

CCDE Certification: Your license to design

As an IT professional, you know you're destined to be leader. CCDE can help you separate yourself from the pack and show the world you've got what it takes:

- The capability to act as a Sr Network Architect
- Knowledge of design solutions at the infrastructure level
- The skill set to define business needs, budget, and operational constraints into the design of a converged solution

Your road to success is clear, but finding a certification program to support Sr level engineers and architects isn't easy. You need something that lets you demonstrate:

- More than just technical acumen
- A business centric approach to design and architecture
- Your real-world leadership skills in tech and business

CCDE certification helps you pull ahead of the pack:

- Differentiates you as an elite network designer
- Demonstrates your technology and business chops
- Positions you as a technical visionary

CCDE was recently revved up to meet the needs of today's IT architects:

- Three core modules and one module of expertise that you choose from: Large-Scale Networks, On-Prem and Cloud Services, and Workforce Mobility
- Improved relevancy to Senior Architect roles
- Greater depth of detail in the technologies covered

With a CCDE 3.0 certification your road to opportunity is endless:

- Recertify your CCIE certification by passing the CCDE written exam
- Combine your technical expertise and design skills to position your organization for digital transformation
- Validate your big-picture design skills and take the lead in building a network that achieves business goals and technical needs
