PIX/ASA 7.x Easy VPN mit ASA 5500 als Server und PIX 506E als Client (NEM) - Konfigurationsbeispiel

Inhalt

Einführung

Dieses Dokument enthält eine Beispielkonfiguration für IPsec zwischen einer Cisco Adaptive Security Appliance (ASA) 5520 und einem Cisco PIX 506E mit EasyVPN. Die ASA 5520 fungiert als EasyVPN-Server, und das PIX 506E fungiert als EasyVPN-Remote-Client. Bei dieser Konfiguration wird ein ASA 5520-Gerät verwendet, auf dem die ASA-Software Version 7.0(4) ausgeführt wird. Sie können diese Konfiguration jedoch auch für PIX-Firewall-Geräte verwenden, auf denen das PIX-Betriebssystem Version 7.0 und höher ausgeführt wird.

Weitere Informationen zu einem ähnlichen Szenario, in dem der Cisco 871 Router als Easy VPN-Remote fungiert, finden Sie unter PIX/ASA 7.x Easy VPN mit ASA 5500 als Server und Cisco 871 als Easy VPN Remote-Konfigurationsbeispiel.

Weitere Informationen zu einem ähnlichen Szenario, in dem der Cisco VPN 3000 Concentrator als Easy VPN-Server fungiert, finden Sie im VPN Hardware Client auf einer Sicherheitslösung der Serie PIX 501/506 mit VPN 3000 Concentrator.

Unter PIX 501/506 Easy VPN Remote zu einem IOS® Router im Netzwerkerweiterungsmodus mit erweiterter Authentifizierungskonfiguration (Konfigurationsbeispiel) finden Sie weitere Informationen zu einem ähnlichen Szenario, in dem der Cisco IOS Router als Easy VPN-Server fungiert.

Weitere Informationen finden Sie unter PIX-to-PIX 6.x: Easy VPN (NEM)-Konfigurationsbeispiel für weitere Informationen zu einem ähnlichen Szenario, in dem das PIX 506 6.x als Easy VPN-Server fungiert.

Voraussetzungen

Anforderungen

Stellen Sie sicher, dass Sie diese Anforderungen erfüllen, bevor Sie versuchen, diese Konfiguration durchzuführen:

- Vergewissern Sie sich, dass Sie über grundlegende Kenntnisse der Betriebssysteme IPsec und ASA/PIX 6.x und 7.x verfügen.

Verwendete Komponenten

Die Informationen in diesem Dokument basierend auf folgenden Software- und Hardware-Versionen:

- Der Remote-Hardware-Client von EasyVPN ist ein PIX 506E, der Version 6.3(5) ausführt.
- Der EasyVPN-Server ist eine ASA 5520, die Version 7.0(4) ausführt.

Hinweis: Auf der ASA 5500-Serie, Version 7.x, wird die gleiche Software ausgeführt wie in PIX, Version 7.x. Die Konfigurationen in diesem Dokument gelten für beide Produktlinien.

Die Informationen in diesem Dokument beziehen sich auf Geräte in einer speziell eingerichteten Testumgebung. Alle Geräte, die in diesem Dokument benutzt wurden, begannen mit einer gelöschten (Nichterfüllungs) Konfiguration. Wenn Ihr Netz Live ist, überprüfen Sie, ob Sie die mögliche Auswirkung jedes möglichen Befehls verstehen.

Konventionen

Weitere Informationen zu Dokumentkonventionen finden Sie in den Cisco Technical Tips Conventions (Technische Tipps zu Konventionen von Cisco).

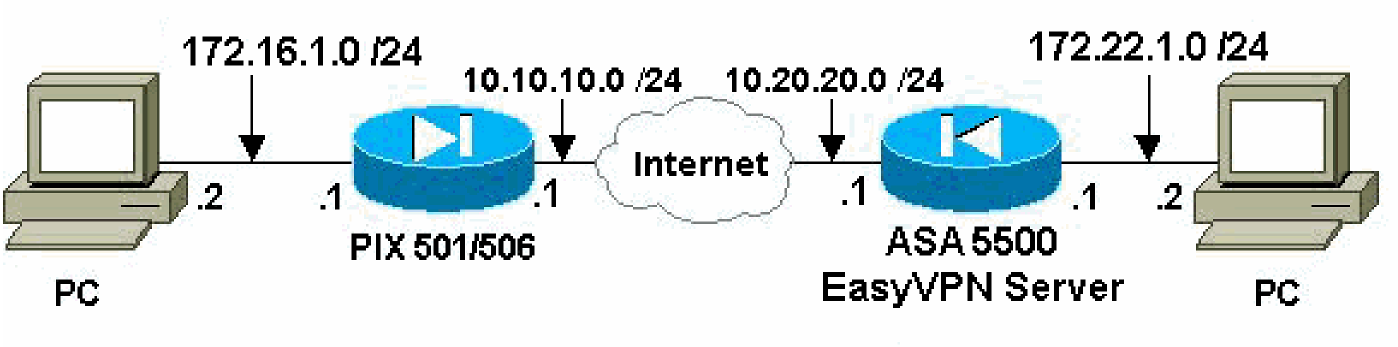
Konfiguration

In diesem Abschnitt erfahren Sie, wie Sie die in diesem Dokument beschriebenen Funktionen konfigurieren können.

Hinweis: Verwenden Sie das Command Lookup Tool (nur registrierte Kunden), um weitere Informationen zu den in diesem Abschnitt verwendeten Befehlen zu erhalten.

Netzwerkdiagramm

In diesem Dokument wird die folgende Netzwerkeinrichtung verwendet:



Konfigurationen

In diesem Dokument werden folgende Konfigurationen verwendet:

- Easy VPN-Server (ASA 5520)
- Easy VPN Remote Hardware Client

Easy VPN-Server (ASA 5520)

Fehlerbehebung

In diesem Abschnitt finden Sie Informationen zur Behebung von Fehlern in Ihrer Konfiguration.

Wenn Sie den EasyVPN-Remote-Hardware-Client und den EasyVPN-Server wie in diesem Dokument beschrieben eingerichtet haben und weiterhin Probleme auftreten, sammeln Sie die **Debug-**Ausgabe jedes PIX und die Ausgabe der Befehle **show** zur Analyse durch den technischen Support von Cisco. Weitere Informationen finden Sie unter Fehlerbehebung bei PIX zur Weiterleitung des Datenverkehrs an einen etablierten IPSec-Tunnel oder IP Security Troubleshooting - Understanding and Using debug Commands. Aktivieren Sie IPsec-Debugging auf dem PIX.

In diesen Abschnitten werden PIX-**Debug-**Befehle und Beispielausgaben angezeigt.

- EasyVPN-Serverbefehle
- Befehle des EasyVPN-Remote-Hardware-Client

Das Output Interpreter Tool (nur registrierte Kunden) (OIT) unterstützt bestimmte **show**-Befehle. Verwenden Sie das OIT, um eine Analyse der **Ausgabe des** Befehls **show anzuzeigen**.

Hinweis: Beachten Sie vor der Verwendung von **Debug-**Befehlen die Informationen zu Debug-Befehlen.

EasyVPN-Serverbefehle

- **debug crypto ipsec**: Zeigt die IPsec-Verhandlungen von Phase 2 an.
- **debug crypto isakmp**: Zeigt die ISAKMP-Verhandlungen von Phase 1 an.

Beispielausgaben werden hier angezeigt.

```
ASA5520-704#debug crypto ipsec 2
ASA5520-704#debug crypto isakmp 2
ASA5520-704# Sep 15 23:02:42 [IKEv1]: IP = 10.10.10.1, Connection landed
