[Is the TMS API available in all TMS versions?](#)

## Introduction

This article relates to Cisco TelePresence Management Suite.

### **Q. Is the TMS API available in all TMS versions?**

**A.** No, the API is available from TMS version 9 and later.

It should be noted that in later versions, more elements and features have been added. For example, the TMS 9.x API is more limited than the TMS 12.x API. Consult the API documentation to see these differences.

The documentation can be found at [Cisco TelePresence Management Suite Extension Booking API](#).
