RESETMGR RESETUNKNOWN	3-Error	A restarted process could not be identified by its Job ID the Reset Manager has reset the Standby system.	Reset Manager stores a set of IDs each one of these IDs uniquely identifies a process on the system. A process was restarted but it could not be uniquely identified via its Job ID. It is possible that the restarted process was being monitored by the Reset Manager but since we cannot be sure the Standby system is being reset. This is most likely due to a software fault on the system.	resetmgr	LOG_SID_NO_ACTION

RSVP/TKY/ACL/CHG	5-Notice	Key chain [chars] [chars] for [inet] because ACL \[chars]\ [chars]		rsvp	"If the ACL change unexpectedly caused authentication to be disabled\n or enabled for one or more RSVP neighbors undo the ACL change so that\n RSVP authentication is not impacted."

Facility-Severity-Mnemonic	Severity-Meaning	Message	Message-Explanation	Component	Recommended-Action
			<p>The ACL specified in the message text associates the key chain specified in the message text with a set of RSVP neighbors. RSVP uses the specified key chain to authenticate each RSVP message exchanged with that set of RSVP neighbors after the association is configured. Subsequently the specified ACL has been reconfigured such that the key chain association is no longer valid for one or more RSVP neighbors in the set. This causes RSVP to search the configuration for another suitable key chain to use with those neighbors. If no such key chain is found RSVP will no longer be able to provide authentication for messages exchanged with those RSVP neighbors. This causes RSVP to discard RSVP messages from that set of neighbors. Because this may ultimately lead to loss of RSVP functionality with those neighbors RSVP generates this system message.</p>		

Facility-Severity-Mnemonic	Severity-Meaning	Message	Message-Explanation	Component	Recommended-Action
			This system\n\n message may also be generated if the ACL is subsequently changed so that\n\n it re-associates RSVP neighbors with the specified key chain. If RSVP is\n\n not using another key chain for the set of RSVP neighbors specified by\n\n the ACL RSVP will begin using the specified key chain to exchange\n\n authenticated RSVP messages with that set of RSVP neighbors potentially\n\n restoring RSVP functionality with those neighbors.

SBC_HA_LARGE_IS_UNSUPPORTED	3-Error	The current version of the SBC Standby does not support the syncing of large SBC contexts	The current version of the SBC Standby does not support the syncing of large SBC contexts. A context that contains 24 or more media and signaling flows is a large context. It is rare to have such a large context and thus ISSU compatibility has been permitted even though this difference in support exists. Normal SBC High Availability synchronization will continue to operate successfully as long as no contexts contain more than 24 signaling or media flows. VINES2-CONSISTENCY	2-Critical	Error [chars]	<p>The VINES code ran into a situation that should not happen. For example an IPC port number needs to be allocated but all 65535 port numbers are currently in use. Another possible cause is that VINES attempted to add a cache entry but had no path associated with the destination address. This may cause temporary slow performance to only those stations that have experienced this inconsistency until complete cache entries are added. However connectivity should not be lost because all data traffic can still be routed via process-level switching.</p>	vines	<p>"Copy the message exactly as it appears and report it your technical support representative.
