

Configuring GRE over IPSec Between a Cisco IOS Router and a VPN 5000 Concentrator Using Static Routing

Document ID: 3969

Cisco has announced the end of sales for the Cisco VPN 5000 Series Concentrators. For more information, please see the End-of-Sales Announcement.

Related Information

Introduction

This document describes how to configure generic routing encapsulation (GRE) over IPSec between a Cisco VPN 5000 Series Concentrator and a Cisco router running Cisco IOS® software. The GRE-over-IPSec feature is introduced in the VPN 5000 Concentrator 6.0(19) software release.

In this example, static routing is used to route packets across the tunnel.

Prerequisites

Requirements

There are no specific requirements for this document.

Components Used

The information in this document is based on these software and hardware versions:

- Cisco IOS Software Release 12.2(3)
- Cisco VPN 5000 Concentrator software version 6.0(19)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

For more information on document conventions, refer to the Cisco Technical Tips Conventions.

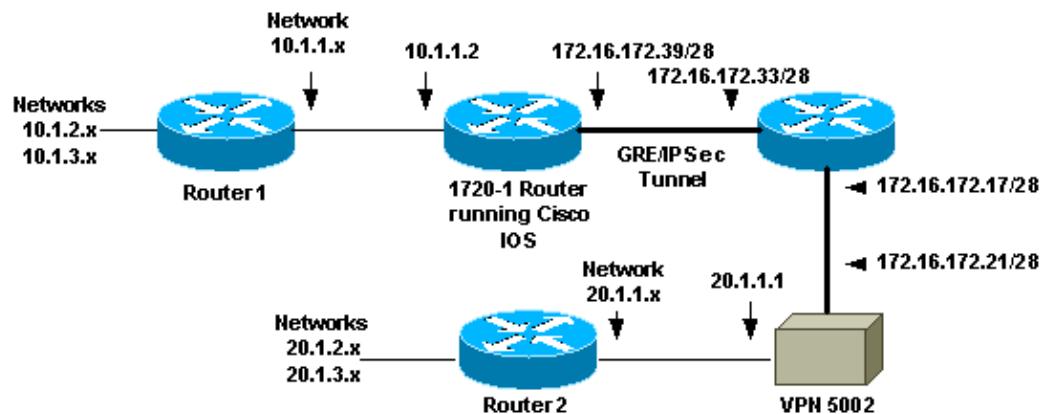

Configure

In this section, you are presented with the information to configure the features described in this document.

Note: To find additional information on the commands used in this document, use the Command Lookup Tool (registered customers only).

Network Diagram

This document uses the network setup shown in this diagram.

GRE over IPSec is configured between the 1720-1 router running Cisco IOS software and the VPN 5002 Concentrator. Behind the router and the VPN Concentrator, there are multiple networks that are advertised through Open Shortest Path First (OSPF). OSPF runs within the GRE tunnel between the router and the VPN Concentrator.

- These networks are behind the 1720-1 router.
 - ◆ 10.1.1.0/24
 - ◆ 10.1.2.0/24
 - ◆ 10.1.3.0/24
- These networks are behind the VPN 5002 Concentrator.
 - ◆ 20.1.1.0/24
 - ◆ 20.1.2.0/24
 - ◆ 20.1.3.0/24

Configurations

This document uses these configurations.

- 1720-1 Router

- VPN 5002 Concentrator

Note: With Cisco IOS Software Releases 12.2(13)T and later (higher numbered T-train codes, 12.3 and later codes), you must apply the configured IPSec crypto map to the physical interface only. You no longer have to apply the crypto map on the GRE tunnel interface. Having the crypto map on the physical and the tunnel interfaces when you use Cisco IOS Software Releases 12.2.(13)T and later should still work, but Cisco Systems recommends that you apply the crypto map on the physical interface only.

Verify

This section provides information you can use to confirm your configuration is working properly.

Certain **show** commands are supported by the Output Interpreter Tool (registered customers only) , which allows you to view an analysis of **show** command output.

- These commands can be run on the Cisco IOS router.
 - ◆ **show crypto isakmp sa** Shows all current Internet Security Association and Key Management Protocol (ISAKMP) security associations (SAs).
 - ◆ **show crypto ipsec sa** Shows all current IPSec SAs.
 - ◆ **show crypto engine connection active** Shows packet encryption/decryption counter for each IPSec SAs.
- You can run these commands on the VPN 5002 Concentrator.
 - ◆ **show system log buffer** Shows basic syslog information.
 - ◆ **vpn trace dump** Shows detailed information about VPN processes.

Troubleshoot

This section provides information you can use to troubleshoot your configuration.

Troubleshooting Commands

Note: Before issuing **debug** commands, please see Important Information on Debug Commands.

You can run these commands on the Cisco IOS router.

- **debug crypto isakmp** Shows detailed information about Internet Key Exchange (IKE) phase I (Main Mode) negotiation.
- **debug crypto ipsec** Shows detailed information about IKE phase II (Quick Mode) negotiation.
- **debug crypto engine** Debugs packet encryption/decryption and Diffie–Hellman (DH) process.

Sample debug Output

Sample debug output for the router and VPN Concentrator is shown here.

- Cisco IOS Router
- VPN 5002 Concentrator

Debugs on the Cisco IOS Router

Output of **debug crypto isakmp** and **debug crypto ipsec** commands on the router is shown here.

Misconfiguration of Tunnel Mode

The VPN 5000 Concentrator proposes transport mode by default when GRE over IPSec is used. When the Cisco IOS router is misconfigured for tunnel mode, then this errors occur.

Debug output on the Cisco IOS router is shown here.

```

2d21h: ISAKMP (0:23): Checking IPsec proposal 1
2d21h: ISAKMP: transform 1, ESP_DES
2d21h: ISAKMP: attributes in transform:
2d21h: ISAKMP: SA life type in seconds
2d21h: ISAKMP: SA life duration (VPI) of 0x0 0x1 0x51 0x80
2d21h: ISAKMP: SA life type in kilobytes
2d21h: ISAKMP: SA life duration (VPI) of 0x0 0x10 0x0 0x0
2d21h: ISAKMP: encaps is 2
2d21h: ISAKMP: authenticator is HMAC-MD5
2d21h: IPSEC(validate_proposal): invalid transform proposal flags -- 0x0

```

The log on the VPN 5002 Concentrator shows an entry similar to this output.

```

lan-lan-VPN0:1:[172.16.172.39]: received notify from partner --
notify: NO PROPOSAL CHOSEN

```
