[Introduction](#)

This document illustrates how to change the title that appears on the WebVPN login and portal pages. With the use of customizations that can be edited with the web-based Customization Editor, the ASA provides a means to change nearly everything about the look and feel of the WebVPN portal. This configuration is performed with ASDM 6.0(2) on an ASA that runs Software Version 8.0(2).

For more information on customizing WebVPN pages in ASA version 7.2 using CLI, refer to [Customizing WebVPN Pages](#).

For more information on customizing Clientless SSL VPN (WebVPN) pages in ASA version 8.0 using CLI, refer to [Customizing Clientless SSL VPN Pages](#).

[Prerequisites](#)

This document is part of a set of documents about the configuration of WebVPN on the ASA.

[Change the WebVPN Title](#)

In this section, you are presented with the information to change the title that appears on the WebVPN login and portal pages.

[Change the Title](#)

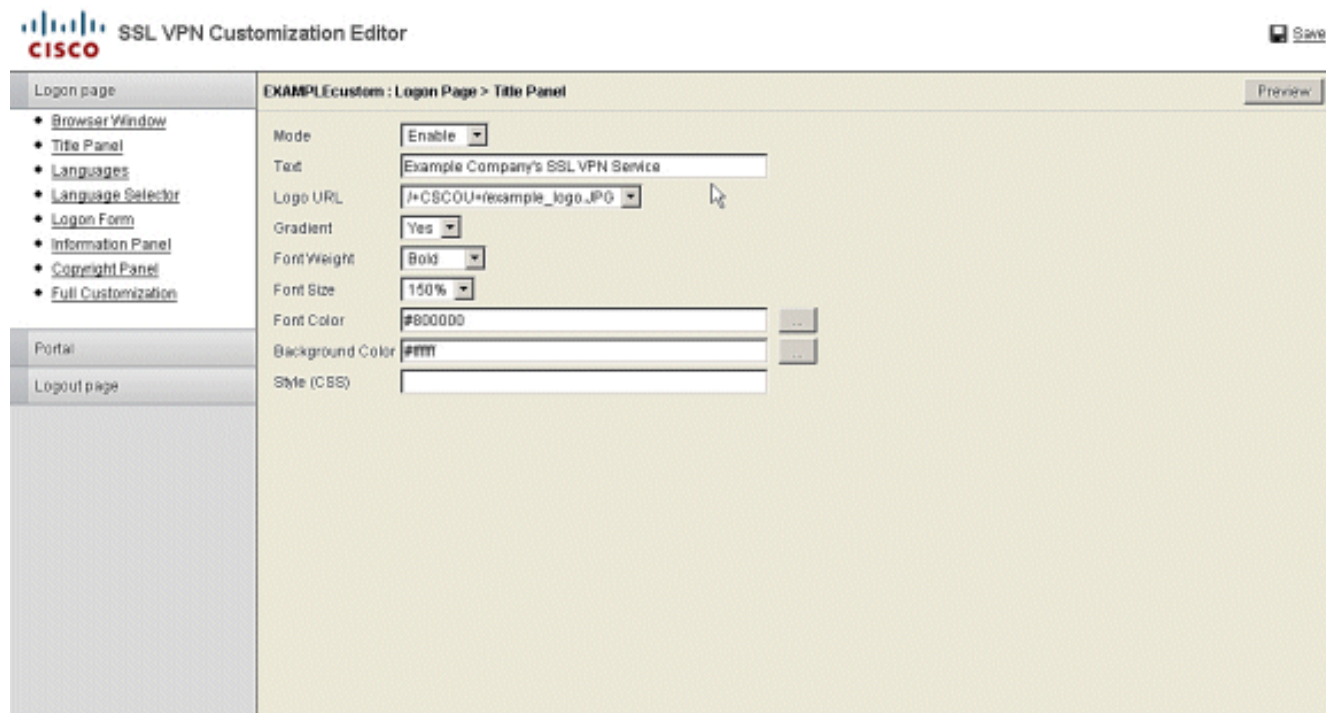

Complete these steps to upload and configure the new title:

1. Navigate to **Configuration > Remote Access VPN > Clientless SSL VPN Access > Portal > Customization**.
2. Choose a customization to edit, or create a new one. **Note:** It is not recommended that you make substantial changes to the Default Customization.
3. In order to change the title of the browser window, replace the text in the **Title** field under

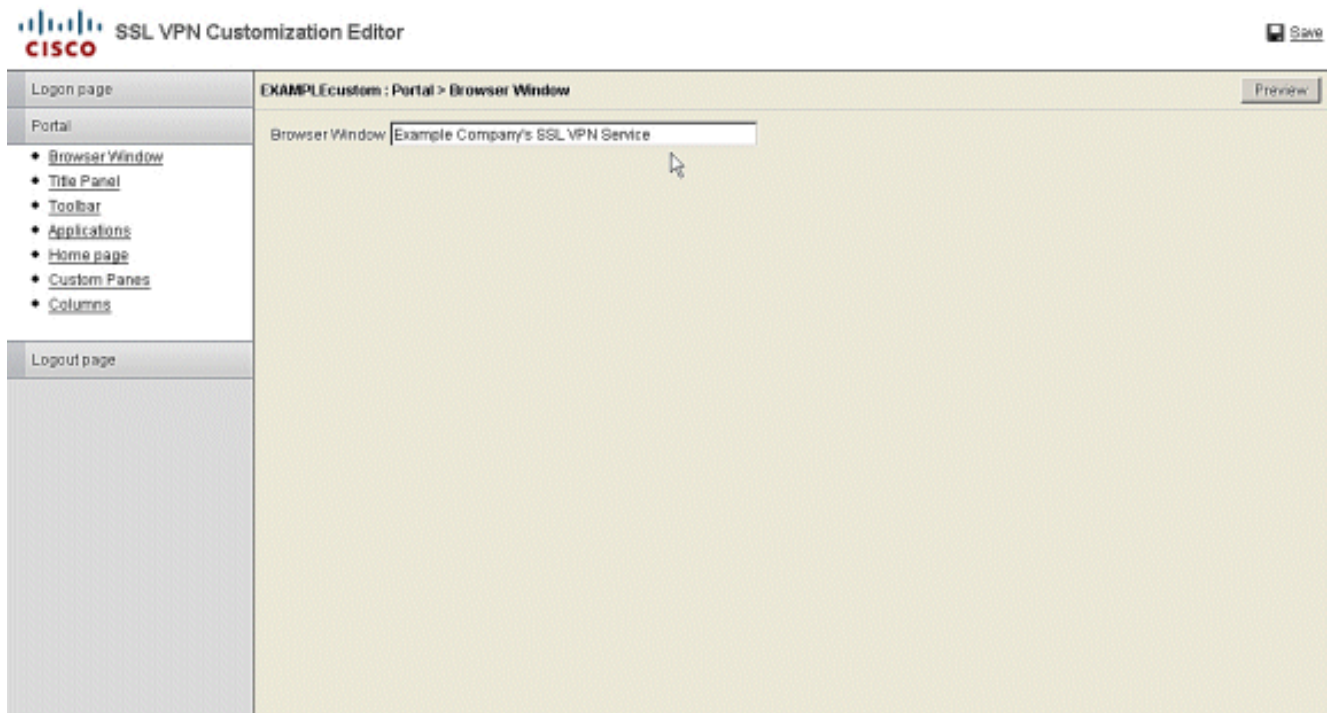

Logon Page > Browser Window (the default view).

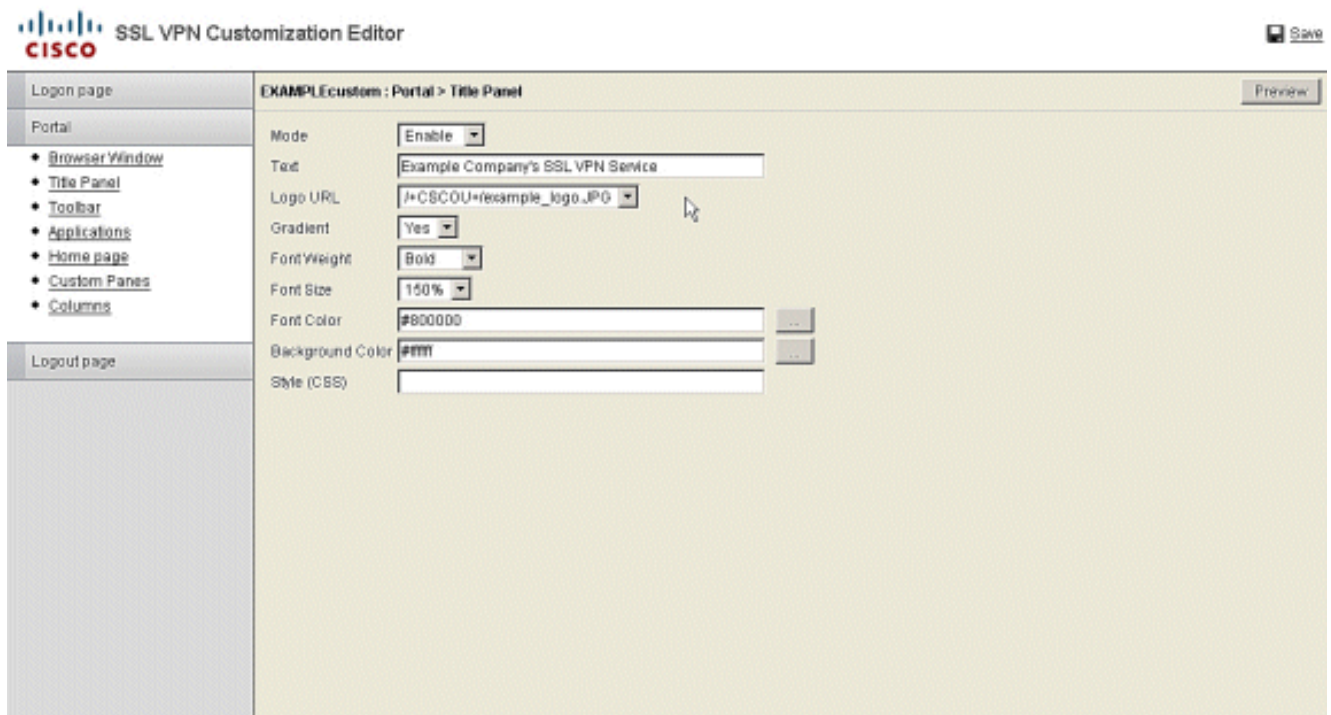

4. In order to change the title that appears on the page itself before login, navigate to **Title Panel > Logon Page**, and replace the text in the **Text** field.

5. In order to change the title of the browser window after login, navigate to **Portal > Browser Window**, and enter the text in the **Browser Window** field.

6. In order to change the title that appears on the page itself after login, navigate to **Portal > Title Panel** , and replace the text in the **Text** field.

7. Click **Save** in the upper right corner.

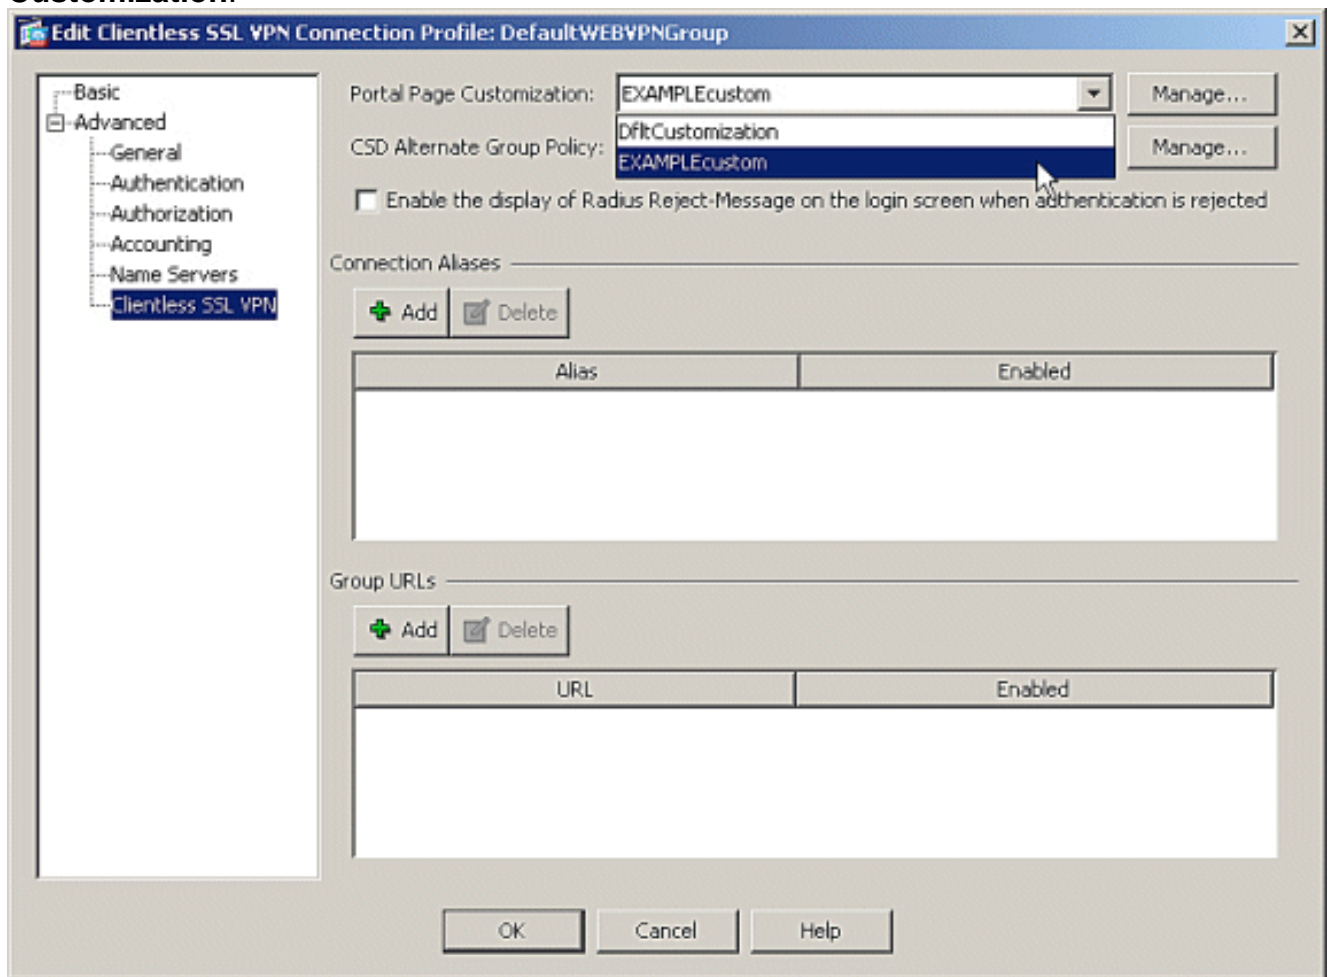

[Apply the Customization](#)

It is important to make sure that the customization that you have configured is applied to the correct connection profile (tunnel group) in order for the new title to appear on the login and portal pages. Unless users connect to the ASA with a Group-URL, **it is necessary to apply the customization to the DefaultWEBVPNGroup for the new title to appear before login**. This table shows where the customization must be applied for a given configuration. The steps after the table show how to configure the customization in the connection profile (tunnel group).

	User login method		
	Login w/out Group Selection (use default)	Login w/ Group Selection	Group-URL
Customization visible on Login Page	DefaultWEBVPNGroup	DefaultWEBVPNGroup	User's Connection Profile (tunnel group)
Customization visible on Portal Page	DefaultWEBVPNGroup	User's Connection Profile (tunnel group)	User's Connection Profile (tunnel group)

Complete these steps to configure the customization in the connection profile (tunnel group):

1. Navigate to **Configuration > Remote Access VPN > Clientless SSL VPN Access > Connection Profiles**.
2. Choose the DefaultWEBVPNGroup (or your desired group), and click **Edit**.
3. Choose **Advanced > Clientless SSL VPN** in the left pane.
4. Verify that your customization is chosen as the **Portal Page Customization**.

Verify

Navigate to the **WebVPN** login page of the ASA to verify that the title has been changed and the customization is properly applied.

[Troubleshoot](#)

If the new title does not appear, be sure that the customization is applied to the correct connection profile (tunnel group). See [Apply the Customization](#) for more information.
