New Features in Cisco Business Mobile App Version 1.4

Objective

The objective of this article is to go over the new features in the Cisco Business Mobile App version 1.4 and later.

Applicable Devices | Software Version

- Cisco Business Mobile App | 1.4

Introduction

In Cisco Business Mobile App version 1.4, there are several new features that add some new functionality to the app. This includes:

- The ability to delete a site inside of the app. Check out the article on **Site Deletion using Cisco Business Mobile App** to learn more.
- Configuration of individual ports on a switch. For more information, check out the article on **Switch Port Configuration using Cisco Business Mobile App**.
- Enhanced password error messages to support the new password requirements.
- Advanced wireless settings.
- Pending Device Deployment notification.

Enhanced Password Error Messages

In Cisco Business Mobile App version 1.3, more strict password requirements to support the new requirements of the CBS 3.2 switch firmware was added.

In firmware version 1.4, you can now see descriptions as to why a particular password might fail these password checks when configuring a site or when you change site credentials.
