

# Auto Surveillance VLAN in Catalyst 1200 and 1300 Switches

## Objective

The objective of this article is to go over the Auto Surveillance VLAN (ASV) feature in the Catalyst 1200/1300 switches and the steps to configure it.

## Applicable Devices | Software Version

â†‘ Catalyst 1200 | 4.0.0.91 ([Data Sheet](#))

â†‘ Catalyst 1300 | 4.0.0.91 ([Data Sheet](#))

## Introduction

Network communication between surveillance devices such as cameras and monitoring equipment should often be given higher priority and it is important that the various devices that comprise the surveillance infrastructure in the organization are reachable for each other. Normally, the network administrator ensures that all surveillance devices are connected to the same VLAN and to configure this VLAN and the interfaces on it to allow for this high priority traffic.

ASV automates aspects of this setup by detecting defined surveillance devices on the network, assigns them to a VLAN, and sets their traffic priority. The surveillance devices are defined by creating a list of OUIs and MAC addresses. Up to 32 sources for surveillance traffic can be defined in any combination of MAC and OUIs.

## Create an ASV VLAN

ASV can be enabled only on a static VLAN and the VLAN configured as an ASV VLAN cannot be deleted.

### Step 1

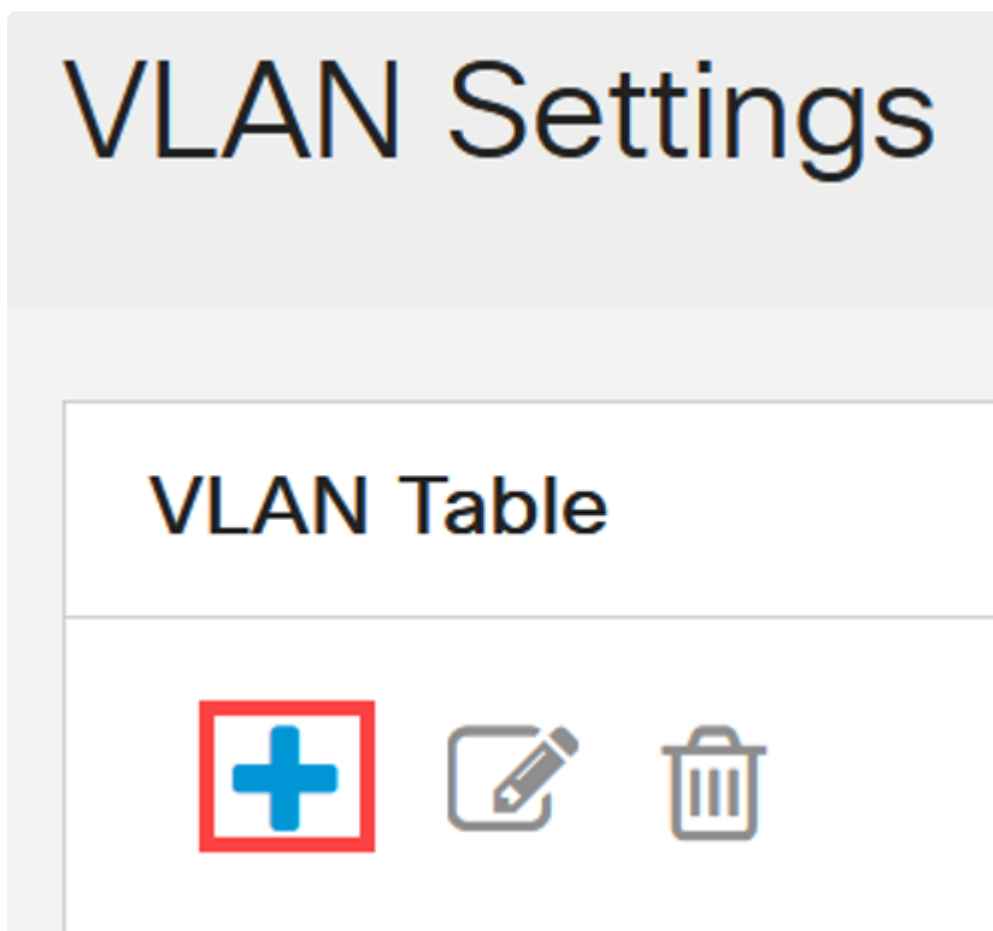

Login to the Catalyst switch and navigate to **VLAN Management > VLAN Settings**.

## ▼ VLAN Management

### VLAN Settings

#### Step 2

To add a VLAN, click on the **plus** symbol.

#### Step 3

Configure the *VLAN ID* and *VLAN Name* and click **Apply**. In this example, the VLAN ID is 5

and the VLAN Name is Auto Surveillance.

### Add VLAN x

VLAN

VLAN ID:  (Range: 2 - 4094) 1

VLAN Name:  (17/32 characters used) 2

VLAN Interface State:  Enable

Link Status SNMP Traps:  Enable

Range

VLAN Range:  -  (Range: 2 - 4094)

3

## Configure ASV Settings

### Step 1

To select the VLAN for ASV, navigate to **VLAN Management > Auto-Surveillance VLAN > ASV General Settings**.

▼ VLAN Management 1

VLAN Settings

Interface Settings

Port to VLAN

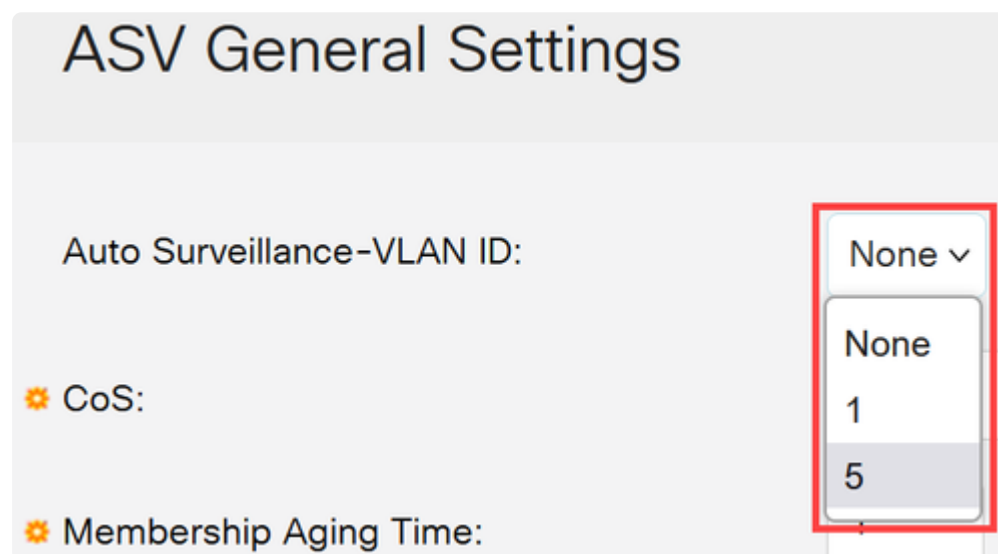

Port VLAN Membership

▶ Voice VLAN

▼ Auto-Surveillance VLAN 2

3 ASV General Settings

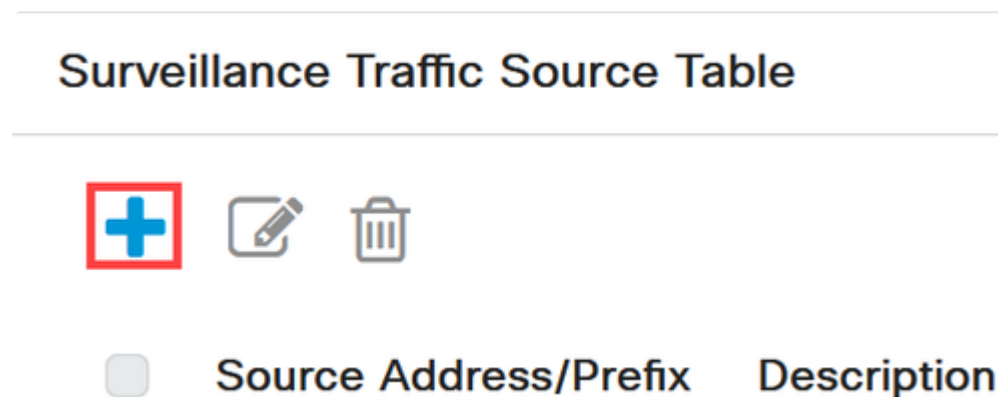

From the *Auto-Surveillance-VLAN ID* drop-down menu, select the VLAN ID for ASV.

The screenshot shows the 'ASV General Settings' interface. The 'Auto Surveillance-VLAN ID' field is highlighted with a red box, and its dropdown menu is open, showing options: 'None', '1', and '5'. The '5' option is selected and highlighted. Below this field are 'CoS' and 'Membership Aging Time' settings, each with a gear icon.

### Step 3

Under the *Surveillance Traffic Source Table*, click the **plus icon**.

The screenshot shows the 'Surveillance Traffic Source Table' interface. Below the title bar, there are three icons: a plus sign (+) in a red square, a pencil icon, and a trash can icon. Below the icons, there is a table header with a radio button, 'Source Address/Prefix', and 'Description'.

### Step 4

To add the surveillance traffic source, select *Source Type* as either *OUI Prefix* or *MAC Address*. Enter the *Source* in the field provided. Optionally, you can add a *Description* and click **Apply**.

## Add Surveillance Traffic Source

x

Source Type:

- OUI Prefix **1**  
 MAC Address

Source:

(3 Octets) **2**

Description:

(0/32 characters used) **3**

**4**

Apply

Close

### Step 5

To enable the ASV VLAN on a specific port, navigate to **VLAN Management > Auto-Surveillance VLAN > ASV Interface Settings**.

▼ VLAN Management **1**

VLAN Settings

Interface Settings

Port to VLAN

Port VLAN Membership

▶ Voice VLAN

▼ Auto-Surveillance **2**  
VLAN

ASV General Settings

**3** ASV Interface Settings

## Step 6

Select the interface and click edit.

### ASV Interface Settings

ASV Interface Settings Table

  2

Filter: *Interface Type* equals to

	Entry No.	Port	Surveillance VLAN Membership	
			Administrative	Operational
<span>1</span> 	1	GE1	Disabled	Disabled
<input type="radio"/>	2	GE2	Disabled	Disabled

## Step 7

**Enable** the *Auto Surveillance VLAN Membership* for the interface and click **Apply**.

## Edit ASV Interface Settings

X

Interface:

Port GE1  LAG 1

Auto Surveillance VLAN Membership:  Enable

2

Apply

Close

## Conclusion

There you go! You have configured ASV on your Catalyst 1200 or 1300 switch.

Check out the following pages for more information on the Catalyst 1200 and 1300 switches.
