If the value of this object is notSupported(1), the probe will not track either of the nlMatrixTables or the alMatrixTables for this protocol and shall not allow this object to be changed to any other value. If the value of this object is supportedOn(3), the probe supports tracking of both of the nlMatrixTables and (if implemented) both of the alMatrixTables for this protocol and is configured to track these tables for this protocol for all control entries and all interfaces. If the value of this object is supportedOff(2), the probe supports tracking of both of the nlMatrixTables and (if implemented) both of the alMatrixTables for this protocol but is configured to not track these tables for this protocol for any control entries or interfaces. Whenever this value changes from supportedOn(3) to supportedOff(2), the probe shall delete all related entries in the nlMatrixTables and the alMatrixTables.

Note that since each alMatrixEntry references 2 protocol directory entries, one for the network address and one for the type of the highest protocol recognized, an entry will only be created in that table if this value is supportedOn(3) for both protocols."

    DESCRIPTION
        "Controls the setup of protocol type distribution statistics
        tables.

        Implementations are encouraged to add an entry per monitored
        interface upon initialization so that a default collection
        of protocol statistics is available.

        Rationale:
        This table controls collection of very basic statistics
        for any or all of the protocols detected on a given interface.
        An NMS can use this table to quickly determine bandwidth
        allocation utilized by different protocols.

        A media-specific statistics collection could also
        be configured (e.g., etherStats, trPStats) to easily obtain
        total frame, octet, and droppedEvents for the same
        interface."

nlMatrixTopNControlTimeRemaining OBJECT-TYPE
    SYNTAX   Integer32 (0..2147483647)
    MAX-ACCESS read-create
    STATUS   current

DESCRIPTION
    "The number of seconds left in the report currently
    being collected. When this object is modified by
    the management station, a new collection is started,
    possibly aborting a currently running report. The
    new value is used as the requested duration of this

    report and is immediately loaded into the associated
    nlMatrixTopNControlDuration object.

    When the report finishes, the probe will automatically
    start another collection with the same initial value
    of nlMatrixTopNControlTimeRemaining. Thus, the management
    station may simply read the resulting reports repeatedly,
    checking the startTime and duration each time to ensure that a
    report was not missed or that the report parameters were not
    changed.

    While the value of this object is non-zero, it decrements
    by one per second until it reaches zero. At the time
    that this object decrements to zero, the report is made
    accessible in the nlMatrixTopNTable, overwriting any report
    that may be there.

    When this object is modified by the management station, any
    associated entries in the nlMatrixTopNTable shall be deleted.

    (Note that this is a different algorithm than the one used
    in the hostTopNTable)."

network-layer address of the source host in this conversation.
The nlMatrixSDDestAddress value in the index identifies the
network-layer address of the destination host in this
conversation.
The second protocolDirLocalIndex value in the index identifies
the protocol that is counted by this entry.

An example of the indexing of this entry is
alMatrixSDPkts.1.783495.18.4.128.2.6.6.4.128.2.6.7.34.

Note that some combinations of index values may result in an
index that exceeds 128 sub-identifiers in length, which exceeds
the maximum for the SNMP protocol. Implementations should take
care to avoid such combinations."

-- Traffic matrix tables from destination to source

alMatrixDSTable OBJECT-TYPE
    SYNTAX      SEQUENCE OF AlMatrixDSEntry
    MAX-ACCESS  not-accessible
    STATUS      current
    DESCRIPTION
        "A list of application traffic matrix entries that collect
        statistics for conversations of a particular protocol between
        two network-level addresses.  This table is indexed first by
        the destination address and then by the source address to make
        it convenient to collect all statistics to a particular
        address.

        The probe will populate this table for all protocols in the
        protocol directory table whose value of
        protocolDirMatrixConfig is equal to supportedOn(3), and
        will delete any entries whose protocolDirEntry is deleted or
        has a protocolDirMatrixConfig value of supportedOff(2).

        The probe will add to this table all pairs of addresses for
        all protocols seen in all packets with no MAC errors and will
        increment octet and packet counts in the table for all packets
        with no MAC errors.  Further, entries will only be added to
        this table if their address pair exists in the nlMatrixDSTable
        and will be deleted from this table if the address pair is
        deleted from the nlMatrixDSTable."

alMatrixTopNControlTimeRemaining OBJECT-TYPE
        SYNTAX   Integer32 (0..2147483647)
        MAX-ACCESS read-create
        STATUS   current
        DESCRIPTION
            "The number of seconds left in the report currently
            being collected. When this object is modified by
            the management station, a new collection is started,
            possibly aborting a currently running report. The
            new value is used as the requested duration of this
            report and is immediately loaded into the associated
            alMatrixTopNControlDuration object.

            When the report finishes, the probe will automatically

start another collection with the same initial value
of alMatrixTopNControlTimeRemaining. Thus, the management
station may simply read the resulting reports repeatedly,
checking the startTime and duration each time to ensure that a
report was not missed or that the report parameters were not
changed.

While the value of this object is non-zero, it decrements
by one per second until it reaches zero. At the time

that this object decrements to zero, the report is made
accessible in the alMatrixTopNTable, overwriting any report
that may be there.

When this object is modified by the management station, any
associated entries in the alMatrixTopNTable shall be deleted.

(Note that this is a different algorithm than the one used
in the hostTopNTable)."

    ::= { alMatrixTopNEntry 9 }

--
-- User History Collection Group (usrHistory)
--
-- The usrHistory group combines mechanisms seen in the alarm and
-- history groups to provide user-specified history collection,
-- utilizing two additional control tables and one additional data
-- table. This function has traditionally been done by NMS
-- applications, via periodic polling. The usrHistory group allows
-- this task to be offloaded to an RMON probe.
--
-- Data (an ASN.1 INTEGER based object) is collected in the same
-- manner as any history data table (e.g., etherHistoryTable) except
-- that the user specifies the MIB instances to be collected. Objects
-- are collected in bucket-groups, with the intent that all MIB
-- instances in the same bucket-group are collected as atomically as
-- possible by the RMON probe.
--
-- The usrHistoryControlTable is a one-dimensional read-create table.
-- Each row configures a collection of user history buckets, much
-- the same as a historyControlEntry, except that the creation of a
-- row in this table will cause one or more associated instances in
-- the usrHistoryObjectTable to be created. The user specifies the
-- number of bucket elements (rows in the usrHistoryObjectTable)
-- requested, as well as the number of buckets requested.
--
-- The usrHistoryObjectTable is a 2-d read-write table.
-- Each row configures a single MIB instance to be collected.
-- All rows with the same major index constitute a bucket-group.
--
-- The usrHistoryTable is a 3-d read-only table containing

-- the data of associated usrHistoryControlEntries. Each
-- entry represents the value of a single MIB instance
-- during a specific sampling interval (or the rate of
-- change during the interval).
--
-- A sample value is stored in two objects - an absolute value and
-- a status object. This allows numbers from -(2G-1) to +4G to be
-- stored. The status object also indicates whether a sample is
-- valid. This allows data collection to continue if periodic
-- retrieval of a particular instance fails for any reason.
--
-- Row Creation Order Relationships
--
-- The static nature of the usrHistoryObjectTable creates
-- some row creation/modification issues. The rows in this

-- table need to be set before the associated
-- usrHistoryControlEntry can be activated.
--
-- Note that the usrHistoryObject entries associated with a
-- particular usrHistoryControlEntry are not required to
-- be active before the control entry is activated. However,
-- the usrHistory data entries associated with an inactive
-- usrHistoryObject entry will be inactive (i.e.,
-- usrHistoryValStatus == valueNotAvailable).
--

usrHistoryControlTable OBJECT-TYPE

  SYNTAX Integer32 (1..65535)
  MAX-ACCESS read-create
  STATUS current
  DESCRIPTION
    "The requested number of discrete time intervals
    over which data is to be saved in the part of the
    usrHistoryTable associated with this usrHistoryControlEntry.

    When this object is created or modified, the probe
    should set usrHistoryControlBucketsGranted as closely to
    this object as possible for the particular probe
    implementation and available resources."
  DEFVAL { 50 }

    ::= { usrHistoryControlEntry 3 }

usrHistoryControlBucketsGranted OBJECT-TYPE
  SYNTAX Integer32 (1..65535)
  MAX-ACCESS read-only
  STATUS current
  DESCRIPTION
    "The number of discrete sampling intervals
    over which data shall be saved in the part of

the usrHistoryTable associated with this
usrHistoryControlEntry.

When the associated usrHistoryControlBucketsRequested
object is created or modified, the probe should set
this object as closely to the requested value as
possible for the particular probe implementation and
available resources. The probe must not lower this
value except as a result of a modification to the associated
usrHistoryControlBucketsRequested object.

The associated usrHistoryControlBucketsRequested object
should be set before or at the same time as this object
to allow the probe to accurately estimate the resources
required for this usrHistoryControlEntry.

There will be times when the actual number of buckets
associated with this entry is less than the value of
this object. In this case, at the end of each sampling
interval, a new bucket will be added to the usrHistoryTable.

When the number of buckets reaches the value of this object
and a new bucket is to be added to the usrHistoryTable,
the oldest bucket associated with this usrHistoryControlEntry
shall be deleted by the agent so that the new bucket can be
added.

When the value of this object changes to a value less than
the current value, entries are deleted from the
usrHistoryTable associated with this usrHistoryControlEntry.
Enough of the oldest of these entries shall be deleted by the
agent so that their number remains less than or equal to the
new value of this object.

When the value of this object changes to a value greater
than the current value, the number of associated usrHistory
entries may be allowed to grow."

    usrHistoryObject table. Each such entry defines a
    MIB instance to be collected periodically."
  ::= { usrHistoryObjectEntry 1 }

usrHistoryObjectVariable OBJECT-TYPE
  SYNTAX OBJECT IDENTIFIER
  MAX-ACCESS read-create
  STATUS current
  DESCRIPTION
    "The object identifier of the particular variable to be

sampled.

Only variables that resolve to an ASN.1 primitive type of
Integer32 (Integer32, Counter, Gauge, or TimeTicks) may be
sampled.

Because SNMP access control is articulated entirely in terms
of the contents of MIB views, no access control mechanism
exists that can restrict the value of this object to identify
only those objects that exist in a particular MIB view.
Because there is thus no acceptable means of restricting the
read access that could be obtained through the user history
mechanism, the probe must only grant write access to this
object in those views that have read access to all objects on
the probe. See USM [RFC3414] and VACM [RFC3415] for more
information.

During a set operation, if the supplied variable name is not
available in the selected MIB view, a badValue error must be
returned.

This object may not be modified if the associated
usrHistoryControlStatus object is equal to active(1)."

        "The value of sysUpTime at the end of the interval over which
        this sample was measured."
        ::= { usrHistoryEntry 3 }

usrHistoryAbsValue OBJECT-TYPE
    SYNTAX Gauge32
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "The absolute value (i.e., unsigned value) of the
        user-specified statistic during the last sampling period. The
        value during the current sampling period is not made available

until the period is completed.

To obtain the true value for this sampling interval, the
associated instance of usrHistoryValStatus must be checked,
and usrHistoryAbsValue adjusted as necessary.

If the MIB instance could not be accessed during the sampling
interval, then this object will have a value of zero, and the
associated instance of usrHistoryValStatus will be set to
'valueNotAvailable(1)'.

The access control check prescribed in the definition of
usrHistoryObjectVariable SHOULD be checked for each sampling
interval. If this check determines that access should not be
allowed, then this object will have a value of zero, and the
associated instance of usrHistoryValStatus will be set to
'valueNotAvailable(1)'."
    ::= { usrHistoryEntry 4 }

  STATUS current
  DESCRIPTION
      "This object indicates the validity and sign of the data in
      the associated instance of usrHistoryAbsValue.

      If the MIB instance could not be accessed during the sampling
      interval, then 'valueNotAvailable(1)' will be returned.

      If the sample is valid and the actual value of the sample is
      greater than or equal to zero, then 'valuePositive(2)' is
      returned.

      If the sample is valid and the actual value of the sample is
      less than zero, 'valueNegative(3)' will be returned. The
      associated instance of usrHistoryAbsValue should be multiplied
      by -1 to obtain the true sample value."
    ::= { usrHistoryEntry 5 }

-- The Probe Configuration Group

--

-- This group controls the configuration of various operating

-- parameters of the probe.

ControlString ::= TEXTUAL-CONVENTION

  STATUS current

  DESCRIPTION

    "This data type is used to communicate with a modem or a

    serial data switch. A ControlString contains embedded

    commands to control how the device will interact with the

    remote device through the serial interface. Commands are

    represented as two-character sequences beginning with

    the '^' character.

    The following commands are recognized by the device (note

    that command characters are case sensitive):

      ^s Send string that follows, which is terminated by the

        next command or the end of string.

      ^c Delay for the number of seconds that follows. Toss

        out any data received rather than store it in a

        buffer for parsing.

      ^t Set timeout to the value represented by the decimal

        digits that follow. The default timeout is 20

        seconds. Note that this timeout may be overridden

        by a smaller serialTimeout configured for the

        associated serial interface (see serialConfigTable).

      ^w Wait for the reply string that follows, which is

        terminated by the next command or the end of string.

        Partial and case-insensitive matching is applied, i.e.,

        if the reply string (any case combination) is found

        anywhere in the received string, then the a match is

        found. If the current timeout elapses without a match,

        then the remaining control string is ignored.

      ^! The ^ character.

      ^d Delay the number of seconds specified by the decimal

        digits that follow.

      ^b Send break for the number of milliseconds specified by

        the decimal digits that follow. If no digits follow,

        break will be enforced for 250 milliseconds by default.

    The following ASCII control characters may be inserted into

    the '^s' send string or the '^w' reply string:

```
^@   0x00
^A   0x01
 ..
^M   0x0D
 ..
^Z   0x1A
^[   0x1B
^    0x1C
^]   0x1D
^^   0x1E
^_   0x1F
```

Binary data may also be inserted into the data stream. The
control sequence for each byte of binary data is ^0x##, where
is the hexadecimal representation of the data byte. Two
ASCII characters (0-9, a-f, A-F) must follow the '^0x'
control prefix. For example, '^0x0D^0x0A' is interpreted as a
carriage return followed by a line feed."

  DESCRIPTION
     "This timeout value is used when the Management Station has
     initiated the conversation over the serial link.  This variable
     represents the number of seconds of inactivity allowed before
     terminating the connection on this serial interface.  Use the
     serialDialoutTimeout in the case where the probe has initiated
     the connection for the purpose of sending a trap."
  DEFVAL { 300 }
  ::= { serialConfigEntry 3 }

serialModemInitString  OBJECT-TYPE
  SYNTAX    ControlString (SIZE (0..255))
  MAX-ACCESS read-create
  STATUS    deprecated

  DESCRIPTION
     "A control string that controls how a modem attached to this
     serial interface should be initialized.  The initialization
     is performed once during startup and again after each
     connection is terminated if the associated serialMode has the
     value of modem(2).

     A control string that is appropriate for a wide variety of
     modems is: '^s^MATE0Q0V1X4 S0=1 S2=43^M'."
  ::= { serialConfigEntry 4 }

serialModemHangUpString  OBJECT-TYPE
  SYNTAX    ControlString (SIZE (0..255))
  MAX-ACCESS read-create
  STATUS    deprecated
```

DESCRIPTION
   "A control string that specifies how to disconnect a modem
   connection on this serial interface. This object is only
   meaningful if the associated serialMode has the value
   of modem(2).

   A control string that is appropriate for a wide variety of
   modems is: '^d2^s+++^d2^sATH0^M^d2'."
::= { serialConfigEntry 5 }

serialModemConnectResp OBJECT-TYPE
   SYNTAX   DisplayString (SIZE (0..255))
   MAX-ACCESS read-create
   STATUS   deprecated
   DESCRIPTION
      "An ASCII string containing substrings that describe the
      expected modem connection response code and associated bps
      rate. The substrings are delimited by the first character
      in the string, for example:
         /CONNECT/300/CONNECT 1200/1200/CONNECT 2400/2400/
         CONNECT 4800/4800/CONNECT 9600/9600
      will be interpreted as:
         response code   bps rate
         CONNECT   300
         CONNECT 1200   1200
         CONNECT 2400   2400
         CONNECT 4800   4800
         CONNECT 9600   9600
      The agent will use the information in this string to adjust
      the bps rate of this serial interface once a modem connection
      is established.

      A value that is appropriate for a wide variety of modems is:

      '/CONNECT/300/CONNECT 1200/1200/CONNECT 2400/2400/
       CONNECT 4800/4800/CONNECT 9600/9600/CONNECT 14400/14400/
       CONNECT 19200/19200/CONNECT 38400/38400/'."
   ::= { serialConfigEntry 6 }

serialModemNoConnectResp OBJECT-TYPE
   SYNTAX   DisplayString (SIZE (0..255))
   MAX-ACCESS read-create
   STATUS   deprecated
   DESCRIPTION
      "An ASCII string containing response codes that may be
      generated by a modem to report the reason why a connection

attempt has failed. The response codes are delimited by
the first character in the string, for example:
    /NO CARRIER/BUSY/NO DIALTONE/NO ANSWER/ERROR/

If one of these response codes is received via this serial
interface while attempting to make a modem connection,
the agent will issue the hang up command as specified by
serialModemHangUpString.

A value that is appropriate for a wide variety of modems is:
'/NO CARRIER/BUSY/NO DIALTONE/NO ANSWER/ERROR/'."

    `telephone closet, 3rd floor')."
::= { system 6 }

sysServices OBJECT-TYPE
  SYNTAX INTEGER (0..127)
  ACCESS read-only
  STATUS mandatory
  DESCRIPTION
      "A value which indicates the set of services that
      this entity primarily offers.

      The value is a sum. This sum initially takes the
      value zero, Then, for each layer, L, in the range
      1 through 7, that this node performs transactions
      for, 2 raised to (L - 1) is added to the sum. For
      example, a node which performs primarily routing
      functions would have a value of 4 (2^(3-1)). In
      contrast, a node which is a host offering
      application services would have a value of 72
      (2^(4-1) + 2^(7-1)). Note that in the context of
      the Internet suite of protocols, values should be
      calculated accordingly:

          layer functionality
              1 physical (e.g., repeaters)
              2 datalink/subnetwork (e.g., bridges)
              3 internet (e.g., IP gateways)
              4 end-to-end (e.g., IP hosts)
              7 applications (e.g., mail relays)

      For systems including OSI protocols, layers 5 and
      6 may also be counted."

-- the Address Translation group

-- Implementation of the Address Translation group is
-- mandatory for all systems. Note however that this group
-- is deprecated by MIB-II. That is, it is being included

-- solely for compatibility with MIB-I nodes, and will most
-- likely be excluded from MIB-III nodes. From MIB-II and
-- onwards, each network protocol group contains its own
-- address translation tables.

-- The Address Translation group contains one table which is
-- the union across all interfaces of the translation tables
-- for converting a NetworkAddress (e.g., an IP address) into
-- a subnetwork-specific address. For lack of a better term,
-- this document refers to such a subnetwork-specific address

-- as a `physical' address.

-- Examples of such translation tables are: for broadcast

-- media where ARP is in use, the translation table is

-- equivalent to the ARP cache; or, on an X.25 network where

-- non-algorithmic translation to X.121 addresses is

-- required, the translation table contains the

-- NetworkAddress to X.121 address equivalences.

atTable OBJECT-TYPE

  SYNTAX SEQUENCE OF AtEntry

  ACCESS not-accessible

  STATUS deprecated

  DESCRIPTION

      "The Address Translation tables contain the

      NetworkAddress to `physical' address equivalences.

      Some interfaces do not use translation tables for

      determining address equivalences (e.g., DDN-X.25

      has an algorithmic method); if all interfaces are

      of this type, then the Address Translation table

      is empty, i.e., has zero entries."

  ::= { at 1 }

  DESCRIPTION
       "The type of route. Note that the values
       direct(3) and indirect(4) refer to the notion of
       direct and indirect routing in the IP

architecture.

Setting this object to the value invalid(2) has
the effect of invalidating the corresponding entry
in the ipRouteTable object. That is, it
effectively dissasociates the destination
identified with said entry from the route
identified with said entry. It is an
implementation-specific matter as to whether the
agent removes an invalidated entry from the table.
Accordingly, management stations must be prepared
to receive tabular information from agents that
corresponds to entries not currently in use.
Proper interpretation of such entries requires
examination of the relevant ipRouteType object."

        timeWait(11),
        deleteTCB(12)
      }
  ACCESS  read-write
  STATUS  mandatory
  DESCRIPTION
        "The state of this TCP connection.

        The only value which may be set by a management
        station is deleteTCB(12).  Accordingly, it is
        appropriate for an agent to return a `badValue'
        response if a management station attempts to set
        this object to any other value.

        If a management station sets this object to the
        value deleteTCB(12), then this has the effect of
        deleting the TCB (as defined in RFC 793) of the
        corresponding connection on the managed node,
        resulting in immediate termination of the
        connection.

        As an implementation-specific option, a RST
        segment may be sent from the managed node to the
        other TCP endpoint (note however that RST segments
        are not sent reliably)."

  ACCESS read-write
  STATUS mandatory
  DESCRIPTION
        "A control variable used to trigger operator-
        initiated Start and Stop events. When read, this
        variable always returns the most recent value that
        egpNeighEventTrigger was set to. If it has not
        been set since the last initialization of the
        network management subsystem on the node, it
        returns a value of `stop'.

        When set, this variable causes a Start or Stop
        event on the specified neighbor, as specified on
        pages 8-10 of RFC 904. Briefly, a Start event
        causes an Idle peer to begin neighbor acquisition
        and a non-Idle peer to reinitiate neighbor
        acquisition. A stop event causes a non-Idle peer
        to return to the Idle state until a Start event
        occurs, either via egpNeighEventTrigger or
        otherwise."

-- the Transmission group

-- Based on the transmission media underlying each interface
-- on a system, the corresponding portion of the Transmission
-- group is mandatory for that system.

-- When Internet-standard definitions for managing
-- transmission media are defined, the transmission group is
-- used to provide a prefix for the names of those objects.

-- Typically, such definitions reside in the experimental
-- portion of the MIB until they are "proven", then as a

-- part of the Internet standardization process, the
-- definitions are accordingly elevated and a new object
-- identifier, under the transmission group is defined. By
-- convention, the name assigned is:
--
--   type OBJECT IDENTIFIER   ::= { transmission number }
--
-- where "type" is the symbolic value used for the media in
-- the ifType column of the ifTable object, and "number" is
-- the actual integer value corresponding to the symbol.

-- the SNMP group

-- Implementation of the SNMP group is mandatory for all
-- systems which support an SNMP protocol entity. Some of
-- the objects defined below will be zero-valued in those
-- SNMP implementations that are optimized to support only
-- those functions specific to either a management agent or
-- a management station. In particular, it should be
-- observed that the objects below refer to an SNMP entity,
-- and there may be several SNMP entities residing on a
-- managed node (e.g., if the node is hosting acting as
-- a management station).

DESCRIPTION

"This is the MIB Module for DOCSIS 2.0-compliant Radio

Frequency (RF) interfaces in Cable Modems and

Cable Modem Termination Systems.

REVISION   "200605240000Z"

DESCRIPTION

"Revision of the IETF RF MIB module for DOCSIS 2.0.

This version published as RFC 4546.

This MIB module revision includes the following

among others:

Usage of ifType (205) for upstream logical channels.

Addition of downstream and upstream utilization

counters.

Additional statistics per upstream interface.

Upstream channel offline configuration mechanism.

Added MIB support for new DOCSIS 2.0 modulation

attributes.

Euro-DOCSIS downstream interleave values.

Adjustments to RFC 2670 definitions based on

the MIB review guidelines from the IETF

Operations and Management Area (OPS)."

REVISION "199908190000Z"

DESCRIPTION

"Initial version, published as RFC 2670.

Modified by Mike St. Johns to fix problems identified by

the first pass of the MIB doctor. Of special note,
docsIfRangingResp and docsIfCmtsInsertionInterval were
obsoleted and replaced by other objects with the same
functionality, but with more appropriate syntax."

scdma(3),
tdmaAndAtdma(4)
}

DocsEqualizerData ::= TEXTUAL-CONVENTION
STATUS   current
DESCRIPTION
"This data type represents the equalizer data
as measured at the receiver interface.
The format of the equalizer follows the structure of the
Transmit Equalization Adjust RNG-RSP TLV of DOCSIS RFI
v2.0 :
1 byte Main tap location 1..(n + m)
1 byte Number of forward taps per symbol
1 byte Number of forward taps: n
1 byte Number of reverse taps: m

Following are the equalizer coefficients:
First, forward taps coefficients:
2 bytes F1 (real), 2 bytes F1 (imag)

...
        2 bytes Fn (real), 2 bytes Fn (imag)

        Then, reverse taps coefficients:
        2 bytes D1 (real), 2 bytes D1 (imag)
        ...

        2 bytes Dm (real), 2 bytes Dm (imag)

        The equalizer coefficients are considered signed 16-bit
        integers in the range from -32768 (0x8000) to 32767
        (0x7FFF).

        DOCSIS specifications require up to a maximum of
        64 equalizer taps (n + m); therefore, this object size
         can get up 260 bytes (4 + 4x64).
        The minimum object size (other than zero) for a t-spaced
        tap with a minimum of 8 symbols will be 36 (4 + 4x8)."

  MAX-ACCESS not-accessible

  STATUS   current

  DESCRIPTION

   "This table describes the attributes of attached upstream

   channels."

 ::= { docsIfBaseObjects 2 }

docsIfUpstreamChannelEntry OBJECT-TYPE

  SYNTAX   DocsIfUpstreamChannelEntry

  MAX-ACCESS not-accessible

  STATUS   current

  DESCRIPTION

   "List of attributes for a single upstream channel. For

   DOCSIS 2.0 CMTSs, an entry in this table exists for

   each ifEntry with an ifType of docsCableUpstreamChannel

   (205).

   For DOCSIS 1.x CM/CMTSs and DOCSIS 2.0 CMs, an entry in

this table exists for each ifEntry with an ifType of
docsCableUpstream (129).

For DOCSIS 2.0 CMTSs, two classes of interfaces can be
defined for this table:
  o Upstream Physical Interfaces: The traditional DOCSIS
    1.x CMTS upstream interface ifType 129 and the DOCSIS
    2.0 ifType 205 that are functional. In other words,
    interfaces that represent upstream receivers within
    an RF MAC interface.
    Entries of physical interfaces are exposed to the
    management interface with their corresponding
    ifStack hierarchy and are not administratively
    created by this table.

  o Upstream Temporary Interfaces: A fictitious
    interface created for the purpose of manipulating
    physical interface parameters offline, then
    validating prior to updating the target physical
    interface.

In case of a reinitialization of the managed system,
physical interfaces values persist while the temporary
interfaces are not recreated.

This mechanism helps to minimize service disruptions
originating in situations where a group of interface
parameter values need to be consistent with each other
in SET operations. A temporary buffer
(temporary interface) is provided to allow the CMTS
to validate the parameters offline."

        "An entry identical to the docsIfModIndex in the
        docsIfCmtsModulationTable that describes this channel.
        This channel is further instantiated there by a grouping
        of interval usage codes (IUCs) that, together, fully
        describe the channel modulation. This object returns 0 if
        the docsIfCmtsModulationTable entry does not exist or is
        empty. See the associated conformance object for write
        conditions and limitations.

        Setting this object returns an 'inconsistentValue'
        error if the following conditions are not satisfied:
        1. All the IUC entries in the selected modulation profile
        MUST have the same value of docsIfCmtsModChannelType.
        2. All of the Modulation parameters in the selected
        modulation profile MUST be consistent with the other
        parameters in this docsIfUpstreamChannelEntry."

docsIfUpChannelUpdate OBJECT-TYPE
  SYNTAX   TruthValue
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
    "Used to perform the copy of adjusted parameters from the
    temporary interface entry to the physical interface
    indicated by the docsIfUpChannelCloneFrom object. The
    transfer is initiated through an SNMP SET to 'true' of

    this object.
    A SET to 'true' fails and returns error 'commitFailed'
    if docsIfUpChannelStatus value is 'notInService', which
    means that the interface parameters values are not
    compatible with each other or have not been validated yet.
    Reading this object always returns 'false'."
 ::= { docsIfUpstreamChannelEntry 17 }

docsIfUpChannelStatus OBJECT-TYPE

SYNTAX   RowStatus
MAX-ACCESS read-create
STATUS   current
DESCRIPTION
　　"This object is only used for the creation of a temporary
　　upstream row with the purpose of updating the parameters
　　of a physical upstream channel entry.

　　The following restrictions apply to this object:
　　1. This object is not writable for physical interfaces.
　　2. Temporary interface entries are only created by a SET
　　　of this object to createandWait(5).
　　3. ifAdminStatus from the Interface MIB RFC 2863 is used
　　　to take a physical upstream channel offline, to be
　　　consistent with DOCSIS 1.x operation, as indicated in
　　　RFC 2670.
　　　In addition,
　　　　o ifAdminStatus 'down' is reflected in this object
　　　　　as 'notInService'.
　　　　o ifOperStatus 'down' while ifAdminStatus 'up' is
　　　　　reflected in this object as 'notInservice'.
　　4. Temporary created rows MUST be set to 'active' with
　　　the purpose of validating upstream parameter
　　　consistency prior to transferring the parameters to the
　　　physical interface.

　　Below is a mandatory procedure for adjusting the values
　　of a physical interface:
　　1. Create a temporary interface entry through an SNMP SET
　　　using 'createAndWait'. At this point, the RowStatus
　　　reports 'notReady'.
　　　The Manager entity uses an ifIndex value outside the
　　　operational range of the physical interfaces for the
　　　creation of a temporary interface.
　　2. Set the docsIfUpChannelCloneFrom object to the ifIndex
　　　value of the physical row to update. Now
　　　docsIfUpChannelStatus reports 'notInService'.
　　3. Change the upstream parameters to the desired values
　　　in the temporary row.

　　4. Validate that all parameters are consistent by setting
　　　docsIfUpChannelStatus to 'active'. A failure to set the
　　　RowStatus to 'active' returns the error 'commitFailed',
　　　which means the parameters are not compatible with the
　　　target physical interface.
　　5. With docsIfUpChannelStatus 'active', transfer the

parameters to the target physical interface by setting
the object docsIfUpChannelUpdate to 'true'.
6. Delete the temporary row by setting
docsIfUpChannelStatus to 'destroy'."

    DESCRIPTION

"Describes the attributes for a single class of service.
If implemented as read-create in the Cable Modem
Termination System, creation of entries in this table is
controlled by the value of
docsIfCmtsQosProfilePermissions.

If implemented as read-only, entries are created based
on information in REG-REQ MAC messages received from
cable modems (for Cable Modem Termination System), or
based on information extracted from the TFTP option file
(for Cable Modem).
In the Cable Modem Termination System, read-only entries
are removed if no longer referenced by
docsIfCmtsServiceTable.

An entry in this table MUST not be removed while it is
referenced by an entry in docsIfCmServiceTable (Cable
Modem) or docsIfCmtsServiceTable (Cable Modem Termination
System).

An entry in this table SHOULD NOT be changeable while
it is referenced by an entry in docsIfCmtsServiceTable.

If this table is created automatically, there SHOULD only
be a single entry for each Class of Service. Multiple
entries with the same Class of Service parameters are NOT
RECOMMENDED."

    DESCRIPTION
        "Current cable modem connectivity state, as specified
        in the RF Interface Specification. Returned status
        information is the CM status, as assumed by the CMTS,
        and indicates the following events:
        other(1)
            Any state other than below.
        ranging(2)
            The CMTS has received an Initial Ranging Request
            message from the CM, and the ranging process is not
            yet complete.
        rangingAborted(3)
            The CMTS has sent a Ranging Abort message to the CM.

rangingComplete(4)

    The CMTS has sent a Ranging Complete message to the CM.

ipComplete(5)

    The CMTS has received a DHCP reply message and
forwarded it to the CM.

registrationComplete(6)

    The CMTS has sent a Registration Response message to
the CM.

accessDenied(7)

    The CMTS has sent a Registration Aborted message
to the CM.

operational(8)

    Value 8 is considered reserved and should not be defined
in future revisions of this MIB module to avoid conflict
with documented implementations that support value 8 to
indicate operational state after completing the BPI
initialization process.

registeredBPIInitializing(9)

    Baseline Privacy (BPI) is enabled and the CMTS is in the
process of completing BPI initialization. This state
MAY last for a significant length of time if failures
occur during the initialization process. After
completion of BPI initialization, the CMTS will report
registrationComplete(6).

The CMTS only needs to report states it is able to
detect."

-- The following independent object and associated table provide
-- operators with a mechanism to evaluate the load/utilization of
-- both upstream and downstream physical channels. This information
-- may be used for capacity planning and incident analysis and may
-- be particularly helpful in provisioning of high value QOS.
--
-- Utilization is expressed as an index representing the calculated
-- percentage utilization of the upstream or downstream channel in
-- the most recent sampling interval (i.e., utilization interval).
-- Refer to the DESCRIPTION field of the
-- docsIfCmtsChannelUtUtilization object for definitions and
-- calculation details.

docsIfCmtsChannelUtilizationInterval OBJECT-TYPE

```
        SYNTAX      Integer32 (0..86400)
        UNITS       "seconds"
        MAX-ACCESS  read-write
        STATUS      current
        DESCRIPTION
            "The time interval in seconds over which the channel
            utilization index is calculated.  All upstream/downstream
            channels use the same
            docsIfCmtsChannelUtilizationInterval.

            Setting a value of zero disables utilization reporting.
            A channel utilization index is calculated over a fixed
            window applying to the most recent
            docsIfCmtsChannelUtilizationInterval.  It would therefore
            be prudent to use a relatively short
            docsIfCmtsChannelUtilizationInterval.
            It is a vendor decision whether to reset the timer when
            docsIfCmtsChannelUtilizationInterval is changed during a
            utilization sampling period."

    STATUS      current
    DESCRIPTION
        "The calculated and truncated utilization index for this
        physical upstream or downstream channel, accurate as of
        the most recent docsIfCmtsChannelUtilizationInterval.

        Upstream Channel Utilization Index:

        The upstream channel utilization index is expressed as a
        percentage of mini-slots utilized on the physical channel,
        regardless of burst type.  For an Initial Maintenance
        region, the mini-slots for the complete region are
        considered utilized if the CMTS received an upstream
        burst within the region from any CM on the physical
        channel.  For contention REQ and REQ/DATA regions, the
        mini-slots for a transmission opportunity within the
        region are considered utilized if the CMTS received an
```

upstream burst within the opportunity from any CM on the physical channel. For all other regions, utilized mini-slots are those in which the CMTS granted bandwidth to any unicast SID on the physical channel.

For an upstream interface that has multiple logical upstream channels enabled, the utilization index is a weighted sum of utilization indices for the logical channels. The weight for each utilization index is the percentage of upstream mini-slots allocated for the corresponding logical channel.
Example:
If 75% of bandwidth is allocated to the first logical channel and 25% to the second, and the utilization indices for each are 60 and 40, respectively, the

utilization index for the upstream physical channel is (60 * 0.75) + (40 * 0.25) = 55. This figure applies to the most recent utilization interval.

Downstream Channel Utilization Index:

The downstream channel utilization index is a percentage expressing the ratio between bytes used to transmit data versus the total number of bytes transmitted in the raw bandwidth of the MPEG channel. As with the upstream utilization index, the calculated value represents the most recent utilization interval.
Formula:
Downstream utilization index =
(100 * (data bytes / raw bytes))

Definitions:
Data bytes: Number of bytes transmitted as data in the docsIfCmtsChannelUtilizationInterval. Identical to docsIfCmtsDownChannelCtrUsed Bytes measured over the utilization interval.
Raw bandwidth: Total number of bytes available for transmitting data, not including bytes used for headers and other overhead.
Raw bytes: (raw bandwidth * docsIfCmtsChannelUtilizationInterval). Identical to docsIfCmtsDownChannelCtrTotal Bytes measured over the utilization interval."

```

DESCRIPTION
"The MIB module for managing the new Ethernet OAM features
introduced by the Ethernet in the First Mile taskforce (IEEE
802.3ah). The functionality presented here is based on IEEE
802.3ah [802.3ah], released in October, 2004. [802.3ah] was
prepared as an addendum to the standing version of IEEE 802.3
[802.3-2002]. Since then, [802.3ah] has been
merged into the base IEEE 802.3 specification in [802.3-2005].

In particular, this MIB focuses on the new OAM functions
introduced in Clause 57 of [802.3ah]. The OAM functionality
of Clause 57 is controlled by new management attributes
introduced in Clause 30 of [802.3ah]. The OAM functions are
not specific to any particular Ethernet physical layer, and
can be generically applied to any Ethernet interface of
[802.3-2002].

An Ethernet OAM protocol data unit is a valid Ethernet frame
with a destination MAC address equal to the reserved MAC
address for Slow Protocols (See 43B of [802.3ah]), a
lengthOrType field equal to the reserved type for Slow
Protocols, and a Slow Protocols subtype equal to that of the
subtype reserved for Ethernet OAM. OAMPDU is used throughout
this document as an abbreviation for Ethernet OAM protocol
data unit.

The following reference is used throughout this MIB module:

  [802.3ah] refers to:
    IEEE Std 802.3ah-2004: 'Draft amendment to -
    Information technology - Telecommunications and
    information exchange between systems - Local and

metropolitan area networks - Specific requirements - Part 3: Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications - Media Access Control Parameters, Physical Layers and Management Parameters for subscriber access networks', October 2004.

[802.3-2002] refers to:
IEEE Std 802.3-2002:
'Information technology - Telecommunications and information exchange between systems - Local and metropolitan area networks - Specific requirements - Part 3: Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications - Media Access Control Parameters, Physical Layers and Management Parameters for subscriber access networks', March 2002.

[802.3-2005] refers to:
IEEE Std 802.3-2005:
'Information technology - Telecommunications and information exchange between systems - Local and metropolitan area networks - Specific requirements - Part 3: Carrier sense multiple access with collision detection (CSMA/CD) access method and physical layer specifications - Media Access Control Parameters, Physical Layers and Management Parameters for subscriber access networks', December 2005.

[802-2001] refers to:
'IEEE Standard for LAN/MAN (Local Area Network/Metropolitan Area Network): Overview and Architecture', IEEE 802, June 2001.

DESCRIPTION
"At initialization and failure conditions, two OAM entities on

the same full-duplex Ethernet link begin a discovery phase to
determine what OAM capabilities may be used on that link. The
progress of this initialization is controlled by the OA
sublayer.

This value is always disabled(1) if OAM is disabled on this
interface via the dot3OamAdminState.

If the link has detected a fault and is transmitting OAMPDUs
with a link fault indication, the value is linkFault(2).
Also, if the interface is not operational (ifOperStatus is
not up(1)), linkFault(2) is returned. Note that the object
ifOperStatus may not be up(1) as a result of link failure or
administrative action (ifAdminState being down(2) or
testing(3)).

The passiveWait(3) state is returned only by OAM entities in
passive mode (dot3OamMode) and reflects the state in which the
OAM entity is waiting to see if the peer device is OA
capable. The activeSendLocal(4) value is used by active mode
devices (dot3OamMode) and reflects the OAM entity actively
trying to discover whether the peer has OAM capability but has
not yet made that determination.

The state sendLocalAndRemote(5) reflects that the local OA
entity has discovered the peer but has not yet accepted or
rejected the configuration of the peer. The local device can,
for whatever reason, decide that the peer device is
unacceptable and decline OAM peering. If the local OAM entity
rejects the peer OAM entity, the state becomes
oamPeeringLocallyRejected(7). If the OAM peering is allowed
by the local device, the state moves to
sendLocalAndRemoteOk(6). Note that both the
sendLocalAndRemote(5) and oamPeeringLocallyRejected(7) states
fall within the state SEND_LOCAL_REMOTE of the Discovery state
diagram [802.3ah, Figure 57-5], with the difference being
whether the local OAM client has actively rejected the peering
or has just not indicated any decision yet. Whether a peering
decision has been made is indicated via the local flags field
in the OAMPDU (reflected in the aOAMLocalFlagsField of
30.3.6.1.10).

If the remote OAM entity rejects the peering, the state

becomes oamPeeringRemotelyRejected(8). Note that both the
sendLocalAndRemoteOk(6) and oamPeeringRemotelyRejected(8)
states fall within the state SEND_LOCAL_REMOTE_OK of the
Discovery state diagram [802.3ah, Figure 57-5], with the
difference being whether the remote OAM client has rejected

the peering or has just not yet decided. This is indicated
via the remote flags field in the OAMPDU (reflected in the
aOAMRemoteFlagsField of 30.3.6.1.11).

When the local OAM entity learns that both it and the remote
OAM entity have accepted the peering, the state moves to
operational(9) corresponding to the SEND_ANY state of the
Discovery state diagram [802.3ah, Figure 57-5].

Since Ethernet OAM functions are not designed to work
completely over half-duplex interfaces, the value
nonOperHalfDuplex(10) is returned whenever Ethernet OAM is
enabled (dot3OamAdminState is enabled(1)), but the interface
is in half-duplex operation.

 SYNTAX   INTEGER {
         passive(1),
         active(2)
         }
 MAX-ACCESS read-write
 STATUS   current
 DESCRIPTION
   "This object configures the mode of OAM operation for this
   Ethernet-like interface. OAM on Ethernet interfaces may be in
   'active' mode or 'passive' mode. These two modes differ in
   that active mode provides additional capabilities to initiate
   monitoring activities with the remote OAM peer entity, while
   passive mode generally waits for the peer to initiate OA
   actions with it. As an example, an active OAM entity can put
   the remote OAM entity in a loopback state, where a passive OA
   entity cannot.

   The default value of dot3OamMode is dependent on the type of
   system on which this Ethernet-like interface resides. The
   default value should be 'active(2)' unless it is known that
   this system should take on a subservient role to the other

device connected over this interface.

Changing this value results in incrementing the configuration
revision field of locally generated OAMPDUs (30.3.6.1.12) and
potentially re-doing the OAM discovery process if the
dot3OamOperStatus was already operational(9).

        }

MAX-ACCESS read-only
STATUS   current
DESCRIPTION
  "The OAM functions supported on this Ethernet-like interface.
  OAM consists of separate functional sets beyond the basic
  discovery process that is always required. These functional
  groups can be supported independently by any implementation.
  These values are communicated to the peer via the local
  configuration field of Information OAMPDUs.

  Setting 'unidirectionalSupport(0)' indicates that the OA

  entity supports the transmission of OAMPDUs on links that are
  operating in unidirectional mode (traffic flowing in one
  direction only). Setting 'loopbackSupport(1)' indicates that
  the OAM entity can initiate and respond to loopback commands.
  Setting 'eventSupport(2)' indicates that the OAM entity can
  send and receive Event Notification OAMPDUs. Setting
  'variableSupport(3)' indicates that the OAM entity can send
  and receive Variable Request and Response OAMPDUs.

         variableSupport(3)
         }
 MAX-ACCESS read-only

STATUS   current
DESCRIPTION
  "The OAM functions supported on this Ethernet-like interface.
  OAM consists of separate functionality sets above the basic
  discovery process. This value indicates the capabilities of
  the peer OAM entity with respect to these functions. This
  value is initialized so all bits are clear.

  If unidirectionalSupport(0) is set, then the peer OAM entity
  supports sending OAM frames on Ethernet interfaces when the
  receive path is known to be inoperable. If
  loopbackSupport(1) is set, then the peer OAM entity can send
  and receive OAM loopback commands. If eventSupport(2) is set,
  then the peer OAM entity can send and receive event OAMPDUs to
  signal various error conditions. If variableSupport(3) is
  set, then the peer OAM entity can send and receive variable
  requests to monitor the attribute value as described in Clause
  57 of [802.3ah].

  The capabilities of the OAM peer can be determined from the
  configuration field of the Local Information TLV of the most
  recently received Information OAMPDU with a Local Information
  TLV. All zeros are returned if no Local Information TLV has

  yet been received.

dot3OamLoopbackTable OBJECT-TYPE
 SYNTAX   SEQUENCE OF Dot3OamLoopbackEntry
 MAX-ACCESS not-accessible
 STATUS   current
 DESCRIPTION
  "This table contains controls for the loopback state of the
  local link as well as indicates the status of the loopback
  function. There is one entry in this table for each entry in
  dot3OamTable that supports loopback functionality (where
  dot3OamFunctionsSupported includes the loopbackSupport bit
  set).

Loopback can be used to place the remote OAM entity in a state
where every received frame (except OAMPDUs) is echoed back
over the same interface on which they were received. In this
state, at the remote entity, 'normal' traffic is disabled as
only the looped back frames are transmitted on the interface.
Loopback is thus an intrusive operation that prohibits normal
data flow and should be used accordingly.
"

 SYNTAX   INTEGER {
         -- all values, except where noted, can be read
         -- but cannot be written
         noLoopback (1),

         -- initiatingLoopback can be read or written
         initiatingLoopback (2),
         remoteLoopback (3),

         -- terminatingLoopback can be read or written
         terminatingLoopback (4),
         localLoopback (5),
         unknown (6)

}
MAX-ACCESS read-write
STATUS   current
DESCRIPTION
 "The loopback status of the OAM entity. This status is
 determined by a combination of the local parser and
 multiplexer states, the remote parser and multiplexer states,
 as well as by the actions of the local OAM client. When
 operating in normal mode with no loopback in progress, the
 status reads noLoopback(1).

 The values initiatingLoopback(2) and terminatingLoopback(4)
 can be read or written. The other values can only be read -
 they can never be written. Writing initiatingLoopback causes
 the local OAM entity to start the loopback process with its
 peer. This value can only be written when the status is
 noLoopback(1). Writing the value initiatingLoopback(2) in any
 other state has no effect. When in remoteLoopback(3), writing
 terminatingLoopback(4) causes the local OAM entity to initiate
 the termination of the loopback state. Writing
 terminatingLoopack(4) in any other state has no effect.

 If the OAM client initiates a loopback and has sent a
 Loopback OAMPDU and is waiting for a response, where the local
 parser and multiplexer states are DISCARD (see [802.3ah,
 57.2.11.1]), the status is 'initiatingLoopback'. In this
 case, the local OAM entity has yet to receive any
 acknowledgment that the remote OAM entity has received its
 loopback command request.

 If the local OAM client knows that the remote OAM entity is in
 loopback mode (via the remote state information as described
 in [802.3ah, 57.2.11.1, 30.3.6.1.15]), the status is
 remoteLoopback(3). If the local OAM client is in the process
 of terminating the remote loopback [802.3ah, 57.2.11.3,
 30.3.6.1.14] with its local multiplexer and parser states in
 DISCARD, the status is terminatingLoopback(4). If the remote
 OAM client has put the local OAM entity in loopback mode as
 indicated by its local parser state, the status is
 localLoopback(5).

 The unknown(6) status indicates that the parser and
 multiplexer combination is unexpected. This status may be
 returned if the OAM loopback is in a transition state but
 should not persist.

The values of this attribute correspond to the following
values of the local and remote parser and multiplexer states.

```
value          LclPrsr  LclMux   RmtPrsr  RmtMux
noLoopback     FWD      FWD      FWD      FWD
initLoopback   DISCARD  DISCARD  FWD      FWD
rmtLoopback    DISCARD  FWD      LPBK     DISCARD
tmtngLoopback  DISCARD  DISCARD  LPBK     DISCARD
lclLoopback    LPBK     DISCARD  DISCARD  FWD
unknown        ***  any other combination  ***

dot3OamFramesLostDueToOam OBJECT-TYPE
 SYNTAX   Counter32
 UNITS   "frames"
 MAX-ACCESS read-only
 STATUS   current
 DESCRIPTION
  "A count of the number of frames that were dropped by the OA
   multiplexer. Since the OAM multiplexer has multiple inputs
   and a single output, there may be cases where frames are
   dropped due to transmit resource contention. This counter is
   incremented whenever a frame is dropped by the OAM layer.
   Note that any Ethernet frame, not just OAMPDUs, may be dropped
   by the OAM layer. This can occur when an OAMPDU takes
   precedence over a 'normal' frame resulting in the 'normal'
   frame being dropped.

   When this counter is incremented, no other counters in this
   MIB are incremented.

   Discontinuities of this counter can occur at re-initialization
   of the management system, and at other times as indicated by
   the value of the ifCounterDiscontinuityTime.

dot3OamEventConfigTable OBJECT-TYPE
 SYNTAX   SEQUENCE OF Dot3OamEventConfigEntry
 MAX-ACCESS not-accessible
 STATUS   current
 DESCRIPTION
   "Ethernet OAM includes the ability to generate and receive
   Event Notification OAMPDUs to indicate various link problems.
   This table contains the mechanisms to enable Event

   Notifications and configure the thresholds to generate the
   standard Ethernet OAM events. There is one entry in the table
   for every entry in dot3OamTable that supports OAM events
   (where dot3OamFunctionsSupported includes the eventSupport
   bit set). The values in the table are maintained across
   changes to dot3OamOperStatus.

   The standard threshold crossing events are:
     - Errored Symbol Period Event. Generated when the number of
       symbol errors exceeds a threshold within a given window
       defined by a number of symbols (for example, 1,000 symbols
       out of 1,000,000 had errors).
     - Errored Frame Period Event. Generated when the number of
       frame errors exceeds a threshold within a given window
       defined by a number of frames (for example, 10 frames out
       of 1000 had errors).
     - Errored Frame Event. Generated when the number of frame
       errors exceeds a threshold within a given window defined
       by a period of time (for example, 10 frames in 1 second
       had errors).
     - Errored Frame Seconds Summary Event. Generated when the
       number of errored frame seconds exceeds a threshold within
       a given time period (for example, 10 errored frame seconds
       within the last 100 seconds). An errored frame second is
       defined as a 1 second interval which had >0 frame errors.
   There are other events (dying gasp, critical events) that are
   not threshold crossing events but which can be
   enabled/disabled via this table.

dot3OamEventLogTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF Dot3OamEventLogEntry
  MAX-ACCESS   not-accessible
  STATUS   current
  DESCRIPTION
    "This table records a history of the events that have occurred
    at the Ethernet OAM level. These events can include locally
    detected events, which may result in locally generated
    OAMPDUs, and remotely detected events, which are detected by
    the OAM peer entity and signaled to the local entity via

    Ethernet OAM. Ethernet OAM events can be signaled by Event
    Notification OAMPDUs or by the flags field in any OAMPDU.

    This table contains both threshold crossing events and
    non-threshold crossing events. The parameters for the
    threshold window, threshold value, and actual value
    (dot3OamEventLogWindowXX, dot3OamEventLogThresholdXX,
    dot3OamEventLogValue) are only applicable to threshold
    crossing events, and are returned as all F's (2^32 - 1) for
    non-threshold crossing events.

Entries in the table are automatically created when such
events are detected. The size of the table is implementation
dependent. When the table reaches its maximum size, older
entries are automatically deleted to make room for newer
entries.

 ::= { dot3OamEventLogEntry 3 }

dot3OamEventLogType   OBJECT-TYPE
 SYNTAX   Unsigned32

 MAX-ACCESS read-only
 STATUS   current
 DESCRIPTION
  "The type of event that generated this entry in the event log.

When the OUI is the IEEE 802.3 OUI of 0x0180C2, the following
event types are defined:
    erroredSymbolEvent(1),
    erroredFramePeriodEvent(2),
    erroredFrameEvent(3),
    erroredFrameSecondsEvent(4),
    linkFault(256),
    dyingGaspEvent(257),
    criticalLinkEvent(258)
The first four are considered threshold crossing events, as
they are generated when a metric exceeds a given value within
a specified window. The other three are not threshold
crossing events.

When the OUI is not 71874 (0x0180C2 in hex), then some other
organization has defined the event space. If event subtyping
is known to the implementation, it may be reflected here.
Otherwise, this value should return all F's (2^32 - 1).

  STATUS            current
  DESCRIPTION
     "Upon initialization, or upon creation of a row containing an
  object of this type, and after any successful SET of this value, a
  GET of this value returns 'y' where y = g^xa MOD p, and where g is
```

the base from usmDHParameters, p is the prime from
usmDHParameters, and xa is a new random integer selected by the
agent in the interval $2^{(l-1)} <= xa < 2^l < p-1$. 'l' is the
optional privateValueLength from usmDHParameters in bits. If 'l'
is omitted, then xa (and xr below) is selected in the interval 0
$<= xa < p-1$. y is expressed as an OCTET STRING 'PV' of length 'k'
which satisfies

$$y = \sum_{i=1}^{k} 2^{(8(k-i))} PV'i$$

where PV1,...,PVk are the octets of PV from first to last, and
where PV1 <> 0.

A successful SET consists of the value 'y' expressed as an OCTET
STRING as above concatenated with the value 'z'(expressed as an
OCTET STRING in the same manner as y) where $z = g^{xr}$ MOD p, where
g, p and l are as above, and where xr is a new random integer
selected by the manager in the interval $2^{(l-1)} <= xr < 2^l <$
p-1. A SET to an object of this type will fail with the error
wrongValue if the current 'y' does not match the 'y' portion of
the value of the varbind for the object. (E.g. GET yout, SET
concat(yin, z), yout <> yin).

Note that the private values xa and xr are never transmitted from
manager to device or vice versa, only the values y and z.
Obviously, these values must be retained until a successful SET on
the associated object.

The shared secret 'sk' is calculated at the agent as $sk = z^{xa}$ MOD
p, and at the manager as $sk = y^{xr}$ MOD p.

Each object definition of this type MUST describe how to map from
the shared secret 'sk' to the operational key value used by the
protocols and operations related to the object. In general, if n
bits of key are required, the author suggests using the n
right-most bits of the shared secret as the operational key value."

usmDHKickstartTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF UsmDHKickstartEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "A table of mappings between zero or more Diffie-Helman key
    agreement values and entries in the usmUserTable. Entries in this
    table are created by providing the associated device with a
    Diffie-Helman public value and a usmUserName/usmUserSecurityName
    pair during initialization. How these values are provided is
    outside the scope of this MIB, but could be provided manually, or
    through a configuration file. Valid public value/name pairs
    result in the creation of a row in this table as well as the
    creation of an associated row (with keys derived as indicated) in
    the usmUserTable. The actual access the related usmSecurityName
    has is dependent on the entries in the VACM tables. In general,
    an implementor will specify one or more standard security names
    and will provide entries in the VACM tables granting various
    levels of access to those names. The actual content of the VACM
    table is beyond the scope of this MIB.

    Note: This table is expected to be readable without authentication
    using the usmUserSecurityName 'dhKickstart'. See the conformance
    statements for details."

  ::= { usmDHKickstartEntry 1 }

usmDHKickstartMyPublic OBJECT-TYPE
  SYNTAX     OCTET STRING
  MAX-ACCESS  read-only
  STATUS     current
  DESCRIPTION
    "The agent's Diffie-Hellman public value for this row.  At
    initialization, the agent generates a random number and derives
    its public value from that number.  This public value is published
    here.  This public value 'y' equals g^r MOD p where g is the from
    the set of Diffie-Hellman parameters, p is the prime from those
    parameters, and r is a random integer selected by the agent in the
```

interval 2^(l-1) <= r < p-1 < 2^l. If l is unspecified, then r is
a random integer selected in the interval 0 <= r < p-1

The public value is expressed as an OCTET STRING 'PV' of length
'k' which satisfies

```
      k
  y =  SUM   2^(8(k-i)) PV'i
      i = 1
```

    where PV1,...,PVk are the octets of PV from first to last, and
    where PV1 != 0.

The following DH parameters (Oakley group #2, RFC 2409, sec 6.1,
6.2) are used for this object:

g = 2
p = FFFFFFFF FFFFFFFF C90FDAA2 2168C234 C4C6628B 80DC1CD1

usmDHKickstartMgrPublic OBJECT-TYPE
  SYNTAX   OCTET STRING
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION

     "The manager's Diffie-Hellman public value for this row. Note
    that this value is not set via the SNMP agent, but may be set via
    some out of band method, such as the device's configuration file.
    The manager calculates this value in the same manner and using the
    same parameter set as the agent does. E.g. it selects a random
    number 'r', calculates y = g^r mod p and provides 'y' as the
    public number expressed as an OCTET STRING. See
    usmDHKickstartMyPublic for details.

When this object is set with a valid value during initialization,
a row is created in the usmUserTable with the following values:

```
usmUserEngineID          localEngineID
usmUserName              [value of usmDHKickstartSecurityName]
usmUserSecurityName      [value of usmDHKickstartSecurityName]
usmUserCloneFrom         ZeroDotZero
usmUserAuthProtocol      usmHMACMD5AuthProtocol
usmUserAuthKeyChange     -- derived from set value
usmUserOwnAuthKeyChange  -- derived from set value
usmUserPrivProtocol      usmDESPrivProtocol
usmUserPrivKeyChange     -- derived from set value
usmUserOwnPrivKeyChange  -- derived from set value
usmUserPublic            "
usmUserStorageType       permanent
usmUserStatus            active
```

A shared secret 'sk' is calculated at the agent as sk =
mgrPublic^r mod p where r is the agents random number and p is the
DH prime from the common parameters. The underlying privacy key
for this row is derived from sk by applying the key derivation
function PBKDF2 defined in PKCS#5v2.0 with a salt of 0xd1310ba6,
and iterationCount of 500, a keyLength of 16 (for
usmDESPrivProtocol), and a prf (pseudo random function) of
'id-hmacWithSHA1'. The underlying authentication key for this row
is derived from sk by applying the key derivation function PBKDF2
with a salt of 0x98dfb5ac , an interation count of 500, a
keyLength of 16 (for usmHMAC5AuthProtocol), and a prf of
'id-hmacWithSHA1'. Note: The salts are the first two words in the
ks0 [key schedule 0] of the BLOWFISH cipher from 'Applied
Cryptography' by Bruce Schnier - they could be any relatively
random string of bits.

The manager can use its knowledge of its own random number and the
agent's public value to kickstart its access to the agent in a
secure manner. Note that the security of this approach is
directly related to the strength of the authorization security of
the out of band provisioning of the managers public value
(e.g. the configuration file), but is not dependent at all on the
strength of the confidentiality of the out of band provisioning
data."

IANAItuProbableCause ::= TEXTUAL-CONVENTION
  STATUS current
  DESCRIPTION
     "ITU-T probable cause values. Duplicate values defined in
     X.733 are appended with X733 to ensure syntactic uniqueness.
     Probable cause value 0 is reserved for special purposes.

     The Internet Assigned Number Authority (IANA) is responsible
     for the assignment of the enumerations in this TC.
     IANAItuProbableCause value of 0 is reserved for special
     purposes and MUST NOT be assigned.

     Values of IANAItuProbableCause in the range 1 to 1023 are
     reserved for causes that correspond to ITU-T probable cause.

     All other requests for new causes will be handled on a
     first-come, first served basis and will be assigned
     enumeration values starting with 1025.

     Request should come in the form of well-formed

     SMI [RFC2578] for enumeration names that are unique and
     sufficiently descriptive.

     While some effort will be taken to ensure that new probable
     causes do not conceptually duplicate existing probable
     causes it is acknowledged that the existence of conceptual
     duplicates in the starting probable cause list is an known
     industry reality.

     To aid IANA in the administration of probable cause names
     and values, the OPS Area Director will appoint one or more
     experts to help review requests.

     See http://www.iana.org"

     DESCRIPTION
        "Session Initiation Protocol (SIP) Common MIB module. This
        module defines objects that may be common to all SIP entities.

        SIP is an application-layer signaling protocol for creating,
        modifying and terminating multimedia sessions with one or more
        participants. These sessions include Internet multimedia
        conferences and Internet telephone calls. SIP is defined in
        RFC 3261 (June 2002).

        This MIB is defined for managing objects that are common to
        SIP User Agents (UAs), Proxy, Redirect, and Registrar servers.
        Objects specific to each of these entities MAY be managed using
        entity specific MIBs defined in other modules.

        Copyright (C) The IETF Trust (2007). This version of
        this MIB module is part of RFC 4780; see the RFC itself for
        full legal notices."

  SYNTAX     INTEGER {
          unknown(1),
          up(2),
          down(3),
          congested(4),
          restarting(5),
          quiescing(6),
          testing(7)
         }
  MAX-ACCESS  read-only
  STATUS     current
  DESCRIPTION
    "This object contains the current operational state of
     the SIP application.

     unknown    : The operational status cannot be determined
              for some reason.
     up        : The application is operating normally and is
              processing (receiving and possibly issuing) SIP
              requests and responses.
     down      : The application is currently unable to process
              SIP messages.
```

congested : The application is operational but no additional

          inbound transactions can be accommodated at the
          moment.
     restarting : The application is currently unavailable, but it
          is in the process of restarting and will
          presumably, soon be able to process SIP messages.
     quiescing : The application is currently operational
          but has been administratively put into
          quiescence mode. Additional inbound
          transactions MAY be rejected.
     testing   : The application is currently in test mode
          and MAY not be able to process SIP messages.

     The operational status values defined for this object are not
     based on any specific information contained in the SIP
     standard."

-- SIP extensions MAY be supported or required by SIP entities.
--

sipCommonOptionTagTable OBJECT-TYPE
  SYNTAX      SEQUENCE OF SipCommonOptionTagEntry
  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
    "This table contains a list of the SIP option tags (SIP
     extensions) that are either required, supported, or
     unsupported by the SIP entity.  These option tags are
     used in the Require, Proxy-Require, Supported, and
     Unsupported header fields.
```

Example: If a user agent client supports, and requires the
server to support, reliability of provisional responses
(RFC 3262), this table contains a row with the option tag string
'100rel' in sipCommonOptionTag and the OCTET STRING value of
'1010 0000' or '0xA0' in sipCommonOptionTagHeaderField.

If a server does not support the required feature (indicated in
a Require header to a UAS, or in a Proxy-Require to a Proxy
Server), the server returns a 420 Bad Extension listing the
feature in an Unsupported header.

Normally, the list of such features supported by an entity is
static (i.e., will not change over time)."

::= { sipCommonSummaryStatsEntry 4 }

sipCommonSummaryTotalTransactions OBJECT-TYPE
  SYNTAX   Counter32
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    "This object contains a count of the number of transactions that
    are in progress and transactions that have reached the
    'Terminated' state. It is not applicable to stateless SIP Proxy
    Servers.

    A SIP transaction occurs between a client and a server, and
    comprises all messages from the first request sent from the
    client to the server, up to a final (non-1xx) response sent
    from the server to the client.

    If the request is INVITE and the final response is a non-2xx,
    the transaction also include an ACK to the response. The ACK
    for a 2xx response to an INVITE request is a separate
    transaction.

    The branch ID parameter in the Via header field values serves
    as a transaction identifier.

    A transaction is identified by the CSeq sequence number within
    a single call leg. The ACK request has the same CSeq number as
    the corresponding INVITE request, but comprises a transaction
    of its own.

    In the case of a forked request, each branch counts as a single
    transaction.

    For a transaction stateless Proxy Server, this counter is
    always 0.

Discontinuities in the value of this counter can occur at
re-initialization of the SIP entity or service. A Management
Station can detect discontinuities in this counter by
monitoring the sipCommonSummaryDisconTime object in the same
row."

  DESCRIPTION
    "This object controls whether a sipCommonStatusCodeNotif is
    emitted when the status code value specified by
    sipCommonStatusCodeValue is sent or received. If the value of
    this object is 'true', then a notification is sent. If it is
    'false', no notification is sent.
    Note well that a notification MAY be emitted for every message
    sent or received that contains the particular status code.
    Depending on the status code involved, this can cause a
    significant number of notification emissions that could be

detrimental to network performance. Managers are forewarned to
be prudent in the use of this object to enable notifications.
Look to sipCommonStatusCodeNotifEmitMode for alternative
controls for sipCommonStatusCodeNotif emissions."
DEFVAL { false }
::= { sipCommonStatusCodeNotifEntry 1 }

sipCommonStatusCodeNotifEmitMode OBJECT-TYPE
  SYNTAX   INTEGER {
          normal(1),
          oneShot(2),
          triggered(3) -- read-only
        }
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION

   "The object sipCommonStatusCodeNotifSend MUST be set to 'true'
   for the values of this object to have any effect. It is
   RECOMMENDED that the desired emit mode be established by this
   object prior to setting sipCommonStatusCodeNotifSend to 'true'.
   This object and the sipCommonStatusCodeNotifSend object can
   obviously be set independently, but their respective values
   will have a dependency on each other and the resulting
   notifications.

   This object specifies the mode for emissions of
   sipCommonStatusCodeNotif notifications.

   normal   : sipCommonStatusCodeNotif notifications will be
           emitted by the system for each SIP response
           message sent or received that contains the
           desired status code.

   oneShot   : Only one sipCommonStatusCodeNotif notification
           will be emitted. It will be the next SIP response
           message sent or received that contains the
           desired status code.

           No more notifications are emitted until this
           object is set to 'oneShot' again or set to
           'normal'. This option is provided as a means of
           quelling the potential promiscuous behavior that
           can be associated with the
           sipCommonStatusCodeNotif.

```
        triggered : This value is only readable and cannot be set.  It
                reflects that the 'oneShot' case has occurred,
                and indicates that the mode needs to be reset to
                get further notifications.  The mode is reset by
                setting this object to 'oneShot' or 'normal'."

the RTP Map Parameters Table in PacketCable Audio/Video
Codecs Specification [PKT-SP-CODEC]. The literal codec
name for each codec is listed below:

Codec   Literal Codec Name

g729   G729

g729E   G729E

pcmu   PCMU

g726at32   G726-32

g728   G728

pcma   PCMA

g726at16   G726-16

g726at24   G726-24

g726at40   G726-40

ilbc   iLBC

bv16   BV16

The literal codec name is the second column of the table
with codec RTP Map Parameters. The Literal Codec Name Column
contains the codec name used in the local connection
options (LCO) of the NCS messages create connection
(CRCX)/modify connection (MDCX) and is also used to
identify the codec in the Call Management System (CMS)
Provisioning Specification. The RTP Map Parameter column of
the Table contains the string used in the media attribute
line (a=) of the session description protocol (SDP)
parameters in NCS messages."

PktcRingCadence   ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
      "This object provides an encoding scheme for ring

      cadences, including repeatability characteristics. All
      fields in this object MUST be encoded in network-byte
      order.

      The first three higher-order octets are reserved. The
      octets that follow are used to encode a 'bit-string', with
      each bit corresponding to 50 milliseconds. A bit value of
      '1' indicates the presence of a ring-tone, and a bit value
      of '0' indicates the absence of a ring-tone, for that
      duration (50 ms) (Note: A minimum number of octets
      required to encode the bit-string MUST be used).

      The first two of the reserved octets MUST indicate the
      length of the encoded cadence (in bits) and MUST range
      between 1 and 264. (Note: The length in bits MUST also be
      consistent with the number of octets that encode the
      cadence). The MTA MUST ignore any unused bits in the last
      octet, but MUST reflect the value as provided on
      subsequent SNMP GETs.

      The third of the reserved octets indicates 'repeatability'
      and MUST be either 0x80 or 0x00 -- the former value
      indicating 'non-repeatability', and the latter indicating
      'repeatability'.

      The MTA MUST reject attempts to set a value that violates
      any of the above requirements."

--
-- The codec table (pktcSigDevCodecTable) defines all combinations
-- of codecs supported by the Multimedia Terminal Adapter (MTA).
--
pktcSigDevCodecTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF PktcSigDevCodecEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    " This table describes the MTA-supported codec types. An MTA
    MUST populate this table with all possible combinations of
    codecs it supports for simultaneous operation. For example,
    an MTA with two endpoints may be designed with a particular
    Digital Signal Processing (DSP) and memory architecture that
    allows it to support the following fixed combinations of
    codecs for simultaneous operation:

    Codec Type   Maximum Number of Simultaneous Codecs
    PCMA   3

    PCMA   2
    PCMU   1

    PCMA   1

```
PCMU                2

PCMU                3

PCMA                1
G729                1

G729                2

PCMU                1
G729                1
```

Based on this example, the entries in the codec table would be:

pktcSigDev CodecComboIndex	pktcSigDev CodecType	pktcSigDev CodecMax
1	pcma	3
2	pcma	2
2	pcmu	1
3	pcma	1
3	pcmu	2
4	pcmu	3
5	pcma	1
5	g729	1
6	g729	2
7	pcmu	1
7	g729	1

An operator querying this table is able to determine all possible codec combinations the MTA is capable of simultaneously supporting.

This table MUST NOT include non-voice codecs."

  STATUS   current
  DESCRIPTION
    " This object is only applicable to the initialRing,
      enableMeterPulse, and meterPulseBurst signal types. This
      object identifies the frequency of the generated signal.
      The following table defines the default values for this
      object depending on signal type:

      pktcSigPulseSignalType   Default
      initialRing   25
      enableMeterPulse   16000
      meterPulseBurst   16000

      The value of twentyfive MUST only be used for the
      initialRing signal type. The values of twelvethousand and
      sixteenthousand MUST only be used for enableMeterPulse and
      meterPulseBurst signal types. An attempt to set this
      object while the value of pktcSigPulseSignalType is not
      initialRing, enableMeterPulse, or meterPulseBurst will
      result in an 'inconsistentValue' error."

      DESCRIPTION
        " For on-hook caller id, pktcSigDevCidMode selects the method
          for representing and signaling caller identification.  For
          the duringRingingETS method, the Frequency Shift Keying
          (FSK) or the Dual-Tone Multi-Frequency (DTMF) containing
          the caller identification information is sent between the
          first and second ring pattern.

          For the dtAsETS,rpAsETS, lrAsETS and lrETS
          methods, the FSK or DTMF containing the caller id
          information is sent before the first ring pattern.

          For the dtAsETS method, the FSK or DTMF is sent after the
          Dual Tone Alert Signal.  For the rpAsETS method, the FSK or
          DTMF is sent after a Ring Pulse.

          For the lrAsETS method, the Line Reversal occurs first,
          then the Dual Tone Alert Signal, and, finally, the FSK or
          DTMF is sent.

          For the lrETS method, the Line Reversal occurs first,
          then the FSK or DTMF is sent.

          The value of this MIB object MUST NOT persist across MTA

STATUS       current
DESCRIPTION
"Cadence rings are defined by the telco governing
body for each country.  The MTA must be able to support
various ranges of cadence patterns and cadence periods.
The MTA will be able to support country-specific
provisioning of the cadence and idle period.  Each
cadence pattern will be assigned a unique value ranging
from 0-127 (inclusive) corresponding to the value of x,
where x is the value sent in the cadence ringing (cr)
signal cr(x), requested per the appropriate NCS
message, and defined in the E package.  The MTA will derive
the cadence periods from the ring cadence table entry, as
provisioned by the customer.  The MTA is allowed to provide
appropriate default values for each of the ring cadences.
This table only needs to be supported when the MTA
implements the E package."

pktcSigDevToneTable   OBJECT-TYPE
  SYNTAX   SEQUENCE OF PktcSigDevToneEntry
  MAX-ACCESS   not-accessible
  STATUS   current
  DESCRIPTION
     " The Tone Table defines the composition of tones and
       various tone operations.

       The definition of the tones callWaiting1 through
       callWaiting4 in this table MUST only contain the
       audible tone itself; the delay between tones or the value
       of the tone repeat count are not applicable for the call
       waiting tones.

       The delay between tones or the repeat count is controlled
       by the objects pktcSigEndPntConfigCallWaitingDelay and
       pktcSigEndPntConfigCallWaitingMaxRep. If the
       pktcSigDevToneType is set to either of the values
       callWaiting1, callWaiting2, callWaiting3, or callWaiting4,
       then the value of the pktcSigDevToneWholeToneRepeatCount
```

object indicates that the particular frequency group is
applicable, as a repeatable part of the tone, based on the
value of the MIB object
pktcSigDevToneWholeToneRepeatCount.

The MTA MUST make sure that, after the provisioning
cycle, the table is fully populated (i.e., for each
possible index, an entry MUST be defined) using
reasonable defaults for each row that was not defined
by the provisioning information delivered via MTA
Configuration.

The frequency composition of each tone is defined by the
pktcSigDevMultiFreqToneTable. For each tone type defined
in pktcSigDevToneTable, the MTA MUST populate at least
one entry in the pktcSigDevMultiFreqToneTable.

For each particular value of pktcSigDevToneType, the
pktcSigDevToneTable table can define non-repeating and
repeating groups of the frequencies defined by the
pktcSigDevMultiFreqToneTable, such that each group is
represented by the set of the consecutive rows
(frequency group) in the pktcSigDevMultiFreqToneTable.

Objects in this table do not persist across MTA reboots.
For tones with multiple frequencies refer to the MIB table
pktcSigDevMultiFreqToneTable."

pktcSigDevToneWholeToneRepeatCount   OBJECT-TYPE
    SYNTAX   Unsigned32 (0..5000)
    MAX-ACCESS   read-only
    STATUS   current
    DESCRIPTION
        "This is the repeat count, which signifies how many times
        to repeat the entire on-off cadence sequence. Setting this
        object may result in a cadence duration longer or shorter
        than the overall signal duration specified by the time out
        (TO) object for a particular signal. If the repeat count
        results in a longer tone duration than the signal duration
        specified by the TO, the tone duration defined by the
        TO object for a particular signal always represents
        the overall signal duration for a tone. In this case, the
        tone duration repeat count will not be fully exercised, and
        the desired tone duration will be truncated per the TO
        setting. If the repeat count results in a shorter tone
        duration than the signal duration specified by the TO, the
        tone duration defined by the repeat count takes precedence
        over the TO and will end the signal event. In this case,

the TO represents a time not to be exceeded for the signal.
It is recommended to ensure proper telephony signaling so that
the TO duration setting should always be longer than the
desired repeat count-time duration."
::={ pktcSigDevToneEntry 4 }

pktcSigDevToneSteady   OBJECT-TYPE
  SYNTAX   TruthValue
  MAX-ACCESS   read-only
  STATUS   current
  DESCRIPTION
      "This MIB object represents the steady tone status. A value
      of 'true(1)' indicates that the steady tone is applied, and
      a value of 'false(2)' indicates otherwise.
      Devices must play out the on-off cadence sequence for
      the number of times indicated by the MIB object
      'pktcSigDevToneWholeToneRepeatCount' prior to applying the
      last tone steadily, indefinitely. If the MIB table
      'pktcSigDevToneTable' contains multiple rows with this
      Object set to a value of 'true(1)', the steady tone is
      applied to the last repeating frequency group of the tone.

      Setting this MIB object may result in a tone duration that is
      longer or shorter than the overall signal duration
      specified by the time out (TO) MIB object for a particular
      signal. If the repeat count results in a longer tone
      duration than the signal duration specified by the TO, the
      tone duration defined by the TO object for a particular
      signal always represents the overall signal duration for a
      tone. In this case, the tone duration repeat count will
      not be fully exercised, and the desired tone duration will
      be truncated per the TO setting. If the repeat count
      results in a shorter tone duration than the signal duration
      specified by the TO, the tone duration defined by the
      repeat count takes precedence over the TO and will end the
      signal event. In this case, the TO represents a time not to
      be exceeded for the signal.

      It is recommended to ensure proper telephony signaling that
      The TO duration setting should always be longer than the
      desired repeat count-time duration, plus the desired maximum
      steady tone period."

pktcSigDevToneFreqMode OBJECT-TYPE
    SYNTAX   INTEGER {
            firstModulatedBySecond(1),
            summation(2)

            }
    MAX-ACCESS   read-only
    STATUS   current
    DESCRIPTION
    "This MIB object provides directive on the
     modulation or summation of the frequencies
     involved in the tone.

     It is to be noted that while summation can
     be done without any constraint on the number
     of frequencies, the modulation (amplitude)
     holds good only when there are two frequencies
     (first and second).

     Thus:
       - If the mode is set to a value of
        'firstModulatedBySecond(1)', the first frequency
        MUST be modulated by the second, and the remaining
        frequencies (third and fourth) ignored. The
        percentage of amplitude modulation to be applied
        is defined by the MIB object
        pktcSigDevToneFreqAmpModePrtg.

       - If the mode is set to a value of
        'summation(2)', all the frequencies MUST be
        summed without any modulation.

  ::={ pktcSigDevMultiFreqToneEntry 7}

pktcSigDevToneDbLevel   OBJECT-TYPE
   SYNTAX   TenthdBm (-250..-110)
   UNITS   "1/10 of a dBm"
   MAX-ACCESS   read-only

   STATUS   current
   DESCRIPTION
      "This MIB object contains the decibel level for each
      analog signal (tone) that is locally generated
      (versus in-band supervisory tones) and sourced to
      the a-b terminals (TE connection point). Each tone
      in itself may consist of multiple frequencies, as
      defined by the MIB table pktcSigDevMultiFreqToneTable.

      This MIB object reflects the desired level at
      the Telco (POTS) a-b (T/R) terminals, including the
      effect of any MTA receiver gain (loss). This is required
      so that locally generated tones are consistent with
      remotely generated in-band tones at the a-b terminals,
      consistent with user expectations.

      This MIB object must be set for each tone.
      When tones are formed by combining multi-frequencies,
      the level of each frequency shall be set so as to result
      in the tone level specified in this object at the a-b
      (T/R) terminals.

      The wide range of levels for this Object is required
      to provide signal-generator levels across the wide
      range of gains (losses) -- but does not imply the entire
      range is to be achievable given the range of gains (losses)
      in the MTA."

pktcSigDevToneFreqRepeatCount OBJECT-TYPE
   SYNTAX   Unsigned32(0..5000)
   MAX-ACCESS   read-only
   STATUS   current
   DESCRIPTION
   "This MIB object indicates the number of times
   to repeat the cadence cycle represented by the
   on/off durations (refer to the MIB objects
   pktcSigDevToneFreqOnDuration and
   pktcSigDevToneFreqOffDuration).

   Setting this object may result in a tone duration that is
   longer or shorter than the overall signal duration
   specified by the time out (TO) object for the
   corresponding tone type. If the value of this MIB
   Object indicates a longer duration than that
   specified by the TO, the latter overrules the former,
   and the desired tone duration will be truncated according
   to the TO.

   However, if the repeat count results in a shorter
   tone duration than the signal duration specified by
   the TO, the tone duration defined by the repeat count
   takes precedence over the TO and will end the signal
   event. In this case, the TO represents a time not to
   be exceeded for the signal. It is recommended, to

ensure proper telephony signaling, that the TO
duration setting should always be longer than the
desired repeat count-time duration. A value of zero
means the tone sequence is to be played once but not
repeated."

DESCRIPTION
   " This object contains the current value of the User
   Datagram Protocol (UDP) receive port on which the
   call agent will receive NCS from the endpoint.
   For each particular endpoint, the MTA MUST use the current
   value of this object to communicate with the corresponding
   CMS. The MTA MUST update this object with the value of the
   'Notified Entity' parameter of the NCS message. If the
   Notified Entity parameter does not contain a CallAgent
   port, the MTA MUST update this object with the default
   value of 2727. Because of the high importance of this
   object to the ability of the MTA to maintain reliable NCS
   communication with the CMS, it is highly recommended not
   to change this object's value using SNMP during normal
   operation."

        operational (1),
        noSecurityAssociation (2),

        disconnected (3)
      }
  MAX-ACCESS   read-only
  STATUS current
  DESCRIPTION
    " This object contains the error status for this interface.
      The operational status indicates that all operations
      necessary to put the line in service have occurred, and the
      CMS has acknowledged the Restart In Progress (RSIP)
      message successfully. If pktcMtaDevCmsIpsecCtrl is enabled
      for the associated call agent, the noSecurityAssociation
      status indicates that no Security Association (SA) yet
      exists for this endpoint. If pktcMtaDevCmsIpsecCtrl is
      disabled for the associated call agent, the
      noSecurityAssociation status is not applicable and should
      not be used by the MTA. The disconnected status indicates
      one of the following two:
      If pktcMtaDevCmsIpsecCtrl is disabled, then no security
      association is involved with this endpoint. The NCS
      signaling software is in process of establishing the NCS
      signaling link via an RSIP exchange.

Otherwise, when pktcMtaDevCmsIpsecCtrl is enabled,
security Association has been established, and the NCS
signaling software is in process of establishing the NCS
signaling link via an RSIP exchange."

         optional(2),
         preferred(3)
       }
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
     "The actual configuration of this capability. The agent
shall attempt to set this as close as possible to the
associated mdmLineCapabilitiesEnableRequested value. The
agent shall make this determination in an implementation-
specific manner that may take into account the configuration
of other capabilities or other considerations. The modem
will choose in an implementation-specific manner between
multiple mutually-exclusive capabilities that each have the
same (non-disabled) value. However, the modem must prefer
all capabilities with a value of 'preferred(3)' over all
capabilities with a value of 'optional(2)'.

In other words, if there are one or more mutually-exclusive
capabilities (e.g. V.32 and V.32bis) that are set to

`preferred', the agent must choose one in an
implementation-specific manner. Otherwise, if there are one
or more mutually-exclusive capabilities that are set to
`optional', the agent must choose one in an implementation-
specific manner."

}
MAX-ACCESS read-write
STATUS   current
DESCRIPTION
"Defines the action the modem will take when DTR is raised.

If the value is set to ignore(1), the modem takes no action
when DTR is raised. Typically, mdmDTEActionDTROnToOff would
also be set to ignore(1) if this object is set to ignore(1).

If the value is set to enableDial(2), the modem prepares to
dial an outgoing call. If the value is set to
autoAnswerEnable(3), the modem will be configured to answer
any incoming call. If the value is set to
establishConnection(4), the modem dials an implementation
specific number.

Immediately after any reset or power-on of the modem, if the
DTR is high, the action specified here will be executed."

"Indicates the reason that the last connection or attempt
failed. The meaning of each reason code is explained below.

   unknown:
This code means the failure reason is unknown or
there has been no previous call.

   other:
This code used when no other code is applicable.
Additional vendor information may be available
elsewhere.

   managementCommand:
A management command terminated the call. These
commands include escaping to command mode, initiating
dialing, restoring lines, and disconnecting.

   inactivityTimeout:
The call was terminated because it was inactive for
at the minimum duration specified.

   mnpIncompatibility:
The modems are unable to resolve MNP protocol
differences.

protocolError:
An error occured in one of protocol in use. Further
information is required to determine in which
protocol the error occurred, and the exact nature of
the error.

powerLoss:
The modem lost power and disconnected the call.

equipmentFailure:
The modem equipment failed.

dtrDrop:
DTR has been turned off while the modem is to
disconnect on DTR drop. (Ref: V.58 cct108TurnedOff)

noDialTone:
If the modem is to monitor for call progress tones,
but the modem has failed to detect dial tone while
attempting to dial a number.

lineBusy:
Busy signal is detected while busy signal detection
is enabled, or while the 'W' or '@' dial modifier is
used. (Ref: V.58 engagedTone)

noAnswer:
The call was not answered.

voiceDetected:
A voice was detected on the call.

carrierLost:
Indicates that the modem has disconnected due to
detection of loss of carrier. In TIA-602, the S10
register determines the time that loss of carrier
must be detected before the modem disconnects.

trainingFailed:
Indicates that the modems did not successfully train
and reach data mode on the previous connection.

faxDetected:
A fax was detected on the call."

  STATUS   current
  DESCRIPTION
     "An integer which may be used as a table index."
  SYNTAX   Unsigned32 (1..4294967295)

IndexIntegerNextFree ::= TEXTUAL-CONVENTION
  DISPLAY-HINT "d"
  STATUS   current

DESCRIPTION
    "An integer which may be used as a new Index in a table.

    The special value of 0 indicates that no more new entries can be
    created in the relevant table.

    When a MIB is used for configuration, an object with this SYNTAX
    always contains a legal value (if non-zero) for an index that is
    not currently used in the relevant table. The Command Generator
    (Network Management Application) reads this variable and uses the
    (non-zero) value read when creating a new row with an SNMP SET.
    When the SET is performed, the Command Responder (agent) must
    determine whether the value is indeed still unused; Two Network
    Management Applications may attempt to create a row
    (configuration entry) simultaneously and use the same value. If
    it is currently unused, the SET succeeds and the Command
    Responder (agent) changes the value of this object, according to
    an implementation-specific algorithm. If the value is in use,

    however, the SET fails. The Network Management Application must
    then re-read this variable to obtain a new usable value.

    An OBJECT-TYPE definition using this SYNTAX MUST specify the
    relevant table for which the object is providing this
    functionality."
  SYNTAX   Unsigned32 (0..4294967295)

IfDirection ::= TEXTUAL-CONVENTION
  STATUS current
  DESCRIPTION
    "IfDirection specifies a direction of data travel on an
    interface. 'inbound' traffic is operated on during reception from
    the interface, while 'outbound' traffic is operated on prior to
    transmission on the interface."
  SYNTAX INTEGER {
        inbound(1),   -- ingress interface
        outbound(2)   -- egress interface
}

--
-- Data Path
--

diffServDataPath   OBJECT IDENTIFIER ::= { diffServMIBObjects 1 }

--

-- Data Path Table

--

-- The Data Path Table enumerates the Differentiated Services

-- Functional Data Paths within this device. Each entry in this table

-- is indexed by ifIndex and ifDirection. Each entry provides the

-- first Differentiated Services Functional Data Path Element to

-- process data flowing along specific data path. This table should

-- have at most two entries for each interface capable of

-- Differentiated Services processing on this device: ingress and

-- egress.

-- Note that Differentiated Services Functional Data Path Elements

-- linked together using their individual next pointers and anchored by

-- an entry of the diffServDataPathTable constitute a functional data

-- path.

--

diffServDataPathTable OBJECT-TYPE

  SYNTAX   SEQUENCE OF DiffServDataPathEntry

  MAX-ACCESS not-accessible

  STATUS   current

  DESCRIPTION

    "The data path table contains RowPointers indicating the start of

    the functional data path for each interface and traffic direction

    in this device. These may merge, or be separated into parallel

    data paths."

  ::= { diffServDataPath 1 }

diffServDataPathEntry OBJECT-TYPE

  SYNTAX   DiffServDataPathEntry

  MAX-ACCESS not-accessible

  STATUS   current

  DESCRIPTION

    "An entry in the data path table indicates the start of a single

    Differentiated Services Functional Data Path in this device.

    These are associated with individual interfaces, logical or

    physical, and therefore are instantiated by ifIndex. Therefore,

    the interface index must have been assigned, according to the

    procedures applicable to that, before it can be meaningfully

    used. Generally, this means that the interface must exist.

    When diffServDataPathStorage is of type nonVolatile, however,

    this may reflect the configuration for an interface whose ifIndex

    has been assigned but for which the supporting implementation is

```
    not currently present."
  INDEX { ifIndex, diffServDataPathIfDirection }
  ::= { diffServDataPathTable 1 }

}

diffServDataPathIfDirection OBJECT-TYPE
  SYNTAX      IfDirection
  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
    "IfDirection specifies whether the reception or transmission path
    for this interface is in view."
  ::= { diffServDataPathEntry 1 }

diffServDataPathStart OBJECT-TYPE
  SYNTAX      RowPointer
  MAX-ACCESS  read-create
  STATUS      current

  DESCRIPTION
    "This selects the first Differentiated Services Functional Data
    Path Element to handle traffic for this data path. This
    RowPointer should point to an instance of one of:
      diffServClfrEntry
      diffServMeterEntry
      diffServActionEntry
      diffServAlgDropEntry
      diffServQEntry

    A value of zeroDotZero in this attribute indicates that no
    Differentiated Services treatment is performed on traffic of this
    data path. A pointer with the value zeroDotZero normally
    terminates a functional data path.

    Setting this to point to a target that does not exist results in
    an inconsistentValue error.  If the row pointed to is removed or
    becomes inactive by other means, the treatment is as if this
    attribute contains a value of zeroDotZero."

     row may be modified at any time."
  ::= { diffServDataPathEntry 4 }

--
-- Classifiers
--

diffServClassifier    OBJECT IDENTIFIER ::= { diffServMIBObjects 2 }

--

-- Classifier Table
--
-- The Classifier Table allows multiple classifier elements, of same or
-- different types, to be used together. A classifier must completely
-- classify all packets presented to it. This means that all traffic
-- presented to a classifier must match at least one classifier element
-- within the classifier, with the classifier element parameters
-- specified by a filter.

-- If there is ambiguity between classifier elements of different
-- classifier, classifier linkage order indicates their precedence; the
-- first classifier in the link is applied to the traffic first.

-- Entries in the classifier element table serves as the anchor for
-- each classification pattern, defined in filter table entries.  Each
-- classifier element table entry also specifies the subsequent
-- downstream Differentiated Services Functional Data Path Element when
-- the classification pattern is satisfied. Each entry in the
```

-- classifier element table describes one branch of the fan-out
-- characteristic of a classifier indicated in the Informal
-- Differentiated Services Model section 4.1. A classifier is composed
-- of one or more classifier elements.

diffServClfrNextFree OBJECT-TYPE
  SYNTAX   IndexIntegerNextFree
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    "This object contains an unused value for diffServClfrId, or a
    zero to indicate that none exist."
  ::= { diffServClassifier 1 }

diffServClfrTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF DiffServClfrEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "This table enumerates all the diffserv classifier functional
    data path elements of this device. The actual classification
    definitions are defined in diffServClfrElementTable entries
    belonging to each classifier.

    An entry in this table, pointed to by a RowPointer specifying an
    instance of diffServClfrStatus, is frequently used as the name
    for a set of classifier elements, which all use the index
    diffServClfrId. Per the semantics of the classifier element
    table, these entries constitute one or more unordered sets of
    tests which may be simultaneously applied to a message to

    classify it.

    The primary function of this table is to ensure that the value of
    diffServClfrId is unique before attempting to use it in creating
    a diffServClfrElementEntry. Therefore, the diffServClfrEntry must
    be created on the same SET as the diffServClfrElementEntry, or
    before the diffServClfrElementEntry is created."
  ::= { diffServClassifier 2 }

diffServClfrEntry OBJECT-TYPE

  ::= { diffServClassifier 3 }

diffServClfrElementTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF DiffServClfrElementEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "The classifier element table enumerates the relationship between
    classification patterns and subsequent downstream Differentiated
    Services Functional Data Path elements.
    diffServClfrElementSpecific points to a filter that specifies the
    classification parameters. A classifier may use filter tables of
    different types together.

    One example of a filter table defined in this MIB is
    diffServMultiFieldClfrTable, for IP Multi-Field Classifiers
    (MFCs). Such an entry might identify anything from a single
    micro-flow (an identifiable sub-session packet stream directed
    from one sending transport to the receiving transport or
    transports), or aggregates of those such as the traffic from a
    host, traffic for an application, or traffic between two hosts
    using an application and a given DSCP. The standard Behavior
    Aggregate used in the Differentiated Services Architecture is
    encoded as a degenerate case of such an aggregate - the traffic
    using a particular DSCP value.

    Filter tables for other filter types may be defined elsewhere."

  ::= { diffServClassifier 4 }

diffServClfrElementEntry OBJECT-TYPE
  SYNTAX   DiffServClfrElementEntry

  DESCRIPTION
    "An index that enumerates the Classifier Element entries.
    Managers obtain new values for row creation in this table by
    reading diffServClfrElementNextFree."
  ::= { diffServClfrElementEntry 1 }

diffServClfrElementPrecedence OBJECT-TYPE
  SYNTAX      Unsigned32  (1..4294967295)
  MAX-ACCESS   read-create
  STATUS      current
  DESCRIPTION
    "The relative order in which classifier elements are applied:
    higher numbers represent classifier element with higher
    precedence.  Classifier elements with the same order must be
    unambiguous i.e. they must define non-overlapping patterns, and
    are considered to be applied simultaneously to the traffic
    stream. Classifier elements with different order may overlap in
    their filters:  the classifier element with the highest order
    that matches is taken.

    On a given interface, there must be a complete classifier in
    place at all times in the ingress direction.  This means one or
    more filters must match any possible pattern. There is no such

    requirement in the egress direction."
  ::= { diffServClfrElementEntry 2 }

diffServClfrElementNext OBJECT-TYPE
  SYNTAX      RowPointer
  MAX-ACCESS   read-create
```

STATUS   current
DESCRIPTION

   "This attribute provides one branch of the fan-out functionality
   of a classifier described in the Informal Differentiated Services
   Model section 4.1.

   This selects the next Differentiated Services Functional Data
   Path Element to handle traffic for this data path. This
   RowPointer should point to an instance of one of:
     diffServClfrEntry
     diffServMeterEntry
     diffServActionEntry
     diffServAlgDropEntry
     diffServQEntry

   A value of zeroDotZero in this attribute indicates no further
   Differentiated Services treatment is performed on traffic of this
   data path. The use of zeroDotZero is the normal usage for the
   last functional data path element of the current data path.

   Setting this to point to a target that does not exist results in
   an inconsistentValue error. If the row pointed to is removed or
   becomes inactive by other means, the treatment is as if this
   attribute contains a value of zeroDotZero."

  ::= { diffServClfrElementEntry 3 }

   longer used."
::= { diffServMultiFieldClfrEntry 15 }

--
-- Meters
--

diffServMeter   OBJECT IDENTIFIER ::= { diffServMIBObjects 3 }

--
-- This MIB supports a variety of Meters. It includes a specific
-- definition for Token Bucket Meter, which are but one type of
-- specification. Other metering parameter sets can be defined in other
-- MIBs.

-- Multiple meter elements may be logically cascaded using their
-- diffServMeterSucceedNext and diffServMeterFailNext pointers if
-- required. One example of this might be for an AF PHB implementation
-- that uses multiple level conformance meters.

-- Cascading of individual meter elements in the MIB is intended to be
-- functionally equivalent to multiple level conformance determination
-- of a packet. The sequential nature of the representation is merely
-- a notational convenience for this MIB.

-- srTCM meters (RFC 2697) can be specified using two sets of
-- diffServMeterEntry and diffServTBParamEntry. The first set specifies
-- the Committed Information Rate and Committed Burst Size

-- token-bucket. The second set specifies the Excess Burst Size
-- token-bucket.

-- trTCM meters (RFC 2698) can be specified using two sets of
-- diffServMeterEntry and diffServTBParamEntry. The first set specifies
-- the Committed Information Rate and Committed Burst Size
-- token-bucket. The second set specifies the Peak Information Rate
-- and Peak Burst Size token-bucket.

-- tswTCM meters (RFC 2859) can be specified using two sets of
-- diffServMeterEntry and diffServTBParamEntry. The first set specifies
-- the Committed Target Rate token-bucket. The second set specifies

-- the Peak Target Rate token-bucket. diffServTBParamInterval in each
-- token bucket reflects the Average Interval.
--

    new values for row creation in this table by reading
    diffServActionNextFree."
  ::= { diffServActionEntry 1 }

diffServActionInterface OBJECT-TYPE
  SYNTAX   InterfaceIndexOrZero
  MAX-ACCESS   read-create
  STATUS   current

  DESCRIPTION
    "The interface index (value of ifIndex) that this action occurs
    on. This may be derived from the diffServDataPathStartEntry's
    index by extension through the various RowPointers. However, as
    this may be difficult for a network management station, it is
    placed here as well. If this is indeterminate, the value is

zero.

This is of especial relevance when reporting the counters which
may apply to traffic crossing an interface:
  diffServCountActOctets,
  diffServCountActPkts,
  diffServAlgDropOctets,
  diffServAlgDropPkts,
  diffServAlgRandomDropOctets, and
  diffServAlgRandomDropPkts.

It is also especially relevant to the queue and scheduler which
may be subsequently applied."
 ::= { diffServActionEntry 2 }

diffServActionNext OBJECT-TYPE
  SYNTAX   RowPointer
  MAX-ACCESS   read-create
  STATUS   current
  DESCRIPTION
    "This selects the next Differentiated Services Functional Data
    Path Element to handle traffic for this data path. This
    RowPointer should point to an instance of one of:
      diffServClfrEntry
      diffServMeterEntry
      diffServActionEntry
      diffServAlgDropEntry
      diffServQEntry

    A value of zeroDotZero in this attribute indicates no further
    Differentiated Services treatment is performed on traffic of this
    data path. The use of zeroDotZero is the normal usage for the
    last functional data path element of the current data path.

    Setting this to point to a target that does not exist results in
    an inconsistentValue error. If the row pointed to is removed or
    becomes inactive by other means, the treatment is as if this
    attribute contains a value of zeroDotZero."

  STATUS   current
  DESCRIPTION
    "The DSCP that this Action will store into the DSCP field of the
    subject. It is quite possible that the only packets subject to
    this Action are already marked with this DSCP. Note also that
    Differentiated Services processing may result in packet being
    marked on both ingress to a network and on egress from it, and
    that ingress and egress can occur in the same router."
  ::= { diffServDscpMarkActEntry 1 }

--
-- Count Action Table
--
-- Because the MIB structure allows multiple cascading
-- diffServActionEntry be used to describe multiple actions for a data
-- path, the counter became an optional action type. In normal
-- implementation, either a data path has counters or it does not, as
-- opposed to being configurable. The management entity may choose to

-- read the counter or not. Hence it is recommended for implementation
-- that have counters to always configure the count action as the first
-- of multiple actions.

  STATUS      current
  DESCRIPTION
    "An index that enumerates the Algorithmic Dropper entries.
    Managers obtain new values for row creation in this table by
    reading diffServAlgDropNextFree."
  ::= { diffServAlgDropEntry 1 }

diffServAlgDropType OBJECT-TYPE
  SYNTAX      INTEGER {
          other(1),
          tailDrop(2),
          headDrop(3),
          randomDrop(4),
          alwaysDrop(5)
}
  MAX-ACCESS  read-create
  STATUS      current
  DESCRIPTION
    "The type of algorithm used by this dropper. The value other(1)
    requires further specification in some other MIB module.

    In the tailDrop(2) algorithm, diffServAlgDropQThreshold
    represents the maximum depth of the queue, pointed to by
    diffServAlgDropQMeasure, beyond which all newly arriving packets
    will be dropped.
```

In the headDrop(3) algorithm, if a packet arrives when the
current depth of the queue, pointed to by
diffServAlgDropQMeasure, is at diffServAlgDropQThreshold, packets
currently at the head of the queue are dropped to make room for
the new packet to be enqueued at the tail of the queue.

In the randomDrop(4) algorithm, on packet arrival, an Active
Queue Management algorithm is executed which may randomly drop a
packet. This algorithm may be proprietary, and it may drop either
the arriving packet or another packet in the queue.
diffServAlgDropSpecific points to a diffServRandomDropEntry that
describes the algorithm. For this algorithm,

diffServAlgDropQThreshold is understood to be the absolute
maximum size of the queue and additional parameters are described
in diffServRandomDropTable.

The alwaysDrop(5) algorithm is as its name specifies; always
drop. In this case, the other configuration values in this Entry
are not meaningful; There is no useful 'next' processing step,
there is no queue, and parameters describing the queue are not
useful. Therefore, diffServAlgDropNext, diffServAlgDropMeasure,
and diffServAlgDropSpecific are all zeroDotZero."
  ::= { diffServAlgDropEntry 2 }

diffServAlgDropNext OBJECT-TYPE
  SYNTAX   RowPointer
  MAX-ACCESS   read-create
  STATUS   current
  DESCRIPTION
    "This selects the next Differentiated Services Functional Data
    Path Element to handle traffic for this data path. This
    RowPointer should point to an instance of one of:
      diffServClfrEntry
      diffServMeterEntry
      diffServActionEntry
      diffServQEntry

    A value of zeroDotZero in this attribute indicates no further
    Differentiated Services treatment is performed on traffic of this
    data path. The use of zeroDotZero is the normal usage for the
    last functional data path element of the current data path.

    When diffServAlgDropType is alwaysDrop(5), this object is
    ignored.

Setting this to point to a target that does not exist results in
an inconsistentValue error. If the row pointed to is removed or
becomes inactive by other means, the treatment is as if this
attribute contains a value of zeroDotZero."
   ::= { diffServAlgDropEntry 3 }

diffServAlgDropQMeasure OBJECT-TYPE
   SYNTAX   RowPointer
   MAX-ACCESS read-create
   STATUS   current
   DESCRIPTION
      "Points to an entry in the diffServQTable to indicate the queue
      that a drop algorithm is to monitor when deciding whether to drop
      a packet. If the row pointed to does not exist, the algorithmic
      dropper element is considered inactive.

      Setting this to point to a target that does not exist results in
      an inconsistentValue error. If the row pointed to is removed or
      becomes inactive by other means, the treatment is as if this
      attribute contains a value of zeroDotZero."
   ::= { diffServAlgDropEntry 4 }

diffServAlgDropQThreshold OBJECT-TYPE
   SYNTAX   Unsigned32 (1..4294967295)
   UNITS   "Bytes"
   MAX-ACCESS read-create
   STATUS   current
   DESCRIPTION
      "A threshold on the depth in bytes of the queue being measured at
      which a trigger is generated to the dropping algorithm, unless
      diffServAlgDropType is alwaysDrop(5) where this object is
      ignored.

      For the tailDrop(2) or headDrop(3) algorithms, this represents
      the depth of the queue, pointed to by diffServAlgDropQMeasure, at
      which the drop action will take place. Other algorithms will need
      to define their own semantics for this threshold."
   ::= { diffServAlgDropEntry 5 }

diffServAlgDropSpecific OBJECT-TYPE
   SYNTAX   RowPointer
   MAX-ACCESS read-create
   STATUS   current
   DESCRIPTION
      "Points to a table entry that provides further detail regarding a
      drop algorithm.

Entries with diffServAlgDropType equal to other(1) may have this
point to a table defined in another MIB module.

Entries with diffServAlgDropType equal to randomDrop(4) must have
this point to an entry in diffServRandomDropTable.

For all other algorithms specified in this MIB, this should take
the value zeroDotZero.

The diffServAlgDropType is authoritative for the type of the drop
algorithm and the specific parameters for the drop algorithm
needs to be evaluated based on the diffServAlgDropType.

Setting this to point to a target that does not exist results in
an inconsistentValue error. If the row pointed to is removed or
becomes inactive by other means, the treatment is as if this
attribute contains a value of zeroDotZero."

-- Scheduler Table
--

diffServScheduler   OBJECT IDENTIFIER ::= { diffServMIBObjects 8 }

--
-- A Scheduler Entry represents a packet scheduler, such as a priority
-- scheduler or a WFQ scheduler. It provides flexibility for multiple
-- scheduling algorithms, each servicing multiple queues, to be used on
-- the same logical/physical interface.
--
-- Note that upstream queues or schedulers specify several of the
-- scheduler's parameters. These must be properly specified if the
-- scheduler is to behave as expected.
--
-- The diffServSchedulerMaxRate attribute specifies the parameters when
-- a scheduler's output is sent to another scheduler. This is used in
-- building hierarchical queues or schedulers.

```
--
-- More discussion of the scheduler functional data path element is in
-- the Informal Differentiated Services Model section 7.1.2.

 STATUS   current
 DESCRIPTION
   "This selects the next Differentiated Services Functional Data
   Path Element to handle traffic for this data path. This normally
   is null (zeroDotZero), or points to a diffServSchedulerEntry or a
   diffServQEntry.

   However, this RowPointer may also point to an instance of:
    diffServClfrEntry,
    diffServMeterEntry,
    diffServActionEntry,
    diffServAlgDropEntry.

   It would point another diffServSchedulerEntry when implementing
   multiple scheduler methods for the same data path, such as having
   one set of queues scheduled by WRR and that group participating
   in a priority scheduling system in which other queues compete
   with it in that way. It might also point to a second scheduler
   in a hierarchical scheduling system.

   If the row pointed to is zeroDotZero, no further Differentiated
   Services treatment is performed on traffic of this data path.

   Setting this to point to a target that does not exist results in
   an inconsistentValue error. If the row pointed to is removed or
   becomes inactive by other means, the treatment is as if this
   attribute contains a value of zeroDotZero."

DESCRIPTION

"For use with diffServSchedulerMethod to indicate the Weighted
Fair Queuing scheduling method, defined as any algorithm in which
a set of queues are conceptually visited in some order, to
implement an average output rate by class. Notice attributes from
diffServMinRateEntry of the queues/schedulers feeding this
scheduler are used when determining the next packet to schedule."
::= { diffServSchedulers 3 }

--
-- Minimum Rate Parameters Table
--
-- The parameters used by a scheduler for its inputs or outputs are
-- maintained separately from the Queue or Scheduler table entries for
-- reusability reasons and so that they may be used by both queues and
-- schedulers. This follows the approach for separation of data path
-- elements from parameterization that is used throughout this MIB.
-- Use of these Minimum Rate Parameter Table entries by Queues and
-- Schedulers allows the modeling of hierarchical scheduling systems.
--
-- Specifically, a Scheduler has one or more inputs and one output.
-- Any queue feeding a scheduler, or any scheduler which feeds a second
-- scheduler, might specify a minimum transfer rate by pointing to an
-- Minimum Rate Parameter Table entry.
--
-- The diffServMinRatePriority/Abs/Rel attributes are used as
-- parameters to the work-conserving portion of a scheduler:
-- "work-conserving" implies that the scheduler can continue to emit
-- data as long as there is data available at its input(s). This has
-- the effect of guaranteeing a certain priority relative to other
-- scheduler inputs and/or a certain minimum proportion of the
-- available output bandwidth. Properly configured, this means a

-- certain minimum rate, which may be exceeded should traffic be
-- available should there be spare bandwidth after all other classes
-- have had opportunities to consume their own minimum rates.
--

SNA-NAU-MIB DEFINITIONS ::= BEGIN

-- This MIB module contains objects necessary
-- for management of the following SNA devices: PU types 1.0, 2.0, 2.1
-- and LU types 0, 1, 2, 3, 4, 7. It also contains generic objects
-- which can be used to manage LU 6.2.

-- Naming conventions in this document:
-- The following names are used in object descriptors according to
-- SNA conventions.

-- The name 'PU' or 'Node' is used to describe Node type 1.0, 2.0 or
-- 2.1.
-- The name 'LU' is used to describe Logical Unit of type 0,1,2,3,
-- 4,7 or 6.2.

-- The following table contains generic Node configuration

-- parameters.

-- **

snaNodeAdminTable OBJECT-TYPE
    SYNTAX SEQUENCE OF SnaNodeAdminEntry
    MAX-ACCESS not-accessible
    STATUS current
    DESCRIPTION
        "This table contains objects which describe the
        configuration parameters for an SNA Node. Link
        specific configuration objects are contained in
        a separate MIB module (e.g., SNA DLC MIB)
        corresponding to the link type.
        The table snaNodeAdminLinkTable contains objects
        which identify the relationship between node instances
        and link instances.

        The entries (i.e., rows) in this table can be created
        by either an Agent or a Management Station.
        The Management Station can do this through setting
        the appropriate value in the snaNodeAdminRowStatus.

        The snaNodeAdminRowStatus object describes the
        status of an entry and is used to change the status

of an entry. The entry is deleted by an Agent based
on the value of the snaNodeAdminRowStatus.

The snaNodeAdminState object describes the desired
operational state of a Node and is used to change the
operational state of a Node. For example, such
information may be obtained from a configuration file.

How an Agent or a Management Station obtains the
initial value of each object at creation time is an
implementation specific issue.

For each entry in this table, there is a corresponding
entry in the snaNodeOperTable.
While the objects in this table describe the desired
or configured operational values of the SNA Node, the
actual runtime values are contained in
snaNodeOperTable."

        onlyMS (4)
        }
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "The value indicates how the Node should be
        activated for the first time.
        The values have the following meanings:

        other (1) - may be used for proprietary methods
            not listed in this enumeration,
        startup (2) - at SNA services' initialization time
            (this is the default),
        demand (3) - only when LU is requested by application,
                or
        onlyMS (4) - by a Management Station only.

        A write operation to this object may immediately
        change the operational value reflected
        in snaNodeOperEnablingMethod depending
        on the Agent implementation. If the Agent
        implementation accepts immediate changes, then the

behavior of the Node changes immediately and not only
after the next system startup of the SNA services.
An immediate change may only apply when the
current value 'demand (3)' is changed to 'onlyMS (4)'
and vice versa."
::= { snaNodeAdminEntry 7 }

snaNodeAdminLuTermDefault OBJECT-TYPE
    SYNTAX INTEGER {
        unbind (1),

        rshutd (3),
        poweroff(4)
        }
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "The value indicates the desired default method
        used to deactivate LUs for this Node
        For LU6.2s, 'unbind(1)' is the only valid value.

        unbind(1) -   terminate the LU-LU session by sending
            an SNA UNBIND request.
        termself(2) - terminate the LU-LU session by sending
            an SNA TERM-SELF (Terminate Self) request on
            the SSCP-LU session. The SSCP will inform the
            remote session LU partner to send an UNBIND
            request to terminate the session.
        rshutd(3) -   terminate the LU-LU session by sending
            an SNA RSHUTD (Request ShutDown) request to
            the remote session LU partner. The remote LU
            will then send an UNBIND request to terminate
            the session.
        poweroff(4) - terminate the LU-LU session by sending
            either an SNA LUSTAT (LU Status) request on
            the LU-LU session or an SNA NOTIFY request on
            the SSCP-LU session indicating that the LU has
            been powered off. Sending both is also
            acceptable. The result should be that the
            remote session LU partner will send an UNBIND
            to terminate the session.

        The default behavior indicated by the value of this
        object may be overridden for an LU instance. The
        override is performed by setting the snaLuAdminTerm
        object instance in the snaLuAdminTable to the desired
        value.

A write operation to this object may immediately
change the operational value reflected
in snaNodeOperLuTermDefault depending
on the Agent implementation."

DESCRIPTION
        "The value indicates the desired method to be used
        by the Agent to stop a Node (i.e., change the Node's
        operational state to inactive(1) ).

        The values have the following meaning:

        other (1) - used for proprietary
            methods not listed in this enumeration.
        normal(2) - deactivate only when there is no more
            activity on this Node (i.e., all data flows
            have been completed and all sessions
            have been terminated).
        immed(3)  - deactivate immediately regardless of
            current activities on this Node. Wait for
            deactivation responses (from remote Node)
            before changing the Node state to inactive.
        force(4)  - deactivate immediately regardless of
            current activities on this Node. Do not wait
            for deactivation responses (from remote Node)
            before changing the Node state to inactive.

        A write operation to this object may immediately
        change the operational value reflected
        in snaNodeOperStopMethod depending
        on the Agent implementation."
    ::= { snaNodeAdminEntry 11 }

snaNodeAdminState OBJECT-TYPE
    SYNTAX  INTEGER {
        inactive (1),
        active (2)
        }
    MAX-ACCESS  read-create
    STATUS  current
    DESCRIPTION
        "The value indicates the desired operational
         state of the SNA Node. This object is used
         by the Management Station to
         activate or deactivate the Node.

         If the current value in snaNodeOperState is
         'active (2)', then setting this object to
         'inactive (1)' will initiate the Node shutdown
         process using the method indicated
```

by snaNodeOperStopMethod.

If the current value in snaNodeOperState is
'inactive (1)', then setting this object to
'active (2)' will initiate the
Node's activation.

A Management Station can always set this object to
'active (2)' irrespective of the value in the
snaOperEnablingMethod."
::= { snaNodeAdminEntry 12 }

snaNodeAdminRowStatus OBJECT-TYPE
    SYNTAX RowStatus
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "This object is used by a Management Station to
        create or delete the row entry in the
        snaNodeAdminTable following
        the RowStatus textual convention.

        Upon successful creation of
        the row, an Agent automatically creates a
        corresponding entry in the snaNodeOperTable with
        snaNodeOperState equal to 'inactive (1)'.

        Row deletion can be Management Station or Agent
        initiated:
        (a) The Management Station can set the value to
        'destroy (6)' only when the value of
        snaNodeOperState of this Node instance is
        'inactive (1)'. The Agent will then delete the rows
        corresponding to this Node instance from the
        snaNodeAdminTable and the snaNodeOperTable.
        (b) The Agent detects that a row is in the
        'notReady (3)' state for greater than a
        default period of 5 minutes.
        (c) All rows with the snaNodeAdminRowStatus object's
        value of 'notReady (3)' will be removed upon the
        next initialization of the SNA services."
    ::= { snaNodeAdminEntry 13 }

-- The following object is updated when there is a change to
-- the value of any object in the snaNodeAdminTable.
-- **

snaNodeAdminTableLastChange OBJECT-TYPE
    SYNTAX TimeStamp
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "The value indicates the timestamp
        (e.g., the Agent's sysUpTime value) of the last
        change made to any object in the snaNodeAdminTable,
        including row deletions/additions (e.g., changes to
        snaNodeAdminRowStatus values).

        This object can be used to reduce frequent
        retrievals of the snaNodeAdminTable by a Management
        Station. It is expected that a Management Station
        will periodically poll this object and compare its
        current value with the previous one. A difference
        indicates that some Node configuration information
        has been changed. Only then will the Management
        Station retrieve the entire table."

        other (1),
        normal (2),
        immed (3),
        force (4)
        }

MAX-ACCESS read-only
STATUS current
DESCRIPTION
"This value identifies the current Node shutdown
method to be used by the Agent to stop the Node.
When the Agent changes the Node's state to 'inactive
(1)', the Agent must use the shutdown method
indicated by this object.

The values have the following meaning:

other (1) - proprietary method not listed in this
        enumeration
normal(2) - deactivate only when there is no more
        activity on this Node (i.e., all data flows
        have been completed and all sessions have
        been terminated).
immed(3) - deactivate immediately regardless of
        current activities on this Node. Wait for
        deactivation responses (from remote Node)
        before changing the Node state to inactive.
force(4) - deactivate immediately regardless of
        current activities on this Node. Do not wait
        for deactivation responses (from remote Node)
        before changing the Node state to inactive.

Note that a write operation to
snaNodeAdminOperStopMethod may immediately change
the value of snaNodeOperStopMethod depending on
the Agent implementation."

    ::= { snaNodeLinkAdminEntry 3 }

snaNodeLinkAdminRowStatus OBJECT-TYPE
    SYNTAX RowStatus
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
    "This object is used by a Management Station to
    create or delete the row entry in the
    snaNodeLinkAdminTable.
    To activate a row, a Management Station sets the value
    to 'active (1)' or 'notReady (3)'. Upon successful
    creation of the row, the Agent automatically creates
    a corresponding entry in the snaNodeLinkOperTable.

    Row deletion can be Management Station or Agent
    initiated:
    (a) The Management Station can set the value to
    'destroy (6)' only when the value of

snaNodeLinkOperState of this Link
instance is 'inactive (1)'. The Agent will then
delete the row corresponding to this Link
instance from snaNodeLinkOperTable and
from snaNodeLinkAdminTable.
(b) The Agent detects that a row is in the
'notReady (3)' state for greater than a
default period of 5 minutes.
(c) The Agent will not include a row with RowStatus=
'notReady (3)', after SNA system re-initialization
 (e.g., reboot)."

    SYNTAX INTEGER {
        unbind (1),
        termself (2),
        rshutd (3),
        poweroff (4)
        }
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "This value identifies the desired method for
        deactivation of this LU. This value overrides the
        default method (snaNodeOperLuTermDefault) for this
        Node. For LU 6.2, only the value 'unbind (1)'
        applies.

        unbind(1) -   terminate the LU-LU session by sending
            an SNA UNBIND request.
        termself(2) - terminate the LU-LU session by sending
            an SNA TERM-SELF (Terminate Self) request on
            the SSCP-LU session. The SSCP will inform the
            remote session LU partner to send an UNBIND
            request to terminate the session.
        rshutd(3) -   terminate the LU-LU session by sending
            an SNA RSHUTD (Request ShutDown) request to
            the remote session LU partner. The remote LU
            will then send an UNBIND request to terminate
            the session.
        poweroff(4) - terminate the LU-LU session by sending

either an SNA LUSTAT (LU Status) request on
the LU-LU session or an SNA NOTIFY request on
the SSCP-LU session indicating that the LU has
been powered off. Sending both is also
acceptable. The result should be that the
remote session LU partner will send an UNBIND
to terminate the session.

A write operation to this object may immediately
change the operational value reflected
in snaLuOperTerm depending
on the Agent implementation."

snaLuAdminRowStatus OBJECT-TYPE
    SYNTAX RowStatus
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "This object is used by a Management Station to
        create or delete the row entry in the
        snaLuAdminTable.
        To activate a row, the Management Station sets the
        value to 'active (1)' or 'notReady (3)'.
        Upon successful creation of the row, the Agent
        automatically creates a corresponding entry in the
        snaLuOperTable with snaLuOperState equal to
        'inactive (1)'.
        Row deletion can be Management Station or Agent
        initiated:
        (a) The Management Station can set the value to
        'destroy (6)' only when the value of snaLuOperState
        of this LU instance is 'inactive (1)'. The Agent will
        then delete the row corresponding to this LU
        instance from snaLuAdminTable and
        from snaLuOperTable.
        (b) The Agent detects that a row is in the
        'notReady (3)' state for greater than a
        default period of 5 minutes.
        (c) The Agent will not create a row with RowStatus
        equal to 'notReady (3)', after SNA system
        re-initialization (e.g., reboot)."

-- ***
-- snaMgtTools group
--
-- Currently this group contains only one table.
-- ***

-- ***
-- The following table contains Response Time Monitoring (RTM)
-- configuration information and statistics for LU Type 2s.
-- RTM supports the capability to measure and report end-user
-- response times for dependent LUs. When the RTM state of an LU
-- is 'on', response times for each LU transaction are monitored.
-- A set of ranges is defined (e.g., Range 1 includes the number of
-- transactions with response times less than 1 second) using the
-- "boundary" definitions (e.g., boundary #2 is defined as 3 seconds).
-- A set of counters (one per range) identifies
-- the number of transactions within each response time range.
-- ***

This is the first version available via the WWW
at: ftp://ftp.isi.edu/mib/ianaiftype.mib"

REVISION   "199401310000Z" -- Jan 31, 1994
DESCRIPTION "Initial version of this MIB as published in
        RFC 1573."

::= { mib-2 30 }

IANAifType ::= TEXTUAL-CONVENTION
    STATUS   current
    DESCRIPTION
        "This data type is used as the syntax of the ifType
        object in the (updated) definition of MIB-II's
        ifTable.

        The definition of this textual convention with the
        addition of newly assigned values is published
        periodically by the IANA, in either the Assigned
        Numbers RFC, or some derivative of it specific to
        Internet Network Management number assignments. (The
        latest arrangements can be obtained by contacting the
        IANA.)

        Requests for new values should be made to IANA via
        email (iana&iana.org).

        The relationship between the assignment of ifType
        values and of OIDs to particular media-specific MIBs
        is solely the purview of IANA and is subject to change
        without notice. Quite often, a media-specific MIB's
        OID-subtree assignment within MIB-II's 'transmission'
        subtree will be the same as its ifType value.
        However, in some circumstances this will not be the
        case, and implementors must not pre-assume any
        specific relationship between ifType values and
        transmission subtree OIDs."

IANAtunnelType ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
        "The encapsulation method used by a tunnel. The value
        direct indicates that a packet is encapsulated
        directly within a normal IP header, with no
        intermediate header, and unicast to the remote tunnel
        endpoint (e.g., an RFC 2003 IP-in-IP tunnel, or an RFC
        1933 IPv6-in-IPv4 tunnel). The value minimal indicates
        that a Minimal Forwarding Header (RFC 2004) is
        inserted between the outer header and the payload
        packet. The value UDP indicates that the payload
        packet is encapsulated within a normal UDP packet
        (e.g., RFC 1234).

        The values sixToFour, sixOverFour, and isatap
        indicates that an IPv6 packet is encapsulated directly
        within an IPv4 header, with no intermediate header,
        and unicast to the destination determined by the 6to4,
        6over4, or ISATAP protocol.

        The remaining protocol-specific values indicate that a
        header of the protocol of that name is inserted
        between the outer header and the payload header.

        The assignment policy for IANAtunnelType values is
        identical to the policy for assigning IANAifType
        values."

pktcMtaDevResetNow OBJECT-TYPE
  SYNTAX   TruthValue
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
    " This object controls the MTA software reset.
      Reading this object always returns 'false'. Setting this
      object to 'true' causes the device to reset immediately
      and the following actions to occur:
        1. All connections (if present) are flushed locally.
        2. All current actions such as ringing immediately
            terminate.
        3. Requests for signaling notifications, such as
            notification based on digit map recognition, are
            flushed.
        4. All endpoints are disabled.
        5. The provisioning flow is started at step MTA-1.
      If a value is written into an instance of
      pktcMtaDevResetNow, the agent MUST NOT retain the supplied
      value across MTA re-initializations or reboots."

      this MTA."
  ::= { pktcMtaDevBase 5 }

pktcMtaDevEnabled    OBJECT-TYPE
  SYNTAX     TruthValue
```

```
    MAX-ACCESS  read-write
    STATUS    current
    DESCRIPTION
        " This object contains the MTA Admin Status of this device.
         If this object is set to 'true', the MTA is
         administratively enabled, and the MTA MUST be able to
         interact with the PacketCable entities, such as CMS,
         Provisioning Server, KDC, and other MTAs and MGs on all
         PacketCable interfaces.
         If this object is set to 'false', the MTA is
         administratively disabled, and the MTA MUST perform the
         following actions for all endpoints:
             - Shut down all media sessions, if present.
             - Shut down Network Control Signaling (NCS)
             signaling by following the Restart in
             Progress procedures in the PacketCable NCS
             specification.
         The MTA must execute all actions required to
         enable or disable the telephony services for all
         endpoints immediately upon receipt of an SNMP SET
         operation.

         Additionally, the MTA MUST maintain the SNMP Interface
         for management and also the SNMP Key management interface.
         Also, the MTA MUST NOT continue Kerberized key management
         with CMSes until this object is set to 'true'.
         Note: MTAs MUST renew the CMS Kerberos tickets according
         to the PacketCable Security or IPCablecom Specification.
         If a value is written into an instance of
         pktcMtaDevEnabled, the agent MUST NOT retain the supplied
         value across MTA re-initializations or reboots."

    PacketCable MTA Device Provisioning Specification."
  ::= { pktcMtaDevBase 7 }

pktcMtaDevProvisioningState   OBJECT-TYPE
  SYNTAX   INTEGER {
        pass   (1),
        inProgress   (2),
        failConfigFileError   (3),
        passWithWarnings   (4),
        passWithIncompleteParsing (5),
        failureInternalError   (6),
        failureOtherReason   (7)
  }
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    " This object indicates the completion state of the MTA
    device provisioning process.

    pass:
    If the configuration file could be parsed successfully
    and the MTA is able to reflect the same in its
    MIB, the MTA MUST return the value 'pass'.

    inProgress:
    If the MTA is in the process of being provisioned,
    the MTA MUST return the value 'inProgress'.

    failConfigFileError:
    If the configuration file was in error due to incorrect
    values in the mandatory parameters, the MTA MUST reject
    the configuration file, and the MTA MUST return the value

    'failConfigFileError'.

    passWithWarnings:
    If the configuration file had proper values for all the
    mandatory parameters but has errors in any of the optional
    parameters (this includes any vendor-specific Object
    Identifiers (OIDs) that are incorrect or not known

to the MTA), the MTA MUST return the value
'passWithWarnings'.

passWithIncompleteParsing:
If the configuration file is valid but the MTA cannot
reflect the same in its configuration (for example, too
many entries caused memory exhaustion), it must accept
the CMS configuration entries related, and the MTA MUST
return the value 'passWithIncompleteParsing'.

failureInternalError:
If the configuration file cannot be parsed due to an
Internal error, the MTA MUST return the value
'failureInternalError'.

failureOtherReason:
If the MTA cannot accept the configuration file for any
other reason than the ones stated above, the MTA MUST
return the value 'failureOtherReason'.

When a final SNMP INFORM is sent as part of Step 25 of the
MTA Provisioning process, this parameter is also included
in the final INFORM message."

pktcMtaDevErrorOidsTable OBJECT-TYPE
  SYNTAX SEQUENCE OF PktcMtaDevErrorOidsEntry
  MAX-ACCESS not-accessible
  STATUS current
  DESCRIPTION
    " This table contains the list of configuration errors or
      warnings the MTA encountered when parsing the
      configuration file it received from the Provisioning
      Server.
      For each error, an entry is created in this table,
      containing the configuration parameters the MTA rejected
      and the associated reason (e.g., wrong or unknown OID,
      inappropriate object values). If the MTA
      did not report a provisioning state of 'pass(1)' in
      the pktcMtaDevProvisioningState object, this table MUST be
      populated for each error or warning instance. Even if
      different parameters share the same error type (e.g., all
      realm name configuration parameters are invalid), all
      observed errors or warnings must be reported as
      different instances. Errors are placed into the table in
      no particular order. The table MUST be cleared each time

      the MTA reboots."

REFERENCE

  pktcMtaDevErrorOidIndex Unsigned32,
  pktcMtaDevErrorOid   SnmpAdminString,
  pktcMtaDevErrorValue   SnmpAdminString,
  pktcMtaDevErrorReason   SnmpAdminString
  }

pktcMtaDevErrorOidIndex OBJECT-TYPE
  SYNTAX   Unsigned32 (1..1024)
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    " This object is the index of the MTA configuration error
      table. It is an integer value that starts at value '1'
      and is incremented for each encountered configuration
      file error or warning.

      The maximum number of errors or warnings that can be
      recorded in the pktcMtaDevErrorOidsTable is set to 1024 as
      a configuration file is usually validated by operators
      before deployment. Given the possible number of
      configuration parameter assignments in the MTA
      configuration file, 1024 is perceived as a sufficient
      limit even with future extensions.

      If the number of the errors in the configuration file
      exceeds 1024, all errors beyond the 1024th one MUST
      be ignored and not be reflected in the
      pktcMtaDevErrorOidsTable."

  ::= {pktcMtaDevErrorOidsEntry 1}

pktcMtaDevErrorOid OBJECT-TYPE
  SYNTAX   SnmpAdminString
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
     " This object contains a human readable representation
       (character string) of the OID corresponding to the
       configuration file parameter that caused the particular
       error.
       For example, if the value of the pktcMtaDevEnabled object
       in the configuration file caused an error, then this
       object instance will contain the human-readable string of
       '1.3.6.1.2.1.140.1.1.6.0'.
       If the MTA generated an error because it was not able
       to recognize a particular OID, then this object
       instance would contain an empty value (zero-length
       string).
       For example, if the value of an OID in the configuration
       file was interpreted by the MTA as being 1.2.3.4.5, and if
       the MTA was not able to recognize this OID as a valid one,
       this object instance will contain a zero-length string.

       If the number of errors in the configuration file exceeds
       1024, then for all subsequent errors, the
       pktcMtaDevErrorOid of the table's 1024th entry MUST
       contain a human-readable representation of the
       pktcMtaDevErrorsTooManyErrors object; i.e., the string
       '1.3.6.1.2.1.140.1.1.4.1.0'.
       Note that the syntax of this object is SnmpAdminString
       instead of OBJECT IDENTIFIER because the object value may
       not be a valid OID due to human or configuration tool
       encoding errors."

  ::= {pktcMtaDevErrorOidsEntry 2}

pktcMtaDevErrorValue OBJECT-TYPE
  SYNTAX   SnmpAdminString
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
     " This object contains the value of the OID corresponding to
       the configuration file parameter that caused the error.
       If the MTA cannot recognize the OID of the
       configuration parameter causing the error, then this
       object instance contains the OID itself as interpreted
       by the MTA in human-readable representation.

If the MTA can recognize the OID but generate an error due
to a wrong value of the parameter, then the object

instance contains the erroneous value of the parameter as
read from the configuration file.
In both cases, the value of this object must be
represented in human-readable form as a character string.
For example, if the value of the pktcMtaDevEnabled object
in the configuration file was 3 (invalid value), then the
pktcMtaDevErrorValue object instance will contain the
human-readable (string) representation of value '3'.
Similarly, if the OID in the configuration file has been
interpreted by the MTA as being 1.2.3.4.5 and the MTA
cannot recognize this OID as a valid one, then this
pktcMtaDevErrorValue object instance will contain human
readable (string) representation of value '1.2.3.4.5'.

If the number of errors in the configuration file exceeds
1024, then for all subsequent errors, the
pktcMtaDevErrorValue of the table's 1024th entry MUST
contain a human-readable representation of the
pktcMtaDevErrorsTooManyErrors object; i.e., the string
'1.3.6.1.2.1.140.1.1.4.1.0'."

    ::= {pktcMtaDevErrorOidsEntry 3}

pktcMtaDevErrorReason OBJECT-TYPE
  SYNTAX   SnmpAdminString
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    " This object indicates the reason for the error or warning,
      as per the MTA's interpretation, in human-readable form.
      For example:
      'VALUE NOT IN RANGE', 'VALUE DOES NOT MATCH TYPE',
      'UNSUPPORTED VALUE', 'LAST 4 BITS MUST BE SET TO ZERO',
      'OUT OF MEMORY - CANNOT STORE'.
      This object may also contain vendor specific errors for
      private vendor OIDs and any proprietary error codes or
      messages that can help diagnose configuration errors.

      If the number of errors in the configuration file exceeds
      1024, then for all subsequent errors, the
      pktcMtaDevErrorReason of the table's 1024th entry MUST
      contain a human-readable string indicating the reason
      for an error; for example,

'Too many errors in the configuration file'."

    MAX-ACCESS read-only
    STATUS   current
    DESCRIPTION
        " This object contains the Internet address type for the
          PacketCable DHCP servers specified in MTA MIB."
    DEFVAL { ipv4 }
    ::= { pktcMtaDevServer 1}

pktcMtaDevServerDhcp1   OBJECT-TYPE
    SYNTAX   InetAddress
    MAX-ACCESS read-only
    STATUS   current
    DESCRIPTION
        " This object contains the Internet Address of the primary
          DHCP server the MTA uses during provisioning.
          The type of this address is determined by the value of
          the pktcMtaDevDhcpServerAddressType object.
          When the latter has the value 'ipv4(1)', this object
          contains the IP address of the primary DHCP
          server. It is provided by the CM to the MTA via the DHCP
          option code 122, sub-option 1, as defined in RFC 3495.

          The behavior of this object when the value of
          pktcMtaDevDhcpServerAddressType is other than 'ipv4(1)'
          is not presently specified, but it may be specified
          in future versions of this MIB module.
          If this object is of value
          0.0.0.0, the MTA MUST stop all provisioning
          attempts, as well as all other activities.
          If this object is of value 255.255.255.255, it means
          that there was no preference given for the primary
          DHCP server, and, the MTA must follow the logic of
          RFC2131, and the value of DHCP option 122,
          sub-option 2, must be ignored."

  MAX-ACCESS  read-write
  STATUS     current
  DESCRIPTION
     " This object contains the Internet Address of the Time
       Server used by an S-MTA for Time Synchronization.  The type
       of this address is determined by the value of the
       pktcMtaDevTimeServerAddressType object.
       When the latter has the value 'ipv4(1)', this object
       contains the IP address of the Time Server used for Time
       Synchronization.
       In the case of an S-MTA, this object must be
       populated with a value other than 0.0.0.0 as obtained
       from DHCP option 4.  The protocol by which the time of day
       MUST be retrieved is defined in RFC 868.
       In the case of an E-MTA, this object must contain a
       value of 0.0.0.0 if the address type is 'ipv4(1)' since
       an E-MTA does not use the Time Protocol for time
       synchronization (an E-MTA uses the time retrieved by the
       DOCSIS cable modem).
       The behavior of this object when the value of
       pktcMtaDevTimeServerAddressType is other than 'ipv4(1)'
       is not presently specified, but it may be specified in
       future versions of this MIB module.

```

pktcMtaDevConfigFile OBJECT-TYPE
  SYNTAX   SnmpAdminString
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
     " This object specifies the MTA device configuration file
       information, including the access method, the server name,
       and the configuration file name. The value of this object
       is the Uniform Resource Locator (URL) of the configuration
       file for TFTP or HTTP download.
       If this object value is a TFTP URL, it must be formatted
       as defined in RFC 3617.
       If this object value is an HTTP URL, it must be formatted
       as defined in RFC 2616.
       If the MTA SNMP Enrollment mechanism is used, then the MTA
       must download the file provided by the Provisioning Server

       during provisioning via an SNMP SET on this object.
       If the MTA SNMP Enrollment mechanism is not used, this
       object MUST contain the URL value corresponding to the
       'siaddr' and 'file' fields received in the DHCP ACK to
       locate the configuration file: the 'siaddr' and 'file'
       fields represent the host and file of the TFTP URL,
       respectively. In this case, the MTA MUST return an
       'inconsistentValue' error in response to SNMP SET
       operations.
       The MTA MUST return a zero-length string if the server
       address (host part of the URL) is unknown.
       If a value is written into an instance of
       pktcMtaDevConfigFile, the agent MUST NOT retain the
       supplied value across MTA re-initializations or reboots."

  ::= { pktcMtaDevServer 9 }

pktcMtaDevSnmpEntity OBJECT-TYPE
  SYNTAX   SnmpAdminString
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
     " This object contains the FQDN of the SNMP entity of the
       Provisioning Server. When the MTA SNMP Enrollment
       Mechanism is used, this object represents the server that
       the MTA communicates with, that it receives the

configuration file URL from, and that it sends the
enrollment notification to. The SNMP entity is also the
destination entity for all the provisioning
notifications. It may be used for post-provisioning
SNMP operations. During the provisioning phase, this
SNMP entity FQDN is supplied to the MTA via DHCP option
122, sub-option 3, as defined in RFC 3495. The MTA must
resolve the FQDN value before its very first network
interaction with the SNMP entity during the provisioning
phase."

REFERENCE

RFC 3495, DHCP Option for CableLabs Client Configuration."
::= { pktcMtaDevServer 10 }

pktcMtaDevProvConfigHash OBJECT-TYPE
SYNTAX   OCTET STRING (SIZE(20))
MAX-ACCESS read-write
STATUS   current

DESCRIPTION
" This object contains the hash value of the contents of the
configuration file.
The authentication algorithm is Secure Hashing Algorithm
1 (SHA-1), and the length is 160 bits. The hash
calculation MUST follow the requirements defined in the
PacketCable Security Specification. When the MTA SNMP
Enrollment mechanism is used, this hash value is
calculated and sent to the MTA prior to sending the
config file. This object value is then provided by the
Provisioning server via an SNMP SET operation.
When the MTA SNMP Enrollment mechanism is not in use, the
hash value is provided in the configuration file itself,
and it is also calculated by the MTA. This object value
MUST represent the hash value calculated by the MTA.
When the MTA SNMP Enrollment mechanism is not in use, the
MTA must reject all SNMP SET operations on this object and
return an 'inconsistentValue' error.
If a value is written into an instance of
pktcMtaDevProvConfigHash, the agent MUST NOT retain the
supplied value across MTA re-initializations or reboots."

PacketCable Security Specification."
::= { pktcMtaDevServer 11 }

pktcMtaDevProvConfigKey OBJECT-TYPE
  SYNTAX   OCTET STRING (SIZE(32))
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
     " This object contains the key used to encrypt/decrypt
       the configuration file when secure SNMPv3 provisioning
       is used.
       The value of this object is provided along with the
       configuration file information (pktcMtaDevConfigFile)
       and hash (pktcMtaDevProvConfigHash) by the Provisioning
       Server via SNMP SET once the configuration file has been
       created, as defined by the PacketCable Security
       specification.

       The privacy algorithm is defined by the
       pktcMtaDevProvConfigEncryptAlg MIB object. The
       MTA requirements related to the privacy algorithm are
       defined in the PacketCable Security Specification.

       If this object is set at any other provisioning step than
       that allowed by the PacketCable MTA Device

       Provisioning Specification, the MTA SHOULD return
       an 'inconsistentValue' error.
       This object must not be used in non secure provisioning
       mode. In non-secure provisioning modes, the MTA SHOULD
       return an 'inconsistentValue' in response to SNMP SET
       operations, and the MTA SHOULD return a zero-length
       string in response to SNMP GET operations.
       If a value is written into an instance of
       pktcMtaDevProvConfigKey, the agent MUST NOT retain the
       supplied value across MTA re-initializations or reboots."

   SYNTAX     Unsigned32 (0..180)
   UNITS      "seconds"
   MAX-ACCESS  read-write
   STATUS     current
   DESCRIPTION
      " This object defines a Kerberos Key Management timer on the
        MTA.  It is the time period during which the MTA saves the
        nonce and Server Kerberos Principal Identifier to match an
        AP Request and its associated AP Reply response from the
        Provisioning Server.
        After the timeout has been exceeded, the client discards
        this (nonce, Server Kerberos Principal Identifier) pair,
        after which it will no longer accept a matching AP Reply.
        This timer only applies when the Provisioning Server
        initiated key management for SNMPv3 (with a
        Wake Up message).
        If this object is set to a zero value, the MTA MUST return
        an 'inconsistentValue' in response to SNMP SET operations.
        This object should not be used in non-secure provisioning
        modes.  In non-secure provisioning modes, the MTA MUST
        return an 'inconsistentValue' in response to SNMP SET
        operations, and the MTA MUST return a zero value in

        response to SNMP GET operations.
        If a value is written into an instance of
        pktcMtaDevProvSolicitedKeyTimeout, the agent MUST NOT
        retain the supplied value across MTA re-initializations
        or reboots."
   DEFVAL { 3 }
   ::= { pktcMtaDevServer 14 }

--=================================================================
--
-- Unsolicited key updates are retransmitted according to an
-- exponential back-off mechanism using two timers and a maximum
-- retry counter for AS replies.
-- The initial retransmission timer value is the nominal timer
-- value (pktcMtaDevProvUnsolicitedKeyNomTimeout).  The
-- retransmissions occur with an exponentially increasing interval
-- that caps at the maximum timeout value
-- (pktcMtaDevProvUnsolicitedKeyMaxTimeout).
-- Retransmissions stop when the maximum retry counter is reached
```

```
--  (pktcMtaDevProvUnsolicitedKeyMaxRetries).
--  For example, with values of 3 seconds for the nominal
--  timer, 100 seconds for the maximum timeout, and 8 retries max,
--  and with an exponential value of 2, this results in
--  retransmission intervals will be 3 s, 6 s, 12 s, 24 s, 48 s,
--  96 s, 100 s, and 100 s;
--  retransmissions then stop because the maximum number of
--  retries (8) has been reached.
--
--================================================================
--
--  Timeouts for unsolicited key management updates are only
--  pertinent before the first SNMPv3 message is sent between the
--  MTA and the Provisioning Server and before the configuration
--  file is loaded.
--

--
--   The procedure of establishing the Security Associations
--   for NCS signaling is described in the PacketCable Security
--   specification.
--   It involves the analysis of the pktcNcsEndPntConfigTable row
--   for the corresponding endpoint number and the correlation of
--   the CMS FQDN from this row with the CMS Table and
--   consequently, with the Realm Table.  Both of these tables
--   are defined below.  The pktcNcsEndPntConfigTable is defined in
--   the IP over Cable Data Network (IPCDN)
--   NCS Signaling MIB [NCSSIGMIB].
--
--   III.  When the MTA receives wake-up or re-key messages from a
--   CMS, it performs key management based on the corresponding
--   entry in the CMS table.  If the matching CMS entry does not
--   exist, it must ignore the wake-up or re-key messages.
--
--=================================================================
--=================================================================
--
--   pktcMtaDevRealmTable
--
--   The pktcMtaDevRealmTable shows the KDC realms.  The table is
--   indexed with pktcMtaDevRealmIndex.  The Realm Table contains the
--   pktcMtaDevRealmName in conjunction with any server that needs
--   a Security Association with the MTA.  Uppercase must be used
--   to compare the pktcMtaDevRealmName content.
--

--=================================================================
```

pktcMtaDevRealmAvailSlot   OBJECT-TYPE
  SYNTAX   Unsigned32 (0..64)
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
      " This object contains the index number of the first
        available entry in the realm table (pktcMtaDevRealmTable).
        If all the entries in the realm table have been assigned,
        this object contains the value of zero.
        A management station should create new entries in the
        realm table, using the following procedure:

        First, issue a management protocol retrieval operation
        to determine the value of the first available index in the
        realm table (pktcMtaDevRealmAvailSlot).

        Second, issue a management protocol SET operation
        to create an instance of the pktcMtaDevRealmStatus
        object by setting its value to 'createAndWait(5)'.

        Third, if the SET operation succeeded, continue
        modifying the object instances corresponding to the newly
        created conceptual row, without fear of collision with
        other management stations. When all necessary conceptual
        columns of the row are properly populated (via SET
        operations or default values), the management station may
        SET the pktcMtaDevRealmStatus object to 'active(1)'."

OBJECT   pktcMtaDevProvConfigEncryptAlg
  SYNTAX PktcMtaDevProvEncryptAlg
  DESCRIPTION
    "An implementation is only required to support
values of none(0) and des64Cbcmode(1).
An IV of zero is used to encrypt in des64Cbcmode, and
the length of pktcMtaDevProvConfigKey is 64 bits, as
defined in the PacketCable Security specification.
Other encryption types may be defined in future
versions of this MIB module."

OBJECT pktcMtaDevRealmOrgName
  SYNTAX LongUtf8String (SIZE (1..384))
  DESCRIPTION
    "The Organization Name field in X.509 certificates
can contain up to 64 UTF-8 encoded characters,
as defined in RFCs 3280 and 4630. Therefore, compliant
devices are only required to support Organization
Name values of up to 64 UTF-8 encoded characters.
Given that RFCs 3280 and 4630 define the UTF-8 encoding,
compliant devices must support a maximum size of 384
octets for pktcMtaDevRealmOrgName. The calculation of
384 octets comes from the RFC 3629 UTF-8 encoding
definition whereby the UTF-8 encoded characters
are encoded as sequences of 1 to 6 octets,
assuming that code points as high as 0x7fffffff
might be used. Subsequent versions of Unicode and ISO
10646 have limited the upper bound to 0x10ffff.

Consequently, the current version of UTF-8, defined in
RFC 3629, does not require more than four octets to
encode a valid code point."

mioxPleEnAddrToX121LkupFlrs OBJECT-TYPE
        SYNTAX Counter
        ACCESS read-only
        STATUS mandatory
        DESCRIPTION
            "The number of times a translation from an
            Encapsulated Address to an X.121 address

failed to find a corresponding X.121
address. Encapsulated addresses can be
looked up in the mioxPeerTable or translated
via an algorithm as for the DDN. Addresses
that are successfully recognized do not
increment this counter. Addresses that are
not recognized (reflecting an abnormal
packet delivery condition) increment this
counter.

If an address translation fails, it may be
difficult to determine which PLE entry
should count the failure. In such cases the
first likely entry in this table should be
selected. Agents should record the failure
even if they are unsure which PLE should be
associated with the failure."
    ::= { mioxPleEntry 3 }

mioxPleLastFailedEnAddr OBJECT-TYPE
    SYNTAX OCTET STRING (SIZE(2..128))
    ACCESS read-only
    STATUS mandatory
    DESCRIPTION
        "The last Encapsulated address that failed
        to find a corresponding X.121 address and
        caused mioxPleEnAddrToX121LkupFlrs to be
        incremented. The first octet of this object
        contains the encapsulation type, the
        remaining octets contain the address of that
        type that failed. Thus for an IP address,
        the length will be five octets, the first
        octet will contain 204 (hex CC), and the
        last four octets will contain the IP
        address. For a snap encapsulation, the
        first byte would be 128 (hex 80) and the
        rest of the octet string would have the snap
        header."

-- clearCall or makeCall.
-- All other defined values must be accepted.
-- Implementors should realize that allowing these values
-- provides richer management, and implementations
-- are encouraged to accept these values.
mioxPeerStatus OBJECT-TYPE
    SYNTAX  INTEGER {
            valid (1),
            createRequest (2),
            underCreation (3),
            invalid (4),
            clearCall (5),
            makeCall (6)
            }
    ACCESS  read-write
    STATUS  mandatory
    DESCRIPTION
        "This reports the status of a peer entry.
        A value of valid indicates a normal entry
        that is in use by the agent.  A value of
        underCreation indicates a newly created
        entry which isn't yet in use because the
        creating management station is still setting
        values.
```

The value of invalid indicates the entry is no longer in use and the agent is free to delete the entry at any time. A management station is also free to use an entry in the invalid state.

Entries are created by setting a value of createRequest. Only non-existent or invalid entries can be set to createRequest. Upon receiving a valid createRequest, the agent will create an entry in the underCreation state. This object can not be set to a value of underCreation directly, entries can only be created by setting a value of createRequest. Entries that exist in other than the invalid state can not be set to createRequest.

Entries with a value of underCreation are not used by the system and the management station can change the values of other objects in the table entry. Management stations should also remember to configure values in the mioxPeerEncTable with the same peer index value as this peer entry.

An entry in the underCreation state can be set to valid or invalid. Entries in the underCreation state will stay in that state until 1) the agent times them out, 2) they are set to valid, 3) they are set to invalid. If an agent notices an entry has been in the underCreation state for an abnormally long time, it may decide the management station has failed and invalidate the entry. A prudent agent will understand that the management station may need to wait for human input and will allow for that possibility in its determination of this abnormally long period.

Once a management station has completed all fields of an entry, it will set a value of valid. This causes the entry to be activated.

Entries in the valid state may also be set to makeCall or clearCall to make or clear

X.25 calls to the peer. After such a set
request the entry will still be in the valid
state. Setting a value of makeCall causes
the agent to initiate an X.25 call request
to the peer specified by the entry. Setting
a value of clearCall causes the agent to
initiate clearing one X.25 call present to
the peer. Each set request will initiate
another call or clear request (up to the
maximum allowed); this means that management
stations that fail to get a response to a
set request should query to see if a call
was in fact placed or cleared before
retrying the request. Entries not in the
valid state can not be set to makeCall or
clearCall.

The values of makeCall and clearCall provide
for circuit control on devices which perform
Ethernet Bridging using static circuit
assignment without address recognition;
other devices which dynamically place calls
based on destination addresses may reject
such requests.

An agent that (re)creates a new entry
because of a set with createRequest, should
also (re)create a mioxPeerEncTable entry
with a mioxPeerEncIndex of 1, and a
mioxPeerEncType of 204 (hex CC)."
    ::= { mioxPeerEntry 2 }

mioxPeerMaxCircuits OBJECT-TYPE

-- ###
--   Peer Encapsulation Table
-- ###

mioxPeerEncTable OBJECT-TYPE
        SYNTAX SEQUENCE OF MioxPeerEncEntry
        ACCESS not-accessible
        STATUS mandatory
        DESCRIPTION
            "This table contains the list of
            encapsulations used to communicate with a
            peer. This table has two indexes, the first
            identifies the peer, the second
            distinguishes encapsulation types.

            The first index identifies the corresponding
            entry in the mioxPeerTable. The second
            index gives the priority of the different
            encapsulations.

            The encapsulation types are ordered in
            priority order. For calling a peer, the
            first entry (mioxPeerEncIndex of 1) is tried
            first. If the call doesn't succeed because
            the remote host clears the call due to
            incompatible call user data, the next entry
            in the list is tried. Each entry is tried
            until the list is exhausted.

            For answering a call, the encapsulation type
            requested by the peer must be found the list
            or the call will be refused. If there are
            no entries in this table for a peer, all
            call requests from the peer will be refused.

            Objects in this table can only be set when
            the mioxPeerStatus object with the same
            index has a value of underCreation. When
            that status object is set to invalid and

deleted, the entry in this table with that
peer index must also be deleted."
::= { mioxPeer 2 }

mioxPeerEncEntry OBJECT-TYPE

        "Per connection information."
    INDEX { mioxPeerIndex, mioxPeerEncIndex}
    ::= { mioxPeerEncTable 1 }

MioxPeerEncEntry ::= SEQUENCE {
    mioxPeerEncIndex
        PositiveInteger,
    mioxPeerEncType
        INTEGER
    }

mioxPeerEncIndex   OBJECT-TYPE
    SYNTAX PositiveInteger
    ACCESS read-only
    STATUS   mandatory
    DESCRIPTION
        "The second index in the table which
        distinguishes different encapsulation
        types."
    ::= { mioxPeerEncEntry 1 }

mioxPeerEncType OBJECT-TYPE
    SYNTAX INTEGER (0..256)
    ACCESS read-write
    STATUS mandatory
    DESCRIPTION
        "The value of the encapsulation type. For
        IP encapsulation this will have a value of
        204 (hex CC). For SNAP encapsulated
        packets, this will have a value of 128 (hex
        80). For CLNP, ISO 8473, this will have a
        value of 129 (hex 81). For ES-ES, ISO 9542,
        this will have a value of 130 (hex 82). A
        value of 197 (hex C5) identifies the Blacker
        X.25 encapsulation. A value of 0,
        identifies the Null encapsulation.

        This value can only be written when the
        mioxPeerStatus object with the same

mioxPeerIndex has a value of underCreation.
        Setting this object to a value of 256
        deletes the entry. When deleting an entry,
        all other entries in the mioxPeerEncTable
        with the same mioxPeerIndex and with an
        mioxPeerEncIndex higher then the deleted
        entry, will all have their mioxPeerEncIndex
        values decremented by one."

-- sysApplRun Group
-- This group models activity information for applications
-- that have been invoked and are either currently running,
-- or have previously run on the host system. Likewise,
-- the individual elements of an invoked application are
-- also modeled to show currently running processes, and
-- processes that have run in the past.

-- sysApplRunTable
-- The sysApplRunTable contains the application instances
-- which are currently running on the host. Since a single
-- application might be invoked multiple times, an entry is
-- added to this table for each INVOCATION of an application.
-- The table is indexed by sysApplInstallPkgIndex, sysApplRunIndex
-- to enable managers to easily locate all invocations of
-- a particular application package.

sysApplRunTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF SysApplRunEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "The table describes the applications which are executing
        on the host. Each time an application is invoked,
        an entry is created in this table. When an application ends,
        the entry is removed from this table and a corresponding
                entry is created in the SysApplPastRunTable.

        A new entry is created in this table whenever the agent
        implementation detects a new running process that is an
        installed application element whose sysApplInstallElmtRole
        designates it as being the application's primary executable
        (sysApplInstallElmtRole = primary(2)).

        The table is indexed by sysApplInstallPkgIndex,
        sysApplRunIndex to enable managers to easily locate all
        invocations of a particular application package."

    sysApplRunCurrentState   RunState
}

sysApplRunIndex OBJECT-TYPE

SYNTAX   Unsigned32 (1..'ffffffff'h)
MAX-ACCESS not-accessible
STATUS   current
DESCRIPTION
    "Part of the index for this table. An arbitrary
    integer used only for indexing purposes. Generally
    monotonically increasing from 1 as new applications are
    started on the host, it uniquely identifies application
    invocations.

    The numbering for this index increases by 1 for each
    INVOCATION of an application, regardless of which
    installed application package this entry represents a
    running instance of.

    An example of the indexing for a couple of entries is
    shown below.

            :
        sysApplRunStarted.17.14
        sysApplRunStarted.17.63
        sysApplRunStarted.18.13
            :

    In this example, the agent has observed 12 application
    invocations when the application represented by entry 18
    in the sysApplInstallPkgTable is invoked. The next
    invocation detected by the agent is an invocation of
    installed application package 17. Some time later,
    installed application 17 is invoked a second time.

    NOTE: this index is not intended to reflect a real-time
    (wall clock time) ordering of application invocations;
    it is merely intended to uniquely identify running
    instances of applications. Although the
    sysApplInstallPkgIndex is included in the INDEX clause
    for this table, it serves only to ease searching of
    this table by installed application and does not
    contribute to uniquely identifying table entries."

sysApplRunCurrentState OBJECT-TYPE
    SYNTAX   RunState
    MAX-ACCESS read-only
    STATUS   current
    DESCRIPTION
        "The current state of the running application instance.
        The possible values are running(1), runnable(2) but waiting
        for a resource such as CPU, waiting(3) for an event,
        exiting(4), or other(5). This value is based on an evaluation
        of the running elements of this application instance (see
        sysApplElmRunState) and their Roles as defined by
        sysApplInstallElmtRole. An agent implementation may
        detect that an application instance is in the process of
        exiting if one or more of its REQUIRED elements are no
        longer running. Most agent implementations will wait until
        a second internal poll has been completed to give the
        system time to start REQUIRED elements before marking the
        application instance as exiting."
    ::= { sysApplRunEntry 3 }

-- sysApplPastRunTable
-- The sysApplPastRunTable provides a history of applications
-- previously run on the host computer. Entries are removed from
-- the sysApplRunTable and corresponding entries are added to this
-- table when an application becomes inactive. Entries remain in
-- this table until they are aged out when either the table size
-- reaches a maximum as determined by the sysApplPastRunMaxRows,
-- or when an entry has aged to exceed a time limit as set be
-- sysApplPastRunTblTimeLimit.
--
-- When aging out entries, the oldest entry, as determined by

-- the value of sysApplPastRunTimeEnded, will be removed first.

sysApplPastRunTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF SysApplPastRunEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "A history of the applications that have previously run
        on the host computer. An entry's information is moved to
        this table from the sysApplRunTable when the invoked
        application represented by the entry ceases to be running.

        An agent implementation can determine that an application
        invocation is no longer running by evaluating the running

elements of the application instance and their Roles as
defined by sysApplInstallElmtRole. Obviously, if there
are no running elements for the application instance,
then the application invocation is no longer running.
If any one of the REQUIRED elements is not running,
the application instance may be in the process of exiting.
Most agent implementations will wait until a second internal
poll has been completed to give the system time to either
restart partial failures or to give all elements time to
exit. If, after the second poll, there are REQUIRED
elements that are not running, then the application
instance may be considered by the agent implementation
to no longer be running.

Entries remain in the sysApplPastRunTable until they
are aged out when either the table size reaches a maximum
as determined by the sysApplPastRunMaxRows, or when an entry
has aged to exceed a time limit as set by
sysApplPastRunTblTimeLimit.

Entries in this table are indexed by sysApplInstallPkgIndex,
sysApplPastRunIndex to facilitate retrieval of all past
run invocations of a particular installed application."

-- sysApplElmtRunTable
-- The sysApplElmtRunTable contains an entry for each process that
-- is currently running on the host. An entry is created in
-- this table for each process at the time it is started, and will
-- remain in the table until the process terminates.
--
-- The table is indexed by sysApplElmtRunInstallPkg,
-- sysApplElmtRunInvocID, and sysApplElmtRunIndex to make it easy
-- to locate all running elements of a particular invoked application
-- which has been installed on the system.

sysApplElmtRunTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF SysApplElmtRunEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "The table describes the processes which are
        currently executing on the host system. Each entry
        represents a running process and is associated with
        the invoked application of which that process is a part, if
        possible. This table contains an entry for every process
        currently running on the system, regardless of whether its
        'parent' application can be determined. So, for example,
        processes like 'ps' and 'grep' will have entries though they
        are not associated with an installed application package.

        Because a running application may involve
        more than one executable, it is possible to have
        multiple entries in this table for each application.
        Entries are removed from this table when the process
        terminates.
        The table is indexed by sysApplElmtRunInstallPkg,
        sysApplElmtRunInvocID, and sysApplElmtRunIndex to
        facilitate the retrieval of all running elements of a
        particular invoked application which has been installed on

-- sysApplElmtPastRunTable
-- The sysApplElmtPastRunTable maintains a history of
-- processes which have previously executed on
-- the host as part of an application. Upon termination
-- of a process, the entry representing the process is removed from
-- the sysApplElmtRunTable and a corresponding entry is created in
-- this table provided that the process was part of an
-- identifiable application. If the process could not be associated

-- with an invoked application, no corresponding entry is created.
-- Hence, whereas the sysApplElmtRunTable contains an entry for
-- every process currently executing on the system, the
-- sysApplElmtPastRunTable only contains entries for processes
-- that previously executed as part of an invoked application.
--
-- Entries remain in this table until they are aged out when
-- either the number of entries in the table reaches a
-- maximum as determined by sysApplElmtPastRunMaxRows, or
-- when an entry has aged to exceed a time limit as set by
-- sysApplElmtPastRunTblTimeLimit. When aging out entries,
-- the oldest entry, as determined by the value of
-- sysApplElmtPastRunTimeEnded, will be removed first.

--
-- The table is indexed by sysApplInstallPkgIndex (from the
-- sysApplInstallPkgTable), sysApplElmtPastRunInvocID, and
-- sysApplElmtPastRunIndex to make it easy to locate all
-- previously executed processes of a particular invoked application
-- that has been installed on the system.

sysApplElmtPastRunTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF SysApplElmtPastRunEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "The table describes the processes which have previously
        executed on the host system as part of an application.
        Each entry represents a process which has previously
        executed and is associated with the invoked application
        of which it was a part. Because an invoked application
        may involve more than one executable, it is possible
        to have multiple entries in this table for
        each application invocation. Entries are added
        to this table when the corresponding process in the
        sysApplElmtRun Table terminates.

        Entries remain in this table until they are aged out when
        either the number of entries in the table reaches a
        maximum as determined by sysApplElmtPastRunMaxRows, or
        when an entry has aged to exceed a time limit as set by
        sysApplElmtPastRunTblTimeLimit. When aging out entries,
        the oldest entry, as determined by the value of
        sysApplElmtPastRunTimeEnded, will be removed first.

        The table is indexed by sysApplInstallPkgIndex (from the
        sysApplInstallPkgTable), sysApplElmtPastRunInvocID,
        and sysApplElmtPastRunIndex to make it easy to locate all
        previously executed processes of a particular invoked
        application that has been installed on the system."

    ::= { sysApplRun 11 }

-- sysApplMap Group
-- This group contains a table, the sysApplMapTable,
-- whose sole purpose is to provide a 'backwards'
-- mapping so that, given a known sysApplElmtRunIndex
-- (process identification number), the corresponding invoked
-- application (sysApplRunIndex), installed element
-- (sysApplInstallElmtIndex), and installed application
-- package (sysApplInstallPkgIndex) can be quickly determined.
--
-- The table will contain one entry for each process
-- currently running on the system.
--
-- A backwards mapping is extremely useful since the tables
-- in this MIB module are typically indexed with the
-- installed application package (sysApplInstallPkgIndex)
-- as the primary key, and on down as required by the
-- specific table, with the process ID number (sysApplElmtRunIndex)
-- being the least significant key.
--
-- It is expected that management applications will use
-- this mapping table by doing a 'GetNext' operation with
-- the known process ID number (sysApplElmtRunIndex) as the partial
-- instance identifier. Assuming that there is an entry for
-- the process, the result should return a single columnar value,
-- the sysApplMapInstallPkgIndex, with the sysApplElmtRunIndex,
-- sysApplRunIndex, and sysApplInstallElmtIndex contained in the
-- instance identifier for the returned MIB object value.
--
-- NOTE: if the process can not be associated back to an
-- invoked application installed on the system, then the
-- value returned for the columnar value sysApplMapInstallPkgIndex
-- will be '0' and the instance portion of the object-identifier
-- will be the process ID number (sysApplElmtRunIndex) followed

-- by 0.0.

sysApplMapTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF SysApplMapEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "The sole purpose of this table is to provide a
        'backwards' mapping so that, given a known
        sysApplElmtRunIndex (process identification number),
        the corresponding invoked application (sysApplRunIndex),
        installed element (sysApplInstallElmtIndex), and
        installed application package (sysApplInstallPkgIndex)

can be quickly determined.

This table will contain one entry for each process
that is currently executing on the system.

It is expected that management applications will use
this mapping table by doing a 'GetNext' operation with
the known process ID number (sysApplElmtRunIndex) as the
partial instance identifier. Assuming that there is an
entry for the process, the result should return a single
columnar value, the sysApplMapInstallPkgIndex, with the
sysApplElmtRunIndex, sysApplRunIndex, and
sysApplInstallElmtIndex contained in the instance identifier
for the returned MIB object value.

NOTE: if the process can not be associated back to an
invoked application installed on the system, then the
value returned for the columnar value
sysApplMapInstallPkgIndex will be '0' and the instance
portion of the object-identifier will be the process ID
number (sysApplElmtRunIndex) followed by 0.0."

IANAItuProbableCause ::= TEXTUAL-CONVENTION
STATUS current
DESCRIPTION
"ITU-T probable cause values. Duplicate values defined in
X.733 are appended with X733 to ensure syntactic uniqueness.
Probable cause value 0 is reserved for special purposes.

The Internet Assigned Number Authority (IANA) is responsible
for the assignment of the enumerations in this TC.
IANAItuProbableCause value of 0 is reserved for special
purposes and MUST NOT be assigned.

Values of IANAItuProbableCause in the range 1 to 1023 are
reserved for causes that correspond to ITU-T probable cause.

All other requests for new causes will be handled on a
first-come, first served basis and will be assigned
enumeration values starting with 1025.

Request should come in the form of well-formed
SMI [RFC2578] for enumeration names that are unique and
sufficiently descriptive.

While some effort will be taken to ensure that new probable
causes do not conceptually duplicate existing probable
causes it is acknowledged that the existence of conceptual
duplicates in the starting probable cause list is an known
industry reality.

To aid IANA in the administration of probable cause names and values, the OPS Area Director will appoint one or more experts to help review requests.

See http://www.iana.org"

DESCRIPTION
    "This is the MIB Module for DOCSIS-compliant cable modems

    and cable-modem termination systems.

    Copyright (C) The IETF Trust (2006). This version
    of this MIB module was published in RFC 4639; for full
    legal notices see the RFC itself."

REVISION "200612200000Z" -- December 20, 2006
DESCRIPTION
    "Second version, published as RFC 4639.

    Modifications to this MIB module since RFC 2669 include:
    - Deprecation of the docsDevFilter group in favor of the
      DiffServ MIB groups, to enable support for IPv6
      filtering and DiffServ Code Point (DSCP) marking.
    - Deprecation of the docsDevCpeGroup in favor of the
      docsDevCpeInetGroup, to enable support of IPv6.
    - Addition of various InetAddress objects to enable

support of IPv6.
- Deprecation of docsDevNmAccessTable in favor of SNMP
  Coexistence and SNMPv3 -- yet adding
  docsDevNmAccessTrapVersion and clarifying
  docsDevNmAccessIp for current use of this table,
- Addition of docsDevIgmpModeControl for management and
  control of the IGMP mode of operation,
- Addition of docsDevMaxCpe for management of the
  maxmium number of CPEs permitted access through a
  cable modem,
- Addition of docsDevSwServerTransportProtocol, and
  modifications to docsDevSoftware object DESCRIPTIONS,
  to enable software downloads via either TFTP or HTTP,
- Replacement of docsDevEvThrottleInhibited with
  docsDevEvThrottleThresholdExceeded to simplify
  event threshold management,
- Modification of docsDevEvReporting to enable local
  logging to the internal volatile log, and not to the
  internal non-volatile log,
- Modification of the compliance statement to make the
  docsDevCpe objects optional
- Created placeholders for two OIDs in the
  docsDevFilterPolicyTable that were never used
- Modified the DESCRIPTION of
  docsDevSwServerTransportProtocol and
  docsDevSwServerAddressType to address the
  dependence between each object
- Added a reference to docsDevServerConfigTftpAddress
- Clarified the scope of notifications that are covered
  by docsDevEvThrottleThreshold
- Clarified an error condition that could occur when

  doing a SET to docsDevEvReporting
- Defined each of the enumerated types for both
  docsDevEvLevel and docsDevEvPriority
- Added UNITS clause to docsDevFilterLLCMatches,
  docsDevFilterIpMatches, docsDevMaxCpe,
  docsDevEvThrottleThreshold and docsDevEvCounts.
- Added REFERENCE clause to docsDevFilterIpProtocol
- Modified DESCRIPTION of docsDevCpeInetAddr to be
  more protocol-neutral
- Removed the enumerated value (1) from both
  docsDevCpeInetSource and docsDevCpeSource
- Covered additional read-write and read-create objects
  in the Security Considerations section
- Modified the default value of docsDevNmAccessIpMask

to be consistent with OSSI specification
- Modified the SYNTAX of docsDevNmAccessCommunity and
  docsDevNmAccessInterfaces in the Conformance
  Statement section
- Added SYNTAX clause to docsDevEvReporting in the
  Conformance Statement section
- Modified SYNTAX clause of docsDevEvReporting to
  move new enumerated type to byte boundary
- Added references to DOCSIS 2.0 specifications to
  multiple objects
- Clarified non-persistency across reboots for
  all tables
- Clarified functionality of docsDevSw objects as
  they relate to docsDevSwOperStatus
- Clarified enumerated types (9) and (10) for
  docsDevServerBootState
- Defined the state of unknown(0) for the following
  objects: docsDevServerDhcpAddressType,
  docsDevServerTimeAddressType,
  docsDevServerConfigTftpAddressType and
  docsDevServerConfigTftpAddressType
- Modified the value in docsDevFilterIpDaddr to be
  consistent with the SYNTAX
- Specified which rows could be modified in an
  active row for docsDevFilterPolicyStatus
- Defined the term 'manually' in docsDevCpeEnroll
- Clarified the description for
  docsDevFilterTosOrMask
- Covered the case of a non-existent row for
  docsDevFilterPolicyPtr
- Added DEFVAL clauses for multiple objects
- Replaced docsDevNotification OBJECT IDENTIFIER
  with docsDevNotifications to address possible
  compatibility issues

- Added support for the usage of RFC 3413 and RFC 3014
  as event notification mechanisms
- Removed docsDevFilterPolicyObsoleteGroup
- Added stdInterface(9) type to docsDevEvReporting to
  support the usage of RFC3413 and RFC3014
- Modified DESCRIPTION for docsDevMaxCpe"

REVISION "199908190000Z"
DESCRIPTION
    "Initial version, published as RFC 2669."

```
        ::= { mib-2 69 }

docsDevMIBObjects  OBJECT IDENTIFIER ::= { docsDev 1 }

docsDevBase OBJECT IDENTIFIER ::= { docsDevMIBObjects 1 }

--
-- For the following object, there is no concept in the
-- RFI specification corresponding to a backup CMTS.  The
-- enumeration is provided here in case someone is able
-- to define such a role or device.
--

docsDevRole OBJECT-TYPE
    SYNTAX INTEGER {
        cm(1),
        cmtsActive(2),
        cmtsBackup(3)
    }
    MAX-ACCESS  read-only
    STATUS     current
    DESCRIPTION
        "Defines the current role of this device.  cm(1) is a
         Cable Modem, cmtsActive(2) is a Cable Modem Termination
         System that is controlling the system of cable modems,
         and cmtsBackup(3) is a CMTS that is currently connected
         but is not controlling the system (not currently used).

         In general, if this device is a 'cm', its role will not
         change during operation or between reboots.  If the
         device is a 'cmts' it may change between cmtsActive and
         cmtsBackup and back again during normal operation.  NB:
         At this time, the DOCSIS standards do not support the
         concept of a backup CMTS, but cmtsBackup is included for
         completeness."

-- The following table provides one level of security for access
-- to the device by network management stations.
-- Note that access is also constrained by the
-- community strings and any vendor-specific security.
--

docsDevNmAccessTable OBJECT-TYPE
    SYNTAX     SEQUENCE OF DocsDevNmAccessEntry
    MAX-ACCESS  not-accessible
    STATUS     deprecated
    DESCRIPTION
       "This table controls access to SNMP objects by network
        management stations.  If the table is empty, access to
        SNMP objects is unrestricted.  The objects in this table
        MUST NOT persist across reboots.  The objects in this
        table are only accessible from cable devices that are
        not capable of operating in SNMP Coexistence mode
        (RFC 3584) or in SNMPv3 mode (RFC 3410).
        See the conformance section for
        details.  Note that some devices are required by other
        specifications (e.g., the DOCSIS OSSIv1.1 specification)
        to support the legacy SNMPv1/v2c docsDevNmAccess mode
        for backward compatibility.

        This table is deprecated.  Instead, use the SNMP
        coexistence MIBs from RFC 3584, the TARGET and
        NOTIFICATION MIBs from RFC 3413, and
        the View-Based Access Control Model (VACM) MIBs for
        all SNMP protocol versions from RFC 3415."

-- dot1dStaticAllowedToGoTo.

docsDevNmAccessInterfaces OBJECT-TYPE
    SYNTAX   OCTET STRING (SIZE (1..32))
    MAX-ACCESS read-create
    STATUS   deprecated

DESCRIPTION
   "Specifies the set of interfaces from which requests from
   this NMS will be accepted. Each octet within
   the value of this object specifies a set of eight

   interfaces, the first octet specifying ports 1
   through 8, the second octet specifying interfaces 9
   through 16, etc. Within each octet, the most
   significant bit represents the lowest numbered
   interface, and the least significant bit represents the
   highest numbered interface. Thus, each interface is
   represented by a single bit within the value of this
   object. If that bit has a value of '1' then that
   interface is included in the set.

   Note that entries in this table apply only to link-layer
   interfaces (e.g., Ethernet and CATV MAC). Bits
   representing upstream and downstream channel interfaces
   MUST NOT be set to '1'.

   Note that if bits corresponding to non-existing
   interfaces are set, the result is implementation
   specific.

   Note that according to the DOCSIS OSSIv1.1
   specification, when ifIndex '1' is included in the
   set, then this row applies to all CPE
   (customer-facing) interfaces.

   The size of this object is the minimum required to
   represent all configured interfaces for this device."
   ::= { docsDevNmAccessEntry 6 }

   SYNTAX INTEGER {
      upgradeFromMgt(1),
      allowProvisioningUpgrade(2),
      ignoreProvisioningUpgrade(3)
   }
   MAX-ACCESS read-write
   STATUS   current
   DESCRIPTION
      "If set to upgradeFromMgt(1), the device will initiate a
      TFTP or HTTP software image download. After
      successfully receiving an image, the device will set
      its state to ignoreProvisioningUpgrade(3) and reboot.
      If the download process is interrupted (e.g., by a reset
      or power failure), the device will load the previous
      image and, after re-initialization, continue to attempt
      loading the image specified in docsDevSwFilename.

      If set to allowProvisioningUpgrade(2), the device will
      use the software version information supplied by the
      provisioning server when next rebooting (this does not
      cause a reboot).

      When set to ignoreProvisioningUpgrade(3), the device
      will disregard software image upgrade information
      from the provisioning server.

      Note that reading this object can return
      upgradeFromMgt(1). This indicates that a software

download is currently in progress, and that the device

will reboot after successfully receiving an image."

maintainBelowThreshold(2) causes trap transmission and
syslog messages to be suppressed if the number of traps
would otherwise exceed the threshold.

stopAtThreshold(3) causes trap transmission to cease at
the threshold and not to resume until directed to do so.

inhibited(4) causes all trap transmission and syslog
messages to be suppressed.

A single event is always treated as a single event for
threshold counting. That is, an event causing both a
trap and a syslog message is still treated as a single
event.

Writing to this object resets the thresholding state."

    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "The priority level that is controlled by this
        entry. These are ordered from most (emergency) to least
        (debug) critical. Each event with a CM or CMTS has a
        particular priority level associated with it (as defined
        by the vendor).

        emergency(1) events indicate vendor-specific fatal
        hardware or software errors that prevent normal system
        operation.

        alert(2) events indicate a serious failure that causes
        the reporting system to reboot but is not caused by

hardware or software malfunctioning.

critical(3) events indicate a serious failure that
requires attention and prevents the device from
transmitting data but that could be recovered without
rebooting the system.

error(4) and warning(5) events indicate that a failure
occurred that could interrupt the normal data flow but
that does not cause the device to re-register.

notice(6) and information(7) events indicate a
milestone or checkpoint in normal operation that could
be of particular importance for troubleshooting.

debug(8) events are reserved for vendor-specific
events.

During normal operation, no event more
critical than notice(6) should be generated. Events
between warning and emergency should be generated at
appropriate levels of problems (e.g., emergency when the
box is about to crash)."
    ::= { docsDevEvControlEntry 1 }

    STATUS   current
    DESCRIPTION
        "Defines the action to be taken on occurrence of this
        event class. Implementations may not necessarily
        support all options for all event classes but at
        minimum must allow traps and syslogging to be
        disabled.

If the local(0) bit is set, then log to the internal
log and update non-volatile store, for backward
compatibility with the original RFC 2669 definition.
If the traps(1) bit is set, then generate
an SNMP trap; if the syslog(2) bit is set, then
send a syslog message (assuming that the syslog address
is set). If the localVolatile(8) bit is set, then
log to the internal log without updating non-volatile
store. If the stdInterface(9) bit is set, then the
agent ignores all other bits except the local(0),
syslog(2), and localVolatile(8) bits. Setting the
stdInterface(9) bit indicates that RFC3413 and
RFC3014 are being used to control event reporting
mechanisms."

    DEFVAL { accept }
    ::= { docsDevFilter 3 }

docsDevFilterIpTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF DocsDevFilterIpEntry
    MAX-ACCESS not-accessible
    STATUS   deprecated
    DESCRIPTION
        "An ordered list of filters or classifiers to apply to
        IP traffic. Filter application is ordered by the filter
        index, rather than by a best match algorithm (note that
        this implies that the filter table may have gaps in the

index values). Packets that match no filters will have policy 0 in the docsDevFilterPolicyTable applied to them, if it exists. Otherwise, Packets that match no filters are discarded or forwarded according to the setting of docsDevFilterIpDefault.

Any IP packet can theoretically match multiple rows of this table. When considering a packet, the table is scanned in row index order (e.g., filter 10 is checked before filter 20). If the packet matches that filter (which means that it matches ALL criteria for that row), actions appropriate to docsDevFilterIpControl and docsDevFilterPolicyId are taken. If the packet was discarded processing is complete. If docsDevFilterIpContinue is set to true, the filter comparison continues with the next row in the table, looking for additional matches.

If the packet matches no filter in the table, the packet is accepted or dropped for further processing according to the setting of docsDevFilterIpDefault. If the packet is accepted, the actions specified by policy group 0 (e.g., the rows in docsDevFilterPolicyTable that have a value of 0 for docsDevFilterPolicyId) are taken, if that policy

group exists.

Logically, this table is consulted twice during the processing of any IP packet: once upon its acceptance from the L2 entity, and once upon its transmission to the L2 entity. In actuality, for cable modems, IP filtering is generally the only IP processing done for transit traffic. This means that inbound and outbound filtering can generally be done at the same time with one pass through the filter table.

The objects in this table are only accessible from cable devices that are not operating in DiffServ MIB mode (RFC 3289). See the conformance section for details.

Note that some devices are required by other specifications (e.g., the DOCSIS OSSIv1.1 specification) to support the legacy SNMPv1/v2c docsDevFilter mode for backward compatibility.

Table entries MUST NOT persist across reboots for any
device.

This table is deprecated. Instead, use the DiffServ MIB
from RFC 3289."

--
-- Policy Mapping Table
--

docsDevFilterPolicyTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF DocsDevFilterPolicyEntry
    MAX-ACCESS not-accessible
    STATUS   deprecated
    DESCRIPTION
      "A Table that maps between a policy group ID and a set
      of pointers to policies to be applied. All rows with
      the same docsDevFilterPolicyId are part of the same
      group of policy pointers and are applied in the order
      in this table. docsDevFilterPolicyTable exists to
      allow multiple policy actions (referenced by policy
      pointers) to be applied to any given classified packet.
      The policy actions are applied in index order.
      For example:

      Index   ID   Type   Action
      1   1   TOS   1
      9   5   TOS   1
      12   1   IPSEC 3

      This says that a packet that matches a filter with
      policy id 1 first has TOS policy 1 applied (which might
      set the TOS bits to enable a higher priority) and next
      has the IPSEC policy 3 applied (which may result in the
      packets being dumped into a secure VPN to a remote
      encryptor).

      Policy ID 0 is reserved for default actions and is
      applied only to packets that match no filters in
      docsDevFilterIpTable.

      Table entries MUST NOT persist across reboots for any
      device.

This table is deprecated. Instead, use the DiffServ MIB

        from RFC 3289."

    ::= { docsDevFilterPolicyEntry 5 }

docsDevFilterPolicyPtr OBJECT-TYPE
    SYNTAX   RowPointer
    MAX-ACCESS read-create
    STATUS   deprecated
    DESCRIPTION
      "This object points to a row in an applicable filter
       policy table. Currently, the only standard policy
       table is docsDevFilterTosTable.

       Per the textual convention, this object points to the
       first accessible object in the row; e.g., to point to a
       row in docsDevFilterTosTable with an index of 21, the
       value of this object would be the object identifier
       docsDevTosStatus.21.

       Vendors are recommended to adhere to the same convention
       when adding vendor-specific policy table extensions.

       If this pointer references an empty or non-existent
       row, then no policy action is taken.

       The default upon row creation is a null pointer that
       results in no policy action being taken."

--
-- TOS Policy action table
--

```
docsDevFilterTosTable OBJECT-TYPE
    SYNTAX     SEQUENCE OF DocsDevFilterTosEntry
    MAX-ACCESS  not-accessible
    STATUS     deprecated
    DESCRIPTION
       "Table used to describe Type of Service (TOS) bits

        processing.

        This table is an adjunct to the docsDevFilterIpTable
        and the docsDevFilterPolicy table.  Entries in the
        latter table can point to specific rows in this (and
        other) tables and cause specific actions to be taken.
        This table permits the manipulation of the value of the
        Type of Service bits in the IP header of the matched
        packet as follows:

        Set the tosBits of the packet to
          (tosBits & docsDevFilterTosAndMask) |
          docsDevFilterTosOrMask

        This construct allows you to do a clear and set of all
        the TOS bits in a flexible manner.

        Table entries MUST NOT persist across reboots for any
        device.

        This table is deprecated.  Instead, use the DiffServ MIB
        from RFC 3289."

        MAX-ACCESS  not-accessible
        STATUS      current
        DESCRIPTION
            "This table lists the IP addresses seen (or permitted) as
            source addresses in packets originating from the
            customer interface on this device.  In addition, this
            table can be provisioned with the specific addresses
            permitted for the CPEs via the normal row creation
            mechanisms.

            N.B.  Management action can add entries in this table
            and in docsDevCpeIpTable past the value of
            docsDevCpeIpMax.  docsDevCpeIpMax ONLY restricts the
            ability of the CM to add learned addresses
            automatically.

            Table entries MUST NOT persist across reboots for any
            device.

            This table exactly mirrors docsDevCpeTable and applies
            to IPv4 and IPv6 addresses."

        DESCRIPTION
            "An entry in the docsDevFilterCpeInetTable.  There is one
            entry for each IP CPE seen or provisioned.  If
            docsDevCpeIpMax is set to -1, this table is ignored;
            otherwise, upon receipt of an IP packet from the
            customer interface of the CM, the source IP address is
```

checked against this table. If the address is in the
table, packet processing continues. If the address is
not in the table but docsDevCpeEnroll is set to any and
the sum of the table sizes for docsDevCpeTable and
docsDevCpeInetTable is less than docsDevCpeIpMax, the
address is added to the table, and packet processing
continues. Otherwise, the packet is dropped.

The filtering actions specified by this table occur
after any LLC filtering (docsDevFilterLLCTable), but
prior to any IP filtering (docsDevFilterIpTable,
docsDevNmAccessTable).

When an agent (cable modem) restarts, then all
dynamically created rows are lost."

SYNTAX   DisplayString (SIZE (0..255))
MAX-ACCESS read-write
STATUS   current
DESCRIPTION

    "The textual identification of the contact person for
this managed node, together with information on how
to contact this person. If no contact information is
known, the value is the zero-length string."

::= { system 4 }

sysName OBJECT-TYPE
SYNTAX   DisplayString (SIZE (0..255))
MAX-ACCESS read-write
STATUS   current
DESCRIPTION

    "An administratively-assigned name for this managed
node. By convention, this is the node's fully-qualified
domain name. If the name is unknown, the value is
the zero-length string."

::= { system 5 }

sysLocation OBJECT-TYPE
SYNTAX   DisplayString (SIZE (0..255))
MAX-ACCESS read-write
STATUS   current
DESCRIPTION

    "The physical location of this node (e.g., 'telephone
closet, 3rd floor'). If the location is unknown, the
value is the zero-length string."

::= { system 6 }

sysServices OBJECT-TYPE
SYNTAX   INTEGER (0..127)
MAX-ACCESS read-only
STATUS   current
DESCRIPTION

    "A value which indicates the set of services that this
entity may potentially offer. The value is a sum.

This sum initially takes the value zero. Then, for
each layer, L, in the range 1 through 7, that this node
performs transactions for, 2 raised to (L - 1) is added
to the sum. For example, a node which performs only
routing functions would have a value of 4 ($2^{(3-1)}$).
In contrast, a node which is a host offering application
services would have a value of 72 ($2^{(4-1)} + 2^{(7-1)}$).

Note that in the context of the Internet suite of
protocols, values should be calculated accordingly:

```
        layer     functionality
          1       physical (e.g., repeaters)
          2       datalink/subnetwork (e.g., bridges)
          3       internet (e.g., supports the IP)
          4       end-to-end  (e.g., supports the TCP)
          7       applications (e.g., supports the SMTP)

For systems including OSI protocols, layers 5 and 6
may also be counted."

    STATUS   current
    DESCRIPTION
        "The total number of community-based SNMP messages (for
         example, SNMPv1) delivered to the SNMP entity which
         used an SNMP community name not known to said entity.
         Also, implementations which authenticate community-based
         SNMP messages using check(s) in addition to matching
         the community name (for example, by also checking
         whether the message originated from a transport address
         allowed to use a specified community name) MAY include
         in this value the number of messages which failed the
         additional check(s). It is strongly RECOMMENDED that

the documentation for any security model which is used
to authenticate community-based SNMP messages specify
the precise conditions that contribute to this value."
::= { snmp 4 }

snmpInBadCommunityUses OBJECT-TYPE
  SYNTAX   Counter32
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
      "The total number of community-based SNMP messages (for
      example, SNMPv1) delivered to the SNMP entity which
      represented an SNMP operation that was not allowed for
      the SNMP community named in the message. The precise
      conditions under which this counter is incremented
      (if at all) depend on how the SNMP entity implements
      its access control mechanism and how its applications
      interact with that access control mechanism. It is
      strongly RECOMMENDED that the documentation for any
      access control mechanism which is used to control access
      to and visibility of MIB instrumentation specify the
      precise conditions that contribute to this value."

DESCRIPTION "The SNMP Management Architecture MIB

     Copyright (C) The Internet Society (2002). This

     version of this MIB module is part of RFC 3411;

     see the RFC itself for full legal notices.

     "

REVISION   "200210140000Z"   -- 14 October 2002

DESCRIPTION "Changes in this revision:

       - Updated various administrative information.

       - Corrected some typos.

       - Corrected typo in description of SnmpEngineID

        that led to range overlap for 127.

       - Changed '255a' to '255t' in definition of

        SnmpAdminString to align with current SMI.

       - Reworded 'reserved' for value zero in

        DESCRIPTION of SnmpSecurityModel.

      - The algorithm for allocating security models

        should give 256 per enterprise block, rather

        than 255.

      - The example engine ID of 'abcd' is not

        legal. Replaced with '800002b804616263'H based

        on example enterprise 696, string 'abc'.

      - Added clarification that engineID should

       persist across re-initializations.

This revision published as RFC 3411.
                    "
        REVISION   "199901190000Z"   -- 19 January 1999
        DESCRIPTION "Updated editors' addresses, fixed typos.

                    "
        REVISION   "199711200000Z"   -- 20 November 1997
        DESCRIPTION "The initial version, published in RFC 2271.
                    "
        ::= { snmpModules 10 }

  -- Textual Conventions used in the SNMP Management Architecture ***

SnmpEngineID ::= TEXTUAL-CONVENTION
   STATUS   current
   DESCRIPTION "An SNMP engine's administratively-unique identifier.
                Objects of this type are for identification, not for
                addressing, even though it is possible that an
                address may have been used in the generation of
                a specific value.

                The value for this object may not be all zeros or
                all 'ff'H or the empty (zero length) string.

                The initial value for this object may be configured
                via an operator console entry or via an algorithmic
                function. In the latter case, the following
                example algorithm is recommended.

                In cases where there are multiple engines on the
                same system, the use of this algorithm is NOT
                appropriate, as it would result in all of those
                engines ending up with the same ID value.

                1) The very first bit is used to indicate how the
                   rest of the data is composed.

                  0 - as defined by enterprise using former methods
                      that existed before SNMPv3. See item 2 below.

                  1 - as defined by this architecture, see item 3
                      below.

                  Note that this allows existing uses of the
                  engineID (also known as AgentID [RFC1910]) to
                  co-exist with any new uses.

2) The snmpEngineID has a length of 12 octets.

The first four octets are set to the binary
equivalent of the agent's SNMP management
private enterprise number as assigned by the
Internet Assigned Numbers Authority (IANA).
For example, if Acme Networks has been assigned
{ enterprises 696 }, the first four octets would
be assigned '000002b8'H.

The remaining eight octets are determined via
one or more enterprise-specific methods. Such
methods must be designed so as to maximize the
possibility that the value of this object will
be unique in the agent's administrative domain.
For example, it may be the IP address of the SNMP
entity, or the MAC address of one of the
interfaces, with each address suitably padded
with random octets. If multiple methods are
defined, then it is recommended that the first
octet indicate the method being used and the
remaining octets be a function of the method.

3) The length of the octet string varies.

The first four octets are set to the binary
equivalent of the agent's SNMP management
private enterprise number as assigned by the
Internet Assigned Numbers Authority (IANA).
For example, if Acme Networks has been assigned
{ enterprises 696 }, the first four octets would
be assigned '000002b8'H.

The very first bit is set to 1. For example, the
above value for Acme Networks now changes to be
'800002b8'H.

The fifth octet indicates how the rest (6th and
following octets) are formatted. The values for
the fifth octet are:

   0   - reserved, unused.

   1   - IPv4 address (4 octets)
          lowest non-special IP address

2   - IPv6 address (16 octets)
       lowest non-special IP address

3   - MAC address (6 octets)
       lowest IEEE MAC address, canonical
       order

4   - Text, administratively assigned
       Maximum remaining length 27

5   - Octets, administratively assigned
       Maximum remaining length 27

6-127 - reserved, unused

128-255 - as defined by the enterprise
          Maximum remaining length 27
       "
SYNTAX   OCTET STRING (SIZE(5..32))

SnmpSecurityModel ::= TEXTUAL-CONVENTION
   STATUS   current
   DESCRIPTION "An identifier that uniquely identifies a
           Security Model of the Security Subsystem within
           this SNMP Management Architecture.

           The values for securityModel are allocated as
           follows:

           - The zero value does not identify any particular
             security model.

           - Values between 1 and 255, inclusive, are reserved
             for standards-track Security Models and are
             managed by the Internet Assigned Numbers Authority
             (IANA).
           - Values greater than 255 are allocated to
             enterprise-specific Security Models. An
             enterprise-specific securityModel value is defined

to be:

enterpriseID * 256 + security model within
enterprise

For example, the fourth Security Model defined by
the enterprise whose enterpriseID is 1 would be
259.

This scheme for allocation of securityModel
values allows for a maximum of 255 standards-
based Security Models, and for a maximum of
256 Security Models per enterprise.

It is believed that the assignment of new
securityModel values will be rare in practice
because the larger the number of simultaneously
utilized Security Models, the larger the
chance that interoperability will suffer.
Consequently, it is believed that such a range
will be sufficient. In the unlikely event that
the standards committee finds this number to be
insufficient over time, an enterprise number
can be allocated to obtain an additional 256
possible values.

Note that the most significant bit must be zero;
hence, there are 23 bits allocated for various
organizations to design and define non-standard

securityModels. This limits the ability to
define new proprietary implementations of Security
Models to the first 8,388,608 enterprises.

It is worthwhile to note that, in its encoded
form, the securityModel value will normally
require only a single byte since, in practice,
the leftmost bits will be zero for most messages
and sign extension is suppressed by the encoding
rules.

As of this writing, there are several values
of securityModel defined for use with SNMP or
reserved for use with supporting MIB objects.
They are as follows:

0 reserved for 'any'
                    1 reserved for SNMPv1
                    2 reserved for SNMPv2c
                    3 User-Based Security Model (USM)
            "
    SYNTAX   INTEGER(0 .. 2147483647)

SnmpMessageProcessingModel ::= TEXTUAL-CONVENTION
    STATUS   current
    DESCRIPTION "An identifier that uniquely identifies a Message
                Processing Model of the Message Processing
                Subsystem within this SNMP Management Architecture.

                The values for messageProcessingModel are
                allocated as follows:

                - Values between 0 and 255, inclusive, are
                  reserved for standards-track Message Processing
                  Models and are managed by the Internet Assigned
                  Numbers Authority (IANA).

                - Values greater than 255 are allocated to
                  enterprise-specific Message Processing Models.
                  An enterprise messageProcessingModel value is
                  defined to be:

                  enterpriseID * 256 +
                      messageProcessingModel within enterprise

                  For example, the fourth Message Processing Model
                  defined by the enterprise whose enterpriseID

                  is 1 would be 259.

                This scheme for allocating messageProcessingModel
                values allows for a maximum of 255 standards-
                based Message Processing Models, and for a
                maximum of 256 Message Processing Models per
                enterprise.

                It is believed that the assignment of new
                messageProcessingModel values will be rare
                in practice because the larger the number of
                simultaneously utilized Message Processing Models,
                the larger the chance that interoperability

will suffer. It is believed that such a range
will be sufficient. In the unlikely event that
the standards committee finds this number to be
insufficient over time, an enterprise number
can be allocated to obtain an additional 256
possible values.

Note that the most significant bit must be zero;
hence, there are 23 bits allocated for various
organizations to design and define non-standard
messageProcessingModels. This limits the ability
to define new proprietary implementations of
Message Processing Models to the first 8,388,608
enterprises.

It is worthwhile to note that, in its encoded
form, the messageProcessingModel value will
normally require only a single byte since, in
practice, the leftmost bits will be zero for
most messages and sign extension is suppressed
by the encoding rules.

As of this writing, there are several values of
messageProcessingModel defined for use with SNMP.
They are as follows:

    0 reserved for SNMPv1
    1 reserved for SNMPv2c
    2 reserved for SNMPv2u and SNMPv2*
    3 reserved for SNMPv3
    "
SYNTAX   INTEGER(0 .. 2147483647)

SnmpSecurityLevel ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION "A Level of Security at which SNMP messages can be
      sent or with which operations are being processed;
      in particular, one of:

    noAuthNoPriv - without authentication and
        without privacy,
    authNoPriv   - with authentication but
        without privacy,

authPriv   - with authentication and
                with privacy.

These three values are ordered such that
noAuthNoPriv is less than authNoPriv and
authNoPriv is less than authPriv.
            "
SYNTAX   INTEGER { noAuthNoPriv(1),
                authNoPriv(2),
                authPriv(3)
            }

SnmpAdminString ::= TEXTUAL-CONVENTION
    DISPLAY-HINT "255t"
    STATUS   current
    DESCRIPTION "An octet string containing administrative
                information, preferably in human-readable form.

                To facilitate internationalization, this
                information is represented using the ISO/IEC
                IS 10646-1 character set, encoded as an octet
                string using the UTF-8 transformation format
                described in [RFC2279].

                Since additional code points are added by
                amendments to the 10646 standard from time
                to time, implementations must be prepared to
                encounter any code point from 0x00000000 to
                0x7fffffff. Byte sequences that do not
                correspond to the valid UTF-8 encoding of a
                code point or are outside this range are
                prohibited.

                The use of control codes should be avoided.

                When it is necessary to represent a newline,
                the control code sequence CR LF should be used.

                The use of leading or trailing white space should
                be avoided.

                For code points not directly supported by user
                interface hardware or software, an alternative
                means of entry and display, such as hexadecimal,
                may be provided.

For information encoded in 7-bit US-ASCII,
the UTF-8 encoding is identical to the
US-ASCII encoding.

UTF-8 may require multiple bytes to represent a
single character / code point; thus the length
of this object in octets may be different from
the number of characters encoded. Similarly,
size constraints refer to the number of encoded
octets, not the number of characters represented
by an encoding.

Note that when this TC is used for an object that
is used or envisioned to be used as an index, then
a SIZE restriction MUST be specified so that the
number of sub-identifiers for any object instance
does not exceed the limit of 128, as defined by
[RFC3416].

Note that the size of an SnmpAdminString object is
measured in octets, not characters.

SpdBooleanOperator ::= TEXTUAL-CONVENTION
    STATUS   current
    DESCRIPTION
        "The SpdBooleanOperator operator is used to specify
         whether sub-components in a decision-making process are

         ANDed or ORed together to decide if the resulting
         expression is true or false."
    SYNTAX   INTEGER { or(1), and(2) }

SpdAdminStatus ::= TEXTUAL-CONVENTION
    STATUS   current
    DESCRIPTION
        "The SpdAdminStatus is used to specify the administrative
         status of an object. Objects that are disabled MUST NOT
         be used by the packet processing engine."
    SYNTAX   INTEGER { enabled(1), disabled(2) }

SpdIPPacketLogging ::= TEXTUAL-CONVENTION
    DISPLAY-HINT "d"

STATUS   current
DESCRIPTION
    "SpdIPPacketLogging specifies whether an audit message
    SHOULD be logged if a packet is passed through a Security
    Association (SA) and if some of that packet is included in
    the log event. A value of '-1' indicates no logging. A
    value of '0' or greater indicates that logging SHOULD be
    done and indicates the number of bytes starting at the
    beginning of the packet to place in the log. Values greater
    than the size of the packet being processed indicate that
    the entire packet SHOULD be sent.

    Examples:
    '-1' no logging
    '0' log but do not include any of the packet in the log
    '20' log and include the first 20 bytes of the packet
        in the log."

  SYNTAX   Integer32 (-1..65535)

SpdTimePeriod ::= TEXTUAL-CONVENTION
  DISPLAY-HINT "31t"
  STATUS   current
  DESCRIPTION
    "This property identifies an overall range of calendar dates
    and time. In a boolean context, a value within this time
    range, inclusive, is considered true.

    This information is encoded as an octet string using
    the UTF-8 transformation format described in STD 63,
    RFC 3629.

    It uses the format suggested in RFC 3060. An octet string

    represents a start date and time and an end date and time.
    For example:

    yyyymmddThhmmss/yyyymmddThhmmss

    Where: yyyy = year   mm = month   dd = day
        hh = hour   mm = minute   ss = second

    The first 'yyyymmddThhmmss' sub-string indicates the start
    date and time. The second 'yyyymmddThhmmss' sub-string
    indicates the end date and time. The character 'T' within

these sub-strings indicates the beginning of the time
portion of each sub-string. The solidus character '/'
separates the start from the end date and time. The end
date and time MUST be subsequent to the start date and
time.

There are also two allowed substitutes for a
'yyyymmddThhmmss' sub-string: one for the start date and
time, and one for the end date and time.

If the start date and time are replaced with the string
'THISANDPRIOR', this sub-string would indicate the current
date and time and the previous dates and time.

If the end date and time are replaced with the string
'THISANDFUTURE', this sub-string would indicate the current
date and time and the subsequent dates and time.

Any of the following SHOULD be considered a
'wrongValue' error:
- Setting a value with the end date and time earlier than
   or equal to the start date and time.
- Setting the start date and time to 'THISANDFUTURE'.
- Setting the end date and time to 'THISANDPRIOR'."

}

spdGroupContName OBJECT-TYPE
  SYNTAX   SnmpAdminString (SIZE(1..32))
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "The administrative name of the group associated with this
    row. A 'group' is formed by all the rows in this table that
    have the same value of this object."
  ::= { spdGroupContentsEntry 1 }

spdGroupContPriority OBJECT-TYPE
  SYNTAX   Integer32 (0..65535)
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "The priority (sequence number) of the sub-component in
    a group that this row represents. This value indicates
    the order that each row of this table MUST be processed
    from low to high. For example, a row with a priority of 0
    is processed before a row with a priority of 1, a 1 before
    a 2, etc."
  ::= { spdGroupContentsEntry 2 }

spdGroupContFilter OBJECT-TYPE
  SYNTAX   VariablePointer
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
    "spdGroupContFilter points to a filter that is evaluated
    to determine whether the spdGroupContComponentName within

this row is exercised. Managers can use this object to classify groups of rules, or subgroups, together in order to achieve a greater degree of control and optimization over the execution order of the items within the group. If the

filter evaluates to false, the rule or subgroup will be skipped and the next rule or subgroup will be evaluated instead. This value can be used to indicate a scalar or row in a table. When indicating a row in a table, this value MUST point to the first column instance in that row.

An example usage of this object would be to limit a group of rules to executing only when the IP packet being processed is designated to be processed by IKE. This effectively creates a group of IKE-specific rules.

The following tables and scalars can be pointed to by this column. All but diffServMultiFieldClfrTable are defined in this MIB:

    diffServMultiFieldClfrTable
    spdIpOffsetFilterTable
    spdTimeFilterTable
    spdCompoundFilterTable
    spdTrueFilter
    spdIpsoHeaderFilterTable

Implementations MAY choose to provide support for other filter tables or scalars.

If this column is set to a VariablePointer value, which references a non-existent row in an otherwise supported table, the inconsistentName exception MUST be returned. If the table or scalar pointed to by the VariablePointer is not supported at all, then an inconsistentValue exception MUST be returned.

If, during packet processing, a row in this table is applied to a packet and the value of this column in that row references a non-existent or non-supported object, the packet MUST be dropped."

  DESCRIPTION
     "This defines the various tests that are used when
      evaluating a given filter.

      The various tests definable in this table are as follows:

      equal:
        - Tests if the OCTET STRING, 'spdIpOffFiltValue', matches

a value in the packet starting at the given offset in
the packet and comparing the entire OCTET STRING of
'spdIpOffFiltValue'. Any values compared this way are
assumed to be unsigned integer values in network byte
order of the same length as 'spdIpOffFiltValue'.

notEqual:
 - Tests if the OCTET STRING, 'spdIpOffFiltValue', does
   not match a value in the packet starting at the given
   offset in the packet and comparing to the entire OCTET
   STRING of 'spdIpOffFiltValue'. Any values compared
   this way are assumed to be unsigned integer values in
   network byte order of the same length as
   'spdIpOffFiltValue'.

arithmeticLess:
 - Tests if the OCTET STRING, 'spdIpOffFiltValue', is
   arithmetically less than ('<') the value starting at
   the given offset within the packet. The value in the
   packet is assumed to be an unsigned integer in network
   byte order of the same length as 'spdIpOffFiltValue'.

arithmeticGreaterOrEqual:
 - Tests if the OCTET STRING, 'spdIpOffFiltValue', is
   arithmetically greater than or equal to ('>=') the
   value starting at the given offset within the packet.
   The value in the packet is assumed to be an unsigned
   integer in network byte order of the same length as
   'spdIpOffFiltValue'.

arithmeticGreater:
 - Tests if the OCTET STRING, 'spdIpOffFiltValue', is
   arithmetically greater than ('>') the value starting at
   the given offset within the packet. The value in the
   packet is assumed to be an unsigned integer in network
   byte order of the same length as 'spdIpOffFiltValue'.

arithmeticLessOrEqual:
 - Tests if the OCTET STRING, 'spdIpOffFiltValue', is
   arithmetically less than or equal to ('<=') the value
   starting at the given offset within the packet. The
   value in the packet is assumed to be an unsigned
   integer in network byte order of the same length as
   'spdIpOffFiltValue'."

spdTimeFiltDayOfMonthMask OBJECT-TYPE
  SYNTAX   OCTET STRING (SIZE(8))

MAX-ACCESS read-create
STATUS   current
DESCRIPTION
  "Defines which days of the month the current time is
  valid for. It is a sequence of 64 BITS, where each BIT
  represents a corresponding day of the month in forward or
  reverse order. Starting from the left-most bit, the first
  31 bits identify the day of the month, counting from the
  beginning of the month. The following 31 bits (bits 32-62)
  indicate the day of the month, counting from the end of the

  month. For months with fewer than 31 days, the bits that
  correspond to the non-existent days of that month are
  ignored (e.g., for non-leap year Februarys, bits 29-31 and
  60-62 are ignored).

  This column evaluates to 'true' if the current day of the
  month's bit is set.

  For example, a value of 0X'80 00 00 01 00 00 00 00'
  indicates that this column evaluates to true on the first
  and last days of the month.

  The last two bits in the string MUST be zero."

spdIPDestinationAddress OBJECT-TYPE
  SYNTAX   InetAddress
  MAX-ACCESS accessible-for-notify
  STATUS   current
  DESCRIPTION
    "Contains the destination address of the packet that
    triggered the notification.

    The format of this object is specified by the
    spdIPDestinationType object."
  ::= { spdNotificationVariables 7 }

spdPacketDirection OBJECT-TYPE
  SYNTAX   IfDirection
  MAX-ACCESS accessible-for-notify
  STATUS   current
  DESCRIPTION
    "Indicates if the packet that triggered the action in
    questions was ingress (inbound) or egress (outbound)."
  ::= { spdNotificationVariables 8 }

spdPacketPart OBJECT-TYPE
  SYNTAX   OCTET STRING (SIZE (0..65535))

MAX-ACCESS accessible-for-notify

STATUS   current
DESCRIPTION
   "spdPacketPart is the front part of the full IP packet that
   triggered this notification. The initial size limit is
   determined by the smaller of the size, indicated by:

   I. The value of the object with the TC syntax
     'SpdIPPacketLogging' that indicated the packet SHOULD be
     logged and

   II. The size of the triggering packet.

   The final limit is determined by the SNMP packet size when
   sending the notification. The maximum size that can be
   included will be the smaller of the initial size, given the
   above, and the length that will fit in a single SNMP
   notification packet after the rest of the notification's
   objects and any other necessary packet data (headers encoding,
   etc.) have been included in the packet."
  ::= { spdNotificationVariables 9 }

spdActionNotification NOTIFICATION-TYPE
  OBJECTS { spdActionExecuted, spdIPEndpointAddType,
     spdIPEndpointAddress,
     spdIPSourceType, spdIPSourceAddress,
     spdIPDestinationType,
     spdIPDestinationAddress,
     spdPacketDirection }
  STATUS current
  DESCRIPTION
   "Notification that an action was executed by a rule.
   Only actions with logging enabled will result in this
   notification getting sent. The object includes the
   spdActionExecuted object, which will indicate which action
   was executed within the scope of the rule. Additionally,
   the spdIPSourceType, spdIPSourceAddress,
   spdIPDestinationType, and spdIPDestinationAddress objects
   are included to indicate the packet source and destination
   of the packet that triggered the action. Finally, the
   spdIPEndpointAddType, spdIPEndpointAddress, and
   spdPacketDirection objects indicate which interface the
   executed action was associated with, and if the packet was
   ingress or egress through the endpoint.

A spdActionNotification SHOULD be limited to a maximum of
one notification sent per minute for any action
notifications that do not have any other configuration
controlling their send rate.

Note that compound actions with multiple executed
sub-actions may result in multiple notifications being sent
from a single rule execution."
  ::= { spdNotifications 1 }

spdPacketNotification NOTIFICATION-TYPE
  OBJECTS { spdActionExecuted, spdIPEndpointAddType,
        spdIPEndpointAddress,
        spdIPSourceType, spdIPSourceAddress,
        spdIPDestinationType,
        spdIPDestinationAddress,
        spdPacketDirection,
        spdPacketPart }
  STATUS current
  DESCRIPTION
      "Notification that a packet passed through a Security
      Association (SA). Only SAs created by actions with packet
      logging enabled will result in this notification getting
      sent. The objects sent MUST include the spdActionExecuted,
      which will indicate which action was executed within the
      scope of the rule. Additionally, the spdIPSourceType,
      spdIPSourceAddress, spdIPDestinationType, and
      spdIPDestinationAddress objects MUST be included to
      indicate the packet source and destination of the packet
      that triggered the action. The spdIPEndpointAddType,
      spdIPEndpointAddress, and spdPacketDirection objects are
      included to indicate which endpoint the packet was
      associated with. Finally, spdPacketPart is included to
      enable sending a variable sized part of the front of the
      packet with the size dependent on the value of the object of
      TC syntax 'SpdIPPacketLogging', which indicated that logging
      should be done.

      A spdPacketNotification SHOULD be limited to a maximum of
      one notification sent per minute for any action
      notifications that do not have any other configuration
      controlling their send rate.

      An action notification SHOULD be limited to a maximum of
      one notification sent per minute for any action
      notifications that do not have any other configuration

```
      controlling their send rate."

```

AppLocalIndex ::= TEXTUAL-CONVENTION
    STATUS   current
    DESCRIPTION
        "A locally arbitrary unique identifier associated with an
        application or application verb.

        All objects of type AppLocalIndex are assigned by the agent
        out of a common number space. In other words, AppLocalIndex
        values assigned to entries in one table must not overlap with
        AppLocalIndex values assigned to entries in another
        table. Further, every protocolDirLocalIndex value registered
        by the agent automatically assigns the same value out of the

        AppLocalIndex number space.

        For example, if the protocolDirLocalIndex values { 1, 3, 5, 7 }
        have been assigned, and the apmHttpFilterAppLocalIndex values
        { 6, 8, 9 } have been assigned:

          - Assignment of new AppLocalIndex values must not use the
            values { 1, 3, 5, 6, 7, 8, 9 }.
          - AppLocalIndex values { 1, 3, 5, 7 } are automatically
            assigned and are associated with the identical value of
            protocolDirLocalIndex. In particular, an entry in the
            apmAppDirTable indexed by a value provides further
            information about a protocol indexed by the same value
            in the protocolDirTable of RMON2.

        The value for each supported application must remain constant
        at least from one re-initialization of the entity's network
        management system to the next re-initialization, except that
        if an application is deleted and re-created, it must be
        re-created with a new value that has not been used since the
        last re-initialization.

        The specific value is meaningful only within a given SNMP
        entity. An AppLocalIndex value must not be re-used until the
        next agent restart."
    SYNTAX   Unsigned32 (1..2147483647)

ProtocolDirNetworkAddress ::= TEXTUAL-CONVENTION
    STATUS   current
    DESCRIPTION
        "A network level address whose semantics and encoding are
        specified by an associated protocolDirLocalIndex

value. Objects of this type must specify which
protocolDirLocalIndex value is used. This value is encoded
according to the encoding rules for the identified
protocolDirectory entry.

For example, if the associated protocolDirLocalIndex indicates
an encapsulation of ip, this object is encoded as a length
octet of 4, followed by the 4 octets of the ip address,
in network byte order.

Objects of this type may allow this value to be the zero
length string. If so, they must identify they meaning of this
value."
SYNTAX   OCTET STRING (SIZE(0..255))

DataSourceOrZero ::= TEXTUAL-CONVENTION

STATUS   current
DESCRIPTION
"Identifies the source of the data that the associated
function is configured to analyze. This source can be any
interface on this device.

In order to identify a particular interface, this
object shall identify the instance of the ifIndex
object, defined in [4], for the desired interface.

For example, if an entry were to receive data from
interface #1, this object would be set to ifIndex.1.

If the source of the data isn't an interface or cannot be
localized to an interface, this object would be set to 0.0"

REFERENCE   "The DataSource textual convention is defined in
       RFC 2021 [5]."
SYNTAX   OBJECT IDENTIFIER

RmonClientID ::= TEXTUAL-CONVENTION
STATUS   current
DESCRIPTION
"A long-lived unique ID assigned to an end-system. This ID is
assigned by the agent using an implementation-specific
algorithm.

Because a client machine may be assigned multiple addresses
over any time period it can be difficult to attribute

behavior to a particular client based solely on its
address. A ClientID may be assigned to provide a more
stable handle for referencing that client. The entity that
assigns the ClientID may use various implementation
techniques to keep track of a client but if the assigning
entity is unable to track client address mappings, it may map
client identifiers to client addresses rather than to
distinct client machines.

This is named ClientID because it helps to solve a problem
seen in network clients (servers usually have well-known,
long-lived addresses). However, ClientID's may be assigned to
any end-system regardless of its role on the network."
SYNTAX   Unsigned32 (0..4294967295)

TransactionAggregationType ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION

      "Specifies one of 4 different techniques for aggregating
      transactions.

      The metrics for a single transaction are the responsiveness of
      the transaction and whether the transaction succeeded (a
      boolean). When such metrics are aggregated in this MIB Module,
      these metrics are replaced by averages and distributions of
      responsiveness and availability. The metrics describing
      aggregates are constant no matter which type of aggregation is
      being performed. These metrics may be found in the
      apmReportTable.

      The flows(1) aggregation is the simplest. All transactions
      that share common application/server/client 3-tuples are
      aggregated together, resulting in a set of metrics for all
      such unique 3-tuples.

      The clients(2) aggregation results in somewhat more
      aggregation (i.e., fewer resulting records). All transactions
      that share common application/client tuples are aggregated
      together, resulting in a set of metrics for all such unique
      tuples.

      The servers(3) aggregation usually results in still more
      aggregation (i.e., fewer resulting records). All transactions
      that share common application/server tuples are aggregated

together, resulting in a set of metrics for all such unique tuples.

The applications(4) aggregation results in the most aggregation (i.e., the fewest resulting records). All transactions that share a common application are aggregated together, resulting in a set of metrics for all such unique applications.

Note that it is not meaningful to aggregate applications, as different applications have widely varying characteristics. As a result, this set of aggregations is complete."

```
SYNTAX    INTEGER {
        flows(1),    -- Least Aggregation
        clients(2),
        servers(3),
        applications(4) -- Most Aggregation
        }
```

-- The APM Application Directory Group

-- The Application Directory Table contains a record for every

-- application monitored by this agent. This table is also used to
-- configure whether or not an application will be measured and which
-- bucket boundaries will be used for the application.
--
-- The bucket boundaries define the break-points between bins of a
-- histogram analysis for that application. As an example of how this
-- works, consider an entry representing response-time for http.
-- If the boundaries are set as follows:
-- Boundary1: 500 milliseconds
-- Boundary2: 1 second
-- Boundary3: 2 seconds
-- Boundary4: 5
-- Boundary5: 15
-- Boundary6: 60
--
-- If the following measurements are made (all in milliseconds):
-- 377, 8645, 1300, 487, 1405, 775, 1115, 850, 945, 1054, 7745, 9380
--
-- A report run during this interval would report the following
-- counts:
-- Bucket1: 2
-- Bucket2: 3
-- Bucket3: 4

-- Bucket4: 0
-- Bucket5: 3
-- Bucket6: 0
-- Bucket7: 0

apmAppDirTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF ApmAppDirEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "The APM MIB directory of applications and application
    verbs. The agent will populate this table with all
    applications/verbs of any responsivenessType it has the
    capability to monitor. Since the agent populates this table
    with every entry it has the capability to monitor, the
    entries in this table are read-write, allowing the management
    station to modify parameters in this table but not to add new
    entries or delete entries (however, entries may be
    disabled). If new entries are added to the apmHttpFilterTable
    or the apmUserDefinedAppTable, the agent will add the
    corresponding entries to this table.

    It is an implementation-dependent matter as to how the agent
    sets these default parameters. For example, it may leave
    certain entries in this table 'off(0)' if the agent developer

    believes that combination will be infrequently used, allowing
    a manager that needs that capability to set it to 'on(1)'.

    Some applications are registered in the RMON2 protocol
    directory and some are registered in other tables in this
    MIB Module. Regardless of where an application is originally
    registered, it is assigned an AppLocalIndex value that is the
    primary index for this table.

    The contents of this table affect all reports and exceptions
    generated by this agent. Accordingly, modification of this
    table should be performed by a manager acting in the role of
    administrator. In particular, management software should not
    require or enforce particular configuration of this table - it
    should reflect the preferences of the site administrator, not
    the software author. As a practical matter, this requires
    management software to allow the administrator to configure
    the values it will use so that it can be adapted to the site
    policy."

       }
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "This object describes and configures the agent's support for
    application performance measurement for this application.

There are 3 types of measurements for different types of applications:

Transaction-Oriented applications have a fairly constant workload to perform for all transactions. The responsiveness metric for transaction-oriented applications is application response time (from first request to final delivery of service) and is measured in milliseconds. This is commonly referred to as end-user response time.

Throughput-Oriented applications have widely varying workloads based on the nature of the client request. In particular, throughput-oriented applications vary widely in the amount of data that must be transported to satisfy the request. The responsiveness metric for throughput-oriented applications is kilobits per second.

Streaming-Oriented applications deliver data at a constant metered rate of speed regardless of the responsiveness of the networking and computing infrastructure. This constant rate of speed is generally specified to be below (sometimes well below) the nominal capability of the infrastructure. However, when the infrastructures cannot deliver data at this speed, interruption of service or degradation of service can result. The responsiveness metric for streaming-oriented applications is the ratio of time that the service is degraded or interrupted to the total service time. This metric is measured in parts per million.

Note that for some applications, measuring more than one responsiveness type may be interesting. For agents that wish

to support more than one measurement for a application, they will populate this table with multiple entries for that application, one for each type."

-- Scalars related to the Application Directory table

apmBucketBoundaryLastChange OBJECT-TYPE
　　SYNTAX　　TimeStamp
　　MAX-ACCESS read-only
　　STATUS　　current
　　DESCRIPTION
　　　　"The value of sysUpTime the last time that any bucket boundary
　　　　in any appDirEntry was changed. This object can help to
　　　　determine if two managers are both trying to enforce different
　　　　configurations of this table."
　　::= { apmMibObjects 2 }

apmAppDirID OBJECT-TYPE
　　SYNTAX　　OBJECT IDENTIFIER
　　MAX-ACCESS read-write
　　STATUS　　current
　　DESCRIPTION
　　　　"This object allows managers to avoid downloading application
　　　　directory information when the directory is set to a known
　　　　(usually fixed) configuration.

　　　　If the value of this object isn't 0.0, it signifies
　　　　that the entire contents of the apmAppDirTable,
　　　　apmHttpFilterTable, apmUserDefinedAppTable and
　　　　protocolDirTable are equal to a known state identified
　　　　by the value of this object. If a manager recognizes this
　　　　value as identifying a directory configuration it has a local
　　　　copy of, it may use this local copy rather than downloading
　　　　these tables. Note that it may have downloaded this local copy
　　　　(and the ID) from another agent and used this copy for all
　　　　other agents that advertised the same ID.

　　　　If an agent recognizes that the entire contents of the
　　　　apmAppDirTable, apmHttpFilterTable,
　　　　apmUserDefinedAppTable and protocolDirTable are equal to
　　　　a known state to which an ID has been assigned, it should set
　　　　this object to that ID.

　　　　In many cases when this feature is used, the application
　　　　directory information will be in read-only memory and thus the
　　　　tables may not be modified via SNMP requests. In the event

　　　　that the tables are writable and a modification is made, the
　　　　agent is responsible for setting this object to 0.0 if it
　　　　cannot determine that the state is equal to a known state.

　　　　An agent is not obligated to recognize and advertise all such

registered states as it may not have knowledge of all states.
Thus, a manager may encounter agents whose DirectoryID value
is 0.0 even though the contents of the directory were equal to
a registered state.

Note that the contents of those tables includes the
protocolDirLocalIndex and appLocalIndex values. In other
words, these values can't be assigned randomly on each agent,
but must be equal to values that are part of the known
state. While it is possible for a manager to download
application directory details using SNMP and to set the
appropriate directoryID, the manager would need to have some
scheme to ensure consistent values of LocalIndex variables
from agent to agent. Such schemes are outside the scope of
this specification.

Application directory registrations are unique within an
administrative domain.

Typically these registrations will be made by an agent
software developer who will set the application directory
tables to a read-only state and assign a DirectoryID to that
state. Thus, all agents running this software would share the
same DirectoryID. As the application directory might change
from one software release to the next, the developer may
register different DirectoryID's for each software release.

A customer could also create a site-wide application directory
configuration and assign a DirectoryID to that configuration
as long as consistent values of LocalIndex variables can be
ensured.

The value of this object must persist across reboots."
 ::= { apmMibObjects 3 }

-- APM HTTP Filter Table

-- The HTTP Filter Table creates virtual applications which measure the
-- performance of certain web pages or sets of web pages. Some
-- circumstances where this is particularly useful are:
--
--   - An Intranet or ASP scenario where a business application is
--   running on one or more web pages or scripts.

--   (i.e., /expense/submit.cgi?employeeID=3426&...)
--   - A web-hosting scenario where one wants to measure the

```
--      service level for a particular customer
--      - An e-commerce scenario where the performance of certain
--      pages needs to be monitored more closely.
--      (i.e., shopping cart, shipping, credit card authorization)

apmHttpFilterTable OBJECT-TYPE
   SYNTAX      SEQUENCE OF ApmHttpFilterEntry
   MAX-ACCESS  not-accessible
   STATUS      current
   DESCRIPTION
      "A table that creates virtual applications which measure the
      performance of certain web pages or sets of web pages.

      When an entry is added to this table, the agent will
      automatically create one or more entries in the
      apmAppDirTable (one for each responsivenessType it is
      capable of measuring).

      Note that when entries exist in this table some HTTP
      transactions will be summarized twice: in applications
      represented here as well as the HTTP application. If entries
      in this table overlap, these transactions may be summarized
      additional times.

      The contents of this table affect all reports and exceptions
      generated by this agent. Accordingly, modification of this

-- The APM Name Table

apmNameTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF ApmNameEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "A client machine may have multiple addresses during a period
    of monitoring. The apmNameTable assigns a long-lived
    identifier to a client and records what addresses were
    assigned to that client for periods of time. Various

implementation techniques exist for tracking this mapping but
if an agent is unable to track client address mappings, it may
map client identifiers to client addresses rather than to
distinct client machines.

A particular apmNameClientID should be a constant attribute of
a particular client. When available, the agent may also record
the machine name and/or user name which may be valuable for
displaying to humans. The apmNameMachineName and
apmNameUserName are relatively constant, changing only if
these attributes actually change on the client.

The agent will store a historical log of these entries, aging
out old entries as the log becomes too large. Since this table
contains information vital to the interpretation of other
tables (e.g., the apmReportTable), the agent should ensure that

the log doesn't age out entries that would be referenced by
data in those tables.

Note that an entry for a clientID is active from its
StartTime until the StartTime of another entry (for the same
clientID) that supersedes it, or 'now' if none supersede
it. Therefore, if a clientID only has a single entry, it is by
definition very new and should never be aged out. No entry for
a clientID should be aged out unless it has been updated by a
new entry for the client (i.e., with an updated address) and
only if the new entry is 'old' enough.

To determine how old is old enough, compute the maximum value
of Interval * (NumReports + 1) of all entries in the
apmReportControlTable (the '+ 1' is to allow a reasonable
period of time for the report to be downloaded). Then take the
larger of this value and the age in seconds of the oldest
entry in the current transaction table. If an entry for a
clientID is superseded by another entry whose StartTime is
more than this many seconds ago, then the older entry may be
deleted."
 ::= { apmMibObjects 8 }

        --   }
  MAX-ACCESS  read-create
  STATUS      current
  DESCRIPTION
```

"The type of aggregation being performed for this set of reports.

The metrics for a single transaction are the responsiveness of the transaction and whether the transaction succeeded (a boolean). When such metrics are aggregated in this MIB Module, these metrics are replaced by averages and distributions of responsiveness and availability. The metrics describing aggregates are constant no matter which type of aggregation is being performed. These metrics may be found in the apmReportTable.

The flows(1) aggregation is the simplest. All transactions that share common application/server/client 3-tuples are aggregated together, resulting in a set of metrics for all such unique 3-tuples.

The clients(2) aggregation results in somewhat more aggregation (i.e., fewer resulting records). All transactions that share common application/client tuples are aggregated together, resulting in a set of metrics for all such unique tuples.

The servers(3) aggregation usually results in still more aggregation (i.e., fewer resulting records). All transactions that share common application/server tuples are aggregated together, resulting in a set of metrics for all such unique tuples.

The applications(4) aggregation results in the most aggregation (i.e., the fewest resulting records). All

transactions that share a common application are aggregated together, resulting in a set of metrics for all such unique applications.

Note that it is not meaningful to aggregate applications, as different applications have widely varying characteristics. As a result, this set of aggregations is complete.

This object may not be modified if the associated apmReportControlStatus object is equal to active(1)."
::= { apmReportControlEntry 3 }

apmReportControlInterval OBJECT-TYPE
    SYNTAX   Unsigned32

UNITS   "Seconds"
MAX-ACCESS read-create
STATUS   current
DESCRIPTION
    "The interval in seconds over which data is accumulated before
    being aggregated into a report in the apmReportTable. All
    reports with the same apmReportControlIndex will be based on
    the same interval. This object must be greater than zero.

    Many users desire that these reports be synchronized to within
    seconds of the beginning of the hour because the results may
    be correlated more meaningfully to business behavior and so
    that data from multiple agents is aggregated over the same
    time periods. Thus management software may take extra effort
    to synchronize reports to the beginning of the hour and to one
    another. However, the agent must not allow reports to 'drift'
    over time as they will quickly become unsynchronized. In
    particular, if there is any fixed processing delay between
    reports, the reports should deduct this time from the interval
    so that reports don't drift.

    This object may not be modified if the associated
    apmReportControlStatus object is equal to active(1)."

MAX-ACCESS read-only
STATUS   current
DESCRIPTION
    "The number of entries per report the agent has allocated
    based on the requested amount in apmReportControlRequestedSize.
    Since multiple reports are saved, the total number of entries
    allocated will be this number multiplied by the value of
    apmReportControlGrantedReports, or 1 if that object doesn't
    exist.

When the associated apmReportControlRequestedSize object is
created or modified, the agent should set this object as
closely to the requested value as is possible for the
particular implementation and available resources. When
considering resources available, the agent must consider its
ability to allocate this many entries for all reports.

Note that while the actual number of entries stored in the
reports may fluctuate due to changing conditions, the agent
must continue to have storage available to satisfy the full
report size for all reports when necessary. Further, the agent
must not lower this value except as a result of a set to the
associated apmReportControlRequestedSize object."

apmReportControlDeniedInserts OBJECT-TYPE
    SYNTAX   Counter32
    MAX-ACCESS read-only
    STATUS   current
    DESCRIPTION
        "The number of failed attempts to add an entry to reports for

        this apmReportControlEntry because the number of entries
        would have exceeded apmReportControlGrantedSize.

        This number is valuable in determining if enough entries have
        been allocated for reports in light of fluctuating network

usage. Note that since an entry that is denied will often be
attempted again, this number will not predict the exact number
of additional entries needed, but can be used to understand
the relative magnitude of the problem.

Also note that there is no ordering specified for the entries
in the report, thus there are no rules for which entries will
be omitted when not enough entries are available. As a
consequence, the agent is not required to delete 'least
valuable' entries first."
   ::= { apmReportControlEntry 11 }

apmReportControlDroppedFrames OBJECT-TYPE
   SYNTAX   Counter32
   MAX-ACCESS read-only
   STATUS   current
   DESCRIPTION
      "The total number of frames which were received by the agent
      and therefore not accounted for in the *StatsDropEvents, but
      for which the agent chose not to count for this entry for
      whatever reason. Most often, this event occurs when the agent
      is out of some resources and decides to shed load from this
      collection.

      This count does not include packets that were not counted
      because they had MAC-layer errors.

      This counter is only relevant if this apm report is based on
      a data source whose collection methodology is based on
      analyzing network traffic.

      Note that if the apmReportTables are inactive because no
      applications are enabled in the application directory, this
      value should be 0.

      Note that, unlike the dropEvents counter, this number is the
      exact number of frames dropped."

  SYNTAX   ApmReportEntry
  MAX-ACCESS not-accessible

STATUS   current
DESCRIPTION
    "A conceptual row in the apmReportTable.
    The apmReportControlIndex value in the index identifies the
    apmReportControlEntry on whose behalf this entry was created.
    The apmReportIndex value in the index identifies which report
    (in the series of reports) this entry is a part of.
    The apmAppDirAppLocalIndex value in the index identifies
    the common application of the transactions aggregated in this
    entry.
    The apmAppDirResponsivenessType value in the index
    identifies the type of responsiveness metric reported by
    this entry and uniquely identifies this entry when more
    than one responsiveness metric is measured for a flow.
    Entries will only exist in this table for those
    combinations of AppLocalIndex and ResponsivenessType
    that are configured 'on(1)'.
    The protocolDirLocalIndex value in the index identifies
    the network layer protocol of the apmReportServerAddress.
    When the associated apmReportControlAggregationType value is
    equal to applications(4) or clients(2), this
    protocolDirLocalIndex value will equal 0.
    The apmReportServerAddress value in the index identifies the
    network layer address of the server in transactions aggregated
    in this entry.
    The apmNameClientID value in the index identifies the
    client in transactions aggregated in this entry. If the
    associated apmReportControlAggregationType is equal to
    applications(4) or servers(3), then this protocolDirLocalIndex
    value will equal 0.

    An example of the indexing of this entry is
    apmReportTransactionCount.3.15.3.1.8.4.192.168.1.2.3232235788

    Note that some combinations of index values may result in an
    index that exceeds 128 sub-identifiers in length which exceeds
    the maximum for the SNMP protocol. Implementations should take
    care to avoid such combinations."

-- APM Transaction Table

apmTransactionTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF ApmTransactionEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "This table contains transactions that are currently running
    or have recently finished."
  ::= { apmMibObjects 11 }

apmTransactionEntry OBJECT-TYPE
  SYNTAX   ApmTransactionEntry

  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "A conceptual row in the apmTransactionTable.

    The apmAppDirAppLocalIndex value in the index identifies
    the application of the transaction represented by this entry.
    The apmAppDirResponsivenessType value in the index
    identifies the type of responsiveness metric reported by
    this entry and uniquely identifies this entry when more
    than one responsiveness metric is measured for a flow.
    Entries will only exist in this table for those
    combinations of AppLocalIndex and ResponsivenessType
    that are configured 'on(1)'.
    The protocolDirLocalIndex value in the index identifies
    the network layer protocol of the apmTransactionServerAddress.
    The apmTransactionServerAddress value in the index identifies
    the network layer address of the server in the transaction
    represented by this entry.
    The apmNameClientID value in the index identifies the
    client in the transaction represented by this entry.

    An example of the indexing of this entry is
    apmTransactionCount.3.1.8.4.192.168.1.2.3232235788.2987

    Note that some combinations of index values may result in an
    index that exceeds 128 sub-identifiers in length which exceeds
    the maximum for the SNMP protocol. Implementations should take
    care to avoid such combinations."

        ::= { apmMibObjects 12 }

-- The APM Exception table
-- The APM Exception Table creates filters so that a management
-- station can get immediate notification of a transaction that has
-- had poor availability or responsiveness.
--
-- This function is particularly helpful in unaggregated situations
-- where the numbers of agents is relatively high and the transaction
-- rate per agent is relatively low (such as agents for desktops or
-- dedicated to small workgroups). Polling agents in such an
-- environment would either cause scalability problems (high rate) or
-- lead to long notification delays (low rate).

apmExceptionTable OBJECT-TYPE
    SYNTAX      SEQUENCE OF ApmExceptionEntry
    MAX-ACCESS  not-accessible
    STATUS      current
    DESCRIPTION
        "This table creates filters so that a management station can
        get immediate notification of a transaction that has had poor

        availability or responsiveness.

        Each apmExceptionEntry is associated with a particular type of
        transaction and is applied to all transactions of that
        type. Multiple apmExceptionEntries may be associated with a
        particular type of transaction. A transaction type is
        identified by the value of the apmAppDirAppLocalIndex
        component of the index.

        Because the quality of a transaction is not known until it is
        completed, these thresholds are only applied after the
        transaction has completed."

  ::= { apmExceptionEntry 9 }

apmThroughputExceptionMinTime OBJECT-TYPE
  SYNTAX   Unsigned32
  UNITS   "seconds"
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
     "Because the responsiveness for throughput-oriented
     transactions is divided by the elapsed time, it can be very
     sensitive to short-term performance variations for
     transactions that take a short period of time. For example,
     when downloading a very short file, a single dropped packet
     could double or triple the total response time.

     Further, throughput is usually examined for applications that

transfer a lot of data, and when doing so it is helpful to
conceptualize transaction costs that are proportional to the
amount of data separately from those costs that are relatively
fixed (i.e., independent of the amount of data). For very
short transactions, these fixed transaction costs (handshake,
setup time, authentication, round-trip time) may dominate the
total response time for the transaction, resulting in
throughput measurements that aren't really proportional to the
network's, server's and client's combined data throughput
capability.

This object controls the minimum number of seconds that an
throughput-based transaction must exceed before an exception
can be generated for it. If this object is set to zero, then
all throughput-based transactions are candidates for
exceptions.

The value of this object must persist across reboots."

            active     (1),
            inactive    (2)
         }
         MAX-ACCESS read-write
         STATUS    current
         DESCRIPTION
            "The status of the DLSw part of the system.  Changing the
             value from active to inactive causes DLSw to take
             the following actions - (1) it disconnects all circuits
             through all DLSw partners, (2) it disconnects all
             transport connections to all DLSw partners, (3) it
             disconnects all local DLC connections, and (4) it stops
             processing all DLC connection set-up traffic.
```

Since these are destructive actions, the user should
query the circuit and transport connection tables in
advance to understand the effect this action will have.
Changing the value from inactive to active causes DLSw
to come up in its initial state, i.e., transport
connections established and ready to bring up circuits."

        "This value of the instance of a conceptual row
        identifies the behavior of the collection of
        transport connections that this conceptual row
        defines. The value of activePersistent, activeOnDemand
        and passive means this DLSw will accept any transport
        connections, initiated by partner DLSw nodes, which
        are defined by this conceptual row. The value of
        activePersistent means this DLSw will also initiate
        the transport connections of this conceptual row and
        retry periodically if necessary. The value of
        activeOnDemand means this DLSw will initiate a
        transport connection of this conceptual row, if
        there is a directory cache hits. The value of

other is implementation specific. The value of exclude
means that the specified node is not allowed to be
a partner to this DLSw node. To take a certain
conceptual row definition out of service, a value of
notInService for dlswTConnConfigRowStatus should be
used."
DEFVAL { passive }
::= { dlswTConnConfigEntry 8 }

dlswTConnConfigSapList OBJECT-TYPE
SYNTAX   OCTET STRING (SIZE(16))
MAX-ACCESS read-create
STATUS   current
DESCRIPTION
"The SAP list indicates which SAPs are advertised to
the transport connection defined by this conceptual
row. Only SAPs with even numbers are represented,
in the form of the most significant bit of the first
octet representing the SAP 0, the next most significant
bit representing the SAP 2, to the least significant
bit of the last octet representing the SAP 254. Data
link switching is allowed for those SAPs which have
one in its corresponding bit, not allowed otherwise.
The whole SAP list has to be changed together. Changing
the SAP list affects only new circuit establishments
and has no effect on established circuits.

This list can be used to restrict specific partners
from knowing about all the SAPs used by DLSw on all its
interfaces (these are represented in dlswIfSapList for
each interface). For instance, one may want to run NetBIOS
with some partners but not others.

If a node supports sending run-time capabilities exchange
messages, changes to this object should cause that action.
When to start the run-time capabilities exchange is
implementation-specific.
The DEFVAL below indicates support for SAPs 0, 4, 8, and C."

     transport connection last entered the 'connected' state.
     A value of zero means this transport connection has never
     been established."
  ::= { dlswTConnOperEntry 5 }

dlswTConnOperState OBJECT-TYPE
  SYNTAX   INTEGER {

```
            connecting        (1),
            initCapExchange   (2),
            connected         (3),
            quiescing         (4),
            disconnecting     (5),
            disconnected      (6)
        }
    MAX-ACCESS read-write
    STATUS    current
    DESCRIPTION
        "The state of this transport connection.  The transport
        connection enters `connecting' state when DLSw makes
        a connection request to the transport layer.  Once initial
        Capabilities Exchange is sent, the transport connection
        enters enters `initCapExchange' state.  When partner
        capabilities have been determined and the transport
        connection is ready for sending CanUReach (CUR) messages,
        it moves to the `connected' state.  When DLSw is in the
        process of bringing down the connection, it is in the
        `disconnecting' state.  When the transport layer
        indicates one of its connections is disconnected, the
        transport connection moves to the `disconnected' state.

        Whereas all of the values will be returned in response
        to a management protocol retrieval operation, only two
        values may be specified in a management protocol set
        operation: `quiescing' and `disconnecting'.  Changing
        the value to `quiescing' prevents new circuits from being
        established, and will cause a transport disconnect when
        the last circuit on the connection goes away.  Changing
        the value to `disconnecting' will force off all circuits
        immediately and bring the connection to `disconnected'
        state."
    ::= { dlswTConnOperEntry 6 }

dlswTConnOperConfigIndex  OBJECT-TYPE
    SYNTAX    INTEGER (0..2147483647)
    MAX-ACCESS read-only
    STATUS    current
    DESCRIPTION
        "The value of dlswTConnConfigIndex of the dlswTConnConfigEntry
        that governs the configuration information used by this
        dlswTConnOperEntry.  The manager can therefore normally
        examine both configured and operational information
        for this transport connection.

        This value is zero if the corresponding dlswTConnConfigEntry
        was deleted after the creation of this dlswTConnOperEntry.
```

If some fields in the former were changed but the conceptual
row was not deleted, some configuration information may not
be valid for this operational transport connection. The
manager can compare dlswTConnOperConnectTime and
dlswTConnConfigLastModifyTime to determine if this condition
exists."

-- A circuit is the end-to-end association of two DLSw entities
-- through one or two DLSw nodes.  It is the concatenation of
-- two "data links", optionally with an intervening transport
-- connection. The origin of the circuit is the end station that
-- initiates the circuit.  The target of the circuit is the end
-- station that receives the initiation.

-- Circuit Table
--
-- This table is the DLSw entity's view of circuits. There will be
-- a conceptual row in the table associated with each data link.
--
-- The chart below lists the various possible combinations of
-- origin and target MAC locations and the number of entries in
-- this Circuit Table:
--
--   number of | Origin End Station Location
--   entries in the |-------------------------------------
--   Circuit Table | internal   local   remote
--   -------------------- |-------------------------------------
--   Target | internal | NA   2   1
--   End | local | 2   2   1
--   Station | remote | 1   1   NA
--   Location | |
--
--   NA: Not applicable
--
-- Note:
-- (a) IfIndex and RouteInfo are applied only if location is local.
-- (b) TDomain and TAddr are applied only if location is remote.
--
-- Most of statistics related to circuits can be collected
-- from LLC-2 Link Station Table.
-- --
dlswCircuitTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF DlswCircuitEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
      "This table is the circuit representation in the DLSw
       entity. Virtual data links are used to represent any internal
       end stations. There is a conceptual row associated with
       each data link. Thus, for circuits without an intervening
       transport connection, there are two conceptual rows
       for each circuit.

       The table consists of the circuits being established,
       established, and as an implementation option, circuits that
       have been disconnected. For circuits carried over
       transport connections, an entry is created after

the CUR_cs was sent or received. For circuits between
two locally attached devices, or internal virtual MAC
addresses, an entry is created when the equivalent of
CUR_cs sent/received status is reached.

End station 1 (S1) and End station 2 (S2) are used to
represent the two end stations of the circuit.
S1 is always an end station which is locally attached.
S2 may be locally attached or remote. If it is locally
attached, the circuit will be represented by two rows indexed
by (A, B) and (B, A) where A & B are the relevant MACs/SAPs.

The table may be used to store the causes of disconnection of
circuits. It is recommended that the oldest disconnected
circuit entry be removed from this table when the memory
space of disconnected circuits is needed."

STATUS   current
DESCRIPTION
```
"The current state of this circuit. The agent, implementation specific, may choose to keep entries for some period of time after circuit disconnect, so the manager can gather the time and cause of disconnection.

While all of the specified values may be returned from a GET operation, the only SETable value is `disconnectPending'. When this value is set, DLSw should perform the appropriate action given its previous state (e.g., send HALT_DL if the state was `connected') to bring the circuit down to the `disconnected' state. Both the partner DLSw and local end station(s) should be notified as appropriate.

This MIB provides no facility to re-establish a disconnected circuit, because in DLSw this should be an end station-driven function."

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical

transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   copyright license to reproduce, prepare Derivative Works of,
   publicly display, publicly perform, sublicense, and distribute the
   Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   (except as stated in this section) patent license to make, have made,
   use, offer to sell, sell, import, and otherwise transfer the Work,
   where such license applies only to those patent claims licensable

by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
that You distribute, all copyright, patent, trademark, and
attribution notices from the Source form of the Work,
excluding those notices that do not pertain to any part of
the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,

reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

Licenses
========

Good news! You may use Kdyby Framework under the terms of either
the New BSD License or the GNU General Public License (GPL) version 2 or 3.

The BSD License is recommended for most projects. It is easy to understand and it
places almost no restrictions on what you can do with the framework. If the GPL
fits better to your project, you can use the framework under this license.

You don't have to notify anyone which license you are using. You can freely
use Kdyby Framework in commercial projects as long as the copyright header
remains intact.

New BSD License

1.289.1 Available under license :

COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL) Version 1.1

1. Definitions.

1.1. "Contributor" means each individual or entity that creates or contributes to the creation of Modifications.

1.2. "Contributor Version" means the combination of the Original Software, prior Modifications used by a Contributor (if any), and the Modifications made by that particular Contributor.

1.3. "Covered Software" means (a) the Original Software, or (b) Modifications, or (c) the combination of files containing Original

Software with files containing Modifications, in each case including portions thereof.

1.4. "Executable" means the Covered Software in any form other than Source Code.

1.5. "Initial Developer" means the individual or entity that first makes Original Software available under this License.

1.6. "Larger Work" means a work which combines Covered Software or portions thereof with code not governed by the terms of this License.

1.7. "License" means this document.

1.8. "Licensable" means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed herein.

1.9. "Modifications" means the Source Code and Executable form of any of the following:

A. Any file that results from an addition to, deletion from or modification of the contents of a file containing Original Software or previous Modifications;

B. Any new file that contains any part of the Original Software or previous Modification; or

C. Any new file that is contributed or otherwise made available under the terms of this License.

1.10. "Original Software" means the Source Code and Executable form of computer software code that is originally released under this License.

1.11. "Patent Claims" means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.

1.12. "Source Code" means (a) the common form of computer software code in which modifications are made and (b) associated documentation included in or with such code.

1.13. "You" (or "Your") means an individual or a legal entity exercising rights under, and complying with all of the terms of, this License. For legal entities, "You" includes any entity which controls, is controlled by, or is under common control with You. For purposes of this definition, "control" means (a) the power, direct

or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (b) ownership of more than fifty percent (50%) of the outstanding shares or beneficial ownership of such entity.

2. License Grants.

2.1. The Initial Developer Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, the Initial Developer hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Initial Developer, to use, reproduce, modify, display, perform, sublicense and distribute the Original Software (or portions thereof), with or without Modifications, and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using or selling of Original Software, to make, have made, use, practice, sell, and offer for sale, and/or otherwise dispose of the Original Software (or portions thereof).

(c) The licenses granted in Sections 2.1(a) and (b) are effective on the date Initial Developer first distributes or otherwise makes the Original Software available to a third party under the terms of this License.

(d) Notwithstanding Section 2.1(b) above, no patent license is granted: (1) for code that You delete from the Original Software, or (2) for infringements caused by: (i) the modification of the Original Software, or (ii) the combination of the Original Software with other software or devices.

2.2. Contributor Grant.

Conditioned upon Your compliance with Section 3.1 below and subject to third party intellectual property claims, each Contributor hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or trademark) Licensable by Contributor to use, reproduce, modify, display, perform, sublicense and distribute the Modifications created by such Contributor (or portions thereof), either on an unmodified basis, with other Modifications, as Covered Software and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using, or selling of Modifications made by that Contributor either alone and/or in combination with its Contributor Version (or portions of such combination), to make, use, sell, offer for sale, have made, and/or otherwise dispose of: (1) Modifications made by that Contributor (or portions thereof); and (2) the combination of Modifications made by that Contributor with its Contributor Version (or portions of such combination).

(c) The licenses granted in Sections 2.2(a) and 2.2(b) are effective on the date Contributor first distributes or otherwise makes the Modifications available to a third party.

(d) Notwithstanding Section 2.2(b) above, no patent license is granted: (1) for any code that Contributor has deleted from the Contributor Version; (2) for infringements caused by: (i) third party modifications of Contributor Version, or (ii) the combination of Modifications made by that Contributor with other software (except as part of the Contributor Version) or other devices; or (3) under Patent Claims infringed by Covered Software in the absence of Modifications made by that Contributor.

3. Distribution Obligations.

3.1. Availability of Source Code.

Any Covered Software that You distribute or otherwise make available in Executable form must also be made available in Source Code form and that Source Code form must be distributed only under the terms of this License. You must include a copy of this License with every copy of the Source Code form of the Covered Software You distribute or otherwise make available. You must inform recipients of any such Covered Software in Executable form as to how they can obtain such Covered Software in Source Code form in a reasonable manner on or through a medium customarily used for software exchange.

3.2. Modifications.

The Modifications that You create or to which You contribute are governed by the terms of this License. You represent that You believe Your Modifications are Your original creation(s) and/or You have sufficient rights to grant the rights conveyed by this License.

3.3. Required Notices.

You must include a notice in each of Your Modifications that identifies You as the Contributor of the Modification. You may not remove or alter any copyright, patent or trademark notices contained

within the Covered Software, or any notices of licensing or any
descriptive text giving attribution to any Contributor or the
Initial Developer.

3.4. Application of Additional Terms.

You may not offer or impose any terms on any Covered Software in
Source Code form that alters or restricts the applicable version of
this License or the recipients' rights hereunder. You may choose to
offer, and to charge a fee for, warranty, support, indemnity or
liability obligations to one or more recipients of Covered Software.
However, you may do so only on Your own behalf, and not on behalf of
the Initial Developer or any Contributor. You must make it
absolutely clear that any such warranty, support, indemnity or
liability obligation is offered by You alone, and You hereby agree
to indemnify the Initial Developer and every Contributor for any
liability incurred by the Initial Developer or such Contributor as a
result of warranty, support, indemnity or liability terms You offer.

3.5. Distribution of Executable Versions.

You may distribute the Executable form of the Covered Software under
the terms of this License or under the terms of a license of Your
choice, which may contain terms different from this License,
provided that You are in compliance with the terms of this License
and that the license for the Executable form does not attempt to
limit or alter the recipient's rights in the Source Code form from
the rights set forth in this License. If You distribute the Covered
Software in Executable form under a different license, You must make
it absolutely clear that any terms which differ from this License
are offered by You alone, not by the Initial Developer or
Contributor. You hereby agree to indemnify the Initial Developer and
every Contributor for any liability incurred by the Initial
Developer or such Contributor as a result of any such terms You offer.

3.6. Larger Works.

You may create a Larger Work by combining Covered Software with
other code not governed by the terms of this License and distribute
the Larger Work as a single product. In such a case, You must make
sure the requirements of this License are fulfilled for the Covered
Software.

4. Versions of the License.

4.1. New Versions.

Oracle is the initial license steward and may publish revised and/or

new versions of this License from time to time. Each version will be
given a distinguishing version number. Except as provided in Section
4.3, no one other than the license steward has the right to modify
this License.

4.2. Effect of New Versions.

You may always continue to use, distribute or otherwise make the
Covered Software available under the terms of the version of the
License under which You originally received the Covered Software. If
the Initial Developer includes a notice in the Original Software
prohibiting it from being distributed or otherwise made available
under any subsequent version of the License, You must distribute and
make the Covered Software available under the terms of the version
of the License under which You originally received the Covered
Software. Otherwise, You may also choose to use, distribute or
otherwise make the Covered Software available under the terms of any
subsequent version of the License published by the license steward.

4.3. Modified Versions.

When You are an Initial Developer and You want to create a new
license for Your Original Software, You may create and use a
modified version of this License if You: (a) rename the license and
remove any references to the name of the license steward (except to
note that the license differs from this License); and (b) otherwise
make it clear that the license contains terms which differ from this
License.

5. DISCLAIMER OF WARRANTY.

COVERED SOFTWARE IS PROVIDED UNDER THIS LICENSE ON AN "AS IS" BASIS,
WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED,
INCLUDING, WITHOUT LIMITATION, WARRANTIES THAT THE COVERED SOFTWARE
IS FREE OF DEFECTS, MERCHANTABLE, FIT FOR A PARTICULAR PURPOSE OR
NON-INFRINGING. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF
THE COVERED SOFTWARE IS WITH YOU. SHOULD ANY COVERED SOFTWARE PROVE
DEFECTIVE IN ANY RESPECT, YOU (NOT THE INITIAL DEVELOPER OR ANY
OTHER CONTRIBUTOR) ASSUME THE COST OF ANY NECESSARY SERVICING,
REPAIR OR CORRECTION. THIS DISCLAIMER OF WARRANTY CONSTITUTES AN
ESSENTIAL PART OF THIS LICENSE. NO USE OF ANY COVERED SOFTWARE IS
AUTHORIZED HEREUNDER EXCEPT UNDER THIS DISCLAIMER.

6. TERMINATION.

6.1. This License and the rights granted hereunder will terminate
automatically if You fail to comply with terms herein and fail to
cure such breach within 30 days of becoming aware of the breach.

Provisions which, by their nature, must remain in effect beyond the termination of this License shall survive.

6.2. If You assert a patent infringement claim (excluding declaratory judgment actions) against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You assert such claim is referred to as "Participant") alleging that the Participant Software (meaning the Contributor Version where the Participant is a Contributor or the Original Software where the Participant is the Initial Developer) directly or indirectly infringes any patent, then any and all rights granted directly or indirectly to You by such Participant, the Initial Developer (if the Initial Developer is not the Participant) and all Contributors under Sections 2.1 and/or 2.2 of this License shall, upon 60 days notice from Participant terminate prospectively and automatically at the expiration of such 60 day notice period, unless if within such 60 day period You withdraw Your claim with respect to the Participant Software against such Participant either unilaterally or pursuant to a written agreement with Participant.

6.3. If You assert a patent infringement claim against Participant alleging that the Participant Software directly or indirectly infringes any patent where such claim is resolved (such as by license or settlement) prior to the initiation of patent infringement litigation, then the reasonable value of the licenses granted by such Participant under Sections 2.1 or 2.2 shall be taken into account in determining the amount or value of any payment or license.

6.4. In the event of termination under Sections 6.1 or 6.2 above, all end user licenses that have been validly granted by You or any distributor hereunder prior to termination (excluding licenses granted to You by any distributor) shall survive termination.

7. LIMITATION OF LIABILITY.

UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY, WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL YOU, THE INITIAL DEVELOPER, ANY OTHER CONTRIBUTOR, OR ANY DISTRIBUTOR OF COVERED SOFTWARE, OR ANY SUPPLIER OF ANY OF SUCH PARTIES, BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL OTHER COMMERCIAL DAMAGES OR LOSSES, EVEN IF SUCH PARTY SHALL HAVE BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. THIS LIMITATION OF LIABILITY SHALL NOT APPLY TO LIABILITY FOR DEATH OR PERSONAL INJURY RESULTING FROM SUCH PARTY'S NEGLIGENCE TO THE EXTENT APPLICABLE LAW PROHIBITS SUCH

LIMITATION. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR
LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS EXCLUSION
AND LIMITATION MAY NOT APPLY TO YOU.

8. U.S. GOVERNMENT END USERS.

The Covered Software is a "commercial item," as that term is defined
in 48 C.F.R. 2.101 (Oct. 1995), consisting of "commercial computer
software" (as that term is defined at 48 C.F.R.
252.227-7014(a)(1)) and "commercial computer software documentation"
as such terms are used in 48 C.F.R. 12.212 (Sept. 1995). Consistent
with 48 C.F.R. 12.212 and 48 C.F.R. 227.7202-1 through 227.7202-4
(June 1995), all U.S. Government End Users acquire Covered Software
with only those rights set forth herein. This U.S. Government Rights
clause is in lieu of, and supersedes, any other FAR, DFAR, or other
clause or provision that addresses Government rights in computer
software under this License.

9. MISCELLANEOUS.

This License represents the complete agreement concerning subject
matter hereof. If any provision of this License is held to be
unenforceable, such provision shall be reformed only to the extent
necessary to make it enforceable. This License shall be governed by
the law of the jurisdiction specified in a notice contained within
the Original Software (except to the extent applicable law, if any,
provides otherwise), excluding such jurisdiction's conflict-of-law
provisions. Any litigation relating to this License shall be subject
to the jurisdiction of the courts located in the jurisdiction and
venue specified in a notice contained within the Original Software,
with the losing party responsible for costs, including, without
limitation, court costs and reasonable attorneys' fees and expenses.
The application of the United Nations Convention on Contracts for
the International Sale of Goods is expressly excluded. Any law or
regulation which provides that the language of a contract shall be
construed against the drafter shall not apply to this License. You
agree that You alone are responsible for compliance with the United
States export administration regulations (and the export control
laws and regulation of any other countries) when You use, distribute
or otherwise make available any Covered Software.

10. RESPONSIBILITY FOR CLAIMS.

As between Initial Developer and the Contributors, each party is
responsible for claims and damages arising, directly or indirectly,
out of its utilization of rights under this License and You agree to
work with Initial Developer and Contributors to distribute such
responsibility on an equitable basis. Nothing herein is intended or

shall be deemed to constitute any admission of liability.

NOTICE PURSUANT TO SECTION 9 OF THE COMMON DEVELOPMENT AND DISTRIBUTION
LICENSE (CDDL)

The code released under the CDDL shall be governed by the laws of the
State of California (excluding conflict-of-law provisions). Any
litigation relating to this License shall be subject to the jurisdiction
of the Federal Courts of the Northern District of California and the
state courts of the State of California, with venue lying in Santa Clara
County, California.

The GNU General Public License (GPL) Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor
Boston, MA 02110-1335
USA

Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to
share and change it. By contrast, the GNU General Public License is
intended to guarantee your freedom to share and change free software--to
make sure the software is free for all its users. This General Public
License applies to most of the Free Software Foundation's software and
to any other program whose authors commit to using it. (Some other Free
Software Foundation software is covered by the GNU Library General
Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price.
Our General Public Licenses are designed to make sure that you have the
freedom to distribute copies of free software (and charge for this
service if you wish), that you receive source code or can get it if you
want it, that you can change the software or use pieces of it in new
free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone
to deny you these rights or to ask you to surrender the rights. These
restrictions translate to certain responsibilities for you if you
distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice

and disclaimer of warranty; keep intact all the notices that refer to
this License and to the absence of any warranty; and give any other
recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and
you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of
it, thus forming a work based on the Program, and copy and distribute
such modifications or work under the terms of Section 1 above, provided
that you also meet all of these conditions:

  a) You must cause the modified files to carry prominent notices
  stating that you changed the files and the date of any change.

  b) You must cause any work that you distribute or publish, that in
  whole or in part contains or is derived from the Program or any part
  thereof, to be licensed as a whole at no charge to all third parties
  under the terms of this License.

  c) If the modified program normally reads commands interactively
  when run, you must cause it, when started running for such
  interactive use in the most ordinary way, to print or display an
  announcement including an appropriate copyright notice and a notice
  that there is no warranty (or else, saying that you provide a
  warranty) and that users may redistribute the program under these
  conditions, and telling the user how to view a copy of this License.
  (Exception: if the Program itself is interactive but does not
  normally print such an announcement, your work based on the Program
  is not required to print an announcement.)

These requirements apply to the modified work as a whole. If
identifiable sections of that work are not derived from the Program, and
can be reasonably considered independent and separate works in
themselves, then this License, and its terms, do not apply to those
sections when you distribute them as separate works. But when you
distribute the same sections as part of a whole which is a work based on
the Program, the distribution of the whole must be on the terms of this
License, whose permissions for other licensees extend to the entire
whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest
your rights to work written entirely by you; rather, the intent is to
exercise the right to control the distribution of derivative or
collective works based on the Program.

In addition, mere aggregation of another work not based on the Program
with the Program (or with a work based on the Program) on a volume of a

storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

    a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

    b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

    c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in
certain countries either by patents or by copyrighted interfaces, the
original copyright holder who places the Program under this License may
add an explicit geographical distribution limitation excluding those
countries, so that distribution is permitted only in or among countries
not thus excluded. In such case, this License incorporates the
limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new
versions of the General Public License from time to time. Such new
versions will be similar in spirit to the present version, but may
differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program
specifies a version number of this License which applies to it and "any
later version", you have the option of following the terms and
conditions either of that version or of any later version published by
the Free Software Foundation. If the Program does not specify a version
number of this License, you may choose any version ever published by the
Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free
programs whose distribution conditions are different, write to the
author to ask for permission. For software which is copyrighted by the
Free Software Foundation, write to the Free Software Foundation; we
sometimes make exceptions for this. Our decision will be guided by the
two goals of preserving the free status of all derivatives of our free
software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO
WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW.
EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR
OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND,
EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED
WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE
ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH
YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL
NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN
WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY
AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR
DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL
DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM
(INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED
INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF

THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

One line to give the program's name and a brief idea of what it does. Copyright (C) <year> <name of author>

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1335 USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) year name of author Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type `show w'. This is free software, and you are welcome to redistribute it under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

Yoyodyne, Inc., hereby disclaims all copyright interest in the program `Gnomovision' (which makes passes at compilers) written by James Hacker.

signature of Ty Coon, 1 April 1989
Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

#

Certain source files distributed by Oracle America, Inc. and/or its affiliates are subject to the following clarification and special exception to the GPLv2, based on the GNU Project exception for its Classpath libraries, known as the GNU Classpath Exception, but only where Oracle has expressly included in the particular source file's header the words "Oracle designates this particular file as subject to the "Classpath" exception as provided by Oracle in the LICENSE file that accompanied this code."

You should also note that Oracle includes multiple, independent programs in this software package. Some of those programs are provided under licenses deemed incompatible with the GPLv2 by the Free Software Foundation and others. For example, the package includes programs licensed under the Apache License, Version 2.0. Such programs are licensed to you under their original licenses.

Oracle facilitates your further distribution of this package by adding the Classpath Exception to the necessary parts of its GPLv2 code, which permits you to use that code in combination with other independent modules not licensed under the GPLv2. However, note that this would not permit you to commingle code under an incompatible license with Oracle's GPLv2 licensed code by, for example, cutting and pasting such code into a file also containing Oracle's GPLv2 licensed code and then distributing the result. Additionally, if you were to remove the Classpath Exception from any of the files to which it applies and distribute the result, you would likely be required to license some or all of the other code in that distribution under the GPLv2 as well, and since the GPLv2 is incompatible with the license terms of some items included in the distribution by Oracle, removing the Classpath

Exception could therefore effectively compromise your ability to
further distribute the package.

Proceed with caution and we recommend that you obtain the advice of a
lawyer skilled in open source matters before removing the Classpath
Exception or making modifications to this package which may
subsequently be redistributed and/or involve the use of third party
software.

CLASSPATH EXCEPTION
Linking this library statically or dynamically with other modules is
making a combined work based on this library. Thus, the terms and
conditions of the GNU General Public License version 2 cover the whole
combination.

As a special exception, the copyright holders of this library give you
permission to link this library with independent modules to produce an
executable, regardless of the license terms of these independent
modules, and to copy and distribute the resulting executable under
terms of your choice, provided that you also meet, for each linked
independent module, the terms and conditions of the license of that
module. An independent module is a module which is not derived from or
based on this library. If you modify this library, you may extend this
exception to your version of the library, but you are not obligated to
do so. If you do not wish to do so, delete this exception statement
from your version.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but

excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its

distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,

unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   copyright license to reproduce, prepare Derivative Works of,
   publicly display, publicly perform, sublicense, and distribute the
   Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   (except as stated in this section) patent license to make, have made,
   use, offer to sell, sell, import, and otherwise transfer the Work,
   where such license applies only to those patent claims licensable
   by such Contributor that are necessarily infringed by their
   Contribution(s) alone or by combination of their Contribution(s)
   with the Work to which such Contribution(s) was submitted. If You
   institute patent litigation against any entity (including a
   cross-claim or counterclaim in a lawsuit) alleging that the Work
   or a Contribution incorporated within the Work constitutes direct
   or contributory patent infringement, then any patent licenses
   granted to You under this License for that Work shall terminate

as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
   Work or Derivative Works thereof in any medium, with or without
   modifications, and in Source or Object form, provided that You
   meet the following conditions:

   (a) You must give any other recipients of the Work or
       Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices
       stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works
       that You distribute, all copyright, patent, trademark, and
       attribution notices from the Source form of the Work,
       excluding those notices that do not pertain to any part of
       the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its
       distribution, then any Derivative Works that You distribute must
       include a readable copy of the attribution notices contained
       within such NOTICE file, excluding those notices that do not
       pertain to any part of the Derivative Works, in at least one
       of the following places: within a NOTICE text file distributed
       as part of the Derivative Works; within the Source form or
       documentation, if provided along with the Derivative Works; or,
       within a display generated by the Derivative Works, if and
       wherever such third-party notices normally appear. The contents
       of the NOTICE file are for informational purposes only and
       do not modify the License. You may add Your own attribution
       notices within Derivative Works that You distribute, alongside
       or as an addendum to the NOTICE text from the Work, provided
       that such additional attribution notices cannot be construed
       as modifying the License.

   You may add Your own copyright statement to Your modifications and
   may provide additional or different license terms and conditions
   for use, reproduction, or distribution of Your modifications, or
   for any such Derivative Works as a whole, provided Your use,
   reproduction, and distribution of the Work otherwise complies with
   the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify

the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity

exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   (except as stated in this section) patent license to make, have made,
   use, offer to sell, sell, import, and otherwise transfer the Work,
   where such license applies only to those patent claims licensable
   by such Contributor that are necessarily infringed by their
   Contribution(s) alone or by combination of their Contribution(s)
   with the Work to which such Contribution(s) was submitted. If You
   institute patent litigation against any entity (including a
   cross-claim or counterclaim in a lawsuit) alleging that the Work
   or a Contribution incorporated within the Work constitutes direct
   or contributory patent infringement, then any patent licenses
   granted to You under this License for that Work shall terminate
   as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
   Work or Derivative Works thereof in any medium, with or without
   modifications, and in Source or Object form, provided that You
   meet the following conditions:

   (a) You must give any other recipients of the Work or
       Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices
       stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works
       that You distribute, all copyright, patent, trademark, and
       attribution notices from the Source form of the Work,
       excluding those notices that do not pertain to any part of
       the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its
       distribution, then any Derivative Works that You distribute must
       include a readable copy of the attribution notices contained
       within such NOTICE file, excluding those notices that do not
       pertain to any part of the Derivative Works, in at least one
       of the following places: within a NOTICE text file distributed
       as part of the Derivative Works; within the Source form or
       documentation, if provided along with the Derivative Works; or,
       within a display generated by the Derivative Works, if and
       wherever such third-party notices normally appear. The contents
       of the NOTICE file are for informational purposes only and
       do not modify the License. You may add Your own attribution
       notices within Derivative Works that You distribute, alongside
       or as an addendum to the NOTICE text from the Work, provided

that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,

or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

1.295.1 Available under license :

GNU LESSER GENERAL PUBLIC LICENSE
                       Version 2.1, February 1999

Copyright (C) 1991, 1999 Free Software Foundation, Inc.
   51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA
Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

[This is the first released version of the Lesser GPL. It also counts
as the successor of the GNU Library Public License, version 2, hence
the version number 2.1.]

                       Preamble

 The licenses for most software are designed to take away your
freedom to share and change it. By contrast, the GNU General Public
Licenses are intended to guarantee your freedom to share and change
free software--to make sure the software is free for all its users.

 This license, the Lesser General Public License, applies to some
specially designated software packages--typically libraries--of the
Free Software Foundation and other authors who decide to use it. You

can use it too, but we suggest you first think carefully about whether this license or the ordinary General Public License is the better strategy to use in any particular case, based on the explanations below.

When we speak of free software, we are referring to freedom of use, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish); that you receive source code or can get it if you want it; that you can change the software and use pieces of it in new free programs; and that you are informed that you can do these things.

To protect your rights, we need to make restrictions that forbid distributors to deny you these rights or to ask you to surrender these rights. These restrictions translate to certain responsibilities for you if you distribute copies of the library or if you modify it.

For example, if you distribute copies of the library, whether gratis or for a fee, you must give the recipients all the rights that we gave you. You must make sure that they, too, receive or can get the source code. If you link other code with the library, you must provide complete object files to the recipients, so that they can relink them with the library after making changes to the library and recompiling it. And you must show them these terms so they know their rights.

We protect your rights with a two-step method: (1) we copyright the library, and (2) we offer you this license, which gives you legal permission to copy, distribute and/or modify the library.

To protect each distributor, we want to make it very clear that there is no warranty for the free library. Also, if the library is modified by someone else and passed on, the recipients should know that what they have is not the original version, so that the original author's reputation will not be affected by problems that might be introduced by others.
^L
Finally, software patents pose a constant threat to the existence of any free program. We wish to make sure that a company cannot effectively restrict the users of a free program by obtaining a restrictive license from a patent holder. Therefore, we insist that any patent license obtained for a version of the library must be consistent with the full freedom of use specified in this license.

Most GNU software, including some libraries, is covered by the ordinary GNU General Public License. This license, the GNU Lesser General Public License, applies to certain designated libraries, and is quite different from the ordinary General Public License. We use

this license for certain libraries in order to permit linking those
libraries into non-free programs.

 When a program is linked with a library, whether statically or using
a shared library, the combination of the two is legally speaking a
combined work, a derivative of the original library. The ordinary
General Public License therefore permits such linking only if the
entire combination fits its criteria of freedom. The Lesser General
Public License permits more lax criteria for linking other code with
the library.

 We call this license the "Lesser" General Public License because it
does Less to protect the user's freedom than the ordinary General
Public License. It also provides other free software developers Less
of an advantage over competing non-free programs. These disadvantages
are the reason we use the ordinary General Public License for many
libraries. However, the Lesser license provides advantages in certain
special circumstances.

 For example, on rare occasions, there may be a special need to
encourage the widest possible use of a certain library, so that it
becomes
a de-facto standard. To achieve this, non-free programs must be
allowed to use the library. A more frequent case is that a free
library does the same job as widely used non-free libraries. In this
case, there is little to gain by limiting the free library to free
software only, so we use the Lesser General Public License.

 In other cases, permission to use a particular library in non-free
programs enables a greater number of people to use a large body of
free software. For example, permission to use the GNU C Library in
non-free programs enables many more people to use the whole GNU
operating system, as well as its variant, the GNU/Linux operating
system.

 Although the Lesser General Public License is Less protective of the
users' freedom, it does ensure that the user of a program that is
linked with the Library has the freedom and the wherewithal to run
that program using a modified version of the Library.

 The precise terms and conditions for copying, distribution and
modification follow. Pay close attention to the difference between a
"work based on the library" and a "work that uses the library". The
former contains code derived from the library, whereas the latter must
be combined with the library in order to run.
^L
            GNU LESSER GENERAL PUBLIC LICENSE
 TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License Agreement applies to any software library or other
program which contains a notice placed by the copyright holder or
other authorized party saying it may be distributed under the terms of
this Lesser General Public License (also called "this License").
Each licensee is addressed as "you".

A "library" means a collection of software functions and/or data
prepared so as to be conveniently linked with application programs
(which use some of those functions and data) to form executables.

The "Library", below, refers to any such software library or work
which has been distributed under these terms. A "work based on the
Library" means either the Library or any derivative work under
copyright law: that is to say, a work containing the Library or a
portion of it, either verbatim or with modifications and/or translated
straightforwardly into another language. (Hereinafter, translation is
included without limitation in the term "modification".)

"Source code" for a work means the preferred form of the work for
making modifications to it. For a library, complete source code means
all the source code for all modules it contains, plus any associated
interface definition files, plus the scripts used to control compilation
and installation of the library.

Activities other than copying, distribution and modification are not
covered by this License; they are outside its scope. The act of
running a program using the Library is not restricted, and output from
such a program is covered only if its contents constitute a work based
on the Library (independent of the use of the Library in a tool for
writing it). Whether that is true depends on what the Library does
and what the program that uses the Library does.

1. You may copy and distribute verbatim copies of the Library's
complete source code as you receive it, in any medium, provided that
you conspicuously and appropriately publish on each copy an
appropriate copyright notice and disclaimer of warranty; keep intact
all the notices that refer to this License and to the absence of any
warranty; and distribute a copy of this License along with the
Library.

You may charge a fee for the physical act of transferring a copy,
and you may at your option offer warranty protection in exchange for a
fee.

2. You may modify your copy or copies of the Library or any portion
of it, thus forming a work based on the Library, and copy and
distribute such modifications or work under the terms of Section 1

above, provided that you also meet all of these conditions:

   a) The modified work must itself be a software library.

   b) You must cause the files modified to carry prominent notices
   stating that you changed the files and the date of any change.

   c) You must cause the whole of the work to be licensed at no
   charge to all third parties under the terms of this License.

   d) If a facility in the modified Library refers to a function or a
   table of data to be supplied by an application program that uses
   the facility, other than as an argument passed when the facility
   is invoked, then you must make a good faith effort to ensure that,
   in the event an application does not supply such function or
   table, the facility still operates, and performs whatever part of
   its purpose remains meaningful.

   (For example, a function in a library to compute square roots has
   a purpose that is entirely well-defined independent of the
   application. Therefore, Subsection 2d requires that any
   application-supplied function or table used by this function must
   be optional: if the application does not supply it, the square
   root function must still compute square roots.)

These requirements apply to the modified work as a whole. If
identifiable sections of that work are not derived from the Library,
and can be reasonably considered independent and separate works in
themselves, then this License, and its terms, do not apply to those
sections when you distribute them as separate works. But when you
distribute the same sections as part of a whole which is a work based
on the Library, the distribution of the whole must be on the terms of
this License, whose permissions for other licensees extend to the
entire whole, and thus to each and every part regardless of who wrote
it.

Thus, it is not the intent of this section to claim rights or contest
your rights to work written entirely by you; rather, the intent is to
exercise the right to control the distribution of derivative or
collective works based on the Library.

In addition, mere aggregation of another work not based on the Library
with the Library (or with a work based on the Library) on a volume of
a storage or distribution medium does not bring the other work under
the scope of this License.

   3. You may opt to apply the terms of the ordinary GNU General Public
License instead of this License to a given copy of the Library. To do

this, you must alter all the notices that refer to this License, so
that they refer to the ordinary GNU General Public License, version 2,
instead of to this License. (If a newer version than version 2 of the
ordinary GNU General Public License has appeared, then you can specify
that version instead if you wish.) Do not make any other change in
these notices.
^L
 Once this change is made in a given copy, it is irreversible for
that copy, so the ordinary GNU General Public License applies to all
subsequent copies and derivative works made from that copy.

 This option is useful when you wish to copy part of the code of
the Library into a program that is not a library.

 4. You may copy and distribute the Library (or a portion or
derivative of it, under Section 2) in object code or executable form
under the terms of Sections 1 and 2 above provided that you accompany
it with the complete corresponding machine-readable source code, which
must be distributed under the terms of Sections 1 and 2 above on a
medium customarily used for software interchange.

 If distribution of object code is made by offering access to copy
from a designated place, then offering equivalent access to copy the
source code from the same place satisfies the requirement to
distribute the source code, even though third parties are not
compelled to copy the source along with the object code.

 5. A program that contains no derivative of any portion of the
Library, but is designed to work with the Library by being compiled or
linked with it, is called a "work that uses the Library". Such a
work, in isolation, is not a derivative work of the Library, and
therefore falls outside the scope of this License.

 However, linking a "work that uses the Library" with the Library
creates an executable that is a derivative of the Library (because it
contains portions of the Library), rather than a "work that uses the
library". The executable is therefore covered by this License.
Section 6 states terms for distribution of such executables.

 When a "work that uses the Library" uses material from a header file
that is part of the Library, the object code for the work may be a
derivative work of the Library even though the source code is not.
Whether this is true is especially significant if the work can be
linked without the Library, or if the work is itself a library. The
threshold for this to be true is not precisely defined by law.

 If such an object file uses only numerical parameters, data
structure layouts and accessors, and small macros and small inline

functions (ten lines or less in length), then the use of the object
file is unrestricted, regardless of whether it is legally a derivative
work. (Executables containing this object code plus portions of the
Library will still fall under Section 6.)

 Otherwise, if the work is a derivative of the Library, you may
distribute the object code for the work under the terms of Section 6.
Any executables containing that work also fall under Section 6,
whether or not they are linked directly with the Library itself.
^L
 6. As an exception to the Sections above, you may also combine or
link a "work that uses the Library" with the Library to produce a
work containing portions of the Library, and distribute that work
under terms of your choice, provided that the terms permit
modification of the work for the customer's own use and reverse
engineering for debugging such modifications.

 You must give prominent notice with each copy of the work that the
Library is used in it and that the Library and its use are covered by
this License. You must supply a copy of this License. If the work
during execution displays copyright notices, you must include the
copyright notice for the Library among them, as well as a reference
directing the user to the copy of this License. Also, you must do one
of these things:

  a) Accompany the work with the complete corresponding
  machine-readable source code for the Library including whatever
  changes were used in the work (which must be distributed under
  Sections 1 and 2 above); and, if the work is an executable linked
  with the Library, with the complete machine-readable "work that
  uses the Library", as object code and/or source code, so that the
  user can modify the Library and then relink to produce a modified
  executable containing the modified Library. (It is understood
  that the user who changes the contents of definitions files in the
  Library will not necessarily be able to recompile the application
  to use the modified definitions.)

  b) Use a suitable shared library mechanism for linking with the
  Library. A suitable mechanism is one that (1) uses at run time a
  copy of the library already present on the user's computer system,
  rather than copying library functions into the executable, and (2)
  will operate properly with a modified version of the library, if
  the user installs one, as long as the modified version is
  interface-compatible with the version that the work was made with.

  c) Accompany the work with a written offer, valid for at
  least three years, to give the same user the materials
  specified in Subsection 6a, above, for a charge no more

than the cost of performing this distribution.

    d) If distribution of the work is made by offering access to copy
    from a designated place, offer equivalent access to copy the above
    specified materials from the same place.

    e) Verify that the user has already received a copy of these
    materials or that you have already sent this user a copy.

  For an executable, the required form of the "work that uses the
Library" must include any data and utility programs needed for
reproducing the executable from it. However, as a special exception,
the materials to be distributed need not include anything that is
normally distributed (in either source or binary form) with the major
components (compiler, kernel, and so on) of the operating system on
which the executable runs, unless that component itself accompanies
the executable.

  It may happen that this requirement contradicts the license
restrictions of other proprietary libraries that do not normally
accompany the operating system. Such a contradiction means you cannot
use both them and the Library together in an executable that you
distribute.
^L
  7. You may place library facilities that are a work based on the
Library side-by-side in a single library together with other library
facilities not covered by this License, and distribute such a combined
library, provided that the separate distribution of the work based on
the Library and of the other library facilities is otherwise
permitted, and provided that you do these two things:

    a) Accompany the combined library with a copy of the same work
    based on the Library, uncombined with any other library
    facilities. This must be distributed under the terms of the
    Sections above.

    b) Give prominent notice with the combined library of the fact
    that part of it is a work based on the Library, and explaining
    where to find the accompanying uncombined form of the same work.

  8. You may not copy, modify, sublicense, link with, or distribute
the Library except as expressly provided under this License. Any
attempt otherwise to copy, modify, sublicense, link with, or
distribute the Library is void, and will automatically terminate your
rights under this License. However, parties who have received copies,
or rights, from you under this License will not have their licenses
terminated so long as such parties remain in full compliance.

9. You are not required to accept this License, since you have not
signed it. However, nothing else grants you permission to modify or
distribute the Library or its derivative works. These actions are
prohibited by law if you do not accept this License. Therefore, by
modifying or distributing the Library (or any work based on the
Library), you indicate your acceptance of this License to do so, and
all its terms and conditions for copying, distributing or modifying
the Library or works based on it.

10. Each time you redistribute the Library (or any work based on the
Library), the recipient automatically receives a license from the
original licensor to copy, distribute, link with or modify the Library
subject to these terms and conditions. You may not impose any further
restrictions on the recipients' exercise of the rights granted herein.
You are not responsible for enforcing compliance by third parties with
this License.
^L
11. If, as a consequence of a court judgment or allegation of patent
infringement or for any other reason (not limited to patent issues),
conditions are imposed on you (whether by court order, agreement or
otherwise) that contradict the conditions of this License, they do not
excuse you from the conditions of this License. If you cannot
distribute so as to satisfy simultaneously your obligations under this
License and any other pertinent obligations, then as a consequence you
may not distribute the Library at all. For example, if a patent
license would not permit royalty-free redistribution of the Library by
all those who receive copies directly or indirectly through you, then
the only way you could satisfy both it and this License would be to
refrain entirely from distribution of the Library.

If any portion of this section is held invalid or unenforceable under any
particular circumstance, the balance of the section is intended to apply,
and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any
patents or other property right claims or to contest validity of any
such claims; this section has the sole purpose of protecting the
integrity of the free software distribution system which is
implemented by public license practices. Many people have made
generous contributions to the wide range of software distributed
through that system in reliance on consistent application of that
system; it is up to the author/donor to decide if he or she is willing
to distribute software through any other system and a licensee cannot
impose that choice.

This section is intended to make thoroughly clear what is believed to
be a consequence of the rest of this License.

12. If the distribution and/or use of the Library is restricted in
certain countries either by patents or by copyrighted interfaces, the
original copyright holder who places the Library under this License may add
an explicit geographical distribution limitation excluding those countries,
so that distribution is permitted only in or among countries not thus
excluded. In such case, this License incorporates the limitation as if
written in the body of this License.

13. The Free Software Foundation may publish revised and/or new
versions of the Lesser General Public License from time to time.
Such new versions will be similar in spirit to the present version,
but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Library
specifies a version number of this License which applies to it and
"any later version", you have the option of following the terms and
conditions either of that version or of any later version published by
the Free Software Foundation. If the Library does not specify a
license version number, you may choose any version ever published by
the Free Software Foundation.
^L
14. If you wish to incorporate parts of the Library into other free
programs whose distribution conditions are incompatible with these,
write to the author to ask for permission. For software which is
copyrighted by the Free Software Foundation, write to the Free
Software Foundation; we sometimes make exceptions for this. Our
decision will be guided by the two goals of preserving the free status
of all derivatives of our free software and of promoting the sharing
and reuse of software generally.

NO WARRANTY

15. BECAUSE THE LIBRARY IS LICENSED FREE OF CHARGE, THERE IS NO
WARRANTY FOR THE LIBRARY, TO THE EXTENT PERMITTED BY APPLICABLE LAW.
EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR
OTHER PARTIES PROVIDE THE LIBRARY "AS IS" WITHOUT WARRANTY OF ANY
KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE
IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR
PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE
LIBRARY IS WITH YOU. SHOULD THE LIBRARY PROVE DEFECTIVE, YOU ASSUME
THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

16. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN
WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY
AND/OR REDISTRIBUTE THE LIBRARY AS PERMITTED ABOVE, BE LIABLE TO YOU
FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR
CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE
LIBRARY (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING

RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A
FAILURE OF THE LIBRARY TO OPERATE WITH ANY OTHER SOFTWARE), EVEN IF
SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH
DAMAGES.

END OF TERMS AND CONDITIONS

^L

How to Apply These Terms to Your New Libraries

 If you develop a new library, and you want it to be of the greatest
possible use to the public, we recommend making it free software that
everyone can redistribute and change. You can do so by permitting
redistribution under these terms (or, alternatively, under the terms
of the ordinary General Public License).

 To apply these terms, attach the following notices to the library.
It is safest to attach them to the start of each source file to most
effectively convey the exclusion of warranty; and each file should
have at least the "copyright" line and a pointer to where the full
notice is found.

    <one line to give the library's name and a brief idea of what it does.>
    Copyright (C) <year> <name of author>

    This library is free software; you can redistribute it and/or
    modify it under the terms of the GNU Lesser General Public
    License as published by the Free Software Foundation; either
    version 2.1 of the License, or (at your option) any later version.

    This library is distributed in the hope that it will be useful,
    but WITHOUT ANY WARRANTY; without even the implied warranty of
    MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU
    Lesser General Public License for more details.

    You should have received a copy of the GNU Lesser General Public
    License along with this library; if not, write to the Free Software
    Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston,
    MA 02110-1301, USA

Also add information on how to contact you by electronic and paper mail.

You should also get your employer (if you work as a programmer) or your
school, if any, to sign a "copyright disclaimer" for the library, if
necessary. Here is a sample; alter the names:

 Yoyodyne, Inc., hereby disclaims all copyright interest in the
 library `Frob' (a library for tweaking knobs) written by James Random

Hacker.

1.297.1 Available under license :

Apache License

Version 2.0, January 2004

http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1
through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date

such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.
You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or

any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

   Copyright [yyyy] [name of copyright owner]

Copyright 2010-2013 Coda Hale and Yammer, Inc., 2014-2017 Dropwizard Team

This product includes software developed by Coda Hale and Yammer, Inc.

This product includes code derived from the JSR-166 project (ThreadLocalRandom, Striped64, LongAdder), which was released with the following comments:

  Written by Doug Lea with assistance from members of JCP JSR-166
  Expert Group and released to the public domain, as explained at
  http://creativecommons.org/publicdomain/zero/1.0/

                        Apache License
                    Version 2.0, January 2004
                  http://www.apache.org/licenses/

   TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

   1. Definitions.

      "License" shall mean the terms and conditions for use, reproduction,
      and distribution as defined by Sections 1 through 9 of this document.

      "Licensor" shall mean the copyright owner or entity authorized by
      the copyright owner that is granting the License.

      "Legal Entity" shall mean the union of the acting entity and all
      other entities that control, are controlled by, or are under common
      control with that entity. For the purposes of this definition,
      "control" means (i) the power, direct or indirect, to cause the
      direction or management of such entity, whether by contract or
      otherwise, or (ii) ownership of fifty percent (50%) or more of the
      outstanding shares, or (iii) beneficial ownership of such entity.

      "You" (or "Your") shall mean an individual or Legal Entity
      exercising permissions granted by this License.

      "Source" form shall mean the preferred form for making modifications,
      including but not limited to software source code, documentation
      source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   copyright license to reproduce, prepare Derivative Works of,
   publicly display, publicly perform, sublicense, and distribute the
   Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   (except as stated in this section) patent license to make, have made,

use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions

for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability

incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

Apache Shiro
Copyright 2008-2020 The Apache Software Foundation

This product includes software developed at
The Apache Software Foundation (http://www.apache.org/).

The implementation for org.apache.shiro.util.SoftHashMap is based
on initial ideas from Dr. Heinz Kabutz's publicly posted version
available at http://www.javaspecialists.eu/archive/Issue015.html,
with continued modifications.

Certain parts (StringUtils, IpAddressMatcher, etc.) of the source
code for this product was copied for simplicity and to reduce
dependencies from the source code developed by the Spring Framework

Project (http://www.springframework.org).

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
copyright license to reproduce, prepare Derivative Works of,
publicly display, publicly perform, sublicense, and distribute the
Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
this License, each Contributor hereby grants to You a perpetual,
worldwide, non-exclusive, no-charge, royalty-free, irrevocable
(except as stated in this section) patent license to make, have made,
use, offer to sell, sell, import, and otherwise transfer the Work,
where such license applies only to those patent claims licensable
by such Contributor that are necessarily infringed by their
Contribution(s) alone or by combination of their Contribution(s)
with the Work to which such Contribution(s) was submitted. If You
institute patent litigation against any entity (including a
cross-claim or counterclaim in a lawsuit) alleging that the Work
or a Contribution incorporated within the Work constitutes direct
or contributory patent infringement, then any patent licenses
granted to You under this License for that Work shall terminate
as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
Work or Derivative Works thereof in any medium, with or without
modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or

Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
   stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
   that You distribute, all copyright, patent, trademark, and
   attribution notices from the Source form of the Work,
   excluding those notices that do not pertain to any part of
   the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
   distribution, then any Derivative Works that You distribute must
   include a readable copy of the attribution notices contained
   within such NOTICE file, excluding those notices that do not
   pertain to any part of the Derivative Works, in at least one
   of the following places: within a NOTICE text file distributed
   as part of the Derivative Works; within the Source form or
   documentation, if provided along with the Derivative Works; or,
   within a display generated by the Derivative Works, if and
   wherever such third-party notices normally appear. The contents
   of the NOTICE file are for informational purposes only and
   do not modify the License. You may add Your own attribution
   notices within Derivative Works that You distribute, alongside
   or as an addendum to the NOTICE text from the Work, provided
   that such additional attribution notices cannot be construed
   as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify
   the terms of any separate license agreement you may have executed
   with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
   names, trademarks, service marks, or product names of the Licensor,
   except as required for reasonable and customary use in describing the
   origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the
   appropriateness of using or redistributing the Work and assume any
   risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

Jackson JSON processor

Jackson is a high-performance, Free/Open Source JSON processing library.

It was originally written by Tatu Saloranta (tatu.saloranta@iki.fi), and has
been in development since 2007.
It is currently developed by a community of developers, as well as supported
commercially by FasterXML.com.

Licensing

Jackson core and extension components may be licensed under different licenses.
To find the details that apply to this artifact see the accompanying LICENSE file.
For more information, including possible other licensing options, contact
FasterXML.com (http://fasterxml.com).

Credits

A list of contributors may be found from CREDITS file, which is included
in some artifacts (usually source distributions); but is always available
from the source code management (SCM) system project uses.

DESCRIPTION
   "This MIB module defines the basic management object
    for the Multimedia Terminal Adapter devices compliant
    with PacketCable and IPCablecom requirements.

    Copyright (C) The IETF Trust (2006). This version of
    this MIB module is part of RFC 4682; see the RFC itself for
    full legal notices."

  REVISION   "200609180000Z"   -- September 18, 2006

  DESCRIPTION
   "Initial version, published as RFC 4682."

::= { mib-2 140 }

 -- Textual Conventions

PktcMtaDevProvEncryptAlg ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
     " This textual convention defines various types of the
       encryption algorithms used for the encryption of the MTA
       configuration file. The description of the encryption

algorithm for each enumerated value is as follows:

'none(0)'   no encryption is used,
'des64CbcMode(1)'   DES 64-bit key in CBC mode,

't3Des192CbcMode(2)' 3DES 192-bit key in CBC mode,
'aes128CbcMode(3)'   AES 128-bit key in CBC mode,
'aes256CbcMode(4)'   AES 256-bit key in CBC mode."
 SYNTAX   INTEGER {
        none   (0),

pktcMtaDevResetNow OBJECT-TYPE
  SYNTAX   TruthValue
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
     " This object controls the MTA software reset.
       Reading this object always returns 'false'. Setting this
       object to 'true' causes the device to reset immediately
       and the following actions to occur:
         1. All connections (if present) are flushed locally.
         2. All current actions such as ringing immediately
            terminate.
         3. Requests for signaling notifications, such as
            notification based on digit map recognition, are

flushed.

4. All endpoints are disabled.

5. The provisioning flow is started at step MTA-1.

If a value is written into an instance of pktcMtaDevResetNow, the agent MUST NOT retain the supplied value across MTA re-initializations or reboots."

REFERENCE

" PacketCable MTA Device Provisioning Specification."

::= { pktcMtaDevBase 1 }

pktcMtaDevSerialNumber OBJECT-TYPE

SYNTAX   SnmpAdminString

MAX-ACCESS read-only

STATUS   current

DESCRIPTION

" This object specifies the manufacturer's serial number of this MTA. The value of this object MUST be identical to the value specified in DHCP option 43, sub-option 4. The list of sub-options for DHCP option 43 are defined in the PacketCable MTA Device Provisioning Specification."

REFERENCE

" PacketCable MTA Device Provisioning Specification."

::= { pktcMtaDevBase 2 }

pktcMtaDevSwCurrentVers OBJECT-TYPE

SYNTAX   SnmpAdminString

MAX-ACCESS read-only

STATUS   current

DESCRIPTION

" This object identifies the software version currently operating in the MTA.
The MTA MUST return a string descriptive of the current software load. This object should use the syntax defined by the individual vendor to identify the software version. The data presented in this object MUST be identical to the software version information contained in the 'sysDescr' MIB object of the MTA. The value of this object MUST be identical to the value specified in DHCP option 43, sub-option 6. The list of sub-options for DHCP option 43 are defined in the PacketCable MTA Device Provisioning Specification."

REFERENCE

" PacketCable MTA Device Provisioning Specification."

```
    ::= { pktcMtaDevBase 3 }

pktcMtaDevFQDN     OBJECT-TYPE
  SYNTAX     SnmpAdminString
  MAX-ACCESS  read-only
  STATUS     current
  DESCRIPTION
    " This object contains the Fully Qualified Domain Name for
      this MTA.  The MTA FQDN is used to uniquely identify the
      device to the PacketCable back office elements."

    ::= { pktcMtaDevBase 4 }

pktcMtaDevEndPntCount     OBJECT-TYPE
  SYNTAX     Unsigned32 (1..255)
  MAX-ACCESS  read-only
  STATUS     current
  DESCRIPTION
    " This object contains the number of physical endpoints for
      this MTA."
    ::= { pktcMtaDevBase 5 }

pktcMtaDevEnabled     OBJECT-TYPE
  SYNTAX     TruthValue
  MAX-ACCESS  read-write
  STATUS     current
  DESCRIPTION
    " This object contains the MTA Admin Status of this device.
      If this object is set to 'true', the MTA is
      administratively enabled, and the MTA MUST be able to
      interact with the PacketCable entities, such as CMS,
      Provisioning Server, KDC, and other MTAs and MGs on all
      PacketCable interfaces.
      If this object is set to 'false', the MTA is
      administratively disabled, and the MTA MUST perform the
      following actions for all endpoints:
         - Shut down all media sessions, if present.
         - Shut down Network Control Signaling (NCS)
         signaling by following the Restart in
         Progress procedures in the PacketCable NCS
         specification.
      The MTA must execute all actions required to
      enable or disable the telephony services for all
      endpoints immediately upon receipt of an SNMP SET
      operation.
```

Additionally, the MTA MUST maintain the SNMP Interface
for management and also the SNMP Key management interface.
Also, the MTA MUST NOT continue Kerberized key management
with CMSes until this object is set to 'true'.
Note: MTAs MUST renew the CMS Kerberos tickets according
to the PacketCable Security or IPCablecom Specification.
If a value is written into an instance of
pktcMtaDevEnabled, the agent MUST NOT retain the supplied
value across MTA re-initializations or reboots."

        failureInternalError   (6),
        failureOtherReason   (7)
  }
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION

" This object indicates the completion state of the MTA device provisioning process.

pass:
If the configuration file could be parsed successfully and the MTA is able to reflect the same in its MIB, the MTA MUST return the value 'pass'.

inProgress:
If the MTA is in the process of being provisioned, the MTA MUST return the value 'inProgress'.

failConfigFileError:
If the configuration file was in error due to incorrect values in the mandatory parameters, the MTA MUST reject the configuration file, and the MTA MUST return the value

'failConfigFileError'.

passWithWarnings:
If the configuration file had proper values for all the mandatory parameters but has errors in any of the optional parameters (this includes any vendor-specific Object Identifiers (OIDs) that are incorrect or not known to the MTA), the MTA MUST return the value 'passWithWarnings'.

passWithIncompleteParsing:
If the configuration file is valid but the MTA cannot reflect the same in its configuration (for example, too many entries caused memory exhaustion), it must accept the CMS configuration entries related, and the MTA MUST return the value 'passWithIncompleteParsing'.

failureInternalError:
If the configuration file cannot be parsed due to an Internal error, the MTA MUST return the value 'failureInternalError'.

failureOtherReason:
If the MTA cannot accept the configuration file for any other reason than the ones stated above, the MTA MUST return the value 'failureOtherReason'.

When a final SNMP INFORM is sent as part of Step 25 of the MTA Provisioning process, this parameter is also included

in the final INFORM message."

    SYNTAX SEQUENCE OF PktcMtaDevErrorOidsEntry
    MAX-ACCESS not-accessible
    STATUS current
    DESCRIPTION
        " This table contains the list of configuration errors or
        warnings the MTA encountered when parsing the
        configuration file it received from the Provisioning
        Server.
        For each error, an entry is created in this table,
        containing the configuration parameters the MTA rejected
        and the associated reason (e.g., wrong or unknown OID,
        inappropriate object values). If the MTA
        did not report a provisioning state of 'pass(1)' in
        the pktcMtaDevProvisioningState object, this table MUST be
        populated for each error or warning instance. Even if
        different parameters share the same error type (e.g., all
        realm name configuration parameters are invalid), all
        observed errors or warnings must be reported as
        different instances. Errors are placed into the table in
        no particular order. The table MUST be cleared each time

        the MTA reboots."
    REFERENCE
        " PacketCable MTA Device Provisioning Specification."
    ::= {pktcMtaDevBase 12 }

pktcMtaDevErrorOidsEntry OBJECT-TYPE
    SYNTAX PktcMtaDevErrorOidsEntry
    MAX-ACCESS not-accessible
    STATUS current
    DESCRIPTION
        " This entry contains the necessary information the MTA MUST
        attempt to provide in case of configuration file errors or
        warnings."
    INDEX { pktcMtaDevErrorOidIndex }
        ::= {pktcMtaDevErrorOidsTable 1}

PktcMtaDevErrorOidsEntry ::= SEQUENCE {
    pktcMtaDevErrorOidIndex Unsigned32,
    pktcMtaDevErrorOid   SnmpAdminString,
    pktcMtaDevErrorValue   SnmpAdminString,
    pktcMtaDevErrorReason   SnmpAdminString
    }

pktcMtaDevErrorOidIndex OBJECT-TYPE
  SYNTAX   Unsigned32 (1..1024)
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
     " This object is the index of the MTA configuration error
       table. It is an integer value that starts at value '1'
       and is incremented for each encountered configuration
       file error or warning.

       The maximum number of errors or warnings that can be
       recorded in the pktcMtaDevErrorOidsTable is set to 1024 as
       a configuration file is usually validated by operators
       before deployment. Given the possible number of
       configuration parameter assignments in the MTA
       configuration file, 1024 is perceived as a sufficient
       limit even with future extensions.

       If the number of the errors in the configuration file
       exceeds 1024, all errors beyond the 1024th one MUST
       be ignored and not be reflected in the
       pktcMtaDevErrorOidsTable."

  ::= {pktcMtaDevErrorOidsEntry 1}

pktcMtaDevErrorOid OBJECT-TYPE
  SYNTAX   SnmpAdminString
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
     " This object contains a human readable representation
       (character string) of the OID corresponding to the
       configuration file parameter that caused the particular
       error.
       For example, if the value of the pktcMtaDevEnabled object
       in the configuration file caused an error, then this
       object instance will contain the human-readable string of
       '1.3.6.1.2.1.140.1.1.6.0'.
       If the MTA generated an error because it was not able
       to recognize a particular OID, then this object
       instance would contain an empty value (zero-length
       string).
       For example, if the value of an OID in the configuration
       file was interpreted by the MTA as being 1.2.3.4.5, and if
       the MTA was not able to recognize this OID as a valid one,

this object instance will contain a zero-length string.

If the number of errors in the configuration file exceeds
1024, then for all subsequent errors, the
pktcMtaDevErrorOid of the table's 1024th entry MUST
contain a human-readable representation of the
pktcMtaDevErrorsTooManyErrors object; i.e., the string
'1.3.6.1.2.1.140.1.1.4.1.0'.
Note that the syntax of this object is SnmpAdminString
instead of OBJECT IDENTIFIER because the object value may
not be a valid OID due to human or configuration tool
encoding errors."

 ::= {pktcMtaDevErrorOidsEntry 2}

pktcMtaDevErrorValue OBJECT-TYPE
  SYNTAX   SnmpAdminString
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
     " This object contains the value of the OID corresponding to
       the configuration file parameter that caused the error.
       If the MTA cannot recognize the OID of the
       configuration parameter causing the error, then this
       object instance contains the OID itself as interpreted
       by the MTA in human-readable representation.
       If the MTA can recognize the OID but generate an error due
       to a wrong value of the parameter, then the object

       instance contains the erroneous value of the parameter as
       read from the configuration file.
       In both cases, the value of this object must be
       represented in human-readable form as a character string.
       For example, if the value of the pktcMtaDevEnabled object
       in the configuration file was 3 (invalid value), then the
       pktcMtaDevErrorValue object instance will contain the
       human-readable (string) representation of value '3'.
       Similarly, if the OID in the configuration file has been
       interpreted by the MTA as being 1.2.3.4.5 and the MTA
       cannot recognize this OID as a valid one, then this
       pktcMtaDevErrorValue object instance will contain human
       readable (string) representation of value '1.2.3.4.5'.

       If the number of errors in the configuration file exceeds
       1024, then for all subsequent errors, the
       pktcMtaDevErrorValue of the table's 1024th entry MUST

contain a human-readable representation of the
pktcMtaDevErrorsTooManyErrors object; i.e., the string
'1.3.6.1.2.1.140.1.1.4.1.0'."

  ::= {pktcMtaDevErrorOidsEntry 3}

pktcMtaDevErrorReason OBJECT-TYPE
  SYNTAX   SnmpAdminString
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    " This object indicates the reason for the error or warning,
      as per the MTA's interpretation, in human-readable form.
      For example:
      'VALUE NOT IN RANGE', 'VALUE DOES NOT MATCH TYPE',
      'UNSUPPORTED VALUE', 'LAST 4 BITS MUST BE SET TO ZERO',
      'OUT OF MEMORY - CANNOT STORE'.
      This object may also contain vendor specific errors for
      private vendor OIDs and any proprietary error codes or
      messages that can help diagnose configuration errors.

      If the number of errors in the configuration file exceeds
      1024, then for all subsequent errors, the
      pktcMtaDevErrorReason of the table's 1024th entry MUST
      contain a human-readable string indicating the reason
      for an error; for example,
      'Too many errors in the configuration file'."

In the case of an S-MTA, this object must be
populated with a value other than 0.0.0.0 as obtained
from DHCP option 4. The protocol by which the time of day
MUST be retrieved is defined in RFC 868.
In the case of an E-MTA, this object must contain a
value of 0.0.0.0 if the address type is 'ipv4(1)' since
an E-MTA does not use the Time Protocol for time
synchronization (an E-MTA uses the time retrieved by the
DOCSIS cable modem).
The behavior of this object when the value of
pktcMtaDevTimeServerAddressType is other than 'ipv4(1)'
is not presently specified, but it may be specified in
future versions of this MIB module.
If a value is written into an instance of
pktcMtaDevTimeServer, the agent MUST NOT retain the
supplied value across MTA re-initializations or reboots."
  REFERENCE

    RFC 2131, Dynamic Host Configuration Protocol;
    RFC 2132, DHCP Options and BOOTP Vendor Extensions."
  ::= { pktcMtaDevServer 8}

pktcMtaDevConfigFile OBJECT-TYPE
  SYNTAX   SnmpAdminString
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
    " This object specifies the MTA device configuration file
    information, including the access method, the server name,
    and the configuration file name. The value of this object
    is the Uniform Resource Locator (URL) of the configuration
    file for TFTP or HTTP download.
    If this object value is a TFTP URL, it must be formatted
    as defined in RFC 3617.
    If this object value is an HTTP URL, it must be formatted
    as defined in RFC 2616.
    If the MTA SNMP Enrollment mechanism is used, then the MTA
    must download the file provided by the Provisioning Server

    during provisioning via an SNMP SET on this object.
    If the MTA SNMP Enrollment mechanism is not used, this

object MUST contain the URL value corresponding to the
'siaddr' and 'file' fields received in the DHCP ACK to
locate the configuration file: the 'siaddr' and 'file'
fields represent the host and file of the TFTP URL,
respectively. In this case, the MTA MUST return an
'inconsistentValue' error in response to SNMP SET
operations.
The MTA MUST return a zero-length string if the server
address (host part of the URL) is unknown.
If a value is written into an instance of
pktcMtaDevConfigFile, the agent MUST NOT retain the
supplied value across MTA re-initializations or reboots."

pktcMtaDevSnmpEntity OBJECT-TYPE
SYNTAX   SnmpAdminString
MAX-ACCESS read-only
STATUS   current
DESCRIPTION
" This object contains the FQDN of the SNMP entity of the
Provisioning Server. When the MTA SNMP Enrollment
Mechanism is used, this object represents the server that
the MTA communicates with, that it receives the
configuration file URL from, and that it sends the
enrollment notification to. The SNMP entity is also the
destination entity for all the provisioning
notifications. It may be used for post-provisioning
SNMP operations. During the provisioning phase, this
SNMP entity FQDN is supplied to the MTA via DHCP option
122, sub-option 3, as defined in RFC 3495. The MTA must
resolve the FQDN value before its very first network
interaction with the SNMP entity during the provisioning
phase."

REFERENCE

RFC 3495, DHCP Option for CableLabs Client Configuration."
::= { pktcMtaDevServer 10 }

pktcMtaDevProvConfigHash OBJECT-TYPE
SYNTAX   OCTET STRING (SIZE(20))
MAX-ACCESS read-write
STATUS   current

DESCRIPTION
    " This object contains the hash value of the contents of the
    configuration file.
    The authentication algorithm is Secure Hashing Algorithm
    1 (SHA-1), and the length is 160 bits. The hash
    calculation MUST follow the requirements defined in the
    PacketCable Security Specification. When the MTA SNMP
    Enrollment mechanism is used, this hash value is
    calculated and sent to the MTA prior to sending the
    config file. This object value is then provided by the
    Provisioning server via an SNMP SET operation.
    When the MTA SNMP Enrollment mechanism is not in use, the
    hash value is provided in the configuration file itself,
    and it is also calculated by the MTA. This object value
    MUST represent the hash value calculated by the MTA.
    When the MTA SNMP Enrollment mechanism is not in use, the
    MTA must reject all SNMP SET operations on this object and
    return an 'inconsistentValue' error.
    If a value is written into an instance of
    pktcMtaDevProvConfigHash, the agent MUST NOT retain the
    supplied value across MTA re-initializations or reboots."

pktcMtaDevProvSolicitedKeyTimeout OBJECT-TYPE
SYNTAX   Unsigned32 (0..180)
UNITS   "seconds"
MAX-ACCESS read-write
STATUS   current
DESCRIPTION
" This object defines a Kerberos Key Management timer on the
MTA. It is the time period during which the MTA saves the
nonce and Server Kerberos Principal Identifier to match an
AP Request and its associated AP Reply response from the
Provisioning Server.
After the timeout has been exceeded, the client discards
this (nonce, Server Kerberos Principal Identifier) pair,
after which it will no longer accept a matching AP Reply.
This timer only applies when the Provisioning Server
initiated key management for SNMPv3 (with a
Wake Up message).
If this object is set to a zero value, the MTA MUST return
an 'inconsistentValue' in response to SNMP SET operations.

This object should not be used in non-secure provisioning
modes. In non-secure provisioning modes, the MTA MUST
return an 'inconsistentValue' in response to SNMP SET
operations, and the MTA MUST return a zero value in

response to SNMP GET operations.
If a value is written into an instance of
pktcMtaDevProvSolicitedKeyTimeout, the agent MUST NOT
retain the supplied value across MTA re-initializations
or reboots."
  DEFVAL { 3 }
  ::= { pktcMtaDevServer 14 }

--===
--
-- Unsolicited key updates are retransmitted according to an
-- exponential back-off mechanism using two timers and a maximum
-- retry counter for AS replies.
-- The initial retransmission timer value is the nominal timer
-- value (pktcMtaDevProvUnsolicitedKeyNomTimeout). The
-- retransmissions occur with an exponentially increasing interval
-- that caps at the maximum timeout value
-- (pktcMtaDevProvUnsolicitedKeyMaxTimeout).
-- Retransmissions stop when the maximum retry counter is reached
-- (pktcMtaDevProvUnsolicitedKeyMaxRetries).
-- For example, with values of 3 seconds for the nominal
-- timer, 100 seconds for the maximum timeout, and 8 retries max,
-- and with an exponential value of 2, this results in
-- retransmission intervals will be 3 s, 6 s, 12 s, 24 s, 48 s,
-- 96 s, 100 s, and 100 s;
-- retransmissions then stop because the maximum number of
-- retries (8) has been reached.
--
--===
--
-- Timeouts for unsolicited key management updates are only
-- pertinent before the first SNMPv3 message is sent between the
-- MTA and the Provisioning Server and before the configuration
-- file is loaded.
--

--===
--
-- Informative Procedures for Setting up Security Associations
--

-- A Security Association may be set up either via configuration or
-- via NCS signaling.
--
-- I. Security association setup via configuration.
--
-- The realm must be configured first. Associated with the realm
-- is a KDC. The realm table (pktcMtaDevRealmTable) indicates
-- information about the realm (e.g., name, organization name) and
-- parameters associated with KDC communications (e.g., grace
-- periods, AS Request/AS Reply adaptive back-off parameters).
--
-- Once the realm is established, one or more CMS(es) may be
-- defined in the realm. Associated with each CMS
-- entry in the pktcMtaDevCmsTable is an explicit reference
-- to a Realm via the realm name (pktcMtaDevCmsKerbRealmName),
-- the FQDN of the CMS, and parameters associated with IPSec
-- key management with the CMS (e.g., clock skew, AP Request/
-- AP Reply adaptive back-off parameters).
--
-- II. Security association setup via NCS signaling.
--
-- The procedure of establishing the Security Associations
-- for NCS signaling is described in the PacketCable Security
-- specification.
-- It involves the analysis of the pktcNcsEndPntConfigTable row
-- for the corresponding endpoint number and the correlation of

--   the CMS FQDN from this row with the CMS Table and

--   consequently, with the Realm Table. Both of these tables

--   are defined below. The pktcNcsEndPntConfigTable is defined in

--   the IP over Cable Data Network (IPCDN)

--   NCS Signaling MIB [NCSSIGMIB].

--

--   III. When the MTA receives wake-up or re-key messages from a

--   CMS, it performs key management based on the corresponding

--   entry in the CMS table. If the matching CMS entry does not

--   exist, it must ignore the wake-up or re-key messages.

--

--==

--==

--

--   pktcMtaDevRealmTable

--

--   The pktcMtaDevRealmTable shows the KDC realms. The table is

--   indexed with pktcMtaDevRealmIndex. The Realm Table contains the

--   pktcMtaDevRealmName in conjunction with any server that needs

--   a Security Association with the MTA. Uppercase must be used

--   to compare the pktcMtaDevRealmName content.

--

--==

pktcMtaDevRealmAvailSlot   OBJECT-TYPE
   SYNTAX   Unsigned32 (0..64)
   MAX-ACCESS read-only
   STATUS   current
   DESCRIPTION
      " This object contains the index number of the first
        available entry in the realm table (pktcMtaDevRealmTable).
        If all the entries in the realm table have been assigned,
        this object contains the value of zero.
        A management station should create new entries in the
        realm table, using the following procedure:

        First, issue a management protocol retrieval operation
        to determine the value of the first available index in the
        realm table (pktcMtaDevRealmAvailSlot).

        Second, issue a management protocol SET operation
        to create an instance of the pktcMtaDevRealmStatus
        object by setting its value to 'createAndWait(5)'.

        Third, if the SET operation succeeded, continue

modifying the object instances corresponding to the newly
created conceptual row, without fear of collision with
other management stations. When all necessary conceptual
columns of the row are properly populated (via SET
operations or default values), the management station may
SET the pktcMtaDevRealmStatus object to 'active(1)'."

        " This object specifies the initial timeout value
        for the AS-REQ/AS-REP exponential back-off and retry
        mechanism. If the DHCP option code 122, sub-option 4, is
        provided to the MTA, it overwrites this value.
        This value should account for the average roundtrip
        time between the MTA and the KDC, as well as the
        processing delay on the KDC.

        Unsolicited key updates are retransmitted according to an
        exponential back-off mechanism using two timers and a
        maximum retry counter for AS replies.
        The initial retransmission timer value is the nominal
        timer value (pktcMtaDevRealmUnsolicitedKeyNomTimeout). The
        retransmissions occur with an exponentially increasing
        interval that caps at the maximum timeout value
        (pktcMtaDevRealmUnsolicitedKeyMaxTimeout).
        Retransmissions stop when the maximum retry counter is
        reached (pktcMatDevRealmUnsolicitedMaxRetries).

For example, with values of 3 seconds for the nominal
timer, 20 seconds for the maximum timeout, and 5 retries
max, in retransmission intervals will be 3 s, 6 s,
12 s, 20 s, and 20 s; retransmissions then stop because
the maximum number of retries has been reached."

  STATUS   current
  DESCRIPTION

    " This object contains the index number of the first
      available entry in the CMS table (pktcMtaDevCmsTable).
      If all the entries in the CMS table have been assigned,
      this object contains the value of zero.
      A management station should create new entries in the

CMS table, using the following procedure:

First, issue a management protocol retrieval operation
to determine the value of the first available index in the
CMS table (pktcMtaDevCmsAvailSlot).

Second, issue a management protocol SET operation
to create an instance of the pktcMtaDevCmsStatus
object by setting its value to 'createAndWait(5)'.

Third, if the SET operation succeeded, continue
modifying the object instances corresponding to the newly
created conceptual row, without fear of collision with
other management stations. When all necessary conceptual
columns of the row are properly populated (via SET
operations or default values), the management station may
SET the pktcMtaDevCmsStatus object to 'active(1)'."

```

invalidateAllCmsOnReboot (1)
            }
    MAX-ACCESS   read-write
    STATUS   current
    DESCRIPTION
        " This object defines a Kerberos Ticket Control Mask that
          instructs the MTA to invalidate the specific Application

          Server Kerberos ticket(s) that are stored locally in the
          MTA NVRAM (non-volatile or persistent memory).
          If the MTA does not store Kerberos tickets in NVRAM, it
          MUST ignore setting of this object and MUST report a BITS
          value of zero when the object is read.
          If the MTA supports Kerberos tickets storage in NVRAM, the
          object value is encoded as follows:
          - Setting the invalidateProvOnReboot bit (bit 0) to 1
            means that the MTA MUST invalidate the Kerberos
            Application Ticket(s) for the Provisioning Application
            at the next MTA reboot if secure SNMP provisioning mode
            is used. In non-secure provisioning modes, the MTA MUST
            return an 'inconsistentValue' in response to SNMP SET
            operations with a bit 0 set to 1.
          - Setting the invalidateAllCmsOnReboot bit (bit 1) to 1
            means that the MTA MUST invalidate the Kerberos
            Application Ticket(s) for all CMSes currently assigned
            to the MTA endpoints.
          If a value is written into an instance of
          pktcMtaDevResetKrbTickets, the agent MUST retain the
          supplied value across an MTA re-initialization or

  the length of pktcMtaDevProvConfigKey is 64 bits, as
  defined in the PacketCable Security specification.
  Other encryption types may be defined in future

versions of this MIB module."

OBJECT pktcMtaDevRealmOrgName
    SYNTAX LongUtf8String (SIZE (1..384))
    DESCRIPTION
        "The Organization Name field in X.509 certificates
    can contain up to 64 UTF-8 encoded characters,
    as defined in RFCs 3280 and 4630. Therefore, compliant
    devices are only required to support Organization
    Name values of up to 64 UTF-8 encoded characters.
    Given that RFCs 3280 and 4630 define the UTF-8 encoding,
    compliant devices must support a maximum size of 384
    octets for pktcMtaDevRealmOrgName. The calculation of
    384 octets comes from the RFC 3629 UTF-8 encoding
    definition whereby the UTF-8 encoded characters
    are encoded as sequences of 1 to 6 octets,
    assuming that code points as high as 0x7fffffff
    might be used. Subsequent versions of Unicode and ISO
    10646 have limited the upper bound to 0x10ffff.

    Consequently, the current version of UTF-8, defined in
    RFC 3629, does not require more than four octets to
    encode a valid code point."

OBJECT   pktcMtaDevProvConfigEncryptAlg
    SYNTAX PktcMtaDevProvEncryptAlg

DESCRIPTION
    "An implementation is only required to support
values of none(0) and des64Cbcmode(1).
An IV of zero is used to encrypt in des64Cbcmode, and
the length of pktcMtaDevProvConfigKey is 64 bits, as
defined in the PacketCable Security specification.
Other encryption types may be defined in future
versions of this MIB module."

    OBJECT pktcMtaDevRealmOrgName
        SYNTAX LongUtf8String (SIZE (1..384))
        DESCRIPTION
            "The Organization Name field in X.509 certificates
can contain up to 64 UTF-8 encoded characters, as
defined in RFCs 3280 and 4630. Therefore, compliant
devices are only required to support Organization
Name values of up to 64 UTF-8 encoded characters.
Given that RFCs 3280 and 4630 define the UTF-8 encoding,
compliant devices must support a maximum size of 384
octets for pktcMtaDevRealmOrgName. The calculation of
384 octets comes from the RFC 3629 UTF-8 encoding
definition whereby the UTF-8 encoded characters
are encoded as sequences of 1 to 6 octets,
assuming that code points as high as 0x7fffffff
might be used. Subsequent versions of Unicode and ISO
10646 have limited the upper bound to 0x10ffff.
Consequently, the current version of UTF-8, defined in
RFC 3629 does not require more than four octets to
encode a valid code point."

  DESCRIPTION
    "The MIB module for managing the new Ethernet OAM features
    introduced by the Ethernet in the First Mile taskforce (IEEE

802.3ah). The functionality presented here is based on IEEE
802.3ah [802.3ah], released in October, 2004. [802.3ah] was
prepared as an addendum to the standing version of IEEE 802.3
[802.3-2002]. Since then, [802.3ah] has been
merged into the base IEEE 802.3 specification in [802.3-2005].

In particular, this MIB focuses on the new OAM functions
introduced in Clause 57 of [802.3ah]. The OAM functionality
of Clause 57 is controlled by new management attributes
introduced in Clause 30 of [802.3ah]. The OAM functions are
not specific to any particular Ethernet physical layer, and
can be generically applied to any Ethernet interface of
[802.3-2002].

An Ethernet OAM protocol data unit is a valid Ethernet frame
with a destination MAC address equal to the reserved MAC
address for Slow Protocols (See 43B of [802.3ah]), a
lengthOrType field equal to the reserved type for Slow
Protocols, and a Slow Protocols subtype equal to that of the
subtype reserved for Ethernet OAM. OAMPDU is used throughout
this document as an abbreviation for Ethernet OAM protocol
data unit.

The following reference is used throughout this MIB module:

  [802.3ah] refers to:
   IEEE Std 802.3ah-2004: 'Draft amendment to -
   Information technology - Telecommunications and
   information exchange between systems - Local and
   metropolitan area networks - Specific requirements - Part
   3: Carrier sense multiple access with collision detection
   (CSMA/CD) access method and physical layer specifications
   - Media Access Control Parameters, Physical Layers and
   Management Parameters for subscriber access networks',
   October 2004.

  [802.3-2002] refers to:
   IEEE Std 802.3-2002:
   'Information technology - Telecommunications and
   information exchange between systems - Local and
   metropolitan area networks - Specific requirements - Part
   3: Carrier sense multiple access with collision detection
   (CSMA/CD) access method and physical layer specifications
   - Media Access Control Parameters, Physical Layers and
   Management Parameters for subscriber access networks',

March 2002.

dot3OamAdminState OBJECT-TYPE
 SYNTAX   INTEGER {
         enabled(1),
         disabled(2)

}
MAX-ACCESS read-write
STATUS   current
DESCRIPTION
  "This object is used to provision the default administrative
  OAM mode for this interface. This object represents the
  desired state of OAM for this interface.

  The dot3OamAdminState always starts in the disabled(2) state
  until an explicit management action or configuration
  information retained by the system causes a transition to the
  enabled(1) state. When enabled(1), Ethernet OAM will attempt
  to operate over this interface.
  "
 REFERENCE   "[802.3ah], 30.3.6.1.2"
 ::= { dot3OamEntry 1 }

dot3OamOperStatus OBJECT-TYPE
 SYNTAX   INTEGER {
          disabled(1),
          linkFault(2),
          passiveWait(3),
          activeSendLocal(4),
          sendLocalAndRemote(5),
          sendLocalAndRemoteOk(6),
          oamPeeringLocallyRejected(7),
          oamPeeringRemotelyRejected(8),
          operational(9),
          nonOperHalfDuplex(10)
          }
 MAX-ACCESS read-only
 STATUS   current
 DESCRIPTION
  "At initialization and failure conditions, two OAM entities on

  the same full-duplex Ethernet link begin a discovery phase to
  determine what OAM capabilities may be used on that link. The
  progress of this initialization is controlled by the OA
  sublayer.

  This value is always disabled(1) if OAM is disabled on this
  interface via the dot3OamAdminState.

  If the link has detected a fault and is transmitting OAMPDUs
  with a link fault indication, the value is linkFault(2).
  Also, if the interface is not operational (ifOperStatus is

not up(1)), linkFault(2) is returned. Note that the object ifOperStatus may not be up(1) as a result of link failure or administrative action (ifAdminState being down(2) or testing(3)).

The passiveWait(3) state is returned only by OAM entities in passive mode (dot3OamMode) and reflects the state in which the OAM entity is waiting to see if the peer device is OA capable. The activeSendLocal(4) value is used by active mode devices (dot3OamMode) and reflects the OAM entity actively trying to discover whether the peer has OAM capability but has not yet made that determination.

The state sendLocalAndRemote(5) reflects that the local OA entity has discovered the peer but has not yet accepted or rejected the configuration of the peer. The local device can, for whatever reason, decide that the peer device is unacceptable and decline OAM peering. If the local OAM entity rejects the peer OAM entity, the state becomes oamPeeringLocallyRejected(7). If the OAM peering is allowed by the local device, the state moves to sendLocalAndRemoteOk(6). Note that both the sendLocalAndRemote(5) and oamPeeringLocallyRejected(7) states fall within the state SEND_LOCAL_REMOTE of the Discovery state diagram [802.3ah, Figure 57-5], with the difference being whether the local OAM client has actively rejected the peering or has just not indicated any decision yet. Whether a peering decision has been made is indicated via the local flags field in the OAMPDU (reflected in the aOAMLocalFlagsField of 30.3.6.1.10).

If the remote OAM entity rejects the peering, the state becomes oamPeeringRemotelyRejected(8). Note that both the sendLocalAndRemoteOk(6) and oamPeeringRemotelyRejected(8) states fall within the state SEND_LOCAL_REMOTE_OK of the Discovery state diagram [802.3ah, Figure 57-5], with the difference being whether the remote OAM client has rejected

the peering or has just not yet decided. This is indicated via the remote flags field in the OAMPDU (reflected in the aOAMRemoteFlagsField of 30.3.6.1.11).

When the local OAM entity learns that both it and the remote OAM entity have accepted the peering, the state moves to operational(9) corresponding to the SEND_ANY state of the Discovery state diagram [802.3ah, Figure 57-5].

Since Ethernet OAM functions are not designed to work
completely over half-duplex interfaces, the value
nonOperHalfDuplex(10) is returned whenever Ethernet OAM is
enabled (dot3OamAdminState is enabled(1)), but the interface
is in half-duplex operation.
"
REFERENCE   "[802.3ah], 30.3.6.1.4, 30.3.6.1.10, 30.3.6.1.11"
::= { dot3OamEntry 2 }

dot3OamMode OBJECT-TYPE
 SYNTAX   INTEGER {
        passive(1),
        active(2)
        }
 MAX-ACCESS read-write
 STATUS   current
 DESCRIPTION
  "This object configures the mode of OAM operation for this
  Ethernet-like interface. OAM on Ethernet interfaces may be in
  'active' mode or 'passive' mode. These two modes differ in
  that active mode provides additional capabilities to initiate
  monitoring activities with the remote OAM peer entity, while
  passive mode generally waits for the peer to initiate OA
  actions with it. As an example, an active OAM entity can put
  the remote OAM entity in a loopback state, where a passive OA
  entity cannot.

  The default value of dot3OamMode is dependent on the type of
  system on which this Ethernet-like interface resides. The
  default value should be 'active(2)' unless it is known that
  this system should take on a subservient role to the other
  device connected over this interface.

  Changing this value results in incrementing the configuration
  revision field of locally generated OAMPDUs (30.3.6.1.12) and
  potentially re-doing the OAM discovery process if the
  dot3OamOperStatus was already operational(9).

 STATUS   current
 DESCRIPTION
   "The configuration revision of the OAM entity as reflected in
   the latest OAMPDU sent by the OAM entity. The config revision
   is used by OAM entities to indicate that configuration changes
   have occurred, which might require the peer OAM entity to
   re-evaluate whether OAM peering is allowed.
   "
 REFERENCE   "[802.3ah], 30.3.6.1.12"
 ::= { dot3OamEntry 5 }

dot3OamFunctionsSupported OBJECT-TYPE
 SYNTAX   BITS {
         unidirectionalSupport (0),
         loopbackSupport(1),
         eventSupport(2),
         variableSupport(3)
       }
 MAX-ACCESS read-only
 STATUS   current
 DESCRIPTION
   "The OAM functions supported on this Ethernet-like interface.
   OAM consists of separate functional sets beyond the basic
   discovery process that is always required. These functional
   groups can be supported independently by any implementation.
   These values are communicated to the peer via the local
   configuration field of Information OAMPDUs.

   Setting 'unidirectionalSupport(0)' indicates that the OA

   entity supports the transmission of OAMPDUs on links that are
   operating in unidirectional mode (traffic flowing in one

direction only). Setting 'loopbackSupport(1)' indicates that
the OAM entity can initiate and respond to loopback commands.
Setting 'eventSupport(2)' indicates that the OAM entity can
send and receive Event Notification OAMPDUs. Setting
'variableSupport(3)' indicates that the OAM entity can send
and receive Variable Request and Response OAMPDUs.

 DESCRIPTION
   "The configuration revision of the OAM peer as reflected in
   the latest OAMPDU. This attribute is changed by the peer
   whenever it has a local configuration change for Ethernet OA
   on this interface. The configuration revision can be
   determined from the Revision field of the Local Information
   TLV of the most recently received Information OAMPDU with
   a Local Information TLV. A value of zero is returned if
   no Local Information TLV has been received.
 "
 REFERENCE   "[802.3ah], 30.3.6.1.13."
 ::= { dot3OamPeerEntry 6 }

dot3OamPeerFunctionsSupported OBJECT-TYPE
 SYNTAX   BITS {
          unidirectionalSupport (0),
          loopbackSupport(1),
          eventSupport(2),
          variableSupport(3)
         }
 MAX-ACCESS read-only
 STATUS   current
 DESCRIPTION
   "The OAM functions supported on this Ethernet-like interface.
   OAM consists of separate functionality sets above the basic
   discovery process. This value indicates the capabilities of
   the peer OAM entity with respect to these functions. This
   value is initialized so all bits are clear.

   If unidirectionalSupport(0) is set, then the peer OAM entity
   supports sending OAM frames on Ethernet interfaces when the
   receive path is known to be inoperable. If
   loopbackSupport(1) is set, then the peer OAM entity can send
   and receive OAM loopback commands. If eventSupport(2) is set,
   then the peer OAM entity can send and receive event OAMPDUs to
   signal various error conditions. If variableSupport(3) is
   set, then the peer OAM entity can send and receive variable

requests to monitor the attribute value as described in Clause
57 of [802.3ah].

The capabilities of the OAM peer can be determined from the
configuration field of the Local Information TLV of the most
recently received Information OAMPDU with a Local Information
TLV. All zeros are returned if no Local Information TLV has

yet been received.

dot3OamLoopbackTable OBJECT-TYPE
 SYNTAX   SEQUENCE OF Dot3OamLoopbackEntry
 MAX-ACCESS not-accessible
 STATUS   current
 DESCRIPTION
   "This table contains controls for the loopback state of the
   local link as well as indicates the status of the loopback
   function. There is one entry in this table for each entry in
   dot3OamTable that supports loopback functionality (where
   dot3OamFunctionsSupported includes the loopbackSupport bit
   set).

   Loopback can be used to place the remote OAM entity in a state
   where every received frame (except OAMPDUs) is echoed back
   over the same interface on which they were received. In this
   state, at the remote entity, 'normal' traffic is disabled as
   only the looped back frames are transmitted on the interface.
   Loopback is thus an intrusive operation that prohibits normal
   data flow and should be used accordingly.
   "
 ::= { dot3OamObjects 3 }

dot3OamLoopbackEntry OBJECT-TYPE
 SYNTAX   Dot3OamLoopbackEntry
 MAX-ACCESS not-accessible
 STATUS   current
 DESCRIPTION
   "An entry in the table, containing information on the loopback

status for a single Ethernet-like interface. Entries in the
table are automatically created whenever the local OAM entity
supports loopback capabilities. The loopback status on the
interface can be determined from the dot3OamLoopbackStatus
object.
"
  INDEX   { ifIndex }
  ::= { dot3OamLoopbackTable 1 }

Dot3OamLoopbackEntry ::=

  SEQUENCE {
    dot3OamLoopbackStatus   INTEGER,
    dot3OamLoopbackIgnoreRx   INTEGER
  }

dot3OamLoopbackStatus OBJECT-TYPE
  SYNTAX   INTEGER {
            -- all values, except where noted, can be read
            -- but cannot be written
            noLoopback (1),

            -- initiatingLoopback can be read or written
            initiatingLoopback (2),
            remoteLoopback (3),

            -- terminatingLoopback can be read or written
            terminatingLoopback (4),
            localLoopback (5),
            unknown (6)
          }
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
    "The loopback status of the OAM entity. This status is
    determined by a combination of the local parser and
    multiplexer states, the remote parser and multiplexer states,
    as well as by the actions of the local OAM client. When
    operating in normal mode with no loopback in progress, the
    status reads noLoopback(1).

    The values initiatingLoopback(2) and terminatingLoopback(4)
    can be read or written. The other values can only be read -
    they can never be written. Writing initiatingLoopback causes
    the local OAM entity to start the loopback process with its
    peer. This value can only be written when the status is

noLoopback(1). Writing the value initiatingLoopback(2) in any
other state has no effect. When in remoteLoopback(3), writing
terminatingLoopback(4) causes the local OAM entity to initiate
the termination of the loopback state. Writing
terminatingLoopack(4) in any other state has no effect.

If the OAM client initiates a loopback and has sent a
Loopback OAMPDU and is waiting for a response, where the local
parser and multiplexer states are DISCARD (see [802.3ah,
57.2.11.1]), the status is 'initiatingLoopback'. In this
case, the local OAM entity has yet to receive any
acknowledgment that the remote OAM entity has received its
loopback command request.

If the local OAM client knows that the remote OAM entity is in
loopback mode (via the remote state information as described
in [802.3ah, 57.2.11.1, 30.3.6.1.15]), the status is
remoteLoopback(3). If the local OAM client is in the process
of terminating the remote loopback [802.3ah, 57.2.11.3,
30.3.6.1.14] with its local multiplexer and parser states in
DISCARD, the status is terminatingLoopback(4). If the remote
OAM client has put the local OAM entity in loopback mode as
indicated by its local parser state, the status is
localLoopback(5).

The unknown(6) status indicates that the parser and
multiplexer combination is unexpected. This status may be
returned if the OAM loopback is in a transition state but
should not persist.

The values of this attribute correspond to the following
values of the local and remote parser and multiplexer states.

```
 value         LclPrsr  LclMux   RmtPrsr  RmtMux
 noLoopback      FWD      FWD      FWD      FWD

dot3OamFramesLostDueToOam OBJECT-TYPE
 SYNTAX   Counter32
 UNITS   "frames"
 MAX-ACCESS read-only
 STATUS   current
 DESCRIPTION
   "A count of the number of frames that were dropped by the OA
   multiplexer. Since the OAM multiplexer has multiple inputs
   and a single output, there may be cases where frames are
   dropped due to transmit resource contention. This counter is
   incremented whenever a frame is dropped by the OAM layer.
   Note that any Ethernet frame, not just OAMPDUs, may be dropped
   by the OAM layer. This can occur when an OAMPDU takes
   precedence over a 'normal' frame resulting in the 'normal'
   frame being dropped.

   When this counter is incremented, no other counters in this
   MIB are incremented.

   Discontinuities of this counter can occur at re-initialization
   of the management system, and at other times as indicated by
   the value of the ifCounterDiscontinuityTime.

dot3OamEventConfigTable OBJECT-TYPE
 SYNTAX   SEQUENCE OF Dot3OamEventConfigEntry
 MAX-ACCESS not-accessible
 STATUS   current
 DESCRIPTION
   "Ethernet OAM includes the ability to generate and receive
   Event Notification OAMPDUs to indicate various link problems.
   This table contains the mechanisms to enable Event

   Notifications and configure the thresholds to generate the
   standard Ethernet OAM events. There is one entry in the table
   for every entry in dot3OamTable that supports OAM events
   (where dot3OamFunctionsSupported includes the eventSupport
   bit set). The values in the table are maintained across

changes to dot3OamOperStatus.

The standard threshold crossing events are:
  - Errored Symbol Period Event. Generated when the number of
    symbol errors exceeds a threshold within a given window
    defined by a number of symbols (for example, 1,000 symbols
    out of 1,000,000 had errors).
  - Errored Frame Period Event. Generated when the number of
    frame errors exceeds a threshold within a given window
    defined by a number of frames (for example, 10 frames out
    of 1000 had errors).
  - Errored Frame Event. Generated when the number of frame
    errors exceeds a threshold within a given window defined
    by a period of time (for example, 10 frames in 1 second
    had errors).
  - Errored Frame Seconds Summary Event. Generated when the
    number of errored frame seconds exceeds a threshold within
    a given time period (for example, 10 errored frame seconds
    within the last 100 seconds). An errored frame second is
    defined as a 1 second interval which had >0 frame errors.
There are other events (dying gasp, critical events) that are
not threshold crossing events but which can be
enabled/disabled via this table.
"

dot3OamEventLogTable OBJECT-TYPE
    SYNTAX      SEQUENCE OF Dot3OamEventLogEntry
    MAX-ACCESS   not-accessible
    STATUS      current
    DESCRIPTION
      "This table records a history of the events that have occurred
       at the Ethernet OAM level.  These events can include locally
       detected events, which may result in locally generated
       OAMPDUs, and remotely detected events, which are detected by
       the OAM peer entity and signaled to the local entity via

       Ethernet OAM.  Ethernet OAM events can be signaled by Event
       Notification OAMPDUs or by the flags field in any OAMPDU.

       This table contains both threshold crossing events and
       non-threshold crossing events.  The parameters for the
       threshold window, threshold value, and actual value
       (dot3OamEventLogWindowXX, dot3OamEventLogThresholdXX,
       dot3OamEventLogValue) are only applicable to threshold
       crossing events, and are returned as all F's (2^32 - 1) for
       non-threshold crossing events.

       Entries in the table are automatically created when such
       events are detected.  The size of the table is implementation
       dependent.  When the table reaches its maximum size, older
       entries are automatically deleted to make room for newer
       entries.

   gets reflected here. "
 ::= { dot3OamEventLogEntry 3 }

dot3OamEventLogType   OBJECT-TYPE
 SYNTAX   Unsigned32

 MAX-ACCESS read-only
 STATUS   current
 DESCRIPTION
   "The type of event that generated this entry in the event log.
   When the OUI is the IEEE 802.3 OUI of 0x0180C2, the following
   event types are defined:
      erroredSymbolEvent(1),
      erroredFramePeriodEvent(2),
      erroredFrameEvent(3),
      erroredFrameSecondsEvent(4),
      linkFault(256),
      dyingGaspEvent(257),
      criticalLinkEvent(258)
   The first four are considered threshold crossing events, as
   they are generated when a metric exceeds a given value within
   a specified window. The other three are not threshold
   crossing events.

   When the OUI is not 71874 (0x0180C2 in hex), then some other
   organization has defined the event space. If event subtyping

is known to the implementation, it may be reflected here.
Otherwise, this value should return all F's (2^32 - 1).
