Introduction

This document describes how to resolve issues on Catalyst 9300X switches involving the HSEC license add-on.

Prerequisites

Requirements

Cisco recommends that you have knowledge of these topics:

- Basic understanding of Cisco Smart Licensing
- Familiarity with Catalyst 9300X switch configuration

Components Used

The information in this document is based on these software and hardware versions:

- Hardware: Catalyst 9300X
- Software: IOS XE 17.9.5

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, ensure that you understand the potential impact of any command.

Background Information

HSEC (High Security) license is an additional license that can be added to the Catalyst 9300X enable the support of encrypted traffic and IPsec features.

Problem

Catalyst 9300X is missing the HSEC license on the switch

Problem Details:

- PID: C9300X-48HX

Commands executed to identify the problem:

```
<#root>
```

```
Switch#
```

```
show license summary
```

```
Account Information:
```

```
Smart Account: Cisco Systems
```

```
Virtual Account: DEFAULT
```

```
License Usage:
```

```
License Entitlement Tag Count Status
```

```
-----  
network-advantage (C9300-48 Network Advan...) 1 IN USE
```

```
dna-advantage (C9300-48 DNA Advantage) 1 IN USE <<<<
```

```
Missing the HSEC license
```

Solution

The solution involves removing both the license and instance from Cisco Smart Software Manager (CSSM), regenerating the reservation code from the switch, and installing the new file onto the switch.

Step 1: Remove License and Instance from CSSM

In CSSM, the license and instance are located under the default virtual account. Observe these steps to remove them:

1. Remove the license from the Virtual account:

- Contact TAC licensing team to remove license from account . Useful data sets that can be included in the case are UDI SN# of device, Smart account name, and Virtual account name.

2. Remove the device from the product instance:

- Navigate to the account that the license is under, for example the Default account → Product instance → search for device SN# → actions (on the right-hand side of the listed device) → remove → Confirm.

Step 2: Regenerate Reservation Code

Run this command on the switch to get the reservation code:

```
<#root>
```

```
device#
```

```
license smart reservation request local
```

Enter this request code in the Cisco Smart Software Manager portal:

```
UDI: PID:C9300X-48HX,SN:FOC2522L1W7
```

```
Request code: CB-ZC9300X-48HX:FOC2522L1W7-AK9A6sMTr-2D
```

Copy the request code and enter it in CSSM. Under the default virtual account navigate to Licenses → License Reservation → (paste code taken from the switch output) → next. Choose the required licenses (HSEC, DNA Advantage, and Network Advantage) and generate the authorization code. Download the new file from CSSM and copy it to the switch. This can be done via FTP or through copy from physical media.

Step 3: Install the New Authorization Code

Verify that the file is in flash and run this command:

```
<#root>
```

```
device#
```

```
license smart reservation install file flash:
```

Install the HSEC license when the switch is connected to CSSM or CSLU using Smart Licensing:

```
<#root>
```

```
C9300X#
```

```
license smart authorization request add hseck9 local
```

```
*Oct 12 20:01:36.680: %SMART_LIC-6-AUTHORIZATION_INSTALL_SUCCESS: A new licensing authorization code wa
```

Verify HSEC license is correctly installed:

```
<#root>
```

```
C9300X#
```

```
show license summary
```

Account Information:

```
Smart Account: Cisco Systems, TAC As of Oct 13 15:50:35 2022 UTC
```

```
Virtual Account: CORE TAC
```

License Usage:

License	Entitlement Tag	Count	Status
network-advantage	(C9300X-12Y Network Adv...)	1	IN USE

```
dna-advantage          (C9300X-12Y DNA Advantage)    1 IN USE
C9K HSEC               (Cat9K HSEC)
0 NOT IN USE
<<<<
```

Enable IPsec as the tunnel mode on the tunnel interface:

```
<#root>
C9300X(config)#
interface tunnel1

C9300X(config-if)#
tunnel mode ipsec ipv4

C9300X(config-if)#
end
```

Once IPsec is enabled, the HSEC license becomes **IN USE**. For further information please reference [Configure IPsec on Catalyst 9000X Series Switches](#).

Verify the license usage:

```
<#root>
device#
show license usage

License                Entitlement Tag                Count Status
-----
C9300 48P Network Ad... (C9300-48 Network Advan...)    1 IN USE
C9300 48P DNA Advantage (C9300-48 DNA Advantage)      1 IN USE
C9K HSEC               (Cat9K HSEC)
```

1 IN USE

```
<<<<
```
