

# **Overlapping Prefix**

The Overlapping prefix feature supports Endpoint Identifier (EID) registration by two sites where the EID prefix from one LISP site is a subset of the EID prefix from another LISP site.

# **Prerequisites for Overlapping Prefix**

• Reliable registration must be established between the xTR (performs functions of both Egress Tunnel Router and Ingress Tunnel Router components) and map server/map resolver (MS/MR).

# **Information About Overlapping Prefix**

## **Endpoint ID (EID)**

An EID value for IPv4 is 32 bit and EID value for IPv6 is 128-bit. EIDs are used in the source and destination address fields of the first LISP header of a packet.

## **EID-Prefix**

An EID-Prefix is a power-of-two blocks of EIDs allocated to a LISP site by an address allocation authority.

### Map Server/Map Resolver (MS/MR)

MS and MR functions are implemented on the same device, which is referred to as an MS/MR device.

## **How to Configure Overlapping Prefix**

## **Configuring Overlapping Prefix**

Configure EID-prefix with "accept-more-specifies" keyword to allow MS to accept registration of more specific prefix.

```
router lisp
site site3
authentication-key cisco
eid-prefix 172.16.0.0/8 accept-more-specifics
exit
Register 3.0.0.0/8 with MS.
router lisp
database-mapping 172.16.0.0/8 10.0.0.3 priority 1 weight 100
Register 3.1.0.0/16 with MS, which is more specific and overlap with 3.0.0.0/8 prefix registered from xTR3.

### Verifying Overlapping Prefix

Perform this task to verify the Overlapping Prefix feature in the LISP network. In this example, there are four routers: MSMR, xTR2, xTR3, and xTR4. Each router has an interface connection in the same subnet (RLOC space) 10.0.0/24. The following are the IP addresses of the routers:

Router	IP Address
MSMR	10.0.0.1
xTR2	10.0.0.2
xTR3	10.0.0.3
xTR4	10.0.0.4

#### **MS/MR Output:**

```
Device# show lisp site
