- Activate specific use cases

Benefits

- Grow your business in addition to securing it by using Cisco® implementation and integration services to get up and running faster and error-free.
- Achieve comprehensive visibility across your network and cloud with continuous tuning, host group automation, and SIEM integration for improved threat detection.
- Greatly reduce business risk by leveraging knowledge transfer from a highly experienced team.
- Increase the efficiency of network forensics.
- Realize your business and security outcomes faster.

Achieve business value faster

The security landscape has changed. Threats are more pervasive than ever, and the effects of a breach can cripple an entire network including your cloud environment, leaving highly sensitive data and systems exposed.

In this new environment, an outdated security solution can't provide the scale or insight required, nor can it flex and adjust for the threats that will come tomorrow.

Cisco Secure Analytics offers end-to-end visibility you need to monitor your entire infrastructure and detect threats before damage is done.

And with [Cisco Secure Analytics Services](#), you will receive the guidance, support, and training needed to maximize the value of the Cisco Secure Network and/or Cloud Analytics solutions at each phase of your lifecycle journey.

Providing successful customer outcomes

Cisco Secure Analytics (includes network and/or cloud solutions) provides comprehensive network visibility. With Cisco Customer Experience (CX), you get expert help to accelerate visibility and other key outcomes strongly aligned with your unique business requirements.

Get it done for you, the right way, the first time. Our services experts also enable future-proofing to optimize your investments and facilitate enduring network and cloud security.

Cisco Secure Analytics Advanced Services

Securing and protecting your network from advanced threats are not easy tasks. To get optimum support, performance, and business value from Cisco Security solutions, you need to make sure the technology is deployed, configured, and tuned properly. The mission of Cisco Advanced Services is to get you up and running faster, so you can see a quicker return on investment and can focus on growing your business, rather than just securing it.

We offer proactive and ongoing engagement—from initial planning, installation, and integration to maintenance and troubleshooting issues—to help you achieve the most value from your purchase. You can take advantage of expert plan, design, implementation, and integration/automation services. This includes project management, site readiness and solution requirements development, implementation and test plan development, implementation and test execution, as well as proxy integrations, connecting security information and event management (SIEM), and automating host groups.

Our Network Forensics Automation Service extends the value of Cisco Secure Network Analytics by helping enable Threat Hunting, Incident response, Audit and Compliance organizations scale, accelerate tasks, and deliver better outcomes. Cisco security service experts help you quickly define and implement automation use cases that will deliver the maximum value for your unique workflows.

With Cisco Secure Analytics Plan, Design, and Implement Services, you will benefit from our expertise, which spans the IT lifecycle at every stage in order to help reduce risk and accelerate outcomes. In addition, we provide a knowledge transfer to help you better deploy and manage your solution. You will get expert help identifying business risks faster, ultimately providing a more rapid ROI by getting full use of the solution quicker.
