To Whom It May Concern:

Acumen Security verified that the following software faithfully embeds a FIPS 140-2 validated cryptographic module,

- Cisco Catalyst 9800-CL 16.10 wireless controller

The software is known to operate on the following platform(s):

- Cisco UCS running VMware ESXi
- Cisco UCS running KVM

During the course of the review, Acumen Security confirmed that the following FIPS 140-2 cryptographic module is incorporated into the product,

- CiscoSSL FIPS Object Module Version: 6.2, FIPS 140-2 certificate #2984
- CiscoSSL FIPS Object Module Version: 7.0, FIPS 140-2 certificate #3341

Acumen Security confirmed that the following features leverage the embedded cryptographic module to provide cryptographic services for **TLS** and **DTLS**:

- Session establishment supporting each service,
- All underlying cryptographic algorithms supporting each services' key derivation functions,
- Hashing for each service,
- Diffie Hellman and Asymmetric Encryption for each service.

Additionally, Acumen Security confirmed that the above referenced cryptographic module is initialized in a manner consistent with the instructions provided in the non-proprietary Security Policy.

Details of the verification may be obtained from Cisco Systems, Inc. at the request of interested parties. This letter represents the independent opinions of Acumen Security and does not imply endorsement of the product by the CMVP or any other parties.

Sincerely,

A handwritten signature in black ink, appearing to read 'Ashit Vora', with a horizontal line underneath.
