

# Release Notes for Cisco Cyber Vision

## Release 4.3.0

### WARNING:

**If you do not require FIPS compliance for your organization, please download the standard release of Cisco Cyber Vision**

#### **For users upgrading to 4.3.0 from previous versions:**

- **Please read the Cisco Cyber Vision 4.3.0 update procedure carefully.**
- Please check the networking configurations before and after the upgrade, see Upgrade to 4.3.0 considerations.
- **For IC3000 users, please read with attention: IC3000 considerations**

## SUMMARY

## FIPS release

The Federal Information Processing Standard (FIPS) 140-2 is a U.S. government standard for specific security requirements for cryptographic modules. This standard applies to all federal agencies that use cryptographic-based security systems to protect sensitive information in computer and telecommunication systems. If you do not require FIPS compliance for your organization, please download the standard release of Cisco Cyber Vision.

### **FIPS build limitations:**

- Only FIPS Center and FIPS Sensors can work together.
- This is not possible to cross-update or downgrade from a non-FIPS version to a FIPS version and vice-versa.
- Only few images are supported, they are listed at the end of this document.

## Compatible device list

Center	Description
<b>VMware ESXi OVA center</b>	VMware ESXi 6.x or later
<b>Windows Server Hyper-V VHDX Center</b>	Microsoft Windows Server Hyper-V version 2016 or later
<b>Cisco UCS C220 M5 CV-CNTR-M5S5</b>	Cyber Vision Center hardware appliance (Cisco UCS® C220 M5 Rack Server) - 16 core CPU, 64 GB RAM, 800GB drives
<b>Cisco UCS C220 M5 CV-CNTR-M5S3</b>	Cyber Vision Center hardware appliance (Cisco UCS® C220 M5 Rack Server) - 12 core CPU, 32 GB RAM, 480GB drives
<b>AWS – Center AMI</b>	Amazon Web Services center image
<b>Azure – Center plan</b>	Microsoft Azure center plan

Platform	Minimum Version	Description
<b>Cisco IC3000</b>	1.5.1	Cyber Vision Sensor hardware appliance
<b>Cisco Catalyst IE3400</b>	17.3.x	Cyber Vision Sensor IOx application hosted in Cisco Catalyst IE3400 Industrial Ethernet switches
<b>Cisco Catalyst IE3300 10G</b>	17.6.x	Cyber Vision Sensor IOx application hosted in Cisco Catalyst IE3300 Industrial Ethernet switches with 10G ports
<b>Cisco Catalyst IE3300 *</b>	17.11.x	Cyber Vision Sensor IOx application hosted in Cisco Catalyst IE3300 Industrial Ethernet switches
<b>Cisco Catalyst IE9300</b>	17.12.x	Cyber Vision Sensor IOx application hosted in Cisco Catalyst IE9300 Rugged Series switches (IOS 17.12 mini)
<b>Cisco IR1101</b>	17.3.x	Cyber Vision Sensor IOx application hosted in Cisco IR1101 Series Industrial Integrated Services Routers
<b>Cisco Catalyst IR8300</b>	17.9.x	Cyber Vision Sensor IOx application hosted in Cisco Catalyst IR8300 Rugged Series Routers
<b>Cisco Catalyst 9300, 9400</b>	17.3.x	Cyber Vision Sensor IOx application hosted in Catalyst 9300, 9300X, 9400 Series switches

\* IE3300 support Cyber Vision application hosting when the platform has 4GB DRAM.

All 4G units start with Version ID (VID) from -06. A CLI command could be used to identify whether its 2G vs 4G, looking at the Max DRAM size of `show platform resources`.

IE switches recommended firmware are: 17.12.1, 17.9.5, 17.6.6.

## Unsupported device list

As of version 4.2.0, [Sentryo hardware is no longer supported](#).

Center	Description
Sentryo CENTER10	Sentryo CENTER10 hardware appliance
Sentryo CENTER30	Sentryo CENTER30 hardware appliance
Sensor	
Sentryo SENSOR3	Sentryo SENSOR3 hardware appliance
Sentryo SENSOR5	Sentryo SENSOR5 hardware appliance
Sentryo SENSOR7	Sentryo SENSOR7 hardware appliance

## Cisco Cyber Vision 4.3.0 update procedure

Cisco Cyber Vision 4.3.0 update procedure depends on the architecture deployed and the tool used to deploy it.

### Warnings

Cisco Cyber Vision version 4.3.0 brings 2 new features which impact the upgrade procedure:

1. IC3000 application change
2. External communications-

For IC3000 application change: [click here](#). For external communications: check the Cyber Vision [network configuration](#) before and after the product upgrade. Network configuration may have an impact on the product database. **Some data stored may be purged** based on it. Find explanations to prepare the product and review the configuration applied.

### Upgrade Path

Upgrade Path to Cisco Cyber Vision 4.3.0

Current Software Release	Upgrade Path to Release 4.3.0
<b>If version prior to 3.2.4</b>	Upgrade first to 3.2.4, then to 4.0.0, then to 4.1.4, then to 4.3.0
<b>Version 3.2.4</b>	Upgrade first to 4.0.0, then to 4.1.4, then to 4.3.0
<b>Version 4.0.0 to 4.0.3</b>	Upgrade first to 4.1.4, then to 4.3.0
<b>Version 4.1.0 to 4.1.4</b>	Upgrade directly to 4.3.0
<b>Version 4.2.0 to 4.2.6</b>	Upgrade directly to 4.3.0

## Compatibility Guidelines

There is downward compatibility of one version between the Global Center and the Center with sync and sensors.

- Global Center (Version N): Compatible with Centers with sync with versions N and N-1 (e.g., Global Center version 4.2.0 can manage local Centers with versions 4.2.0 and 4.1.4).
- Center with sync (Version N): Compatible with sensors with versions N and N-1 (e.g., Center with sync version 4.2.0 can manage sensors with versions 4.2.0 and 4.1.4).

## Data purge

The Center database is regularly maintained to contain the volume of data stored.

The data retention policies are, by default, in version 4.3.0.

- Flows: 7 days
- Events: limited to 10 000 per category
- Variables after 2 years
- External communications: 30 days (limit 1 million)

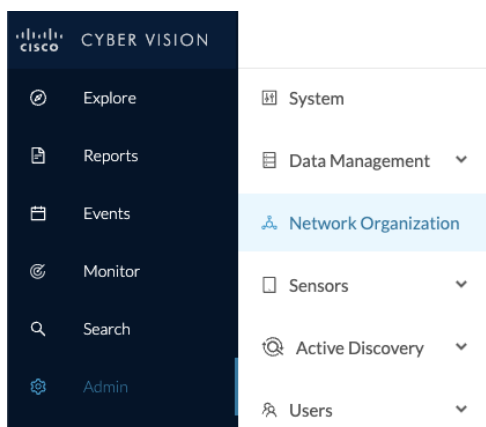

## Upgrade to 4.3.0 considerations

All users must check their networking configurations before and after the upgrade. In release 4.3.0, all communications to components considered as External will not be stored anymore as an activity. The details of the external component are not stored as a standard component. A component is considered External based on the configuration done in the Network Organization page (see example below).

For each external communication:

- some details of the external communications are attached to the internal component.
- an activity is not created.
- the external component is not stored, as a standard component.

During the upgrade of an existing database to the latest version, some purges will occur based on product configuration. Before the upgrade, perform network configuration from the User Interface, in the Admin / Network Organization menu.

Review and modify the network organization before the upgrade, as in version 4.3.0 all external communications are stored in a different manner and external components are removed from the database. All subnets not listed are considered as external. Belonging components are deleted.

For example, if the OT network user is not using private IP address ranges, he has to create the ones he is using before the upgrade. Otherwise, all components in those ranges will be purged.

Before the upgrade, the ranges defined by the Internet Assigned Numbers Authority (IANA) for private usages are added and configured as internal to avoid any data deletion by mistake:

- 10.0.0.0/8
- 172.16.0.0/12
- 192.168.0.0/16

For example, if the organization is before the upgrade:

IP Address / subnet	VLAN ID	Network Name	Network Type	Action
10.0.0.0/20		IT Range	IT Internal	 
10.0.16.0/20		OT Range	OT Internal	 
10.128.0.0/9		Ext	External	 
169.254.0.0/16		IPv4 link local	OT Internal	 

The subnet 10.0.0./8 is added during the upgrade process:

IP Address / subnet	VLAN ID	Network Name	Network Type	Action
10.0.0.0/8		10/8 private network	OT Internal	 
10.0.0.0/20		IT Range	IT Internal	 
10.0.16.0/20		OT Range	OT Internal	 
10.128.0.0/9		Ext	External	 
169.254.0.0/16		IPv4 link local	OT Internal	 

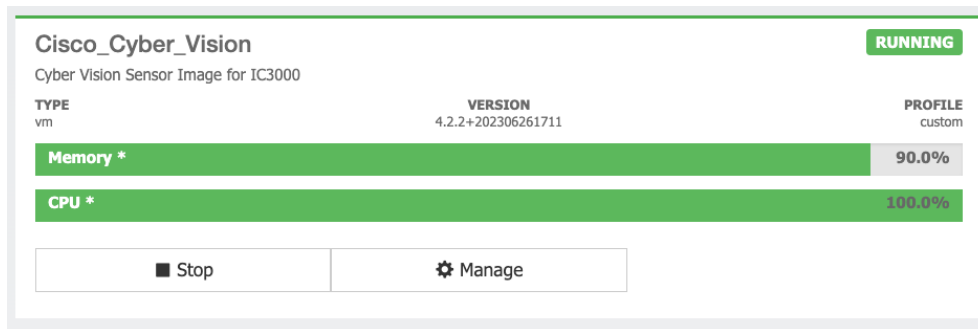

Check the configuration after the upgrade to adjust the configuration and fix the type of the 3 ranges added during the upgrade.

## IC3000 considerations

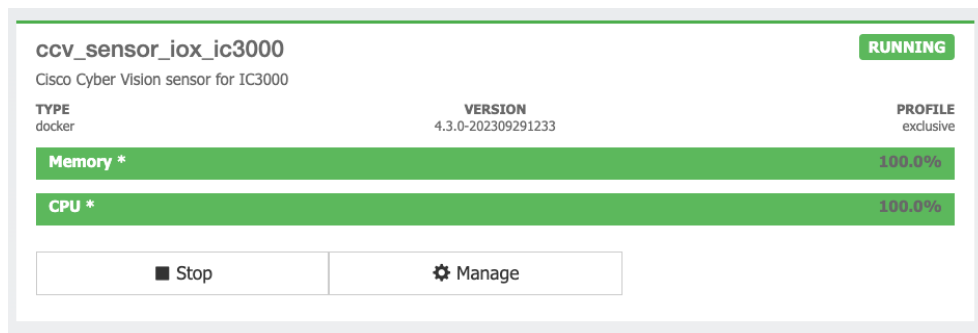

Cisco Cyber Vision sensor application for IC3000 format will change from Virtual Machine to Docker in version 4.3.0. The upgrade from a previous version will consist of a redeployment of a new application. This upgrade can be performed in 2 ways:

1. For IC3000 sensors deployed with the Sensor Management extension, the extension will manage it for the user (details here: [Installation with the extension](#))
2. For IC3000 sensors deployed manually, perform the upgrade manually. Delete and reinstall the sensor (details here: [Manual Installation:](#)).

IC3000 Cyber Vision application before 4.3.0:

IC3000 Cyber Vision application after 4.3.0:

## Limitations

The active discovery feature requires an IC3000 with a firmware version 1.5.1.

Even if you do not use active discovery, we recommend using the latest IC3000 firmware to run the Cyber Vision sensor.

Note:

The ssh access to the sensor application is no longer possible. The IC3000 local manager provides a console connection to the application.

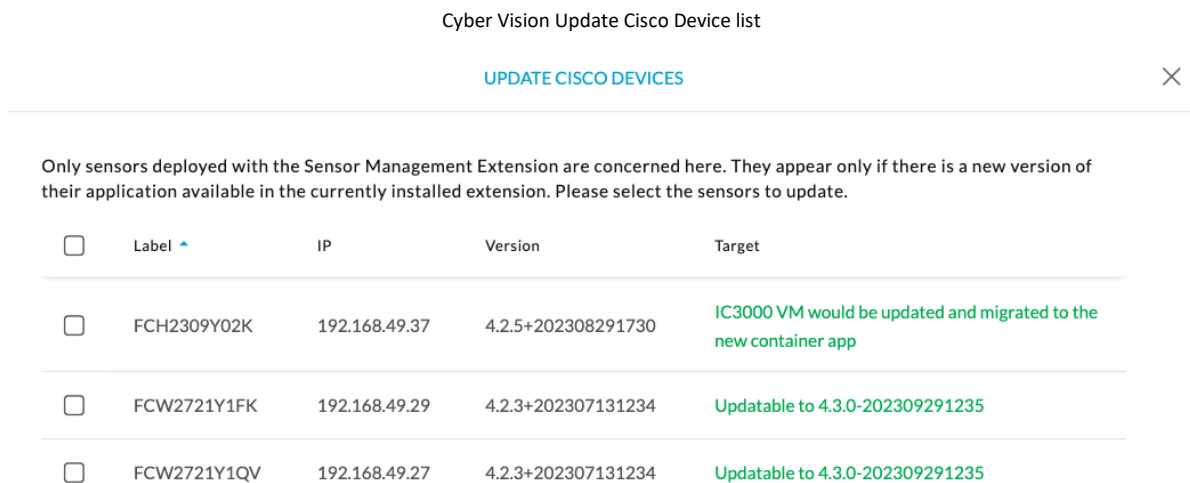

Access using the appconsole user is crashing the sensor application. This is a known issue of the IC3000 firmware version 1.5.1.

### Upgrade with the extension

Follow the standard process to use the 'Update Cisco Devices' functionality (Sensors > Sensor Explore > Manage Cisco devices > Update Cisco devices).

The system lists the upgradable sensors.

If the IC3000 firmware version is not at least 1.5.1 and if the sensor application is using the active discovery, the Sensor Management Extension will not perform the upgrade. Upgrade the IC3000 firmware first.

Cyber Vision Update Cisco Device list – IC3000 firmware issue

UPDATE CISCO DEVICES ×

Only sensors deployed with the Sensor Management Extension are concerned here. They appear only if there is a new version of their application available in the currently installed extension. Please select the sensors to update.

<input type="checkbox"/>	Label ▲	IP	Version	Target
<input type="checkbox"/>	IC3000-16-SENSOR-17-EXT	192.168.51.17	4.2.6+202309071750	Cannot migrate IC3000 VM to container: the sensor has Active Discovery enabled but does not support it anymore: << Platform requires at least version 1.5.1 to support Cyber Vision Active Discovery. ### Installation with the extension

The installation of the IC3000 sensor application with the extension will have some limitations if the IC3000 firmware is below 1.5.1.

Cyber Vision sensor application installation – IC3000 firmware issue

Install via extension

## Configure Cyber Vision IOx sensor app

The device requires additional parameters. Some parameters have been pre-filled. Please complete the remaining fields.

Cisco device: IC3000-2C2F-K9

**!** Platform requires at least version 1.5.1 to support Cyber Vision Active Discovery. Only a passive deployment is possible with the installed version.

<p>Collection IP address*</p> <input type="text"/>	<p>Collection prefix length*</p> <input type="text"/> <p style="text-align: right; font-size: small;">Like 24, 16 or 8</p>
<p>Collection gateway</p> <input type="text"/>	

### Manual Installation:

The IC3000 Cyber Vision Sensor Installation Guide will help you manually deploy or redeploy your sensors.

Guide available here: <https://www.cisco.com/c/en/us/support/security/cyber-vision/products-installation-guides-list.html>.

## Center updates

### Architecture with Global Center

**Preliminary checks:** We highly recommend that you check the health of all Centers connected to the Global Center and of the Global Center itself before updating.

Use an SSH connection to the Center and type the following command:

```
systemctl --failed
```

The number of listed sbs-\* units should be 0. If not, fix the failures before updating.

Cisco Cyber Vision system check – 0 failure

```
root@Center21:~# systemctl --failed
0 loaded units listed.
root@Center21:~#
```

All sbs services should be in a normal state before performing an update. If not, fix the failures before upgrading.

Cisco Cyber Vision system check – example of failure

```
root@Center21:~# systemctl --failed
UNIT                                LOAD    ACTIVE SUB    DESCRIPTION
● sbs-marmotd.service loaded failed failed marmotd persistence service

LOAD   = Reflects whether the unit definition was properly loaded.
ACTIVE = The high-level unit activation state, i.e. generalization of SUB.
SUB     = The low-level unit activation state, values depend on unit type.

1 loaded units listed.
root@Center21:~#
```

Perform a system reboot to solve the issue. For help, please contact support.

For a distributed architecture, use the following steps:

1. Update the Global Center with a or b methods below.
  - a. Use the Graphical User Interface:
    - File= CiscoCyberVision-update-combined--<LAST-VERSION>.dat
    - Navigate to Admin > System, use the System Update button and browse and select the update file.
  - b. Use the Command Line Interface (CLI):
    - File= CiscoCyberVision-update-center--<LAST-VERSION>.dat
    - Launch the update with the following command:
2. Update the Centers connected to the Global Center with the same procedure used for the Global Center (User Interface or CLI).
3. Update the sensors from their corresponding Center (not from the Global Center).
  - a. If you installed the sensors with the sensor management extension:
    - i. first upgrade the extension and then update the sensors.
      - File = CiscoCyberVision-sensor-management--<LAST-VERSION>.ext
      - Navigate to Admin > Extensions. In the Actions column, use the update button and browse to select the update file.
      - The Cisco Cyber Vision sensor management extension can also be updated from the CLI with the command:

```
sbs-extension upgrade /data/tmp/CiscoCyberVision-sensor-management--<LAST-VERSION>.ext
```

- ii. Update all sensors with the extension.

Access the sensor administration page, > “Manage Cisco devices” / “Update Cisco devices” or use the redeploy button in the sensor’s right-side panel. For a complete procedure add hyperlink “Cisco Cyber Vision new features and improvements” or use any sensor installation guide from version 4.2.0.

- b. If you did not install the sensor with the sensor management extension, upgrade the sensor with the sensor package from the platform Local Manager or from the platform Command Line. Use one of the corresponding sensor installation guides.
  - IE3x00, IE93x0 and IR1101 files = CiscoCyberVision-IOx-aarch64--<LAST-VERSION>.tar or CiscoCyberVision-IOx-Active-Discovery-aarch64---<LAST-VERSION>.tar
  - Catalyst 9300 and 9400 and IR8340 files = CiscoCyberVision-IOx-x86-64-<LAST-VERSION>.tar or CiscoCyberVision-IOx-Active-Discovery-x86-64-<LAST-VERSION>.tar.
  - IC3000 files = CiscoCyberVision-IOx-IC3000-<LAST-VERSION>.tar or CiscoCyberVision-IOx-Active-Discovery-IC3000-<LAST-VERSION>.tar

**Important remark regarding CiscoCyberVision-IOx-x86-64 sensor application update:**

**IMPORTANT: Because of rspan compatibility, you cannot update the Cisco CyberVision –IOx-x86-64 sensor application through the Local Manager of a Catalyst 9300, 9400, or IR8340 files from release 4.1.2 (or lower) to release 4.1.3 (or higher). Instead, redeploy the sensor application and upload the enrollment package again. Once you perform the update to a release greater than 4.1.2 with the redeploy, use the standard update procedure for the other releases (for example: 4.2.0 to 4.3.0).**

Guidelines here:

**[Cisco Cyber Vision Sensor Application for Cisco Switches Installation Guide, Release 4.2.0](#)**

- **[procedure with the local manager for the redeploy](#)**
- **[Upgrade procedures for standard updates](#)**

**[Cisco Cyber Vision Sensor Application for Cisco IR8340 Installation Guide, Release 4.2.0](#)**

- **[procedure with the local manager for the redeploy](#)**
- **[Upgrade procedures for standard updates](#)**

## Architecture with one Center

For a single Center, use the following steps:

1. Update the Center with a or b methods below.
  - a. Use the Graphical User Interface:
    - File= CiscoCyberVision-update-combined-<LAST-VERSION>.dat
    - Navigate to Admin > System, use the System Update button, and browse and select the update file.
  - b. Use the Command Line Interface (CLI):
    - File= CiscoCyberVision-update-center-<LAST-VERSION>.dat
    - Launch the update with the following command:

```
sbs-update install /data/tmp/CiscoCyberVision-update-center-<LAST-VERSION>.dat
```

2. Update the sensors.
  - a. If you installed the sensors with the sensor management extension:
    - i. first upgrade the extension and then update the sensors.
      - File = CiscoCyberVision-sensor-management--<LAST-VERSION>.ext
      - Navigate to Admin > Extensions. In the Actions column, use the update button and browse to select the update file.
      - The Cisco Cyber Vision sensor management extension can also be updated from the CLI with the command:

```
sbs-extension upgrade /data/tmp/CiscoCyberVision-sensor-management--<LAST-VERSION>.ext
```

- ii. Then update all sensors with the extension.

Access the sensor administration page, > “Manage Cisco devices” / “Update Cisco devices” or use the redeploy button in the sensor’s right-side panel. For a complete procedure add hyperlink “Cisco Cyber Vision new features and improvements” or use any sensor installation guide from version 4.2.0.

- b. If you did not install the sensor with the sensor management extension, upgrade the sensor with the sensor package from the platform Local Manager or from the platform Command Line. Use one of the corresponding sensor installation guides.
  - IE3x00, IE93x0 and IR1101 files = CiscoCyberVision-IOx-aarch64--<LAST-VERSION>.tar or CiscoCyberVision-IOx-Active-Discovery-aarch64---<LAST-VERSION>.tar
  - Catalyst 9300 and 9400 and IR8340 files = CiscoCyberVision-IOx-x86-64-<LAST-VERSION>.tar or CiscoCyberVision-IOx-Active-Discovery-x86-64-<LAST-VERSION>.tar.
  - IC3000 files = CiscoCyberVision-IOx-IC3000-<LAST-VERSION>.tar or CiscoCyberVision-IOx-Active-Discovery-IC3000-<LAST-VERSION>.tar

**Important remark regarding CiscoCyberVision-IOx-x86-64 sensor application update:**

**IMPORTANT: Because of rspan compatibility, you cannot update the Cisco CyberVision –IOx-x86-64 sensor application through the Local Manager of a Catalyst 9300, 9400, or IR8340 files from release 4.1.2 (or lower) to release 4.1.3 (or higher). Instead, redeploy the sensor application and upload the enrollment package again. Once you perform the update to a release greater than 4.1.2 with the redeploy, use the standard update procedure for the other releases (for example: 4.2.0 to 4.3.0).**

Guidelines here:

**[Cisco Cyber Vision Sensor Application for Cisco Switches Installation Guide, Release 4.2.0](#)**

- **[procedure with the local manager for the redeploy](#)**
- **[Upgrade procedures for standard updates](#)**

**[Cisco Cyber Vision Sensor Application for Cisco IR8340 Installation Guide, Release 4.2.0](#)**

- **[procedure with the local manager for the redeploy](#)**
- **[Upgrade procedures for standard updates](#)**

**AWS and Azure Centers**

For a Center deployed in AWS or Azure, follow the procedure described in Architecture with one Center.

## Cisco Cyber Vision 4.3.0 important changes

### Communication port and protocol changes

#### Port

No modification in 4.3.0.

#### Protocol

No modification in 4.3.0.

#### API

No modification in 4.3.0.

#### SYSLOG

No modification in 4.3.0.

# Cisco Cyber Vision new features and improvements

## External communication

### Introduction

For Release 4.3.0, we added External Communication. This feature enhances the way components are currently created based on the DPI and the information we are able to gather.

If the communication includes a device / IP that is not defined by an internal network in the network organization (or is explicitly defined as External), then only the minimal data is stored for the internal component, without creating the external component. This data includes:

- Internal Device (IP, MAC)
- Source port (TCP/UDP)
- External Device (IP)
- Destination port (TCP/UDP)

This eliminates the impact of creating and storing components that are not providing value.

Use the Network Organization to define Internal and External subnets.

Cisco Cyber Vision Network Organization

6 Networks

IP Address / subnet	VLAN ID	Network Name	Network Type	Action
10.0.0.0/8		10/8 private network	External	
10.0.0.0/20		IT Range	IT Internal	
10.0.16.0/20		OT Range	OT Internal	
169.254.0.0/16		IPv4 link local	OT Internal	
172.16.0.0/12		172.16/12 private network	OT Internal	
192.168.0.0/16		192.168/16 private network	OT Internal	
192.168.11.0/24	11	LGV-Network	OT Internal	
192.168.12.0/24	12	AGV-Network	OT Internal	
fc00::7		FC00::7 IPv6 local unicast	OT Internal	
fe80::10		IPv6 link local	OT Internal	

### Internal vs External

All subnets not listed in the Network Organization or explicitly defined as External are considered External. Some exceptions exist. They are not defined in the list but are considered as internal:

3. Broadcast IPv4: 255.255.255.255
4. IPv4 and IPv6 zero: 0.0.0.0 and 0:0:0:0:0:0:0
5. Loopback IPv4 and IPv6: 127.0.0.1 and ::1
6. Multicast IPv4 and IPv6: 224.0.0.0/8 and ff00::/8

### External communication impact in the UI

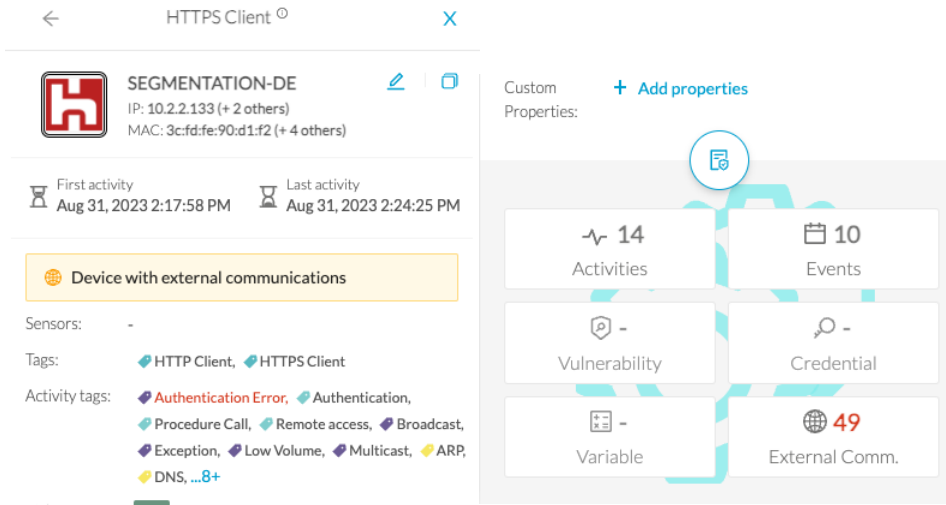

External components are no longer created, stored or displayed as other components. An internal component which is communicating with external components is highlighted in the User Interface. The device / component is highlighted in the map and circled in orange.

Cisco Cyber Vision devices with external communications

The screenshot displays the Cisco Cyber Vision user interface. On the left, a network map shows a central device labeled 'SEGMENTATION-DE' (with a red 'H' icon) connected to several other devices including 'LEAP Manager 0.0.0.0', '10.2.2.133', 'vmware', '10.2.3.201', '192.168.42.14', '192.168.42.55', '204.0.0.0', 'intel', 'VMWARE 192.168.42.55', '10.2.1.1', 'GIGABYTE 10.2.3.12', and 'Broadcast 255.255.255.255'. The 'intel' device is highlighted with an orange border. On the right, a detailed view of the 'SEGMENTATION-DE' device is shown, including its IP (10.2.2.133), MAC (3cfd:fe:90:d1:f2), activity timestamps, and a list of activity tags such as 'Authentication Error', 'Authentication', 'Procedure Call', 'Remote access', 'Broadcast', 'Exception', 'Low Volume', 'Multicast', and 'ARP'. A yellow banner indicates it is a 'Device with external communications'.

On the left side panel, an orange rectangle indicates that the device had some external communications. A new panel indicates the number of external communications.

Cisco Cyber Vision device with external communications left panel

A new activity tab lists the external communications.

## Subnetting for network organization

### Network Organization configuration

When deploying Cyber Vision, the Network Organization is a critical setting that can impact the effectiveness of Cyber Visions device discovery. In previous Cyber Vision releases, the Network Organization settings did not allow overlapping networks to be defined. For customers who leverage a large network for all their IT networks, and smaller subnets out of that to define their OT networks, this requires a lot of network definition.

This feature allows a subnetting approach.

### To define subnets:

1. Click Admin > Network Organization.

The configuration now supports subnets.

### Cisco Cyber Vision Network Organization

6 Networks

IP Address / subnet	VLAN ID	Network Name	Network Type	Action
10.0.0.0/8		10/8 private network	External	
10.0.0.0/20		IT Range	IT Internal	
10.0.16.0/20		OT Range	OT Internal	
169.254.0.0/16		IPv4 link local	OT Internal	
172.16.0.0/12		172.16/12 private network	OT Internal	
192.168.0.0/16		192.168/16 private network	OT Internal	
192.168.11.0/24	11	LGV-Network	OT Internal	
192.168.12.0/24	12	AGV-Network	OT Internal	
fc00::/7		FC00::/7 IPv6 local unicast	OT Internal	
fe80::/10		IPv6 link local	OT Internal	

### Network Organization API

We created some new API routes to manage the Network Organization with some scripts. We updated the API documentation to describe the new Network Organization routes.

Cisco Cyber Vision Network Organization API routes

CustomNetwork

GET	/networks/
PUT	/networks/
POST	/networks/
DELETE	/networks/
POST	/networks/check

### Network Organization impact on Cyber Vision

Network Organization impacts the external communications detailed above. It also impacts the ingestion configuration. For all defined ranges, you can enable or disable the flow storage.

Cisco Cyber Vision Ingestion Configuration - Flow retention

#### Flows Configuration

Flows Storage

If disabled, flows won't be stored in the database, you can enable storage and adjust settings in your network configuration.

Select All OT

Deselect All IT

Network Name	IP Address / subnet	VLAN ID	Network Type
<input type="checkbox"/> 10/8 private network	10.0.0.0/8		External
<input checked="" type="checkbox"/> IT Range	10.0.0.0/20		IT Internal
<input checked="" type="checkbox"/> OT Range	10.0.16.0/20		OT Internal
<input checked="" type="checkbox"/> IPv4 link local	169.254.0.0/16		OT Internal
<input checked="" type="checkbox"/> 192.168/16 private network	192.168.0.0/16		OT Internal
<input checked="" type="checkbox"/> LGV-Network	192.168.11.0/24	11	OT Internal
<input checked="" type="checkbox"/> AGV-Network	192.168.12.0/24	12	OT Internal
<input checked="" type="checkbox"/> FC00::/7 IPv6 local unicast	fc00::/7		OT Internal
<input checked="" type="checkbox"/> IPv6 link local	fe80::/10		OT Internal
<input type="checkbox"/> Others			External

L2 Flow Storage

L2 flows are defined by communication between endpoints without IP addresses.

## Sensor templates

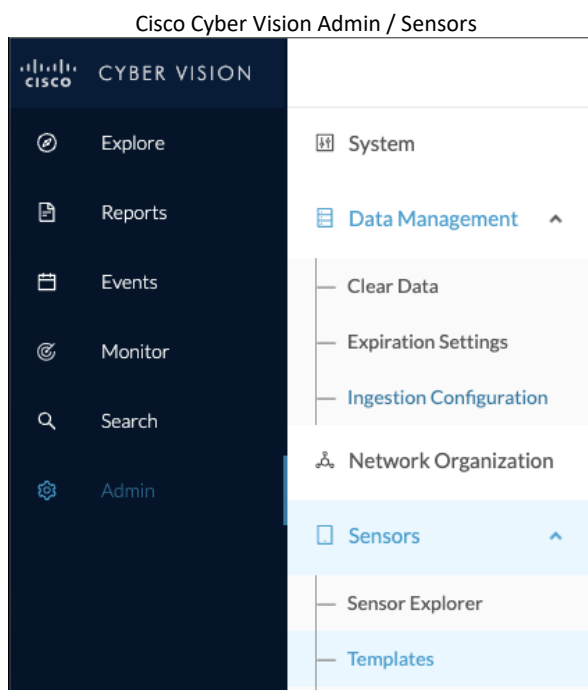

In previous Cyber Vision versions, any settings on the sensor, including custom protocol ports, and which protocols are enabled, require you to modify a configuration file hosted on the sensor. It required a manual connection to each sensor to modify the configuration.

Cyber Vision version 4.3.0 provides a feature with a centralized method for managing the configuration of multiple sensors. The Sensor Template feature lets you configure sensor settings from the user interface. You create some templates and assign those templates to the sensors. In Cyber Vision 4.3.0, a template can manage 2 types of settings which help you:

1. Enable or disable protocol DPI
2. Customize the protocol ports

### To access Sensor Templates:

Click Admin > Sensors > Templates.

You can create, edit and delete templates. A default template is assigned to all new sensors. You can also create a new sensor template with the button “Add sensor template.”

Cisco Cyber Vision Configuration Template menu

## Configuration Template

Sensor configuration templates allow you to enable and personalize protocol settings, and deploy them to a large number of sensors.

[Add sensor template](#) As of: November 8, 2023 at 3:34:44 PM

Name	Sensor Count	Deployment progress	Last update	Actions
Default	2	<div style="width: 100%; height: 10px; background-color: green; border: 1px solid green;"></div>	-	...

### To create a template:

1. Click **Admin > Sensors > Templates > Add sensor template.**
2. In **Basic information:** Add a **Name** and **Description** (optional).
3. In **Protocol configuration:** Enable / disable protocols and change port settings.
4. Select sensors: Select sensors affected to the template.
5. Summary: Check and validate the template configuration.

Cisco Cyber Vision Create sensor template

[CREATE SENSOR TEMPLATE](#) X

\* Name

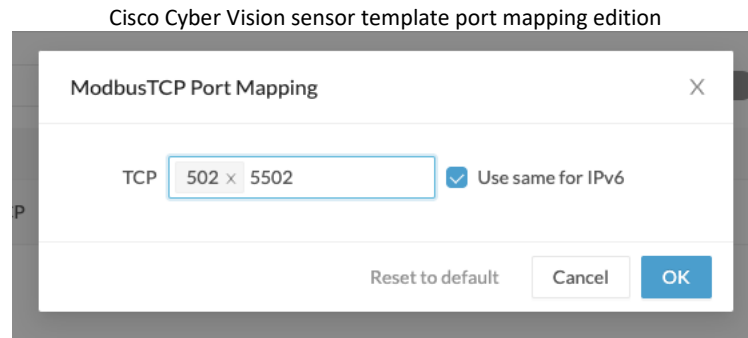

Please enter a name

Description

To enable or disable the DPI of a protocol, use the selector.

To change the Port Mapping, a text box is available to add / delete ports.

Cisco Cyber Vision sensor template, protocol port mapping changed

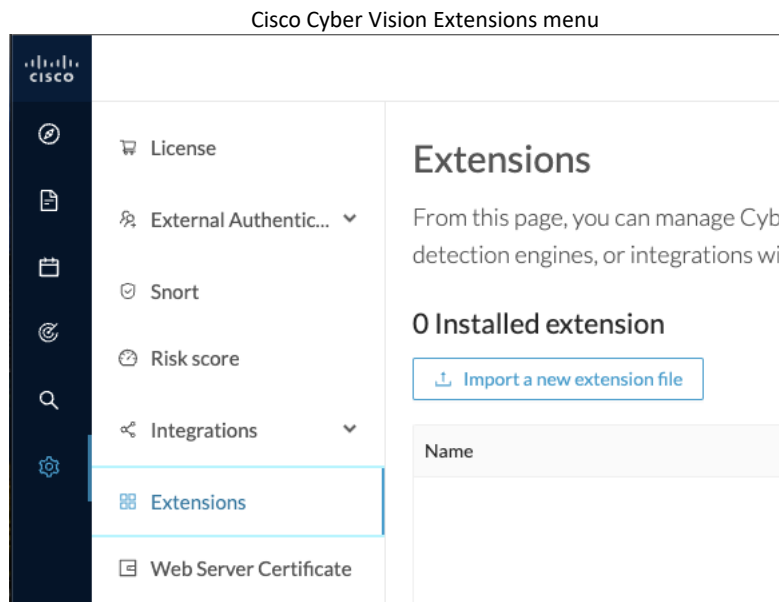

## New report feature

For Cisco Cyber Vision version 4.3.0, we added a new report for **Security Posture**. To see the report, you must install a report management extension.

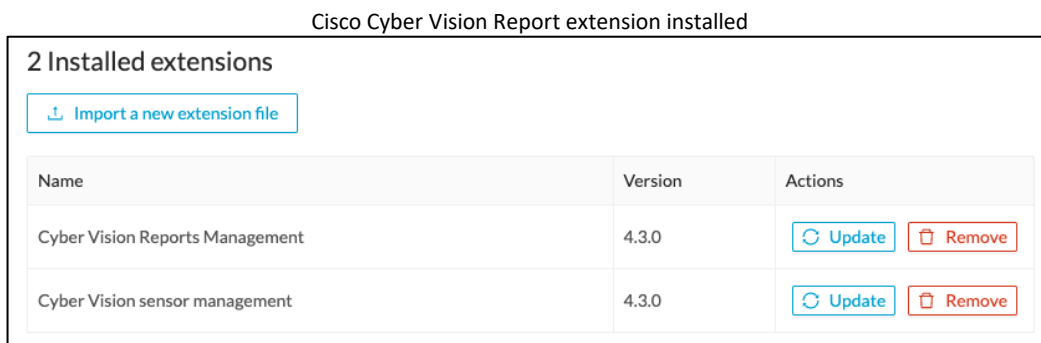

### Report extension setup:

Click **Admin > Extensions > Import a new extension file**.

Select **CiscoCyberVision-reports-management-4.3.0.ext**.

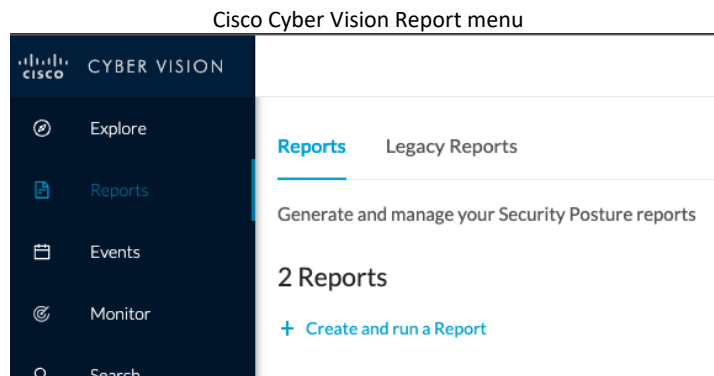

Install the Cyber Vision report management extension.

**To create and run a report:**

1. Click **Create and run a report**.

2. Type in a Name, Description, and Type (Security Posture).
3. For Logo, you can import a company logo.
4. For Format: Word (doc) or Adobe (.pdf).
5. For Presets: reports are based on preset datasets. Select the preset for the report.
6. For Table of Content: choose the content for the report.
7. Click Save

Cisco Cyber Vision Report list

Name	Preset	Created by	Last Modified	Status	Last Run	Actions
PLC	All Controllers	admin@sentryo.net	Nov 10, 2023, 11:26 AM	Processing	Nov 10, 2023, 11:25 AM	...
ALLNetwork	All data	admin@sentryo.net	Nov 10, 2023, 11:24 AM	Success	Nov 9, 2023, 6:45 PM	...
Rockwell	Rockwell	admin@sentryo.net	Nov 10, 2023, 11:24 AM	Success	Nov 9, 2023, 6:43 PM	...

In this table, you can see the Status of the reports. You can download the generated reports and can edit, delete or duplicate an existing configuration.

## IC3000 sensor application migration

We enhanced the Cyber Vision IC3000 sensor application type in version 4.3.0. Now you can configure Active Discovery on multiple vlans on a single interface (with 802.1Q trunking encapsulation).

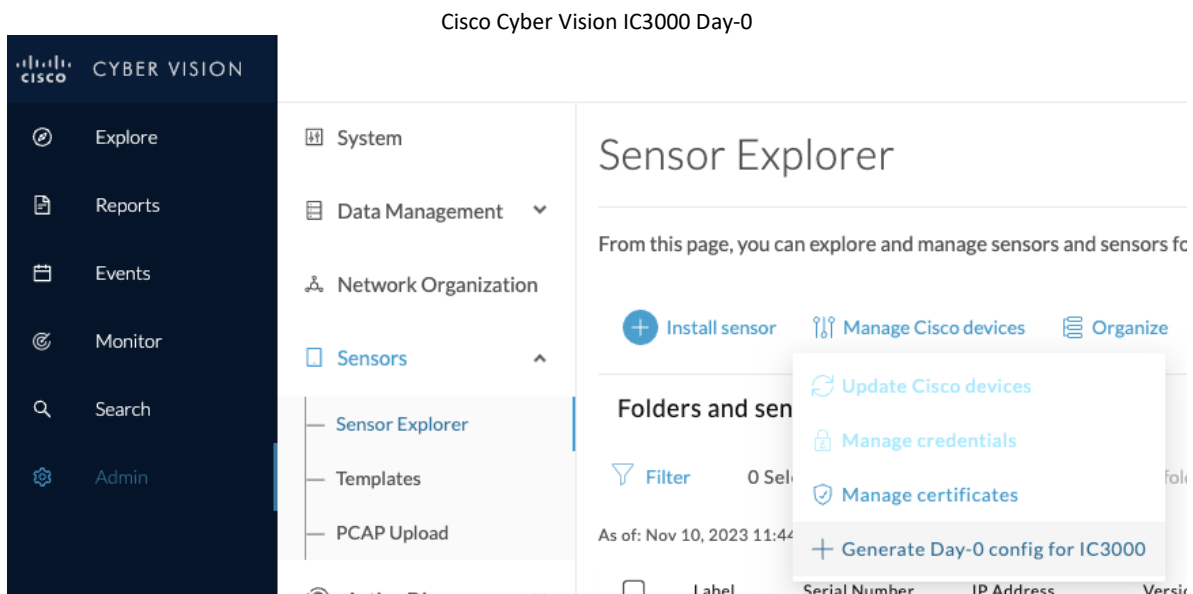

The impact on upgrades and installations are detailed here: [IC3000 considerations](#).

Other impacts are:

1. The sensor offline feature is no longer available.
2. Direct ssh connection to the sensor is no longer possible. Use the IC3000 local manager console connection.
3. Active Discovery requires an IC3000 firmware 1.5.1 minimum.

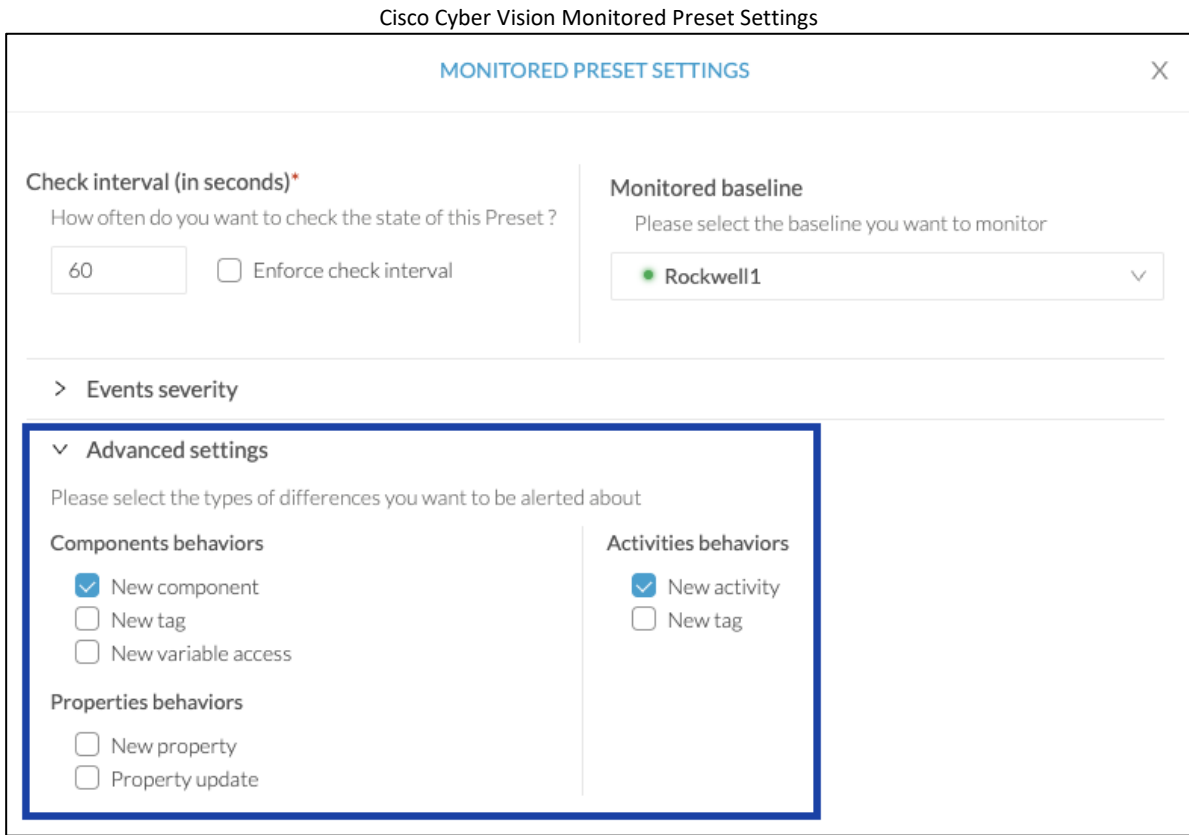

In addition, IC3000 Day-0 feature is still available, but this is now a separate feature available. To access it: Click **Admin > Sensors > Sensor Explorer > Manage Cisco devices > Generate Day-0 config for IC3000**.

## Monitor mode changes

To configure Cyber Vision baselines, some advanced settings are now available. Click Explore > Monitor > Monitored preset settings > expand Advanced settings > check New component and New activity.

The new settings help you decrease the number of alerts generated by the system. The setting capabilities allow the system to filter to generate differences only on some behaviors and not all of them, as before.

For example, apply the system for the following use cases:

- **Detection of a new activity on a set of critical equipment**

Since production lines are the most central and critical part of an industrial network, monitor the set of PLCs which manage these production lines to ensure you are notified in case a new activity happens on the network.

- **Tracking components that are doing specific protocols**

Tracking components that send DNS requests on a network allows you to be notified in case a component of the monitored network is doing this type of request. You will have information such as the component's IP address.

## Active Discovery changes

Cyber Vision version 4.3.0 is now able to actively discover devices on new protocols. Several new protocols are now available:

- Bacnet – Building management protocol
- DNP3 – power grid
- Melsoft - Mitsubishi
- Modbus, UMAS
- Omron

## UI diagnostic enhancement

The diagnostic generation from the user interface is now done in the background. It lets the user navigate during the diagnostic generation and download the package once it's ready.

## Cisco Cyber Vision 4.3.0 enhancements

CDETS	Description
CSCwe16301	Add a LLMNR inspector and dissector
CSCwe16281	Yokogawa - add the Controller tag when Controller Info/Controller Name/ Supported Module tags are set
CSCwe16266	Add event when Triton detected
CSCwe16236	Use MODBUS query (function code 43) for Active Discovery - unicast
CSCwe16234	Clear Data - review code and optimize it to speed up operation
CSCwe16206	Allow for simple tuning of the monitor mode
CSCwe16204	Melssoft: The properties observed in the flows are not used in the component
CSCwf43032	Add heap and profile to sensor diagnostic
CSCwf78646	Sensor explorer: improve user experience
CSCwh37562	Add scp client to sensor iox app
CSCwh51681	sbs-diag add type and name on diag file name
CSCwh55833	Diagnostic File: Add sensor status in the sbs_sensor_list output

## Cisco Cyber Vision 4.3.0 Resolved Caveats

CDETS	Description
CSCwe16283	MMS : Wrong model names and fw version
CSCwe16262	Reset-data: Cancel button should be disabled once clear data is started
CSCwe16209	Wrong device icons seen on the Device view
CSCwe16208	reset all data "failing" in case of too much data
-	Fins Omron : The tags between the PLC and the engineering station are reversed - 11764
CSCwe16171	Device engine uncomplete assetization - Rockwell example
CSCwe16166	mdns decoded name: remove .local extension
CSCwf03873	Device technical sheet - Vulnerability widget - typo in 'Acknowledged' word in vulnerability filter
CSCwh37567	UI - Fix Sort - Remove the sort parameter from the URL when switching the tabs
CSCwh19219	[FIPS] kdb import fails for subscriber rules
CSCwh20627	rsyslog-sensors max tcp connection can be exceeded
CSCwh37566	Explore - option to select custom period
CSCwh32778	No warning when deploying sensor with extension on cat9k without ssd
CSCwh37561	Deadlock in sbs-worker on sensor-info table
CSCwh59619	NAD Event - Limit content of large events
CSCwh72942	Flow-Flow properties purge - Improve the batch size limit management
CSCwf68110	Display clear error message in the UI when center update process fails
CSCwf68109	Issue when updating center with many IC3000
CSCwh65365	make sensor export flow properties every 120s by default
CSCwi00089	sql error persisting some opcua variables
CSCwi00088	"Failed to retrieve vulnerabilities" on some devices
CSCwh37564	Admin - additional pop-up for CPU intensive processes
CSCwh65364	Click here to fill should be updated with message and a button
CSCwi00089	sql error persisting on some opcua variables

## Cisco Cyber Vision Open Caveats

Issues ID / CDETS	Component	Description
CSCwi33573	Center	Edit Network settings - Device engine options clarify VLAN Usage
CSCwi33574	Center	Edit Network settings - Unclear Device engine options
CSCwi33572	Center	Edit Network settings - Device engine options interlock
CSCwi32082	Center + extensions	Extension issues when center is not stopped properly
CSCwi28690	Center	External communications without direction are not listed
CSCwb12630	Center + ISE	All components are not synchronized with ISE
CSCwd39017	Center	Missing information in the Smart License Usage

### CSCwi32082: Extension issues when center is not stopped properly.

When report management and sensor management extensions are installed, if the center is not stopped properly, it may happen that the extensions didn't start properly. A workaround is available, from the sensor command line type:

```
sudo podman rm -f reports-management
sudo systemctl restart sbs-extension
```

### CSCwi33572 / CSCwi33574 / CSCwi33574: Edit Network settings - Device engine options.

Clarifications needed regarding those options:

1. The 2 check boxes must not be used at the same time.
2. "This IP range is deployed several time, the device engine will not use IP to group components into device."

IP will not be used for the whole range to group components into devices.

3. "Do not group component seen by different sensors. For this IP range, the device engine will only use components from one sensor to create devices."

IP will be used to group components into devices for all components seen by one sensor.

4. Vlan considerations:
  - a. Option 1 needs VLAN ID to work
  - b. Option 2 must not have VLAN ID to work.
