

Cisco Multimedia Line Equalizer/Reverse Conditioner 1 GHz - 65/86 MHz Split

The Cisco® Multimedia Line Equalizer/Reverse Conditioner (LEQ/RC), shown in Figure 1, improves network performance on both the forward and reverse paths in a coaxial transmission system.

In the forward path, the fixed forward equalizer offsets undesirable down-tilt associated with cumulative cable and passive losses, allowing tap port RF levels to be maintained within desired design limits, even at taps located near the ends of lines.

In the reverse path, plug-in attenuator allows RF levels to be conditioned for optimal performance of critical reverse path services. By selectively adding reverse attenuation at Cisco Multimedia LEQ/RC locations, the range of RF levels transmitted from closed-loop customer premises equipment in a given service area can be narrowed considerably.

With greater percentages of devices, such as high-speed data and telephony modems, transmitting in the upper end of their RF transmit ranges, improvements in carrier-to-ingress and carrier-to-noise performance can be realized.

Features

- Fixed 9 dB or 11 dB forward equalizers
- Plug-in attenuator location for reverse-path optimization
- Connection beam non-interruptible AC and RF bypass (Figure 2) that optimizes network availability during maintenance periods
- Equalizer in and out bypass, which allows reverse conditioning deployment network locations where forward equalization is not desired

- 15A current passing capability, which allows placement in all portions of the network
- 6 kV surge protection
- Circuit contained in faceplate, compatible with existing Cisco line equalizer products
- Rugged, polymer-coated housing that provides reliable performance in the most challenging environments; additional labels provided in packaging mark the tap containing a DC/EQ module

Note:

1. Chrominance and luminance at 3.58 MHz above the video carrier
2. Propagation delay in 2 MHz bandwidth
3. Unless otherwise noted, all the specifications in Table 1 through Table 7 reflect typical station performance at stated reference levels in the recommended operating configurations. Specifications are based on measurements made in accordance with SCTE/ANSI standards (where applicable), using standard frequency assignments.

Ordering Information

To place an order, visit the [Cisco Ordering Home Page](#) and refer to Table 8 and Table 9, which list the part numbers for the Cisco Multimedia LEQ/RC.
