 STATUS   current
 DESCRIPTION
   "If the event represents a threshold crossing event, the two
   objects dot3OamEventWindowHi and dot3OamEventWindowLo, form
   an unsigned 64-bit integer yielding the window over which the
   value was measured for the threshold crossing event (for
   example, 5, when 11 occurrences happened in 5 seconds while
   the threshold was 10). The two objects are combined as:

   dot3OamEventLogWindow = ((2^32) * dot3OamEventLogWindowHi)
                 + dot3OamEventLogWindowLo

   Otherwise, this value is returned as all F's (2^32 - 1) and
   adds no useful information.

-- ****************************************************************

snaNodeAdminTable OBJECT-TYPE
     SYNTAX  SEQUENCE OF SnaNodeAdminEntry
     MAX-ACCESS  not-accessible
     STATUS  current
     DESCRIPTION
          "This table contains objects which describe the
          configuration parameters for an SNA Node.  Link
          specific configuration objects are contained in
          a separate MIB module (e.g., SNA DLC MIB)
          corresponding to the link type.
          The table snaNodeAdminLinkTable contains objects
          which identify the relationship between node instances
          and link instances.

          The entries (i.e., rows) in this table can be created
          by either an Agent or a Management Station.
          The Management Station can do this through setting
          the appropriate value in the snaNodeAdminRowStatus.

          The snaNodeAdminRowStatus object describes the
          status of an entry and is used to change the status
          of an entry.  The entry is deleted by an Agent based
          on the value of the snaNodeAdminRowStatus.

          The snaNodeAdminState object describes the desired
          operational state of a Node and is used to change the
          operational state of a Node.  For example, such
          information may be obtained from a configuration file.

          How an Agent or a Management Station obtains the
          initial value of each object at creation time is an
```

implementation specific issue.

For each entry in this table, there is a corresponding
entry in the snaNodeOperTable.
While the objects in this table describe the desired
or configured operational values of the SNA Node, the
actual runtime values are contained in
snaNodeOperTable."

        demand (3),
        onlyMS (4)
        }
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "The value indicates how the Node should be
        activated for the first time.
        The values have the following meanings:

        other (1) - may be used for proprietary methods
           not listed in this enumeration,
        startup (2) - at SNA services' initialization time
           (this is the default),
        demand (3) - only when LU is requested by application,
                or
        onlyMS (4) - by a Management Station only.

        A write operation to this object may immediately
        change the operational value reflected
        in snaNodeOperEnablingMethod depending
        on the Agent implementation. If the Agent
        implementation accepts immediate changes, then the
        behavior of the Node changes immediately and not only
        after the next system startup of the SNA services.
        An immediate change may only apply when the
        current value 'demand (3)' is changed to 'onlyMS (4)'
        and vice versa."
     ::= { snaNodeAdminEntry 7 }

snaNodeAdminLuTermDefault OBJECT-TYPE
    SYNTAX INTEGER {
        unbind (1),

termself (2),
        rshutd (3),
        poweroff(4)
        }
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "The value indicates the desired default method
        used to deactivate LUs for this Node
        For LU6.2s, 'unbind(1)' is the only valid value.

        unbind(1) -   terminate the LU-LU session by sending
            an SNA UNBIND request.
        termself(2) - terminate the LU-LU session by sending
            an SNA TERM-SELF (Terminate Self) request on
            the SSCP-LU session. The SSCP will inform the
            remote session LU partner to send an UNBIND
            request to terminate the session.
        rshutd(3) -   terminate the LU-LU session by sending
            an SNA RSHUTD (Request ShutDown) request to
            the remote session LU partner. The remote LU
            will then send an UNBIND request to terminate
            the session.
        poweroff(4) - terminate the LU-LU session by sending
            either an SNA LUSTAT (LU Status) request on
            the LU-LU session or an SNA NOTIFY request on
            the SSCP-LU session indicating that the LU has
            been powered off. Sending both is also
            acceptable. The result should be that the
            remote session LU partner will send an UNBIND
            to terminate the session.

        The default behavior indicated by the value of this
        object may be overridden for an LU instance. The
        override is performed by setting the snaLuAdminTerm
        object instance in the snaLuAdminTable to the desired
        value.

        A write operation to this object may immediately
        change the operational value reflected
        in snaNodeOperLuTermDefault depending
        on the Agent implementation."

    DESCRIPTION
        "The value indicates the desired method to be used
        by the Agent to stop a Node (i.e., change the Node's
        operational state to inactive(1)).

        The values have the following meaning:

other (1) - used for proprietary
methods not listed in this enumeration.
normal(2) - deactivate only when there is no more
activity on this Node (i.e., all data flows
have been completed and all sessions
have been terminated).
immed(3) - deactivate immediately regardless of
current activities on this Node. Wait for
deactivation responses (from remote Node)
before changing the Node state to inactive.
force(4) - deactivate immediately regardless of
current activities on this Node. Do not wait
for deactivation responses (from remote Node)
before changing the Node state to inactive.

A write operation to this object may immediately
change the operational value reflected
in snaNodeOperStopMethod depending
on the Agent implementation."
::= { snaNodeAdminEntry 11 }

snaNodeAdminState OBJECT-TYPE
SYNTAX INTEGER {
inactive (1),
active (2)
}
MAX-ACCESS read-create
STATUS current
DESCRIPTION
"The value indicates the desired operational
state of the SNA Node. This object is used
by the Management Station to
activate or deactivate the Node.

If the current value in snaNodeOperState is
'active (2)', then setting this object to
'inactive (1)' will initiate the Node shutdown
process using the method indicated
by snaNodeOperStopMethod.

If the current value in snaNodeOperState is
'inactive (1)', then setting this object to
'active (2)' will initiate the
Node's activation.

A Management Station can always set this object to
'active (2)' irrespective of the value in the
snaOperEnablingMethod."

```
        ::= { snaNodeAdminEntry 12 }

snaNodeAdminRowStatus OBJECT-TYPE
      SYNTAX  RowStatus
      MAX-ACCESS  read-create
      STATUS  current
      DESCRIPTION
            "This object is used by a Management Station to
            create or delete the row entry in the
            snaNodeAdminTable following
            the RowStatus textual convention.

            Upon successful creation of
            the row, an Agent automatically creates a
            corresponding entry in the snaNodeOperTable with
            snaNodeOperState equal to 'inactive (1)'.

            Row deletion can be Management Station or Agent
            initiated:
            (a) The Management Station can set the value to
            'destroy (6)' only when the value of
            snaNodeOperState of this Node instance is
            'inactive (1)'. The Agent will then delete the rows
            corresponding to this Node instance from the
            snaNodeAdminTable and the snaNodeOperTable.
            (b) The Agent detects that a row is in the
            'notReady (3)' state for greater than a
            default period of 5 minutes.
            (c) All rows with the snaNodeAdminRowStatus object's
            value of 'notReady (3)' will be removed upon the
            next initialization of the SNA services."

snaNodeLinkAdminRowStatus OBJECT-TYPE
    SYNTAX RowStatus
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "This object is used by a Management Station to
        create or delete the row entry in the
        snaNodeLinkAdminTable.
        To activate a row, a Management Station sets the value
        to 'active (1)' or 'notReady (3)'. Upon successful
        creation of the row, the Agent automatically creates
        a corresponding entry in the snaNodeLinkOperTable.

        Row deletion can be Management Station or Agent
        initiated:
        (a) The Management Station can set the value to
        'destroy (6)' only when the value of
        snaNodeLinkOperState of this Link
        instance is 'inactive (1)'. The Agent will then
        delete the row corresponding to this Link
        instance from snaNodeLinkOperTable and
        from snaNodeLinkAdminTable.
        (b) The Agent detects that a row is in the
        'notReady (3)' state for greater than a
        default period of 5 minutes.
        (c) The Agent will not include a row with RowStatus=
        'notReady (3)', after SNA system re-initialization

```
            (e.g., reboot)."

        poweroff (4)
        }
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "This value identifies the desired method for
        deactivation of this LU. This value overrides the
        default method (snaNodeOperLuTermDefault) for this
        Node. For LU 6.2, only the value 'unbind (1)'
        applies.

        unbind(1) -   terminate the LU-LU session by sending
            an SNA UNBIND request.
        termself(2) - terminate the LU-LU session by sending
            an SNA TERM-SELF (Terminate Self) request on
            the SSCP-LU session. The SSCP will inform the
            remote session LU partner to send an UNBIND
            request to terminate the session.
        rshutd(3) -   terminate the LU-LU session by sending
            an SNA RSHUTD (Request ShutDown) request to
            the remote session LU partner. The remote LU
            will then send an UNBIND request to terminate
            the session.
        poweroff(4) - terminate the LU-LU session by sending
            either an SNA LUSTAT (LU Status) request on
            the LU-LU session or an SNA NOTIFY request on
            the SSCP-LU session indicating that the LU has
            been powered off. Sending both is also
            acceptable. The result should be that the
            remote session LU partner will send an UNBIND
            to terminate the session.

        A write operation to this object may immediately
        change the operational value reflected

---

in snaLuOperTerm depending
on the Agent implementation."
::= { snaLuAdminEntry 8 }

snaLuAdminRowStatus OBJECT-TYPE
    SYNTAX RowStatus
    MAX-ACCESS read-create
    STATUS current
    DESCRIPTION
        "This object is used by a Management Station to
        create or delete the row entry in the
        snaLuAdminTable.
        To activate a row, the Management Station sets the
        value to 'active (1)' or 'notReady (3)'.
        Upon successful creation of the row, the Agent
        automatically creates a corresponding entry in the
        snaLuOperTable with snaLuOperState equal to
        'inactive (1)'.
        Row deletion can be Management Station or Agent
        initiated:
        (a) The Management Station can set the value to
        'destroy (6)' only when the value of snaLuOperState
        of this LU instance is 'inactive (1)'. The Agent will
        then delete the row corresponding to this LU
        instance from snaLuAdminTable and
        from snaLuOperTable.
        (b) The Agent detects that a row is in the
        'notReady (3)' state for greater than a
        default period of 5 minutes.
        (c) The Agent will not create a row with RowStatus
        equal to 'notReady (3)', after SNA system
        re-initialization (e.g., reboot)."

-- **
-- snaMgtTools group
--
-- Currently this group contains only one table.
-- **

-- **
-- The following table contains Response Time Monitoring (RTM)
-- configuration information and statistics for LU Type 2s.
-- RTM supports the capability to measure and report end-user
-- response times for dependent LUs. When the RTM state of an LU
-- is 'on', response times for each LU transaction are monitored.
-- A set of ranges is defined (e.g., Range 1 includes the number of
-- transactions with response times less than 1 second) using the
-- "boundary" definitions (e.g., boundary #2 is defined as 3 seconds).
-- A set of counters (one per range) identifies
-- the number of transactions within each response time range.
-- **

            optional(2),
            preferred(3)
        }
    MAX-ACCESS read-write
    STATUS   current
    DESCRIPTION
        "The requested configuration of this capability. If this
        value is 'disabled(1)', this is a request to disable this
        protocol. If this value is 'preferred(3)', this is a
        request to enable this protocol, and to prefer it in any
        negotiation over other appropriate protocols that have a
        value of 'optional(2)'."
    DEFVAL   { preferred }
    ::= { mdmLineCapabilitiesEntry 3 }

mdmLineCapabilitiesEnableGranted OBJECT-TYPE
    SYNTAX   INTEGER {
            disabled(1),
            optional(2),
            preferred(3)
        }
    MAX-ACCESS read-only
    STATUS   current
    DESCRIPTION
        "The actual configuration of this capability. The agent
        shall attempt to set this as close as possible to the
        associated mdmLineCapabilitiesEnableRequested value. The
        agent shall make this determination in an implementation-
        specific manner that may take into account the configuration
        of other capabilities or other considerations. The modem
        will choose in an implementation-specific manner between
        multiple mutually-exclusive capabilities that each have the
        same (non-disabled) value. However, the modem must prefer
        all capabilities with a value of 'preferred(3)' over all
        capabilities with a value of 'optional(2)'.

In other words, if there are one or more mutually-exclusive
capabilities (e.g. V.32 and V.32bis) that are set to
`preferred', the agent must choose one in an
implementation-specific manner. Otherwise, if there are one
or more mutually-exclusive capabilities that are set to
`optional', the agent must choose one in an implementation-
specific manner."

             failed. The meaning of each reason code is explained below.

                unknown:
             This code means the failure reason is unknown or
             there has been no previous call.

                other:
             This code used when no other code is applicable.
             Additional vendor information may be available
             elsewhere.

                managementCommand:
             A management command terminated the call. These
             commands include escaping to command mode, initiating
             dialing, restoring lines, and disconnecting.

                inactivityTimeout:
             The call was terminated because it was inactive for
             at the minimum duration specified.

                mnpIncompatibility:

The modems are unable to resolve MNP protocol differences.

protocolError:
An error occured in one of protocol in use. Further information is required to determine in which protocol the error occurred, and the exact nature of the error.

powerLoss:
The modem lost power and disconnected the call.

equipmentFailure:
The modem equipment failed.

dtrDrop:
DTR has been turned off while the modem is to disconnect on DTR drop. (Ref: V.58 cct108TurnedOff)

noDialTone:
If the modem is to monitor for call progress tones, but the modem has failed to detect dial tone while attempting to dial a number.

lineBusy:
Busy signal is detected while busy signal detection is enabled, or while the 'W' or '@' dial modifier is used. (Ref: V.58 engagedTone)

noAnswer:
The call was not answered.

voiceDetected:
A voice was detected on the call.

carrierLost:
Indicates that the modem has disconnected due to detection of loss of carrier. In TIA-602, the S10 register determines the time that loss of carrier must be detected before the modem disconnects.

trainingFailed:
Indicates that the modems did not successfully train and reach data mode on the previous connection.

faxDetected:
A fax was detected on the call."

  SpdBooleanOperator ::= TEXTUAL-CONVENTION
    STATUS   current
    DESCRIPTION
       "The SpdBooleanOperator operator is used to specify
        whether sub-components in a decision-making process are

        ANDed or ORed together to decide if the resulting

expression is true or false."
SYNTAX   INTEGER { or(1), and(2) }

SpdAdminStatus ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
    "The SpdAdminStatus is used to specify the administrative
     status of an object. Objects that are disabled MUST NOT
     be used by the packet processing engine."
  SYNTAX   INTEGER { enabled(1), disabled(2) }

SpdIPPacketLogging ::= TEXTUAL-CONVENTION
  DISPLAY-HINT "d"
  STATUS   current
  DESCRIPTION
    "SpdIPPacketLogging specifies whether an audit message
     SHOULD be logged if a packet is passed through a Security
     Association (SA) and if some of that packet is included in
     the log event. A value of '-1' indicates no logging. A
     value of '0' or greater indicates that logging SHOULD be
     done and indicates the number of bytes starting at the
     beginning of the packet to place in the log. Values greater
     than the size of the packet being processed indicate that
     the entire packet SHOULD be sent.

     Examples:
     '-1' no logging
     '0' log but do not include any of the packet in the log
     '20' log and include the first 20 bytes of the packet
        in the log."

  SYNTAX   Integer32 (-1..65535)

SpdTimePeriod ::= TEXTUAL-CONVENTION
  DISPLAY-HINT "31t"
  STATUS   current
  DESCRIPTION
    "This property identifies an overall range of calendar dates
     and time. In a boolean context, a value within this time
     range, inclusive, is considered true.

     This information is encoded as an octet string using
     the UTF-8 transformation format described in STD 63,
     RFC 3629.

     It uses the format suggested in RFC 3060. An octet string

represents a start date and time and an end date and time.
For example:

yyyymmddThhmmss/yyyymmddThhmmss

Where: yyyy = year   mm = month   dd = day
      hh = hour   mm = minute   ss = second

The first 'yyyymmddThhmmss' sub-string indicates the start
date and time. The second 'yyyymmddThhmmss' sub-string
indicates the end date and time. The character 'T' within
these sub-strings indicates the beginning of the time
portion of each sub-string. The solidus character '/'
separates the start from the end date and time. The end
date and time MUST be subsequent to the start date and
time.

There are also two allowed substitutes for a
'yyyymmddThhmmss' sub-string: one for the start date and
time, and one for the end date and time.

If the start date and time are replaced with the string
'THISANDPRIOR', this sub-string would indicate the current
date and time and the previous dates and time.

If the end date and time are replaced with the string
'THISANDFUTURE', this sub-string would indicate the current
date and time and the subsequent dates and time.

Any of the following SHOULD be considered a
'wrongValue' error:
- Setting a value with the end date and time earlier than
  or equal to the start date and time.
- Setting the start date and time to 'THISANDFUTURE'.
- Setting the end date and time to 'THISANDPRIOR'."

     global system policy that is to be applied on egress
     packets (i.e., packets leaving an interface and entering a
     network) when a given endpoint does not contain a policy
     definition in the spdEndpointToGroupTable. Its value can
     be used as an index into the spdGroupContentsTable to
     retrieve a list of policies. A zero length string
     indicates that no system-wide policy exists and the default
     policy of 'drop' SHOULD be executed for egress packets
     until one is imposed by either this object or by the
     endpoint processing a given packet.

    This object MUST be persistent"
  DEFVAL { "" }

spdEndpointToGroupTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF SpdEndpointToGroupEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION

"This table maps policies (groupings) onto an endpoint
(interface). A policy group assigned to an endpoint is then
used to control access to the network traffic passing
through that endpoint.

If an endpoint has been configured with a policy group and
no rule within that policy group matches that packet, the
default action in this case SHALL be to drop the packet.

If no policy group has been assigned to an endpoint, then
the policy group specified by spdIngressPolicyGroupName MUST
be used on traffic inbound from the network through that
endpoint, and the policy group specified by
spdEgressPolicyGroupName MUST be used for traffic outbound
to the network through that endpoint."

spdGroupContPriority OBJECT-TYPE
  SYNTAX   Integer32 (0..65535)
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "The priority (sequence number) of the sub-component in
    a group that this row represents. This value indicates

the order that each row of this table MUST be processed
from low to high. For example, a row with a priority of 0
is processed before a row with a priority of 1, a 1 before
a 2, etc."
   ::= { spdGroupContentsEntry 2 }

spdGroupContFilter OBJECT-TYPE
   SYNTAX   VariablePointer
   MAX-ACCESS read-create
   STATUS   current
   DESCRIPTION
      "spdGroupContFilter points to a filter that is evaluated
      to determine whether the spdGroupContComponentName within
      this row is exercised. Managers can use this object to
      classify groups of rules, or subgroups, together in order to
      achieve a greater degree of control and optimization over
      the execution order of the items within the group. If the

      filter evaluates to false, the rule or subgroup will be
      skipped and the next rule or subgroup will be evaluated
      instead. This value can be used to indicate a scalar or
      row in a table. When indicating a row in a table, this
      value MUST point to the first column instance in that row.

      An example usage of this object would be to limit a
      group of rules to executing only when the IP packet
      being processed is designated to be processed by IKE.
      This effectively creates a group of IKE-specific rules.

      The following tables and scalars can be pointed to by this
      column. All but diffServMultiFieldClfrTable are defined in
      this MIB:

            diffServMultiFieldClfrTable
            spdIpOffsetFilterTable
            spdTimeFilterTable
            spdCompoundFilterTable
            spdTrueFilter
            spdIpsoHeaderFilterTable

      Implementations MAY choose to provide support for other
      filter tables or scalars.

      If this column is set to a VariablePointer value, which
      references a non-existent row in an otherwise supported
      table, the inconsistentName exception MUST be returned. If

the table or scalar pointed to by the VariablePointer is
not supported at all, then an inconsistentValue exception
MUST be returned.

If, during packet processing, a row in this table is applied
to a packet and the value of this column in that row
references a non-existent or non-supported object, the
packet MUST be dropped."

  SYNTAX   RowStatus
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
    "This object indicates the conceptual status of this row.

    The value of this object has no effect on whether other
    objects in this conceptual row can be modified.

    This object cannot be made active until a filter
    referenced by the spdSubFiltSubfilter object is both
    defined and active. An attempt to do so MUST result in
    an inconsistentValue error.

    If active, this object MUST remain active unless one of the
    following two conditions are met:

    I. No active row in the SpdCompoundFilterTable exists
        that has a matching spdCompFiltName.

    II. Or, at least one other active row in this table has a
        matching spdCompFiltName.

If neither condition is met, an attempt to set this row to
something other than active MUST result in an
inconsistentValue error."

          arithmeticGreater(5),
```

arithmeticLessOrEqual(6) }
MAX-ACCESS read-create
STATUS   current
DESCRIPTION
    "This defines the various tests that are used when
    evaluating a given filter.

    The various tests definable in this table are as follows:

    equal:
      - Tests if the OCTET STRING, 'spdIpOffFiltValue', matches

        a value in the packet starting at the given offset in
        the packet and comparing the entire OCTET STRING of
        'spdIpOffFiltValue'. Any values compared this way are
        assumed to be unsigned integer values in network byte
        order of the same length as 'spdIpOffFiltValue'.

    notEqual:
      - Tests if the OCTET STRING, 'spdIpOffFiltValue', does
        not match a value in the packet starting at the given
        offset in the packet and comparing to the entire OCTET
        STRING of 'spdIpOffFiltValue'. Any values compared
        this way are assumed to be unsigned integer values in
        network byte order of the same length as
        'spdIpOffFiltValue'.

    arithmeticLess:
      - Tests if the OCTET STRING, 'spdIpOffFiltValue', is
        arithmetically less than ('<') the value starting at
        the given offset within the packet. The value in the
        packet is assumed to be an unsigned integer in network
        byte order of the same length as 'spdIpOffFiltValue'.

    arithmeticGreaterOrEqual:
      - Tests if the OCTET STRING, 'spdIpOffFiltValue', is
        arithmetically greater than or equal to ('>=') the
        value starting at the given offset within the packet.
        The value in the packet is assumed to be an unsigned
        integer in network byte order of the same length as
        'spdIpOffFiltValue'.

    arithmeticGreater:
      - Tests if the OCTET STRING, 'spdIpOffFiltValue', is
        arithmetically greater than ('>') the value starting at
        the given offset within the packet. The value in the

packet is assumed to be an unsigned integer in network
byte order of the same length as 'spdIpOffFiltValue'.

arithmeticLessOrEqual:
 - Tests if the OCTET STRING, 'spdIpOffFiltValue', is
   arithmetically less than or equal to ('<=') the value
   starting at the given offset within the packet. The
   value in the packet is assumed to be an unsigned
   integer in network byte order of the same length as
   'spdIpOffFiltValue'."

    MAX-ACCESS read-create
    STATUS   current
    DESCRIPTION
       "Defines which days of the month the current time is
        valid for. It is a sequence of 64 BITS, where each BIT
        represents a corresponding day of the month in forward or
        reverse order. Starting from the left-most bit, the first
        31 bits identify the day of the month, counting from the
        beginning of the month. The following 31 bits (bits 32-62)
        indicate the day of the month, counting from the end of the

        month. For months with fewer than 31 days, the bits that
        correspond to the non-existent days of that month are
        ignored (e.g., for non-leap year Februarys, bits 29-31 and
        60-62 are ignored).

        This column evaluates to 'true' if the current day of the
        month's bit is set.

        For example, a value of 0X'80 00 00 01 00 00 00 00'
        indicates that this column evaluates to true on the first
        and last days of the month.

      action. The order in which sub-actions MUST be executed
      are based on the value from this column, with the lowest
      numeric value executing first (i.e., priority 0 before
      priority 1, 1 before 2, etc.)."
    ::= { spdSubactionsEntry 1 }

spdSubActSubActionName OBJECT-TYPE
  SYNTAX   VariablePointer
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
      "This column points to the action to be taken. It MAY,
      but is not limited to, point to a row in one of the
      following tables:

        spdCompoundActionTable   - Allowing recursion
        ipsaSaPreconfiguredActionTable
        ipiaIkeActionTable
        ipiaIpsecActionTable

      It MAY also point to one of the scalar objects beneath
      spdStaticActions.

      If this object is set to a pointer to a row in an
      unsupported (or unknown) table, an inconsistentValue
      error MUST be returned.

      If this object is set to point to a non-existent row in
      an otherwise supported table, an inconsistentName error
      MUST be returned.

      If, during packet processing, this column has a value that
      references a non-existent or non-supported object, the
      packet MUST be dropped."
    ::= { spdSubactionsEntry 2 }

spdPacketPart OBJECT-TYPE
  SYNTAX   OCTET STRING (SIZE (0..65535))
  MAX-ACCESS accessible-for-notify

  STATUS   current
  DESCRIPTION
    "spdPacketPart is the front part of the full IP packet that
     triggered this notification. The initial size limit is
     determined by the smaller of the size, indicated by:

     I. The value of the object with the TC syntax
         'SpdIPPacketLogging' that indicated the packet SHOULD be
         logged and

     II. The size of the triggering packet.

     The final limit is determined by the SNMP packet size when
     sending the notification. The maximum size that can be
     included will be the smaller of the initial size, given the
     above, and the length that will fit in a single SNMP
     notification packet after the rest of the notification's
     objects and any other necessary packet data (headers encoding,
     etc.) have been included in the packet."

        spdIPDestinationAddress,
        spdPacketDirection }
  STATUS current
  DESCRIPTION
    "Notification that an action was executed by a rule.

Only actions with logging enabled will result in this
notification getting sent. The object includes the
spdActionExecuted object, which will indicate which action
was executed within the scope of the rule. Additionally,
the spdIPSourceType, spdIPSourceAddress,
spdIPDestinationType, and spdIPDestinationAddress objects
are included to indicate the packet source and destination
of the packet that triggered the action. Finally, the
spdIPEndpointAddType, spdIPEndpointAddress, and
spdPacketDirection objects indicate which interface the
executed action was associated with, and if the packet was
ingress or egress through the endpoint.

A spdActionNotification SHOULD be limited to a maximum of
one notification sent per minute for any action
notifications that do not have any other configuration
controlling their send rate.

Note that compound actions with multiple executed
sub-actions may result in multiple notifications being sent
from a single rule execution."

  STATUS current
  DESCRIPTION
    "Notification that a packet passed through a Security
    Association (SA). Only SAs created by actions with packet
    logging enabled will result in this notification getting
    sent. The objects sent MUST include the spdActionExecuted,
    which will indicate which action was executed within the
    scope of the rule. Additionally, the spdIPSourceType,
    spdIPSourceAddress, spdIPDestinationType, and
    spdIPDestinationAddress objects MUST be included to
    indicate the packet source and destination of the packet
    that triggered the action. The spdIPEndpointAddType,
    spdIPEndpointAddress, and spdPacketDirection objects are
    included to indicate which endpoint the packet was
    associated with. Finally, spdPacketPart is included to

enable sending a variable sized part of the front of the
packet with the size dependent on the value of the object of
TC syntax 'SpdIPPacketLogging', which indicated that logging
should be done.

A spdPacketNotification SHOULD be limited to a maximum of
one notification sent per minute for any action
notifications that do not have any other configuration
controlling their send rate.

An action notification SHOULD be limited to a maximum of
one notification sent per minute for any action
notifications that do not have any other configuration
controlling their send rate."

IANAItuProbableCause ::= TEXTUAL-CONVENTION
   STATUS current
   DESCRIPTION
      "ITU-T probable cause values. Duplicate values defined in
      X.733 are appended with X733 to ensure syntactic uniqueness.
      Probable cause value 0 is reserved for special purposes.

      The Internet Assigned Number Authority (IANA) is responsible
      for the assignment of the enumerations in this TC.
      IANAItuProbableCause value of 0 is reserved for special
      purposes and MUST NOT be assigned.

Values of IANAItuProbableCause in the range 1 to 1023 are
reserved for causes that correspond to ITU-T probable cause.

All other requests for new causes will be handled on a
first-come, first served basis and will be assigned
enumeration values starting with 1025.

Request should come in the form of well-formed
SMI [RFC2578] for enumeration names that are unique and
sufficiently descriptive.

While some effort will be taken to ensure that new probable
causes do not conceptually duplicate existing probable
causes it is acknowledged that the existence of conceptual
duplicates in the starting probable cause list is an known
industry reality.

To aid IANA in the administration of probable cause names
and values, the OPS Area Director will appoint one or more
experts to help review requests.

See http://www.iana.org"

-- sysApplInstalled Group
-- This group provides information about application packages
-- that have been installed on the host computer. The group
-- contains two tables. The first, the sysApplInstallPkgTable,
-- describes the application packages, the second, the
-- sysApplInstallElmtTable, describes the constituent elements
-- (files and executables) which compose an application package.

--
-- In order to appear in this group, an application and its
-- component files must be discoverable by the system itself,
-- possibly through some type of software installation mechanism
-- or registry.

-- sysApplInstallPkgTable
-- The system installed application packages table provides
-- information on the software packages installed on a system.
-- These packages may consist of many different files including
-- executable and non-executable files.

sysApplInstallPkgTable OBJECT-TYPE

-- elements (files and executables) installed on the host computer.

sysApplInstallElmtTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF SysApplInstallElmtEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "This table details the individual application package
        elements (files and executables) which comprise the
        applications defined in the sysApplInstallPkg Table.
        Each entry in this table has an index to the
        sysApplInstallPkg table to identify the application
        package of which it is a part. As a result, there may
        be many entries in this table for each instance in the
        sysApplInstallPkg Table.

        Table entries are indexed by sysApplInstallPkgIndex,
        sysApplInstallElmtIndex to facilitate retrieval of
        all elements associated with a particular installed
        application package."
    ::= { sysApplInstalled 2 }

   STATUS   current
   DESCRIPTION
      "The full directory path where this element is installed.

For example, the value would be '/opt/EMPuma/bin' for an
element installed in the directory '/opt/EMPuma/bin'.
Most application packages include information about the
elements contained in the package. In addition, elements
are typically installed in sub-directories under the
package installation directory. In cases where the
element path names are not included in the package
information itself, the path can usually be determined
by a simple search of the sub-directories. If the
element is not installed in that location and there is
no other information available to the agent implementation,
then the path is unknown and null is returned."

                -- not be running unless required elements are.
            unknown(5)
                -- Default value for the case when an operator
                -- has not yet assigned one of the other values.
                -- When set, bits 1, 2, 3, and 4 have no meaning.
            }
MAX-ACCESS read-write
STATUS   current
DESCRIPTION
    "An operator assigned value used in the determination of
    application status. This value is used by the agent to
    determine both the mapping of started processes to the
    initiation of an application, as well as to allow for a
    determination of application health. The default value,
    unknown(5), is used when an operator has not yet assigned
    one of the other values. If unknown(5) is set, bits
    1 - 4 have no meaning. The possible values are:

        executable(0),
            An application may have one or
            more executable elements. The rest of the
            bits have no meaning if the element is not
            executable.
        exclusive(1),

Only one copy of an exclusive element may be
running per invocation of the running
application.

primary(2),
The primary executable. An application can
have one, and only one element that is designated
as the primary executable. The execution of
this element constitutes an invocation of
the application. This is used by the agent
implementation to determine the initiation of
an application. The primary executable must
remain running long enough for the agent
implementation to detect its presence.

required(3),
An application may have zero or more required
elements. All required elements must be running
in order for the application to be judged to be
running and healthy.

dependent(4),
An application may have zero or more
dependent elements. Dependent elements may
not be running unless required elements are.

unknown(5)
Default value for the case when an operator
has not yet assigned one of the other values.
When set, bits 1, 2, 3, and 4 have no meaning.

sysApplInstallElmtRole is used by the agent implementation
in determining the initiation of an application, the
current state of a running application (see
sysApplRunCurrentState), when an application invocation is
no longer running, and the exit status of a terminated
application invocation (see sysApplPastRunExitState)."

     For example, for a file with a total size of 4,294,967,296
     bytes this variable would have a value of 0; for a file with
     a total size of 4,294,967,295 bytes this variable would be
     4,294,967,295."
   ::= { sysApplInstallElmtEntry 11 }

-- sysApplRun Group
-- This group models activity information for applications
-- that have been invoked and are either currently running,
-- or have previously run on the host system. Likewise,
-- the individual elements of an invoked application are
-- also modeled to show currently running processes, and
-- processes that have run in the past.

-- sysApplRunTable
-- The sysApplRunTable contains the application instances
-- which are currently running on the host. Since a single
-- application might be invoked multiple times, an entry is
-- added to this table for each INVOCATION of an application.
-- The table is indexed by sysApplInstallPkgIndex, sysApplRunIndex
-- to enable managers to easily locate all invocations of
-- a particular application package.

sysApplRunTable OBJECT-TYPE
   SYNTAX   SEQUENCE OF SysApplRunEntry
   MAX-ACCESS not-accessible
   STATUS   current
   DESCRIPTION

"The table describes the applications which are executing
on the host. Each time an application is invoked,
an entry is created in this table. When an application ends,
the entry is removed from this table and a corresponding
        entry is created in the SysApplPastRunTable.

A new entry is created in this table whenever the agent
implementation detects a new running process that is an
installed application element whose sysApplInstallElmtRole
designates it as being the application's primary executable
(sysApplInstallElmtRole = primary(2)).

The table is indexed by sysApplInstallPkgIndex,
sysApplRunIndex to enable managers to easily locate all
invocations of a particular application package."
    ::= { sysApplRun 1 }

        currently running on this host."
    INDEX   { sysApplInstallPkgIndex, sysApplRunIndex }
    ::= { sysApplRunTable   1 }

SysApplRunEntry ::= SEQUENCE {
    sysApplRunIndex   Unsigned32,
    sysApplRunStarted   DateAndTime,
    sysApplRunCurrentState   RunState
}

sysApplRunIndex OBJECT-TYPE
    SYNTAX   Unsigned32 (1..'ffffffff'h)
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "Part of the index for this table. An arbitrary
        integer used only for indexing purposes. Generally
        monotonically increasing from 1 as new applications are
        started on the host, it uniquely identifies application
        invocations.

        The numbering for this index increases by 1 for each
        INVOCATION of an application, regardless of which
        installed application package this entry represents a
        running instance of.

An example of the indexing for a couple of entries is
shown below.

  :
sysApplRunStarted.17.14
sysApplRunStarted.17.63
sysApplRunStarted.18.13
  :

In this example, the agent has observed 12 application
invocations when the application represented by entry 18
in the sysApplInstallPkgTable is invoked. The next
invocation detected by the agent is an invocation of
installed application package 17. Some time later,
installed application 17 is invoked a second time.

NOTE: this index is not intended to reflect a real-time
(wall clock time) ordering of application invocations;
it is merely intended to uniquely identify running
instances of applications. Although the
sysApplInstallPkgIndex is included in the INDEX clause
for this table, it serves only to ease searching of
this table by installed application and does not
contribute to uniquely identifying table entries."
 ::= { sysApplRunEntry 1 }

sysApplRunStarted OBJECT-TYPE
 SYNTAX DateAndTime
 MAX-ACCESS read-only
 STATUS current
 DESCRIPTION
  "The date and time that the application was started."
 ::= { sysApplRunEntry 2 }

sysApplRunCurrentState OBJECT-TYPE
 SYNTAX RunState
 MAX-ACCESS read-only
 STATUS current
 DESCRIPTION
  "The current state of the running application instance.
  The possible values are running(1), runnable(2) but waiting
  for a resource such as CPU, waiting(3) for an event,
  exiting(4), or other(5). This value is based on an evaluation
  of the running elements of this application instance (see
  sysApplElmRunState) and their Roles as defined by
  sysApplInstallElmtRole. An agent implementation may
  detect that an application instance is in the process of

exiting if one or more of its REQUIRED elements are no
longer running. Most agent implementations will wait until
a second internal poll has been completed to give the
system time to start REQUIRED elements before marking the
application instance as exiting."
    ::= { sysApplRunEntry 3 }

-- sysApplPastRunTable
-- The sysApplPastRunTable provides a history of applications
-- previously run on the host computer. Entries are removed from
-- the sysApplRunTable and corresponding entries are added to this
-- table when an application becomes inactive. Entries remain in
-- this table until they are aged out when either the table size
-- reaches a maximum as determined by the sysApplPastRunMaxRows,
-- or when an entry has aged to exceed a time limit as set be
-- sysApplPastRunTblTimeLimit.
--
-- When aging out entries, the oldest entry, as determined by

-- the value of sysApplPastRunTimeEnded, will be removed first.

sysApplPastRunTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF SysApplPastRunEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "A history of the applications that have previously run
        on the host computer. An entry's information is moved to
        this table from the sysApplRunTable when the invoked
        application represented by the entry ceases to be running.

        An agent implementation can determine that an application
        invocation is no longer running by evaluating the running
        elements of the application instance and their Roles as
        defined by sysApplInstallElmtRole. Obviously, if there
        are no running elements for the application instance,
        then the application invocation is no longer running.
        If any one of the REQUIRED elements is not running,
        the application instance may be in the process of exiting.
        Most agent implementations will wait until a second internal
        poll has been completed to give the system time to either
        restart partial failures or to give all elements time to
        exit. If, after the second poll, there are REQUIRED
        elements that are not running, then the application
        instance may be considered by the agent implementation
        to no longer be running.

Entries remain in the sysApplPastRunTable until they
are aged out when either the table size reaches a maximum
as determined by the sysApplPastRunMaxRows, or when an entry
has aged to exceed a time limit as set by
sysApplPastRunTblTimeLimit.

Entries in this table are indexed by sysApplInstallPkgIndex,
sysApplPastRunIndex to facilitate retrieval of all past
run invocations of a particular installed application."

-- which has been installed on the system.
```

sysApplElmtRunTable OBJECT-TYPE
   SYNTAX   SEQUENCE OF SysApplElmtRunEntry
   MAX-ACCESS not-accessible
   STATUS   current
   DESCRIPTION
      "The table describes the processes which are
      currently executing on the host system. Each entry
      represents a running process and is associated with
      the invoked application of which that process is a part, if
      possible. This table contains an entry for every process
      currently running on the system, regardless of whether its
      'parent' application can be determined. So, for example,
      processes like 'ps' and 'grep' will have entries though they
      are not associated with an installed application package.

      Because a running application may involve
      more than one executable, it is possible to have
      multiple entries in this table for each application.
      Entries are removed from this table when the process
      terminates.
      The table is indexed by sysApplElmtRunInstallPkg,
      sysApplElmtRunInvocID, and sysApplElmtRunIndex to
      facilitate the retrieval of all running elements of a
      particular invoked application which has been installed on

-- sysApplElmtPastRunTable
-- The sysApplElmtPastRunTable maintains a history of
-- processes which have previously executed on
-- the host as part of an application. Upon termination
-- of a process, the entry representing the process is removed from
-- the sysApplElmtRunTable and a corresponding entry is created in
-- this table provided that the process was part of an
-- identifiable application. If the process could not be associated

-- with an invoked application, no corresponding entry is created.
-- Hence, whereas the sysApplElmtRunTable contains an entry for
-- every process currently executing on the system, the
-- sysApplElmtPastRunTable only contains entries for processes
-- that previously executed as part of an invoked application.
--
-- Entries remain in this table until they are aged out when
-- either the number of entries in the table reaches a
-- maximum as determined by sysApplElmtPastRunMaxRows, or
-- when an entry has aged to exceed a time limit as set by
-- sysApplElmtPastRunTblTimeLimit. When aging out entries,
-- the oldest entry, as determined by the value of
-- sysApplElmtPastRunTimeEnded, will be removed first.
--
-- The table is indexed by sysApplInstallPkgIndex (from the
-- sysApplInstallPkgTable), sysApplElmtPastRunInvocID, and
-- sysApplElmtPastRunIndex to make it easy to locate all
-- previously executed processes of a particular invoked application
-- that has been installed on the system.

sysApplElmtPastRunTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF SysApplElmtPastRunEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "The table describes the processes which have previously

executed on the host system as part of an application.
Each entry represents a process which has previously
executed and is associated with the invoked application
of which it was a part. Because an invoked application
may involve more than one executable, it is possible
to have multiple entries in this table for
each application invocation. Entries are added
to this table when the corresponding process in the
sysApplElmtRun Table terminates.

Entries remain in this table until they are aged out when
either the number of entries in the table reaches a
maximum as determined by sysApplElmtPastRunMaxRows, or
when an entry has aged to exceed a time limit as set by
sysApplElmtPastRunTblTimeLimit. When aging out entries,
the oldest entry, as determined by the value of
sysApplElmtPastRunTimeEnded, will be removed first.

The table is indexed by sysApplInstallPkgIndex (from the
sysApplInstallPkgTable), sysApplElmtPastRunInvocID,
and sysApplElmtPastRunIndex to make it easy to locate all
previously executed processes of a particular invoked
application that has been installed on the system."

    resources to the agent."
DEFVAL   { 60 }
::= { sysApplRun 11 }

-- sysApplMap Group
-- This group contains a table, the sysApplMapTable,
-- whose sole purpose is to provide a 'backwards'
-- mapping so that, given a known sysApplElmtRunIndex
-- (process identification number), the corresponding invoked
-- application (sysApplRunIndex), installed element
-- (sysApplInstallElmtIndex), and installed application
-- package (sysApplInstallPkgIndex) can be quickly determined.
--
-- The table will contain one entry for each process
-- currently running on the system.
--
-- A backwards mapping is extremely useful since the tables

-- in this MIB module are typically indexed with the
-- installed application package (sysApplInstallPkgIndex)
-- as the primary key, and on down as required by the
-- specific table, with the process ID number (sysApplElmtRunIndex)
-- being the least significant key.
--
-- It is expected that management applications will use
-- this mapping table by doing a 'GetNext' operation with
-- the known process ID number (sysApplElmtRunIndex) as the partial
-- instance identifier. Assuming that there is an entry for
-- the process, the result should return a single columnar value,
-- the sysApplMapInstallPkgIndex, with the sysApplElmtRunIndex,
-- sysApplRunIndex, and sysApplInstallElmtIndex contained in the
-- instance identifier for the returned MIB object value.
--
-- NOTE: if the process can not be associated back to an
-- invoked application installed on the system, then the
-- value returned for the columnar value sysApplMapInstallPkgIndex
-- will be '0' and the instance portion of the object-identifier
-- will be the process ID number (sysApplElmtRunIndex) followed

-- by 0.0.

sysApplMapTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF SysApplMapEntry

DESCRIPTION "The SNMP Management Architecture MIB

REVISION   "200210140000Z"   -- 14 October 2002
DESCRIPTION "Changes in this revision:
         - Updated various administrative information.
         - Corrected some typos.
         - Corrected typo in description of SnmpEngineID
           that led to range overlap for 127.
         - Changed '255a' to '255t' in definition of
           SnmpAdminString to align with current SMI.
         - Reworded 'reserved' for value zero in
           DESCRIPTION of SnmpSecurityModel.
         - The algorithm for allocating security models
           should give 256 per enterprise block, rather
           than 255.
         - The example engine ID of 'abcd' is not
           legal. Replaced with '800002b804616263'H based
           on example enterprise 696, string 'abc'.
         - Added clarification that engineID should
           persist across re-initializations.
         This revision published as RFC 3411.

"
          REVISION   "199901190000Z"   -- 19 January 1999

                Published as RFC 2571.
                "
          REVISION   "199711200000Z"   -- 20 November 1997
          DESCRIPTION "The initial version, published in RFC 2271.
                "
          ::= { snmpModules 10 }

  -- Textual Conventions used in the SNMP Management Architecture ***

SnmpEngineID ::= TEXTUAL-CONVENTION
    STATUS   current
    DESCRIPTION "An SNMP engine's administratively-unique identifier.
            Objects of this type are for identification, not for
            addressing, even though it is possible that an
            address may have been used in the generation of
            a specific value.

            The value for this object may not be all zeros or
            all 'ff'H or the empty (zero length) string.

            The initial value for this object may be configured
            via an operator console entry or via an algorithmic
            function. In the latter case, the following
            example algorithm is recommended.

            In cases where there are multiple engines on the
            same system, the use of this algorithm is NOT
            appropriate, as it would result in all of those
            engines ending up with the same ID value.

            1) The very first bit is used to indicate how the
              rest of the data is composed.

              0 - as defined by enterprise using former methods
                  that existed before SNMPv3. See item 2 below.

              1 - as defined by this architecture, see item 3
                below.

              Note that this allows existing uses of the
              engineID (also known as AgentID [RFC1910]) to
              co-exist with any new uses.

2) The snmpEngineID has a length of 12 octets.

The first four octets are set to the binary
equivalent of the agent's SNMP management
private enterprise number as assigned by the
Internet Assigned Numbers Authority (IANA).
For example, if Acme Networks has been assigned
{ enterprises 696 }, the first four octets would
be assigned '000002b8'H.

The remaining eight octets are determined via
one or more enterprise-specific methods. Such
methods must be designed so as to maximize the
possibility that the value of this object will
be unique in the agent's administrative domain.
For example, it may be the IP address of the SNMP
entity, or the MAC address of one of the
interfaces, with each address suitably padded
with random octets. If multiple methods are
defined, then it is recommended that the first
octet indicate the method being used and the
remaining octets be a function of the method.

3) The length of the octet string varies.

The first four octets are set to the binary
equivalent of the agent's SNMP management
private enterprise number as assigned by the
Internet Assigned Numbers Authority (IANA).
For example, if Acme Networks has been assigned
{ enterprises 696 }, the first four octets would
be assigned '000002b8'H.

The very first bit is set to 1. For example, the
above value for Acme Networks now changes to be
'800002b8'H.

The fifth octet indicates how the rest (6th and
following octets) are formatted. The values for
the fifth octet are:

   0   - reserved, unused.

   1   - IPv4 address (4 octets)
          lowest non-special IP address

2   - IPv6 address (16 octets)
            lowest non-special IP address

       3   - MAC address (6 octets)
            lowest IEEE MAC address, canonical
            order

       4   - Text, administratively assigned
            Maximum remaining length 27

       5   - Octets, administratively assigned
            Maximum remaining length 27

      6-127 - reserved, unused

     128-255 - as defined by the enterprise
             Maximum remaining length 27
       "
SYNTAX   OCTET STRING (SIZE(5..32))

SnmpSecurityModel ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION "An identifier that uniquely identifies a
         Security Model of the Security Subsystem within
         this SNMP Management Architecture.

         The values for securityModel are allocated as
         follows:

         - The zero value does not identify any particular
           security model.

         - Values between 1 and 255, inclusive, are reserved
           for standards-track Security Models and are
           managed by the Internet Assigned Numbers Authority
           (IANA).
         - Values greater than 255 are allocated to
           enterprise-specific Security Models. An
           enterprise-specific securityModel value is defined
           to be:

enterpriseID * 256 + security model within enterprise

For example, the fourth Security Model defined by the enterprise whose enterpriseID is 1 would be 259.

This scheme for allocation of securityModel values allows for a maximum of 255 standards-based Security Models, and for a maximum of 256 Security Models per enterprise.

It is believed that the assignment of new securityModel values will be rare in practice because the larger the number of simultaneously utilized Security Models, the larger the chance that interoperability will suffer. Consequently, it is believed that such a range will be sufficient. In the unlikely event that the standards committee finds this number to be insufficient over time, an enterprise number can be allocated to obtain an additional 256 possible values.

Note that the most significant bit must be zero; hence, there are 23 bits allocated for various organizations to design and define non-standard

securityModels. This limits the ability to define new proprietary implementations of Security Models to the first 8,388,608 enterprises.

It is worthwhile to note that, in its encoded form, the securityModel value will normally require only a single byte since, in practice, the leftmost bits will be zero for most messages and sign extension is suppressed by the encoding rules.

As of this writing, there are several values of securityModel defined for use with SNMP or reserved for use with supporting MIB objects. They are as follows:

   0 reserved for 'any'

1 reserved for SNMPv1
                    2 reserved for SNMPv2c
                    3 User-Based Security Model (USM)
            "
   SYNTAX   INTEGER(0 .. 2147483647)

 SnmpMessageProcessingModel ::= TEXTUAL-CONVENTION
   STATUS   current
   DESCRIPTION "An identifier that uniquely identifies a Message
                Processing Model of the Message Processing
                Subsystem within this SNMP Management Architecture.

                The values for messageProcessingModel are
                allocated as follows:

                - Values between 0 and 255, inclusive, are
                  reserved for standards-track Message Processing
                  Models and are managed by the Internet Assigned
                  Numbers Authority (IANA).

                - Values greater than 255 are allocated to
                  enterprise-specific Message Processing Models.
                  An enterprise messageProcessingModel value is
                  defined to be:

                  enterpriseID * 256 +
                      messageProcessingModel within enterprise

                  For example, the fourth Message Processing Model
                  defined by the enterprise whose enterpriseID

                  is 1 would be 259.

                This scheme for allocating messageProcessingModel
                values allows for a maximum of 255 standards-
                based Message Processing Models, and for a
                maximum of 256 Message Processing Models per
                enterprise.

                It is believed that the assignment of new
                messageProcessingModel values will be rare
                in practice because the larger the number of
                simultaneously utilized Message Processing Models,
                the larger the chance that interoperability
                will suffer. It is believed that such a range

will be sufficient. In the unlikely event that
the standards committee finds this number to be
insufficient over time, an enterprise number
can be allocated to obtain an additional 256
possible values.

Note that the most significant bit must be zero;
hence, there are 23 bits allocated for various
organizations to design and define non-standard
messageProcessingModels. This limits the ability
to define new proprietary implementations of
Message Processing Models to the first 8,388,608
enterprises.

It is worthwhile to note that, in its encoded
form, the messageProcessingModel value will
normally require only a single byte since, in
practice, the leftmost bits will be zero for
most messages and sign extension is suppressed
by the encoding rules.

As of this writing, there are several values of
messageProcessingModel defined for use with SNMP.
They are as follows:

    0 reserved for SNMPv1
    1 reserved for SNMPv2c
    2 reserved for SNMPv2u and SNMPv2*
    3 reserved for SNMPv3
    "
SYNTAX   INTEGER(0 .. 2147483647)

SnmpSecurityLevel ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION "A Level of Security at which SNMP messages can be
          sent or with which operations are being processed;
          in particular, one of:

          noAuthNoPriv - without authentication and
                  without privacy,
          authNoPriv   - with authentication but
                  without privacy,
          authPriv   - with authentication and

     with privacy.

    These three values are ordered such that
    noAuthNoPriv is less than authNoPriv and
    authNoPriv is less than authPriv.
    "
 SYNTAX INTEGER { noAuthNoPriv(1),
     authNoPriv(2),
     authPriv(3)
     }

SnmpAdminString ::= TEXTUAL-CONVENTION
 DISPLAY-HINT "255t"
 STATUS current
 DESCRIPTION "An octet string containing administrative
    information, preferably in human-readable form.

    To facilitate internationalization, this
    information is represented using the ISO/IEC
    IS 10646-1 character set, encoded as an octet
    string using the UTF-8 transformation format
    described in [RFC2279].

    Since additional code points are added by
    amendments to the 10646 standard from time
    to time, implementations must be prepared to
    encounter any code point from 0x00000000 to
    0x7fffffff. Byte sequences that do not
    correspond to the valid UTF-8 encoding of a
    code point or are outside this range are
    prohibited.

    The use of control codes should be avoided.

    When it is necessary to represent a newline,
    the control code sequence CR LF should be used.

    The use of leading or trailing white space should
    be avoided.

    For code points not directly supported by user
    interface hardware or software, an alternative
    means of entry and display, such as hexadecimal,
    may be provided.

For information encoded in 7-bit US-ASCII,
the UTF-8 encoding is identical to the
US-ASCII encoding.

UTF-8 may require multiple bytes to represent a
single character / code point; thus the length
of this object in octets may be different from
the number of characters encoded. Similarly,
size constraints refer to the number of encoded
octets, not the number of characters represented
by an encoding.

Note that when this TC is used for an object that
is used or envisioned to be used as an index, then
a SIZE restriction MUST be specified so that the
number of sub-identifiers for any object instance
does not exceed the limit of 128, as defined by
[RFC3416].

Note that the size of an SnmpAdminString object is
measured in octets, not characters.

-- the System group
--
-- a collection of objects common to all managed systems.

system   OBJECT IDENTIFIER ::= { mib-2 1 }

sysDescr OBJECT-TYPE
  SYNTAX     DisplayString (SIZE (0..255))
  MAX-ACCESS  read-only
```

```
     STATUS     current
     DESCRIPTION
             "A textual description of the entity.  This value should
             include the full name and version identification of
             the system's hardware type, software operating-system,
             and networking software."
      ::= { system 1 }

sysObjectID OBJECT-TYPE
   SYNTAX     OBJECT IDENTIFIER
   MAX-ACCESS  read-only
   STATUS     current
   DESCRIPTION
             "The vendor's authoritative identification of the
             network management subsystem contained in the entity.
             This value is allocated within the SMI enterprises
             subtree (1.3.6.1.4.1) and provides an easy and
             unambiguous means for determining `what kind of box' is
             being managed.  For example, if vendor `Flintstones,
             Inc.' was assigned the subtree 1.3.6.1.4.1.424242,
             it could assign the identifier 1.3.6.1.4.1.424242.1.1
             to its `Fred Router'."
      ::= { system 2 }

sysUpTime OBJECT-TYPE

   SYNTAX     TimeTicks
   MAX-ACCESS  read-only
   STATUS     current
   DESCRIPTION
             "The time (in hundredths of a second) since the
             network management portion of the system was last
             re-initialized."
      ::= { system 3 }

sysContact OBJECT-TYPE
   SYNTAX     DisplayString (SIZE (0..255))
   MAX-ACCESS  read-write
   STATUS     current
   DESCRIPTION
             "The textual identification of the contact person for
             this managed node, together with information on how
             to contact this person.  If no contact information is
             known, the value is the zero-length string."
      ::= { system 4 }
```

sysName OBJECT-TYPE
  SYNTAX   DisplayString (SIZE (0..255))
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
        "An administratively-assigned name for this managed
        node. By convention, this is the node's fully-qualified
        domain name. If the name is unknown, the value is
        the zero-length string."
  ::= { system 5 }

sysLocation OBJECT-TYPE
  SYNTAX   DisplayString (SIZE (0..255))
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
        "The physical location of this node (e.g., 'telephone
        closet, 3rd floor'). If the location is unknown, the
        value is the zero-length string."
  ::= { system 6 }

sysServices OBJECT-TYPE
  SYNTAX   INTEGER (0..127)
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
        "A value which indicates the set of services that this
        entity may potentially offer. The value is a sum.

        This sum initially takes the value zero. Then, for
        each layer, L, in the range 1 through 7, that this node
        performs transactions for, 2 raised to (L - 1) is added
        to the sum. For example, a node which performs only
        routing functions would have a value of 4 ($2^{(3-1)}$).
        In contrast, a node which is a host offering application
        services would have a value of 72 ($2^{(4-1)} + 2^{(7-1)}$).
        Note that in the context of the Internet suite of
        protocols, values should be calculated accordingly:

            layer   functionality
             1   physical (e.g., repeaters)
             2   datalink/subnetwork (e.g., bridges)
             3   internet (e.g., supports the IP)
             4   end-to-end (e.g., supports the TCP)
             7   applications (e.g., supports the SMTP)

For systems including OSI protocols, layers 5 and 6
may also be counted."

IANAItuProbableCause ::= TEXTUAL-CONVENTION
```

STATUS current
DESCRIPTION
    "ITU-T probable cause values. Duplicate values defined in
    X.733 are appended with X733 to ensure syntactic uniqueness.
    Probable cause value 0 is reserved for special purposes.

    The Internet Assigned Number Authority (IANA) is responsible
    for the assignment of the enumerations in this TC.
    IANAItuProbableCause value of 0 is reserved for special
    purposes and MUST NOT be assigned.

    Values of IANAItuProbableCause in the range 1 to 1023 are
    reserved for causes that correspond to ITU-T probable cause.

    All other requests for new causes will be handled on a
    first-come, first served basis and will be assigned
    enumeration values starting with 1025.

    Request should come in the form of well-formed

    SMI [RFC2578] for enumeration names that are unique and
    sufficiently descriptive.

    While some effort will be taken to ensure that new probable
    causes do not conceptually duplicate existing probable
    causes it is acknowledged that the existence of conceptual
    duplicates in the starting probable cause list is an known
    industry reality.

    To aid IANA in the administration of probable cause names
    and values, the OPS Area Director will appoint one or more
    experts to help review requests.

    See http://www.iana.org"

DESCRIPTION
    "The MIB module for managing remote monitoring
     device implementations. This MIB module
     extends the architecture introduced in the original
     RMON MIB as specified in RFC 2819.

     Copyright (C) The Internet Society (2006). This version of
     this MIB module is part of RFC 4502; see the RFC itself for
     full legal notices."

  REVISION "200605020000Z"   -- May 2, 2006
  DESCRIPTION
    "This version updates the proposed-standard version of the
     RMON2 MIB (published as RFC 2021) by adding 2 new
     enumerations to the nlMatrixTopNControlRateBase object and
     4 new enumerations to the alMatrixTopNControlRateBase object.
     These new enumerations support the creation of high-capacity
     topN reports in the High Capacity RMON MIB [RFC3273].

     Additionally, the following objects have been deprecated, as
     they have not had enough independent implementations to
     demonstrate interoperability to meet the requirements of a
     Draft Standard:

     probeDownloadFile
     probeDownloadTFTPServer
     probeDownloadAction
     probeDownloadStatus

serialMode

serialProtocol

serialTimeout

serialModemInitString

serialModemHangUpString

serialModemConnectResp

serialModemNoConnectResp

serialDialoutTimeout

serialStatus

serialConnectDestIpAddress

serialConnectType

serialConnectDialString

serialConnectSwitchConnectSeq

serialConnectSwitchDisconnectSeq

serialConnectSwitchResetSeq

serialConnectOwner

serialConnectStatus

netConfigIPAddress

netConfigSubnetMask

netConfigStatus

netDefaultGateway

tokenRingMLStats2DroppedFrames

tokenRingMLStats2CreateTime

tokenRingPStats2DroppedFrames

tokenRingPStats2CreateTime

ringStationControl2DroppedFrames

ringStationControl2CreateTime

sourceRoutingStats2DroppedFrames

sourceRoutingStats2CreateTime

trapDestIndex

trapDestCommunity

trapDestProtocol

trapDestAddress

trapDestOwner

trapDestStatus

In addition, two corrections were made. The LastCreateTime
Textual Convention had been defined with a base type of
another textual convention, which isn't allowed in SMIv2. The
definition has been modified to use TimeTicks as the base
type.

Further, the SerialConfigEntry SEQUENCE definition included
sub-typing information that is not allowed in SMIv2. This
information has been deleted. Ranges were added to a number of
objects and textual-conventions to constrain their maximum
(and sometimes minimum) sizes. The addition of these ranges
documents existing practice for these objects. These objects

are:
ControlString
protocolDirID
protocolDirParameters
addressMapNetworkAddress
nlHostAddress
nlMatrixSDSourceAddress
nlMatrixSDDestAddress
nlMatrixDSSourceAddress
nlMatrixDSDestAddress
nlMatrixTopNSourceAddress
nlMatrixTopNDestAddress
alHostEntry
alMatrixSDEntry
alMatrixDSEntry
alMatrixTopNSourceAddress
alMatrixTopNDestAddress

Finally, the TimeFilter TC has been updated to encourage agent
implementations that allow a MIB walk to behave well even when
performed by an application that is not aware of the special
TimeFilter semantics."

REVISION "200207080000Z"   -- 08 July, 2002
DESCRIPTION
"Added new enumerations to support the High-Capacity RMON
MIB as defined in RFC 3273. Also fixed some typos and
added clarifications."

```
ZeroBasedCounter32 ::= TEXTUAL-CONVENTION
    STATUS current
    DESCRIPTION
        "This TC describes an object that counts events with the
        following semantics: objects of this type will be set to
        zero(0) on creation and will thereafter count appropriate
        events, wrapping back to zero(0) when the value 2^32 is
        reached.

        Provided that an application discovers the new object within
        the minimum time to wrap, it can use the initial value as a
        delta since it last polled the table of which this object is
        part.  It is important for a management station to be aware of
        this minimum time and the actual time between polls, and to
        discard data if the actual time is too long or there is no
        defined minimum time.

        Typically, this TC is used in tables where the INDEX space is
        constantly changing and/or the TimeFilter mechanism is in use."
    SYNTAX Gauge32

LastCreateTime ::= TEXTUAL-CONVENTION
    STATUS current
    DESCRIPTION
        "This TC describes an object that stores the value of the
        sysUpTime object at the last time its entry was created.

        This can be used for polling applications to determine that an
        entry has been deleted and re-created between polls, causing
        an otherwise undetectable discontinuity in the data.

        If sysUpTime is reset to zero as a result of a re-
        initialization of the network management (sub)system, then
        the values of all LastCreateTime objects are also reset.
        However, after approximately 497 days without a re-
        initialization, the sysUpTime object will reach 2^^32-1 and
        then increment to zero; in this case, existing values
        of TimeStamp objects do not change.  This can lead to
        ambiguities in the value of TimeStamp objects."
    SYNTAX TimeTicks
```

TimeFilter ::= TEXTUAL-CONVENTION
 STATUS   current
 DESCRIPTION
    "To be used for the index to a table. Allows an application
    to download only those rows changed since a particular time.

    Note that this is not a history mechanism. Only current values
    of underlying objects are returned; saved instance values
    associated with particular values of sysUpTime are not.

    An entry is considered changed if the value of any object in the
    entry changes, if the row is created, or if any object in the
    entry is created or deleted. Note that deleted entries cannot
    be detected or downloaded.

    A time-filtered conceptual table is created by inserting a
    single object of SYNTAX TimeFilter as the first INDEX component
    in a copy of an existing basic conceptual table (i.e., any
    SEQUENCE without a TimeFilter INDEX component). Thus, for
    each conceptual entry 'I' in the basic table, there exists N
    conceptual entries in the time-filtered version, indexed N.I,
    where 'N' is equal to the value of sysUpTime.

    When an application retrieves conceptual instances from a
    time-filtered table, and an INDEX value is provided for the
    TimeFilter INDEX component 'N', the agent will only consider
    returning basic conceptual entries (e.g., 'fooColumn.N.I') if
    any column within the basic conceptual entry has changed since
    sysUpTime 'N'. If not, the basic conceptual entry will
    be ignored for the particular retrieval operation.

    When sysUpTime is equal to zero, this table shall be empty.

    One conceptual entry exists for each past value of sysUpTime,
    except that the whole table is purged should sysUpTime wrap.

    As an entry in a time-filtered table is updated (i.e., one of
    the columns in the basic conceptual table is changed), new
    conceptual entries are also created in the time-filtered version
    (which still shares the now updated object values with all other
    instances). The number of unique time-filtered instances that
    are created is determined by the value of sysUpTime at which the
    basic entry was last updated. One unique instance will exist
    for each value of sysUpTime at the last update time for the row.
    However, a new TimeFilter index instance is created for each new

sysUpTime value. The TimeFilter index values not associated
with entry updates are called duplicate time-filtered instances.

After some deployment experience, it has been determined that
a time-filtered table is more efficient if the agent
stops a MIB walk operation by skipping over rows with a
TimeFilter index value higher than the value in the received
GetNext/GetBulk request. That is, instead of incrementing a
TimeFilter index value, the agent will continue to the next

object or table. As a consequence, GetNext or GetBulk
operations will provide only one pass through a time-filtered
table.

It is suggested that an agent implement a time-filtered table
in this manner to improve performance and avoid a MIB walk
getting stuck in time-filtered tables. It is, however, still
acceptable for an agent to implement a time-filtered table in
the traditional manner (i.e., every conceptual time-filtered
instance is returned in GetNext and GetBulk PDU responses), and
management applications must be able to deal with such
traditional implementations.

See the appendix for further discussion of this textual
convention.

The following example is provided to demonstrate TimeFilter
behavior:

Consider the following basic conceptual table, basicFooTable.
(Note that the basic version of a time-filtered table may not
actually be defined.)

    basicFooTable:

    basicFooTable ...
    INDEX { fooIndex }

    BasicFooEntry {
      fooIndex   Integer32,
      fooCounts   Counter32
    }

For this example, the basicFooTable contains two static
conceptual entries (fooIndex equals '1' and '2'), created at
time zero. It also contains one dynamic conceptual entry

(fooIndex equals '3'), which is created at time '3' and deleted at time '7'.

The time-filtered version of the basicFooTable could be defined as follows:

```
FooTable:

fooTable ...
INDEX { fooTimeMark, fooIndex }

FooEntry {

  fooTimeMark  TimeFilter,
  fooIndex    Integer32,
  fooCounts   Counter32
}
```

Note that entries exist in the time-filtered conceptual table only if they actually exist in the underlying (basic) table.

For this example, the fooTable will have three underlying basic entries (fooIndex == 1, 2, and 3), with the following activity (for sysUpTime equal 0 to 9):

- fooEntry.N.1 is created at time '0' and most recently updated at time '6' to the value '5'.
- fooEntry.N.2 is created at time '0' and most recently updated at time '8' to the value '9'.
- fooEntry.N.3 is created at time '3', updated at time '5' to the value '17', and deleted at time '7'.

The following tables show the values that would be returned for MIB walk operations with various TimeFilter values, done at different times. An application issues a retrieval request at time 'T', with a TimeFilter value, 'N' (typically set to a lower value, such as the value of sysUpTime at the last polling cycle).

The following values would be returned in a MIB walk of fooCounts.N if T equals '0' and N equals '0':

```
fooCounts.N.I   Value
=========================
fooCounts.0.1   0
fooCounts.0.2   0
```

Note that nothing is returned for fooCounts.0.3, since that
entry does not exist at sysUpTime equals '0'.

The following values would be returned in a full (traditional) MIB
walk of fooCounts.N if T equals '3' and N equals '0':

```
fooCounts.N.I   Value
=======================
fooCounts.0.1   0
fooCounts.0.2   0
fooCounts.0.3   0
fooCounts.1.3   0
fooCounts.2.3   0
fooCounts.3.3   0
```

Note that there are no instances for T equals 1 or 2 for the
first two values of N, as these entries did not change
since they were created at time '0'.

Note that the current value for 'fooCounts.N.3' is returned
here, even for values of N less than '3' (when the entry was
created). The agent only considers the current existence of an
entry in the TimeFilter algorithm, not the time when the entry
was created.

Note that the instances 'fooCounts.0.3', 'fooCounts.1.3',
and 'fooCounts.2.3' are duplicates and can be suppressed by the
agent in a MIB walk.

The following values would be returned in a full (traditional)
MIB walk of fooCounts.N if T equals '6' and N equals '3':

```
fooCounts.N.I   Value
=======================
fooCounts.3.1   5
fooCounts.3.3   17
fooCounts.4.1   5
fooCounts.4.3   17
fooCounts.5.1   5
fooCounts.5.3   17
fooCounts.6.1   5
```

Note that no instances for entry 'fooCounts.N.2' are returned,
since it has not changed since time '3'.

Note that all instances except 'fooCounts.5.3' and
'fooCounts.6.1' are duplicates and can be suppressed by the
agent in a MIB walk.

The following values would be returned in a full (traditional)
MIB walk of fooCounts.N if T equals '9' and N equals '6':

```
fooCounts.N.I   Value
=======================
fooCounts.6.1   5
fooCounts.6.2   9
fooCounts.7.2   9
fooCounts.8.2   9
```

Note that no instances for entry 'fooCounts.N.3' are returned,
since it was deleted at time '7'.

Note that instances 'fooCounts.6.2' and 'fooCounts.7.2'

are duplicates and can be suppressed by the agent in a MIB
walk."

    protocolDirStatus   RowStatus
}

protocolDirID OBJECT-TYPE
    SYNTAX   OCTET STRING (SIZE (4..128))
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "A unique identifier for a particular protocol. Standard
        identifiers will be defined in such a manner that they

        can often be used as specifications for new protocols - i.e.,
        a tree-structured assignment mechanism that matches the
        protocol encapsulation 'tree' and that has algorithmic
        assignment mechanisms for certain subtrees. See RFC 2074 for
        more details.

        Despite the algorithmic mechanism, the probe will only place
        entries in here for those protocols it chooses to collect. In
        other words, it need not populate this table with all
        possible ethernet protocol types, nor need it create them on
        the fly when it sees them. Whether it does these
        things is a matter of product definition (cost/benefit,
        usability) and is up to the designer of the product.

        If an entry is written to this table with a protocolDirID that
        the agent doesn't understand, either directly or
        algorithmically, the SET request will be rejected with an
        inconsistentName or badValue (for SNMPv1) error."
    ::= { protocolDirEntry 1 }

protocolDirParameters OBJECT-TYPE

SYNTAX   OCTET STRING (SIZE (1..32))

    MAX-ACCESS read-only
    STATUS   current
    DESCRIPTION

    "The locally arbitrary but unique identifier associated
    with this protocolDir entry.

    The value for each supported protocol must remain constant at
    least from one re-initialization of the entity's network
    management system to the next re-initialization, except that
    if a protocol is deleted and re-created, it must be re-created
    with a new value that has not been used since the last
    re-initialization.

    The specific value is meaningful only within a given SNMP
    entity. A protocolDirLocalIndex must not be re-used until the
    next agent restart in the event that the protocol directory
    entry is deleted."
  ::= { protocolDirEntry 3 }

protocolDirDescr OBJECT-TYPE
    SYNTAX   DisplayString (SIZE (1..64))

MAX-ACCESS read-create
STATUS   current
DESCRIPTION
    "A textual description of the protocol encapsulation.
    A probe may choose to describe only a subset of the
    entire encapsulation (e.g., only the highest layer).

    This object is intended for human consumption only.

    This object may not be modified if the associated
    protocolDirStatus object is equal to active(1)."
::= { protocolDirEntry 4 }

protocolDirType OBJECT-TYPE
  SYNTAX   BITS {
            extensible(0),
            addressRecognitionCapable(1)
          }
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    "This object describes 2 attributes of this protocol
     directory entry.

     The presence or absence of the 'extensible' bit describes
     whether this protocol directory entry can be extended
     by the user by creating protocol directory entries that are
     children of this protocol.

     An example of an entry that will often allow extensibility is

     'ip.udp'. The probe may automatically populate some children
     of this node, such as 'ip.udp.snmp' and 'ip.udp.dns'.
     A probe administrator or user may also populate additional
     children via remote SNMP requests that create entries in this
     table. When a child node is added for a protocol for which the
     probe has no built-in support extending a parent node (for
     which the probe does have built-in support),
     that child node is not extendable. This is termed 'limited
     extensibility'.

     When a child node is added through this extensibility
     mechanism, the values of protocolDirLocalIndex and
     protocolDirType shall be assigned by the agent.

     The other objects in the entry will be assigned by the

manager who is creating the new entry.

This object also describes whether this agent can
recognize addresses for this protocol, should it be a
network-level protocol. That is, while a probe may be able
to recognize packets of a particular network-layer protocol
and count them, it takes additional logic to be able to
recognize the addresses in this protocol and to populate
network-layer or application-layer tables with the addresses
in this protocol. If this bit is set, the agent will
recognize network-layer addresses for this protocol and
populate the network- and application-layer host and matrix
tables with these protocols.

Note that when an entry is created, the agent will supply
values for the bits that match the capabilities of the agent
with respect to this protocol. Note that since row creations
usually exercise the limited extensibility feature, these
bits will usually be set to zero."
    ::= { protocolDirEntry 5 }

          }
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
    "This object describes and configures the probe's support for
    address mapping for this protocol. When the probe creates
    entries in this table for all protocols that it understands,

    it will set the entry to notSupported(1) if it doesn't have
    the capability to perform address mapping for the protocol or
    if this protocol is not a network-layer protocol. When
    an entry is created in this table by a management operation as
    part of the limited extensibility feature, the probe must set
    this value to notSupported(1), because limited extensibility
    of the protocolDirTable does not extend to interpreting
    addresses of the extended protocols.

    If the value of this object is notSupported(1), the probe
    will not perform address mapping for this protocol and
    shall not allow this object to be changed to any other value.

If the value of this object is supportedOn(3), the probe
supports address mapping for this protocol and is configured
to perform address mapping for this protocol for all
addressMappingControlEntries and all interfaces.
If the value of this object is supportedOff(2), the probe
supports address mapping for this protocol but is configured
to not perform address mapping for this protocol for any
addressMappingControlEntries and all interfaces.
Whenever this value changes from supportedOn(3) to
supportedOff(2), the probe shall delete all related entries in
the addressMappingTable."
   ::= { protocolDirEntry 6 }

protocolDirHostConfig OBJECT-TYPE

           notSupported(1),
           supportedOff(2),
           supportedOn(3)
        }
   MAX-ACCESS read-create
   STATUS   current
   DESCRIPTION
      "This object describes and configures the probe's support for
      the network-layer and application-layer host tables for this
      protocol. When the probe creates entries in this table for
      all protocols that it understands, it will set the entry to
      notSupported(1) if it doesn't have the capability to track the
      nlHostTable for this protocol or if the alHostTable is
      implemented but doesn't have the capability to track this
      protocol. Note that if the alHostTable is implemented, the
      probe may only support a protocol if it is supported in both
      the nlHostTable and the alHostTable.

      If the associated protocolDirType object has the
      addressRecognitionCapable bit set, then this is a network-
      layer protocol for which the probe recognizes addresses, and

      thus the probe will populate the nlHostTable and alHostTable
      with addresses it discovers for this protocol.

      If the value of this object is notSupported(1), the probe
      will not track the nlHostTable or alHostTable for this
      protocol and shall not allow this object to be changed to any
      other value. If the value of this object is supportedOn(3),
      the probe supports tracking of the nlHostTable and alHostTable
      for this protocol and is configured to track both tables

for this protocol for all control entries and all interfaces.
If the value of this object is supportedOff(2), the probe
supports tracking of the nlHostTable and alHostTable for this
protocol but is configured to not track these tables
for any control entries or interfaces.
Whenever this value changes from supportedOn(3) to
supportedOff(2), the probe shall delete all related entries in
the nlHostTable and alHostTable.

Note that since each alHostEntry references 2 protocol
directory entries, one for the network address and one for the
type of the highest protocol recognized, an entry will
only be created in that table if this value is supportedOn(3)
for both protocols."
::= { protocolDirEntry 7 }

protocolDirMatrixConfig OBJECT-TYPE

        }
    MAX-ACCESS read-create
    STATUS   current
    DESCRIPTION
        "This object describes and configures the probe's support for
        the network-layer and application-layer matrix tables for this
        protocol. When the probe creates entries in this table for
        all protocols that it understands, it will set the entry to
        notSupported(1) if it doesn't have the capability to track the
        nlMatrixTables for this protocol or if the alMatrixTables are
        implemented but don't have the capability to track this
        protocol. Note that if the alMatrix tables are implemented,
        the probe may only support a protocol if it is supported in
        both of the nlMatrixTables and both of the
        alMatrixTables.

        If the associated protocolDirType object has the
        addressRecognitionCapable bit set, then this is a network-

        layer protocol for which the probe recognizes addresses, and
        thus the probe will populate both of the nlMatrixTables and
        both of the alMatrixTables with addresses it discovers for
        this protocol.

        If the value of this object is notSupported(1), the probe

will not track either of the nlMatrixTables or the
alMatrixTables for this protocol and shall not allow this
object to be changed to any other value. If the value of this
object is supportedOn(3), the probe supports tracking of both
of the nlMatrixTables and (if implemented) both of the
alMatrixTables for this protocol and is configured to track
these tables for this protocol for all control entries and all
interfaces. If the value of this object is supportedOff(2),
the probe supports tracking of both of the nlMatrixTables and
(if implemented) both of the alMatrixTables for this protocol
but is configured to not track these tables for this
protocol for any control entries or interfaces.
Whenever this value changes from supportedOn(3) to
supportedOff(2), the probe shall delete all related entries in
the nlMatrixTables and the alMatrixTables.

Note that since each alMatrixEntry references 2 protocol
directory entries, one for the network address and one for the
type of the highest protocol recognized, an entry will
only be created in that table if this value is supportedOn(3)
for both protocols."

-- discovered by the probe.
-- Note that while the hlHostControlTable also has objects that
-- control an optional alHostTable, implementation of the alHostTable is
-- not required to fully implement this group.

hlHostControlTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF HlHostControlEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "A list of higher-layer (i.e., non-MAC) host table control
    entries.

These entries will enable the collection of the network- and
application-level host tables indexed by network addresses.
Both the network- and application-level host tables are
controlled by this table so that they will both be created
and deleted at the same time, further increasing the ease with
which they can be implemented as a single datastore. (Note that
if an implementation stores application-layer host records in
memory, it can derive network-layer host records from them.)

Entries in the nlHostTable will be created on behalf of each
entry in this table. Additionally, if this probe implements
the alHostTable, entries in the alHostTable will be created on
behalf of each entry in this table.

Implementations are encouraged to add an entry per monitored
interface upon initialization so that a default collection
of host statistics is available."

--
-- Network Layer Matrix Group
--
-- Counts the amount of traffic sent between each pair of network
-- addresses discovered by the probe.
-- Note that while the hlMatrixControlTable also has objects that
-- control optional alMatrixTables, implementation of the
-- alMatrixTables is not required to fully implement this group.

hlMatrixControlTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF HlMatrixControlEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "A list of higher-layer (i.e., non-MAC) matrix control entries.

    These entries will enable the collection of the network- and
    application-level matrix tables containing conversation

statistics indexed by pairs of network addresses.
Both the network- and application-level matrix tables are
controlled by this table so that they will both be created
and deleted at the same time, further increasing the ease with
which they can be implemented as a single datastore. (Note that
if an implementation stores application-layer matrix records

in memory, it can derive network-layer matrix records from
them.)

Entries in the nlMatrixSDTable and nlMatrixDSTable will be
created on behalf of each entry in this table. Additionally,
if this probe implements the alMatrix tables, entries in the
alMatrix tables will be created on behalf of each entry in
this table."

    nlMatrixTopNEntries are sorted by, as well as a control
    for the table that the results will be reported in.

    This object may not be modified if the associated
    nlMatrixTopNControlStatus object is equal to active(1).

    If this value is less than or equal to 2, when the report
    is prepared, entries are created in the nlMatrixTopNTable
    associated with this object.
    If this value is greater than or equal to 3, when the report
    is prepared, entries are created in the
    nlMatrixTopNHighCapacityTable associated with this object."
  ::= { nlMatrixTopNControlEntry 3 }

nlMatrixTopNControlTimeRemaining OBJECT-TYPE
  SYNTAX   Integer32 (0..2147483647)
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
    "The number of seconds left in the report currently
    being collected. When this object is modified by
    the management station, a new collection is started,
    possibly aborting a currently running report. The
    new value is used as the requested duration of this

report and is immediately loaded into the associated
nlMatrixTopNControlDuration object.

When the report finishes, the probe will automatically
start another collection with the same initial value
of nlMatrixTopNControlTimeRemaining. Thus, the management
station may simply read the resulting reports repeatedly,
checking the startTime and duration each time to ensure that a
report was not missed or that the report parameters were not
changed.

While the value of this object is non-zero, it decrements
by one per second until it reaches zero. At the time
that this object decrements to zero, the report is made
accessible in the nlMatrixTopNTable, overwriting any report
that may be there.

When this object is modified by the management station, any
associated entries in the nlMatrixTopNTable shall be deleted.

(Note that this is a different algorithm than the one used
in the hostTopNTable)."

nlMatrixTopNControlGrantedSize OBJECT-TYPE
   SYNTAX   Integer32 (0..2147483647)
   MAX-ACCESS read-only
   STATUS   current
   DESCRIPTION
      "The maximum number of matrix entries in this report.

      When the associated nlMatrixTopNControlRequestedSize object is
      created or modified, the probe should set this
      object as closely to the requested value as
      possible for the particular implementation and
      available resources. The probe must not lower this
      value except as a side-effect of a set to the associated
      nlMatrixTopNControlRequestedSize object.

      If the value of nlMatrixTopNControlRateBase is equal to
      nlMatrixTopNPkts, when the next topN report is generated,
      matrix entries with the highest value of nlMatrixTopNPktRate
      shall be placed in this table in decreasing order of this rate
      until there is no more room or until there are no more
      matrix entries.

      If the value of nlMatrixTopNControlRateBase is equal to
      nlMatrixTopNOctets, when the next topN report is generated,
      matrix entries with the highest value of nlMatrixTopNOctetRate
      shall be placed in this table in decreasing order of this rate

until there is no more room or until there are no more
matrix entries.

It is an implementation-specific matter how entries with the
same value of nlMatrixTopNPktRate or nlMatrixTopNOctetRate are
sorted. It is also an implementation-specific matter as to

whether zero-valued entries are available."

    alMatrixTopNControlTimeRemaining OBJECT-TYPE
        SYNTAX   Integer32 (0..2147483647)
        MAX-ACCESS read-create
        STATUS   current
        DESCRIPTION
            "The number of seconds left in the report currently
            being collected. When this object is modified by
            the management station, a new collection is started,
            possibly aborting a currently running report. The
            new value is used as the requested duration of this
            report and is immediately loaded into the associated
            alMatrixTopNControlDuration object.

            When the report finishes, the probe will automatically
            start another collection with the same initial value
            of alMatrixTopNControlTimeRemaining. Thus, the management
            station may simply read the resulting reports repeatedly,
            checking the startTime and duration each time to ensure that a
            report was not missed or that the report parameters were not
            changed.

While the value of this object is non-zero, it decrements
by one per second until it reaches zero. At the time

that this object decrements to zero, the report is made
accessible in the alMatrixTopNTable, overwriting any report
that may be there.

When this object is modified by the management station, any
associated entries in the alMatrixTopNTable shall be deleted.

(Note that this is a different algorithm than the one used
in the hostTopNTable)."

::= { alMatrixTopNEntry 9 }

--
-- User History Collection Group (usrHistory)
--
-- The usrHistory group combines mechanisms seen in the alarm and
-- history groups to provide user-specified history collection,
-- utilizing two additional control tables and one additional data

-- table. This function has traditionally been done by NMS
-- applications, via periodic polling. The usrHistory group allows
-- this task to be offloaded to an RMON probe.
--
-- Data (an ASN.1 INTEGER based object) is collected in the same
-- manner as any history data table (e.g., etherHistoryTable) except
-- that the user specifies the MIB instances to be collected. Objects
-- are collected in bucket-groups, with the intent that all MIB
-- instances in the same bucket-group are collected as atomically as
-- possible by the RMON probe.
--
-- The usrHistoryControlTable is a one-dimensional read-create table.
-- Each row configures a collection of user history buckets, much
-- the same as a historyControlEntry, except that the creation of a
-- row in this table will cause one or more associated instances in
-- the usrHistoryObjectTable to be created. The user specifies the
-- number of bucket elements (rows in the usrHistoryObjectTable)
-- requested, as well as the number of buckets requested.
--
-- The usrHistoryObjectTable is a 2-d read-write table.
-- Each row configures a single MIB instance to be collected.
-- All rows with the same major index constitute a bucket-group.
--
-- The usrHistoryTable is a 3-d read-only table containing

-- the data of associated usrHistoryControlEntries. Each
-- entry represents the value of a single MIB instance
-- during a specific sampling interval (or the rate of
-- change during the interval).
--
-- A sample value is stored in two objects - an absolute value and
-- a status object. This allows numbers from -(2G-1) to +4G to be
-- stored. The status object also indicates whether a sample is
-- valid. This allows data collection to continue if periodic
-- retrieval of a particular instance fails for any reason.
--
-- Row Creation Order Relationships
--
-- The static nature of the usrHistoryObjectTable creates
-- some row creation/modification issues. The rows in this
-- table need to be set before the associated
-- usrHistoryControlEntry can be activated.
--
-- Note that the usrHistoryObject entries associated with a
-- particular usrHistoryControlEntry are not required to
-- be active before the control entry is activated. However,

-- the usrHistory data entries associated with an inactive

-- usrHistoryObject entry will be inactive (i.e.,

-- usrHistoryValStatus == valueNotAvailable).

usrHistoryControlBucketsGranted OBJECT-TYPE
  SYNTAX Integer32 (1..65535)
  MAX-ACCESS read-only
  STATUS current
  DESCRIPTION
    "The number of discrete sampling intervals
    over which data shall be saved in the part of
    the usrHistoryTable associated with this
    usrHistoryControlEntry.

    When the associated usrHistoryControlBucketsRequested
    object is created or modified, the probe should set
    this object as closely to the requested value as

possible for the particular probe implementation and
available resources. The probe must not lower this
value except as a result of a modification to the associated
usrHistoryControlBucketsRequested object.

The associated usrHistoryControlBucketsRequested object
should be set before or at the same time as this object
to allow the probe to accurately estimate the resources
required for this usrHistoryControlEntry.

There will be times when the actual number of buckets
associated with this entry is less than the value of
this object. In this case, at the end of each sampling
interval, a new bucket will be added to the usrHistoryTable.

When the number of buckets reaches the value of this object
and a new bucket is to be added to the usrHistoryTable,
the oldest bucket associated with this usrHistoryControlEntry
shall be deleted by the agent so that the new bucket can be
added.

When the value of this object changes to a value less than
the current value, entries are deleted from the
usrHistoryTable associated with this usrHistoryControlEntry.
Enough of the oldest of these entries shall be deleted by the
agent so that their number remains less than or equal to the
new value of this object.

When the value of this object changes to a value greater
than the current value, the number of associated usrHistory
entries may be allowed to grow."

    MIB instance to be collected periodically."
  ::= { usrHistoryObjectEntry 1 }

usrHistoryObjectVariable OBJECT-TYPE
  SYNTAX OBJECT IDENTIFIER
  MAX-ACCESS read-create
  STATUS current
  DESCRIPTION
    "The object identifier of the particular variable to be

    sampled.

    Only variables that resolve to an ASN.1 primitive type of
    Integer32 (Integer32, Counter, Gauge, or TimeTicks) may be
    sampled.

Because SNMP access control is articulated entirely in terms
of the contents of MIB views, no access control mechanism
exists that can restrict the value of this object to identify
only those objects that exist in a particular MIB view.
Because there is thus no acceptable means of restricting the
read access that could be obtained through the user history
mechanism, the probe must only grant write access to this
object in those views that have read access to all objects on
the probe. See USM [RFC3414] and VACM [RFC3415] for more
information.

During a set operation, if the supplied variable name is not
available in the selected MIB view, a badValue error must be
returned.

This object may not be modified if the associated
usrHistoryControlStatus object is equal to active(1)."
   ::= { usrHistoryObjectEntry 2 }

usrHistoryObjectSampleType OBJECT-TYPE
   SYNTAX INTEGER {
         absoluteValue(1),
         deltaValue(2)
      }
   MAX-ACCESS read-create
   STATUS current
   DESCRIPTION
      "The method of sampling the selected variable for storage in
      the usrHistoryTable.

      If the value of this object is absoluteValue(1), the value of
      the selected variable will be copied directly into the history
      bucket.

      If the value of this object is deltaValue(2), the value of the
      selected variable at the last sample will be subtracted from
      the current value, and the difference will be stored in the
      history bucket. If the associated usrHistoryObjectVariable
      instance could not be obtained at the previous sample
      interval, then a delta sample is not possible, and the value
      of the associated usrHistoryValStatus object for this interval
      will be valueNotAvailable(1).

      This object may not be modified if the associated
      usrHistoryControlStatus object is equal to active(1)."

  MAX-ACCESS not-accessible
  STATUS   current

DESCRIPTION
    "An index that uniquely identifies the particular sample this
    entry represents among all samples associated with the same
    usrHistoryControlEntry. This index starts at 1 and increases
    by one as each new sample is taken."
    ::= { usrHistoryEntry 1 }

usrHistoryIntervalStart OBJECT-TYPE
    SYNTAX TimeStamp
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "The value of sysUpTime at the start of the interval over
        which this sample was measured. If the probe keeps track of
        the time of day, it should start the first sample of the
        history at a time such that when the next hour of the day
        begins, a sample is started at that instant.

        Note that following this rule may require that the probe delay
        collecting the first sample of the history, as each sample
        must be of the same interval. Also note that the sample that
        is currently being collected is not accessible in this table
        until the end of its interval."
    ::= { usrHistoryEntry 2 }

usrHistoryIntervalEnd OBJECT-TYPE
    SYNTAX TimeStamp
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "The value of sysUpTime at the end of the interval over which
        this sample was measured."
    ::= { usrHistoryEntry 3 }

usrHistoryAbsValue OBJECT-TYPE
    SYNTAX Gauge32
    MAX-ACCESS read-only
    STATUS current
    DESCRIPTION
        "The absolute value (i.e., unsigned value) of the
        user-specified statistic during the last sampling period. The
        value during the current sampling period is not made available
        until the period is completed.

        To obtain the true value for this sampling interval, the
        associated instance of usrHistoryValStatus must be checked,
        and usrHistoryAbsValue adjusted as necessary.

If the MIB instance could not be accessed during the sampling
interval, then this object will have a value of zero, and the
associated instance of usrHistoryValStatus will be set to
'valueNotAvailable(1)'.

The access control check prescribed in the definition of
usrHistoryObjectVariable SHOULD be checked for each sampling
interval. If this check determines that access should not be
allowed, then this object will have a value of zero, and the
associated instance of usrHistoryValStatus will be set to
'valueNotAvailable(1)'."
  ::= { usrHistoryEntry 4 }

usrHistoryValStatus OBJECT-TYPE
  SYNTAX INTEGER {
      valueNotAvailable(1),
      valuePositive(2),
      valueNegative(3)
  }
  MAX-ACCESS read-only
  STATUS current
  DESCRIPTION
      "This object indicates the validity and sign of the data in
      the associated instance of usrHistoryAbsValue.

      If the MIB instance could not be accessed during the sampling
      interval, then 'valueNotAvailable(1)' will be returned.

      If the sample is valid and the actual value of the sample is
      greater than or equal to zero, then 'valuePositive(2)' is
      returned.

      If the sample is valid and the actual value of the sample is
      less than zero, 'valueNegative(3)' will be returned. The
      associated instance of usrHistoryAbsValue should be multiplied
      by -1 to obtain the true sample value."
  ::= { usrHistoryEntry 5 }

-- The Probe Configuration Group
--
-- This group controls the configuration of various operating
-- parameters of the probe.

ControlString ::= TEXTUAL-CONVENTION

STATUS current
DESCRIPTION
    "This data type is used to communicate with a modem or a

    serial data switch. A ControlString contains embedded
    commands to control how the device will interact with the
    remote device through the serial interface. Commands are
    represented as two-character sequences beginning with
    the '^' character.

    The following commands are recognized by the device (note
    that command characters are case sensitive):

      ^s Send string that follows, which is terminated by the
        next command or the end of string.
      ^c Delay for the number of seconds that follows. Toss
        out any data received rather than store it in a
        buffer for parsing.
      ^t Set timeout to the value represented by the decimal
        digits that follow. The default timeout is 20
        seconds. Note that this timeout may be overridden
        by a smaller serialTimeout configured for the
        associated serial interface (see serialConfigTable).
      ^w Wait for the reply string that follows, which is
        terminated by the next command or the end of string.
        Partial and case-insensitive matching is applied, i.e.,
        if the reply string (any case combination) is found
        anywhere in the received string, then the a match is
        found. If the current timeout elapses without a match,
        then the remaining control string is ignored.
      ^! The ^ character.
      ^d Delay the number of seconds specified by the decimal
        digits that follow.
      ^b Send break for the number of milliseconds specified by
        the decimal digits that follow. If no digits follow,
        break will be enforced for 250 milliseconds by default.

    The following ASCII control characters may be inserted into
    the '^s' send string or the '^w' reply string:

      ^@   0x00
      ^A   0x01
      ..
      ^M   0x0D
      ..
      ^Z   0x1A

```
    ^[    0x1B
    ^\    0x1C
    ^]    0x1D
    ^^    0x1E
    ^_    0x1F
```

Binary data may also be inserted into the data stream. The
control sequence for each byte of binary data is ^0x##, where
is the hexadecimal representation of the data byte. Two
ASCII characters (0-9, a-f, A-F) must follow the '^0x'
control prefix. For example, '^0x0D^0x0A' is interpreted as a
carriage return followed by a line feed."

-- Trap Destination Table
--
-- This table defines the destination addresses for traps generated
-- from the device. This table maps a community to one or more trap
-- destination entries.
--
-- The same trap will be sent to all destinations specified in the
-- entries that have the same trapDestCommunity as the eventCommunity
-- (as defined by RMON MIB), as long as no access control mechanism
-- (e.g., VACM) prohibits sending to one or more of the destinations.
-- Information in this table will be stored in non-volatile memory.

-- If the device has gone through a hard restart, this information
-- will be reset to its default state.

    DESCRIPTION
     "This is the MIB Module for DOCSIS-compliant cable modems
```

and cable-modem termination systems.

Copyright (C) The IETF Trust (2006). This version
of this MIB module was published in RFC 4639; for full
legal notices see the RFC itself."

REVISION "200612200000Z" -- December 20, 2006
DESCRIPTION
  "Second version, published as RFC 4639.

  Modifications to this MIB module since RFC 2669 include:
  - Deprecation of the docsDevFilter group in favor of the
    DiffServ MIB groups, to enable support for IPv6
    filtering and DiffServ Code Point (DSCP) marking.
  - Deprecation of the docsDevCpeGroup in favor of the
    docsDevCpeInetGroup, to enable support of IPv6.
  - Addition of various InetAddress objects to enable
    support of IPv6.
  - Deprecation of docsDevNmAccessTable in favor of SNMP
    Coexistence and SNMPv3 -- yet adding
    docsDevNmAccessTrapVersion and clarifying
    docsDevNmAccessIp for current use of this table,
  - Addition of docsDevIgmpModeControl for management and
    control of the IGMP mode of operation,
  - Addition of docsDevMaxCpe for management of the
    maxmium number of CPEs permitted access through a
    cable modem,
  - Addition of docsDevSwServerTransportProtocol, and
    modifications to docsDevSoftware object DESCRIPTIONS,
    to enable software downloads via either TFTP or HTTP,
  - Replacement of docsDevEvThrottleInhibited with
    docsDevEvThrottleThresholdExceeded to simplify
    event threshold management,
  - Modification of docsDevEvReporting to enable local
    logging to the internal volatile log, and not to the
    internal non-volatile log,
  - Modification of the compliance statement to make the
    docsDevCpe objects optional
  - Created placeholders for two OIDs in the
    docsDevFilterPolicyTable that were never used
  - Modified the DESCRIPTION of
    docsDevSwServerTransportProtocol and
    docsDevSwServerAddressType to address the
    dependence between each object
  - Added a reference to docsDevServerConfigTftpAddress
  - Clarified the scope of notifications that are covered

by docsDevEvThrottleThreshold

- Clarified an error condition that could occur when

doing a SET to docsDevEvReporting

- Defined each of the enumerated types for both
  docsDevEvLevel and docsDevEvPriority
- Added UNITS clause to docsDevFilterLLCMatches,
  docsDevFilterIpMatches, docsDevMaxCpe,
  docsDevEvThrottleThreshold and docsDevEvCounts.
- Added REFERENCE clause to docsDevFilterIpProtocol
- Modified DESCRIPTION of docsDevCpeInetAddr to be
  more protocol-neutral
- Removed the enumerated value (1) from both
  docsDevCpeInetSource and docsDevCpeSource
- Covered additional read-write and read-create objects
  in the Security Considerations section
- Modified the default value of docsDevNmAccessIpMask
  to be consistent with OSSI specification
- Modified the SYNTAX of docsDevNmAccessCommunity and
  docsDevNmAccessInterfaces in the Conformance
  Statement section
- Added SYNTAX clause to docsDevEvReporting in the
  Conformance Statement section
- Modified SYNTAX clause of docsDevEvReporting to
  move new enumerated type to byte boundary
- Added references to DOCSIS 2.0 specifications to
  multiple objects
- Clarified non-persistency across reboots for
  all tables
- Clarified functionality of docsDevSw objects as
  they relate to docsDevSwOperStatus
- Clarified enumerated types (9) and (10) for
  docsDevServerBootState
- Defined the state of unknown(0) for the following
  objects: docsDevServerDhcpAddressType,
  docsDevServerTimeAddressType,
  docsDevServerConfigTftpAddressType and
  docsDevServerConfigTftpAddressType
- Modified the value in docsDevFilterIpDaddr to be
  consistent with the SYNTAX
- Specified which rows could be modified in an
  active row for docsDevFilterPolicyStatus
- Defined the term 'manually' in docsDevCpeEnroll
- Clarified the description for
  docsDevFilterTosOrMask
- Covered the case of a non-existent row for

docsDevFilterPolicyPtr
- Added DEFVAL clauses for multiple objects
- Replaced docsDevNotification OBJECT IDENTIFIER
  with docsDevNotifications to address possible
  compatibility issues

- Added support for the usage of RFC 3413 and RFC 3014
  as event notification mechanisms
- Removed docsDevFilterPolicyObsoleteGroup
- Added stdInterface(9) type to docsDevEvReporting to
  support the usage of RFC3413 and RFC3014
- Modified DESCRIPTION for docsDevMaxCpe"

REVISION "199908190000Z"
DESCRIPTION
   "Initial version, published as RFC 2669."

   ::= { mib-2 69 }

docsDevBase OBJECT IDENTIFIER ::= { docsDevMIBObjects 1 }

--
-- For the following object, there is no concept in the
-- RFI specification corresponding to a backup CMTS. The
-- enumeration is provided here in case someone is able
-- to define such a role or device.
--

docsDevRole OBJECT-TYPE
    SYNTAX INTEGER {
       cm(1),
       cmtsActive(2),
       cmtsBackup(3)
    }
    MAX-ACCESS read-only
    STATUS   current
    DESCRIPTION
       "Defines the current role of this device. cm(1) is a
       Cable Modem, cmtsActive(2) is a Cable Modem Termination
       System that is controlling the system of cable modems,
       and cmtsBackup(3) is a CMTS that is currently connected
       but is not controlling the system (not currently used).

       In general, if this device is a 'cm', its role will not

change during operation or between reboots. If the
device is a 'cmts' it may change between cmtsActive and
cmtsBackup and back again during normal operation. NB:
At this time, the DOCSIS standards do not support the
concept of a backup CMTS, but cmtsBackup is included for
completeness."
::= { docsDevBase 1 }

docsDevDateTime OBJECT-TYPE
    SYNTAX   DateAndTime
    MAX-ACCESS read-write
    STATUS   current
    DESCRIPTION
       "The current date and time, with time zone information
       (if known).

       If the real data and time cannot be determined, this
       shall represent elapsed time from boot relative to
       the standard epoch '1970-1-1,0:0:0.0'. In other
       words, if this agent has been up for 3 minutes and
       not been able to determine what the actual date and
       time are, this object will return the value
       '1970-1-1,0:03:0.0'."
    ::= { docsDevBase 2 }

docsDevResetNow OBJECT-TYPE
    SYNTAX   TruthValue
    MAX-ACCESS read-write
    STATUS   current
    DESCRIPTION
       "Setting this object to true(1) causes the device to
       reset. Reading this object always returns false(2)."
    ::= { docsDevBase 3 }

docsDevSerialNumber OBJECT-TYPE
    SYNTAX   SnmpAdminString
    MAX-ACCESS read-only
    STATUS   current
    DESCRIPTION

--
-- The following table provides one level of security for access
-- to the device by network management stations.
-- Note that access is also constrained by the
-- community strings and any vendor-specific security.
--

docsDevNmAccessTable OBJECT-TYPE
     SYNTAX   SEQUENCE OF DocsDevNmAccessEntry
     MAX-ACCESS not-accessible
     STATUS   deprecated
     DESCRIPTION
        "This table controls access to SNMP objects by network
         management stations. If the table is empty, access to
         SNMP objects is unrestricted. The objects in this table
         MUST NOT persist across reboots. The objects in this
         table are only accessible from cable devices that are
         not capable of operating in SNMP Coexistence mode
         (RFC 3584) or in SNMPv3 mode (RFC 3410).
         See the conformance section for
         details. Note that some devices are required by other
         specifications (e.g., the DOCSIS OSSIv1.1 specification)
         to support the legacy SNMPv1/v2c docsDevNmAccess mode
         for backward compatibility.

         This table is deprecated. Instead, use the SNMP

coexistence MIBs from RFC 3584, the TARGET and
NOTIFICATION MIBs from RFC 3413, and
the View-Based Access Control Model (VACM) MIBs for
all SNMP protocol versions from RFC 3415."
::= { docsDevMIBObjects 2 }

docsDevNmAccessEntry OBJECT-TYPE
    SYNTAX   DocsDevNmAccessEntry
    MAX-ACCESS not-accessible
    STATUS   deprecated
    DESCRIPTION
        "An entry describing access to SNMP objects by a
        particular network management station. An entry in
        this table is not readable unless the management station
        has read-write permission (either implicit if the table
        is empty, or explicit through an entry in this table).
        Entries are ordered by docsDevNmAccessIndex. The first

        matching entry (e.g., matching IP address and community
        string) is used to derive access."

        roWithTraps(4),
        rwWithTraps(5),
        trapsOnly(6)
    }
    MAX-ACCESS read-create

STATUS   deprecated
DESCRIPTION
    "Specifies the type of access allowed to this NMS.
    Setting this object to none(1) causes the table entry
    to be destroyed. Read(2) allows access by 'get' and
    'get-next' PDUs. ReadWrite(3) allows access by 'set' as
    well. RoWithtraps(4), rwWithTraps(5), and trapsOnly(6)
    control distribution of Trap PDUs transmitted by this
    device."
DEFVAL { read }
::= { docsDevNmAccessEntry 5 }

-- The syntax of the following object was copied from RFC 1493,
-- dot1dStaticAllowedToGoTo.

docsDevNmAccessInterfaces OBJECT-TYPE
    SYNTAX   OCTET STRING (SIZE (1..32))
    MAX-ACCESS read-create
    STATUS   deprecated
    DESCRIPTION
        "Specifies the set of interfaces from which requests from
        this NMS will be accepted. Each octet within
        the value of this object specifies a set of eight

        interfaces, the first octet specifying ports 1
        through 8, the second octet specifying interfaces 9
        through 16, etc. Within each octet, the most
        significant bit represents the lowest numbered
        interface, and the least significant bit represents the
        highest numbered interface. Thus, each interface is
        represented by a single bit within the value of this
        object. If that bit has a value of '1' then that
        interface is included in the set.

        Note that entries in this table apply only to link-layer
        interfaces (e.g., Ethernet and CATV MAC). Bits
        representing upstream and downstream channel interfaces
        MUST NOT be set to '1'.

        Note that if bits corresponding to non-existing
        interfaces are set, the result is implementation
        specific.

        Note that according to the DOCSIS OSSIv1.1
        specification, when ifIndex '1' is included in the
        set, then this row applies to all CPE

(customer-facing) interfaces.

        The size of this object is the minimum required to
        represent all configured interfaces for this device."
    ::= { docsDevNmAccessEntry 6 }

docsDevNmAccessStatus OBJECT-TYPE
    SYNTAX   RowStatus
    MAX-ACCESS read-create
    STATUS   deprecated
    DESCRIPTION
        "Controls and reflects the status of rows in this
        table. Rows in this table may be created by either the
        create-and-go or create-and-wait paradigm. There is no
        restriction on changing values in a row of this table
        while the row is active.

        The following objects MUST have valid values before this
        object can be set to active: docsDevNmAccessIp,
        docsDevNmAccessStatus, docsDevNmAccessIpMask,
        docsDevNmAccessCommunity, docsDevNmAccessControl, and
        docsDevNmAccessInterfaces."

        allowProvisioningUpgrade(2),
        ignoreProvisioningUpgrade(3)
    }
    MAX-ACCESS read-write
    STATUS   current
    DESCRIPTION
        "If set to upgradeFromMgt(1), the device will initiate a

TFTP or HTTP software image download. After
successfully receiving an image, the device will set
its state to ignoreProvisioningUpgrade(3) and reboot.
If the download process is interrupted (e.g., by a reset
or power failure), the device will load the previous
image and, after re-initialization, continue to attempt
loading the image specified in docsDevSwFilename.

If set to allowProvisioningUpgrade(2), the device will
use the software version information supplied by the
provisioning server when next rebooting (this does not
cause a reboot).

When set to ignoreProvisioningUpgrade(3), the device
will disregard software image upgrade information
from the provisioning server.

Note that reading this object can return
upgradeFromMgt(1). This indicates that a software
download is currently in progress, and that the device
will reboot after successfully receiving an image."

SYNTAX INTEGER {
  unconstrained(1),
  maintainBelowThreshold(2),
  stopAtThreshold(3),
  inhibited(4)
}
MAX-ACCESS read-write
STATUS   current
DESCRIPTION
  "Controls the transmission of traps and syslog messages
  with respect to the trap pacing threshold.

  unconstrained(1) causes traps and syslog messages to be
  transmitted without regard to the threshold settings.

  maintainBelowThreshold(2) causes trap transmission and
  syslog messages to be suppressed if the number of traps
  would otherwise exceed the threshold.

  stopAtThreshold(3) causes trap transmission to cease at
  the threshold and not to resume until directed to do so.

  inhibited(4) causes all trap transmission and syslog
  messages to be suppressed.

  A single event is always treated as a single event for
  threshold counting. That is, an event causing both a
  trap and a syslog message is still treated as a single
  event.

  Writing to this object resets the thresholding state."

    information(7),
    debug(8)

}
        MAX-ACCESS not-accessible
        STATUS   current
        DESCRIPTION
            "The priority level that is controlled by this
            entry. These are ordered from most (emergency) to least
            (debug) critical. Each event with a CM or CMTS has a
            particular priority level associated with it (as defined
            by the vendor).

            emergency(1) events indicate vendor-specific fatal
            hardware or software errors that prevent normal system
            operation.

            alert(2) events indicate a serious failure that causes
            the reporting system to reboot but is not caused by
            hardware or software malfunctioning.

            critical(3) events indicate a serious failure that
            requires attention and prevents the device from
            transmitting data but that could be recovered without
            rebooting the system.

            error(4) and warning(5) events indicate that a failure
            occurred that could interrupt the normal data flow but
            that does not cause the device to re-register.

            notice(6) and information(7) events indicate a
            milestone or checkpoint in normal operation that could
            be of particular importance for troubleshooting.

            debug(8) events are reserved for vendor-specific
            events.

            During normal operation, no event more
            critical than notice(6) should be generated. Events
            between warning and emergency should be generated at
            appropriate levels of problems (e.g., emergency when the
            box is about to crash)."
        ::= { docsDevEvControlEntry 1 }

            local(0),
            traps(1),

syslog(2),
        -- The following are extensions to the original set of
        -- labels. The extensions start at an octet boundary.
        -- So for bits 3 - 7, one MUST set them to zero on send
        -- and one MUST ignore them on receipt.
        localVolatile(8),
        stdInterface(9)
    }
    MAX-ACCESS read-write
    STATUS   current
    DESCRIPTION
        "Defines the action to be taken on occurrence of this
        event class. Implementations may not necessarily
        support all options for all event classes but at
        minimum must allow traps and syslogging to be
        disabled.

        If the local(0) bit is set, then log to the internal
        log and update non-volatile store, for backward
        compatibility with the original RFC 2669 definition.
        If the traps(1) bit is set, then generate
        an SNMP trap; if the syslog(2) bit is set, then
        send a syslog message (assuming that the syslog address
        is set). If the localVolatile(8) bit is set, then
        log to the internal log without updating non-volatile
        store. If the stdInterface(9) bit is set, then the
        agent ignores all other bits except the local(0),
        syslog(2), and localVolatile(8) bits. Setting the
        stdInterface(9) bit indicates that RFC3413 and
        RFC3014 are being used to control event reporting
        mechanisms."

docsDevFilterLLCIfIndex OBJECT-TYPE
   SYNTAX   InterfaceIndexOrZero
   MAX-ACCESS read-create
   STATUS   current
   DESCRIPTION
    "The entry interface to which this filter applies. The
    value corresponds to ifIndex for either a CATV MAC or
    another network interface. If the value is zero, the
    filter applies to all interfaces. In Cable Modems, the
    default value is the customer side interface(s). In
    CMTSs, this object has to be specified to
    create a row in this table.

    Note that according to the DOCSIS OSSIv1.1
    specification, ifIndex '1' in the CM means that this
    row applies to all Cable Modem-to-CPE Interfaces
    (CMCI)."

docsDevFilterIpDefault OBJECT-TYPE
    SYNTAX INTEGER {
      discard(1),
      accept(2)
    }
    MAX-ACCESS read-write

    STATUS   deprecated
    DESCRIPTION
      "The default behavior for (bridged) packets that do not
      match IP filters (or Internet filters, if implemented)

is defined by docsDevFilterIpDefault.

If set to discard(1), all packets not matching an IP
filter in docsDevFilterIpTable will be discarded. If
set to accept(2), all packets not matching an IP filter
or an Internet filter will be accepted for further
processing (e.g., bridging)."
    DEFVAL { accept }
    ::= { docsDevFilter 3 }

docsDevFilterIpTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF DocsDevFilterIpEntry
    MAX-ACCESS not-accessible
    STATUS   deprecated
    DESCRIPTION
      "An ordered list of filters or classifiers to apply to
      IP traffic. Filter application is ordered by the filter
      index, rather than by a best match algorithm (note that
      this implies that the filter table may have gaps in the
      index values). Packets that match no filters will have
      policy 0 in the docsDevFilterPolicyTable applied to
      them, if it exists. Otherwise, Packets that match no
      filters are discarded or forwarded according to the
      setting of docsDevFilterIpDefault.

      Any IP packet can theoretically match multiple rows of
      this table. When considering a packet, the table is
      scanned in row index order (e.g., filter 10 is checked
      before filter 20). If the packet matches that filter
      (which means that it matches ALL criteria for that row),
      actions appropriate to docsDevFilterIpControl and
      docsDevFilterPolicyId are taken. If the packet was
      discarded processing is complete. If
      docsDevFilterIpContinue is set to true, the filter
      comparison continues with the next row in the table,
      looking for additional matches.

      If the packet matches no filter in the table, the packet
      is accepted or dropped for further processing
      according to the setting of docsDevFilterIpDefault.
      If the packet is accepted, the actions specified by
      policy group 0 (e.g., the rows in
      docsDevFilterPolicyTable that have a value of 0 for
      docsDevFilterPolicyId) are taken, if that policy

      group exists.

Logically, this table is consulted twice during the
processing of any IP packet: once upon its acceptance
from the L2 entity, and once upon its transmission to
the L2 entity. In actuality, for cable modems, IP
filtering is generally the only IP processing done for
transit traffic. This means that inbound and outbound
filtering can generally be done at the same time with
one pass through the filter table.

The objects in this table are only accessible from cable
devices that are not operating in DiffServ MIB mode
(RFC 3289). See the conformance section for details.

Note that some devices are required by other
specifications (e.g., the DOCSIS OSSIv1.1 specification)
to support the legacy SNMPv1/v2c docsDevFilter mode
for backward compatibility.

Table entries MUST NOT persist across reboots for any
device.

This table is deprecated. Instead, use the DiffServ MIB
from RFC 3289."

--
-- Policy Mapping Table
--

docsDevFilterPolicyTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF DocsDevFilterPolicyEntry
    MAX-ACCESS not-accessible
    STATUS   deprecated
    DESCRIPTION
       "A Table that maps between a policy group ID and a set
       of pointers to policies to be applied. All rows with
       the same docsDevFilterPolicyId are part of the same
       group of policy pointers and are applied in the order
       in this table. docsDevFilterPolicyTable exists to
       allow multiple policy actions (referenced by policy
       pointers) to be applied to any given classified packet.
       The policy actions are applied in index order.
       For example:

```
     Index   ID   Type   Action
      1    1     TOS    1
      9    5     TOS    1
     12    1     IPSEC  3
```

This says that a packet that matches a filter with
policy id 1 first has TOS policy 1 applied (which might
set the TOS bits to enable a higher priority) and next
has the IPSEC policy 3 applied (which may result in the
packets being dumped into a secure VPN to a remote
encryptor).

Policy ID 0 is reserved for default actions and is
applied only to packets that match no filters in
docsDevFilterIpTable.

Table entries MUST NOT persist across reboots for any
device.

This table is deprecated. Instead, use the DiffServ MIB

from RFC 3289."

DESCRIPTION
   "This is the MIB Module for DOCSIS 2.0-compliant Radio
   Frequency (RF) interfaces in Cable Modems and
   Cable Modem Termination Systems.

   Copyright (C) The Internet Society (2006). This
   version of this MIB module is part of RFC 4546; see
   the RFC itself for full legal notices."

REVISION   "200605240000Z"
DESCRIPTION
   "Revision of the IETF RF MIB module for DOCSIS 2.0.
   This version published as RFC 4546.
   This MIB module revision includes the following
   among others:
   Usage of ifType (205) for upstream logical channels.
   Addition of downstream and upstream utilization
   counters.
   Additional statistics per upstream interface.
   Upstream channel offline configuration mechanism.

Added MIB support for new DOCSIS 2.0 modulation
attributes.
Euro-DOCSIS downstream interleave values.
Adjustments to RFC 2670 definitions based on
the MIB review guidelines from the IETF

Operations and Management Area (OPS)."

REVISION "199908190000Z"
DESCRIPTION
    "Initial version, published as RFC 2670.
    Modified by Mike St. Johns to fix problems identified by
    the first pass of the MIB doctor. Of special note,
    docsIfRangingResp and docsIfCmtsInsertionInterval were
    obsoleted and replaced by other objects with the same
    functionality, but with more appropriate syntax."

  }

DocsEqualizerData ::= TEXTUAL-CONVENTION
   STATUS     current
   DESCRIPTION
      "This data type represents the equalizer data
       as measured at the receiver interface.
```

The format of the equalizer follows the structure of the
Transmit Equalization Adjust RNG-RSP TLV of DOCSIS RFI
v2.0 :
1 byte Main tap location 1..(n + m)
1 byte Number of forward taps per symbol
1 byte Number of forward taps: n
1 byte Number of reverse taps: m

Following are the equalizer coefficients:
First, forward taps coefficients:
2 bytes F1 (real), 2 bytes F1 (imag)

...
2 bytes Fn (real), 2 bytes Fn (imag)

Then, reverse taps coefficients:
2 bytes D1 (real), 2 bytes D1 (imag)
...

2 bytes Dm (real), 2 bytes Dm (imag)

The equalizer coefficients are considered signed 16-bit
integers in the range from -32768 (0x8000) to 32767
(0x7FFF).

DOCSIS specifications require up to a maximum of
64 equalizer taps (n + m); therefore, this object size
 can get up 260 bytes (4 + 4x64).
The minimum object size (other than zero) for a t-spaced
tap with a minimum of 8 symbols will be 36 (4 + 4x8)."

    taps12increment17(8)
  }
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
    "The Forward Error Correction (FEC) interleaving used
    for this downstream channel.
    Values are defined as follows:
    taps8Increment16(3): protection 5.9/4.1 usec,
           latency .22/.15 msec
    taps16Increment8(4): protection 12/8.2 usec,
           latency .48/.33 msec

taps32Increment4(5):   protection 24/16 usec,
                           latency .98/.68 msec
                taps64Increment2(6):   protection 47/33 usec,
                           latency 2/1.4 msec
                taps128Increment1(7): protection 95/66 usec,
                           latency 4/2.8 msec
                taps12increment17(8): protection 18/14 usec,
                           latency 0.43/0.32 msec

            The value 'taps12increment17' is supported by EuroDOCSIS
            cable systems only, and the others by DOCSIS cable systems.

            If the interface is down, this object either returns
            the configured value (CMTS), the most current value (CM),
            or the value of unknown(1).
            The value of other(2) is returned if the interleave
            is known but not defined in the above list.
            See the associated conformance object for write
            conditions and limitations. See the reference for the FEC
            configuration described by the setting of this object."

   MAX-ACCESS not-accessible
   STATUS   current
   DESCRIPTION

"This table describes the attributes of attached upstream
        channels."
    ::= { docsIfBaseObjects 2 }

docsIfUpstreamChannelEntry OBJECT-TYPE
    SYNTAX   DocsIfUpstreamChannelEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "List of attributes for a single upstream channel. For
        DOCSIS 2.0 CMTSs, an entry in this table exists for
        each ifEntry with an ifType of docsCableUpstreamChannel
        (205).
        For DOCSIS 1.x CM/CMTSs and DOCSIS 2.0 CMs, an entry in
        this table exists for each ifEntry with an ifType of
        docsCableUpstream (129).

        For DOCSIS 2.0 CMTSs, two classes of interfaces can be
        defined for this table:
         o Upstream Physical Interfaces: The traditional DOCSIS
           1.x CMTS upstream interface ifType 129 and the DOCSIS
           2.0 ifType 205 that are functional. In other words,
           interfaces that represent upstream receivers within
           an RF MAC interface.
           Entries of physical interfaces are exposed to the
           management interface with their corresponding
           ifStack hierarchy and are not administratively
           created by this table.

         o Upstream Temporary Interfaces: A fictitious
           interface created for the purpose of manipulating
           physical interface parameters offline, then
           validating prior to updating the target physical
           interface.

        In case of a reinitialization of the managed system,
        physical interfaces values persist while the temporary
        interfaces are not recreated.

        This mechanism helps to minimize service disruptions
        originating in situations where a group of interface
        parameter values need to be consistent with each other
        in SET operations. A temporary buffer
        (temporary interface) is provided to allow the CMTS
        to validate the parameters offline."

   docsIfUpChannelScdmaHoppingSeed,
   docsIfUpChannelType, and
   docsIfUpChannelPreEqEnable
   Setting this object to the value of a non-existent or
   a temporary upstream interface returns the error
   'wrongValue'.
   This object MUST contain a value of zero for physical
   interfaces entries.
   Setting this object in row entries that correspond to
   physical interfaces returns the error 'wrongValue'."
  ::= { docsIfUpstreamChannelEntry 16 }

docsIfUpChannelUpdate OBJECT-TYPE
  SYNTAX TruthValue
  MAX-ACCESS read-create
  STATUS current
  DESCRIPTION
   "Used to perform the copy of adjusted parameters from the
   temporary interface entry to the physical interface

indicated by the docsIfUpChannelCloneFrom object. The
transfer is initiated through an SNMP SET to 'true' of

this object.
A SET to 'true' fails and returns error 'commitFailed'
if docsIfUpChannelStatus value is 'notInService', which
means that the interface parameters values are not
compatible with each other or have not been validated yet.
Reading this object always returns 'false'."
  ::= { docsIfUpstreamChannelEntry 17 }

docsIfUpChannelStatus OBJECT-TYPE
    SYNTAX   RowStatus
    MAX-ACCESS read-create
    STATUS   current
    DESCRIPTION
        "This object is only used for the creation of a temporary
        upstream row with the purpose of updating the parameters
        of a physical upstream channel entry.

        The following restrictions apply to this object:
        1. This object is not writable for physical interfaces.
        2. Temporary interface entries are only created by a SET
           of this object to createandWait(5).
        3. ifAdminStatus from the Interface MIB RFC 2863 is used
           to take a physical upstream channel offline, to be
           consistent with DOCSIS 1.x operation, as indicated in
           RFC 2670.
           In addition,
            o ifAdminStatus 'down' is reflected in this object
              as 'notInService'.
            o ifOperStatus 'down' while ifAdminStatus 'up' is
              reflected in this object as 'notInservice'.
        4. Temporary created rows MUST be set to 'active' with
           the purpose of validating upstream parameter
           consistency prior to transferring the parameters to the
           physical interface.

        Below is a mandatory procedure for adjusting the values
        of a physical interface:
        1. Create a temporary interface entry through an SNMP SET
           using 'createAndWait'. At this point, the RowStatus
           reports 'notReady'.
           The Manager entity uses an ifIndex value outside the
           operational range of the physical interfaces for the
           creation of a temporary interface.

2. Set the docsIfUpChannelCloneFrom object to the ifIndex
   value of the physical row to update. Now
   docsIfUpChannelStatus reports 'notInService'.
3. Change the upstream parameters to the desired values
   in the temporary row.

4. Validate that all parameters are consistent by setting
   docsIfUpChannelStatus to 'active'. A failure to set the
   RowStatus to 'active' returns the error 'commitFailed',
   which means the parameters are not compatible with the
   target physical interface.
5. With docsIfUpChannelStatus 'active', transfer the
   parameters to the target physical interface by setting
   the object docsIfUpChannelUpdate to 'true'.
6. Delete the temporary row by setting
   docsIfUpChannelStatus to 'destroy'."

          "Describes the attributes for each class of service."
       ::= { docsIfBaseObjects 3 }

docsIfQosProfileEntry OBJECT-TYPE
       SYNTAX     DocsIfQosProfileEntry

       MAX-ACCESS  not-accessible
       STATUS     current
       DESCRIPTION
          "Describes the attributes for a single class of service.
          If implemented as read-create in the Cable Modem
          Termination System, creation of entries in this table is
          controlled by the value of
          docsIfCmtsQosProfilePermissions.

          If implemented as read-only, entries are created based
          on information in REG-REQ MAC messages received from
          cable modems (for Cable Modem Termination System), or
          based on information extracted from the TFTP option file
          (for Cable Modem).
          In the Cable Modem Termination System, read-only entries
          are removed if no longer referenced by
          docsIfCmtsServiceTable.

          An entry in this table MUST not be removed while it is
          referenced by an entry in docsIfCmServiceTable (Cable
          Modem) or docsIfCmtsServiceTable (Cable Modem Termination
          System).

          An entry in this table SHOULD NOT be changeable while
          it is referenced by an entry in docsIfCmtsServiceTable.

          If this table is created automatically, there SHOULD only
          be a single entry for each Class of Service.  Multiple
          entries with the same Class of Service parameters are NOT
          RECOMMENDED."

STATUS   current
DESCRIPTION
    "Current cable modem connectivity state, as specified
    in the RF Interface Specification. Returned status
    information is the CM status, as assumed by the CMTS,
    and indicates the following events:
    other(1)
        Any state other than below.
    ranging(2)
        The CMTS has received an Initial Ranging Request
        message from the CM, and the ranging process is not
        yet complete.
    rangingAborted(3)
        The CMTS has sent a Ranging Abort message to the CM.

    rangingComplete(4)
        The CMTS has sent a Ranging Complete message to the CM.
    ipComplete(5)
        The CMTS has received a DHCP reply message and
        forwarded it to the CM.
    registrationComplete(6)
        The CMTS has sent a Registration Response message to
        the CM.
    accessDenied(7)
        The CMTS has sent a Registration Aborted message
        to the CM.
    operational(8)
        Value 8 is considered reserved and should not be defined
        in future revisions of this MIB module to avoid conflict
        with documented implementations that support value 8 to
        indicate operational state after completing the BPI
        initialization process.
    registeredBPIInitializing(9)
        Baseline Privacy (BPI) is enabled and the CMTS is in the
        process of completing BPI initialization. This state
        MAY last for a significant length of time if failures
        occur during the initialization process. After
        completion of BPI initialization, the CMTS will report
        registrationComplete(6).
    The CMTS only needs to report states it is able to
    detect."

     DESCRIPTION
        "The calculated and truncated utilization index for this
```

physical upstream or downstream channel, accurate as of the most recent docsIfCmtsChannelUtilizationInterval.

Upstream Channel Utilization Index:

The upstream channel utilization index is expressed as a percentage of mini-slots utilized on the physical channel, regardless of burst type. For an Initial Maintenance region, the mini-slots for the complete region are considered utilized if the CMTS received an upstream burst within the region from any CM on the physical channel. For contention REQ and REQ/DATA regions, the mini-slots for a transmission opportunity within the region are considered utilized if the CMTS received an upstream burst within the opportunity from any CM on the physical channel. For all other regions, utilized mini-slots are those in which the CMTS granted bandwidth to any unicast SID on the physical channel.

For an upstream interface that has multiple logical upstream channels enabled, the utilization index is a weighted sum of utilization indices for the logical channels. The weight for each utilization index is the percentage of upstream mini-slots allocated for the corresponding logical channel.
Example:
If 75% of bandwidth is allocated to the first logical channel and 25% to the second, and the utilization indices for each are 60 and 40, respectively, the

utilization index for the upstream physical channel is (60 * 0.75) + (40 * 0.25) = 55. This figure applies to the most recent utilization interval.

Downstream Channel Utilization Index:

The downstream channel utilization index is a percentage expressing the ratio between bytes used to transmit data versus the total number of bytes transmitted in the raw bandwidth of the MPEG channel. As with the upstream utilization index, the calculated value represents the most recent utilization interval.
Formula:
Downstream utilization index =
(100 * (data bytes / raw bytes))

Definitions:

Data bytes: Number of bytes transmitted as data in the
              docsIfCmtsChannelUtilizationInterval.
              Identical to docsIfCmtsDownChannelCtrUsed
              Bytes measured over the utilization
              interval.

Raw bandwidth: Total number of bytes available for
              transmitting data, not including bytes
              used for headers and other overhead.

Raw bytes: (raw bandwidth *
              docsIfCmtsChannelUtilizationInterval).
              Identical to docsIfCmtsDownChannelCtrTotal
              Bytes measured over the utilization
              interval."

DESCRIPTION
    "This MIB module supplies the basic management
    objects for the PacketCable and IPCablecom Signaling
    protocols. This version of the MIB includes
    common signaling and Network Call Signaling

    (NCS)-related signaling objects.

    Copyright (C) The IETF Trust (2008). This version of
    this MIB module is part of RFC 5098; see the RFC itself for
    full legal notices."
 REVISION   "200712180000Z"
 DESCRIPTION
    "Initial version, published as RFC 5098."

TenthdBm ::= TEXTUAL-CONVENTION
  DISPLAY-HINT "d-1"
  STATUS   current
  DESCRIPTION
     "This TEXTUAL-CONVENTION represents power levels that are
     normally expressed in dBm. Units are in tenths of a dBm;
     for example, -13.5 dBm will be represented as -135."
  SYNTAX   Integer32

PktcCodecType ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
     " This TEXTUAL-CONVENTION defines various types of codecs
     that MAY be supported. The description for each
     enumeration is listed below:

     Enumeration   Description
     other   a defined codec not in the enumeration
     unknown   a codec not defined by the PacketCable
             Codec Specification
     g729   ITU-T Recommendation G.729
     reserved   for future use
     g729E   ITU-T Recommendation G.729E
     pcmu   Pulse Code Modulation u-law (PCMU)
     g726at32   ITU-T Recommendation G.726-32 (32 kbit/s)
     g728   ITU-T Recommendation G.728
     pcma   Pulse Code Modulation a-law (PCMA)

g726at16   ITU-T Recommendation G.726-16 (16 kbit/s)

g726at24   ITU-T Recommendation G.726-24 (24 kbit/s)

g726at40   ITU-T Recommendation G.726-40 (40 kbit/s)

ilbc   IETF Internet low-bit rate codec

bv16   Broadcom BroadVoice16

The list of codecs is consistent with the IETF
Real-Time Transport Protocol (RTP) Profile registry and

the RTP Map Parameters Table in PacketCable Audio/Video
Codecs Specification [PKT-SP-CODEC]. The literal codec
name for each codec is listed below:

Codec   Literal Codec Name
g729   G729
g729E   G729E
pcmu   PCMU
g726at32   G726-32
g728   G728
pcma   PCMA
g726at16   G726-16
g726at24   G726-24
g726at40   G726-40
ilbc   iLBC
bv16   BV16

The literal codec name is the second column of the table
with codec RTP Map Parameters. The Literal Codec Name Column
contains the codec name used in the local connection
options (LCO) of the NCS messages create connection
(CRCX)/modify connection (MDCX) and is also used to
identify the codec in the Call Management System (CMS)
Provisioning Specification. The RTP Map Parameter column of
the Table contains the string used in the media attribute
line (a=) of the session description protocol (SDP)
parameters in NCS messages."

PktcRingCadence   ::= TEXTUAL-CONVENTION
  STATUS       current
  DESCRIPTION
      "This object provides an encoding scheme for ring

      cadences, including repeatability characteristics.  All
      fields in this object MUST be encoded in network-byte
      order.

      The first three higher-order octets are reserved.  The
      octets that follow are used to encode a 'bit-string', with
      each bit corresponding to 50 milliseconds.  A bit value of
      '1' indicates the presence of a ring-tone, and a bit value
      of '0' indicates the absence of a ring-tone, for that
      duration (50 ms) (Note: A minimum number of octets
      required to encode the bit-string MUST be used).

      The first two of the reserved octets MUST indicate the
      length of the encoded cadence (in bits) and MUST range
      between 1 and 264.  (Note: The length in bits MUST also be
      consistent with the number of octets that encode the
      cadence).  The MTA MUST ignore any unused bits in the last
      octet, but MUST reflect the value as provided on
      subsequent SNMP GETs.

      The third of the reserved octets indicates 'repeatability'
      and MUST be either 0x80 or 0x00 -- the former value
      indicating 'non-repeatability', and the latter indicating
      'repeatability'.

      The MTA MUST reject attempts to set a value that violates
      any of the above requirements."

  SYNTAX  OCTET STRING (SIZE(4..36))

--
-- The codec table (pktcSigDevCodecTable) defines all combinations
-- of codecs supported by the Multimedia Terminal Adapter (MTA).
--
pktcSigDevCodecTable OBJECT-TYPE
   SYNTAX     SEQUENCE OF PktcSigDevCodecEntry
   MAX-ACCESS  not-accessible
   STATUS     current
   DESCRIPTION
      " This table describes the MTA-supported codec types.  An MTA
        MUST populate this table with all possible combinations of
        codecs it supports for simultaneous operation.  For example,
        an MTA with two endpoints may be designed with a particular
        Digital Signal Processing (DSP) and memory architecture that
        allows it to support the following fixed combinations of
        codecs for simultaneous operation:

        Codec Type    Maximum Number of Simultaneous Codecs
        PCMA                  3

        PCMA                  2
        PCMU                  1

        PCMA                  1
```

PCMU   2

PCMU   3

PCMA   1
G729   1

G729   2

PCMU   1
G729   1

Based on this example, the entries in the codec table would be:

pktcSigDev CodecComboIndex	pktcSigDev CodecType	pktcSigDev CodecMax
1	pcma	3
2	pcma	2
2	pcmu	1
3	pcma	1
3	pcmu	2
4	pcmu	3
5	pcma	1
5	g729	1
6	g729	2
7	pcmu	1
7	g729	1

An operator querying this table is able to determine all possible codec combinations the MTA is capable of simultaneously supporting.

This table MUST NOT include non-voice codecs."

pktcSigDevCidMode    OBJECT-TYPE
  SYNTAX      INTEGER {
        duringRingingETS(1),
        dtAsETS(2),
        rpAsETS(3),

        lrAsETS(4),
        lrETS(5)
        }
  MAX-ACCESS read-write
  STATUS current
  DESCRIPTION
    " For on-hook caller id, pktcSigDevCidMode selects the method
      for representing and signaling caller identification.  For
      the duringRingingETS method, the Frequency Shift Keying
      (FSK) or the Dual-Tone Multi-Frequency (DTMF) containing
      the caller identification information is sent between the
      first and second ring pattern.

      For the dtAsETS,rpAsETS, lrAsETS and lrETS
      methods, the FSK or DTMF containing the caller id
      information is sent before the first ring pattern.

      For the dtAsETS method, the FSK or DTMF is sent after the
      Dual Tone Alert Signal.  For the rpAsETS method, the FSK or
      DTMF is sent after a Ring Pulse.

      For the lrAsETS method, the Line Reversal occurs first,
      then the Dual Tone Alert Signal, and, finally, the FSK or
      DTMF is sent.

      For the lrETS method, the Line Reversal occurs first,
      then the FSK or DTMF is sent.

      The value of this MIB object MUST NOT persist across MTA
      reboots."

        DESCRIPTION
            " For visual message waiting indicator (VMWI),
            pktcSigDevVmwiMode selects the alerting signal method. For
            the dtAsETS, rpAsETS, lrAsETS, osi, and lrETS methods,
            the FSK containing the VMWI information is sent after an
            alerting signal.

            For the dtAsETS method, the FSK, or DTMF
            is sent after the Dual Tone Alert Signal. For the rpAsETS
            method, the FSK or DTMF is sent after a Ring Pulse.

            For the lrAsETS method, the Line Reversal occurs first,
            then the Dual Tone Alert Signal, and, finally, the FSK or
            DTMF is sent.

            For the OSI method, the FSK or DTMF is sent after the Open
            Switching Interval.

            For the lrETS method, the Line Reversal occurs first,
            then the FSK or DTMF is sent.

            The value of this MIB object MUST NOT persist across MTA

    MAX-ACCESS   not-accessible
    STATUS   current
    DESCRIPTION
        "Cadence rings are defined by the telco governing
        body for each country. The MTA must be able to support
        various ranges of cadence patterns and cadence periods.
        The MTA will be able to support country-specific
        provisioning of the cadence and idle period. Each
        cadence pattern will be assigned a unique value ranging
        from 0-127 (inclusive) corresponding to the value of x,
        where x is the value sent in the cadence ringing (cr)
        signal cr(x), requested per the appropriate NCS
        message, and defined in the E package. The MTA will derive
        the cadence periods from the ring cadence table entry, as
        provisioned by the customer. The MTA is allowed to provide
        appropriate default values for each of the ring cadences.
        This table only needs to be supported when the MTA
        implements the E package."

pktcSigDevToneTable   OBJECT-TYPE
  SYNTAX   SEQUENCE OF PktcSigDevToneEntry
  MAX-ACCESS   not-accessible
  STATUS   current
  DESCRIPTION
    " The Tone Table defines the composition of tones and
      various tone operations.

      The definition of the tones callWaiting1 through
      callWaiting4 in this table MUST only contain the
      audible tone itself; the delay between tones or the value
      of the tone repeat count are not applicable for the call
      waiting tones.

      The delay between tones or the repeat count is controlled
      by the objects pktcSigEndPntConfigCallWaitingDelay and
      pktcSigEndPntConfigCallWaitingMaxRep. If the
      pktcSigDevToneType is set to either of the values
      callWaiting1, callWaiting2, callWaiting3, or callWaiting4,
      then the value of the pktcSigDevToneWholeToneRepeatCount
      object indicates that the particular frequency group is

applicable, as a repeatable part of the tone, based on the value of the MIB object pktcSigDevToneWholeToneRepeatCount.

The MTA MUST make sure that, after the provisioning cycle, the table is fully populated (i.e., for each possible index, an entry MUST be defined) using reasonable defaults for each row that was not defined by the provisioning information delivered via MTA Configuration.

The frequency composition of each tone is defined by the pktcSigDevMultiFreqToneTable. For each tone type defined in pktcSigDevToneTable, the MTA MUST populate at least one entry in the pktcSigDevMultiFreqToneTable.

For each particular value of pktcSigDevToneType, the pktcSigDevToneTable table can define non-repeating and repeating groups of the frequencies defined by the pktcSigDevMultiFreqToneTable, such that each group is represented by the set of the consecutive rows (frequency group) in the pktcSigDevMultiFreqToneTable.

Objects in this table do not persist across MTA reboots. For tones with multiple frequencies refer to the MIB table pktcSigDevMultiFreqToneTable."

        multi-frequency tones for the particular tone type in
        the multi-frequency table (pktcSigDevMultiFreqToneTable).

        Such a sequence of the consecutive multi-frequency tones
        forms the tone group for the particular tone type in the
        pktcSigDevToneTable."
    ::={ pktcSigDevToneEntry 3}

pktcSigDevToneWholeToneRepeatCount   OBJECT-TYPE
  SYNTAX   Unsigned32 (0..5000)
  MAX-ACCESS   read-only
  STATUS   current
  DESCRIPTION
    "This is the repeat count, which signifies how many times
      to repeat the entire on-off cadence sequence. Setting this
      object may result in a cadence duration longer or shorter
      than the overall signal duration specified by the time out
      (TO) object for a particular signal. If the repeat count
      results in a longer tone duration than the signal duration
      specified by the TO, the tone duration defined by the
      TO object for a particular signal always represents
      the overall signal duration for a tone. In this case, the
      tone duration repeat count will not be fully exercised, and
      the desired tone duration will be truncated per the TO
      setting. If the repeat count results in a shorter tone
      duration than the signal duration specified by the TO, the
      tone duration defined by the repeat count takes precedence
      over the TO and will end the signal event. In this case,

the TO represents a time not to be exceeded for the signal.
It is recommended to ensure proper telephony signaling so that
the TO duration setting should always be longer than the
desired repeat count-time duration."
  ::={ pktcSigDevToneEntry 4 }

pktcSigDevToneSteady   OBJECT-TYPE
 SYNTAX   TruthValue
 MAX-ACCESS   read-only
 STATUS   current
 DESCRIPTION
   "This MIB object represents the steady tone status. A value
    of 'true(1)' indicates that the steady tone is applied, and
    a value of 'false(2)' indicates otherwise.
    Devices must play out the on-off cadence sequence for
    the number of times indicated by the MIB object
    'pktcSigDevToneWholeToneRepeatCount' prior to applying the
    last tone steadily, indefinitely. If the MIB table
    'pktcSigDevToneTable' contains multiple rows with this
    Object set to a value of 'true(1)', the steady tone is
    applied to the last repeating frequency group of the tone.

    Setting this MIB object may result in a tone duration that is
    longer or shorter than the overall signal duration
    specified by the time out (TO) MIB object for a particular
    signal. If the repeat count results in a longer tone
    duration than the signal duration specified by the TO, the
    tone duration defined by the TO object for a particular
    signal always represents the overall signal duration for a
    tone. In this case, the tone duration repeat count will
    not be fully exercised, and the desired tone duration will
    be truncated per the TO setting. If the repeat count
    results in a shorter tone duration than the signal duration
    specified by the TO, the tone duration defined by the
    repeat count takes precedence over the TO and will end the
    signal event. In this case, the TO represents a time not to
    be exceeded for the signal.

    It is recommended to ensure proper telephony signaling that
    The TO duration setting should always be longer than the
    desired repeat count-time duration, plus the desired maximum
    steady tone period."

        frequency of a tone type.  A value of zero implies
        absence of the referenced frequency."
    ::={ pktcSigDevMultiFreqToneEntry 5}

pktcSigDevToneFreqMode OBJECT-TYPE
    SYNTAX      INTEGER {
            firstModulatedBySecond(1),
            summation(2)

            }
    MAX-ACCESS   read-only
    STATUS      current
    DESCRIPTION
    "This MIB object provides directive on the
     modulation or summation of the frequencies
     involved in the tone.

     It is to be noted that while summation can
     be done without any constraint on the number
     of frequencies, the modulation (amplitude)
     holds good only when there are two frequencies
     (first and second).

     Thus:
       - If the mode is set to a value of
        'firstModulatedBySecond(1)', the first frequency
        MUST be modulated by the second, and the remaining
        frequencies (third and fourth) ignored.  The
        percentage of amplitude modulation to be applied
        is defined by the MIB object
        pktcSigDevToneFreqAmpModePrtg.

       - If the mode is set to a value of
        'summation(2)', all the frequencies MUST be
        summed without any modulation.
     "
    ::={ pktcSigDevMultiFreqToneEntry 6}

pktcSigDevToneFreqAmpModePrtg OBJECT-TYPE
    SYNTAX      Unsigned32(0..100)
    MAX-ACCESS   read-only
    STATUS      current
    DESCRIPTION
       "This MIB object represents the percentage of amplitude
        modulation applied to the second frequency
        when the MIB object pktcSigDevToneFreqMode is
```

set to a value of 'firstModulatedBySecond (1)'.

If the MIB object pktcSigDevToneFreqMode is set to
value of 'summation (2)', then this MIB object MUST be
ignored."
::={ pktcSigDevMultiFreqToneEntry 7}

pktcSigDevToneDbLevel   OBJECT-TYPE
   SYNTAX   TenthdBm (-250..-110)
   UNITS   "1/10 of a dBm"
   MAX-ACCESS   read-only

   STATUS   current
   DESCRIPTION
      "This MIB object contains the decibel level for each
       analog signal (tone) that is locally generated
       (versus in-band supervisory tones) and sourced to
       the a-b terminals (TE connection point). Each tone
       in itself may consist of multiple frequencies, as
       defined by the MIB table pktcSigDevMultiFreqToneTable.

       This MIB object reflects the desired level at
       the Telco (POTS) a-b (T/R) terminals, including the
       effect of any MTA receiver gain (loss). This is required
       so that locally generated tones are consistent with
       remotely generated in-band tones at the a-b terminals,
       consistent with user expectations.

       This MIB object must be set for each tone.
       When tones are formed by combining multi-frequencies,
       the level of each frequency shall be set so as to result
       in the tone level specified in this object at the a-b
       (T/R) terminals.

       The wide range of levels for this Object is required
       to provide signal-generator levels across the wide
       range of gains (losses) -- but does not imply the entire
       range is to be achievable given the range of gains (losses)
       in the MTA."
   DEFVAL { -120 }

       frequency reference corresponding to the tone type
       is turned off."
   ::={ pktcSigDevMultiFreqToneEntry 10}

pktcSigDevToneFreqRepeatCount OBJECT-TYPE
   SYNTAX   Unsigned32(0..5000)
   MAX-ACCESS   read-only
   STATUS   current
   DESCRIPTION
   "This MIB object indicates the number of times
   to repeat the cadence cycle represented by the
   on/off durations (refer to the MIB objects
   pktcSigDevToneFreqOnDuration and
   pktcSigDevToneFreqOffDuration).

   Setting this object may result in a tone duration that is
   longer or shorter than the overall signal duration
   specified by the time out (TO) object for the
   corresponding tone type. If the value of this MIB
   Object indicates a longer duration than that
   specified by the TO, the latter overrules the former,
   and the desired tone duration will be truncated according
   to the TO.

   However, if the repeat count results in a shorter
   tone duration than the signal duration specified by
   the TO, the tone duration defined by the repeat count
   takes precedence over the TO and will end the signal
   event. In this case, the TO represents a time not to
   be exceeded for the signal. It is recommended, to
   ensure proper telephony signaling, that the TO

duration setting should always be longer than the
desired repeat count-time duration. A value of zero
means the tone sequence is to be played once but not
repeated."
::={ pktcSigDevMultiFreqToneEntry 11 }

     }

  MAX-ACCESS   read-only

  STATUS current

  DESCRIPTION

   " This object contains the error status for this interface.
The operational status indicates that all operations
necessary to put the line in service have occurred, and the
CMS has acknowledged the Restart In Progress (RSIP)
message successfully. If pktcMtaDevCmsIpsecCtrl is enabled
for the associated call agent, the noSecurityAssociation
status indicates that no Security Association (SA) yet
exists for this endpoint. If pktcMtaDevCmsIpsecCtrl is
disabled for the associated call agent, the
noSecurityAssociation status is not applicable and should
not be used by the MTA. The disconnected status indicates
one of the following two:
If pktcMtaDevCmsIpsecCtrl is disabled, then no security
association is involved with this endpoint. The NCS
signaling software is in process of establishing the NCS
signaling link via an RSIP exchange.
Otherwise, when pktcMtaDevCmsIpsecCtrl is enabled,

security Association has been established, and the NCS
signaling software is in process of establishing the NCS
signaling link via an RSIP exchange."

dlswNodeStdPacingSupport  OBJECT-TYPE
   SYNTAX    INTEGER  {
```

```
        none          (1),  -- does not support DLSw
                            -- Standard pacing scheme
        adaptiveRcvWindow (2),  -- the receive window size
                            -- varies
        fixedRcvWindow    (3)  -- the receive window size
                            -- remains constant
    }
    MAX-ACCESS  read-only
    STATUS    current
    DESCRIPTION
        "Circuit pacing, as defined in the DLSw Standard, allows each
        of the two DLSw nodes on a circuit to control the amount
        of data the other is permitted to send to them.  This object
        reflects the level of support the DLSw node has for this
        protocol.  (1) means the node has no support for the standard
        circuit pacing flows;  it may use RFC 1434+ methods only, or
        a proprietary flow control scheme.  (2) means the node supports
        the standard scheme and can vary the window sizes it grants as
        a data receiver.  (3) means the node supports the standard
        scheme but never varies its receive window size."

            active    (1),
            inactive    (2)
        }
        MAX-ACCESS read-write
        STATUS    current
        DESCRIPTION
            "The status of the DLSw part of the system.  Changing the
            value from active to inactive causes DLSw to take
            the following actions - (1) it disconnects all circuits
            through all DLSw partners, (2) it disconnects all
            transport connections to all DLSw partners, (3) it
            disconnects all local DLC connections, and (4) it stops
            processing all DLC connection set-up traffic.
            Since these are destructive actions, the user should
            query the circuit and transport connection tables in
            advance to understand the effect this action will have.
            Changing the value from inactive to active causes DLSw
            to come up in its initial state, i.e., transport
            connections established and ready to bring up circuits."

  }
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
    "This value of the instance of a conceptual row
    identifies the behavior of the collection of
    transport connections that this conceptual row
    defines. The value of activePersistent, activeOnDemand
    and passive means this DLSw will accept any transport
    connections, initiated by partner DLSw nodes, which
    are defined by this conceptual row. The value of
    activePersistent means this DLSw will also initiate
    the transport connections of this conceptual row and
    retry periodically if necessary. The value of
    activeOnDemand means this DLSw will initiate a
    transport connection of this conceptual row, if
    there is a directory cache hits. The value of
    other is implementation specific. The value of exclude
    means that the specified node is not allowed to be
    a partner to this DLSw node. To take a certain
    conceptual row definition out of service, a value of
    notInService for dlswTConnConfigRowStatus should be
    used."
  DEFVAL { passive }
  ::= { dlswTConnConfigEntry 8 }

dlswTConnConfigSapList OBJECT-TYPE
  SYNTAX   OCTET STRING (SIZE(16))
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
    "The SAP list indicates which SAPs are advertised to
     the transport connection defined by this conceptual
     row. Only SAPs with even numbers are represented,
     in the form of the most significant bit of the first
     octet representing the SAP 0, the next most significant
     bit representing the SAP 2, to the least significant
     bit of the last octet representing the SAP 254. Data
     link switching is allowed for those SAPs which have
     one in its corresponding bit, not allowed otherwise.
     The whole SAP list has to be changed together. Changing
     the SAP list affects only new circuit establishments
     and has no effect on established circuits.

     This list can be used to restrict specific partners
     from knowing about all the SAPs used by DLSw on all its
     interfaces (these are represented in dlswIfSapList for
     each interface). For instance, one may want to run NetBIOS
     with some partners but not others.

     If a node supports sending run-time capabilities exchange
     messages, changes to this object should cause that action.
     When to start the run-time capabilities exchange is
     implementation-specific.
     The DEFVAL below indicates support for SAPs 0, 4, 8, and C."

      quiescing   (4),
      disconnecting   (5),
      disconnected   (6)
   }
   MAX-ACCESS read-write

STATUS   current
DESCRIPTION
  "The state of this transport connection. The transport
  connection enters `connecting' state when DLSw makes
  a connection request to the transport layer. Once initial
  Capabilities Exchange is sent, the transport connection
  enters enters `initCapExchange' state. When partner
  capabilities have been determined and the transport
  connection is ready for sending CanUReach (CUR) messages,
  it moves to the `connected' state. When DLSw is in the
  process of bringing down the connection, it is in the
  `disconnecting' state. When the transport layer
  indicates one of its connections is disconnected, the
  transport connection moves to the `disconnected' state.

  Whereas all of the values will be returned in response
  to a management protocol retrieval operation, only two
  values may be specified in a management protocol set
  operation: `quiescing' and `disconnecting'. Changing
  the value to `quiescing' prevents new circuits from being
  established, and will cause a transport disconnect when
  the last circuit on the connection goes away. Changing
  the value to `disconnecting' will force off all circuits
  immediately and bring the connection to `disconnected'
  state."
  ::= { dlswTConnOperEntry 6 }

dlswTConnOperConfigIndex OBJECT-TYPE
  SYNTAX   INTEGER (0..2147483647)
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    "The value of dlswTConnConfigIndex of the dlswTConnConfigEntry
    that governs the configuration information used by this
    dlswTConnOperEntry. The manager can therefore normally
    examine both configured and operational information
    for this transport connection.

    This value is zero if the corresponding dlswTConnConfigEntry
    was deleted after the creation of this dlswTConnOperEntry.
    If some fields in the former were changed but the conceptual
    row was not deleted, some configuration information may not
    be valid for this operational transport connection. The
    manager can compare dlswTConnOperConnectTime and
    dlswTConnConfigLastModifyTime to determine if this condition
    exists."

-- --
-- Circuit Table
--
-- This table is the DLSw entity's view of circuits. There will be

```
-- a conceptual row in the table associated with each data link.
--
-- The chart below lists the various possible combinations of
-- origin and target MAC locations and the number of entries in
-- this Circuit Table:
--
--          number of     |   Origin End Station Location
--        entries in the  |-------------------------------------
--        Circuit Table   | internal    local      remote
--        ----------------|-------------------------------------
--   Target  | internal | NA        2        1
--   End     | local    | 2         2        1
--   Station | remote   | 1         1          NA
--   Location|          |
--
--   NA: Not applicable
--
-- Note:
-- (a) IfIndex and RouteInfo are applied only if location is local.
-- (b) TDomain and TAddr are applied only if location is remote.
--
-- Most of statistics related to circuits can be collected
-- from LLC-2 Link Station Table.
-- -------------------------------------------------------------------
dlswCircuitTable  OBJECT-TYPE
   SYNTAX     SEQUENCE OF DlswCircuitEntry
   MAX-ACCESS not-accessible
   STATUS     current
   DESCRIPTION
      "This table is the circuit representation in the DLSw
       entity. Virtual data links are used to represent any internal
       end stations.  There is a conceptual row associated with
       each data link.  Thus, for circuits without an intervening
       transport connection, there are two conceptual rows
       for each circuit.

       The table consists of the circuits being established,
       established, and as an implementation option, circuits that
       have been disconnected.  For circuits carried over
       transport connections, an entry is created after
       the CUR_cs was sent or received.  For circuits between
       two locally attached devices, or internal virtual MAC
       addresses, an entry is created when the equivalent of
       CUR_cs sent/received status is reached.

       End station 1 (S1) and End station 2 (S2) are used to
       represent the two end stations of the circuit.
       S1 is always an end station which is locally attached.
```

S2 may be locally attached or remote. If it is locally
attached, the circuit will be represented by two rows indexed
by (A, B) and (B, A) where A & B are the relevant MACs/SAPs.

The table may be used to store the causes of disconnection of
circuits. It is recommended that the oldest disconnected
circuit entry be removed from this table when the memory
space of disconnected circuits is needed."

        `telephone closet, 3rd floor')."
   ::= { system 6 }

sysServices OBJECT-TYPE
   SYNTAX INTEGER (0..127)
   ACCESS read-only
   STATUS mandatory
   DESCRIPTION
        "A value which indicates the set of services that
        this entity primarily offers.

The value is a sum. This sum initially takes the
value zero, Then, for each layer, L, in the range
1 through 7, that this node performs transactions
for, 2 raised to (L - 1) is added to the sum. For
example, a node which performs primarily routing
functions would have a value of 4 ($2^{(3-1)}$). In
contrast, a node which is a host offering
application services would have a value of 72
($2^{(4-1)} + 2^{(7-1)}$). Note that in the context of
the Internet suite of protocols, values should be
calculated accordingly:

    layer functionality
       1 physical (e.g., repeaters)
       2 datalink/subnetwork (e.g., bridges)
       3 internet (e.g., IP gateways)
       4 end-to-end (e.g., IP hosts)
       7 applications (e.g., mail relays)

For systems including OSI protocols, layers 5 and
6 may also be counted."

          particular media being used to realize the
          interface.  For example, if the interface is
          realized by an ethernet, then the value of this
          object refers to a document defining objects
          specific to ethernet.  If this information is not
          present, its value should be set to the OBJECT
          IDENTIFIER { 0 0 }, which is a syntatically valid
          object identifier, and any conformant
          implementation of ASN.1 and BER must be able to
          generate and recognize this value."
      ::= { ifEntry 22 }

-- the Address Translation group

-- Implementation of the Address Translation group is
-- mandatory for all systems.  Note however that this group
-- is deprecated by MIB-II. That is, it is being included

-- solely for compatibility with MIB-I nodes, and will most
-- likely be excluded from MIB-III nodes.  From MIB-II and
-- onwards, each network protocol group contains its own
-- address translation tables.

-- The Address Translation group contains one table which is
-- the union across all interfaces of the translation tables
-- for converting a NetworkAddress (e.g., an IP address) into
-- a subnetwork-specific address.  For lack of a better term,
-- this document refers to such a subnetwork-specific address
-- as a `physical' address.

-- Examples of such translation tables are: for broadcast
-- media where ARP is in use, the translation table is
-- equivalent to the ARP cache; or, on an X.25 network where
-- non-algorithmic translation to X.121 addresses is
-- required, the translation table contains the
-- NetworkAddress to X.121 address equivalences.

atTable OBJECT-TYPE
    SYNTAX  SEQUENCE OF AtEntry
    ACCESS  not-accessible

atPhysAddress OBJECT-TYPE
  SYNTAX PhysAddress
  ACCESS read-write
  STATUS deprecated
  DESCRIPTION
    "The media-dependent `physical' address.

Setting this object to a null string (one of zero
length) has the effect of invaliding the
corresponding entry in the atTable object. That
is, it effectively dissasociates the interface
identified with said entry from the mapping
identified with said entry. It is an
implementation-specific matter as to whether the
agent removes an invalidated entry from the table.
Accordingly, management stations must be prepared
to receive tabular information from agents that
corresponds to entries not currently in use.
Proper interpretation of such entries requires
examination of the relevant atPhysAddress object."

  STATUS mandatory
  DESCRIPTION
        "Indicate the mask to be logical-ANDed with the
        destination address before being compared to the
        value in the ipRouteDest field. For those systems
        that do not support arbitrary subnet masks, an
        agent constructs the value of the ipRouteMask by
        determining whether the value of the correspondent
        ipRouteDest field belong to a class-A, B, or C
        network, and then using one of:

            mask   network
            255.0.0.0   class-A
            255.255.0.0   class-B
            255.255.255.0 class-C
        If the value of the ipRouteDest is 0.0.0.0 (a
        default route), then the mask value is also
        0.0.0.0. It should be noted that all IP routing
        subsystems implicitly use this mechanism."
  ::= { ipRouteEntry 11 }

ipRouteMetric5 OBJECT-TYPE

                }
          ACCESS  read-write
          STATUS  mandatory
          DESCRIPTION
                "The type of mapping.

                Setting this object to the value invalid(2) has
                the effect of invalidating the corresponding entry
                in the ipNetToMediaTable.  That is, it effectively
                dissasociates the interface identified with said
                entry from the mapping identified with said entry.
```

It is an implementation-specific matter as to
whether the agent removes an invalidated entry
from the table. Accordingly, management stations
must be prepared to receive tabular information
from agents that corresponds to entries not
currently in use. Proper interpretation of such
entries requires examination of the relevant
ipNetToMediaType object."

  SYNTAX INTEGER { start(1), stop(2) }
  ACCESS read-write
  STATUS mandatory
  DESCRIPTION
      "A control variable used to trigger operator-
      initiated Start and Stop events. When read, this
      variable always returns the most recent value that
      egpNeighEventTrigger was set to. If it has not
      been set since the last initialization of the
      network management subsystem on the node, it
      returns a value of `stop'.

When set, this variable causes a Start or Stop
event on the specified neighbor, as specified on
pages 8-10 of RFC 904. Briefly, a Start event
causes an Idle peer to begin neighbor acquisition
and a non-Idle peer to reinitiate neighbor
acquisition. A stop event causes a non-Idle peer
to return to the Idle state until a Start event
occurs, either via egpNeighEventTrigger or
otherwise."

-- the Transmission group

-- Based on the transmission media underlying each interface
-- on a system, the corresponding portion of the Transmission
-- group is mandatory for that system.

-- When Internet-standard definitions for managing
-- transmission media are defined, the transmission group is
-- used to provide a prefix for the names of those objects.

-- Typically, such definitions reside in the experimental
-- portion of the MIB until they are "proven", then as a
-- part of the Internet standardization process, the
-- definitions are accordingly elevated and a new object
-- identifier, under the transmission group is defined. By
-- convention, the name assigned is:
--
--   type OBJECT IDENTIFIER   ::= { transmission number }
--
-- where "type" is the symbolic value used for the media in
-- the ifType column of the ifTable object, and "number" is
-- the actual integer value corresponding to the symbol.

-- the SNMP group

-- Implementation of the SNMP group is mandatory for all
-- systems which support an SNMP protocol entity. Some of
-- the objects defined below will be zero-valued in those
-- SNMP implementations that are optimized to support only
-- those functions specific to either a management agent or
-- a management station. In particular, it should be
-- observed that the objects below refer to an SNMP entity,
-- and there may be several SNMP entities residing on a
-- managed node (e.g., if the node is hosting acting as
-- a management station).

     SYNTAX  Counter
     ACCESS  read-only
     STATUS  mandatory
     DESCRIPTION
          "The number of times a translation from an
          Encapsulated Address to an X.121 address
          failed to find a corresponding X.121
          address.  Encapsulated addresses can be
          looked up in the mioxPeerTable or translated
          via an algorithm as for the DDN.  Addresses
          that are successfully recognized do not
          increment this counter.  Addresses that are
          not recognized (reflecting an abnormal
          packet delivery condition) increment this
          counter.

          If an address translation fails, it may be
          difficult to determine which PLE entry
```

should count the failure. In such cases the
first likely entry in this table should be
selected. Agents should record the failure
even if they are unsure which PLE should be
associated with the failure."

mioxPleLastFailedEnAddr OBJECT-TYPE
    SYNTAX OCTET STRING (SIZE(2..128))
    ACCESS read-only
    STATUS mandatory
    DESCRIPTION
        "The last Encapsulated address that failed
        to find a corresponding X.121 address and
        caused mioxPleEnAddrToX121LkupFlrs to be
        incremented. The first octet of this object
        contains the encapsulation type, the
        remaining octets contain the address of that
        type that failed. Thus for an IP address,
        the length will be five octets, the first
        octet will contain 204 (hex CC), and the
        last four octets will contain the IP
        address. For a snap encapsulation, the
        first byte would be 128 (hex 80) and the
        rest of the octet string would have the snap
        header."

    STATUS  mandatory
    DESCRIPTION
        "The amount of time time in milliseconds
        this interface will keep an idle connection
        open before closing it.  A value of
        2147483647 indicates no timer."
    DEFVAL { 10000 }
    ::= { mioxPleEntry 13 }

mioxPleHoldDownTimer   OBJECT-TYPE
    SYNTAX  PositiveInteger
    ACCESS  read-write
    STATUS  mandatory
    DESCRIPTION
        "The hold down timer in milliseconds.  This
        is the minimum amount of time to wait before
        trying another call to a host that was
        previously unsuccessful.  A value of
        2147483647 indicates the host will not be
        retried."
    DEFVAL { 0 }
    ::= { mioxPleEntry 14 }
```

mioxPleCollisionRetryTimer OBJECT-TYPE
    SYNTAX PositiveInteger
    ACCESS read-write
    STATUS mandatory
    DESCRIPTION
        "The Collision Retry Timer in milliseconds.
        The time to delay between call attempts when
        the maximum number of circuits is exceeded
        in a call attempt."
    DEFVAL { 0 }
    ::= { mioxPleEntry 15 }

mioxPleDefaultPeerId OBJECT-TYPE
    SYNTAX InstancePointer
    ACCESS read-write
    STATUS mandatory
    DESCRIPTION
        "This identifies the instance of the index
        in the mioxPeerTable for the default
        parameters to use with this interface.

        The entry identified by this object may have
        a zero length Encapsulation address and a
        zero length X.121 address.

        These default parameters are used with
        connections to hosts that do not have
        entries in the mioxPeerTable. Such
        connections occur when using ddn-x25 IP-X.25
        address mapping or when accepting
        connections from other hosts not in the
        mioxPeerTable.

        The mioxPeerEncTable entry with the same
        index as the mioxPeerTable entry specifies
        the call encapsulation types this PLE will
        accept for peers not in the mioxPeerTable.
        If the mioxPeerEncTable doesn't contain any
        entries, this PLE will not accept calls from
        entries not in the mioxPeerTable."
    ::= { mioxPleEntry 16 }

-- Systems can claim conformance with this MIB without
-- implementing sets to mioxPeerStatus with a value of
-- clearCall or makeCall.
-- All other defined values must be accepted.
-- Implementors should realize that allowing these values
-- provides richer management, and implementations
-- are encouraged to accept these values.
mioxPeerStatus OBJECT-TYPE
    SYNTAX INTEGER {
        valid (1),
        createRequest (2),
        underCreation (3),
        invalid (4),
        clearCall (5),
        makeCall (6)
        }
    ACCESS read-write
    STATUS mandatory
    DESCRIPTION
        "This reports the status of a peer entry.
        A value of valid indicates a normal entry
        that is in use by the agent. A value of
        underCreation indicates a newly created
        entry which isn't yet in use because the
        creating management station is still setting
        values.

        The value of invalid indicates the entry is
        no longer in use and the agent is free to
        delete the entry at any time. A management
        station is also free to use an entry in the
        invalid state.

        Entries are created by setting a value of
        createRequest. Only non-existent or invalid
        entries can be set to createRequest. Upon
        receiving a valid createRequest, the agent
        will create an entry in the underCreation
        state. This object can not be set to a

value of underCreation directly, entries can
only be created by setting a value of
createRequest. Entries that exist in other
than the invalid state can not be set to
createRequest.

Entries with a value of underCreation are
not used by the system and the management
station can change the values of other
objects in the table entry. Management
stations should also remember to configure
values in the mioxPeerEncTable with the same
peer index value as this peer entry.

An entry in the underCreation state can be
set to valid or invalid. Entries in the
underCreation state will stay in that state
until 1) the agent times them out, 2) they
are set to valid, 3) they are set to
invalid. If an agent notices an entry has
been in the underCreation state for an
abnormally long time, it may decide the
management station has failed and invalidate
the entry. A prudent agent will understand
that the management station may need to wait
for human input and will allow for that
possibility in its determination of this
abnormally long period.

Once a management station has completed all
fields of an entry, it will set a value of
valid. This causes the entry to be
activated.

Entries in the valid state may also be set
to makeCall or clearCall to make or clear
X.25 calls to the peer. After such a set
request the entry will still be in the valid
state. Setting a value of makeCall causes
the agent to initiate an X.25 call request
to the peer specified by the entry. Setting
a value of clearCall causes the agent to
initiate clearing one X.25 call present to
the peer. Each set request will initiate
another call or clear request (up to the
maximum allowed); this means that management
stations that fail to get a response to a
set request should query to see if a call

was in fact placed or cleared before
retrying the request. Entries not in the
valid state can not be set to makeCall or
clearCall.

The values of makeCall and clearCall provide
for circuit control on devices which perform
Ethernet Bridging using static circuit
assignment without address recognition;
other devices which dynamically place calls
based on destination addresses may reject
such requests.

An agent that (re)creates a new entry
because of a set with createRequest, should
also (re)create a mioxPeerEncTable entry
with a mioxPeerEncIndex of 1, and a
mioxPeerEncType of 204 (hex CC)."
::= { mioxPeerEntry 2 }

mioxPeerMaxCircuits OBJECT-TYPE
    SYNTAX PositiveInteger
    ACCESS read-write
    STATUS   mandatory
    DESCRIPTION

    DESCRIPTION
        "The number of seconds a call to this peer
        was active. This counter will be
        incremented by one for every second a

connection to a peer was open. If two calls
are open at the same time, one second of
elapsed real time will results in two
seconds of connect time."
::= { mioxPeerEntry 5 }

mioxPeerX25CallParamId OBJECT-TYPE
    SYNTAX InstancePointer
    ACCESS read-write
    STATUS mandatory
    DESCRIPTION
        "The instance of the index object in the
        x25CallParmTable from RFC 1382 for the X.25
        call parameters used to communicate with the
        remote host. The well known value {0 0}
        indicates no call parameters specified."
    DEFVAL { {0 0} }
    ::= { mioxPeerEntry 6 }

mioxPeerEnAddr OBJECT-TYPE
    SYNTAX   OCTET STRING (SIZE (0..128))
    ACCESS read-write
    STATUS mandatory
    DESCRIPTION
        "The Encapsulation address of the remote
        host mapped by this table entry. A length
        of zero indicates the remote IP address is
        unknown or unspecified for use as a PLE
        default.

        The first octet of this object contains the
        encapsulation type, the remaining octets
        contain an address of that type. Thus for
        an IP address, the length will be five
        octets, the first octet will contain 204
        (hex CC), and the last four octets will
        contain the IP address. For a snap
        encapsulation, the first byte would be 128
        (hex 80) and the rest of the octet string
        would have the snap header."

-- ###
--   Peer Encapsulation Table
-- ###

mioxPeerEncTable OBJECT-TYPE
    SYNTAX SEQUENCE OF MioxPeerEncEntry
    ACCESS not-accessible
    STATUS mandatory
    DESCRIPTION
            "This table contains the list of
            encapsulations used to communicate with a
            peer. This table has two indexes, the first
            identifies the peer, the second
            distinguishes encapsulation types.

            The first index identifies the corresponding
            entry in the mioxPeerTable. The second
            index gives the priority of the different
            encapsulations.

            The encapsulation types are ordered in
            priority order. For calling a peer, the
            first entry (mioxPeerEncIndex of 1) is tried
            first. If the call doesn't succeed because
            the remote host clears the call due to
            incompatible call user data, the next entry
            in the list is tried. Each entry is tried
            until the list is exhausted.

            For answering a call, the encapsulation type
            requested by the peer must be found the list
            or the call will be refused. If there are
            no entries in this table for a peer, all
            call requests from the peer will be refused.

            Objects in this table can only be set when
            the mioxPeerStatus object with the same
            index has a value of underCreation. When
            that status object is set to invalid and
            deleted, the entry in this table with that
            peer index must also be deleted."
    ::= { mioxPeer 2 }

mioxPeerEncEntry OBJECT-TYPE
    SYNTAX MioxPeerEncEntry
    ACCESS not-accessible
    STATUS mandatory
    DESCRIPTION
        "Per connection information."
    INDEX { mioxPeerIndex, mioxPeerEncIndex}
    ::= { mioxPeerEncTable 1 }

```
MioxPeerEncEntry ::= SEQUENCE {
    mioxPeerEncIndex
        PositiveInteger,
    mioxPeerEncType
        INTEGER
    }

mioxPeerEncIndex      OBJECT-TYPE
    SYNTAX  PositiveInteger
    ACCESS  read-only
    STATUS   mandatory
    DESCRIPTION
        "The second index in the table which
        distinguishes different encapsulation
        types."
    ::= { mioxPeerEncEntry 1 }

mioxPeerEncType OBJECT-TYPE
    SYNTAX  INTEGER (0..256)
    ACCESS  read-write
    STATUS  mandatory
    DESCRIPTION
        "The value of the encapsulation type.  For
        IP encapsulation this will have a value of
        204 (hex CC).  For SNAP encapsulated
        packets, this will have a value of 128 (hex
        80).  For CLNP, ISO 8473, this will have a
        value of 129 (hex 81).  For ES-ES, ISO 9542,
        this will have a value of 130 (hex 82).  A
        value of 197 (hex C5) identifies the Blacker
        X.25 encapsulation.  A value of 0,
        identifies the Null encapsulation.

        This value can only be written when the
        mioxPeerStatus object with the same
        mioxPeerIndex has a value of underCreation.
        Setting this object to a value of 256
        deletes the entry.  When deleting an entry,
        all other entries in the mioxPeerEncTable
        with the same mioxPeerIndex and with an
        mioxPeerEncIndex higher then the deleted
        entry, will all have their mioxPeerEncIndex
        values decremented by one."

-- Textual conventions

DHKeyChange ::=   TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
    "Upon initialization, or upon creation of a row containing an
object of this type, and after any successful SET of this value, a
GET of this value returns 'y' where $y = g^{xa}$ MOD p, and where g is
the base from usmDHParameters, p is the prime from
usmDHParameters, and xa is a new random integer selected by the
agent in the interval $2^{(l-1)} <= xa < 2^l < p-1$. 'l' is the
optional privateValueLength from usmDHParameters in bits. If 'l'
is omitted, then xa (and xr below) is selected in the interval 0
$<= xa < p-1$. y is expressed as an OCTET STRING 'PV' of length 'k'
which satisfies

$$y = \sum_{i=1}^{k} 2^{(8(k-i))} PV'_i$$

    where PV1,...,PVk are the octets of PV from first to last, and
    where $PV1 <> 0$.

A successful SET consists of the value 'y' expressed as an OCTET
STRING as above concatenated with the value 'z'(expressed as an
OCTET STRING in the same manner as y) where $z = g^{xr}$ MOD p, where
g, p and l are as above, and where xr is a new random integer
selected by the manager in the interval $2^{(l-1)} <= xr < 2^l <$
p-1. A SET to an object of this type will fail with the error
wrongValue if the current 'y' does not match the 'y' portion of
the value of the varbind for the object. (E.g. GET yout, SET
concat(yin, z), $yout <> yin$).

Note that the private values xa and xr are never transmitted from
manager to device or vice versa, only the values y and z.
Obviously, these values must be retained until a successful SET on
the associated object.

The shared secret 'sk' is calculated at the agent as $sk = z^{xa}$ MOD
p, and at the manager as $sk = y^{xr}$ MOD p.

Each object definition of this type MUST describe how to map from
the shared secret 'sk' to the operational key value used by the
protocols and operations related to the object. In general, if n
bits of key are required, the author suggests using the n

right-most bits of the shared secret as the operational key value."

usmDHKickstartTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF UsmDHKickstartEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "A table of mappings between zero or more Diffie-Helman key
agreement values and entries in the usmUserTable. Entries in this
table are created by providing the associated device with a
Diffie-Helman public value and a usmUserName/usmUserSecurityName
pair during initialization. How these values are provided is
outside the scope of this MIB, but could be provided manually, or
through a configuration file. Valid public value/name pairs
result in the creation of a row in this table as well as the

creation of an associated row (with keys derived as indicated) in
the usmUserTable. The actual access the related usmSecurityName
has is dependent on the entries in the VACM tables. In general,
an implementor will specify one or more standard security names
and will provide entries in the VACM tables granting various
levels of access to those names. The actual content of the VACM
table is beyond the scope of this MIB.

Note: This table is expected to be readable without authentication
using the usmUserSecurityName 'dhKickstart'. See the conformance
statements for details."

  STATUS   current
  DESCRIPTION

    "The agent's Diffie-Hellman public value for this row. At
initialization, the agent generates a random number and derives
its public value from that number. This public value is published
here. This public value 'y' equals g^r MOD p where g is the from
the set of Diffie-Hellman parameters, p is the prime from those
parameters, and r is a random integer selected by the agent in the
interval $2^{(l-1)} \leq r < p-1 < 2^l$. If l is unspecified, then r is
a random integer selected in the interval $0 \leq r < p-1$

The public value is expressed as an OCTET STRING 'PV' of length
'k' which satisfies

$$y = \sum_{i=1}^{k} 2^{(8(k-i))} PV'i$$

where PV1,...,PVk are the octets of PV from first to last, and
where PV1 != 0.

The following DH parameters (Oakley group #2, RFC 2409, sec 6.1,
6.2) are used for this object:

g = 2
p = FFFFFFFF FFFFFFFF C90FDAA2 2168C234 C4C6628B 80DC1CD1

  ::= { usmDHKickstartEntry 2 }

usmDHKickstartMgrPublic OBJECT-TYPE
  SYNTAX   OCTET STRING
  MAX-ACCESS read-only
  STATUS   current

DESCRIPTION

   "The manager's Diffie-Hellman public value for this row. Note
that this value is not set via the SNMP agent, but may be set via
some out of band method, such as the device's configuration file.
The manager calculates this value in the same manner and using the
same parameter set as the agent does. E.g. it selects a random
number 'r', calculates $y = g^r \bmod p$ and provides 'y' as the
public number expressed as an OCTET STRING. See
usmDHKickstartMyPublic for details.

When this object is set with a valid value during initialization,
a row is created in the usmUserTable with the following values:

usmUserEngineID   localEngineID
usmUserName   [value of usmDHKickstartSecurityName]
usmUserSecurityName   [value of usmDHKickstartSecurityName]
usmUserCloneFrom   ZeroDotZero
usmUserAuthProtocol   usmHMACMD5AuthProtocol
usmUserAuthKeyChange   -- derived from set value
usmUserOwnAuthKeyChange   -- derived from set value
usmUserPrivProtocol   usmDESPrivProtocol
usmUserPrivKeyChange   -- derived from set value
usmUserOwnPrivKeyChange   -- derived from set value
usmUserPublic   "
usmUserStorageType   permanent
usmUserStatus   active

A shared secret 'sk' is calculated at the agent as sk =
$mgrPublic^r \bmod p$ where r is the agents random number and p is the
DH prime from the common parameters. The underlying privacy key
for this row is derived from sk by applying the key derivation
function PBKDF2 defined in PKCS#5v2.0 with a salt of 0xd1310ba6,
and iterationCount of 500, a keyLength of 16 (for
usmDESPrivProtocol), and a prf (pseudo random function) of
'id-hmacWithSHA1'. The underlying authentication key for this row
is derived from sk by applying the key derivation function PBKDF2
with a salt of 0x98dfb5ac , an interation count of 500, a
keyLength of 16 (for usmHMAC5AuthProtocol), and a prf of
'id-hmacWithSHA1'. Note: The salts are the first two words in the
ks0 [key schedule 0] of the BLOWFISH cipher from 'Applied
Cryptography' by Bruce Schnier - they could be any relatively
random string of bits.

The manager can use its knowledge of its own random number and the
agent's public value to kickstart its access to the agent in a
secure manner. Note that the security of this approach is
directly related to the strength of the authorization security of

the out of band provisioning of the managers public value

(e.g. the configuration file), but is not dependent at all on the

strength of the confidentiality of the out of band provisioning

data."

AppLocalIndex ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION

  "A locally arbitrary unique identifier associated with an
application or application verb.

All objects of type AppLocalIndex are assigned by the agent
out of a common number space. In other words, AppLocalIndex
values assigned to entries in one table must not overlap with
AppLocalIndex values assigned to entries in another
table. Further, every protocolDirLocalIndex value registered
by the agent automatically assigns the same value out of the

AppLocalIndex number space.

For example, if the protocolDirLocalIndex values { 1, 3, 5, 7 }
have been assigned, and the apmHttpFilterAppLocalIndex values
{ 6, 8, 9 } have been assigned:

- Assignment of new AppLocalIndex values must not use the
  values { 1, 3, 5, 6, 7, 8, 9 }.
- AppLocalIndex values { 1, 3, 5, 7 } are automatically
  assigned and are associated with the identical value of
  protocolDirLocalIndex. In particular, an entry in the
  apmAppDirTable indexed by a value provides further
  information about a protocol indexed by the same value
  in the protocolDirTable of RMON2.

The value for each supported application must remain constant
at least from one re-initialization of the entity's network
management system to the next re-initialization, except that
if an application is deleted and re-created, it must be
re-created with a new value that has not been used since the
last re-initialization.

The specific value is meaningful only within a given SNMP
entity. An AppLocalIndex value must not be re-used until the
next agent restart."
SYNTAX   Unsigned32 (1..2147483647)

ProtocolDirNetworkAddress ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
    "A network level address whose semantics and encoding are
    specified by an associated protocolDirLocalIndex
    value. Objects of this type must specify which
    protocolDirLocalIndex value is used. This value is encoded
    according to the encoding rules for the identified
    protocolDirectory entry.

    For example, if the associated protocolDirLocalIndex indicates
    an encapsulation of ip, this object is encoded as a length
    octet of 4, followed by the 4 octets of the ip address,
    in network byte order.

    Objects of this type may allow this value to be the zero
    length string. If so, they must identify they meaning of this
    value."
  SYNTAX   OCTET STRING (SIZE(0..255))

DataSourceOrZero ::= TEXTUAL-CONVENTION

    STATUS   current
    DESCRIPTION
       "Identifies the source of the data that the associated
       function is configured to analyze. This source can be any
       interface on this device.

       In order to identify a particular interface, this
       object shall identify the instance of the ifIndex
       object, defined in [4], for the desired interface.

       For example, if an entry were to receive data from
       interface #1, this object would be set to ifIndex.1.

       If the source of the data isn't an interface or cannot be
       localized to an interface, this object would be set to 0.0"

    REFERENCE   "The DataSource textual convention is defined in
         RFC 2021 [5]."
    SYNTAX   OBJECT IDENTIFIER

RmonClientID ::= TEXTUAL-CONVENTION
    STATUS   current
    DESCRIPTION
       "A long-lived unique ID assigned to an end-system. This ID is
       assigned by the agent using an implementation-specific
       algorithm.

       Because a client machine may be assigned multiple addresses
       over any time period it can be difficult to attribute
       behavior to a particular client based solely on its
       address. A ClientID may be assigned to provide a more
       stable handle for referencing that client. The entity that
       assigns the ClientID may use various implementation
       techniques to keep track of a client but if the assigning
       entity is unable to track client address mappings, it may map
       client identifiers to client addresses rather than to
       distinct client machines.

       This is named ClientID because it helps to solve a problem
       seen in network clients (servers usually have well-known,
       long-lived addresses). However, ClientID's may be assigned to
       any end-system regardless of its role on the network."
    SYNTAX   Unsigned32 (0..4294967295)

TransactionAggregationType ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION

      "Specifies one of 4 different techniques for aggregating
      transactions.

      The metrics for a single transaction are the responsiveness of
      the transaction and whether the transaction succeeded (a
      boolean). When such metrics are aggregated in this MIB Module,
      these metrics are replaced by averages and distributions of
      responsiveness and availability. The metrics describing
      aggregates are constant no matter which type of aggregation is
      being performed. These metrics may be found in the
      apmReportTable.

      The flows(1) aggregation is the simplest. All transactions
      that share common application/server/client 3-tuples are
      aggregated together, resulting in a set of metrics for all
      such unique 3-tuples.

      The clients(2) aggregation results in somewhat more
      aggregation (i.e., fewer resulting records). All transactions
      that share common application/client tuples are aggregated
      together, resulting in a set of metrics for all such unique
      tuples.

      The servers(3) aggregation usually results in still more
      aggregation (i.e., fewer resulting records). All transactions
      that share common application/server tuples are aggregated
      together, resulting in a set of metrics for all such unique
      tuples.

      The applications(4) aggregation results in the most
      aggregation (i.e., the fewest resulting records). All
      transactions that share a common application are aggregated
      together, resulting in a set of metrics for all such unique
      applications.

      Note that it is not meaningful to aggregate applications, as
      different applications have widely varying characteristics. As a
      result, this set of aggregations is complete."
  SYNTAX   INTEGER {
        flows(1),   -- Least Aggregation

```
           clients(2),
           servers(3),
           applications(4) -- Most Aggregation
       }

-- The APM Application Directory Group

-- The Application Directory Table contains a record for every

-- application monitored by this agent. This table is also used to
-- configure whether or not an application will be measured and which
-- bucket boundaries will be used for the application.
--
-- The bucket boundaries define the break-points between bins of a
-- histogram analysis for that application. As an example of how this
-- works, consider an entry representing response-time for http.
-- If the boundaries are set as follows:
-- Boundary1: 500 milliseconds
-- Boundary2: 1 second
-- Boundary3: 2 seconds
-- Boundary4: 5
-- Boundary5: 15
-- Boundary6: 60
--
-- If the following measurements are made (all in milliseconds):
-- 377, 8645, 1300, 487, 1405, 775, 1115, 850, 945, 1054, 7745, 9380
--
-- A report run during this interval would report the following
-- counts:
-- Bucket1: 2
-- Bucket2: 3
-- Bucket3: 4
-- Bucket4: 0
-- Bucket5: 3
-- Bucket6: 0
-- Bucket7: 0

apmAppDirTable OBJECT-TYPE
    SYNTAX     SEQUENCE OF ApmAppDirEntry
    MAX-ACCESS  not-accessible
    STATUS     current
    DESCRIPTION
        "The APM MIB directory of applications and application
        verbs. The agent will populate this table with all
        applications/verbs of any responsivenessType it has the
        capability to monitor. Since the agent populates this table
```

with every entry it has the capability to monitor, the
entries in this table are read-write, allowing the management
station to modify parameters in this table but not to add new
entries or delete entries (however, entries may be
disabled). If new entries are added to the apmHttpFilterTable
or the apmUserDefinedAppTable, the agent will add the
corresponding entries to this table.

It is an implementation-dependent matter as to how the agent
sets these default parameters. For example, it may leave
certain entries in this table 'off(0)' if the agent developer

believes that combination will be infrequently used, allowing
a manager that needs that capability to set it to 'on(1)'.

Some applications are registered in the RMON2 protocol
directory and some are registered in other tables in this
MIB Module. Regardless of where an application is originally
registered, it is assigned an AppLocalIndex value that is the
primary index for this table.

The contents of this table affect all reports and exceptions
generated by this agent. Accordingly, modification of this
table should be performed by a manager acting in the role of
administrator. In particular, management software should not
require or enforce particular configuration of this table - it
should reflect the preferences of the site administrator, not
the software author. As a practical matter, this requires
management software to allow the administrator to configure
the values it will use so that it can be adapted to the site
policy."

        "This object describes and configures the agent's support for
        application performance measurement for this application.
        There are 3 types of measurements for different types of
        applications:

        Transaction-Oriented applications have a fairly constant
        workload to perform for all transactions. The responsiveness
        metric for transaction-oriented applications is application
        response time (from first request to final delivery of
        service) and is measured in milliseconds. This is
        commonly referred to as end-user response time.

        Throughput-Oriented applications have widely varying workloads
        based on the nature of the client request. In particular,
        throughput-oriented applications vary widely in the amount of
        data that must be transported to satisfy the request. The
```

responsiveness metric for throughput-oriented applications is kilobits per second.

Streaming-Oriented applications deliver data at a constant metered rate of speed regardless of the responsiveness of the networking and computing infrastructure. This constant rate of speed is generally specified to be below (sometimes well below) the nominal capability of the infrastructure. However, when the infrastructures cannot deliver data at this speed, interruption of service or degradation of service can result. The responsiveness metric for streaming-oriented applications is the ratio of time that the service is degraded or interrupted to the total service time. This metric is measured in parts per million.

Note that for some applications, measuring more than one responsiveness type may be interesting. For agents that wish

to support more than one measurement for a application, they will populate this table with multiple entries for that application, one for each type."

  DESCRIPTION
    "The value of sysUpTime the last time that any bucket boundary
    in any appDirEntry was changed. This object can help to
    determine if two managers are both trying to enforce different
    configurations of this table."
  ::= { apmMibObjects 2 }

apmAppDirID OBJECT-TYPE
  SYNTAX   OBJECT IDENTIFIER
  MAX-ACCESS read-write

STATUS   current
DESCRIPTION
"This object allows managers to avoid downloading application
directory information when the directory is set to a known
(usually fixed) configuration.

If the value of this object isn't 0.0, it signifies
that the entire contents of the apmAppDirTable,
apmHttpFilterTable, apmUserDefinedAppTable and
protocolDirTable are equal to a known state identified
by the value of this object. If a manager recognizes this
value as identifying a directory configuration it has a local
copy of, it may use this local copy rather than downloading
these tables. Note that it may have downloaded this local copy
(and the ID) from another agent and used this copy for all
other agents that advertised the same ID.

If an agent recognizes that the entire contents of the
apmAppDirTable, apmHttpFilterTable,
apmUserDefinedAppTable and protocolDirTable are equal to
a known state to which an ID has been assigned, it should set
this object to that ID.

In many cases when this feature is used, the application
directory information will be in read-only memory and thus the
tables may not be modified via SNMP requests. In the event

that the tables are writable and a modification is made, the
agent is responsible for setting this object to 0.0 if it
cannot determine that the state is equal to a known state.

An agent is not obligated to recognize and advertise all such
registered states as it may not have knowledge of all states.
Thus, a manager may encounter agents whose DirectoryID value
is 0.0 even though the contents of the directory were equal to
a registered state.

Note that the contents of those tables includes the
protocolDirLocalIndex and appLocalIndex values. In other
words, these values can't be assigned randomly on each agent,
but must be equal to values that are part of the known
state. While it is possible for a manager to download
application directory details using SNMP and to set the
appropriate directoryID, the manager would need to have some
scheme to ensure consistent values of LocalIndex variables
from agent to agent. Such schemes are outside the scope of

this specification.

Application directory registrations are unique within an
administrative domain.

Typically these registrations will be made by an agent
software developer who will set the application directory
tables to a read-only state and assign a DirectoryID to that
state. Thus, all agents running this software would share the
same DirectoryID. As the application directory might change
from one software release to the next, the developer may
register different DirectoryID's for each software release.

A customer could also create a site-wide application directory
configuration and assign a DirectoryID to that configuration
as long as consistent values of LocalIndex variables can be
ensured.

The value of this object must persist across reboots."
    ::= { apmMibObjects 3 }

-- APM HTTP Filter Table

-- The HTTP Filter Table creates virtual applications which measure the
-- performance of certain web pages or sets of web pages. Some
-- circumstances where this is particularly useful are:
--
--   - An Intranet or ASP scenario where a business application is
--   running on one or more web pages or scripts.

--   (i.e., /expense/submit.cgi?employeeID=3426&...)
--   - A web-hosting scenario where one wants to measure the
--   service level for a particular customer
--   - An e-commerce scenario where the performance of certain
--   pages needs to be monitored more closely.
--   (i.e., shopping cart, shipping, credit card authorization)

apmHttpFilterTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF ApmHttpFilterEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "A table that creates virtual applications which measure the
        performance of certain web pages or sets of web pages.

        When an entry is added to this table, the agent will

automatically create one or more entries in the
apmAppDirTable (one for each responsivenessType it is
capable of measuring).

Note that when entries exist in this table some HTTP
transactions will be summarized twice: in applications
represented here as well as the HTTP application. If entries
in this table overlap, these transactions may be summarized
additional times.

The contents of this table affect all reports and exceptions
generated by this agent. Accordingly, modification of this
table should be performed by a manager acting in the role of
administrator. In particular, management software should not
require or enforce particular configuration of this table - it
should reflect the preferences of the site administrator, not
the software author."

-- The APM Name Table

apmNameTable OBJECT-TYPE
  SYNTAX      SEQUENCE OF ApmNameEntry
  MAX-ACCESS  not-accessible
  STATUS      current
  DESCRIPTION
     "A client machine may have multiple addresses during a period
     of monitoring. The apmNameTable assigns a long-lived
     identifier to a client and records what addresses were
     assigned to that client for periods of time. Various
     implementation techniques exist for tracking this mapping but
     if an agent is unable to track client address mappings, it may
     map client identifiers to client addresses rather than to
     distinct client machines.

     A particular apmNameClientID should be a constant attribute of
     a particular client. When available, the agent may also record
     the machine name and/or user name which may be valuable for
     displaying to humans. The apmNameMachineName and
     apmNameUserName are relatively constant, changing only if
     these attributes actually change on the client.

     The agent will store a historical log of these entries, aging
     out old entries as the log becomes too large. Since this table
```

contains information vital to the interpretation of other
tables (e.g., the apmReportTable), the agent should ensure that

the log doesn't age out entries that would be referenced by
data in those tables.

Note that an entry for a clientID is active from its
StartTime until the StartTime of another entry (for the same
clientID) that supersedes it, or 'now' if none supersede
it. Therefore, if a clientID only has a single entry, it is by
definition very new and should never be aged out. No entry for
a clientID should be aged out unless it has been updated by a
new entry for the client (i.e., with an updated address) and
only if the new entry is 'old' enough.

To determine how old is old enough, compute the maximum value
of Interval * (NumReports + 1) of all entries in the
apmReportControlTable (the '+ 1' is to allow a reasonable
period of time for the report to be downloaded). Then take the
larger of this value and the age in seconds of the oldest
entry in the current transaction table. If an entry for a
clientID is superseded by another entry whose StartTime is
more than this many seconds ago, then the older entry may be
deleted."
  ::= { apmMibObjects 8 }

    DESCRIPTION
        "A unique ID assigned to the machine represented by this
        mapping. This ID is assigned by the agent using an
        implementation-specific algorithm."
    ::= { apmNameEntry 1 }

apmNameClientAddress OBJECT-TYPE
    SYNTAX      ProtocolDirNetworkAddress (SIZE(1..255))
    MAX-ACCESS  not-accessible
    STATUS      current
    DESCRIPTION
        "The network client address for this client when this mapping
        was active.

        This is represented as an octet string with specific semantics
        and length as identified by the protocolDirLocalIndex
        component of the index. This object may not be the zero length
        string.

        Since this object is an index variable, it is encoded in the
        index according to the index encoding rules.  For example, if
        the protocolDirLocalIndex component of the index indicates an
        encapsulation of ip, this object is encoded as a length octet
        of 4, followed by the 4 octets of the ip address, in network
        byte order. Care should be taken to avoid values of this
        object that, in conjunction with the other index variables,
        would result in an index longer than SNMP's maximum of 128
        subidentifiers."

    apmReportControlTable. Each such entry defines a unique
    report whose results are placed in the apmReportTable on
    behalf of this apmReportControlEntry."
  ::= { apmReportControlEntry 1 }

apmReportControlDataSource OBJECT-TYPE
  SYNTAX   DataSourceOrZero
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
      "The source of the data for APM Reports generated on
      behalf of this apmReportControlEntry.

      If the measurement is being performed by a probe, this should
      be set to interface or port where data was received for
      analysis. If the measurement isn't being performed by a probe,
      this should be set to the primary interface over which the
      measurement is being performed. If the measurement isn't being
      performed by a probe and there is no primary interface or this

      information isn't known, this object should be set to 0.0.

      This object may not be modified if the associated
      apmReportControlStatus object is equal to active(1)."
  ::= { apmReportControlEntry 2 }

apmReportControlAggregationType OBJECT-TYPE
  SYNTAX   TransactionAggregationType
        --   INTEGER {
        --   flows(1),
        --   clients(2),
        --   servers(3),
        --   applications(4)
        --   }
  MAX-ACCESS read-create
  STATUS   current
  DESCRIPTION
      "The type of aggregation being performed for this set of
      reports.

      The metrics for a single transaction are the responsiveness of
      the transaction and whether the transaction succeeded (a
      boolean). When such metrics are aggregated in this MIB Module,
      these metrics are replaced by averages and distributions of
      responsiveness and availability. The metrics describing
      aggregates are constant no matter which type of aggregation is
      being performed. These metrics may be found in the
      apmReportTable.

      The flows(1) aggregation is the simplest. All transactions
      that share common application/server/client 3-tuples are

aggregated together, resulting in a set of metrics for all
such unique 3-tuples.

The clients(2) aggregation results in somewhat more
aggregation (i.e., fewer resulting records). All transactions
that share common application/client tuples are aggregated
together, resulting in a set of metrics for all such unique
tuples.

The servers(3) aggregation usually results in still more
aggregation (i.e., fewer resulting records). All transactions
that share common application/server tuples are aggregated
together, resulting in a set of metrics for all such unique
tuples.

The applications(4) aggregation results in the most
aggregation (i.e., the fewest resulting records). All

transactions that share a common application are aggregated
together, resulting in a set of metrics for all such unique
applications.

Note that it is not meaningful to aggregate applications, as
different applications have widely varying characteristics.
As a result, this set of aggregations is complete.

This object may not be modified if the associated
apmReportControlStatus object is equal to active(1)."
    ::= { apmReportControlEntry 3 }

apmReportControlInterval OBJECT-TYPE
    SYNTAX   Unsigned32
    UNITS   "Seconds"
    MAX-ACCESS read-create
    STATUS   current
    DESCRIPTION
        "The interval in seconds over which data is accumulated before
        being aggregated into a report in the apmReportTable. All
        reports with the same apmReportControlIndex will be based on
        the same interval. This object must be greater than zero.

        Many users desire that these reports be synchronized to within
        seconds of the beginning of the hour because the results may
        be correlated more meaningfully to business behavior and so
        that data from multiple agents is aggregated over the same
        time periods. Thus management software may take extra effort

to synchronize reports to the beginning of the hour and to one
another. However, the agent must not allow reports to 'drift'
over time as they will quickly become unsynchronized. In
particular, if there is any fixed processing delay between
reports, the reports should deduct this time from the interval
so that reports don't drift.

This object may not be modified if the associated
apmReportControlStatus object is equal to active(1)."
DEFVAL { 3600 }

apmReportControlGrantedSize OBJECT-TYPE
  SYNTAX   Unsigned32
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    "The number of entries per report the agent has allocated
    based on the requested amount in apmReportControlRequestedSize.
    Since multiple reports are saved, the total number of entries
    allocated will be this number multiplied by the value of
    apmReportControlGrantedReports, or 1 if that object doesn't
    exist.

    When the associated apmReportControlRequestedSize object is
    created or modified, the agent should set this object as
    closely to the requested value as is possible for the
    particular implementation and available resources. When
    considering resources available, the agent must consider its
    ability to allocate this many entries for all reports.

    Note that while the actual number of entries stored in the
    reports may fluctuate due to changing conditions, the agent
    must continue to have storage available to satisfy the full
    report size for all reports when necessary. Further, the agent
    must not lower this value except as a result of a set to the
    associated apmReportControlRequestedSize object."

    numbered one."
  ::= { apmReportControlEntry 10 }

apmReportControlDeniedInserts OBJECT-TYPE
  SYNTAX   Counter32
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    "The number of failed attempts to add an entry to reports for

    this apmReportControlEntry because the number of entries
    would have exceeded apmReportControlGrantedSize.

    This number is valuable in determining if enough entries have
    been allocated for reports in light of fluctuating network
    usage. Note that since an entry that is denied will often be
    attempted again, this number will not predict the exact number
    of additional entries needed, but can be used to understand
    the relative magnitude of the problem.

    Also note that there is no ordering specified for the entries
    in the report, thus there are no rules for which entries will
    be omitted when not enough entries are available. As a
    consequence, the agent is not required to delete 'least
    valuable' entries first."
  ::= { apmReportControlEntry 11 }

apmReportControlDroppedFrames OBJECT-TYPE
  SYNTAX   Counter32

MAX-ACCESS read-only
STATUS   current
DESCRIPTION
   "The total number of frames which were received by the agent
   and therefore not accounted for in the *StatsDropEvents, but
   for which the agent chose not to count for this entry for
   whatever reason. Most often, this event occurs when the agent
   is out of some resources and decides to shed load from this
   collection.

   This count does not include packets that were not counted
   because they had MAC-layer errors.

   This counter is only relevant if this apm report is based on
   a data source whose collection methodology is based on
   analyzing network traffic.

   Note that if the apmReportTables are inactive because no
   applications are enabled in the application directory, this
   value should be 0.

   Note that, unlike the dropEvents counter, this number is the
   exact number of frames dropped."

  STATUS   current
  DESCRIPTION
    "A conceptual row in the apmReportTable.
    The apmReportControlIndex value in the index identifies the
    apmReportControlEntry on whose behalf this entry was created.
    The apmReportIndex value in the index identifies which report
    (in the series of reports) this entry is a part of.
    The apmAppDirAppLocalIndex value in the index identifies
    the common application of the transactions aggregated in this
    entry.
    The apmAppDirResponsivenessType value in the index
    identifies the type of responsiveness metric reported by
    this entry and uniquely identifies this entry when more

than one responsiveness metric is measured for a flow.
Entries will only exist in this table for those
combinations of AppLocalIndex and ResponsivenessType
that are configured 'on(1)'.
The protocolDirLocalIndex value in the index identifies
the network layer protocol of the apmReportServerAddress.
When the associated apmReportControlAggregationType value is
equal to applications(4) or clients(2), this
protocolDirLocalIndex value will equal 0.
The apmReportServerAddress value in the index identifies the
network layer address of the server in transactions aggregated
in this entry.
The apmNameClientID value in the index identifies the
client in transactions aggregated in this entry. If the
associated apmReportControlAggregationType is equal to
applications(4) or servers(3), then this protocolDirLocalIndex
value will equal 0.

An example of the indexing of this entry is
apmReportTransactionCount.3.15.3.1.8.4.192.168.1.2.3232235788

Note that some combinations of index values may result in an
index that exceeds 128 sub-identifiers in length which exceeds
the maximum for the SNMP protocol. Implementations should take
care to avoid such combinations."

-- The APM Exception table
-- The APM Exception Table creates filters so that a management
-- station can get immediate notification of a transaction that has
-- had poor availability or responsiveness.
--
-- This function is particularly helpful in unaggregated situations
-- where the numbers of agents is relatively high and the transaction
-- rate per agent is relatively low (such as agents for desktops or
-- dedicated to small workgroups). Polling agents in such an
-- environment would either cause scalability problems (high rate) or
-- lead to long notification delays (low rate).

apmExceptionTable OBJECT-TYPE
    SYNTAX   SEQUENCE OF ApmExceptionEntry
    MAX-ACCESS not-accessible
    STATUS   current
    DESCRIPTION
        "This table creates filters so that a management station can
        get immediate notification of a transaction that has had poor

        availability or responsiveness.

        Each apmExceptionEntry is associated with a particular type of
        transaction and is applied to all transactions of that
        type. Multiple apmExceptionEntries may be associated with a
        particular type of transaction. A transaction type is
        identified by the value of the apmAppDirAppLocalIndex
        component of the index.

        Because the quality of a transaction is not known until it is
        completed, these thresholds are only applied after the
        transaction has completed."

    state are apmExceptionResponsivenessComparison,
    apmExceptionResponsivenessThreshold and
    apmExceptionUnsuccessfulException."
  ::= { apmExceptionEntry 9 }

apmThroughputExceptionMinTime OBJECT-TYPE
  SYNTAX   Unsigned32
  UNITS   "seconds"
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
    "Because the responsiveness for throughput-oriented
    transactions is divided by the elapsed time, it can be very
    sensitive to short-term performance variations for
    transactions that take a short period of time. For example,
    when downloading a very short file, a single dropped packet
    could double or triple the total response time.

    Further, throughput is usually examined for applications that
    transfer a lot of data, and when doing so it is helpful to
    conceptualize transaction costs that are proportional to the
    amount of data separately from those costs that are relatively
    fixed (i.e., independent of the amount of data). For very
    short transactions, these fixed transaction costs (handshake,
    setup time, authentication, round-trip time) may dominate the
    total response time for the transaction, resulting in
    throughput measurements that aren't really proportional to the
    network's, server's and client's combined data throughput
    capability.

    This object controls the minimum number of seconds that an
    throughput-based transaction must exceed before an exception
    can be generated for it. If this object is set to zero, then

all throughput-based transactions are candidates for
exceptions.

   The value of this object must persist across reboots."
  DEFVAL   { 10 }
  ::= { apmMibObjects 14 }

apmNotificationMaxRate OBJECT-TYPE
  SYNTAX   Unsigned32
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
    "The maximum number of notifications that can be generated
    from this agent by the apmExceptionTable in any 60 second
    period.

    The value of this object must persist across reboots."
  DEFVAL { 1 }

apmTransactionResponsivenessAlarm NOTIFICATION-TYPE
  OBJECTS   { apmExceptionResponsivenessThreshold,
          apmTransactionResponsiveness }
  STATUS   current
  DESCRIPTION
    "Notification sent when a transaction exceeds a threshold
    defined in the apmException table. The index of the
    included apmExceptionResponsivenessThreshold object identifies
    the apmExceptionEntry that specified the threshold. The
    apmTransactionResponsiveness variable identifies the actual
    transaction and its responsiveness.

    Agent implementors are urged to include additional data
    objects in the alarm that may explain the reason for the
    alarm. It is helpful to include such data in the alarm because
    it describes the situation at the time the alarm was
    generated, where polls after the fact may not provide
    meaningful information. Examples of such information are CPU
    load, memory utilization, network utilization, and transaction
    statistics."
  ::= { apmNotifications 1 }

apmTransactionUnsuccessfulAlarm NOTIFICATION-TYPE
  OBJECTS   { apmExceptionResponsivenessThreshold }
  STATUS   current
  DESCRIPTION
    "Notification sent when a transaction is unsuccessful.
    The index of the included apmExceptionResponsivenessThreshold
    object identifies both the type of the transaction that caused
    this notification as well as the apmExceptionEntry that
    specified the threshold.

    Agent implementors are urged to include additional data
    objects in the alarm that may explain the reason for the
    alarm. It is helpful to include such data in the alarm because
    it describes the situation at the time the alarm was
    generated, where polls after the fact may not provide
    meaningful information. Examples of such information are CPU
    load, memory utilization, network utilization, and transaction
    statistics."

        at: ftp://ftp.isi.edu/mib/ianaiftype.mib"

REVISION   "199401310000Z" -- Jan 31, 1994
DESCRIPTION "Initial version of this MIB as published in
        RFC 1573."

::= { mib-2 30 }

IANAifType ::= TEXTUAL-CONVENTION
   STATUS   current
   DESCRIPTION
          "This data type is used as the syntax of the ifType
          object in the (updated) definition of MIB-II's
          ifTable.

          The definition of this textual convention with the
          addition of newly assigned values is published
          periodically by the IANA, in either the Assigned
          Numbers RFC, or some derivative of it specific to
          Internet Network Management number assignments. (The
          latest arrangements can be obtained by contacting the
          IANA.)

          Requests for new values should be made to IANA via
          email (iana&iana.org).

          The relationship between the assignment of ifType
          values and of OIDs to particular media-specific MIBs
          is solely the purview of IANA and is subject to change
          without notice. Quite often, a media-specific MIB's
          OID-subtree assignment within MIB-II's 'transmission'
          subtree will be the same as its ifType value.
          However, in some circumstances this will not be the
          case, and implementors must not pre-assume any
          specific relationship between ifType values and
          transmission subtree OIDs."

IANAtunnelType ::= TEXTUAL-CONVENTION
  STATUS   current
  DESCRIPTION
        "The encapsulation method used by a tunnel. The value
        direct indicates that a packet is encapsulated
        directly within a normal IP header, with no
        intermediate header, and unicast to the remote tunnel
        endpoint (e.g., an RFC 2003 IP-in-IP tunnel, or an RFC
        1933 IPv6-in-IPv4 tunnel). The value minimal indicates
        that a Minimal Forwarding Header (RFC 2004) is
        inserted between the outer header and the payload
        packet. The value UDP indicates that the payload
        packet is encapsulated within a normal UDP packet
        (e.g., RFC 1234).

        The values sixToFour, sixOverFour, and isatap
        indicates that an IPv6 packet is encapsulated directly
        within an IPv4 header, with no intermediate header,
        and unicast to the destination determined by the 6to4,
        6over4, or ISATAP protocol.

        The remaining protocol-specific values indicate that a
        header of the protocol of that name is inserted
        between the outer header and the payload header.

        The assignment policy for IANAtunnelType values is
        identical to the policy for assigning IANAifType
        values."

  DESCRIPTION
    "Session Initiation Protocol (SIP) Common MIB module. This
    module defines objects that may be common to all SIP entities.

    SIP is an application-layer signaling protocol for creating,
    modifying and terminating multimedia sessions with one or more
    participants. These sessions include Internet multimedia
    conferences and Internet telephone calls. SIP is defined in
    RFC 3261 (June 2002).

    This MIB is defined for managing objects that are common to
    SIP User Agents (UAs), Proxy, Redirect, and Registrar servers.
    Objects specific to each of these entities MAY be managed using
    entity specific MIBs defined in other modules.

    Copyright (C) The IETF Trust (2007). This version of
    this MIB module is part of RFC 4780; see the RFC itself for

full legal notices."

          restarting(5),
          quiescing(6),
          testing(7)
          }
  MAX-ACCESS  read-only
  STATUS    current
  DESCRIPTION
    "This object contains the current operational state of
     the SIP application.

     unknown    : The operational status cannot be determined
                  for some reason.
     up         : The application is operating normally and is
                  processing (receiving and possibly issuing) SIP
                  requests and responses.
     down       : The application is currently unable to process
                  SIP messages.
     congested  : The application is operational but no additional

                  inbound transactions can be accommodated at the
                  moment.
     restarting : The application is currently unavailable, but it
                  is in the process of restarting and will
                  presumably, soon be able to process SIP messages.
     quiescing  : The application is currently operational
                  but has been administratively put into
                  quiescence mode.  Additional inbound
                  transactions MAY be rejected.
     testing    : The application is currently in test mode
                  and MAY not be able to process SIP messages.

     The operational status values defined for this object are not
     based on any specific information contained in the SIP
     standard."

-- SIP extensions MAY be supported or required by SIP entities.
--

sipCommonOptionTagTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF SipCommonOptionTagEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "This table contains a list of the SIP option tags (SIP
    extensions) that are either required, supported, or
    unsupported by the SIP entity. These option tags are
    used in the Require, Proxy-Require, Supported, and
    Unsupported header fields.

    Example: If a user agent client supports, and requires the
    server to support, reliability of provisional responses
    (RFC 3262), this table contains a row with the option tag string
    '100rel' in sipCommonOptionTag and the OCTET STRING value of
    '1010 0000' or '0xA0' in sipCommonOptionTagHeaderField.

    If a server does not support the required feature (indicated in
    a Require header to a UAS, or in a Proxy-Require to a Proxy
    Server), the server returns a 420 Bad Extension listing the
    feature in an Unsupported header.

    Normally, the list of such features supported by an entity is
    static (i.e., will not change over time)."

  ::= { sipCommonSummaryStatsEntry 4 }

sipCommonSummaryTotalTransactions OBJECT-TYPE
  SYNTAX   Counter32
  MAX-ACCESS read-only
  STATUS   current
  DESCRIPTION
    "This object contains a count of the number of transactions that
    are in progress and transactions that have reached the
    'Terminated' state. It is not applicable to stateless SIP Proxy
    Servers.

A SIP transaction occurs between a client and a server, and
comprises all messages from the first request sent from the
client to the server, up to a final (non-1xx) response sent
from the server to the client.

If the request is INVITE and the final response is a non-2xx,
the transaction also include an ACK to the response. The ACK
for a 2xx response to an INVITE request is a separate
transaction.

The branch ID parameter in the Via header field values serves
as a transaction identifier.

A transaction is identified by the CSeq sequence number within
a single call leg. The ACK request has the same CSeq number as
the corresponding INVITE request, but comprises a transaction
of its own.

In the case of a forked request, each branch counts as a single
transaction.

For a transaction stateless Proxy Server, this counter is
always 0.

Discontinuities in the value of this counter can occur at
re-initialization of the SIP entity or service. A Management
Station can detect discontinuities in this counter by
monitoring the sipCommonSummaryDisconTime object in the same
row."

}

sipCommonStatusCodeNotifSend OBJECT-TYPE
  SYNTAX   TruthValue
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION
    "This object controls whether a sipCommonStatusCodeNotif is
    emitted when the status code value specified by
    sipCommonStatusCodeValue is sent or received. If the value of
    this object is 'true', then a notification is sent. If it is
    'false', no notification is sent.
    Note well that a notification MAY be emitted for every message
    sent or received that contains the particular status code.
    Depending on the status code involved, this can cause a
    significant number of notification emissions that could be
    detrimental to network performance. Managers are forewarned to
    be prudent in the use of this object to enable notifications.
    Look to sipCommonStatusCodeNotifEmitMode for alternative
    controls for sipCommonStatusCodeNotif emissions."
  DEFVAL { false }
  ::= { sipCommonStatusCodeNotifEntry 1 }

sipCommonStatusCodeNotifEmitMode OBJECT-TYPE
  SYNTAX   INTEGER {
        normal(1),
        oneShot(2),
        triggered(3) -- read-only
        }
  MAX-ACCESS read-write
  STATUS   current
  DESCRIPTION

    "The object sipCommonStatusCodeNotifSend MUST be set to 'true'
    for the values of this object to have any effect. It is
    RECOMMENDED that the desired emit mode be established by this

object prior to setting sipCommonStatusCodeNotifSend to 'true'.
This object and the sipCommonStatusCodeNotifSend object can
obviously be set independently, but their respective values
will have a dependency on each other and the resulting
notifications.

This object specifies the mode for emissions of
sipCommonStatusCodeNotif notifications.

normal   : sipCommonStatusCodeNotif notifications will be
           emitted by the system for each SIP response
           message sent or received that contains the
           desired status code.

oneShot   : Only one sipCommonStatusCodeNotif notification
           will be emitted. It will be the next SIP response
           message sent or received that contains the
           desired status code.

           No more notifications are emitted until this
           object is set to 'oneShot' again or set to
           'normal'. This option is provided as a means of
           quelling the potential promiscuous behavior that
           can be associated with the
           sipCommonStatusCodeNotif.

triggered : This value is only readable and cannot be set. It
           reflects that the 'oneShot' case has occurred,
           and indicates that the mode needs to be reset to
           get further notifications. The mode is reset by
           setting this object to 'oneShot' or 'normal'."

  SYNTAX   Unsigned32 (1..4294967295)

IndexIntegerNextFree ::= TEXTUAL-CONVENTION

  DISPLAY-HINT "d"

  STATUS   current

  DESCRIPTION

    "An integer which may be used as a new Index in a table.

  The special value of 0 indicates that no more new entries can be

  created in the relevant table.

  When a MIB is used for configuration, an object with this SYNTAX

  always contains a legal value (if non-zero) for an index that is

  not currently used in the relevant table. The Command Generator

  (Network Management Application) reads this variable and uses the

  (non-zero) value read when creating a new row with an SNMP SET.

  When the SET is performed, the Command Responder (agent) must

determine whether the value is indeed still unused; Two Network
Management Applications may attempt to create a row
(configuration entry) simultaneously and use the same value. If
it is currently unused, the SET succeeds and the Command
Responder (agent) changes the value of this object, according to
an implementation-specific algorithm. If the value is in use,

however, the SET fails. The Network Management Application must
then re-read this variable to obtain a new usable value.

An OBJECT-TYPE definition using this SYNTAX MUST specify the
relevant table for which the object is providing this
functionality."
  SYNTAX   Unsigned32 (0..4294967295)

IfDirection ::= TEXTUAL-CONVENTION
  STATUS current
  DESCRIPTION
    "IfDirection specifies a direction of data travel on an
    interface. 'inbound' traffic is operated on during reception from
    the interface, while 'outbound' traffic is operated on prior to
    transmission on the interface."
  SYNTAX INTEGER {

          outbound(2)   -- egress interface
}

--
-- Data Path
--

diffServDataPath   OBJECT IDENTIFIER ::= { diffServMIBObjects 1 }

--
-- Data Path Table
--
-- The Data Path Table enumerates the Differentiated Services
-- Functional Data Paths within this device. Each entry in this table
-- is indexed by ifIndex and ifDirection. Each entry provides the
-- first Differentiated Services Functional Data Path Element to
-- process data flowing along specific data path. This table should
-- have at most two entries for each interface capable of
-- Differentiated Services processing on this device: ingress and
-- egress.

-- Note that Differentiated Services Functional Data Path Elements

-- linked together using their individual next pointers and anchored by
-- an entry of the diffServDataPathTable constitute a functional data
-- path.
--

diffServDataPathTable OBJECT-TYPE
  SYNTAX   SEQUENCE OF DiffServDataPathEntry
  MAX-ACCESS not-accessible
  STATUS   current

  DESCRIPTION
    "The data path table contains RowPointers indicating the start of
    the functional data path for each interface and traffic direction
    in this device. These may merge, or be separated into parallel
    data paths."
  ::= { diffServDataPath 1 }

diffServDataPathEntry OBJECT-TYPE
  SYNTAX   DiffServDataPathEntry
  MAX-ACCESS not-accessible
  STATUS   current
  DESCRIPTION
    "An entry in the data path table indicates the start of a single
    Differentiated Services Functional Data Path in this device.

    These are associated with individual interfaces, logical or
    physical, and therefore are instantiated by ifIndex. Therefore,
    the interface index must have been assigned, according to the
    procedures applicable to that, before it can be meaningfully
    used. Generally, this means that the interface must exist.

    When diffServDataPathStorage is of type nonVolatile, however,
    this may reflect the configuration for an interface whose ifIndex
    has been assigned but for which the supporting implementation is
    not currently present."

    for this interface is in view."
  ::= { diffServDataPathEntry 1 }

diffServDataPathStart OBJECT-TYPE
  SYNTAX   RowPointer
  MAX-ACCESS   read-create
  STATUS   current

  DESCRIPTION
    "This selects the first Differentiated Services Functional Data
    Path Element to handle traffic for this data path. This
    RowPointer should point to an instance of one of:
      diffServClfrEntry
      diffServMeterEntry
      diffServActionEntry
      diffServAlgDropEntry
      diffServQEntry

    A value of zeroDotZero in this attribute indicates that no
    Differentiated Services treatment is performed on traffic of this
    data path. A pointer with the value zeroDotZero normally
    terminates a functional data path.

    Setting this to point to a target that does not exist results in
    an inconsistentValue error. If the row pointed to is removed or
    becomes inactive by other means, the treatment is as if this
    attribute contains a value of zeroDotZero."
  ::= { diffServDataPathEntry 2 }

      row may be modified at any time."
   ::= { diffServDataPathEntry 4 }

--
-- Classifiers
--

diffServClassifier     OBJECT IDENTIFIER ::= { diffServMIBObjects 2 }

--

-- Classifier Table
--
-- The Classifier Table allows multiple classifier elements, of same or
-- different types, to be used together. A classifier must completely
-- classify all packets presented to it. This means that all traffic
-- presented to a classifier must match at least one classifier element
-- within the classifier, with the classifier element parameters
-- specified by a filter.

-- If there is ambiguity between classifier elements of different
-- classifier, classifier linkage order indicates their precedence; the
-- first classifier in the link is applied to the traffic first.

-- Entries in the classifier element table serves as the anchor for
-- each classification pattern, defined in filter table entries.  Each
-- classifier element table entry also specifies the subsequent
-- downstream Differentiated Services Functional Data Path Element when
-- the classification pattern is satisfied. Each entry in the
-- classifier element table describes one branch of the fan-out
-- characteristic of a classifier indicated in the Informal
-- Differentiated Services Model section 4.1.  A classifier is composed
-- of one or more classifier elements.

diffServClfrNextFree OBJECT-TYPE
  SYNTAX     IndexIntegerNextFree

  STATUS     current
  DESCRIPTION
     "This object contains an unused value for diffServClfrId, or a
      zero to indicate that none exist."
```

```
      ::= { diffServClassifier 1 }

diffServClfrTable OBJECT-TYPE
   SYNTAX      SEQUENCE OF DiffServClfrEntry
   MAX-ACCESS   not-accessible
   STATUS      current
   DESCRIPTION
      "This table enumerates all the diffserv classifier functional
      data path elements of this device.  The actual classification
      definitions are defined in diffServClfrElementTable entries
      belonging to each classifier.

      An entry in this table, pointed to by a RowPointer specifying an
      instance of diffServClfrStatus, is frequently used as the name
      for a set of classifier elements, which all use the index
      diffServClfrId. Per the semantics of the classifier element
      table, these entries constitute one or more unordered sets of
      tests which may be simultaneously applied to a message to

      classify it.

      The primary function of this table is to ensure that the value of
      diffServClfrId is unique before attempting to use it in creating
      a diffServClfrElementEntry. Therefore, the diffServClfrEntry must
      be created on the same SET as the diffServClfrElementEntry, or
      before the diffServClfrElementEntry is created."

  ::= { diffServClassifier 3 }

diffServClfrElementTable OBJECT-TYPE

SYNTAX   SEQUENCE OF DiffServClfrElementEntry
MAX-ACCESS   not-accessible
STATUS   current
DESCRIPTION

   "The classifier element table enumerates the relationship between
   classification patterns and subsequent downstream Differentiated
   Services Functional Data Path elements.
   diffServClfrElementSpecific points to a filter that specifies the
   classification parameters. A classifier may use filter tables of
   different types together.

   One example of a filter table defined in this MIB is
   diffServMultiFieldClfrTable, for IP Multi-Field Classifiers
   (MFCs). Such an entry might identify anything from a single
   micro-flow (an identifiable sub-session packet stream directed
   from one sending transport to the receiving transport or
   transports), or aggregates of those such as the traffic from a
   host, traffic for an application, or traffic between two hosts
   using an application and a given DSCP. The standard Behavior
   Aggregate used in the Differentiated Services Architecture is
   encoded as a degenerate case of such an aggregate - the traffic
   using a particular DSCP value.

   Filter tables for other filter types may be defined elsewhere."

  ::= { diffServClassifier 4 }

diffServClfrElementEntry OBJECT-TYPE
  SYNTAX   DiffServClfrElementEntry
  MAX-ACCESS   not-accessible
  STATUS   current
  DESCRIPTION
   "An entry in the classifier element table describes a single
   element of the classifier."
  INDEX { diffServClfrId, diffServClfrElementId }
  ::= { diffServClfrElementTable 1 }

DiffServClfrElementEntry ::= SEQUENCE {

    ::= { diffServClfrElementEntry 1 }

diffServClfrElementPrecedence OBJECT-TYPE
    SYNTAX   Unsigned32 (1..4294967295)
    MAX-ACCESS read-create
    STATUS   current
    DESCRIPTION
        "The relative order in which classifier elements are applied:
        higher numbers represent classifier element with higher
        precedence. Classifier elements with the same order must be
        unambiguous i.e. they must define non-overlapping patterns, and
        are considered to be applied simultaneously to the traffic
        stream. Classifier elements with different order may overlap in
        their filters: the classifier element with the highest order
        that matches is taken.

        On a given interface, there must be a complete classifier in
        place at all times in the ingress direction. This means one or
        more filters must match any possible pattern. There is no such

        requirement in the egress direction."

        diffServQEntry

      A value of zeroDotZero in this attribute indicates no further
      Differentiated Services treatment is performed on traffic of this
      data path. The use of zeroDotZero is the normal usage for the
      last functional data path element of the current data path.

      Setting this to point to a target that does not exist results in
      an inconsistentValue error. If the row pointed to is removed or
      becomes inactive by other means, the treatment is as if this
      attribute contains a value of zeroDotZero."

    ::= { diffServMultiFieldClfrEntry 15 }

--
-- Meters
--

diffServMeter        OBJECT IDENTIFIER ::= { diffServMIBObjects 3 }

--
-- This MIB supports a variety of Meters.  It includes a specific
-- definition for Token Bucket Meter, which are but one type of
-- specification. Other metering parameter sets can be defined in other
-- MIBs.

-- Multiple meter elements may be logically cascaded using their
-- diffServMeterSucceedNext and diffServMeterFailNext pointers if
-- required. One example of this might be for an AF PHB implementation
-- that uses multiple level conformance meters.

-- Cascading of individual meter elements in the MIB is intended to be
-- functionally equivalent to multiple level conformance determination
-- of a packet.  The sequential nature of the representation is merely
-- a notational convenience for this MIB.

-- srTCM meters (RFC 2697) can be specified using two sets of
-- diffServMeterEntry and diffServTBParamEntry. The first set specifies
-- the Committed Information Rate and Committed Burst Size
-- token-bucket.  The second set specifies the Excess Burst Size
-- token-bucket.

-- trTCM meters (RFC 2698) can be specified using two sets of
-- diffServMeterEntry and diffServTBParamEntry. The first set specifies
-- the Committed Information Rate and Committed Burst Size
-- token-bucket.  The second set specifies the Peak Information Rate
-- and Peak Burst Size token-bucket.

-- tswTCM meters (RFC 2859) can be specified using two sets of
-- diffServMeterEntry and diffServTBParamEntry. The first set specifies
-- the Committed Target Rate token-bucket.  The second set specifies
```

-- the Peak Target Rate token-bucket. diffServTBParamInterval in each
-- token bucket reflects the Average Interval.

              tailDrop(2),
              headDrop(3),
              randomDrop(4),
              alwaysDrop(5)
}
  MAX-ACCESS  read-create
  STATUS      current
  DESCRIPTION
     "The type of algorithm used by this dropper. The value other(1)
     requires further specification in some other MIB module.

     In the tailDrop(2) algorithm, diffServAlgDropQThreshold
     represents the maximum depth of the queue, pointed to by
     diffServAlgDropQMeasure, beyond which all newly arriving packets
     will be dropped.

     In the headDrop(3) algorithm, if a packet arrives when the
     current depth of the queue, pointed to by
     diffServAlgDropQMeasure, is at diffServAlgDropQThreshold, packets
     currently at the head of the queue are dropped to make room for
     the new packet to be enqueued at the tail of the queue.

     In the randomDrop(4) algorithm, on packet arrival, an Active
     Queue Management algorithm is executed which may randomly drop a
     packet. This algorithm may be proprietary, and it may drop either
     the arriving packet or another packet in the queue.
     diffServAlgDropSpecific points to a diffServRandomDropEntry that
     describes the algorithm. For this algorithm,
```

diffServAlgDropQThreshold is understood to be the absolute
maximum size of the queue and additional parameters are described
in diffServRandomDropTable.

The alwaysDrop(5) algorithm is as its name specifies; always
drop. In this case, the other configuration values in this Entry
are not meaningful; There is no useful 'next' processing step,
there is no queue, and parameters describing the queue are not
useful. Therefore, diffServAlgDropNext, diffServAlgDropMeasure,
and diffServAlgDropSpecific are all zeroDotZero."
::= { diffServAlgDropEntry 2 }

diffServAlgDropNext OBJECT-TYPE
  SYNTAX   RowPointer
  MAX-ACCESS   read-create
  STATUS   current
  DESCRIPTION
    "This selects the next Differentiated Services Functional Data
    Path Element to handle traffic for this data path. This
    RowPointer should point to an instance of one of:
      diffServClfrEntry
      diffServMeterEntry
      diffServActionEntry
      diffServQEntry

    A value of zeroDotZero in this attribute indicates no further
    Differentiated Services treatment is performed on traffic of this
    data path. The use of zeroDotZero is the normal usage for the
    last functional data path element of the current data path.

    When diffServAlgDropType is alwaysDrop(5), this object is
    ignored.

    Setting this to point to a target that does not exist results in
    an inconsistentValue error. If the row pointed to is removed or
    becomes inactive by other means, the treatment is as if this
    attribute contains a value of zeroDotZero."
::= { diffServAlgDropEntry 3 }

diffServAlgDropQMeasure OBJECT-TYPE
  SYNTAX   RowPointer
  MAX-ACCESS   read-create
  STATUS   current
  DESCRIPTION
    "Points to an entry in the diffServQTable to indicate the queue

that a drop algorithm is to monitor when deciding whether to drop
a packet. If the row pointed to does not exist, the algorithmic
dropper element is considered inactive.

Setting this to point to a target that does not exist results in
an inconsistentValue error. If the row pointed to is removed or
becomes inactive by other means, the treatment is as if this
attribute contains a value of zeroDotZero."
    ::= { diffServAlgDropEntry 4 }

diffServAlgDropQThreshold OBJECT-TYPE
    SYNTAX   Unsigned32 (1..4294967295)
    UNITS   "Bytes"
    MAX-ACCESS   read-create
    STATUS   current
    DESCRIPTION
        "A threshold on the depth in bytes of the queue being measured at
        which a trigger is generated to the dropping algorithm, unless
        diffServAlgDropType is alwaysDrop(5) where this object is
        ignored.

        For the tailDrop(2) or headDrop(3) algorithms, this represents
        the depth of the queue, pointed to by diffServAlgDropQMeasure, at
        which the drop action will take place. Other algorithms will need
        to define their own semantics for this threshold."

--
-- Scheduler Table
--

diffServScheduler     OBJECT IDENTIFIER ::= { diffServMIBObjects 8 }

--
-- A Scheduler Entry represents a packet scheduler, such as a priority
-- scheduler or a WFQ scheduler. It provides flexibility for multiple
-- scheduling algorithms, each servicing multiple queues, to be used on
-- the same logical/physical interface.
--
-- Note that upstream queues or schedulers specify several of the
-- scheduler's parameters. These must be properly specified if the
-- scheduler is to behave as expected.
--
-- The diffServSchedulerMaxRate attribute specifies the parameters when
-- a scheduler's output is sent to another scheduler. This is used in
-- building hierarchical queues or schedulers.

--
-- More discussion of the scheduler functional data path element is in
-- the Informal Differentiated Services Model section 7.1.2.

STATUS   current
DESCRIPTION

  "This selects the next Differentiated Services Functional Data
  Path Element to handle traffic for this data path. This normally
  is null (zeroDotZero), or points to a diffServSchedulerEntry or a
  diffServQEntry.

  However, this RowPointer may also point to an instance of:
   diffServClfrEntry,
   diffServMeterEntry,
   diffServActionEntry,
   diffServAlgDropEntry.

  It would point another diffServSchedulerEntry when implementing
  multiple scheduler methods for the same data path, such as having
  one set of queues scheduled by WRR and that group participating
  in a priority scheduling system in which other queues compete
  with it in that way. It might also point to a second scheduler
  in a hierarchical scheduling system.

  If the row pointed to is zeroDotZero, no further Differentiated
  Services treatment is performed on traffic of this data path.

  Setting this to point to a target that does not exist results in
  an inconsistentValue error. If the row pointed to is removed or
  becomes inactive by other means, the treatment is as if this
  attribute contains a value of zeroDotZero."

     a set of queues are conceptually visited in some order, to
     implement an average output rate by class. Notice attributes from
     diffServMinRateEntry of the queues/schedulers feeding this
     scheduler are used when determining the next packet to schedule."
  ::= { diffServSchedulers 3 }

--
-- Minimum Rate Parameters Table
--
-- The parameters used by a scheduler for its inputs or outputs are
-- maintained separately from the Queue or Scheduler table entries for
-- reusability reasons and so that they may be used by both queues and
-- schedulers.  This follows the approach for separation of data path
-- elements from parameterization that is used throughout this MIB.
-- Use of these Minimum Rate Parameter Table entries by Queues and
-- Schedulers allows the modeling of hierarchical scheduling systems.
--
-- Specifically, a Scheduler has one or more inputs and one output.
-- Any queue feeding a scheduler, or any scheduler which feeds a second
-- scheduler, might specify a minimum transfer rate by pointing to an
-- Minimum Rate Parameter Table entry.
--
-- The diffServMinRatePriority/Abs/Rel attributes are used as
-- parameters to the work-conserving portion of a scheduler:
-- "work-conserving" implies that the scheduler can continue to emit
-- data as long as there is data available at its input(s).  This has
-- the effect of guaranteeing a certain priority relative to other
-- scheduler inputs and/or a certain minimum proportion of the
-- available output bandwidth. Properly configured, this means a
-- certain minimum rate, which may be exceeded should traffic be
-- available should there be spare bandwidth after all other classes
-- have had opportunities to consume their own minimum rates.
--

<P><FONT SIZE="2"></FONT><FONT SIZE="2">"Program" means the Contributions distributed in accordance with this Agreement.</FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.</FONT>
<P><FONT SIZE="2"><B></B></FONT>
<P><FONT SIZE="2"><B>2. GRANT OF RIGHTS</B></FONT>

<UL><FONT SIZE="2"></FONT><FONT SIZE="2">a) </FONT><FONT SIZE="2">Subject to the terms of this Agreement, each Contributor hereby grants</FONT><FONT SIZE="2"> Recipient a non-exclusive, worldwide, royalty-free copyright license to</FONT><FONT SIZE="2" COLOR="#FF0000"> </FONT><FONT SIZE="2">reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.</FONT></UL>

<UL><FONT SIZE="2"></FONT></UL>

<UL><FONT SIZE="2"></FONT><FONT SIZE="2">b) Subject to the terms of this Agreement, each Contributor hereby grants </FONT><FONT SIZE="2">Recipient a non-exclusive, worldwide,</FONT><FONT SIZE="2" COLOR="#008000"> </FONT><FONT SIZE="2">royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.   </FONT></UL>

<UL><FONT SIZE="2"></FONT></UL>

<UL><FONT SIZE="2">c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.</FONT></UL>

<UL><FONT SIZE="2"></FONT></UL>

<UL><FONT SIZE="2">d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement. </FONT></UL>

<UL><FONT SIZE="2"></FONT></UL>

<P><FONT SIZE="2"><B>3. REQUIREMENTS</B></FONT>
<P><FONT SIZE="2"><B></B>A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:</FONT>

<UL><FONT SIZE="2">a) it complies with the terms and conditions of this Agreement; and</FONT></UL>

<UL><FONT SIZE="2">b) its license agreement:</FONT></UL>

<UL><FONT SIZE="2">i) effectively disclaims</FONT><FONT SIZE="2"> on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose; </FONT></UL>

<UL><FONT SIZE="2">ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits; </FONT></UL>

<UL><FONT SIZE="2">iii)</FONT><FONT SIZE="2"> states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and</FONT></UL>

<UL><FONT SIZE="2">iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.</FONT><FONT SIZE="2" COLOR="#0000FF"> </FONT><FONT SIZE="2" COLOR="#FF0000"></FONT></UL>

<UL><FONT SIZE="2" COLOR="#FF0000"></FONT><FONT SIZE="2"></FONT></UL>

<P><FONT SIZE="2">When the Program is made available in source code form:</FONT>

<UL><FONT SIZE="2">a) it must be made available under this Agreement; and </FONT></UL>

<UL><FONT SIZE="2">b) a copy of this Agreement must be included with each copy of the Program. </FONT></UL>

<P><FONT SIZE="2"></FONT><FONT SIZE="2" COLOR="#0000FF"><STRIKE></STRIKE></FONT>

<P><FONT SIZE="2" COLOR="#0000FF"><STRIKE></STRIKE></FONT><FONT SIZE="2">Contributors may not remove or alter any copyright notices contained within the Program. </FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution. </FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"><B>4. COMMERCIAL DISTRIBUTION</B></FONT>
<P><FONT SIZE="2">Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.</FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.</FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2" COLOR="#0000FF"></FONT>
<P><FONT SIZE="2" COLOR="#0000FF"></FONT><FONT SIZE="2"><B>5. NO WARRANTY</B></FONT>
<P><FONT SIZE="2">EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is</FONT><FONT SIZE="2"> solely responsible for determining the appropriateness of using and distributing </FONT><FONT SIZE="2">the Program</FONT><FONT SIZE="2"> and assumes all risks associated with its exercise of rights under this Agreement</FONT><FONT SIZE="2">, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, </FONT><FONT SIZE="2">programs or equipment, and unavailability or interruption of operations</FONT><FONT SIZE="2">. </FONT><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2"><B>6. DISCLAIMER OF LIABILITY</B></FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2">EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES </FONT><FONT SIZE="2">(INCLUDING WITHOUT LIMITATION LOST PROFITS),</FONT><FONT SIZE="2"> HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT,

STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.</FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"><B>7. GENERAL</B></FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2">If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.</FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">If Recipient institutes patent litigation against a Contributor with respect to a patent applicable to software (including a cross-claim or counterclaim in a lawsuit), then any patent licenses granted by that Contributor to such Recipient under this Agreement shall terminate as of the date such litigation is filed. In addition, if Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed. </FONT><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive. </FONT><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2">Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to </FONT><FONT SIZE="2">publish new versions (including revisions) of this Agreement from time to </FONT><FONT SIZE="2">time. No one other than the Agreement Steward has the right to modify this Agreement. IBM is the initial Agreement Steward. IBM may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. </FONT><FONT SIZE="2">Each new version of the Agreement will be given a distinguishing version number. The Program (including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new </FONT><FONT SIZE="2">version. </FONT><FONT SIZE="2">Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, </FONT><FONT SIZE="2">by implication, estoppel or otherwise</FONT><FONT SIZE="2">.</FONT><FONT SIZE="2"> All rights in the Program not expressly granted under this Agreement are reserved.</FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.</FONT>

/*
*                                 Apache License
*                           Version 2.0, January 2004
*                        http://www.apache.org/licenses/
*
*   TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION
*
*   1. Definitions.
*
*      "License" shall mean the terms and conditions for use, reproduction,
*      and distribution as defined by Sections 1 through 9 of this document.
*
*      "Licensor" shall mean the copyright owner or entity authorized by
*      the copyright owner that is granting the License.
*
*      "Legal Entity" shall mean the union of the acting entity and all
*      other entities that control, are controlled by, or are under common
*      control with that entity. For the purposes of this definition,
*      "control" means (i) the power, direct or indirect, to cause the
*      direction or management of such entity, whether by contract or
*      otherwise, or (ii) ownership of fifty percent (50%) or more of the
*      outstanding shares, or (iii) beneficial ownership of such entity.
*
```

```
*       "You" (or "Your") shall mean an individual or Legal Entity
*       exercising permissions granted by this License.
*
*       "Source" form shall mean the preferred form for making modifications,
*       including but not limited to software source code, documentation
*       source, and configuration files.
*
*       "Object" form shall mean any form resulting from mechanical
*       transformation or translation of a Source form, including but
*       not limited to compiled object code, generated documentation,
*       and conversions to other media types.
*
*       "Work" shall mean the work of authorship, whether in Source or
*       Object form, made available under the License, as indicated by a
*       copyright notice that is included in or attached to the work
*       (an example is provided in the Appendix below).
*
*       "Derivative Works" shall mean any work, whether in Source or Object
*       form, that is based on (or derived from) the Work and for which the
*       editorial revisions, annotations, elaborations, or other modifications
*       represent, as a whole, an original work of authorship. For the purposes
*       of this License, Derivative Works shall not include works that remain
*       separable from, or merely link (or bind by name) to the interfaces of,
*       the Work and Derivative Works thereof.
*
*       "Contribution" shall mean any work of authorship, including
*       the original version of the Work and any modifications or additions
*       to that Work or Derivative Works thereof, that is intentionally
*       submitted to Licensor for inclusion in the Work by the copyright owner
*       or by an individual or Legal Entity authorized to submit on behalf of
*       the copyright owner. For the purposes of this definition, "submitted"
*       means any form of electronic, verbal, or written communication sent
*       to the Licensor or its representatives, including but not limited to
*       communication on electronic mailing lists, source code control systems,
*       and issue tracking systems that are managed by, or on behalf of, the
*       Licensor for the purpose of discussing and improving the Work, but
*       excluding communication that is conspicuously marked or otherwise
*       designated in writing by the copyright owner as "Not a Contribution."
*
*       "Contributor" shall mean Licensor and any individual or Legal Entity
*       on behalf of whom a Contribution has been received by Licensor and
*       subsequently incorporated within the Work.
*
*    2. Grant of Copyright License. Subject to the terms and conditions of
*       this License, each Contributor hereby grants to You a perpetual,
*       worldwide, non-exclusive, no-charge, royalty-free, irrevocable
*       copyright license to reproduce, prepare Derivative Works of,
*       publicly display, publicly perform, sublicense, and distribute the
```

```
 *      Work and such Derivative Works in Source or Object form.
 *
 *   3. Grant of Patent License. Subject to the terms and conditions of
 *      this License, each Contributor hereby grants to You a perpetual,
 *      worldwide, non-exclusive, no-charge, royalty-free, irrevocable
 *      (except as stated in this section) patent license to make, have made,
 *      use, offer to sell, sell, import, and otherwise transfer the Work,
 *      where such license applies only to those patent claims licensable
 *      by such Contributor that are necessarily infringed by their
 *      Contribution(s) alone or by combination of their Contribution(s)
 *      with the Work to which such Contribution(s) was submitted. If You
 *      institute patent litigation against any entity (including a
 *      cross-claim or counterclaim in a lawsuit) alleging that the Work
 *      or a Contribution incorporated within the Work constitutes direct
 *      or contributory patent infringement, then any patent licenses
 *      granted to You under this License for that Work shall terminate
 *      as of the date such litigation is filed.
 *
 *   4. Redistribution. You may reproduce and distribute copies of the
 *      Work or Derivative Works thereof in any medium, with or without
 *      modifications, and in Source or Object form, provided that You
 *      meet the following conditions:
 *
 *      (a) You must give any other recipients of the Work or
 *          Derivative Works a copy of this License; and
 *
 *      (b) You must cause any modified files to carry prominent notices
 *          stating that You changed the files; and
 *
 *      (c) You must retain, in the Source form of any Derivative Works
 *          that You distribute, all copyright, patent, trademark, and
 *          attribution notices from the Source form of the Work,
 *          excluding those notices that do not pertain to any part of
 *          the Derivative Works; and
 *
 *      (d) If the Work includes a "NOTICE" text file as part of its
 *          distribution, then any Derivative Works that You distribute must
 *          include a readable copy of the attribution notices contained
 *          within such NOTICE file, excluding those notices that do not
 *          pertain to any part of the Derivative Works, in at least one
 *          of the following places: within a NOTICE text file distributed
 *          as part of the Derivative Works; within the Source form or
 *          documentation, if provided along with the Derivative Works; or,
 *          within a display generated by the Derivative Works, if and
 *          wherever such third-party notices normally appear. The contents
 *          of the NOTICE file are for informational purposes only and
 *          do not modify the License. You may add Your own attribution
 *          notices within Derivative Works that You distribute, alongside
```

```
*      or as an addendum to the NOTICE text from the Work, provided
*      that such additional attribution notices cannot be construed
*      as modifying the License.
*
*   You may add Your own copyright statement to Your modifications and
*   may provide additional or different license terms and conditions
*   for use, reproduction, or distribution of Your modifications, or
*   for any such Derivative Works as a whole, provided Your use,
*   reproduction, and distribution of the Work otherwise complies with
*   the conditions stated in this License.
*
*   5. Submission of Contributions. Unless You explicitly state otherwise,
*     any Contribution intentionally submitted for inclusion in the Work
*     by You to the Licensor shall be under the terms and conditions of
*     this License, without any additional terms or conditions.
*     Notwithstanding the above, nothing herein shall supersede or modify
*     the terms of any separate license agreement you may have executed
*     with Licensor regarding such Contributions.
*
*   6. Trademarks. This License does not grant permission to use the trade
*     names, trademarks, service marks, or product names of the Licensor,
*     except as required for reasonable and customary use in describing the
*     origin of the Work and reproducing the content of the NOTICE file.
*
*   7. Disclaimer of Warranty. Unless required by applicable law or
*     agreed to in writing, Licensor provides the Work (and each
*     Contributor provides its Contributions) on an "AS IS" BASIS,
*     WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
*     implied, including, without limitation, any warranties or conditions
*     of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
*     PARTICULAR PURPOSE. You are solely responsible for determining the
*     appropriateness of using or redistributing the Work and assume any
*     risks associated with Your exercise of permissions under this License.
*
*   8. Limitation of Liability. In no event and under no legal theory,
*     whether in tort (including negligence), contract, or otherwise,
*     unless required by applicable law (such as deliberate and grossly
*     negligent acts) or agreed to in writing, shall any Contributor be
*     liable to You for damages, including any direct, indirect, special,
*     incidental, or consequential damages of any character arising as a
*     result of this License or out of the use or inability to use the
*     Work (including but not limited to damages for loss of goodwill,
*     work stoppage, computer failure or malfunction, or any and all
*     other commercial damages or losses), even if such Contributor
*     has been advised of the possibility of such damages.
*
*   9. Accepting Warranty or Additional Liability. While redistributing
*     the Work or Derivative Works thereof, You may choose to offer,
```

```
 *    and charge a fee for, acceptance of support, warranty, indemnity,
 *    or other liability obligations and/or rights consistent with this
 *    License. However, in accepting such obligations, You may act only
 *    on Your own behalf and on Your sole responsibility, not on behalf
 *    of any other Contributor, and only if You agree to indemnify,
 *    defend, and hold each Contributor harmless for any liability
 *    incurred by, or claims asserted against, such Contributor by reason
 *    of your accepting any such warranty or additional liability.
 *
 *  END OF TERMS AND CONDITIONS
 *
 *  APPENDIX: How to apply the Apache License to your work.
 *
 *    To apply the Apache License to your work, attach the following
 *    boilerplate notice, with the fields enclosed by brackets "[]"
 *    replaced with your own identifying information. (Don't include
 *    the brackets!)  The text should be enclosed in the appropriate
 *    comment syntax for the file format. We also recommend that a
 *    file or class name and description of purpose be included on the
 *    same "printed page" as the copyright notice for easier
 *    identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

   "License" shall mean the terms and conditions for use, reproduction,
   and distribution as defined by Sections 1 through 9 of this document.

   "Licensor" shall mean the copyright owner or entity authorized by

the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained

within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be

liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

<P><B></B><FONT SIZE="3"></FONT>
<P><FONT SIZE="3"></FONT><FONT SIZE="2">THE ACCOMPANYING PROGRAM IS PROVIDED
UNDER THE TERMS OF THIS COMMON PUBLIC LICENSE ("AGREEMENT"). ANY USE,
REPRODUCTION OR DISTRIBUTION OF THE PROGRAM CONSTITUTES RECIPIENT'S ACCEPTANCE
OF THIS AGREEMENT.</FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"><B>1. DEFINITIONS</B></FONT>
<P><FONT SIZE="2">"Contribution" means:</FONT>

<UL><FONT SIZE="2">a) in the case of the initial Contributor, the initial code and documentation distributed
under this Agreement, and<BR CLEAR="LEFT">
b) in the case of each subsequent Contributor:</FONT></UL>

<UL><FONT SIZE="2">i)   changes to the Program, and</FONT></UL>

<UL><FONT SIZE="2">ii) additions to the Program;</FONT></UL>

<UL><FONT SIZE="2">where such changes and/or additions to the Program originate from and are distributed by that particular Contributor. </FONT><FONT SIZE="2">A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself or anyone acting on such Contributor's behalf. </FONT><FONT SIZE="2">Contributions do not include additions to the Program which: (i) are separate modules of software distributed in conjunction with the Program under their own license agreement, and (ii) are not derivative works of the Program. </FONT></UL>

<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">"Contributor" means any person or entity that distributes the Program.</FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">"Licensed Patents " mean patent claims licensable by a Contributor which are necessarily infringed by the use or sale of its Contribution alone or when combined with the Program. </FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2">"Program" means the Contributions distributed in accordance with this Agreement.</FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.</FONT>
<P><FONT SIZE="2"><B></B></FONT>
<P><FONT SIZE="2"><B>2. GRANT OF RIGHTS</B></FONT>

<UL><FONT SIZE="2"></FONT><FONT SIZE="2">a) </FONT><FONT SIZE="2">Subject to the terms of this Agreement, each Contributor hereby grants</FONT><FONT SIZE="2"> Recipient a non-exclusive, worldwide, royalty-free copyright license to</FONT><FONT SIZE="2" COLOR="#FF0000"> </FONT><FONT SIZE="2">reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.</FONT></UL>

<UL><FONT SIZE="2"></FONT></UL>

<UL><FONT SIZE="2"></FONT><FONT SIZE="2">b) Subject to the terms of this Agreement, each Contributor hereby grants </FONT><FONT SIZE="2">Recipient a non-exclusive, worldwide,</FONT><FONT SIZE="2" COLOR="#008000"> </FONT><FONT SIZE="2">royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.   </FONT></UL>

<UL><FONT SIZE="2"></FONT></UL>

<UL><FONT SIZE="2">c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.</FONT></UL>

<UL><FONT SIZE="2"></FONT></UL>

<UL><FONT SIZE="2">d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement. </FONT></UL>

<UL><FONT SIZE="2"></FONT></UL>

<P><FONT SIZE="2"><B>3. REQUIREMENTS</B></FONT>
<P><FONT SIZE="2"><B></B>A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:</FONT>

<UL><FONT SIZE="2">a) it complies with the terms and conditions of this Agreement; and</FONT></UL>

<UL><FONT SIZE="2">b) its license agreement:</FONT></UL>

<UL><FONT SIZE="2">i) effectively disclaims</FONT><FONT SIZE="2"> on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose; </FONT></UL>

<UL><FONT SIZE="2">ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits; </FONT></UL>

<UL><FONT SIZE="2">iii)</FONT><FONT SIZE="2"> states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and</FONT></UL>

<UL><FONT SIZE="2">iv) states that source code for the Program is available from such Contributor, and informs

licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.</FONT><FONT SIZE="2" COLOR="#0000FF"> </FONT><FONT SIZE="2" COLOR="#FF0000"></FONT></UL>

<UL><FONT SIZE="2" COLOR="#FF0000"></FONT><FONT SIZE="2"></FONT></UL>

<P><FONT SIZE="2">When the Program is made available in source code form:</FONT>

<UL><FONT SIZE="2">a) it must be made available under this Agreement; and </FONT></UL>

<UL><FONT SIZE="2">b) a copy of this Agreement must be included with each copy of the Program. </FONT></UL>

<P><FONT SIZE="2"></FONT><FONT SIZE="2" COLOR="#0000FF"><STRIKE></STRIKE></FONT>
<P><FONT SIZE="2" COLOR="#0000FF"><STRIKE></STRIKE></FONT><FONT SIZE="2">Contributors may not remove or alter any copyright notices contained within the Program. </FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution. </FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2"><B>4. COMMERCIAL DISTRIBUTION</B></FONT>
<P><FONT SIZE="2">Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors.   Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.</FONT>
<P><FONT SIZE="2"></FONT>
<P><FONT SIZE="2">For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.</FONT>
<P><FONT SIZE="2"></FONT><FONT SIZE="2" COLOR="#0000FF"></FONT>
<P><FONT SIZE="2" COLOR="#0000FF"></FONT><FONT SIZE="2"><B>5. NO WARRANTY</B></FONT>
<P><FONT SIZE="2">EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS

PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is</FONT><FONT SIZE="2"> solely responsible for determining the appropriateness of using and distributing </FONT><FONT SIZE="2">the Program</FONT><FONT SIZE="2"> and assumes all risks associated with its exercise of rights under this Agreement</FONT><FONT SIZE="2">, including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, </FONT><FONT SIZE="2">programs or equipment, and unavailability or interruption of operations</FONT><FONT SIZE="2">. </FONT><FONT SIZE="2"></FONT>

<P><FONT SIZE="2"></FONT>

<P><FONT SIZE="2"></FONT><FONT SIZE="2"><B>6. DISCLAIMER OF LIABILITY</B></FONT>

<P><FONT SIZE="2"></FONT><FONT SIZE="2">EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, EXEMPLARY, OR CONSEQUENTIAL DAMAGES </FONT><FONT SIZE="2">(INCLUDING WITHOUT LIMITATION LOST PROFITS),</FONT><FONT SIZE="2"> HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.</FONT>

<P><FONT SIZE="2"></FONT><FONT SIZE="2"></FONT>

<P><FONT SIZE="2"><B>7. GENERAL</B></FONT>

<P><FONT SIZE="2"></FONT><FONT SIZE="2">If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.</FONT>

<P><FONT SIZE="2"></FONT>

<P><FONT SIZE="2">If Recipient institutes patent litigation against a Contributor with respect to a patent applicable to software (including a cross-claim or counterclaim in a lawsuit), then any patent licenses granted by that Contributor to such Recipient under this Agreement shall terminate as of the date such litigation is filed. In addition, if Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such litigation is filed. </FONT><FONT SIZE="2"></FONT>

<P><FONT SIZE="2"></FONT>

<P><FONT SIZE="2">All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this Agreement and any licenses granted by Recipient relating to the Program shall continue and survive. </FONT><FONT SIZE="2"></FONT>

<P><FONT SIZE="2"></FONT>

<P><FONT SIZE="2"></FONT><FONT SIZE="2">Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the right to </FONT><FONT SIZE="2">publish new versions (including revisions) of this Agreement from time to </FONT><FONT SIZE="2">time. No one other than the Agreement Steward has the right to modify this Agreement. IBM is the initial Agreement Steward. IBM may assign the responsibility to serve as the Agreement Steward to a suitable separate entity. </FONT><FONT SIZE="2">Each new version of the Agreement will be given a distinguishing version number. The Program

(including Contributions) may always be distributed subject to the version of the Agreement under which it was received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the Program (including its Contributions) under the new </FONT><FONT SIZE="2">version. </FONT><FONT SIZE="2">Except as expressly stated in Sections 2(a) and 2(b) above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement, whether expressly, </FONT><FONT SIZE="2">by implication, estoppel or otherwise</FONT><FONT SIZE="2">.</FONT><FONT SIZE="2"> All rights in the Program not expressly granted under this Agreement are reserved.</FONT>

<P><FONT SIZE="2"></FONT>

<P><FONT SIZE="2">This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United States of America. No party to this Agreement will bring a legal action under this Agreement more than one year after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.</FONT>

ASM: a very small and fast Java bytecode manipulation framework

/*
*   Apache License
*   Version 2.0, January 2004
*   http://www.apache.org/licenses/
*
*   TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION
*

*   1. Definitions.
*
*   "License" shall mean the terms and conditions for use, reproduction,
*   and distribution as defined by Sections 1 through 9 of this document.
*
*   "Licensor" shall mean the copyright owner or entity authorized by
*   the copyright owner that is granting the License.
*
*   "Legal Entity" shall mean the union of the acting entity and all
*   other entities that control, are controlled by, or are under common
*   control with that entity. For the purposes of this definition,
*   "control" means (i) the power, direct or indirect, to cause the
*   direction or management of such entity, whether by contract or
*   otherwise, or (ii) ownership of fifty percent (50%) or more of the
*   outstanding shares, or (iii) beneficial ownership of such entity.
*
*   "You" (or "Your") shall mean an individual or Legal Entity
*   exercising permissions granted by this License.
*
*   "Source" form shall mean the preferred form for making modifications,
*   including but not limited to software source code, documentation
*   source, and configuration files.
*
*   "Object" form shall mean any form resulting from mechanical
*   transformation or translation of a Source form, including but
*   not limited to compiled object code, generated documentation,
*   and conversions to other media types.
*
*   "Work" shall mean the work of authorship, whether in Source or
*   Object form, made available under the License, as indicated by a
*   copyright notice that is included in or attached to the work
*   (an example is provided in the Appendix below).
*
*   "Derivative Works" shall mean any work, whether in Source or Object
*   form, that is based on (or derived from) the Work and for which the
*   editorial revisions, annotations, elaborations, or other modifications
*   represent, as a whole, an original work of authorship. For the purposes
*   of this License, Derivative Works shall not include works that remain
*   separable from, or merely link (or bind by name) to the interfaces of,
*   the Work and Derivative Works thereof.
*
*   "Contribution" shall mean any work of authorship, including
*   the original version of the Work and any modifications or additions
*   to that Work or Derivative Works thereof, that is intentionally
*   submitted to Licensor for inclusion in the Work by the copyright owner
*   or by an individual or Legal Entity authorized to submit on behalf of
*   the copyright owner. For the purposes of this definition, "submitted"
*   means any form of electronic, verbal, or written communication sent

* to the Licensor or its representatives, including but not limited to
* communication on electronic mailing lists, source code control systems,
* and issue tracking systems that are managed by, or on behalf of, the
* Licensor for the purpose of discussing and improving the Work, but
* excluding communication that is conspicuously marked or otherwise
* designated in writing by the copyright owner as "Not a Contribution."
*
* "Contributor" shall mean Licensor and any individual or Legal Entity
* on behalf of whom a Contribution has been received by Licensor and
* subsequently incorporated within the Work.
*
* 2. Grant of Copyright License. Subject to the terms and conditions of
*   this License, each Contributor hereby grants to You a perpetual,
*   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
*   copyright license to reproduce, prepare Derivative Works of,
*   publicly display, publicly perform, sublicense, and distribute the
*   Work and such Derivative Works in Source or Object form.
*
* 3. Grant of Patent License. Subject to the terms and conditions of
*   this License, each Contributor hereby grants to You a perpetual,
*   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
*   (except as stated in this section) patent license to make, have made,
*   use, offer to sell, sell, import, and otherwise transfer the Work,
*   where such license applies only to those patent claims licensable
*   by such Contributor that are necessarily infringed by their
*   Contribution(s) alone or by combination of their Contribution(s)
*   with the Work to which such Contribution(s) was submitted. If You
*   institute patent litigation against any entity (including a
*   cross-claim or counterclaim in a lawsuit) alleging that the Work
*   or a Contribution incorporated within the Work constitutes direct
*   or contributory patent infringement, then any patent licenses
*   granted to You under this License for that Work shall terminate
*   as of the date such litigation is filed.
*
* 4. Redistribution. You may reproduce and distribute copies of the
*   Work or Derivative Works thereof in any medium, with or without
*   modifications, and in Source or Object form, provided that You
*   meet the following conditions:
*
*   (a) You must give any other recipients of the Work or
*   Derivative Works a copy of this License; and
*
*   (b) You must cause any modified files to carry prominent notices
*   stating that You changed the files; and
*
*   (c) You must retain, in the Source form of any Derivative Works
*   that You distribute, all copyright, patent, trademark, and
*   attribution notices from the Source form of the Work,

```
 *        excluding those notices that do not pertain to any part of
 *        the Derivative Works; and
 *
 *    (d) If the Work includes a "NOTICE" text file as part of its
 *        distribution, then any Derivative Works that You distribute must
 *        include a readable copy of the attribution notices contained
 *        within such NOTICE file, excluding those notices that do not
 *        pertain to any part of the Derivative Works, in at least one
 *        of the following places: within a NOTICE text file distributed
 *        as part of the Derivative Works; within the Source form or
 *        documentation, if provided along with the Derivative Works; or,
 *        within a display generated by the Derivative Works, if and
 *        wherever such third-party notices normally appear. The contents
 *        of the NOTICE file are for informational purposes only and
 *        do not modify the License. You may add Your own attribution
 *        notices within Derivative Works that You distribute, alongside
 *        or as an addendum to the NOTICE text from the Work, provided
 *        that such additional attribution notices cannot be construed
 *        as modifying the License.
 *
 *    You may add Your own copyright statement to Your modifications and
 *    may provide additional or different license terms and conditions
 *    for use, reproduction, or distribution of Your modifications, or
 *    for any such Derivative Works as a whole, provided Your use,
 *    reproduction, and distribution of the Work otherwise complies with
 *    the conditions stated in this License.
 *
 * 5. Submission of Contributions. Unless You explicitly state otherwise,
 *    any Contribution intentionally submitted for inclusion in the Work
 *    by You to the Licensor shall be under the terms and conditions of
 *    this License, without any additional terms or conditions.
 *    Notwithstanding the above, nothing herein shall supersede or modify
 *    the terms of any separate license agreement you may have executed
 *    with Licensor regarding such Contributions.
 *
 * 6. Trademarks. This License does not grant permission to use the trade
 *    names, trademarks, service marks, or product names of the Licensor,
 *    except as required for reasonable and customary use in describing the
 *    origin of the Work and reproducing the content of the NOTICE file.
 *
 * 7. Disclaimer of Warranty. Unless required by applicable law or
 *    agreed to in writing, Licensor provides the Work (and each
 *    Contributor provides its Contributions) on an "AS IS" BASIS,
 *    WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
 *    implied, including, without limitation, any warranties or conditions
 *    of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
 *    PARTICULAR PURPOSE. You are solely responsible for determining the
 *    appropriateness of using or redistributing the Work and assume any

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications

represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   copyright license to reproduce, prepare Derivative Works of,
   publicly display, publicly perform, sublicense, and distribute the
   Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   (except as stated in this section) patent license to make, have made,
   use, offer to sell, sell, import, and otherwise transfer the Work,
   where such license applies only to those patent claims licensable
   by such Contributor that are necessarily infringed by their
   Contribution(s) alone or by combination of their Contribution(s)
   with the Work to which such Contribution(s) was submitted. If You
   institute patent litigation against any entity (including a
   cross-claim or counterclaim in a lawsuit) alleging that the Work
   or a Contribution incorporated within the Work constitutes direct
   or contributory patent infringement, then any patent licenses
   granted to You under this License for that Work shall terminate
   as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
   Work or Derivative Works thereof in any medium, with or without

modifications, and in Source or Object form, provided that You
meet the following conditions:

(a) You must give any other recipients of the Work or
    Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
    stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
    that You distribute, all copyright, patent, trademark, and
    attribution notices from the Source form of the Work,
    excluding those notices that do not pertain to any part of
    the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
    distribution, then any Derivative Works that You distribute must
    include a readable copy of the attribution notices contained
    within such NOTICE file, excluding those notices that do not
    pertain to any part of the Derivative Works, in at least one
    of the following places: within a NOTICE text file distributed
    as part of the Derivative Works; within the Source form or
    documentation, if provided along with the Derivative Works; or,
    within a display generated by the Derivative Works, if and
    wherever such third-party notices normally appear. The contents
    of the NOTICE file are for informational purposes only and
    do not modify the License. You may add Your own attribution
    notices within Derivative Works that You distribute, alongside
    or as an addendum to the NOTICE text from the Work, provided
    that such additional attribution notices cannot be construed
    as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify
   the terms of any separate license agreement you may have executed
   with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade

names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier

identification within third-party archives.

1.313 ecj 4.4.2

1.313.1 Available under license :

Eclipse Public License - v 1.0

THE ACCOMPANYING PROGRAM IS PROVIDED UNDER THE TERMS OF THIS ECLIPSE PUBLIC
LICENSE ("AGREEMENT"). ANY USE, REPRODUCTION OR DISTRIBUTION OF THE PROGRAM
CONSTITUTES RECIPIENT'S ACCEPTANCE OF THIS AGREEMENT.

1. DEFINITIONS

"Contribution" means:

a) in the case of the initial Contributor, the initial code and documentation distributed under this Agreement, and
b) in the case of each subsequent Contributor:

i) changes to the Program, and

ii) additions to the Program;

where such changes and/or additions to the Program originate from and are distributed by that particular
Contributor. A Contribution 'originates' from a Contributor if it was added to the Program by such Contributor itself
or anyone acting on such Contributor's behalf. Contributions do not include additions to the Program which: (i) are
separate modules of software distributed in conjunction with the Program under their own license agreement, and
(ii) are not derivative works of the Program.

"Contributor" means any person or entity that distributes the Program.

"Licensed Patents " mean patent claims licensable by a Contributor which are necessarily infringed by the use or
sale of its Contribution alone or when combined with the Program.

"Program" means the Contributions distributed in accordance with this Agreement.

"Recipient" means anyone who receives the Program under this Agreement, including all Contributors.

2. GRANT OF RIGHTS

a) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free copyright license to reproduce, prepare derivative works of, publicly display, publicly perform, distribute and sublicense the Contribution of such Contributor, if any, and such derivative works, in source code and object code form.

b) Subject to the terms of this Agreement, each Contributor hereby grants Recipient a non-exclusive, worldwide, royalty-free patent license under Licensed Patents to make, use, sell, offer to sell, import and otherwise transfer the Contribution of such Contributor, if any, in source code and object code form. This patent license shall apply to the combination of the Contribution and the Program if, at the time the Contribution is added by the Contributor, such addition of the Contribution causes such combination to be covered by the Licensed Patents. The patent license shall not apply to any other combinations which include the Contribution. No hardware per se is licensed hereunder.

c) Recipient understands that although each Contributor grants the licenses to its Contributions set forth herein, no assurances are provided by any Contributor that the Program does not infringe the patent or other intellectual property rights of any other entity. Each Contributor disclaims any liability to Recipient for claims brought by any other entity based on infringement of intellectual property rights or otherwise. As a condition to exercising the rights and licenses granted hereunder, each Recipient hereby assumes sole responsibility to secure any other intellectual property rights needed, if any. For example, if a third party patent license is required to allow Recipient to distribute the Program, it is Recipient's responsibility to acquire that license before distributing the Program.

d) Each Contributor represents that to its knowledge it has sufficient copyright rights in its Contribution, if any, to grant the copyright license set forth in this Agreement.

3. REQUIREMENTS

A Contributor may choose to distribute the Program in object code form under its own license agreement, provided that:

a) it complies with the terms and conditions of this Agreement; and

b) its license agreement:

i) effectively disclaims on behalf of all Contributors all warranties and conditions, express and implied, including warranties or conditions of title and non-infringement, and implied warranties or conditions of merchantability and fitness for a particular purpose;

ii) effectively excludes on behalf of all Contributors all liability for damages, including direct, indirect, special, incidental and consequential damages, such as lost profits;

iii) states that any provisions which differ from this Agreement are offered by that Contributor alone and not by any other party; and

iv) states that source code for the Program is available from such Contributor, and informs licensees how to obtain it in a reasonable manner on or through a medium customarily used for software exchange.

When the Program is made available in source code form:

a) it must be made available under this Agreement; and

b) a copy of this Agreement must be included with each copy of the Program.

Contributors may not remove or alter any copyright notices contained within the Program.

Each Contributor must identify itself as the originator of its Contribution, if any, in a manner that reasonably allows subsequent Recipients to identify the originator of the Contribution.

4. COMMERCIAL DISTRIBUTION

Commercial distributors of software may accept certain responsibilities with respect to end users, business partners and the like. While this license is intended to facilitate the commercial use of the Program, the Contributor who includes the Program in a commercial product offering should do so in a manner which does not create potential liability for other Contributors. Therefore, if a Contributor includes the Program in a commercial product offering, such Contributor ("Commercial Contributor") hereby agrees to defend and indemnify every other Contributor ("Indemnified Contributor") against any losses, damages and costs (collectively "Losses") arising from claims, lawsuits and other legal actions brought by a third party against the Indemnified Contributor to the extent caused by the acts or omissions of such Commercial Contributor in connection with its distribution of the Program in a commercial product offering. The obligations in this section do not apply to any claims or Losses relating to any actual or alleged intellectual property infringement. In order to qualify, an Indemnified Contributor must: a) promptly notify the Commercial Contributor in writing of such claim, and b) allow the Commercial Contributor to control, and cooperate with the Commercial Contributor in, the defense and any related settlement negotiations. The Indemnified Contributor may participate in any such claim at its own expense.

For example, a Contributor might include the Program in a commercial product offering, Product X. That Contributor is then a Commercial Contributor. If that Commercial Contributor then makes performance claims, or offers warranties related to Product X, those performance claims and warranties are such Commercial Contributor's responsibility alone. Under this section, the Commercial Contributor would have to defend claims against the other Contributors related to those performance claims and warranties, and if a court requires any other Contributor to pay any damages as a result, the Commercial Contributor must pay those damages.

5. NO WARRANTY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, THE PROGRAM IS PROVIDED ON AN "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, EITHER EXPRESS OR IMPLIED INCLUDING, WITHOUT LIMITATION, ANY WARRANTIES OR CONDITIONS OF TITLE, NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. Each Recipient is solely responsible for determining the appropriateness of using and distributing the Program and assumes all risks associated with its exercise of rights under this Agreement , including but not limited to the risks and costs of program errors, compliance with applicable laws, damage to or loss of data, programs or equipment, and unavailability or interruption of operations.

6. DISCLAIMER OF LIABILITY

EXCEPT AS EXPRESSLY SET FORTH IN THIS AGREEMENT, NEITHER RECIPIENT NOR ANY
CONTRIBUTORS SHALL HAVE ANY LIABILITY FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL,
EXEMPLARY, OR CONSEQUENTIAL DAMAGES (INCLUDING WITHOUT LIMITATION LOST PROFITS),
HOWEVER CAUSED AND ON ANY THEORY OF LIABILITY, WHETHER IN CONTRACT, STRICT
LIABILITY, OR TORT (INCLUDING NEGLIGENCE OR OTHERWISE) ARISING IN ANY WAY OUT OF
THE USE OR DISTRIBUTION OF THE PROGRAM OR THE EXERCISE OF ANY RIGHTS GRANTED
HEREUNDER, EVEN IF ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

7. GENERAL

If any provision of this Agreement is invalid or unenforceable under applicable law, it shall not affect the validity or
enforceability of the remainder of the terms of this Agreement, and without further action by the parties hereto, such
provision shall be reformed to the minimum extent necessary to make such provision valid and enforceable.

If Recipient institutes patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit)
alleging that the Program itself (excluding combinations of the Program with other software or hardware) infringes
such Recipient's patent(s), then such Recipient's rights granted under Section 2(b) shall terminate as of the date such
litigation is filed.

All Recipient's rights under this Agreement shall terminate if it fails to comply with any of the material terms or
conditions of this Agreement and does not cure such failure in a reasonable period of time after becoming aware of
such noncompliance. If all Recipient's rights under this Agreement terminate, Recipient agrees to cease use and
distribution of the Program as soon as reasonably practicable. However, Recipient's obligations under this
Agreement and any licenses granted by Recipient relating to the Program shall continue and survive.

Everyone is permitted to copy and distribute copies of this Agreement, but in order to avoid inconsistency the
Agreement is copyrighted and may only be modified in the following manner. The Agreement Steward reserves the
right to publish new versions (including revisions) of this Agreement from time to time. No one other than the
Agreement Steward has the right to modify this Agreement. The Eclipse Foundation is the initial Agreement
Steward. The Eclipse Foundation may assign the responsibility to serve as the Agreement Steward to a suitable
separate entity. Each new version of the Agreement will be given a distinguishing version number. The Program
(including Contributions) may always be distributed subject to the version of the Agreement under which it was
received. In addition, after a new version of the Agreement is published, Contributor may elect to distribute the
Program (including its Contributions) under the new version. Except as expressly stated in Sections 2(a) and 2(b)
above, Recipient receives no rights or licenses to the intellectual property of any Contributor under this Agreement,
whether expressly, by implication, estoppel or otherwise. All rights in the Program not expressly granted under this
Agreement are reserved.

This Agreement is governed by the laws of the State of New York and the intellectual property laws of the United
States of America. No party to this Agreement will bring a legal action under this Agreement more than one year
after the cause of action arose. Each party waives its rights to a jury trial in any resulting litigation.

1.316 opentracing-spring-web-autoconfigure 0.3.2

1.316.1 Available under license :

Apache License

Version 2.0, January 2004

http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications

or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.
You may add Your own copyright statement to Your modifications and may provide additional or different license

terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

  "License" shall mean the terms and conditions for use, reproduction,
  and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but

excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   copyright license to reproduce, prepare Derivative Works of,
   publicly display, publicly perform, sublicense, and distribute the
   Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   (except as stated in this section) patent license to make, have made,
   use, offer to sell, sell, import, and otherwise transfer the Work,
   where such license applies only to those patent claims licensable
   by such Contributor that are necessarily infringed by their
   Contribution(s) alone or by combination of their Contribution(s)
   with the Work to which such Contribution(s) was submitted. If You
   institute patent litigation against any entity (including a
   cross-claim or counterclaim in a lawsuit) alleging that the Work
   or a Contribution incorporated within the Work constitutes direct
   or contributory patent infringement, then any patent licenses
   granted to You under this License for that Work shall terminate
   as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
   Work or Derivative Works thereof in any medium, with or without
   modifications, and in Source or Object form, provided that You
   meet the following conditions:

   (a) You must give any other recipients of the Work or
       Derivative Works a copy of this License; and

   (b) You must cause any modified files to carry prominent notices
       stating that You changed the files; and

   (c) You must retain, in the Source form of any Derivative Works
       that You distribute, all copyright, patent, trademark, and
       attribution notices from the Source form of the Work,
       excluding those notices that do not pertain to any part of
       the Derivative Works; and

   (d) If the Work includes a "NOTICE" text file as part of its

distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,

unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems,

and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
distribution, then any Derivative Works that You distribute must
include a readable copy of the attribution notices contained
within such NOTICE file, excluding those notices that do not
pertain to any part of the Derivative Works, in at least one
of the following places: within a NOTICE text file distributed
as part of the Derivative Works; within the Source form or
documentation, if provided along with the Derivative Works; or,
within a display generated by the Derivative Works, if and
wherever such third-party notices normally appear. The contents
of the NOTICE file are for informational purposes only and
do not modify the License. You may add Your own attribution
notices within Derivative Works that You distribute, alongside
or as an addendum to the NOTICE text from the Work, provided
that such additional attribution notices cannot be construed
as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
any Contribution intentionally submitted for inclusion in the Work
by You to the Licensor shall be under the terms and conditions of
this License, without any additional terms or conditions.
Notwithstanding the above, nothing herein shall supersede or modify
the terms of any separate license agreement you may have executed
with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
names, trademarks, service marks, or product names of the Licensor,
except as required for reasonable and customary use in describing the
origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

   To apply the Apache License to your work, attach the following
   boilerplate notice, with the fields enclosed by brackets "[]"
   replaced with your own identifying information. (Don't include
   the brackets!) The text should be enclosed in the appropriate
   comment syntax for the file format. We also recommend that a
   file or class name and description of purpose be included on the
   same "printed page" as the copyright notice for easier
   identification within third-party archives.

/**
* KieSession is the most common way to interact with the engine. A KieSession
* allows the application to establish an iterative conversation with the engine, where the state of the
* session is kept across invocations. The reasoning process may be triggered multiple times for the
* same set of data. After the application finishes using the session, though, it <b>must</b> call the
* <code>dispose()</code> method in order to free the resources and used memory.
*
* <p>
* Simple example showing a KieSession executing rules for a given collection of java objects.
```

```
* </p>
* <pre>
* KieServices kieServices = KieServices.Factory.get();
* KieContainer kContainer = kieServices.getKieClasspathContainer();
* KieSession kSession = kContainer.newKieSession();
*
* for( Object fact : facts ) {
* kSession.insert( fact );
* }
* kSession.fireAllRules();
* kSession.dispose();
* </pre>
*
* <p>
* Simple example showing a stateful session executing processes.
* </p>
* <pre>
* KieSession kSession = kbase.newKieSession();
* kSession.startProcess("com.sample.processid");
* kSession.signalEvent("SomeEvent", null);
* kSession.startProcess("com.sample.processid");
* kSession.dispose();
* </pre>
*
* <p>
* KieSession support globals. Globals are used to pass information into the engine
* (like data or service callbacks that can be used in your rules and processes), but they should not
* be used to reason over. If you need to reason over your data, make sure you insert
* it as a fact, not a global.</p>
* <p>Globals are shared among ALL your rules and processes, so be especially careful of (and avoid
* as much as possible) mutable globals. Also, it is a good practice to set your globals before
* inserting your facts or starting your processes. Rules engines evaluate rules at fact insertion
* time, and so, if you are using a global to constraint a fact pattern, and the global is not set,
* you may receive a <code>NullPointerException</code>. </p>
* <p>Globals can be resolved in two ways. The KieSession supports getGlobals() which
* returns the internal Globals, which itself can take a delegate. Calling of setGlobal(String, Object)
* will set the global on an internal Collection. Identifiers in this internal
* Collection will have priority over the externally supplied Globals delegate. If an identifier cannot be found in
* the internal Collection, it will then check the externally supplied Globals delegate, if one has been set.
* </p>
*
* <p>Code snippet for setting a global:</p>
* <pre>
* KieSession ksession = kbase.newKieSession();
* ksession.setGlobal( "hbnSession", hibernateSession ); // sets a global hibernate session, that can be used for DB
interactions in the rules.
* for( Object fact : facts ) {
* ksession.insert( fact );
```

* }
* ksession.fireAllRules(); // this will now execute and will be able to resolve the "hbnSession" identifier.
* ksession.dispose();
* </pre>
*
* <p>
* Like StatelessKieSession this also implements CommandExecutor which can be used to script a KieSession. See CommandExecutor
* for more details.
* </p>
*
* @see Globals

/**
 * <code>RuleBasedTransliterator</code> is a transliterator
 * that reads a set of rules in order to determine how to perform
 * translations. Rule sets are stored in resource bundles indexed by
 * name. Rules within a rule set are separated by semicolons (';').
 * To include a literal semicolon, prefix it with a backslash ('\').
 * Unicode Pattern_White_Space is ignored.
 * If the first non-blank character on a line is '#',
 * the entire line is ignored as a comment. </p>
 *
 * <p>Each set of rules consists of two groups, one forward, and one
 * reverse. This is a convention that is not enforced; rules for one
 * direction may be omitted, with the result that translations in
 * that direction will not modify the source text. In addition,
 * bidirectional forward-reverse rules may be specified for
 * symmetrical transformations.</p>
 *
 * <p>Rule syntax </p>
 *
 * <p>Rule statements take one of the following forms: </p>
 *
 * <dl>
 *   <dt><code>$alefmadda=\u0622;</code></dt>
 *   <dd>Variable definition. The name on the
 *   left is assigned the text on the right. In this example,
 *   after this statement, instances of the left hand name,
 *   "<code>$alefmadda</code>", will be replaced by
 *   the Unicode character U+0622. Variable names must begin
 *   with a letter and consist only of letters, digits, and
 *   underscores. Case is significant. Duplicate names cause
 *   an exception to be thrown, that is, variables cannot be
 *   redefined. The right hand side may contain well-formed
 *   text of any length, including no text at all ("<code>$empty=;</code>").

*   The right hand side may contain embedded <code>UnicodeSet</code>
*   patterns, for example, &quot;<code>$softvowel=[eiyEIY]</code>&quot;.</dd>
*   <dd>&nbsp;</dd>
*   <dt><code>ai&gt;$alefmadda;</code></dt>
*   <dd>Forward translation rule. This rule
*   states that the string on the left will be changed to the
*   string on the right when performing forward
*   transliteration.</dd>
*   <dt>&nbsp;</dt>
*   <dt><code>ai&lt;$alefmadda;</code></dt>
*   <dd>Reverse translation rule. This rule
*   states that the string on the right will be changed to
*   the string on the left when performing reverse
*   transliteration.</dd>
* </dl>
*
* <dl>
*   <dt><code>ai&lt;&gt;$alefmadda;</code></dt>
*   <dd>Bidirectional translation rule. This
*   rule states that the string on the right will be changed
*   to the string on the left when performing forward
*   transliteration, and vice versa when performing reverse
*   transliteration.</dd>
* </dl>
*
* <p>Translation rules consist of a match pattern and an output
* string. The match pattern consists of literal characters,
* optionally preceded by context, and optionally followed by
* context. Context characters, like literal pattern characters,
* must be matched in the text being transliterated. However, unlike
* literal pattern characters, they are not replaced by the output
* text. For example, the pattern &quot;<code>abc{def}</code>&quot;
* indicates the characters &quot;<code>def</code>&quot; must be
* preceded by &quot;<code>abc</code>&quot; for a successful match.
* If there is a successful match, &quot;<code>def</code>&quot; will
* be replaced, but not &quot;<code>abc</code>&quot;. The final '<code>}</code>'
* is optional, so &quot;<code>abc{def</code>&quot; is equivalent to
* &quot;<code>abc{def}</code>&quot;. Another example is &quot;<code>{123}456</code>&quot;
* (or &quot;<code>123}456</code>&quot;) in which the literal
* pattern &quot;<code>123</code>&quot; must be followed by &quot;<code>456</code>&quot;.
* </p>
*
* <p>The output string of a forward or reverse rule consists of
* characters to replace the literal pattern characters. If the
* output string contains the character '<code>|</code>', this is
* taken to indicate the location of the cursor after
* replacement. The cursor is the point in the text at which the
* next replacement, if any, will be applied. The cursor is usually

* placed within the replacement text; however, it can actually be
* placed into the precending or following context by using the
* special character '<code>@</code>'. Examples:</p>
*
* <blockquote>
*   <p><code>a {foo} z > | @ bar; # foo -> bar, move cursor
*   before a
*   {foo} xyz > bar @@|; # foo -> bar, cursor between
*   y and z</code></p>
* </blockquote>
*
* <p>UnicodeSet</p>
*
* <p><code>UnicodeSet</code> patterns may appear anywhere that
* makes sense. They may appear in variable definitions.
* Contrariwise, <code>UnicodeSet</code> patterns may themselves
* contain variable references, such as "<code>$a=[a-z];$not_a=[^$a]</code>",
* or "<code>$range=a-z;$ll=[$range]</code>".</p>
*
* <p><code>UnicodeSet</code> patterns may also be embedded directly
* into rule strings. Thus, the following two rules are equivalent:</p>
*
* <blockquote>
*   <p><code>$vowel=[aeiou]; $vowel>'*'; # One way to do this
*   [aeiou]>'*';
*   #
*   Another way</code></p>
* </blockquote>
*
* <p>See {@link UnicodeSet} for more documentation and examples.</p>
*
* <p>Segments</p>
*
* <p>Segments of the input string can be matched and copied to the
* output string. This makes certain sets of rules simpler and more
* general, and makes reordering possible. For example:</p>
*
* <blockquote>
*   <p><code>([a-z]) > $1 $1;
*   #
*   double lowercase letters
*   ([:Lu:]) ([:Ll:]) > $2 $1; # reverse order of Lu-Ll pairs</code></p>
* </blockquote>
*
* <p>The segment of the input string to be copied is delimited by
* "<code>(</code>" and "<code>)</code>". Up to
* nine segments may be defined. Segments may not overlap. In the
* output string, "<code>$1</code>" through "<code>$9</code>"

* represent the input string segments, in left-to-right order of

* definition.</p>

*

* <p>Anchors</p>

*

* <p>Patterns can be anchored to the beginning or the end of the text. This is done with the

* special characters '<code>^</code>' and '<code>$</code>'. For example:</p>

*

* <blockquote>

*   <p><code>^ a   > 'BEG_A';   # match 'a' at start of text

*   a   > 'A';   # match other instances

* of 'a'

*   z $ > 'END_Z';   # match 'z' at end of text

*   z   > 'Z';   # match other instances

* of 'z'</code></p>

* </blockquote>

*

* <p>It is also possible to match the beginning or the end of the text using a <code>UnicodeSet</code>.

* This is done by including a virtual anchor character '<code>$</code>' at the end of the

* set pattern. Although this is usually the match chafacter for the end anchor, the set will

* match either the beginning or the end of the text, depending on its placement. For

* example:</p>

*

* <blockquote>

*   <p><code>$x = [a-z$];   # match 'a' through 'z' OR anchor

* $x 1   > 2;   # match '1' after a-z or at the start

*   3 $x > 4;   # match '3' before a-z or at the end</code></p>

* </blockquote>

*

* <p>Example </p>

*

* <p>The following example rules illustrate many of the features of

* the rule language. </p>

*

* <table border="0" cellpadding="4">

*   <tr>

*   <td valign="top">Rule 1.</td>

*   <td valign="top" nowrap><code>abc{def}>x|y</code></td>

*   </tr>

*   <tr>

*   <td valign="top">Rule 2.</td>

*   <td valign="top" nowrap><code>xyz>r</code></td>

*   </tr>

*   <tr>

*   <td valign="top">Rule 3.</td>

*   <td valign="top" nowrap><code>yz>q</code></td>

*   </tr>

* </table>

```
*
* <p>Applying these rules to the string &quot;<code>adefabcdefz</code>&quot;
* yields the following results: </p>
*
* <table border="0" cellpadding="4">
*   <tr>
*     <td valign="top" nowrap><code>|adefabcdefz</code></td>
*     <td valign="top">Initial state, no rules match. Advance
*     cursor.</td>
*   </tr>
*   <tr>
*     <td valign="top" nowrap><code>a|defabcdefz</code></td>
*     <td valign="top">Still no match. Rule 1 does not match
*     because the preceding context is not present.</td>
*   </tr>
*   <tr>
*     <td valign="top" nowrap><code>ad|efabcdefz</code></td>
*     <td valign="top">Still no match. Keep advancing until
*     there is a match...</td>
*   </tr>
*   <tr>
*     <td valign="top" nowrap><code>ade|fabcdefz</code></td>
*     <td valign="top">...</td>
*   </tr>
*   <tr>
*     <td valign="top" nowrap><code>adef|abcdefz</code></td>
*     <td valign="top">...</td>
*   </tr>
*   <tr>
*     <td valign="top" nowrap><code>adefa|bcdefz</code></td>
*     <td valign="top">...</td>
*   </tr>
*   <tr>
*     <td valign="top" nowrap><code>adefab|cdefz</code></td>
*     <td valign="top">...</td>
*   </tr>
*   <tr>
*     <td valign="top" nowrap><code>adefabc|defz</code></td>
*     <td valign="top">Rule 1 matches; replace &quot;<code>def</code>&quot;
*     with &quot;<code>xy</code>&quot; and back up the cursor
*     to before the '<code>y</code>'.</td>
*   </tr>
*   <tr>
*     <td valign="top" nowrap><code>adefabcx|yz</code></td>
*     <td valign="top">Although &quot;<code>xyz</code>&quot; is
*     present, rule 2 does not match because the cursor is
*     before the '<code>y</code>', not before the '<code>x</code>'.
*     Rule 3 does match. Replace &quot;<code>yz</code>&quot;
```

```
 *          with &quot;<code>q</code>&quot;.</td>
 *      </tr>
 *      <tr>
 *        <td valign="top" nowrap><code>adefabcxq|</code></td>
 *        <td valign="top">The cursor is at the end;
 *          transliteration is complete.</td>
 *      </tr>
 * </table>
 *
 * <p>The order of rules is significant. If multiple rules may match
 * at some point, the first matching rule is applied. </p>
 *
 * <p>Forward and reverse rules may have an empty output string.
 * Otherwise, an empty left or right hand side of any statement is a
 * syntax error. </p>
 *
 * <p>Single quotes are used to quote any character other than a
 * digit or letter. To specify a single quote itself, inside or
 * outside of quotes, use two single quotes in a row. For example,
 * the rule &quot;<code>'&gt;'&gt;o"clock</code>&quot; changes the
 * string &quot;<code>&gt;</code>&quot; to the string &quot;<code>o'clock</code>&quot;.
 * </p>
 *
 * <p><b>Notes</b> </p>
 *
 * <p>While a RuleBasedTransliterator is being built, it checks that
 * the rules are added in proper order. For example, if the rule
 * &quot;a&gt;x&quot; is followed by the rule &quot;ab&gt;y&quot;,
 * then the second rule will throw an exception. The reason is that
 * the second rule can never be triggered, since the first rule
 * always matches anything it matches. In other words, the first
 * rule <em>masks</em> the second rule. </p>

 */
/**
 * {@icuenhanced java.text.DateFormatSymbols}.{@icu _usage_}
 *
 * <p><code>DateFormatSymbols</code> is a public class for encapsulating
 * localizable date-time formatting data, such as the names of the
 * months, the names of the days of the week, and the time zone data.
 * <code>DateFormat</code> and <code>SimpleDateFormat</code> both use
 * <code>DateFormatSymbols</code> to encapsulate this information.
 *
 * <p>Typically you shouldn't use <code>DateFormatSymbols</code> directly.
 * Rather, you are encouraged to create a date-time formatter with the
 * <code>DateFormat</code> class's factory methods: <code>getTimeInstance</code>,
 * <code>getDateInstance</code>, or <code>getDateTimeInstance</code>.
 * These methods automatically create a <code>DateFormatSymbols</code> for
 * the formatter so that you don't have to. After the
 * formatter is created, you may modify its format pattern using the
 * <code>setPattern</code> method. For more information about
 * creating formatters using <code>DateFormat</code>'s factory methods,
 * see {@link DateFormat}.
 *
 * <p>If you decide to create a date-time formatter with a specific
 * format pattern for a specific locale, you can do so with:
 * <blockquote>
 * <pre>
 * new SimpleDateFormat(aPattern, new DateFormatSymbols(aLocale)).
 * </pre>
 * </blockquote>
 *
 * <p><code>DateFormatSymbols</code> objects are clonable. When you obtain
 * a <code>DateFormatSymbols</code> object, feel free to modify the
 * date-time formatting data. For instance, you can replace the localized
 * date-time format pattern characters with the ones that you feel easy
 * to remember. Or you can change the representative cities
 * to your favorite ones.
 *
 * <p>New <code>DateFormatSymbols</code> subclasses may be added to support
 * <code>SimpleDateFormat</code> for date-time formatting for additional locales.
 *
 * @see          DateFormat
 * @see          SimpleDateFormat
 * @see          com.ibm.icu.util.SimpleTimeZone

*/
/**
* <code>Replaceable</code> is an interface representing a
* string of characters that supports the replacement of a range of
* itself with a new string of characters.  It is used by APIs that
* change a piece of text while retaining metadata.  Metadata is data
* other than the Unicode characters returned by char32At().  One
* example of metadata is style attributes; another is an edit
* history, marking each character with an author and revision number.
*
* <p>An implicit aspect of the <code>Replaceable</code> API is that
* during a replace operation, new characters take on the metadata of
* the old characters.  For example, if the string "the <b>bold</b>
* font" has range (4, 8) replaced with "strong", then it becomes "the
* <b>strong</b> font".
*
* <p><code>Replaceable</code> specifies ranges using a start
* offset and a limit offset.  The range of characters thus specified
* includes the characters at offset start..limit-1.  That is, the
* start offset is inclusive, and the limit offset is exclusive.
*
* <p><code>Replaceable</code> also includes API to access characters
* in the string: <code>length()</code>, <code>charAt()</code>,
```

* <code>char32At()</code>, and <code>extractBetween()</code>.
*
* <p>For a subclass to support metadata, typical behavior of
* <code>replace()</code> is the following:
*
*   Set the metadata of the new text to the metadata of the first
*   character replaced
*   If no characters are replaced, use the metadata of the
*   previous character
*   If there is no previous character (i.e. start == 0), use the
*   following character
*   If there is no following character (i.e. the replaceable was
*   empty), use default metadata
*   If the code point U+FFFF is seen, it should be interpreted as
*   a special marker having no metadata
*
*
* If this is not the behavior, the subclass should document any differences.

/**
* DateIntervalInfo is a public class for encapsulating localizable
* date time interval patterns. It is used by DateIntervalFormat.
*
* <P>
* For most users, ordinary use of DateIntervalFormat does not need to create
* DateIntervalInfo object directly.
* DateIntervalFormat will take care of it when creating a date interval
* formatter when user pass in skeleton and locale.
*
* <P>
* For power users, who want to create their own date interval patterns,
* or want to re-set date interval patterns, they could do so by
* directly creating DateIntervalInfo and manupulating it.
*
* <P>
* Logically, the interval patterns are mappings
* from (skeleton, the_largest_different_calendar_field)
* to (date_interval_pattern).
*
* <P>

* A skeleton
*
*
* only keeps the field pattern letter and ignores all other parts
* in a pattern, such as space, punctuations, and string literals.
*
* hides the order of fields.
*
* might hide a field's pattern letter length.
*
* For those non-digit calendar fields, the pattern letter length is
* important, such as MMM, MMMM, and MMMMM; EEE and EEEE,
* and the field's pattern letter length is honored.
*
* For the digit calendar fields, such as M or MM, d or dd, yy or yyyy,
* the field pattern length is ignored and the best match, which is defined
* in date time patterns, will be returned without honor the field pattern
* letter length in skeleton.
*
*
* <P>
* The calendar fields we support for interval formatting are:
* year, month, date, day-of-week, am-pm, hour, hour-of-day, minute, and
* second (though we do not currently have specific intervalFormat data for
* skeletons with seconds).
* Those calendar fields can be defined in the following order:
* year > month > date > am-pm > hour > minute > second
*
* The largest different calendar fields between 2 calendars is the
* first different calendar field in above order.
*
* For example: the largest different calendar fields between "Jan 10, 2007"
* and "Feb 20, 2008" is year.
*
* <P>
* There is a set of pre-defined static skeleton strings.
* There are pre-defined interval patterns for those pre-defined skeletons
* in locales' resource files.
* For example, for a skeleton YEAR_ABBR_MONTH_DAY, which is "yMMMd",
* in en_US, if the largest different calendar field between date1 and date2
* is "year", the date interval pattern is "MMM d, yyyy - MMM d, yyyy",
* such as "Jan 10, 2007 - Jan 10, 2008".
* If the largest different calendar field between date1 and date2 is "month",
* the date interval pattern is "MMM d - MMM d, yyyy",
* such as "Jan 10 - Feb 10, 2007".
* If the largest different calendar field between date1 and date2 is "day",
* the date interval pattern is ""MMM d-d, yyyy", such as "Jan 10-20, 2007".
*

* For date skeleton, the interval patterns when year, or month, or date is
* different are defined in resource files.
* For time skeleton, the interval patterns when am/pm, or hour, or minute is
* different are defined in resource files.
*
*
* <P>
* There are 2 dates in interval pattern. For most locales, the first date
* in an interval pattern is the earlier date. There might be a locale in which
* the first date in an interval pattern is the later date.
* We use fallback format for the default order for the locale.
* For example, if the fallback format is "{0} - {1}", it means
* the first date in the interval pattern for this locale is earlier date.
* If the fallback format is "{1} - {0}", it means the first date is the
* later date.
* For a particular interval pattern, the default order can be overriden
* by prefixing "latestFirst:" or "earliestFirst:" to the interval pattern.
* For example, if the fallback format is "{0}-{1}",
* but for skeleton "yMMMd", the interval pattern when day is different is
* "latestFirst:d-d MMM yy", it means by default, the first date in interval
* pattern is the earlier date. But for skeleton "yMMMd", when day is different,
* the first date in "d-d MMM yy" is the later date.
*
* <P>
* The recommended way to create a DateIntervalFormat object is to pass in
* the locale.
* By using a Locale parameter, the DateIntervalFormat object is
* initialized with the pre-defined interval patterns for a given or
* default locale.
* <P>
* Users can also create DateIntervalFormat object
* by supplying their own interval patterns.
* It provides flexibility for power usage.
*
* <P>
* After a DateIntervalInfo object is created, clients may modify
* the interval patterns using setIntervalPattern function as so desired.
* Currently, users can only set interval patterns when the following
* calendar fields are different: ERA, YEAR, MONTH, DATE, DAY_OF_MONTH,
* DAY_OF_WEEK, AM_PM, HOUR, HOUR_OF_DAY, MINUTE and SECOND.
* Interval patterns when other calendar fields are different is not supported.
* <P>
* DateIntervalInfo objects are cloneable.
* When clients obtain a DateIntervalInfo object,
* they can feel free to modify it as necessary.
* <P>
* DateIntervalInfo are not expected to be subclassed.
* Data for a calendar is loaded out of resource bundles.

* Through ICU 4.4, date interval patterns are only supported in the Gregoria
* calendar; non-Gregorian calendars are supported from ICU 4.4.1.
*
* @stable ICU 4.0

 */
/**
 * <code>Transliterator</code> is an abstract class that transliterates text from one format to another. The most common
 * kind of transliterator is a script, or alphabet, transliterator. For example, a Russian to Latin transliterator
 * changes Russian text written in Cyrillic characters to phonetically equivalent Latin characters. It does not
 * <em>translate</em> Russian to English! Transliteration, unlike translation, operates on characters, without reference
 * to the meanings of words and sentences.
 *
 * <p>
 * Although script conversion is its most common use, a transliterator can actually perform a more general class of
 * tasks. In fact, <code>Transliterator</code> defines a very general API which specifies only that a segment of the
 * input text is replaced by new text. The particulars of this conversion are determined entirely by subclasses of
 * <code>Transliterator</code>.
 *
 * <p>
 * <b>Transliterators are stateless</b>
 *
 * <p>
 * <code>Transliterator</code> objects are <em>stateless</em>; they retain no information between calls to
 * <code>transliterate()</code>. As a result, threads may share transliterators without synchronizing them. This might
 * seem to limit the complexity of the transliteration operation. In practice, subclasses perform complex
 * transliterations by delaying the replacement of text until it is known that no other replacements are possible. In
```

* other words, although the <code>Transliterator</code> objects are stateless, the source text itself embodies all the
 * needed information, and delayed operation allows arbitrary complexity.
 *
 * <p>
 * Batch transliteration
 *
 * <p>
 * The simplest way to perform transliteration is all at once, on a string of existing text. This is referred to as
 * batch transliteration. For example, given a string <code>input</code> and a transliterator
 <code>t</code>,
 * the call
 *
 * <blockquote><code>String result = t.transliterate(input);
 * </code></blockquote>
 *
 * will transliterate it and return the result. Other methods allow the client to specify a substring to be
 * transliterated and to use {@link Replaceable} objects instead of strings, in order to preserve out-of-band
 * information (such as text styles).
 *
 * <p>
 * Keyboard transliteration
 *
 * <p>
 * Somewhat more involved is keyboard, or incremental transliteration. This is the transliteration of text
 that
 * is arriving from some source (typically the user's keyboard) one character at a time, or in some other piecemeal
 * fashion.
 *
 * <p>
 * In keyboard transliteration, a <code>Replaceable</code> buffer stores the text. As text is inserted, as much as
 * possible is transliterated on the fly. This means a GUI that displays the contents of the buffer may show text being
 * modified as each new character arrives.
 *
 * <p>
 * Consider the simple <code>RuleBasedTransliterator</code>:
 *
 * <blockquote><code>
 * th>{theta}
 * t>{tau}
 * </code></blockquote>
 *
 * When the user types 't', nothing will happen, since the transliterator is waiting to see if the next character is
 * 'h'. To remedy this, we introduce the notion of a cursor, marked by a '|' in the output string:
 *
 * <blockquote><code>
 * t>|{tau}
 * {tau}h>{theta}
 * </code></blockquote>

*
* Now when the user types 't', tau appears, and if the next character is 'h', the tau changes to a theta. This is
* accomplished by maintaining a cursor position (independent of the insertion point, and invisible in the GUI) across
* calls to <code>transliterate()</code>. Typically, the cursor will be coincident with the insertion point, but in a
* case like the one above, it will precede the insertion point.
*
* <p>
* Keyboard transliteration methods maintain a set of three indices that are updated with each call to
* <code>transliterate()</code>, including the cursor, start, and limit. These indices are changed by the method, and
* they are passed in and out via a Position object. The <code>start</code> index marks the beginning of the substring
* that the transliterator will look at. It is advanced as text becomes committed (but it is not the committed index;
* that's the <code>cursor</code>). The <code>cursor</code> index, described above, marks the point at which the
* transliterator last stopped, either because it reached the end, or because it required more characters to
* disambiguate between possible inputs. The <code>cursor</code> can also be explicitly set by rules in a
* <code>RuleBasedTransliterator</code>. Any characters before the <code>cursor</code> index are frozen; future keyboard
* transliteration calls within this input sequence will not change them. New text is inserted at the <code>limit</code>
* index, which marks the end of the substring that the transliterator looks at.
*
* <p>
* Because keyboard transliteration assumes that more characters are to arrive, it is conservative in its operation. It
* only transliterates when it can do so unambiguously. Otherwise it waits for more characters to arrive. When the
* client code knows that no more characters are forthcoming, perhaps because the user has performed some input
* termination operation, then it should call <code>finishTransliteration()</code> to complete any pending
* transliterations.
*
* <p>
* Inverses
*
* <p>
* Pairs of transliterators may be inverses of one another. For example, if transliterator A transliterates
* characters by incrementing their Unicode value (so "abc" -> "def"), and transliterator B decrements character
* values, then A is an inverse of B and vice versa. If we compose A with B in a compound
* transliterator, the result is the indentity transliterator, that is, a transliterator that does not change its input
* text.
*
* The <code>Transliterator</code> method <code>getInverse()</code> returns a transliterator's inverse, if one exists,
* or <code>null</code> otherwise. However, the result of <code>getInverse()</code> usually will not be a true
* mathematical inverse. This is because true inverse transliterators are difficult to formulate. For example, consider
* two transliterators: AB, which transliterates the character 'A' to 'B', and BA, which transliterates
* 'B' to 'A'. It might seem that these are exact inverses, since
*

* <blockquote>"A" x AB -> "B"
* "B" x BA -> "A"</blockquote>
*
* where 'x' represents transliteration. However,
*
* <blockquote>"ABCD" x AB -> "BBCD"
* "BBCD" x BA -> "AACD"</blockquote>
*
* so AB composed with BA is not the identity. Nonetheless, BA may be usefully considered to be
* AB's inverse, and it is on this basis that AB<code>.getInverse()</code> could legitimately return
* BA.
*
* <p>
* Filtering
* <p>Each transliterator has a filter, which restricts changes to those characters selected by the filter. The
* filter affects just the characters that are changed -- the characters outside of the filter are still part of the
* context for the filter. For example, in the following even though 'x' is filtered out, and doesn't convert to y, it does
affect the conversion of 'a'.
*
* <pre>
* String rules = &quot;x &gt; y; x{a} &gt; b; &quot;;
* Transliterator tempTrans = Transliterator.createFromRules(&quot;temp&quot;, rules, Transliterator.FORWARD);
* tempTrans.setFilter(new UnicodeSet(&quot;[a]&quot;));
* String tempResult = tempTrans.transform(&quot;xa&quot;);
* // results in &quot;xb&quot;
*</pre>
* <p>
* IDs and display names
*
* <p>
* A transliterator is designated by a short identifier string or ID. IDs follow the format
* source-destination, where source describes the entity being replaced, and destination
* describes the entity replacing source. The entities may be the names of scripts, particular sequences of
* characters, or whatever else it is that the transliterator converts to or from. For example, a transliterator from
* Russian to Latin might be named "Russian-Latin". A transliterator from keyboard escape sequences to Latin-1
* characters might be named "KeyboardEscape-Latin1". By convention, system entity names are in English, with the
* initial letters of words capitalized; user entity names may follow any format so long as they do not contain dashes.
*
* <p>
* In addition to programmatic IDs, transliterator objects have display names for presentation in user interfaces,
* returned by {@link #getDisplayName}.
*
* <p>
* Factory methods and registration
*

---

* <p>
* In general, client code should use the factory method <code>getInstance()</code> to obtain an instance of a
* transliterator given its ID. Valid IDs may be enumerated using <code>getAvailableIDs()</code>. Since transliterators
* are stateless, multiple calls to <code>getInstance()</code> with the same ID will return the same object.
*
* <p>
* In addition to the system transliterators registered at startup, user transliterators may be registered by calling
* <code>registerInstance()</code> at run time. To register a transliterator subclass without instantiating it (until it
* is needed), users may call <code>registerClass()</code>.
*
* <p>
* Composed transliterators
*
* <p>
* In addition to built-in system transliterators like "Latin-Greek", there are also built-in composed
* transliterators. These are implemented by composing two or more component transliterators. For example, if we have
* scripts "A", "B", "C", and "D", and we want to transliterate between all pairs of them, then we need to write 12
* transliterators: "A-B", "A-C", "A-D", "B-A",..., "D-A", "D-B", "D-C". If it is possible to convert all scripts to an
* intermediate script "M", then instead of writing 12 rule sets, we only need to write 8: "A~M", "B~M", "C~M", "D~M",
* "M~A", "M~B", "M~C", "M~D". (This might not seem like a big win, but it's really 2n vs. n
* <sup>2</sup> - n, so as n gets larger the gain becomes significant. With 9 scripts, it's 18 vs. 72
* rule sets, a big difference.) Note the use of "~" rather than "-" for the script separator here; this indicates that
* the given transliterator is intended to be composed with others, rather than be used as is.
*
* <p>
* Composed transliterators can be instantiated as usual. For example, the system transliterator "Devanagari-Gujarati"
* is a composed transliterator built internally as "Devanagari~InterIndic;InterIndic~Gujarati". When this
* transliterator is instantiated, it appears externally to be a standard transliterator (e.g., getID() returns
* "Devanagari-Gujarati").
*
* <p>
* Subclassing
*
* <p>
* Subclasses must implement the abstract method <code>handleTransliterate()</code>.
* <p>
* Subclasses should override the <code>transliterate()</code> method taking a <code>Replaceable</code> and the
* <code>transliterate()</code> method taking a <code>String</code> and <code>StringBuffer</code> if the performance of
* these methods can be improved over the performance obtained by the default implementations in this class.

*/
/**
* A transliteration rule used by
* <code>RuleBasedTransliterator</code>.
* <code>TransliterationRule</code> is an immutable object.
*
* <p>A rule consists of an input pattern and an output string.  When
* the input pattern is matched, the output string is emitted.  The
* input pattern consists of zero or more characters which are matched
* exactly (the key) and optional context.  Context must match if it
* is specified.  Context may be specified before the key, after the
* key, or both.  The key, preceding context, and following context
* may contain variables.  Variables represent a set of Unicode
* characters, such as the letters <i>a</i> through <i>z</i>.
* Variables are detected by looking up each character in a supplied
* variable list to see if it has been so defined.
*
* <p>A rule may contain segments in its input string and segment
* references in its output string.  A segment is a substring of the
* input pattern, indicated by an offset and limit.  The segment may
* be in the preceding or following context.  It may not span a
* context boundary.  A segment reference is a special character in
* the output string that causes a segment of the input string (not
* the input pattern) to be copied to the output string.  The range of
* special characters that represent segment references is defined by
* RuleBasedTransliterator.Data.
*
* <p>Example: The rule "([a-z]) . ([0-9]) > $2 . $1" will change the input
* string "abc.123" to "ab1.c23".

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1
through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are
under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or
indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of
fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source
code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form,
including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as
indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix
below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the

Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the

Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within

third-party archives.

/**
* A contract for inspecting and potentially modifying request data values such
* as URL query parameters or form field values before they are rendered by a
* view or before a redirect.
*
* <p>Implementations may use this contract for example as part of a solution
* to provide data integrity, confidentiality, protection against cross-site
* request forgery (CSRF), and others or for other tasks such as automatically
* adding a hidden field to all forms and URLs.
*
* <p>View technologies that support this contract can obtain an instance to
* delegate to via {@link RequestContext#getRequestDataValueProcessor()}.
*

* @author Rossen Stoyanchev
* @since 3.1

/**
* XSLT-driven View that allows for response context to be rendered as the
* result of an XSLT transformation.
*
* <p>The XSLT Source object is supplied as a parameter in the model and then
* {@link #locateSource detected} during response rendering. Users can either specify
* a specific entry in the model via the {@link #setSourceKey sourceKey} property or
* have Spring locate the Source object. This class also provides basic conversion
* of objects into Source implementations. See {@link #getSourceTypes() here}
* for more details.
*
* <p>All model parameters are passed to the XSLT Transformer as parameters.
* In addition the user can configure {@link #setOutputProperties output properties}
* to be passed to the Transformer.
*
* @author Rob Harrop
* @author Juergen Hoeller
* @since 2.0

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.
You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

  Copyright [yyyy] [name of copyright owner]

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of

this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

(a) You must give any other recipients of the Work or Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify
   the terms of any separate license agreement you may have executed
   with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
   names, trademarks, service marks, or product names of the Licensor,
   except as required for reasonable and customary use in describing the
   origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the
   appropriateness of using or redistributing the Work and assume any
   risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only

on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work.

To apply the Apache License to your work, attach the following
boilerplate notice, with the fields enclosed by brackets "[]"
replaced with your own identifying information. (Don't include
the brackets!) The text should be enclosed in the appropriate
comment syntax for the file format. We also recommend that a
file or class name and description of purpose be included on the
same "printed page" as the copyright notice for easier
identification within third-party archives.

limitations under the License.

1.335 jackson-xc 2.10.4

1.335.1 Available under license :

Jackson JSON processor

Jackson is a high-performance, Free/Open Source JSON processing library.
It was originally written by Tatu Saloranta (tatu.saloranta@iki.fi), and has
been in development since 2007.
It is currently developed by a community of developers, as well as supported
commercially by FasterXML.com.

Licensing

Jackson core and extension components may licensed under different licenses.

To find the details that apply to this artifact see the accompanying LICENSE file.
For more information, including possible other licensing options, contact
FasterXML.com (http://fasterxml.com).

Credits

A list of contributors may be found from CREDITS file, which is included
in some artifacts (usually source distributions); but is always available
from the source code management (SCM) system project uses.
This copy of Jackson JSON processor `jackson-module-jaxb-annotations` module is licensed under the
Apache (Software) License, version 2.0 ("the License").
See the License for details about distribution rights, and the
specific rights regarding derivate works.

You may obtain a copy of the License at:

http://www.apache.org/licenses/LICENSE-2.0

/**
 * Provides an implementation of the NTLM authentication protocol.
 * <p>
 * This class provides methods for generating authentication
 * challenge responses for the NTLM authentication protocol.  The NTLM
 * protocol is a proprietary Microsoft protocol and as such no RFC
 * exists for it.  This class is based upon the reverse engineering
 * efforts of a wide range of people.</p>
 *
 * <p>Please note that an implementation of JCE must be correctly installed and configured when
 * using NTLM support.</p>
 *
 * <p>This class should not be used externally to HttpClient as it's API is specifically
 * designed to work with HttpClient's use case, in particular it's connection management.</p>

/*

File: ConcurrentReaderHashMap

Written by Doug Lea. Adapted and released, under explicit
permission, from JDK1.2 HashMap.java and Hashtable.java which
carries the following copyright:

History:
Date   Who   What
28oct1999 dl   Created
14dec1999 dl   jmm snapshot
19apr2000 dl   use barrierLock
12jan2001 dl   public release
17nov2001 dl   Minor tunings
20may2002 dl   BarrierLock can now be serialized.
09dec2002 dl   Fix interference checks.

1.343 javax-activation 1.2.0

1.343.1 Available under license :

COMMON DEVELOPMENT AND DISTRIBUTION LICENSE (CDDL) Version 1.1

1. Definitions.

 1.1. "Contributor" means each individual or entity that creates or
 contributes to the creation of Modifications.

 1.2. "Contributor Version" means the combination of the Original
 Software, prior Modifications used by a Contributor (if any), and

the Modifications made by that particular Contributor.

1.3. "Covered Software" means (a) the Original Software, or (b) Modifications, or (c) the combination of files containing Original Software with files containing Modifications, in each case including portions thereof.

1.4. "Executable" means the Covered Software in any form other than Source Code.

1.5. "Initial Developer" means the individual or entity that first makes Original Software available under this License.

1.6. "Larger Work" means a work which combines Covered Software or portions thereof with code not governed by the terms of this License.

1.7. "License" means this document.

1.8. "Licensable" means having the right to grant, to the maximum extent possible, whether at the time of the initial grant or subsequently acquired, any and all of the rights conveyed herein.

1.9. "Modifications" means the Source Code and Executable form of any of the following:

A. Any file that results from an addition to, deletion from or modification of the contents of a file containing Original Software or previous Modifications;

B. Any new file that contains any part of the Original Software or previous Modification; or

C. Any new file that is contributed or otherwise made available under the terms of this License.

1.10. "Original Software" means the Source Code and Executable form of computer software code that is originally released under this License.

1.11. "Patent Claims" means any patent claim(s), now owned or hereafter acquired, including without limitation, method, process, and apparatus claims, in any patent Licensable by grantor.

1.12. "Source Code" means (a) the common form of computer software code in which modifications are made and (b) associated documentation included in or with such code.

1.13. "You" (or "Your") means an individual or a legal entity

exercising rights under, and complying with all of the terms of,
this License. For legal entities, "You" includes any entity which
controls, is controlled by, or is under common control with You. For
purposes of this definition, "control" means (a) the power, direct
or indirect, to cause the direction or management of such entity,
whether by contract or otherwise, or (b) ownership of more than
fifty percent (50%) of the outstanding shares or beneficial
ownership of such entity.

2. License Grants.

2.1. The Initial Developer Grant.

Conditioned upon Your compliance with Section 3.1 below and subject
to third party intellectual property claims, the Initial Developer
hereby grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or
trademark) Licensable by Initial Developer, to use, reproduce,
modify, display, perform, sublicense and distribute the Original
Software (or portions thereof), with or without Modifications,
and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using or selling of
Original Software, to make, have made, use, practice, sell, and
offer for sale, and/or otherwise dispose of the Original Software
(or portions thereof).

(c) The licenses granted in Sections 2.1(a) and (b) are effective on
the date Initial Developer first distributes or otherwise makes the
Original Software available to a third party under the terms of this
License.

(d) Notwithstanding Section 2.1(b) above, no patent license is
granted: (1) for code that You delete from the Original Software, or
(2) for infringements caused by: (i) the modification of the
Original Software, or (ii) the combination of the Original Software
with other software or devices.

2.2. Contributor Grant.

Conditioned upon Your compliance with Section 3.1 below and subject
to third party intellectual property claims, each Contributor hereby
grants You a world-wide, royalty-free, non-exclusive license:

(a) under intellectual property rights (other than patent or
trademark) Licensable by Contributor to use, reproduce, modify,
display, perform, sublicense and distribute the Modifications

created by such Contributor (or portions thereof), either on an unmodified basis, with other Modifications, as Covered Software and/or as part of a Larger Work; and

(b) under Patent Claims infringed by the making, using, or selling of Modifications made by that Contributor either alone and/or in combination with its Contributor Version (or portions of such combination), to make, use, sell, offer for sale, have made, and/or otherwise dispose of: (1) Modifications made by that Contributor (or portions thereof); and (2) the combination of Modifications made by that Contributor with its Contributor Version (or portions of such combination).

(c) The licenses granted in Sections 2.2(a) and 2.2(b) are effective on the date Contributor first distributes or otherwise makes the Modifications available to a third party.

(d) Notwithstanding Section 2.2(b) above, no patent license is granted: (1) for any code that Contributor has deleted from the Contributor Version; (2) for infringements caused by: (i) third party modifications of Contributor Version, or (ii) the combination of Modifications made by that Contributor with other software (except as part of the Contributor Version) or other devices; or (3) under Patent Claims infringed by Covered Software in the absence of Modifications made by that Contributor.

3. Distribution Obligations.

3.1. Availability of Source Code.

Any Covered Software that You distribute or otherwise make available in Executable form must also be made available in Source Code form and that Source Code form must be distributed only under the terms of this License. You must include a copy of this License with every copy of the Source Code form of the Covered Software You distribute or otherwise make available. You must inform recipients of any such Covered Software in Executable form as to how they can obtain such Covered Software in Source Code form in a reasonable manner on or through a medium customarily used for software exchange.

3.2. Modifications.

The Modifications that You create or to which You contribute are governed by the terms of this License. You represent that You believe Your Modifications are Your original creation(s) and/or You have sufficient rights to grant the rights conveyed by this License.

3.3. Required Notices.

You must include a notice in each of Your Modifications that identifies You as the Contributor of the Modification. You may not remove or alter any copyright, patent or trademark notices contained within the Covered Software, or any notices of licensing or any descriptive text giving attribution to any Contributor or the Initial Developer.

3.4. Application of Additional Terms.

You may not offer or impose any terms on any Covered Software in Source Code form that alters or restricts the applicable version of this License or the recipients' rights hereunder. You may choose to offer, and to charge a fee for, warranty, support, indemnity or liability obligations to one or more recipients of Covered Software. However, you may do so only on Your own behalf, and not on behalf of the Initial Developer or any Contributor. You must make it absolutely clear that any such warranty, support, indemnity or liability obligation is offered by You alone, and You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of warranty, support, indemnity or liability terms You offer.

3.5. Distribution of Executable Versions.

You may distribute the Executable form of the Covered Software under the terms of this License or under the terms of a license of Your choice, which may contain terms different from this License, provided that You are in compliance with the terms of this License and that the license for the Executable form does not attempt to limit or alter the recipient's rights in the Source Code form from the rights set forth in this License. If You distribute the Covered Software in Executable form under a different license, You must make it absolutely clear that any terms which differ from this License are offered by You alone, not by the Initial Developer or Contributor. You hereby agree to indemnify the Initial Developer and every Contributor for any liability incurred by the Initial Developer or such Contributor as a result of any such terms You offer.

3.6. Larger Works.

You may create a Larger Work by combining Covered Software with other code not governed by the terms of this License and distribute the Larger Work as a single product. In such a case, You must make sure the requirements of this License are fulfilled for the Covered Software.

4. Versions of the License.

4.1. New Versions.

Oracle is the initial license steward and may publish revised and/or new versions of this License from time to time. Each version will be given a distinguishing version number. Except as provided in Section 4.3, no one other than the license steward has the right to modify this License.

4.2. Effect of New Versions.

You may always continue to use, distribute or otherwise make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. If the Initial Developer includes a notice in the Original Software prohibiting it from being distributed or otherwise made available under any subsequent version of the License, You must distribute and make the Covered Software available under the terms of the version of the License under which You originally received the Covered Software. Otherwise, You may also choose to use, distribute or otherwise make the Covered Software available under the terms of any subsequent version of the License published by the license steward.

4.3. Modified Versions.

When You are an Initial Developer and You want to create a new license for Your Original Software, You may create and use a modified version of this License if You: (a) rename the license and remove any references to the name of the license steward (except to note that the license differs from this License); and (b) otherwise make it clear that the license contains terms which differ from this License.

5. DISCLAIMER OF WARRANTY.

COVERED SOFTWARE IS PROVIDED UNDER THIS LICENSE ON AN "AS IS" BASIS, WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, WITHOUT LIMITATION, WARRANTIES THAT THE COVERED SOFTWARE IS FREE OF DEFECTS, MERCHANTABLE, FIT FOR A PARTICULAR PURPOSE OR NON-INFRINGING. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE COVERED SOFTWARE IS WITH YOU. SHOULD ANY COVERED SOFTWARE PROVE DEFECTIVE IN ANY RESPECT, YOU (NOT THE INITIAL DEVELOPER OR ANY OTHER CONTRIBUTOR) ASSUME THE COST OF ANY NECESSARY SERVICING, REPAIR OR CORRECTION. THIS DISCLAIMER OF WARRANTY CONSTITUTES AN ESSENTIAL PART OF THIS LICENSE. NO USE OF ANY COVERED SOFTWARE IS AUTHORIZED HEREUNDER EXCEPT UNDER THIS DISCLAIMER.

6. TERMINATION.

6.1. This License and the rights granted hereunder will terminate automatically if You fail to comply with terms herein and fail to cure such breach within 30 days of becoming aware of the breach. Provisions which, by their nature, must remain in effect beyond the termination of this License shall survive.

6.2. If You assert a patent infringement claim (excluding declaratory judgment actions) against Initial Developer or a Contributor (the Initial Developer or Contributor against whom You assert such claim is referred to as "Participant") alleging that the Participant Software (meaning the Contributor Version where the Participant is a Contributor or the Original Software where the Participant is the Initial Developer) directly or indirectly infringes any patent, then any and all rights granted directly or indirectly to You by such Participant, the Initial Developer (if the Initial Developer is not the Participant) and all Contributors under Sections 2.1 and/or 2.2 of this License shall, upon 60 days notice from Participant terminate prospectively and automatically at the expiration of such 60 day notice period, unless if within such 60 day period You withdraw Your claim with respect to the Participant Software against such Participant either unilaterally or pursuant to a written agreement with Participant.

6.3. If You assert a patent infringement claim against Participant alleging that the Participant Software directly or indirectly infringes any patent where such claim is resolved (such as by license or settlement) prior to the initiation of patent infringement litigation, then the reasonable value of the licenses granted by such Participant under Sections 2.1 or 2.2 shall be taken into account in determining the amount or value of any payment or license.

6.4. In the event of termination under Sections 6.1 or 6.2 above, all end user licenses that have been validly granted by You or any distributor hereunder prior to termination (excluding licenses granted to You by any distributor) shall survive termination.

7. LIMITATION OF LIABILITY.

UNDER NO CIRCUMSTANCES AND UNDER NO LEGAL THEORY, WHETHER TORT (INCLUDING NEGLIGENCE), CONTRACT, OR OTHERWISE, SHALL YOU, THE INITIAL DEVELOPER, ANY OTHER CONTRIBUTOR, OR ANY DISTRIBUTOR OF COVERED SOFTWARE, OR ANY SUPPLIER OF ANY OF SUCH PARTIES, BE LIABLE TO ANY PERSON FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES OF ANY CHARACTER INCLUDING, WITHOUT LIMITATION, DAMAGES FOR LOSS OF GOODWILL, WORK STOPPAGE, COMPUTER FAILURE OR MALFUNCTION, OR ANY AND ALL OTHER COMMERCIAL DAMAGES OR

LOSSES, EVEN IF SUCH PARTY SHALL HAVE BEEN INFORMED OF THE POSSIBILITY OF SUCH DAMAGES. THIS LIMITATION OF LIABILITY SHALL NOT APPLY TO LIABILITY FOR DEATH OR PERSONAL INJURY RESULTING FROM SUCH PARTY'S NEGLIGENCE TO THE EXTENT APPLICABLE LAW PROHIBITS SUCH LIMITATION. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OR LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO THIS EXCLUSION AND LIMITATION MAY NOT APPLY TO YOU.

8. U.S. GOVERNMENT END USERS.

The Covered Software is a "commercial item," as that term is defined in 48 C.F.R. 2.101 (Oct. 1995), consisting of "commercial computer software" (as that term is defined at 48 C.F.R. 252.227-7014(a)(1)) and "commercial computer software documentation" as such terms are used in 48 C.F.R. 12.212 (Sept. 1995). Consistent with 48 C.F.R. 12.212 and 48 C.F.R. 227.7202-1 through 227.7202-4 (June 1995), all U.S. Government End Users acquire Covered Software with only those rights set forth herein. This U.S. Government Rights clause is in lieu of, and supersedes, any other FAR, DFAR, or other clause or provision that addresses Government rights in computer software under this License.

9. MISCELLANEOUS.

This License represents the complete agreement concerning subject matter hereof. If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable. This License shall be governed by the law of the jurisdiction specified in a notice contained within the Original Software (except to the extent applicable law, if any, provides otherwise), excluding such jurisdiction's conflict-of-law provisions. Any litigation relating to this License shall be subject to the jurisdiction of the courts located in the jurisdiction and venue specified in a notice contained within the Original Software, with the losing party responsible for costs, including, without limitation, court costs and reasonable attorneys' fees and expenses. The application of the United Nations Convention on Contracts for the International Sale of Goods is expressly excluded. Any law or regulation which provides that the language of a contract shall be construed against the drafter shall not apply to this License. You agree that You alone are responsible for compliance with the United States export administration regulations (and the export control laws and regulation of any other countries) when You use, distribute or otherwise make available any Covered Software.

10. RESPONSIBILITY FOR CLAIMS.

As between Initial Developer and the Contributors, each party is

responsible for claims and damages arising, directly or indirectly,
out of its utilization of rights under this License and You agree to
work with Initial Developer and Contributors to distribute such
responsibility on an equitable basis. Nothing herein is intended or
shall be deemed to constitute any admission of liability.

NOTICE PURSUANT TO SECTION 9 OF THE COMMON DEVELOPMENT AND DISTRIBUTION
LICENSE (CDDL)

The code released under the CDDL shall be governed by the laws of the
State of California (excluding conflict-of-law provisions). Any
litigation relating to this License shall be subject to the jurisdiction
of the Federal Courts of the Northern District of California and the
state courts of the State of California, with venue lying in Santa Clara
County, California.

 The GNU General Public License (GPL) Version 2, June 1991

Copyright (C) 1989, 1991 Free Software Foundation, Inc.
51 Franklin Street, Fifth Floor
Boston, MA 02110-1335
USA

Everyone is permitted to copy and distribute verbatim copies
of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to
share and change it. By contrast, the GNU General Public License is
intended to guarantee your freedom to share and change free software--to
make sure the software is free for all its users. This General Public
License applies to most of the Free Software Foundation's software and
to any other program whose authors commit to using it. (Some other Free
Software Foundation software is covered by the GNU Library General
Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price.
Our General Public Licenses are designed to make sure that you have the
freedom to distribute copies of free software (and charge for this
service if you wish), that you receive source code or can get it if you
want it, that you can change the software or use pieces of it in new
free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it.

For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

0. This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

1. You may copy and distribute verbatim copies of the Program's source
code as you receive it, in any medium, provided that you conspicuously
and appropriately publish on each copy an appropriate copyright notice
and disclaimer of warranty; keep intact all the notices that refer to
this License and to the absence of any warranty; and give any other
recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and
you may at your option offer warranty protection in exchange for a fee.

2. You may modify your copy or copies of the Program or any portion of
it, thus forming a work based on the Program, and copy and distribute
such modifications or work under the terms of Section 1 above, provided
that you also meet all of these conditions:

  a) You must cause the modified files to carry prominent notices
  stating that you changed the files and the date of any change.

  b) You must cause any work that you distribute or publish, that in
  whole or in part contains or is derived from the Program or any part
  thereof, to be licensed as a whole at no charge to all third parties
  under the terms of this License.

  c) If the modified program normally reads commands interactively
  when run, you must cause it, when started running for such
  interactive use in the most ordinary way, to print or display an
  announcement including an appropriate copyright notice and a notice
  that there is no warranty (or else, saying that you provide a
  warranty) and that users may redistribute the program under these
  conditions, and telling the user how to view a copy of this License.
  (Exception: if the Program itself is interactive but does not
  normally print such an announcement, your work based on the Program
  is not required to print an announcement.)

These requirements apply to the modified work as a whole. If
identifiable sections of that work are not derived from the Program, and
can be reasonably considered independent and separate works in
themselves, then this License, and its terms, do not apply to those
sections when you distribute them as separate works. But when you
distribute the same sections as part of a whole which is a work based on
the Program, the distribution of the whole must be on the terms of this
License, whose permissions for other licensees extend to the entire
whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest
your rights to work written entirely by you; rather, the intent is to
exercise the right to control the distribution of derivative or

collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

3. You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:

   a) Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

   b) Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,

   c) Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

4. You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will

automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.

5. You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.

6. Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

7. If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.

If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.

It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.

This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.

8. If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.

9. The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.

Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

10. If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

11. BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM "AS IS" WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.

12. IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR

DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL
DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM
(INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED
INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF
THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR
OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest
possible use to the public, the best way to achieve this is to make it
free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to
attach them to the start of each source file to most effectively convey
the exclusion of warranty; and each file should have at least the
"copyright" line and a pointer to where the full notice is found.

   One line to give the program's name and a brief idea of what it does.
   Copyright (C) <year> <name of author>

   This program is free software; you can redistribute it and/or modify
   it under the terms of the GNU General Public License as published by
   the Free Software Foundation; either version 2 of the License, or
   (at your option) any later version.

   This program is distributed in the hope that it will be useful, but
   WITHOUT ANY WARRANTY; without even the implied warranty of
   MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU
   General Public License for more details.

   You should have received a copy of the GNU General Public License
   along with this program; if not, write to the Free Software
   Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1335 USA

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this
when it starts in an interactive mode:

   Gnomovision version 69, Copyright (C) year name of author
   Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type
   `show w'. This is free software, and you are welcome to redistribute
   it under certain conditions; type `show c' for details.

The hypothetical commands `show w' and `show c' should show the

appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w' and `show c'; they could even be mouse-clicks or menu items--whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a "copyright disclaimer" for the program, if necessary. Here is a sample; alter the names:

  Yoyodyne, Inc., hereby disclaims all copyright interest in the program `Gnomovision' (which makes passes at compilers) written by James Hacker.

  signature of Ty Coon, 1 April 1989
  Ty Coon, President of Vice

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.

#

Certain source files distributed by Oracle America, Inc. and/or its affiliates are subject to the following clarification and special exception to the GPLv2, based on the GNU Project exception for its Classpath libraries, known as the GNU Classpath Exception, but only where Oracle has expressly included in the particular source file's header the words "Oracle designates this particular file as subject to the "Classpath" exception as provided by Oracle in the LICENSE file that accompanied this code."

You should also note that Oracle includes multiple, independent programs in this software package. Some of those programs are provided under licenses deemed incompatible with the GPLv2 by the Free Software Foundation and others. For example, the package includes programs licensed under the Apache License, Version 2.0. Such programs are licensed to you under their original licenses.

Oracle facilitates your further distribution of this package by adding the Classpath Exception to the necessary parts of its GPLv2 code, which permits you to use that code in combination with other independent modules not licensed under the GPLv2. However, note that this would not permit you to commingle code under an incompatible license with Oracle's GPLv2 licensed code by, for example, cutting and pasting such code into a file also containing Oracle's GPLv2 licensed code and then distributing the result. Additionally, if you were to remove the Classpath Exception from any of the files to which it applies and

distribute the result, you would likely be required to license some or
all of the other code in that distribution under the GPLv2 as well, and
since the GPLv2 is incompatible with the license terms of some items
included in the distribution by Oracle, removing the Classpath
Exception could therefore effectively compromise your ability to
further distribute the package.

Proceed with caution and we recommend that you obtain the advice of a
lawyer skilled in open source matters before removing the Classpath
Exception or making modifications to this package which may
subsequently be redistributed and/or involve the use of third party
software.

CLASSPATH EXCEPTION
Linking this library statically or dynamically with other modules is
making a combined work based on this library. Thus, the terms and
conditions of the GNU General Public License version 2 cover the whole
combination.

As a special exception, the copyright holders of this library give you
permission to link this library with independent modules to produce an
executable, regardless of the license terms of these independent
modules, and to copy and distribute the resulting executable under
terms of your choice, provided that you also meet, for each linked
independent module, the terms and conditions of the license of that
module. An independent module is a module which is not derived from or
based on this library. If you modify this library, you may extend this
exception to your version of the library, but you are not obligated to
do so. If you do not wish to do so, delete this exception statement
from your version.

1.347.1 Available under license :

Apache License
Version 2.0, January 2004
http://www.apache.org/licenses/

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction, and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all other entities that control, are controlled by, or are under common control with that entity. For the purposes of this definition, "control" means (i) the power, direct or indirect, to cause the direction or management of such entity, whether by contract or otherwise, or (ii) ownership of fifty percent (50%) or more of the outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications, including but not limited to software source code, documentation source, and configuration files.

"Object" form shall mean any form resulting from mechanical transformation or translation of a Source form, including but not limited to compiled object code, generated documentation, and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or Object form, made available under the License, as indicated by a copyright notice that is included in or attached to the work (an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object form, that is based on (or derived from) the Work and for which the editorial revisions, annotations, elaborations, or other modifications represent, as a whole, an original work of authorship. For the purposes of this License, Derivative Works shall not include works that remain separable from, or merely link (or bind by name) to the interfaces of, the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including the original version of the Work and any modifications or additions to that Work or Derivative Works thereof, that is intentionally submitted to Licensor for inclusion in the Work by the copyright owner or by an individual or Legal Entity authorized to submit on behalf of the copyright owner. For the purposes of this definition, "submitted" means any form of electronic, verbal, or written communication sent to the Licensor or its representatives, including but not limited to communication on electronic mailing lists, source code control systems, and issue tracking systems that are managed by, or on behalf of, the Licensor for the purpose of discussing and improving the Work, but excluding communication that is conspicuously marked or otherwise designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity on behalf of whom a Contribution has been received by Licensor and subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable copyright license to reproduce, prepare Derivative Works of, publicly display, publicly perform, sublicense, and distribute the Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of this License, each Contributor hereby grants to You a perpetual, worldwide, non-exclusive, no-charge, royalty-free, irrevocable (except as stated in this section) patent license to make, have made, use, offer to sell, sell, import, and otherwise transfer the Work, where such license applies only to those patent claims licensable by such Contributor that are necessarily infringed by their Contribution(s) alone or by combination of their Contribution(s) with the Work to which such Contribution(s) was submitted. If You institute patent litigation against any entity (including a cross-claim or counterclaim in a lawsuit) alleging that the Work or a Contribution incorporated within the Work constitutes direct or contributory patent infringement, then any patent licenses granted to You under this License for that Work shall terminate as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the Work or Derivative Works thereof in any medium, with or without modifications, and in Source or Object form, provided that You meet the following conditions:

You must give any other recipients of the Work or Derivative Works a copy of this License; and

You must cause any modified files to carry prominent notices stating that You changed the files; and

You must retain, in the Source form of any Derivative Works that You distribute, all copyright, patent, trademark, and attribution notices from the Source form of the Work, excluding those notices that do not pertain to any part of the Derivative Works; and

If the Work includes a "NOTICE" text file as part of its distribution, then any Derivative Works that You distribute must include a readable copy of the attribution notices contained within such NOTICE file, excluding those notices that do not pertain to any part of the Derivative Works, in at least one of the following places: within a NOTICE text file distributed as part of the Derivative Works; within the Source form or documentation, if provided along with the Derivative Works; or, within a display generated by the Derivative Works, if and wherever such third-party notices normally appear. The contents of the NOTICE file are for informational purposes only and do not modify the License. You may add Your own attribution notices within Derivative Works that You distribute, alongside or as an addendum to the NOTICE text from the Work, provided that such additional attribution notices cannot be construed as modifying the License.
You may add Your own copyright statement to Your modifications and may provide additional or different license terms and conditions for use, reproduction, or distribution of Your modifications, or for any such Derivative Works as a whole, provided Your use, reproduction, and distribution of the Work otherwise complies with the conditions stated in this License.
5. Submission of Contributions. Unless You explicitly state otherwise, any Contribution intentionally submitted for inclusion in the Work by You to the Licensor shall be under the terms and conditions of this License, without any additional terms or conditions. Notwithstanding the above, nothing herein shall supersede or modify the terms of any separate license agreement you may have executed with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade names, trademarks, service marks, or product names of the Licensor, except as required for reasonable and customary use in describing the origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or agreed to in writing, Licensor provides the Work (and each Contributor provides its Contributions) on an "AS IS" BASIS, WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied, including, without limitation, any warranties or conditions of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A PARTICULAR PURPOSE. You are solely responsible for determining the appropriateness of using or redistributing the Work and assume any risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory, whether in tort (including negligence), contract, or otherwise, unless required by applicable law (such as deliberate and grossly negligent acts) or agreed to in writing, shall any Contributor be liable to You for damages, including any direct, indirect, special, incidental, or consequential damages of any character arising as a result of this License or out of the use or inability to use the Work (including but not limited to damages for loss of goodwill, work stoppage, computer failure or malfunction, or any and all other commercial damages or losses), even if such Contributor has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing the Work or Derivative Works thereof, You may choose to offer, and charge a fee for, acceptance of support, warranty, indemnity, or other liability obligations and/or rights consistent with this License. However, in accepting such obligations, You may act only on Your own behalf and on Your sole responsibility, not on behalf of any other Contributor, and only if You agree to indemnify, defend, and hold each Contributor harmless for any liability incurred by, or claims asserted against, such Contributor by reason of your accepting any such warranty or additional liability.

END OF TERMS AND CONDITIONS

APPENDIX: How to apply the Apache License to your work

To apply the Apache License to your work, attach the following boilerplate notice, with the fields enclosed by brackets "[]" replaced with your own identifying information. (Don't include the brackets!) The text should be enclosed in the appropriate comment syntax for the file format. We also recommend that a file or class name and description of purpose be included on the same "printed page" as the copyright notice for easier identification within third-party archives.

WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or implied.
See the License for the specific language governing permissions and
limitations under the License.

TERMS AND CONDITIONS FOR USE, REPRODUCTION, AND DISTRIBUTION

1. Definitions.

"License" shall mean the terms and conditions for use, reproduction,
and distribution as defined by Sections 1 through 9 of this document.

"Licensor" shall mean the copyright owner or entity authorized by
the copyright owner that is granting the License.

"Legal Entity" shall mean the union of the acting entity and all
other entities that control, are controlled by, or are under common
control with that entity. For the purposes of this definition,
"control" means (i) the power, direct or indirect, to cause the
direction or management of such entity, whether by contract or
otherwise, or (ii) ownership of fifty percent (50%) or more of the
outstanding shares, or (iii) beneficial ownership of such entity.

"You" (or "Your") shall mean an individual or Legal Entity
exercising permissions granted by this License.

"Source" form shall mean the preferred form for making modifications,
including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain

separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   copyright license to reproduce, prepare Derivative Works of,
   publicly display, publicly perform, sublicense, and distribute the
   Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   (except as stated in this section) patent license to make, have made,
   use, offer to sell, sell, import, and otherwise transfer the Work,
   where such license applies only to those patent claims licensable
   by such Contributor that are necessarily infringed by their
   Contribution(s) alone or by combination of their Contribution(s)
   with the Work to which such Contribution(s) was submitted. If You
   institute patent litigation against any entity (including a
   cross-claim or counterclaim in a lawsuit) alleging that the Work
   or a Contribution incorporated within the Work constitutes direct
   or contributory patent infringement, then any patent licenses
   granted to You under this License for that Work shall terminate
   as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
   Work or Derivative Works thereof in any medium, with or without
   modifications, and in Source or Object form, provided that You
   meet the following conditions:

(a) You must give any other recipients of the Work or
    Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
    stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
    that You distribute, all copyright, patent, trademark, and
    attribution notices from the Source form of the Work,
    excluding those notices that do not pertain to any part of
    the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
    distribution, then any Derivative Works that You distribute must
    include a readable copy of the attribution notices contained
    within such NOTICE file, excluding those notices that do not
    pertain to any part of the Derivative Works, in at least one
    of the following places: within a NOTICE text file distributed
    as part of the Derivative Works; within the Source form or
    documentation, if provided along with the Derivative Works; or,
    within a display generated by the Derivative Works, if and
    wherever such third-party notices normally appear. The contents
    of the NOTICE file are for informational purposes only and
    do not modify the License. You may add Your own attribution
    notices within Derivative Works that You distribute, alongside
    or as an addendum to the NOTICE text from the Work, provided
    that such additional attribution notices cannot be construed
    as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify
   the terms of any separate license agreement you may have executed
   with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
   names, trademarks, service marks, or product names of the Licensor,
   except as required for reasonable and customary use in describing the

origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or
   agreed to in writing, Licensor provides the Work (and each
   Contributor provides its Contributions) on an "AS IS" BASIS,
   WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
   implied, including, without limitation, any warranties or conditions
   of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
   PARTICULAR PURPOSE. You are solely responsible for determining the
   appropriateness of using or redistributing the Work and assume any
   risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
   whether in tort (including negligence), contract, or otherwise,
   unless required by applicable law (such as deliberate and grossly
   negligent acts) or agreed to in writing, shall any Contributor be
   liable to You for damages, including any direct, indirect, special,
   incidental, or consequential damages of any character arising as a
   result of this License or out of the use or inability to use the
   Work (including but not limited to damages for loss of goodwill,
   work stoppage, computer failure or malfunction, or any and all
   other commercial damages or losses), even if such Contributor
   has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
   the Work or Derivative Works thereof, You may choose to offer,
   and charge a fee for, acceptance of support, warranty, indemnity,
   or other liability obligations and/or rights consistent with this
   License. However, in accepting such obligations, You may act only
   on Your own behalf and on Your sole responsibility, not on behalf
   of any other Contributor, and only if You agree to indemnify,
   defend, and hold each Contributor harmless for any liability
   incurred by, or claims asserted against, such Contributor by reason
   of your accepting any such warranty or additional liability.

including but not limited to software source code, documentation
source, and configuration files.

"Object" form shall mean any form resulting from mechanical
transformation or translation of a Source form, including but
not limited to compiled object code, generated documentation,
and conversions to other media types.

"Work" shall mean the work of authorship, whether in Source or
Object form, made available under the License, as indicated by a
copyright notice that is included in or attached to the work
(an example is provided in the Appendix below).

"Derivative Works" shall mean any work, whether in Source or Object
form, that is based on (or derived from) the Work and for which the
editorial revisions, annotations, elaborations, or other modifications
represent, as a whole, an original work of authorship. For the purposes
of this License, Derivative Works shall not include works that remain
separable from, or merely link (or bind by name) to the interfaces of,
the Work and Derivative Works thereof.

"Contribution" shall mean any work of authorship, including
the original version of the Work and any modifications or additions
to that Work or Derivative Works thereof, that is intentionally
submitted to Licensor for inclusion in the Work by the copyright owner
or by an individual or Legal Entity authorized to submit on behalf of
the copyright owner. For the purposes of this definition, "submitted"
means any form of electronic, verbal, or written communication sent
to the Licensor or its representatives, including but not limited to
communication on electronic mailing lists, source code control systems,
and issue tracking systems that are managed by, or on behalf of, the
Licensor for the purpose of discussing and improving the Work, but
excluding communication that is conspicuously marked or otherwise
designated in writing by the copyright owner as "Not a Contribution."

"Contributor" shall mean Licensor and any individual or Legal Entity
on behalf of whom a Contribution has been received by Licensor and
subsequently incorporated within the Work.

2. Grant of Copyright License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   copyright license to reproduce, prepare Derivative Works of,
   publicly display, publicly perform, sublicense, and distribute the
   Work and such Derivative Works in Source or Object form.

3. Grant of Patent License. Subject to the terms and conditions of
   this License, each Contributor hereby grants to You a perpetual,
   worldwide, non-exclusive, no-charge, royalty-free, irrevocable
   (except as stated in this section) patent license to make, have made,
   use, offer to sell, sell, import, and otherwise transfer the Work,
   where such license applies only to those patent claims licensable
   by such Contributor that are necessarily infringed by their
   Contribution(s) alone or by combination of their Contribution(s)
   with the Work to which such Contribution(s) was submitted. If You
   institute patent litigation against any entity (including a
   cross-claim or counterclaim in a lawsuit) alleging that the Work
   or a Contribution incorporated within the Work constitutes direct
   or contributory patent infringement, then any patent licenses
   granted to You under this License for that Work shall terminate
   as of the date such litigation is filed.

4. Redistribution. You may reproduce and distribute copies of the
   Work or Derivative Works thereof in any medium, with or without
   modifications, and in Source or Object form, provided that You
   meet the following conditions:

   (a) You must give any other recipients of the Work or
       Derivative Works a copy of this License; and

(b) You must cause any modified files to carry prominent notices
    stating that You changed the files; and

(c) You must retain, in the Source form of any Derivative Works
    that You distribute, all copyright, patent, trademark, and
    attribution notices from the Source form of the Work,
    excluding those notices that do not pertain to any part of
    the Derivative Works; and

(d) If the Work includes a "NOTICE" text file as part of its
    distribution, then any Derivative Works that You distribute must
    include a readable copy of the attribution notices contained
    within such NOTICE file, excluding those notices that do not
    pertain to any part of the Derivative Works, in at least one
    of the following places: within a NOTICE text file distributed
    as part of the Derivative Works; within the Source form or
    documentation, if provided along with the Derivative Works; or,
    within a display generated by the Derivative Works, if and
    wherever such third-party notices normally appear. The contents
    of the NOTICE file are for informational purposes only and
    do not modify the License. You may add Your own attribution
    notices within Derivative Works that You distribute, alongside
    or as an addendum to the NOTICE text from the Work, provided
    that such additional attribution notices cannot be construed
    as modifying the License.

You may add Your own copyright statement to Your modifications and
may provide additional or different license terms and conditions
for use, reproduction, or distribution of Your modifications, or
for any such Derivative Works as a whole, provided Your use,
reproduction, and distribution of the Work otherwise complies with
the conditions stated in this License.

5. Submission of Contributions. Unless You explicitly state otherwise,
   any Contribution intentionally submitted for inclusion in the Work
   by You to the Licensor shall be under the terms and conditions of
   this License, without any additional terms or conditions.
   Notwithstanding the above, nothing herein shall supersede or modify
   the terms of any separate license agreement you may have executed
   with Licensor regarding such Contributions.

6. Trademarks. This License does not grant permission to use the trade
   names, trademarks, service marks, or product names of the Licensor,
   except as required for reasonable and customary use in describing the
   origin of the Work and reproducing the content of the NOTICE file.

7. Disclaimer of Warranty. Unless required by applicable law or

agreed to in writing, Licensor provides the Work (and each
Contributor provides its Contributions) on an "AS IS" BASIS,
WITHOUT WARRANTIES OR CONDITIONS OF ANY KIND, either express or
implied, including, without limitation, any warranties or conditions
of TITLE, NON-INFRINGEMENT, MERCHANTABILITY, or FITNESS FOR A
PARTICULAR PURPOSE. You are solely responsible for determining the
appropriateness of using or redistributing the Work and assume any
risks associated with Your exercise of permissions under this License.

8. Limitation of Liability. In no event and under no legal theory,
whether in tort (including negligence), contract, or otherwise,
unless required by applicable law (such as deliberate and grossly
negligent acts) or agreed to in writing, shall any Contributor be
liable to You for damages, including any direct, indirect, special,
incidental, or consequential damages of any character arising as a
result of this License or out of the use or inability to use the
Work (including but not limited to damages for loss of goodwill,
work stoppage, computer failure or malfunction, or any and all
other commercial damages or losses), even if such Contributor
has been advised of the possibility of such damages.

9. Accepting Warranty or Additional Liability. While redistributing
the Work or Derivative Works thereof, You may choose to offer,
and charge a fee for, acceptance of support, warranty, indemnity,
or other liability obligations and/or rights consistent with this
License. However, in accepting such obligations, You may act only
on Your own behalf and on Your sole responsibility, not on behalf
of any other Contributor, and only if You agree to indemnify,
defend, and hold each Contributor harmless for any liability
incurred by, or claims asserted against, such Contributor by reason
of your accepting any such warranty or additional liability.
