

Radius Attribute 82: Tunnel Assignment ID

The Radius Attribute 82: Tunnel Assignment ID feature allows the Layer 2 Tunnel Protocol (L2TP) network access server (NAS) to group users from different per-user or domain RADIUS profiles into the same active tunnel if the tunnel endpoints, tunnel type, and Tunnel-Assignment-ID are identical.

Configuration Information

Configuration information is included in the “Configuring AAA for VPDNs” module in the *Cisco IOS VPDN Configuration Guide*, Release 12.4T, at the following URL:

- http://www.cisco.com/univercd/cc/td/doc/product/software/ios124/124tcg/tvvpn_c/vpc2auht.htm

Command Reference

No commands were modified by this feature.
