Error Message %SIP600-6-NULLQID: PXF([dec]):Null-QID ([chars]) [int] packets dropped.

Explanation The SIP-600 line card has encountered an invalid queue. The packet has been dropped. The packet will be counted in the null queue statistics. Packet traffic should continue normally.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP600_PARSING_ENGINE Messages

This section contains SIP-600 parsing engine messages.

Error Message %SIP600_PARSING_ENGINE-3-DROP_FIFO_OVERFLOW: Parsing Engine Drop Fifo Overflow

Explanation The SIP-600 parsing engine has detected that the drop FIFO queue has exceeded the maximum limit. New updates will be discarded. The parsing engine continues to process data from the interfaces if possible.

Recommended Action If traffic has resumed, no action is required. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_PARSING_ENGINE-3-INTERRUPT_ERROR: [chars]

Explanation The SIP-600 parsing engine has detected the specified interrupt event. The message text on the console or in the system log provides more information on this error. The parsing engine continues to process data from the interfaces, if possible.

Recommended Action If traffic has resumed, no action is required. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_PARSING_ENGINE-3-MASTER_ABORT: Parsing Engine CPU Master Abort Error

Explanation The SIP-600 parsing engine has detected a CPU Master Abort Interrupt. A read to a write-only register or a write to a read-only register could cause this interrupt. The parsing engine continues to process data from the interfaces, if possible.

Recommended Action If traffic has resumed, no action is required. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_PARSING_ENGINE-3-PARITY_ERROR: Parsing Engine CPU Parity Error

Explanation The SIP-600 parsing engine has detected a CPU parity error. A hardware fault is suspected on the second occurrence only. Otherwise, the parsing engine continues to process data from the interface if possible.

Recommended Action If traffic has resumed, no action is required. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_PARSING_ENGINE-3-RP_INT_WATCHDOG_TIMEOUT: Parsing Engine RP Interface Watchdog Timeout

Explanation The SIP-600 parsing engine has detected an RP interface watchdog timeout. The RP interface process has not relinquished the processor for the watchdog timeout period. The parsing engine continues to process data from the interfaces, if possible.

Recommended Action If traffic has resumed, no action is required. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP600_QOS Messages

This section contains SPA Interface Processor 600 quality of service (SIP600_QOS) messages.

SIP600_QOS-2

Error Message %SIP600_QOS-2-INITFAIL: SIP-600 Initialization Failed [chars]: [chars] [dec] [dec]

Explanation The SIP-600 could not initialize the memory that is needed for the QoS feature. A hardware problem has occurred on the line card that prevents QoS from functioning.

Recommended Action If QoS is a desired feature, try to reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_QOS-2-NOMEM: Memory Allocation Failure - [chars]: [chars] [dec] [dec]

Explanation SIP-600 could not allocate the memory that is required for the QoS feature. This condition might indicate that more memory must be installed on the affected line card or platform to service all features and related entries that are enabled in the configuration.

Recommended Action Check available memory and install more if necessary. If sufficient memory is available, reload the Cisco IOS image on the affected line card or platform. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP600_QOS-3

Error Message %SIP600_QOS-3-CLASSIFYUPDATE: SIP-600 Update QoS Classify Hardware Failed - [chars]: [chars] [dec] Cause: [hex]

Explanation SIP-600 received an error on the specified hardware classify entry when attempting the specified action.

Recommended Action If the error occurs on allocating any of the Default Classify Entries, attempt to reload the line card because traffic cannot be forwarded out this line card. If the error occurs in all other cases, remove the QoS action just performed at the user interface, wait a period of time, then reapply the service-policy. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_QOS-3-EXCEEDEXCESSQRATE: SIP-600 Exceeded system maximum excess queue rates - [chars]: [chars] [dec] Cause: [hex]

Explanation The SIP-600 received an error on the specified hardware queue when attempting the specified action. This condition is the result of attempting to configure a QoS action. The sum of excess bandwidth for all allocated queues has exceeded the system limit.

Recommended Action Remove the service policy that failed and try applying the **shape** command to each of the classes if they are not already configured. Then reapply the service policy. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and

attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_QOS-3-EXCEEDGUARTQRATE: SIP-600 Exceeded Guaranteed Rates on interface - [chars]: [chars] [dec] Cause: [hex]

Explanation The SIP-600 received an error on the specified hardware queue when attempting the specified action. This condition is the result of attempting to configure a QoS action. The sum of all queue-guaranteed rates has exceeded the maximum that can be configured for the interface to which the queues are applied. This condition could be caused when the **priority** command is configured without the **police** command.

Recommended Action Add the **police** command to limit the rate of the priority queue. If this is not the problem, remove the service policy and reapply it. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_QOS-3-INSUFFDFLTBW: SIP-600 Insufficient bandwidth for default processing: port [dec] queue id [dec] Cause: [hex]

Explanation The SIP-600 reserves 1 percent of the bandwidth of a port for router control packets. When a service policy is applied, this bandwidth is first deducted from the QoS class default queue. If there is not sufficient bandwidth in the class default queue and the sum of queue-guaranteed bandwidth exceeds the link rate, this message is generated instead of the EXCEEDGUARTQRATE message.

Recommended Action Determine if there is any bandwidth available for class default so that space is made available for the port's queue to handle control packets. Reduce the amount of bandwidth configured on user-defined classes so that more bandwidth is available for class default. If necessary, explicitly configure bandwidth for class default by entering the bandwidth command. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_QOS-3-NORESOURCE: SIP-600 Out of Resources- [chars]: [chars] [dec] Cause: [hex]

Explanation The specified resource has been depleted from the SIP-600.

Recommended Action Change the SIP-600 configuration to conserve the specified resource.

Error Message %SIP600_QOS-3-NOTFOUND: SIP-600 Software Element Not Found - [chars]: [chars] [dec]

Explanation SIP-600 client could not locate a required software element.

Recommended Action Reload the Cisco IOS image on the affected line card or platform. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_QOS-3-NOTSUP: SIP-600 Feature Not Supported - [chars]: [chars] [chars]

Explanation The SIP-600 does not support the specified feature.

Recommended Action Change the SIP-600 configuration so that it does not include the specified feature.

Error Message %SIP600_QOS-3-QEXCEEDWREDGRP: SIP-600 Exceeded WRED limit groups for queue [dec]

Explanation The SIP-600 depleted available resources when configuring WRED on the specified hardware queue. This condition is a result of attempting to configure a QoS action.

Recommended Action For each queue, there is a limited number of unique WRED limits sets that can be configured. The user's configuration action has caused the limits to go beyond the system limit. As a result, WRED is not configured on that queue. The following configuration illustrates three unique sets of WRED min/max limits:

```
random-detect
random-detect prec 0 1000 2000 1
random-detect prec 1 1000 2000 1
random-detect prec 2 2000 3000 1
```

```

random-detect prec 3 2000 3000 1
random-detect prec 4 1000 2000 1
random-detect prec 5 3000 4000 1
random-detect prec 6 2000 3000 1
random-detect prec 7 3000 4000 1

```

Update your configuration so that the WRED configuration is within the limits and reapply the service policy.

Error Message %SIP600_QOS-3-QUPDATE: SIP-600 Update Queue Hardware Failed - [chars]: [chars] [dec] Cause: [hex]

Explanation The SIP-600 received an error on the specified hardware queue when attempting the specified action. This condition is the result of attempting to configure a QoS action.

Recommended Action There are a variety of reasons that this condition occurs: 1) If the user configuration action was to remove a service policy and then reapply a service policy to the same interface, it is possible that queues are still draining, which prevents new queues from being allocated. You need to remove the service-policy that failed, wait for a period of time, and then reapply the service policy. 2) It is possible that the number of resources has been depleted. You can consolidate your current QoS configuration to free up resources, and then try reapplying your new configuration. 3) If the error was the result of removing queue hardware, then there is a hardware problem that must be reported. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600_QOS-3-QWREDGTQLIMIT: SIP-600 WRED maximum threshold exceeds queue-limit for queue [dec]

Explanation The WRED maximum threshold values should be greater than the assigned queue limit. This condition is the result of the user attempting to configure WRED or changing bandwidth rates, which changes queue-limit values. If this error has occurred, the queue is allocated but WRED is not enabled.

Recommended Action Make sure that the queue-limits configured does not exceed any of the WRED max_threshold values. If the queue-limit command is not configured, configure one that is greater than WRED max_threshold values.

SIP600_QOS-4

Error Message %SIP600_QOS-4-NOTINSHAPE: Warning - Ingress shaping on [chars] not supported on this interface.

Explanation Ingress shaping on the specified precedences or DSCP is not supported on this interface because such packets are control data, which go through a separate high-priority path.

Recommended Action Because the specific match statements are ignored, no action is required.

SIPSPA Messages

This section contains shared port adapter (SPA) on GSR line card messages.

SIPSPA-3

Error Message %SIPSPA-3-BADCMD: [chars]: Unsupported command [dec], arg0=[hex], arg1=[hex], arg2=[hex]

Explanation The route processor issued a command that the software was not able to process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-BAD_IFCOMTYPE: Bad ifcom message type=[int]

Explanation The route processor sent a message that the software was not able to process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-BADINT: Attempted to access HWIDB for port [int]

Explanation The line card attempted to access the hardware interface descriptor block (IDB) associated with a nonexistent port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-CMDNOINT: HWIDB Null for command [dec], arg=[hex]

Explanation The route processor issued a command that the software was unable to process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-DEVICE_ERROR: subSlot [dec], spatype [hex]. Device error: [chars]

Explanation An error related to a device on the SPA has been detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-EFC_CHAN_ERR: EFC error - interface [chars], vc [dec], anyphy [dec], err_code [dec] : [chars]

Explanation There was a failure to configure EFC channel or parameters.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-FCI_NOT_SET: Bay [dec]: [chars]: FCI type not set

Explanation An FCI type of zero was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-HWIDB_FAILURE: Creation: port [dec] vc [dec]

Explanation There was a failure to create a hardware interface descriptor block (IDB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-INVALID_ANYPHY: Bay [dec] - Invalid anyphy number [int] for vc [dec]

Explanation The specified interface has an invalid anyphy number.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-IPCALLOCFAIL: Failed to allocate IPC buffer [chars]

Explanation The line card failed to allocate a buffer for communication with the route processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-IPCSENDFAIL: Failed to send IPC message [chars]

Explanation The line card failed to send a message to the route processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-ISR_RC_ERROR: ISR return code out of range. rc=[dec]

Explanation The ISR error return code is out of range.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-LINKREC_ERROR: Link record error - Bay [dec] vc [dec], error code [dec]

Explanation There was an error during processing of the link record structure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-MESSAGE_ERROR: Bay [dec]: [chars]

Explanation An unexpected error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-MSGTOOBIG: Message length exceeds max, [int] bytes

Explanation The line card attempted to send too large a message to the route processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-NODISPATCH: Dispatch vector Null, cmd=[dec], dintf=[dec]

Explanation No command dispatch vector was found for the specified interface.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-POWER: Bay [dec] 12V power is [chars]

Explanation The SPA 12 V power fault indicator is displaying the indicated condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-SONET_CLOCK_FAILED: SPA Sonet clock has failed (status = [hex])

Explanation The SPA SONET clock has failed. SPAs that rely on the SPA SONET clock for proper operation, such as POS and ATM, will be affected.

Recommended Action If the SPA SONET clock does not recover, perform an online insertion and removal (OIR).

Error Message %SIPSPA-3-SONET_CLOCK_RECOVERED: SPA Sonet clock has recovered (status = [hex])

Explanation The SPA SONET clock has recovered.

Recommended Action No action is required.

Error Message %SIPSPA-3-SPI4_CONFIG_FAILURE: Bay [dec], spi4 configuration failure, error [dec]

Explanation An attempt to configure the SPI4 interface has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-3-SPI4_INIT_FAILURE: Bay [dec] initialization failure

Explanation An attempt to create a SPI4 subblock has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIPSPA-4

Error Message %SIPSPA-4-MAX_BANDWIDTH: Total SPA bandwidth exceeds line card capacity of [int] Mbps

Explanation The total bandwidth of SPAs exceeds the specified rated capacity of this line card.

Recommended Action Refer to the line card guidelines for the maximum allowed aggregated SPA bandwidth for the line card.

Error Message %SIPSPA-4-MAX_BANDWIDTH_NS: Total SPA bandwidth exceeds line card capacity, full utilization of installed SPA interfaces is not supported

Explanation The total bandwidth of SPAs exceeds the rated capacity of this line card.

Recommended Action Refer to the line card guidelines for the maximum allowed aggregated SPA bandwidth for the line card.

Error Message %SIPSPA-4-SPABUS: Bay [dec] [chars] failed. sz=[int] rd_par=[int] noresp=[int] err_l=[int] addr=[hex] data=[hex] parity=[hex] deadman=[int]

Explanation The SPA bus has reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIPSPA-4-SPABUS2: Bay [dec] [chars] failed. sz=[int] rd_par=[int] noresp=[int] absent=[int] err_l=[int] addr=[hex] data=[hex] parity=[hex] deadman=[int]

Explanation The SPA bus has reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIPSPA-6

Error Message %SIPSPA-6-ERRORRECOVER: A Hardware or Software error occurred on [chars]. Reason : [chars] Automatic Error recovery initiated. No further intervention required.

Explanation An error occurred in one of the devices. Automatic recovery will be attempted. If recovery succeeds, no further messages will be logged and no action will be required.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SLB Messages

This section contains server load-balancing messages.

Error Message %SLB-4-CF: Unexpected error: [chars]

Explanation An unexpected error occurred in SLB slave replication.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SLB-4-CF_BULK: [chars]

Explanation An unexpected error has occurred in SLB slave replication and bulk synchronization.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SLB-4-CF_IPC: Slave replication messages are creating a backlog in IPC. Some SLB objects may not be synchronized.

Explanation Due to an IPC resource contention, SLB was unable to replicate all objects.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SLB-4-CF_NUM: Unexpected error: [chars] [dec]

Explanation An unexpected error has occurred in SLB slave replication.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SLB-4-CF_RATE: Overrun of SLB's slave replication rate, some SLB objects may not be synchronized.

Explanation Due to a high connection rate, SLB was unable to replicate all objects.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SLB-4-IF_REMOVED: Access interface removed: [chars] being set to outofservice.

Explanation An interface being referenced in SLB access configuration has been removed. The virtual server or firewall farms referencing this interface will be brought out of service.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SMC Messages

This section contains Services Management Channel (SMC) messages.

SMC-2

Error Message %SMC-2-BAD_ID_HW: Failed Identification Test in [chars] [[dec]/[dec]]
The module in [chars] in this router may not be a genuine Cisco product. Cisco warranties and support programs only apply to genuine Cisco products. If Cisco determines that your insertion of non-Cisco memory, WIC cards, AIM cards, Network Modules, SPA cards, GBICs or other modules into a Cisco product is the cause of a support issue, Cisco may deny support under your warranty or under a Cisco support program such as SmartNet.

Explanation The hardware in the specified location could not be identified as a genuine Cisco product.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SMC-2-FAILED_ID_HW: Failed Identification Test in [chars]
[[dec]/[dec]]

Explanation An error occurred while identifying the hardware in the specified location.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SMC-2-PROTO_HW: Module ([chars]) is a registered proto-type for Cisco Lab use only, and not certified for live network operation.

Explanation The hardware in the specified location is a prototype module from Cisco and should not be used in a live network.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SMSC_RP Messages

This section contains short message service center route processor messages.

SMSC_RP-3

Error Message %SMSC_RP-3-GETHWVER_FAILED: Unable to set 7600-SSC-400 in slot [dec] in single-spa-mode because of error in obtaining its hardware revision.

Explanation The 7600-SSC-400 could not be set to single-SPA mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SMSC_RP-3-NO_SCP_BUFFER: Unable to set 7600-SSC-400 in slot [dec] in single-spa-mode because of insufficient scp buffers.

Explanation The 7600-SSC-400 could not be set to single-SPA mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SMSC_RP-3-SSC_SSPA_RETRY: 7600-SSC-400 in slot [dec] is reset as a [dec] try to set it in single-spa-mode.

Explanation The specified slot has reset in an attempt to set it to single-SPA mode. A maximum of three retries are performed.

Recommended Action If the third retry is unsuccessful, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SMSC_RP-3-SSC_SSPA_SHUT: 7600-SSC-400 in slot [dec] is shutdown because it cannot be set in single-spa-mode

Explanation The specified slot has been shut down because it cannot be set to single-SPA mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SMSC_RP-6

Error Message %SMSC_RP-6-INVALID_HW_VERSION: Single-spa-mode is not allowed for 7600-SSC-400 hardware version [dec].[dec].

Explanation Only 7600-SSC-400 versions greater than 0.3 can be set in single-SPA mode.

Recommended Action To use single-SPA mode, use 7600-SSC-400 versions greater than 0.3.

SNASW Messages

This section contains Systems Network Architecture (SNA) Switching Services messages.

SNASW-3

Error Message %SNASW-3-CLS_LOG_0: PROBLEM - [int] - Could not validate process handle [chars]

Explanation CLS has passed the SNA switch a DLC packet, but the SNA switch does not have a valid handle to invoke the correct SNA process. The CLS message has been discarded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SNASW-3-HPR_LOG_20: PROBLEM - [int] - Remote node supplied a corrupted RSCV: the next hop is the local CP [chars]

Explanation A high performance routing (HPR) route setup request or response unit (RU) has been received with a Route Selection Control Vector (RSCV) that gives the local node as the next ANR hop, which is an invalid vector. The remote node is sending invalid protocol data.

Recommended Action Report the error to the remote end administrator.

SNASW-4

Error Message %SNASW-4-RTP_LOG_10: EXCEPTION - [int] - LFSID in use, moving on to next one. [chars]

Explanation An LFSID was found to be in use. The SNA switch will use another one.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SNMP Messages

This section contains Simple Network Management Protocol (SNMP) messages.

SNMP-3

Error Message %SNMP-3-AUTHFAILIPV6: Authentication failure for SNMP request from host %P

Explanation An SNMP request sent by this host was not authenticated.

Recommended Action Make sure that the community and user name used in the SNMP request has been configured on the router.

Error Message %SNMP-3-BADIFINDEXTABLE: The file nvram:ifIndex-table is corrupt.

Explanation The file is not in the expected format.

Recommended Action Delete the file if possible.

Error Message %SNMP-3-DVR_DUP_REGN_ERR: Attempt for dupe regn with SNMP IM by driver having ifIndex [dec] and ifDescr [chars]

Explanation A driver is attempting to register an IDB with the interface manager while there is already an interface with the same ifIndex and ifDescr but different IDB registered. A duplicate registration would cause the interface counters shown by SNMP to not work properly for this particular interface.

Recommended Action Fix the duplicate registration in the driver level.

Error Message %SNMP-3-DVR_DUP_REGN_WARNING: Attempt for dupe regn with SNMP IM by driver having ifIndex [dec] and ifDescr [chars]

Explanation A driver is attempting to register an IDB that is already registered with the interface manager. This is just a warning message and handled by SNMP.

Recommended Action Fix the duplicate registration in the driver level.

Error Message %SNMP-3-DYNSYNCFAIL: Snmp Dynamic Sync Failed for %s %s %s%s

Explanation The dynamic synchronization of an SNMP MIB to the standby device failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SNMP-3-INPUT_QFULL_ERR: Packet dropped due to input queue full

Explanation An SNMP packet was dropped because the input queue is full.

Recommended Action Enter the **show snmp** command to see the number of packets dropped. Stop any SNMP access to the device until the error condition has recovered.

Error Message %SNMP-3-INTERRUPT_CALL_ERR: [chars] function, cannot be called from interrupt handler

Explanation A call has been made to the function from an interrupt handler. This is not permitted. The function call will fail and the device will reboot down the stack in a memory allocation call.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SNMP-3-ISSU_ERR: [chars]

Explanation An error occurred during an ISSU versioning operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SNMP-3-MAX_TRAPS_EXCEED_ERR: Maximum number of traps exceeded the maximum allowed in the current sync-message to STANDBY

Explanation This is a software development debug message. The number of SNMP traps defined exceeded the maximum allowed in a checkpoint synchronization message.

Recommended Action (These actions apply only to the developer, and not to the user.) Increase SNMP_SYNC_BITMASK_MAX to a higher value. Check smci_rf_status_event() for further details.

Error Message %SNMP-3-SYNCFAIL: SNMP MIB Sync Failure: [chars]

Explanation An error occurred while synchronizing an SNMP MIB to standby.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SNMP-4

Error Message %SNMP-4-HIGHCPU: Process exceeds %dms threshold (%dms IOS quantum) for %s of %s--result %s

Explanation A warning threshold was exceeded when SNMP was processing a variable binding.

Recommended Action Enter the **debug snmp packet** command to determine the contents of the SNMP request that is causing the message. Some MIB objects require a relatively large amount of time to process. MIB objects in the multi-variable-binding are processed one by one. If possible, do

not retrieve MIB objects appearing in this messages by using multi-variable-binding SNMP PDUs. Copy the error message exactly as it appears, and report it along with any debug output to your technical support representative.

Error Message %SNMP-4-NOENGINEIDV6: Remote snmpEngineID for %P not found when creating user: %s

Explanation An attempt to create a user failed, probably because the engine ID of the remote agent or SNMP manager was not configured.

Recommended Action Configure the remote snmpEngineID and reconfigure the user. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SNMP-5

Error Message %SNMP-5-LINK_DOWN: LinkDown:Interface %s changed state to down

Explanation The state of the interface is changed to down.

Recommended Action No action is required.

Error Message %SNMP-5-LINK_UP: LinkUp:Interface %s changed state to up

Explanation The state of the interface is changed to up.

Recommended Action No action is required.

Error Message %SNMP-5-MODULERESET: [chars] object has been set to 'reset' for [chars]=[dec] from IP address [chars].

Explanation The SNMP server has reset a module.

Recommended Action No action is required.

SNMP_BULKSTAT Messages

This section contains Simple Network Management Protocol (SNMP) bulk data collection messages.

SNMP_BULKSTAT-3

Error Message %SNMP_BULKSTAT-3-5: Memory not available for [chars] for [chars]

Explanation Data collection or transfer could not be successfully carried out because of lack of memory.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %SNMP_BULKSTAT-3-REMOTE_FILE_WRITE_ERR: File Write failed for the remote file [chars]

Explanation The user name or password specified in the error message might not have the required privileges to write a file to the network management station specified in the error message, or the destination directory specified in the error message is invalid.

Recommended Action Ensure that the user name and password in the network management station address has the necessary privileges to write to the destination directory.

Error Message %SNMP_BULKSTAT-3-TOOSMALL_BUFFER: Buffer size is insufficient to accommodate even the header part for [chars]

Explanation The buffer size is insufficient to accommodate the header for the bulk data file. The header contains the schema definitions of all the configured schemas.

Recommended Action Increase the maximum buffer size using the **buffer-size** *size-of-buffer* command, where *size-of-buffer* is the increased buffer size.

SNMP_BULKSTAT-4

Error Message %SNMP_BULKSTAT-4-BUFFER_OVERFLOW: Buffer size too small to accommodate data for one collection interval for [chars]

Explanation The bulk data file is too large for the configured buffer size for a single transfer interval. Data collection will continue in another new buffer of the configured size, and the collected buffer will be transferred to the configured destination.

Recommended Action Increase the maximum buffer size using the **buffer-size** *size-of-buffer* command, where *size-of-buffer* is the increased buffer size.

Error Message %SNMP_BULKSTAT-4-PRI_URL_UNREACHABLE: Primary network management station is unreachable for [chars]

Explanation The collected bulk data file could not be successfully transferred to the primary network management station address specified in the error message. This condition can occur because the primary network management address is not configured or the configured primary network

management station address is unreachable. If a secondary network management station address is configured, the collected bulk data file will be sent to the secondary network management station address.

Recommended Action Ensure that the primary network management station address is configured. If the primary network management station address is configured, check the connectivity to the destination indicated by the primary network management station address specified in the error message.

Error Message %SNMP_BULKSTAT-4-SEC_URL_UNREACHABLE: Secondary network management station is unreachable for [chars]

Explanation The collected bulk data file could not be successfully transferred to the secondary network management station address destination specified in the error message. This condition can occur because the secondary network management station address is not configured or the configured secondary network management station address is unreachable. If a retention interval is not configured, the bulk data file will be immediately deleted. If a retention interval is configured, retries will be attempted for the configured number of times.

Recommended Action Check the connectivity to the destination indicated by the secondary network management station address shown in the error message.

SNMP_MGR Messages

This section contains Simple Network Management Protocol (SNMP) manager messages.

SNMP_MGR-3

Error Message %SNMP_MGR-3-BADINFORMTRANSPORT: Unknown inform transport type: [chars]

Explanation This SNMP inform destination uses an unknown transport type. Inform notifications cannot be sent to this destination.

Recommended Action Copy the error message and the output from **show techsupport** exactly as it appears, and report it to your technical support representative.

Error Message %SNMP_MGR-3-MISSINGHOSTIPV6: Cannot locate information on SNMP informs host: %P

Explanation A table entry cannot be found for the indicated SNMP informs destination. As a result, inform notifications will not be sent to this destination.

Recommended Action Delete and readd the informs destination by entering the **snmp-server host** configuration command. If this does not clear the condition, reload the system and copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require

assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show snmp host**, and **show snmp** commands and your pertinent troubleshooting logs.

SNMP_MGR-4

Error Message %SNMP_MGR-4-BADRESPONSESTATUS: Unknown response status code: [int]

Explanation The SNMP Manager process received an internal response with an unknown status code.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

SNMP_MIB_ISSU Messages

This section contains Simple Network Management Protocol (SNMP) MIB in-service software upgrade (ISSU) messages.

SNMP_MIB_ISSU-2

Error Message %SNMP_MIB_ISSU-2-GET_BUFFER: SNMP MIB ISSU client failed to get buffer for message. Error: %d (%s)

Explanation The SNMP MIB ISSU client was unable to get buffer space for building a negotiation message. As a result, the negotiation message cannot be sent to the standby device and the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-2-INIT: SNMP MIB ISSU client initialization failed to %s. Error: %d (%s)

Explanation The SNMP MIB ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-2-SEND_NEGO_FAILED: SNMP MIB ISSU client failed to send negotiation message. Error: %d (%s)

Explanation The SNMP MIB ISSU client was unable to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-2-SESSION_NEGO: SNMP MIB ISSU client encountered unexpected client nego_done. Error: %d (%s)

Explanation An ISSU-compliant client transitions through a series of internal states. The SNMP MIB ISSU client encountered a client negotiation done state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-2-SESSION_REGISTRY: SNMP MIB ISSU client failed to register session information. Error: %d (%s)

Explanation The SNMP MIB ISSU client was unable to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

SNMP_MIB_ISSU-3

Error Message %SNMP_MIB_ISSU-3-CAP_INVALID_SIZE: SNMP MIB ISSU client capability list is empty.

Explanation The SNMP MIB ISSU client capability exchange list is empty, which is an invalid condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu capability entries** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-3-CAP_NOT_COMPATIBLE: SNMP MIB ISSU client capability exchange result incompatible.

Explanation Based on the results of the capability exchange, the SNMP MIB ISSU client is not compatible with the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-3-INVALID_SESSION: SNMP MIB ISSU client does not have a valid registered session.

Explanation The SNMP MIB ISSU client does not have a valid registered session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-3-MSG_NOT_OK: SNMP MIB ISSU client 'Message Type %d' is not compatible

Explanation The SNMP MIB ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-3-MSG_SIZE: SNMP MIB ISSU client failed to get the MTU for Message Type %d. Error: %d (%s)

Explanation The SNMP MIB ISSU client was unable to calculate the MTU for the specified message. The SNMP MIB ISSU client is not able to send the message to the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-3-SESSION_UNREGISTRY: SNMP MIB ISSU client failed to unregister session information. Error: %d (%s)

Explanation The SNMP MIB ISSU client was unable to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SNMP_MIB_ISSU-3-TRANSFORM_FAIL: SNMP MIB ISSU client %s transform failed for 'Message Type %d'. Error: %d (%s)

Explanation The SNMP MIB ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the SNMP MIB state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

SONET Messages

This section contains Synchronous Optical Network (SONET) messages.

SONET-3

Error Message %SONET-3-APSCOMMCHANGE: [chars]: Link to [chars] channel reverts to PGP protocol version [dec]

Explanation APS has reverted to a different version of the PGP protocol between working and protect routers.

Recommended Action This is an informational message only. No action is required.

Error Message %SONET-3-APSEVENT: [chars]: APS event type error: event [dec] undefined

Explanation The APS software has malfunctioned.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SONET-3-APSHAHOLDTIME: [chars]: [chars]

Explanation The PGP hold time was adjusted.

Recommended Action This is an informational message only. No action is required.

Error Message %SONET-3-APSSYNCSECONDARY: [dec]/[dec]: No hwidb

Explanation A new secondary RP was unable to find a device descriptor block corresponding to slot and unit specified by primary the RP.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SONET-3-DELAYTIMER: [chars]

Explanation The system was unable to create a delay timer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SONET-6

Error Message %SONET-6-APSREFL: [chars]: Remote reflection of APS status now [chars]

Explanation The APS software has detected a change in the reflected local APS status.

Recommended Action This is an informational message only and occurs in normal operation. No action is required.

Error Message %SONET-6-APSREMSWI: [chars]: Remote APS status now [chars]

Explanation The APS software has detected a change in the APS status of the remote interface.

Recommended Action This is an informational message only and occurs in normal operation. No action is required.

SPA Messages

This section contains shared port adapter (SPA) messages.

SPA-0

Error Message %SPA-0-TEMP_SHUTDOWN: [chars] temperature too high. ([dec]C) SPA has been shut down.

Explanation The SPA has been shut down.

Recommended Action Ensure that the temperature is normal in the area where the router is located and resolve any conditions, such as malfunctioning fans, that are causing a temperature increase.

Error Message %SPA-0-TEMP_SHUTDOWN_OVR: [chars] temperature too high ([dec]C) but shutdown has been overridden.

Explanation SPA shutdown has been overridden by the configuration.

Recommended Action Ensure that the temperature is normal in the area where the router is located and resolve any conditions, such as malfunctioning fans, that are causing a temperature increase.

Error Message %SPA-0-VOLT_SHUTDOWN: [chars] voltage out of operating range. Nominal ([dec]mV), value ([dec]mV). The SPA has been shut down.

Explanation The SPA has been shut down to prevent component damage.

Recommended Action Replace the SPA immediately. Record the associated messages and return the SPA for service.

SPA-2

Error Message %SPA-2-TEMP_CRITICAL: [chars] temperature too high. ([dec]C)

Explanation The SPA temperature is too high.

Recommended Action Ensure that the temperature is normal in the area where the router is located and resolve any conditions, such as malfunctioning fans, that are causing a temperature increase.

Error Message %SPA-2-VOLT_CRITICAL: [chars] voltage outside of nominal range.
Nominal ([dec]mV), value([dec]mV)

Explanation One of the measured environmental test points exceeded the nominal voltage threshold. This condition could cause the system to fail to operate properly.

Explanation Correct the specified condition, or the system may shut itself down as a preventive measure. Enter the **show environment all** command to help determine if this problem is due to a voltage condition.

Error Message %SPA-2-VOLT_SHUTDOWN_OVR: [chars] voltage outside of operating range.
Nominal ([dec]mV), value([dec]mV). SPA shutdown has been overridden by configuration.

Explanation One of the measured environmental test points exceeded the nominal voltage threshold. SPA shutdown has been overridden by the configuration.

Recommended Action Correct the specified condition. Enter the **show environment all** command to help determine if this problem is due to a voltage condition.

SPA-3

Error Message %SPA-3-BAD_FCITYPE: [chars]: Illegal FCI type [dec].

Explanation An invalid FCI type was passed to the SPA. This is a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-3-ENVMON_INITFAIL: SPA environmental monitoring initialization error

Explanation A failure occurred during the SPA environmental monitoring subsystem startup. Environmental monitoring is not enabled.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %SPA-3-ENVMON_NOT_MONITORED: Environmental monitoring is not enabled for [chars]

Explanation The specified SPA has not registered any sensors with the environmental monitoring system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-3-RESOURCE_ERROR: [chars] ([hex], [hex], [hex], [hex]) [chars]

Explanation A required resource could not be allocated.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-3-SOFTWARE_ERROR: [chars] ([hex], [hex], [hex], [hex]) [chars]

Explanation The specified software error has been detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA-4

Error Message %SPA-4-TEMP_WARNING: [chars] temperature too high. ([dec]C)

Explanation The SPA temperature is too high.

Recommended Action Ensure that the temperature is normal in the area where the router is located and resolve any conditions, such as malfunctioning fans, that are causing a temperature increase.

Error Message %SPA-4-TEMP_WARNLOW: [chars] temperature too low. ([dec]C)

Explanation The SPA temperature too low. Component reliability and data integrity may be compromised.

Recommended Action Raise the ambient temperature if it is too low. If there is no issue with the ambient temperature, then the SPA temperature sensor has likely failed. If there are no data errors, this warning can be ignored.

SPA_CCB Messages

This section contains SPA configuration control block (CCB) command messages.

SPA_CCB-3

Error Message %SPA_CCB-3-CMDFAIL_0ARG: [chars]: host command [dec] error: [chars].

Explanation A command from the host failed to execute for the specified reason.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CCB-3-CMDFAIL_1ARG: [chars]: host command [dec] (arg0=[dec]) error: [chars].

Explanation A CCB command failed to execute for the specified reason.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CCB-3-CMDFAIL_2ARG: [chars]: host command [dec] (arg0=[dec], arg1=[dec]) error: [chars].

Explanation A command from the host failed to execute for the specified reason.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CCB-3-CMDFAIL_3ARG: [chars]: host command [dec] (arg0=[dec], arg1=[dec], arg2=[dec]) error: [chars].

Explanation A command from the host failed to execute for the specified reason.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CCB-3-CMD_TOOEARLY: [chars]: host command [dec] received before handler ready.

Explanation A host command was received before the handler was initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CCB-3-ENQUEUE_FAIL: [chars]: host command [dec] failed to enqueue.

Explanation An error occurred while the SPA console was attempting to enqueue a host command to the command queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CCB-3-IF_CONFIG: [chars]: IF_CONFIG type [dec] failed.

Explanation The specified interface configuration type is not valid for the SPA card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_CCB-4

Error Message %SPA_CCB-4-BADENCAP: [chars]: Unknown encapsulation command [dec].

Explanation An invalid encapsulation command was received by the SPA. This is a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_CHOC_DSX Messages

This section contains common channelized shared port adapter (SPA_CHOC_DSX) messages.

SPA_CHOC_DSX-3

Error Message %SPA_CHOC_DSX-3-BAD_SIZE_ERR: SPA [dec]/[dec]: [dec] [chars] events on HDLC Controller were encountered.The SPA is being restarted.

Explanation The SPA driver detected an error event on the HDLC controller.

Recommended Action If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-COR_MEM_ERR: SPA [dec]/[dec]: [dec] correctable [chars] memory error(s) encountered.
The error has been corrected and normal processing should continue.
The memory address of most the recent error is: [hex]

Explanation The SPA driver detected a correctable memory error on the SPA card. The error has been corrected and normal processing should continue. The hexadecimal memory address of the most recent error is specified in the message text on the console or in the system log.

Recommended Action If the condition persists, or other errors are specified for the SPA, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-EFC_ERROR: EFC ERROR: [chars] - [chars] [int]

Explanation The SPA extended flow control (EFC) encountered an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-HDLC_CTRL_ERR: SPA [dec]/[dec]: [dec] [chars] events on HDLC Controller were encountered.

Explanation The SPA driver detected an error event on the HDLC controller.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-INVALID_IF_TYPE: Invalid SPA type [dec] on [chars]. Port Number = [dec].

Explanation The software cannot recognize the interface type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-INVLIAD_IF_INDEX: Invalid interface index [dec] on slot/bay:[dec]/[dec]. Min. Index = [dec]. Max. Index = [dec].

Explanation The index is not valid for the specified interface.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-LINK_TABLE_ERR: [chars]: Could not create link table, error [dec]

Explanation An error occurred during the creation of the link record table. Interfaces may not come up or pass traffic.

Recommended Action If the ports on the SPA are not operating as expected, power down and reseat the specified SPA card. If the error messages persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-NODESTROYSUBBLOCK: The [chars] subblock named [chars] was not removed

Explanation IDB subblocks could not be removed during the unprovisioning of a channel. This condition indicates a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-NULL_DATA_STRUCTURE: Failed to create [chars] on slot/bay:[dec]/[dec]. Port Number = [dec].

Explanation The specified software resource cannot be allocated for this hardware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-NULL_SPA_PTR:

Explanation The pointer to a SPA value is null.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-SEMAHOG: SPA on [chars]: Semaphore Hog was encountered.

Explanation The semaphore used by the IPC communication between host and the SPA was monopolized by one process. This behavior would cause other processes fail to send commands down to the SPA and might result in improper operation.

Recommended Action Stop all the traffic on the SPA, and then reload the configuration by entering **shutdown** and **no shutdown** commands on the controllers. If the problem persists, power cycle the SPA. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-SPA_CMD_RETURN_ERR: SPA command [chars] return error [int]

Explanation The SPA returned an error status for a host command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-SPA_CMD_SEND_ERR: Failed to send [chars] command to SPA

Explanation The host failed to send a command to the SPA.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-SPA_SW_ERR: SPA on [chars]: [chars] Software error was encountered.

Explanation The SPA driver detected a software error condition on the SPA card. This condition might cause improper operation.

Recommended Action Reload the configuration by entering **shutdown** and **no shutdown** commands on the controllers. If the problem persists, power cycle the SPA. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-SPI4_HW_ERR: SPA on [chars]: [chars] Hardware error was encountered.

Explanation The SPA driver detected a hardware error condition on the SPA card's SPI4 bus. This condition might cause improper operation.

Recommended Action Power down and reseal the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-UNCOR_MEM_ERR: SPA [dec]/[dec]: [dec] uncorrectable [chars] memory error(s) encountered.
The memory address of most the recent error is: [hex]
The SPA is being restarted.

Explanation The SPA driver detected an uncorrectable memory error condition on the SPA card. Packet corruption may result. The hexadecimal memory address of the most recent error is specified in the message text on the console or in the system log.

Recommended Action Power down and reseal the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-UNCOR_PARITY_ERR: SPA [dec]/[dec]: [dec] [chars] parity error(s) encountered.

Explanation The SPA driver detected an uncorrectable parity error condition on the SPA card. Packet corruption may result.

Recommended Action Power down and reseal the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-UNKNOWN_CMD: Unknown [chars] command recieved on slot/bay:[dec]/[dec]. Command Type = [dec]

Explanation An unknown command was received by the SPA card carrier.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-4-UNPROV_FAIL: Interface [chars] unprovisioning failed: [chars]

Explanation The system failed to respond to an unprovisioning command. A hidden VLAN could not be deleted within a 2-second timeout window. This condition may be caused by a system that is too busy or by a FIB IPC failure. The line card driver code will attempt to delete the hidden VLAN.

Recommended Action If processing continues normally, no action is required. If system operation is adversely affected, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOC_DSX-3-VCCFG_ERROR: Interface [chars] config command error (cmd [int], arg [int], retval [int])

Explanation A command sent from the system to a line card has failed. This is an internal software error.

Recommended Action Decode the traceback and get the output of the **show logging** command on the RP and SIP-1 and check if there are any errors being reported. Try to recreate the problem to see if there is a consistent method to recreate. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs

SPA_CHOXC Messages

This section contains common channelized shared port adapter (SPA) messages.

SPA_CHOXC-3

Error Message %SPA_CHOXC-3-"NULL": NULL [chars]

Explanation The NULL pointer was seen when getting the data structure. This is an internal software error.

Recommended Action Decode the traceback. Enter the **debug hw-module subslot slot/bay oir plugin** command while the problem is happening. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC-3-CREATE_FAIL: Failed to create [chars] : slot/bay:[dec] / [dec]

Explanation The CHOXC SPA controller descriptor block creation failed.

Recommended Action Check the amount of system memory available. Upgrade your system to the latest version of Cisco IOS software. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC-3-FATAL_ERROR: Fatal error for [chars] : slot/bay:[dec] / [dec]

Explanation The CHOXC SPA controller encountered a fatal error.

Recommended Action Upgrade your system to the latest version of Cisco IOS software. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC-3-INVALID_SPA_TYPE: Invalid SPA type :
slot/bay: [dec]/[dec], spa_type=[dec].

Explanation The CHOXC SPA type cannot be recognized by the version of Cisco IOS software currently running on the system.

Recommended Action Upgrade your system to the latest version of Cisco IOS software in your release train. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC-3-NULL_INSTANCE: Null [chars] instance for [chars] :
slot/bay: [dec]/[dec]

Explanation The instance pointer is NULL when getting the data structure. This is an internal software error.

Recommended Action Decode the traceback and get the output of **show running-config**. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC-3-RETURN_ERROR: Return error for [chars]:
return_value=[dec]

Explanation An error code was received. This is an internal software error.

Recommended Action Decode the traceback and get the output of **show running-config**. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using

the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC-3-UNKNOWN_OPTION: Received unknown [chars]: option=[dec]

Explanation An unknown option was received. This is an internal software error.

Recommended Action Decode the traceback and get the output of **show running-config**. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_CHOXC_CWRP Messages

This section contains common channelized shared port adapter (SPA) CWRP messages.

SPA_CHOXC_CWRP-1

Error Message %SPA_CHOXC_CWRP-1-ALLOCFAIL: OC3/STM1 [dec]/[dec] [chars] allocation failure

Explanation A memory allocation failure occurred in the CHOXC controller or channel. This is an internal software error.

Recommended Action Decode the traceback. Enter the **debug hw-module subslot slot/bay oir plugin** command while the problem is happening. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_CHOXC_CWRP-3

Error Message %SPA_CHOXC_CWRP-3-APS_CMD_FAIL: Failed to send APS command [hex] to [chars] (retcode [hex])

Explanation An APS command send failed. This is an internal software error.

Recommended Action If this error happened while configuring APS, try reconfiguring the interface. If the error persists or occurred during normal operation, decode the traceback and copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC_CWRP-3-CORRUPT: Corrupt configuration, unsupported [chars] ([int]) encountered

Explanation The OC3/STM1 RP driver running configuration is corrupt.

Recommended Action Decode the traceback and get the output of **show running-config**. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC_CWRP-3-NULL_SUBBLOCK: Null ssb for [chars]

Explanation The hardware IDB subblock is NULL. This is an internal software error.

Recommended Action Decode the traceback and get the output of **show running-config**. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC_CWRP-3-PLUGIN_ERR: [chars]

Explanation The RP plugin encountered an error during a plugin call. This is an internal software error.

Recommended Action Decode the traceback. Enter the **debug hw-module subslot slot/bay oir plugin** command while the problem is happening. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC_CWRP-3-TIMEOUT: Interface ([chars]): [chars]

Explanation The line card did not reply to a query for SONET information from the CHOXC RP driver. This is an internal software error.

Recommended Action Decode the traceback. Enter the **debug hw-module subslot slot/bay oir plugin** command while the problem is happening. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_CHOXC_CWRP-5

Error Message %SPA_CHOXC_CWRP-5-DEF_SUBRATE: [chars] [chars]

Explanation The remote subrate configuration has changed.

Recommended Action No action is required.

Error Message %SPA_CHOXC_CWRP-5-PATH_UPDOWN: Path [chars], changed state to [chars]

Explanation A SONET high-order path changed its state. This is an internal software error.

Recommended Action Decode the traceback and get the output of **show controller sonet**. Look into this output to see if there are any alarms being reported at the path level. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CHOXC_CWRP-5-T3_UPDOWN: T3 [chars], changed state to [chars]

Explanation A T3 within STS1 has changed its state. This is an internal software error.

Recommended Action Decode the traceback and get the output of **show controller sonet**. Look into this output to see if there are any alarms being reported at the path level. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_CONSOLE Messages

This section contains shared port adapter (SPA) virtual console messages.

SPA_CONSOLE-3

Error Message %SPA_CONSOLE-3-BADDETACH: SPA console session detach failed with IPC error [chars].

Explanation A failure occurred when attempting to detach SPA console subsystem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CONSOLE-3-INITFAIL: [chars]: SPA console initialization error: [chars].

Explanation A failure occurred during initialization of the SPA console subsystem. The SPA console may not be functioning.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CONSOLE-3-NOBUF: No packet buffer available for sending SPA console messages

Explanation An error occurred while the SPA console was attempting to acquire a packet buffer from the IPC buffer pool.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc status** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CONSOLE-3-NO_DRIVER: [chars]: VCON_SPACP: Driver not ready.

Explanation The SPA sent a message before the line card was fully initialized.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CONSOLE-3-RX_BUS_PARAM: [chars]: VCON_SPACP: Invalid SPA bus parameters.

Explanation There was an error receiving a message from the SPA.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CONSOLE-3-TX_BUS_PARAM: [chars]: VCON_SPACP: Invalid SPA bus parameters.

Explanation There was an error sending a message to the SPA.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_CONSOLE-5

Error Message %SPA_CONSOLE-5-CANTGET: Cannot get spa client ipc port

Explanation The SPA virtual console subblock is not properly initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CONSOLE-5-CANTSEND: Cannot send SPA console messages.

Explanation An error occurred while a SPA console message was being sent through the IPC. This condition might result in a malfunction in the operation of the IPC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc status** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CONSOLE-5-CANTSET: Cannot set spa client ipc port

Explanation The SPA virtual console subblock is not properly initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CONSOLE-5-QUEUEFULL: Queue holding SPA console messages is full current console packet will be dropped

Explanation An error occurred while the SPA console was queueing a packet for transmission. Some console data may be lost.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc status** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPACP Messages

This section contains SPA bus communications protocol (SPA CP) messages.

Error Message %SPACP-3-BUFFER: [chars]: Failed to allocate buffer for SPACP message.

Explanation Cannot allocate memory for an SPACP message.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPACP-3-CREATE: [chars]: SPA Bus Device creation failed.

Explanation Cannot allocate memory for the SPA bus structure.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPACP-3-INIT: [chars]: Failed to initialize SPACP. [chars].

Explanation SPACP messaging could not be initialized for the specified reason.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPACP-3-OPCODE: [chars]: SPACP opcode [hex] unknown.

Explanation An unexpected message was received from the SPA.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPACP-3-SEND: [chars]: Failed to send SPACP message.

Explanation Failed to send a message to the SPA.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_CT3 Messages

This section contains CT3 shared port adapter (SPA) messages.

Error Message %SPA_CT3-3-INVALID_SPA_TYPE: Invalid SPA type : slot/bay:[dec]/[dec], SPA_type=[dec].

Explanation The CT3 SPA type cannot be recognized by the version of Cisco IOS software currently running on the system.

Recommended Action Upgrade the system to the latest version of Cisco IOS software in your release train. If you require further assistance, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CT3-3-PROCESS_FAIL: process creation failed for [chars]

Explanation A command could not be processed because of a process-creation failure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_CT3-3-SUBRATE_FPGA_DL_FAILED: [chars]: Failed to download the subrate FPGA image.

Explanation The specified SPA was not able to download the subrate FPGA image during a card-initialization sequence. The image might be corrupted and the system will try to recover from this error by upgrading the image.

Recommended Action If the system cannot recover from this error automatically after a few attempts, it will power off the affected SPA. In that case, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot slot-number/subslot-number fpd** and **show hw-module subslot slot-number/subslot-number oir** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_DATABUS Messages

This section contains SPA data bus interface messages.

Error Message %SPA_DATABUS-3-PACKET_GAP_ERROR: [chars] [chars] - A packet gap error has occurred

Explanation The data bus interface on this line card is experiencing a hardware-related issue. No loss of data or data corruption should occur. Packets should continue to be forwarded because this error will occur only with a hardware failure.

Recommended Action If this error recurs, verify whether the failed hardware is the SIP or the SPA. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_BAD_CHAN_NUM: [chars] [chars] - An error condition on the SPA data bus has occurred.

Explanation An error condition on the SPA data bus has occurred. This condition can be caused by a software fault only.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_BAD_CNTR_WORD: [chars] [chars] - An error condition on the data bus between the SPA and the SIP has occurred.

Explanation An error condition has occurred on the data bus between the SPA and the SIP. Symptoms of this error include data corruption or a short duration of data loss. In addition, the interface may lock up.

Recommended Action If this error recurs, verify whether the failed hardware is the SIP or the SPA. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_CALENDAR_LEN: [chars] [chars] - An error condition on the data bus between the SPA and the SIP has occurred.

Explanation An error condition on the data bus between the SPA and the SIP has occurred. This condition results from a software fault.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_CRTL_WD_NO_DIP4: [chars] [chars] - An error condition on the data bus between the SPA and the SIP has occurred.

Explanation This message points to an error condition on the SPA data bus. Symptoms of this error include data corruption or a short duration of data loss.

Recommended Action If this error recurs, verify whether the failed hardware is the SIP or the SPA. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_FIFO_STATUS_BUS: [chars] [chars] - FIFO status bus out of frame condition has occurred.

Explanation The data bus interface on this line card is experiencing a hardware-related issue. When this condition is occurring, the interface will be down or may not forward any traffic. This error will occur only with a hardware failure.

Recommended Action If this error recurs, verify whether the failed hardware is the SIP or the SPA. If supported by the platform, try running diagnostics on the suspected hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_OUT_OF_FRAME: [chars] [chars] - A data bus out of frame error condition has occurred

Explanation An error has occurred on the data bus between the SPA and the SIP. When this condition is occurring, the interface will be down or may not forward any traffic. This error will only occur with a hardware failure.

Recommended Action Power down and reseat the card. If this error recurs, verify whether the failed hardware is the SIP or the SPA. If supported by the platform, try running diagnostics on the suspected hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_SEQUENCE: [chars] [chars] - A sequence error has occurred.

Explanation A sequence error has occurred on the data bus between the SPA and the SIP. When this condition is occurring, a short duration of packet loss may be noticed. This condition may indicate a developing hardware failure. This error should occur very infrequently during normal operation and should not occur when no changes are made to the configuration. This error will occur only with a hardware failure.

Recommended Action If this error recurs, verify whether the failed hardware is the SIP or the SPA. If supported by the platform, try running diagnostics on the suspected hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_SINGLE_DIP2_PARITY: [chars] [chars] - A single DIP 2 parity error on the FIFO status bus has occurred.

Explanation The data bus interface on this line card is experiencing a hardware-related issue. Some packets may be dropped. This error will occur only with a hardware failure.

Recommended Action If this error recurs, verify whether the failed hardware is the SIP or the SPA. If supported by the platform, try running diagnostics on the suspected hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_SINGLE_DIP4_PARITY: [chars] [chars] - A single DIP4 parity error has occurred on the data bus.

Explanation A single parity error has occurred on the data bus between the SPA and the SIP. When this condition is occurring, a short duration of packet loss or symptoms resulting from data corruption may occur. This condition may indicate a developing hardware failure. This error should occur very infrequently during normal operation and should not occur when no changes are made to the configuration.

Recommended Action Power down and reseal the card. If this error recurs, verify whether the failed hardware is the SIP or the SPA. If supported by the platform, try running diagnostics on the suspected hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_SINK_FIFO_OVERFLOW: [chars] [chars] - An error condition on the data bus between the SPA and the SIP has occurred.

Explanation An error condition on the data bus between the SPA and the SIP has occurred. Possible causes include misconfiguration of maxburst parameters, incorrect FIFO sizing, or improper FIFO threshold settings.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. You may need to load a more recent version of the software. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_SINK_FIFO_UNDERRUN: [chars] [chars] - An error condition on the data bus between the SPA and the SIP has occurred.

Explanation An error condition on the data bus between the SPA and the SIP has occurred. Possible causes include misconfiguration of maxburst parameters, incorrect FIFO sizing, or improper FIFO threshold settings.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. You may need to load a more recent version of the software. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_DATABUS-3-SPI4_UNALIGNED_BURST: [chars] [chars] - An error on the data bus has occurred.

Explanation Under normal conditions, the transitions from the data burst state to payload control or idle control are possible only on integer multiples of 8 cycles or upon the end of a packet. This error happens if the modelware (MW) bit flips on the bus with coincidental good 4-bit diagonal interleave parity (dip4) or due to a malfunctioning source.

Recommended Action Power down and reseal the card. If this error recurs, verify whether the failed hardware is the SIP or the SPA, because this error will occur only with a hardware failure. If supported by the platform, try running diagnostics on the suspected hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number errors spi4** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_EEPROM Messages

This section contains shared port adapter (SPA) EEPROM messages.

SPA_EEPROM-3

Error Message %SPA_EEPROM-3-FIELD_NOT_FOUND: [chars]: Failed to find content of field type [hex] with data size = [dec] bytes. The EEPROM might require an update.

Explanation The system failed to find the content of the specified field type from the SPA EEPROM. The format of the EEPROM of the specified SPA might not be up to date.

Recommended Action Retry the operation. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show idprom module slot-number/subslot-number dump** command or the **show diag subslot slot-number/subslot-number** command (depending on the support of the platform) to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_EEPROM-3-FORMAT_ERROR: [chars]: [chars]. The EEPROM might require an update.

Explanation A format error has been detected in the EEPROM of the specified SPA. The type of error is specified in the message.

Recommended Action Retry the operation. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show idprom module slot-number/subslot-number dump** command or the **show diag subslot slot-number/subslot-number** command (depending on the support of the platform) to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_EEPROM-3-READ_FAILED: Failed to read the EEPROM content of [chars] in [chars] (offset=[hex], num_byte=[int])

Explanation The system failed to read the EEPROM content of the specified SPA with the specified offset value and number of bytes to read.

Recommended Action Retry the operation. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show idprom module slot-number/subslot-number dump** command or the **show diag subslot slot-number/subslot-number** command (depending on the support of the platform) to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_EEPROM-3-RPC_FAILED: Failed to send RPC message to [chars] EEPROM of [chars] in [chars] - [chars]

Explanation The system failed to send an RPC message to read or write the EEPROM of the specified SPA. The cause of the error condition is shown in the message.

Recommended Action Retry the operation. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_EEPROM-3-SET_WR_PROTECT_FAILED: [chars]: Failed to [chars] the EEPROM write protect mode on [chars].

Explanation The system failed to enable or disable the write protect mode for the SPA EEPROM on the specified device. This might happen if the device were busy performing other tasks.

Recommended Action Retry the operation. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show idprom module slot-number/subslot-number dump** command or the **show diag subslot slot-number/subslot-number** command (depending on the support of the platform) to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_EEPROM-3-SW_ERROR: NULL

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_EEPROM-3-WRITE_FAILED: Failed to write the EEPROM content for [chars] in [chars] (offset=[hex], num_byte=[int])

Explanation The system failed to write data into the EEPROM of the specified SPA with the specified offset value and number of bytes to write.

Recommended Action Retry the operation. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show idprom module slot-number/subslot-number dump** command or the **show diag subslot slot-number/subslot-number** command (depending on the support of the platform) to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_EEPROM-4

Error Message %SPA_EEPROM-4-CANNOT_UPDATE: [chars]: EEPROM data cannot be updated at this moment because the SPA is not in service.

Explanation The EEPROM update operation cannot be performed because the specified SPA could have been in an out-of-service state, an admin down state, or is trying to get initialized.

Recommended Action Retry the operation when the SPA is in service. Check the operational status of the SPA with the **show hw-module subslot slot-number/subslot-number oir** command. If the SPA is shown to be in the out-of-service state, correct the specified problem before the retry to update EEPROM. If the state shown is admin down, reenable the SPA by entering the **no hw-module subslot slot-number/subslot-number shutdown** command.

Error Message %SPA_EEPROM-4-DATA_TRUNCATED: [chars]: Data will be truncated for field type [hex] - size ([int] bytes) too big for this field type ([int] bytes)

Explanation The provided data to be written into the specified field type of the SPA EEPROM is too big. The data will be truncated to fit into the allowed space.

Recommended Action Retry the operation with a data size that will fit into the specified size for the field type.

SPA_ETHER Messages

This section contains 4-port 10/100, 2-Port 10/100/1000 Ethernet shared port adapter (SPA) messages.

SPA_ETHER-1

Error Message %SPA_ETHER-1-ALLOCFAIL: Subslot [dec]/[dec], [chars] allocation failure ([chars])

Explanation The router has failed to allocate sufficient memory for a software module on the Ethernet SPA located in the specified subslot. The error message indicates the modular services card slot, the SPA subslot, the SPA type and the name of the software module.

Recommended Action Perform an OIR of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the MSC. Enter the **show memory summary** command to attempt to determine the cause of the error. Reduce system activity to reduce memory demands. If conditions warrant, upgrade to a larger memory configuration. If you require further assistance, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_ETHER-3

Error Message %SPA_ETHER-3-HW_ERROR: Subslot [dec]/[dec], [chars] Hardware device error ([chars]) detected, reactivating the SPA

Explanation An internal hardware device error has occurred on the Ethernet SPA. The message text specifies the modular services card slot, the SPA subslot, the SPA type, and the name of the hardware device. The SPA has been deactivated and reactivated to resolve the problem. If the error occurs more than five times within an hour, no further attempts to reactivate the SPA will be made. This condition is most likely due to an unrecoverable hardware failure.

Recommended Action Perform an OIR operation of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the MSC. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show diag** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-INITFAIL: Subslot [dec]/[dec], [chars] initialization failure ([chars])

Explanation Initialization of an internal device on the Ethernet SPA in the specified subslot has failed. The message text specifies the modular services card slot, the SPA subslot, the SPA type, and the name of the device that failed to initialize. The message also provides the interface name and other details about the error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-INVALID_PORT: Subslot [dec]/[dec], [chars] Incorrect port number ([dec]) specified for SPA

Explanation An internal error has been encountered by the Ethernet software driver for the SPA. The message text specifies the modular services card slot, the SPA subslot, the SPA type, and the invalid interface port number. This condition is caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-SEND_MSG: Subslot [dec]/[dec], [chars] Failed to notify driver process about a line state change in one of the SPA interfaces

Explanation A state change has occurred on the line of one of the interface ports on the Ethernet SPA. The message text specifies the modular services card slot, the SPA subslot, and the SPA type. Information to identify the affected interface port on the SPA is not provided. The affected interface might not function properly.

Recommended Action Perform an OIR operation of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the MSC. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show diag** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-SFP_EEPROM_READ_FAIL: [chars], [chars] initialization failure ([chars])

Explanation The pluggable transceiver module (SFP) on the Ethernet SPA could not be initialized because the EEPROM on the pluggable transceiver module (SFP) could not be read. The error message specifies the modular services card slot, the SPA subslot, the SPA port, the SPA type and the name of the device that failed to initialize.

Recommended Action Ensure that the pluggable transceiver module (SFP) is properly seated in the SPA port by reseating it. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply

clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-SFP_SEC_FAIL: [chars], [chars] initialization failure ([chars])

Explanation The pluggable transceiver module (SFP) on the Ethernet SPA could not be initialized because it could not pass the SFP security check. The error message specifies the modular services card slot, the SPA subslot, the SPA port, the SPA type and the reason for the security check failure.

Recommended Action Try replacing the pluggable transceiver module (SFP) with a Cisco approved pluggable transceiver module (SFP). If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-SPI4_NOT_IN_SYNC: Subslot [dec]/[dec], [chars] SPI4 internal interface is not synchronized with the modular services card for the SPA located in the specified subslot.

Explanation The SPI4 internal path between the modular services card and the SPA is not synchronized. The message text specifies the modular services card slot, the SPA subslot, and the SPA type. This error indicates that either the SPA is not properly inserted into the MSC or a hardware failure has occurred on the SPA.

Recommended Action Perform an OIR operation of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the MSC. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show diag** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-TCAM_ACCESS_FAILURE: Subslot [dec]/[dec], [chars]
Failure in accessing the TCAM device ([chars], status = [hex])

Explanation An attempt to access the TCAM device on the SPA has failed. The message text specifies the modular services card slot, the SPA subslot, and the SPA type. This condition indicates a hardware failure.

Recommended Action Perform an OIR operation of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the MSC. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show diag** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-TCAM_INST_CREATE_FAIL: Subslot [dec]/[dec], [chars]
Failed to create the TCAM management instance (status = [hex])

Explanation The SPA failed to create the internal data structures that are required to manage TCAM entries. The message text specifies the modular services card slot, the SPA subslot, and the SPA type. This condition indicates a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-TCAM_MAC_DA_TABLE_ACCESS_FAILURE: Subslot [dec]/[dec], [chars]
Failure in accessing the TCAM destination MAC address table ([chars])

Explanation The TCAM destination MAC address table for the SPA interface could not be accessed. The message text specifies the modular services card slot, the SPA subslot, the SPA type, and the affected interface number. This error indicates either a software error or a hardware failure.

Recommended Action Perform an OIR operation of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the MSC. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show diag** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply

clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-TCAM_MAC_DA_TABLE_INVALID: Subslot [dec]/[dec], [chars]
Destination MAC address filter table is invalid for interface [dec]

Explanation The internal data structure that is used by the SPA to manage the destination MAC address filtering for an interface port is invalid. The message text specifies the modular services card slot, the SPA subslot, the SPA type, and the interface port. This condition indicates a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-TCAM_VLAN_TABLE_ACCESS_FAILURE: Subslot [dec]/[dec],
[chars] Failure in accessing the TCAM VLAN address table ([chars])

Explanation An attempt to access the TCAM VLAN table for the SPA has failed. The message text specifies the modular services card slot, the SPA subslot, the SPA type, and the affected interface. This condition indicates either a software error or a hardware failure.

Recommended Action Perform an OIR operation of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the MSC. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show diag** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-3-TCAM_VLAN_TABLE_INVALID: Subslot [dec]/[dec], [chars]
VLAN filter table is invalid for interface [dec]

Explanation The internal data structure used by the SPA to manage the VLAN filtering is invalid. The SPA supports a separate VLAN table for each interface. The message text specifies the modular services card slot, the SPA subslot, the SPA type, and the affected interface. This condition indicates a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_ETHER-4

Error Message %SPA_ETHER-4-BAY_NOT_FOUND: Subslot [dec]/[dec], [chars] Failed to get the bay information

Explanation A software data structure could not be retrieved for the subslot. The message text specifies the modular services card slot, the affected subslot, and the SPA type. This condition indicates a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-4-NOPROCESS: Subslot [dec]/[dec], [chars] creation of [chars] process failed

Explanation A software process to manage the SPA could not be created. The message text specifies the modular services card slot, the SPA subslot, the SPA type, and the name of the process. This error message will be accompanied by a Cisco IOS software error message that gives more information about the cause for this failure.

Recommended Action Enter the **show memory summary** command to attempt to determine the cause of the error. Reduce system activity to reduce memory demands. If conditions warrant, upgrade to a larger memory configuration. If you require further assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact

your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-4-TCAM_MAC_DA_TABLE_FULL: Subslot [dec]/[dec], [chars] Destination MAC address filter table is full for interface [dec], MAC address = [enet], mask = [enet]

Explanation The TCAM destination MAC address table for an interface on the SPA is full. The SPA supports a separate MAC table for each interface. The message text specifies the modular services card slot, the SPA subslot, the SPA type, the affected interface, and the MAC address. The specified MAC address will not be added to the TCAM table.

Recommended Action Attempt to remove some of the registered MAC addresses for the interface by changing the interface configuration. To verify the MAC addresses currently in use by an interface, enter the **show controllers** command.

Error Message %SPA_ETHER-4-TCAM_VLAN_TABLE_FULL: Subslot [dec]/[dec], [chars] VLAN filter table is full for interface [dec], VLAN identifier = [dec]

Explanation The TCAM VLAN filter table for an interface on the SPA is full. The SPA supports a separate MAC table for each interface. The message text specifies the modular services card slot, the SPA subslot, the SPA type, the affected interface, and the VLAN entry that failed. The specified VLAN identifier will not be added to the TCAM table.

Recommended Action Attempt to remove some of the registered VLANs for the interface by changing the interface configuration. To verify the VLAN IDs currently in use by an interface, enter the **show controllers** command.

Error Message %SPA_ETHER-4-TEMPERATURE_READ_FAIL: Subslot [dec]/[dec], [chars] Failed to read current temperature from sensor [dec], (status = [hex])

Explanation The current temperature reading on the SPA cannot be determined. The message text specifies the modular services card slot, the SPA subslot, and the SPA type. This condition indicates a hardware failure.

Recommended Action Perform an OIR operation of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the MSC. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show diag** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_ETHER-4-VOLTAGE_READ_FAIL: Subslot [dec]/[dec], [chars] Failed to read the current voltage for [chars] supply

Explanation The current voltage reading for the SPA voltage supply cannot be determined. The error message indicates the modular services card slot, the SPA subslot, the SPA type and the identification of the voltage supply. This error indicates a hardware failure.

Recommended Action Perform an OIR operation of the SPA located in the specified subslot. Before removing the SPA, enter the **hw-module subslot stop** command. Remove the SPA, wait 5 seconds, and reinsert the SPA into the MSC. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show diag** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_ETHER-6

Error Message %SPA_ETHER-6-TCAM_VLAN_FILTERING_DISABLED: Subslot [dec]/[dec], [chars] TCAM VLAN filter table is full, disabling VLAN filtering for interface [dec]

Explanation VLAN filtering for the specified interface has been disabled because the VLAN table is full. This means that the SPA will transmit frames destined for any VLAN ID to the route processor. The SPA supports a separate VLAN table per interface. The error message indicates the modular services card slot, the SPA subslot, the SPA type, and the affected interface.

Recommended Action To verify the VLAN IDs that are currently in use by an interface, enter the **show controllers** command. You can remove some of the existing VLANs from the interface configuration to reactivate VLAN filtering on the indicated interface.

Error Message %SPA_ETHER-6-TCAM_VLAN_FILTERING_ENABLED: Subslot [dec]/[dec], [chars] Enabling VLAN filtering for interface [dec]

Explanation VLAN filtering for the specified interface is enabled. The SPA supports a separate VLAN table per interface. The error message indicates the modular services card slot, the SPA subslot, the SPA type, and the affected interface.

Recommended Action VLAN filtering has been reactivated, and the VLAN table is no longer full. This means that the SPA will transmit frames to the route processor only for those VLAN IDs configured on the specified interface. To verify the VLAN IDs that are currently in use by an interface, enter the **show controllers** command.

SPA_FPD Messages

This section contains shared port adapter (SPA) field-programmable device (FPD) messages.

SPA_FPD-2

Error Message %SPA_FPD-2-PWR_NO_OK: SPA POWER OK signal is not asserted for [chars] in [chars] for FPD upgrade.

Explanation A check for the SPA POWER OK signal assertion failed. This might indicate a hardware problem with the SPA.

Recommended Action Contact your Cisco technical support representative to have the SPA replaced.

SPA_FPD-3

Error Message %SPA_FPD-3-GETVER_FAILED: Failed to get FPD version for SPA in subslot [dec]: [chars].

Explanation Failed to get a field-programmable device (FPD) version due to either an IPC problem or an operation error. The card will be disabled.

Recommended Action Check the SPA seating and the SPA status. Ensure compatibility among FPD, Cisco IOS, and possible SPA firmware by comparing the output of the **show hw-module subslot fpd** command with Cisco IOS release notes. Obtain the Cisco IOS version by entering the **show version** command.

Error Message %SPA_FPD-3-JTAG_ERR: [chars]: Failed to program a [chars] FPD image file. Error code [hex].

Explanation An error occurred while attempting to program a SPA FPGA using the JTAG bus. It could be caused by an outdated carrier card FPGA or SPA connection, or it may also result from an internal software error.

Recommended Action Reseat the SPA and retry the upgrade. Verify that the carrier card FPGA is current. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_FPD-3-PWR_OFF_FAILED: Failed to power-off [chars] in [chars] for FPD offline upgrade within [dec] seconds.

Explanation The power-off operation of the indicated SPA failed within the number of specified seconds. This might indicate that the waiting time for the SPA to power off is not long enough, which can happen if the SPA has many interfaces configured.

Recommended Action Retry the upgrade operation again later. If the problem persists, remove the configuration of the SPA before retrying the upgrade operation.

Error Message %SPA_FPD-3-SMM665_CONF_WRITE_ERROR: [chars]: Failed to write new configuration into SMM665 device.

Explanation An error occurred while attempting to write to the SMM665 through the Cisco 2-wire (C2W) serial interface from the SPA carrier card. The C2W serial interface may be busy.

Recommended Action Retry the upgrade operation again later. If the problem persists, remove the configuration of the SPA before retrying the upgrade operation.

Error Message %SPA_FPD-3-SW_ERROR: NULL

Explanation This is an internal software error, which should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_FPD-3-UPGRADE_FAILED: Failed to upgrade FPD for SPA in subslot [dec], [chars].

Explanation The FPD image upgrade operation has failed. This error is specific to the SPA. The cause could be a wrong image file, an error in accessing FPGA storage, or a physical interrupt, such as a power failure or card removal. Depending on the SPA type and error cause, the card could be in an unusable status. Normally the system automatically reattempts the upgrade and shuts down the card after repeated failures.

Recommended Action Do not interrupt the system while an FPD upgrade is in progress. Obtain the matching FPD package. Refer to the Cisco IOS release notes for more information on obtaining the correct FPD package for the SPA. Review the output of the RP FPD logs.

SPA_HA Messages

This section contains SPA high availability (HA) messages.

Error Message %SPA_HA-3-BADSWITCHOVER: [chars]: Invalid HA event detected: [chars]

Explanation An HA switchover event occurred before initialization was finished.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_IPSEC Messages

This section contains IPsec VPN SPA (SPA-IPSEC) messages.

Error Message %SPA_IPSEC-3-BOOT_FAIL: [chars]: [chars].

Explanation The SPA failed to boot up for the specified reason.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_IPSEC-3-BRDTYPE: Incorrect jacket card board type [dec] detected.

Explanation The detected SIP/SSC module type is not a C7600-SSC-400 or C7600-SSC-600.

Recommended Action Install the module carrier type that supports your SPA.

Error Message %SPA_IPSEC-3-OVERRIDE: [chars]: Overriding bundled firmware with ssc[int]-[chars].

Explanation The specified file was used instead of a bundled file. This is a debugging feature.

Recommended Action This is an informational message only. No action is required.

Error Message %SPA_IPSEC-3-PROC_FAIL: [chars]: [chars] Process creation failed.

Explanation Cannot allocate memory for the specified process.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_IPSEC-3-PWRCYCLE: SPA ([dec]/[dec]) is being power-cycled (Module not responding to keep-alive polling).

Explanation The SPA has stopped responding to keepalive polling from the carrier card. The SPA has been power-cycled.

Recommended Action Once the SPA is back on line, retrieve the crash dump data that was saved on the bootflash of the supervisor engine. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_IPSEC-3-QUACK: %s: Skipping quack authentication for hw ver %d.%d.

Explanation Quack authentication was not performed for some prototype boards.

Recommended Action No action is required.

Error Message %SPA_IPSEC-3-SKIP_SPI: %s: Skipping SPI Init.

Explanation SPI initialization will not be performed. This is a debugging feature.

Recommended Action No action is required.

Error Message %SPA_IPSEC-3-SPA_BUS: %s: SPA Bus timeout.

Explanation A timeout occurred while trying to access the SPA.

Recommended Action Reseat the board and try again. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA-IPSEC-2G Messages

This section contains IPsec VPN SPA (SPA-IPSEC-2G) messages.

SPA-IPSEC-2G-2

Error Message %SPA_IPSEC-2G-2-ACE_PKA_KAT_FAILURE: PKA: Known Answer Test failure: [chars]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_IPSEC_2G-2-ACEIKEADRVPKRM: Decode of RSA Private Key [dec] failed

Explanation Data error in PKI certificate.

Recommended Action Verify certificate server for proper operation.

Error Message %SPA_IPSEC_2G-2-ACEIKEAPRVCREDRV: Driver refused RSA Private Key

Explanation Attempt to create too many PKI sessions on SPA.

Recommended Action Reduce system load.

Error Message %SPA_IPSEC_2G-2-ACEIKEAPRVDRV: Driver refused RSA Private Key

Explanation Attempt to create too many PKI sessions on SPA.

Recommended Action Reduce system load.

Error Message %SPA_IPSEC_2G-2-ACEIKEAPVRMDRV: Decode of RSA Private Key [dec] failed

Explanation Data error in PKI certificate.

Recommended Action Verify certificate server for proper operation.

Error Message %SPA_IPSEC_2G-2-ACENVRAMCSUM: NVRAM Checksum failed

Explanation Error reported by firmware.

Recommended Action Contact TAC.

Error Message %SPA_IPSEC_2G-2-ACENVRAMWR: Write to nvram failed

Explanation Error reported by firmware.

Recommended Action Contact TAC.

Error Message %SPA-IPSEC-2G-2-ACESCPERROR: Null MAC address pointer in SCP module

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA-IPSEC-2G-3

Error Message %SPA_IPSEC_2G-3-ACEI0BADPARAM: PcpManCreateTunn: cannot create tunnel with expiring Sa

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, contact TAC with the output of show tech-support command .

Error Message %SPA-IPSEC-2G-3-ACEI0TCAMFAILED: SpdSpInstall: cannot install Sp [dec]: TmInsertSp failed

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-3-ACEI1BADPARAM: SpdSpInstall: cannot install generic SP [dec] with non-zero priority

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-3-ACEI10OUTOFSA: PcpQOpCreSaBegin: cannot create new Sa using SpdMan

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools

and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_IPSEC_2G-3-ACEI10OUTOFCME: PcpManCreateAcl: cannot allocate new Acl for aclId=[int]

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_IPSEC_2G-3-ACEI11NESTOVERFLOW: SpdSaAddTmInsCb: cannot have more than [dec] pending nested callbacks from TcamMan

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-3-ACEI11OUTOFSEL: PcpAclGetSpSelSet: cannot clone SelSet for ACL [dec]

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-3-ACEI2BADPARAM: PcpManUpdateFlow: cannot update flow [dec] with invalid ID

Explanation Configuration not downloaded correctly.

Recommended Action Can safely ignore.

Error Message %SPA-IPSEC-2G-3-ACEI12IDNOTINUSE: PcpManRemoveAcl: cannot remove non-existing access list [int]

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-3-ACEI12OUTOFSAPAR: SpdSaSetKeys: cannot allocate new SaPar for Sa [dec]

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-3-ACEI13IDINUSE: PcpManRemoveAcl: cannot remove access list [int] while in use

Explanation An error has been reported by the firmware.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-3-ACEI3OUTOFSEL: PcpQOpActSaBegin: cannot allocate selector set for outer Sa in flowId [dec]

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-3-ACEI14BADCMEID: PcpSpdCreateCme: cannot create Cme with ID=[dec]: too large

Explanation Configuration not downloaded correctly.

Recommended Action Remove and reapply crypto map. If the failure persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Error Message %SPA-IPSEC-2G-4-FIPSCHECK3: FIPS Failed Packet Comparison.

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-FIPSCHECK4: FIPS Test Completed Successfully.

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-ICPUFRAG1: PktReasmSetAction failed.

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-ICPUPP2: SaCheckSelectors: Illegal pkt, no valid SA

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-ICPUPP3: Illegal pkt dst:[dec].[dec].[dec].[dec] proto:[dec] spi:[hex], no match on SA SPI [hex].

Explanation No matching SA was found for the received encrypted packet. This message is most likely to occur during rekeying when the inbound SA is not yet established.

Recommended Action If the message persists and packets are being lost, check whether the CPU is overloaded or the crypto engine is oversubscribed.

Error Message %SPA-IPSEC-2G-4-ICPUPP4: Illegal pkt dst:[dec].[dec].[dec].[dec] proto:[dec] spi:[hex], no match on SA dst[dec].[dec].[dec].[dec]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-ICPUPP8: Illegal clear pkt src:[dec].[dec].[dec].[dec] dst:[dec].[dec].[dec].[dec] proto:[dec].

Explanation Clear packets were received that should have been encrypted.

Recommended Action Check whether the remote peer has a correct security policy and SA to encrypt the packets. Compare IP addresses of the packets with crypto ACLs.

Error Message %SPA-IPSEC-2G-4-ICPUPP9: Packet src:[dec].[dec].[dec].[dec] dst:[dec].[dec].[dec].[dec] seq num:[hex] failed replay check last seq num:[hex] for SA:[hex].

Explanation IPsec packets have failed the anti-replay check. A common cause is the use of QoS in your network. With QoS, lower priority packets can arrive late, missing the anti-replay check window. When this condition occurs, higher level protocols can request retransmission so that functionality is not lost. Time-sensitive protocols, such as voice traffic, might be degraded due to dropped or late packets.

Recommended Action Increase the anti-replay window size. If anti-replay checking is not needed, disable it. Display the SA with the given index - **show tacm ipr sa** .

Error Message %SPA-IPSEC-2G-4-ICPUPP10: Packet src:[dec].[dec].[dec].[dec] dst:[dec].[dec].[dec].[dec] proto ESP, but not SA proto!

Explanation The received packet's protocol does not match the SA protocol. The SA expects AH, but the packet uses ESP.

Recommended Action Check whether the negotiated protocol matches the configured transform sets of both peers. Contact TAC with outputs of **show crypto ipsec sas** command.

Error Message %SPA-IPSEC-2G-4-ICPUPP11: Packet src:[dec].[dec].[dec].[dec] dst:[dec].[dec].[dec].[dec] proto AH, but not SA proto!

Explanation The received packet's protocol does not match the SA protocol. The SA expects ESP, but the packet uses AH. Contact TAC with outputs of **show crypto ipsec sas** command.

Recommended Action Check whether the negotiated protocol matches the configured transform sets of both peers.

Error Message %SPA-IPSEC-2G-4-ICPUPP12: IPPE says IPsec, not pkt src:[dec].[dec].[dec].[dec] dst:[dec].[dec].[dec].[dec] proto:[dec]!

Explanation An error has been reported by the firmware.

Recommended Action No action.

Error Message %SPA-IPSEC-2G-4-ICPUPP13: Policy check failed for pkt src:[dec].[dec].[dec].[dec] dst:[dec].[dec].[dec].[dec] proto:[dec] SA index:[hex]

Explanation The decrypted packet does not match the security policy.

Recommended Action Check whether the security policy on both peers is symmetric.

Error Message %SPA-IPSEC-2G-4-ICPUPP14: Pkt src:[dec].[dec].[dec].[dec]
dst:[dec].[dec].[dec].[dec] proto:[dec] match deny; SA index [hex]

Explanation Auditable event: Policy check failed for inbound packet.

Recommended Action Check the crypto ACLs (whether the security policy on both peers is symmetric).

Error Message %SPA-IPSEC-2G-4-ICPUPP15: SecInfo [hex] doesn't match with SA [hex] SA index:[hex]

Explanation An unexpected and unsupported nesting of SA was detected.

Recommended Action Remove any nested SA.

Error Message %SPA-IPSEC-2G-4-ICPUPP16: Inner proto [dec] must be IPSec but is not

Explanation An unexpected and unsupported nesting of SA was detected.

Recommended Action Remove any nested SA.

Error Message %SPA-IPSEC-2G-4-ICPUSYSIPADDRADD: PktProcAddSysIpAddr: Unable to add local IP Addr [hex]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-ICPUSYSIPADDRDEL: PktProcAddSysIpAddr: Unable to delete local IP Addr [hex]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-ISAUNCA7: PktProcAtnModSas: Mismatch valid flag
unca:invalid index:[hex]

Explanation An error has been reported by the firmware.

Recommended Action For details enter the **show team ipr sa** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-RECOVERYDONE: CP Lockup Recovery - Done

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-RECOVERYFRAG: Ipfrag: Unable to transmit. CP Lockup Occured.

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA-IPSEC-2G-4-RECOVERYSTART: CP Lockup Recovery - Start (OCPU)

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_IPSEC_2G-4-SINGLEIP: Wrong type [dec] size:[dec].

Explanation Error reported by firmware.

Recommended Action No action.

Error Message %SPA_IPSEC_2G-4-SPDID: XcpuSetVlanSpdId: IpcAllocFailed

Explanation Crypto connect config could not be programmed correctly.

Recommended Action Remove and reapply crypto connect commands, and if problem persists, contact TAC.

Error Message %SPA-IPSEC-2G-4-XCPURECOVERY: Error Disabling CP

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA-IPSEC-2G-5

Error Message %SPA_IPSEC_2G-5-ACEPKADHGSHIDNOALL: PkaDhGenerateShared:DH session ID [dec] not allocated

Explanation Invalid crypto ID used, command rejected, likely due to high system load.

Recommended Action Reduce system load.

Error Message %SPA_IPSEC_2G-5-ACEPKADHGSIDINUSE: PKA: PkaDhGenerateSessionInt: DH session id [dec] already in use

Explanation Invalid crypto ID used, command rejected, likely due to high system load.

Recommended Action Reduce system load.

Error Message %SPA_IPSEC_2G-5-ACEPKADHGSINVID: PKA: PkaDhGenerateSessionInt: invalid DH session id [dec]

Explanation Possible software bug.

Recommended Action Contact TAC.

Error Message %SPA_IPSEC_2G-5-ACEPKAINITCMLP: BCM5820: Initialization complete

Explanation These messages are normal after SPA bootup.

Recommended Action Can ignore safely.

Error Message %SPA_IPSEC_2G-5-ACEPKANOBDESC: PKA: no data buffer descriptors available

Explanation Out of buffers for crypto operation.

Recommended Action Reduce system load.

Error Message %SPA_IPSEC_2G-5-ACEPKANOMOREDHRPS: PKA: no more DH groups available

Explanation Too many DH groups defined. Possible software error.

Recommended Action Contact TAC.

Error Message %SPA_IPSEC_2G-5-ACEPKAPOSTRSTDELAY: PKA: BCM5820 post reset delay

Explanation These messages are normal after SPA bootup.

Recommended Action Can ignore safely.

Error Message %SPA_IPSEC_2G-5-ACEPKARESUB: BCM5820: Resubmitting crypto request

Explanation These messages are normal after SPA bootup.

Recommended Action Can ignore safely.

Error Message %SPA_IPSEC_2G-5-ACEPKARESUBPK: BCM5820: Resubmitting PK request [hex]

Explanation These messages are normal after SPA bootup.

Recommended Action Can ignore safely.

Error Message %SPA_IPSEC_2G-5-ACEPKARSARMPBUSYID: PKA: can't remove busy RSA private session [dec]

Explanation Trying to delete a busy RSA session. May be caused by out-of-order messaging on a highly loaded system.

Recommended Action Reduce system load.

Error Message %SPA_IPSEC_2G-5-ACEPKARST: PKA: BCM5820 in reset

Explanation These messages are normal after SPA bootup.

Recommended Action Can ignore safely.

Error Message %SPA_IPSEC_2G-5-ACEPKARSTCOMPL: BCM5820: Reset complete

Explanation These messages are normal after SPA bootup.

Recommended Action Can ignore safely.

SPA-IPSEC-2G-6

Error Message %SPA_IPSEC-2G-6-ACEPKAHWCRNGT: PKA: HW RNG has duplicate data, discarding

Explanation Duplicate random data detected, duplicate data was discarded.

Recommended Action This is normal operation if seen rarely. Contact TAC if seen frequently.

Error Message %SPA_IPSEC_2G-6-ACEPKAPKNOMCR2: PKA: no Public Key MCRs available

Explanation Out of buffers for crypto operation.

Recommended Action Reduce system load.

Error Message %SPA-IPSEC-2G-6-ACEPKARNGDUP: PKA: A pseudo-random number was generated twice in succession. [hex][hex]; 0Unrecognized format 'x%p' 0Unrecognized format 'x%p' idx:[hex]

Explanation An error has been reported by the firmware

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_IPSEC_2G-6-ACEPKARNG: PKA: seed key is same as the seed, discarding

Explanation Duplicate random data detected, duplicate data was discarded.

Recommended Action This is normal operation if seen rarely. Contact TAC if seen frequently.

Error Message %SPA_IPSEC_2G-6-ACEPKARNGDUP: PKA: A pseudo-random number was generated twice in succession. [hex][hex]; 0Unrecognized format 'x%p' 0Unrecognized format 'x%p' idx:[hex]

Explanation Duplicate random data detected, duplicate data was discarded.

Recommended Action This is normal operation if seen rarely. Contact TAC if seen frequently.

Recommended Action

Error Message %SPA-IPSEC-2G-6-ACEPKARNGKAT: PKA: RNG failed KAT

Explanation Pseudo-RNG known-answer-test failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message

SPA_MIB Messages

This section contains SPA MIB messages.

Error Message %SPA_MIB-4-DATA_LEN: [chars]: MIB message lengths mismatch([chars]), expecting [dec] bytes, receiving [dec].

Explanation The MIB updates expected more data than was received.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPAN Messages

This section contains Switched Port Analyzer (SPAN) messages.

SPAN-0

Error Message %SPAN-0-DISTRIBUTED_EGRESS_INCOMPATIBLE: Distributed egress SPAN is not recommended up to certain hardware revision of WS-X6708-10GE

Explanation The distributed egress SPAN feature is not supported on WS-X6708-10GE hardware revisions earlier than version 1.4. By default, the system will be in centralized mode. Attempting to enable the distributed feature will cause this warning message, but will not prevent the feature from being configured.

Recommended Action Disable distributed egress SPAN by entering the **no monitor session egress replication-mode distributed** command in global configuration mode. For further caveats on the distributed egress SPAN feature, see the Cisco IOS software release notes and search for bug ID CSCso05127 using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl.

SPAN-3

Error Message %SPAN-3-REDIR_HW_UNAVAIL: Redirect hardware resource not available [chars]

Explanation The system could not allocate resource for redirecting BPDUs. A possible cause of this condition is that all available redirect registers in the policy feature card (PFC) are used by other features.

Recommended Action Free up a redirect register in the PFC by unconfiguring features that use redirect registers and retry allowing BPDUs for SPAN service modules. If protocol tunneling is configured on any ports, remove the protocol tunneling configuration from all ports to free up one redirect register.

Error Message %SPAN-3-SESS_DEC_CFG: SPAN hardware resource is in use. [chars]

Explanation The system could not allocate a SPAN hardware resource for the feature specified in the message. It is possible that a distributed EtherChannel has been configured in the system that is using SPAN hardware resource.

Recommended Action Remove one or all of the distributed EtherChannels from the system and retry the operation.

Error Message %SPAN-3-SESS_HW_UNAVAIL: SPAN hardware resource not available [chars]

Explanation The system could not allocate a SPAN hardware resource for the feature specified in the message. A possible cause of this condition is that all available SPAN source sessions are already in use. The system can be configured with a maximum of two SPAN source sessions or one RSPAN source session

Recommended Action Remove one of the existing SPAN or RSPAN source sessions and retry the operation.

SPAN-4

Error Message %SPAN-4-DISTRIBUTED_EGRESS_INCOMPATIBLE: Distributed egress SPAN is not recommended up to certain hardware revision of WS-X6708-10GE

Explanation The distributed egress SPAN feature is not supported on hardware revisions earlier than v1.4 of WS-X6708-10GE. By default the system will be in centralized mode. An attempt to enable the distributed feature will cause this warning message but will not prevent the feature from being configured.

Recommended Action Disable distributed egress SPAN by entering the **no monitor session egress replication-mode distributed** command in global configuration mode. See the documentation release notes and DDTs CSCso05127 for more information on the caveats exposed by this feature.

SPAN-5

Error Message %SPAN-5-ERSPAN_ADJ_TUNNEL: ERSPAN Destination behind a tunnel.
Shutting down session [dec]

Explanation The next hop to the IP address specified as the ERSPAN destination lies behind a tunnel. This configuration is not supported. The ERSPAN session is shut down when such a configuration is detected.

Recommended Action Specify another ERSPAN destination IP address that does not have a tunnel as the next-hop adjacency.

Error Message %SPAN-5-PKTCAP_START: Packet capture session %d started

Explanation A packet capture session was activated manually or after the scheduled time.

Recommended Action Stop the capture if it is not required. By configuring the rate-limit value in the **monitor session type** capture configuration mode, you can change the rate of packets reaching the CPU for capture. If the capture traffic rate is too high, you can drop protocol packets.

Error Message %SPAN-5-PKTCAP_START_FAILED: Packet capture session [dec] failed to start. [chars]

Explanation Packet capture is activated by user or after the scheduled time but failed to start.

Recommended Action Correct the failure reason and re-activate or re-schedule the capture.

Error Message %SPAN-5-PKTCAP_STOP: Packet capture session %d ended %s, %d packets captured

Explanation Packet capture was stopped. The capture stops if the capture buffer is full or if the user manually stops the capture or if a capture timeout occurs.

Recommended Action You can view the capture on the console or you can export the capture buffer using the **monitor capture export buffer** command. Delete the capture session if it is no longer required.

SPAN-6

Error Message %SPAN-6-SPAN_EGRESS_REPLICATION_MODE_CHANGE: Span Egress HW Replication Mode Change Detected. Current replication mode for [chars] is [chars]

Explanation When autodetection of egress SPAN replication mode is enabled, the system will transition any available sessions to centralized mode when a distributed egress SPAN-incapable line card is inserted. The system will transition back the available sessions to distributed egress SPAN mode when the last distributed egress SPAN-incapable line card is removed.

Recommended Action To prevent a session switching back to distributed egress SPAN mode, enter the **monitor session egress replication-mode centralized** command.

SPANTREE Messages

This section contains Spanning Tree Protocol (STP) messages.

SPANTREE-2

Error Message %SPANTREE-2-BRIDGE_ASSURANCE_BLOCK: Bridge Assurance blocking port %s%s.

Explanation Bridge Protocol Data Units (BPDUs) were not received from a neighboring switch on the interface that has spanning tree Bridge Assurance (BA) configured. As a result, the interface was moved to the spanning tree blocking state.

Recommended Action Disable BA on the interface or make sure that the interface is connected to a L2 switch or bridge device.

Error Message %SPANTREE-2-BRIDGE_ASSURANCE_UNBLOCK: Bridge Assurance unblocking port %s%s.

Explanation The indicated interface has been restored to the normal spanning tree state after receiving BPDUs from the neighboring Layer 2 switch or bridge.

Recommended Action No action is required.

Error Message %SPANTREE-2-PVST_PEER_BLOCK: PVST+ peer detected on port %s

Explanation Although the Multiple Spanning Tree Protocol (MSTP) Per-VLAN Spanning Tree Plus (PVST+) simulation feature is disabled, PVST+ BPDU(s) are detected on the indicated interface.

Recommended Action Make sure the PVST+ switch is removed from the network or enable the MSTP PVST simulation feature.

Error Message %SPANTREE-2-PVST_PEER_UNBLOCK: Unblocking port %s

Explanation The indicated interface is no longer receiving the PVST+ BPDUs. The inconsistency is cleared and the interface has returned to normal operation.

Recommended Action No action is required.

Error Message %SPANTREE-2-PVSTSIM_OK: PVST Simulation inconsistency cleared on port [chars].

Explanation The listed interface is no longer receiving PVST BPDUs advertising information inconsistent with the CIST port information. The PVST simulation inconsistency condition is cleared and the interface will return to normal operation.

Recommended Action No action is required.

SPANTREE-3

Error Message %SPANTREE-3-PRESTD_NEIGH: pre-standard MST interaction not configured ([chars]). Please, configure: 'spanning-tree mst pre-standard' on ports connected to MST pre-standard switches.

Explanation The switch has received a prestandard multiple spanning-tree (MST) BPDU on a port that is not configured for prestandard MST BPDU transmission. The switch will automatically adjust its mode of operation on this port and will start sending prestandard BPDUs. However, this autodetection of prestandard neighbors is not 100 percent accurate and we recommended that you explicitly configure the port for prestandard MST BPDU transmission. This warning message will be displayed only once.

Recommended Action Configure the **spanning-tree mst pre-standard** command on all the ports that are connected to switches running the Cisco prestandard version of MST. We recommended that you migrate all the switches in the network to the IEEE standard MST version when it is possible.

SPANTREE-4

Error Message %SPANTREE-4-PORT_NOT_FORWARDING: [chars] [chars] [chars] [chars]

Explanation The port is not in a forwarding state and is not forwarding packets.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPANTREE-6

Error Message %SPANTREE-6-PORTADD_ALL_VLANS: [chars] added to all Vlans

Explanation The interface has been added to all VLANs

Recommended Action This is an informational message only. No action is required.

Error Message %SPANTREE-6-PORTDEL_ALL_VLANS: [chars] deleted from all Vlans

Explanation The interface has been deleted from all VLANs.

Recommended Action This is an informational message only. No action is required.

Error Message %SPANTREE-6-PORT_STATE: Port [chars] instance [dec] moving from [chars] to [chars]

Explanation The state of the specified spanning tree port has changed.

Recommended Action No action is required.

SPANTREE-7

Error Message %SPANTREE-7-PORTDEL_SUCCESS: [chars] deleted from Vlan [dec]

Explanation The interface has been deleted from the specified VLAN.

Recommended Action This is an informational message only. No action is required.

SPAN_ICC_ISSU Messages

This section contains SPAN intercard communication (ICC) in-service software upgrade (ISSU) messages.

SPAN_ICC_ISSU-3

Error Message %SPAN_ICC_ISSU-3-BUFFER: SPAN ICC ISSU client failed to get buffer for message, error %d

Explanation The SPAN ICC ISSU client was unable to get a buffer for building a negotiation message. As a result, it cannot send the negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %SPAN_ICC_ISSU-3-CAPABILITY: SPAN ISSU client %s

Explanation The SPAN ISSU client detected an error during capability negotiation. A mismatch exists in the client capability between the active and standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SPAN_ICC_ISSU-3-MSG_NOT_OK: SPAN ICC ISSU client message %d is not compatible

Explanation The SPAN ICC ISSU client received an incompatible message from the peer unit. Since the message is not compatible, it cannot be processed by this unit

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %SPAN_ICC_ISSU-3-MSG_SIZE: SPAN ICC ISSU client failed to get the message size for message %d

Explanation The SPAN ICC ISSU client was unable to calculate the message size for the message specified. The SPAN ICC ISSU client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %SPAN_ICC_ISSU-3-POLICY: SPAN ICC ISSU client message type %d is %s

Explanation The SPAN ICC ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %SPAN_ICC_ISSU-3-SEND_FAILED: SPAN ICC ISSU client failed to send a negotiation message, error %d

Explanation The SPAN ICC ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %SPAN_ICC_ISSU-3-SESSION: SPAN ICC ISSU client %s

Explanation SPAN ICC ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SPAN_ICC_ISSU-3-TRANSFORM: SPAN ICC ISSU client %s transform failed, error %s

Explanation The SPAN ICC ISSU client could not transform the message. If the transmit transformation failed, the ICC message cannot be sent to the peer unit. If the receive transformation failed, the ICC message cannot be applied on the peer unit. In either case, the SPAN ICC ISSU state will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

SPA_OIR Messages

This section contains shared port adapter (SPA) online insertion and removal (OIR) messages.

SPA_OIR-2

Error Message %SPA_OIR-2-INITFAIL: SPA OIR initialization error

Explanation A failure occurred during the SPA OIR subsystem startup. SPA OIR is not functional for the RP or line card that generated the message.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %SPA_OIR-2-SUBSLOTINITFAIL: SPA OIR initialization error for [chars]

Explanation A failure occurred during the SPA OIR subsystem startup. SPA OIR is not functional for the specified slot or subslot.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

SPA_OIR-3

Error Message %SPA_OIR-3-CMD_ATTR: [chars]: Unexpected command identifier ([int])

Explanation An unexpected command identifier was detected when processing a command related to a SPA OIR. The command was not processed. This is most likely due to a software problem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-CORRUPT_EVENT: [chars]

Explanation Corruption was detected within a SPA OIR event for the subslot specified in the message. When this error occurs, the system attempts automatic recovery by reloading the SPA. This condition could be caused by a software, firmware, or hardware problem, but a firmware or software problem is more likely. For distributed platforms, SPA OIR events are transported over different media depending on the platform (for example, the Cisco 12000 uses the MBUS). An unlikely cause of this error is that an event message was corrupted during transport.

Recommended Action No immediate action is required on the system if the SPA is operational. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-EVENT_DATA_ERROR: SPA OIR event data error - [chars]([int])

Explanation Invalid data was detected within a SPA OIR event. The SPA OIR state machines may not reflect the state of the hardware. The problem affects only one SPA, but the SPA cannot be determined from the context where the error was detected. This condition could be caused by a software or hardware problem, but a software problem is more likely. For distributed platforms, SPA OIR messages are transported over different media depending on the platform (for example, the Cisco12000 uses the MBUS). An unlikely cause of this error is that an event message was corrupted during transport.

Recommended Action Check the system log for other messages that may help determine which SPA is affected. Enter the **hw-module target_spa reload** command, with *target_spa* being the slot or subslot of the affected SPA. Entering this command will perform a power cycle and synchronizes the affected SPA software with the hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-EVENT_HANDLING: [chars]: [chars][hex]

Explanation A data structure error was detected when handling a SPA OIR event for the SPA in the slot or subslot specified in the message. The SPA OIR state machines may not reflect the state of the hardware. This condition is most likely due to a software problem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-EVENT_TIMEOUT: [chars]: Timeout waiting for SPA OIR event

Explanation While waiting for a SPA OIR event, a timeout occurred for the subslot specified in the message. The SPA did not complete initialization. When this error occurs, the system attempts automatic recovery by reloading the SPA. This condition could be caused by a software or hardware problem, but a software problem is more likely. For distributed platforms, SPA OIR events are transported over different media depending on the platform (for example, the Cisco 12000 uses the MBUS). An unlikely cause of this error is that an event message was corrupted during transport.

Recommended Action No immediate action is required on the system if the SPA is operational. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-HW_INIT_TIMEOUT: [chars]

Explanation A timeout occurred for the specified subslot while waiting for the SPA hardware to initialize. The SPA did not complete initialization. When this error occurs, the system attempts an automatic recovery by reloading the SPA. This condition could be caused by a software, firmware, or hardware problem, but a firmware or hardware problem is most likely.

Recommended Action No immediate action is required on the system if the SPA is operational. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities

will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-HW_SIGNAL_DEASSERTED: [chars]

Explanation One or more hardware signals indicated that the SPA hardware in the specified subslot should be reinitialized. When this error occurs, the system attempts an automatic recovery by reloading the SPA. This condition could be caused by a software, firmware, or hardware problem, but a firmware or hardware problem is most likely. This condition could be caused by a rare interaction between SPA and its SIP.

Recommended Action No immediate action is required on the system if the SPA is operational. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, or would like to report a suspected hardware failure, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-MESSAGE_ERROR: [chars]: SPA OIR event message error - [chars] ([int])

Explanation An error was detected in a SPA OIR event message for the SPA in the specified slot or subslot. The SPA OIR state machines may not reflect the state of the hardware for this SPA. This condition could be caused by a software or hardware problem, but a software problem is more likely. For distributed platforms, SPA OIR messages are transported over different media depending on the platform (for example, the Cisco 12000 uses the MBUS). An unlikely cause of this error is that an event message was corrupted during transport.

Recommended Action Enter the **hw-module target_spa reload** command, with *target_spa* being the slot or subslot of the affected SPA. Entering this command will perform a power cycle and synchronizes the affected SPA software with the hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-POST_EVENT_ERROR: [chars]: event [int]

Explanation A SPA OIR event message was not enqueued for the SPA in the specified slot or subslot. The SPA OIR state machines may not reflect the state of the hardware for this SPA. This condition is most likely due to a software problem.

Recommended Action Enter the **hw-module target_spa reload** command, with *target_spa* being the slot or subslot of the affected SPA. Entering this command will perform a power cycle and synchronizes the affected SPA software with the hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-RECOVERY_RELOAD: [chars]: Attempting recovery by reloading SPA

Explanation The OIR facility attempted an automatic recovery by reloading the SPA in the specified subslot. Look for other messages related to this SPA subslot to determine the failure that triggered the automatic recovery.

Recommended Action This is an informational message only. No action is required.

Error Message %SPA_OIR-3-SEQUENCE_NUMBER_ERROR: [chars]

Explanation A sequence number error was detected within a SPA OIR event for the specified subslot. When this error occurs, the system attempts an automatic recovery by reloading the SPA. This condition could be caused by a software, firmware, or hardware problem, but a firmware or software problem is most likely. For distributed platforms, SPA OIR events are transported over different media depending on the platform (for example, the Cisco 12000 uses the MBUS). An unlikely cause of this error is that an event message was corrupted during transport.

Recommended Action No immediate action is required on the system if the SPA is operational. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, or would like to report a suspected hardware failure, open a case with the Technical Assistance Center

via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-SPA_POWERED_OFF: [chars]: SPA [chars] powered off after [int] failures within [int] seconds

Explanation The SPA was powered off because it failed too often. This condition may be caused by a software, firmware, or hardware error.

Recommended Action Look for other system messages related to this SPA subslot to determine the root cause of the failure. Enter the **hw-module target_spa reload** command, with *target_spa* being the slot or subslot of the affected SPA. Entering this command will perform a power cycle and synchronizes the affected SPA software with the hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-SW_INIT_TIMEOUT: [chars]: SPA initialization not completed

Explanation A timeout occurred for the specified subslot while waiting for the SPA software driver to initialize the SPA. The SPA did not complete initialization. When this error occurs, the system attempts automatic recovery by reloading the SPA. This condition could be caused by software, firmware or hardware problem, but a software or firmware problem is more likely.

Recommended Action Check for other reported messages for more verification. Hardware replacement should not occur on the first occurrence. Before requesting hardware replacement, review troubleshooting logs with a Cisco technical support representative. No immediate action is required on the system if the SPA is operational. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, or would like to report a suspected hardware failure, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-UNEXPECTED_EVENT: [chars]: SPA OIR unexpected event([int])

Explanation An unexpected SPA OIR event was detected for the SPA in the specified slot or subslot. The SPA OIR state machines may not reflect the state of the hardware for this SPA. This condition could be caused by software or hardware problem, but a software problem is more likely. For distributed platforms, SPA OIR messages are transported over different media depending on the platform (for example, the Cisco 12000 uses the MBUS). An unlikely cause of this error is that an event message was corrupted during transport.

Recommended Action Enter the **hw-module** *target_spa* **reload** command, with *target_spa* being the slot or subslot of the affected SPA. Entering this command will perform a power cycle and synchronizes the affected SPA software with the hardware. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-UNEXPECTED_INSERTED_EVENT: [chars]

Explanation An unexpected inserted event occurred for the specified subslot. When this error occurs, the system attempts automatic recovery by reloading the SPA. This condition could be caused by a software, firmware, or hardware problem, but a firmware or software problem is most likely. This condition could be caused by a rare interaction between SPA and its SIP.

Recommended Action No immediate action is required on the system if the SPA is operational. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, or would like to report a suspected hardware failure, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-UNEXPECTED_RECOVERY_ACTION: [chars]: SPA [chars], unexpected recovery action([int]) for fail code [hex]

Explanation An error occurred while processing a failure message for the SPA in the slot or subslot number specified in the message. The recovery action to be taken after a SPA failure is determined by calling a SPA driver function. This message indicates that the SPA driver function returned an

invalid recovery action. After this message was issued, the SPA was reloaded in an attempt to recover. The SPA driver most likely returned an invalid recovery action because of a software problem.

Recommended Action No immediate action is required on the system if the SPA is operational. Copy the message exactly as it appears on the console or in the system log. Enter the **show monitor event-log spa all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, or would like to report a suspected hardware failure, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-UNRECOGNIZED: The SPA of type [hex] in [chars] is not recognized

Explanation The type of the SPA in the specified subplot is not recognized by the operating system. Either the operating system might not support this SPA type on this platform or the SPA type identification stored on the SPA is invalid.

Recommended Action Ensure that the system is running a version of the operating system that supports the specified SPA type on this platform. If the correct operating system version is in use, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Include the information about the SPA type found on the front of the SPA. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_OIR-3-UNSUPPORTED: The [chars] in [chars] is not supported by the [chars] module

Explanation The SPA in the specified subplot is not supported in the specified SIP by the version of the operating system currently running on the system. The SPA type may be supported by another SIP or by a later operating system release.

Recommended Action Ensure that the SIP specified in the error message supports the specified SPA type. Ensure that the operating system release supports the SPA type in the SIP. It may be necessary to upgrade your system to the latest operating system release in your release train, or it may be necessary to use a different SIP type. If the SPA type specified in the error message does not match the interface types or numbers shown on the front of the SPA, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Include information regarding the SPA type found on the front of the SPA. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_OIR-6

Error Message %SPA_OIR-6-INSCARD: Card inserted in [chars]

Explanation The OIR facility detected a newly inserted SPA. The interfaces associated with that SPA are operational, but will be shut down until they are configured by the user. If any interfaces of that type were previously configured, they will be restored to their previous state.

Recommended Action This is an informational message only. No action is required.

Error Message %SPA_OIR-6-PRECONFIG_MISMATCH: [chars]: Inserted SPA type does not match preconfigured SPA type. Configuration updated

Explanation There is mismatch between the inserted SPA type and the preconfigured SPA type on platforms that support preconfiguration. The inserted SPA replaces the preconfigured SPA.

Recommended Action Verify the configuration by entering the **show running-config** command. If you would like to revert to the preconfigured type, remove the SPA and then update the configuration from a backup copy.

Error Message %SPA_OIR-6-REMCARD: Card removed from [chars], interfaces disabled

Explanation The OIR facility detected the removal of a SPA from the specified slot or subslot. The interfaces on that SPA will be administratively shut down and marked as removed. The routing table will be flushed of any routes through the removed interfaces.

Recommended Action This is an informational message only. No action is required.

Error Message %SPA_OIR-6-SHUTDOWN: [chars] is administratively shutdown; Use 'no hw-module [chars] shutdown' to enable

Explanation The SPA was not brought up because the SPA bay is in an administrative down state. The SPA bay will appear as **hw-module target_spa shutdown** in the running configuration.

Recommended Action Use the **no hw-module target_spa shutdown** command to administratively enable the SPA bay.

SPA_PLIM Messages

This section contains shared port adapter (SPA) physical layer interface module messages.

SPA_PLIM-3

Error Message %SPA_PLIM-3-FATALERROR: SPA in slot [dec] bay [dec] experienced a fatal error [chars] and is being reset.

Explanation A fatal error was encountered during SPA operation. The SPA may be restarted.

Recommended Action If the error is not observed more than once, it might be a singular event and the SPA needs to be monitored. If the issue occurs repeatedly, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLIM-3-FW_RELOAD: [chars] is being reloaded due to firmware/application exception.

Explanation The SPA firmware application has failed. The SPA is being reloaded to recover its operational state.

Recommended Action Collect the application core file from flash. The core filename and time stamp are shown in the preceding message.

Error Message %SPA_PLIM-3-HEARTBEAT: [chars] has experienced an heartbeat failure Current Sequence [int] received Sequence [int] Time since last keep [dec]ms.

Explanation The IPC communication between the local CPU and host in the specified slot is not functional. The IPC module will be restarted, after which communication might be reestablished. If the problem persists the SPA will be reset.

Recommended Action If the system continues running normally, no action is required. If this message recurs, or the system behaves abnormally, collect the logs from the system (RP and line card). Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number tech-support** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLIM-3-INITFAIL: [chars] has failed initialization because SPA [chars].

Explanation A failure occurred during the SPA initialization. SPA is not functional and may be restarted by the RP or line card.

Recommended Action If the line card or RP successfully initialized the SPA, no action is required. If the SPA was not successfully initialized, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLIM-3-INIT_PORT: [chars] PLIM client IPC port has not been initialized.

Explanation The specified PLIM client IPC port has not been initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc status** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_PLIM-4

Error Message %SPA_PLIM-4-EXCEPTION: [chars] has experienced an exception: [chars].
Writing SPA crash dump information to [chars].

Explanation The local CPU in the specified slot has experienced an exception condition. The process that caused the exception might have been restarted. If an exception core dump was created, the core dump is stored in the line card flash memory, if available.

Recommended Action If the system continues running normally, no action is required. If this message recurs, or the system behaves abnormally, collect the crash dump file from the line card flash. Copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module slot-number/subslot-number tech-support** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLIM-4-SBE_ECC: [chars] reports [dec] SBE occurrence at [dec] addresses

Explanation The SPA has reported single-bit correctable ECC errors. The log shows that more than one SBE has occurred. SBEs are correctable memory problems. It will not affect router operation. Excessive occurrences may indicate defective memory.

Recommended Action Observe at the first occurrence. If the error recurs, replace the faulty memory chip at the earliest opportunity.

Error Message %SPA_PLIM-4-SBE_OVERFLOW: [chars] SBE table([dec] elements) overflows.

Explanation The SPA has reported more unique single-bit correctable ECC errors than the platform defined internal table can hold. SBEs are correctable memory problems. It will not affect router operation. Excessive occurrences indicate defective memory.

Recommended Action Replace the faulty memory chip at the earliest opportunity.

SPA_PLIM-5

Error Message %SPA_PLIM-5-RECEIVINGFILE: Receiving [chars] from [chars].

Explanation The SPA has sent a file (syslog or core dump) to the line card and the file has been stored in the line card flash if available.

Recommended Action This is a debug message only. No action is required.

SPA_PLUGIN Messages

This section contains shared port adapter (SPA) plug-in messages.

SPA_PLUGIN-3

Error Message %SPA_PLUGIN-3-AUXC2W_CREATE: [chars]: Device auxiliary C2W creation failed.

Explanation Cannot allocate memory for auxiliary C2W structure.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %SPA_PLUGIN-3-EEPROM_READ: [chars]: Error reading EEPROM.

Explanation Cannot read EEPROM content. It indicates either an improperly seated SPA or a hardware failure.

Recommended Action Power down and reseal the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-EFC_NOTSYNC: [chars]: Can not synchronize EFC bus.

Explanation Extended flow control between the modular services card and the SPA is not synchronized. The SPA is shut down. It indicates either an improperly seated SPA, a hardware failure, or an outdated ROMMON or FPGA image.

Recommended Action Power down and reseat the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-EXCEPTION: [chars]: Exception with cause [dec].

Explanation One of the SPA software components has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-FAILED: [chars]: Plugin initialization failed.

Explanation Plug-in initialization has failed. Plug-in initialization can fail for many reasons. Preceding messages may state the cause.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-FILE_ERROR: [chars]: Error accessing file [chars].

Explanation The specified file cannot be accessed. Either the file is not found, lack of permission, out of space, or other file system or device errors.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-FILE_TRANSFER: [chars]: Failed to transfer file to or from SPA.

Explanation Failed to transfer a file to or from the SPA. This error might be caused by lack of memory on the SPA or jacket card, IPC failures, improperly seated SPA, or other errors.

Recommended Action Power down and reseal the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-FIRMWARE_APPS_DOWNLOAD: [chars]: Firmware application download failed.

Explanation Failed to download an application image to the SPA. This error might be caused by lack of memory on the SPA, IPC failures, an improperly seated SPA, or other download errors.

Recommended Action Power down and reseal the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-FIRMWARE_APPS_STARTUP: [chars]: Firmware application startup failed. SPA status([hex]) host status([hex])

Explanation Cannot start application image downloaded to SPA. Possible causes might be either a bad image on the line card flash disk, a hardware failure, or an outdated FPGA or ROMMON image.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-FIRMWARE_BADIMAGE: [chars]: Firmware file [chars] read failed.

Explanation The firmware image pointed to by the path is not valid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-FIRMWARE_BADPATH: [chars]: Invalid firmware file path [chars].

Explanation The specified firmware file path is invalid. This is a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-FIRMWARE_DOWNLOAD: [chars]: Firmware download failed.

Explanation Failed to download firmware image to the SPA. This error is caused by either lack of memory on the SPA, IPC failures, an improperly seated SPA, or other download errors.

Recommended Action Power down and reseal the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-FIRMWARE_NOMEMORY: [chars]: Insufficient memory for firmware file [chars], size [dec].

Explanation Cannot allocate memory for firmware image downloading to the SPA.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %SPA_PLUGIN-3-FIRMWARE_STARTUP: [chars]: Firmware startup failed. SPA status([hex]) host status([hex])

Explanation Cannot start the firmware image downloaded to the SPA. Possible causes are either a bad image on the line card flash disk, hardware failures, or an outdated FPGA or ROMMON image.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-IOFPGA_CREATE: [chars]: Device IOFPGA creation failed.

Explanation Cannot allocate memory for IOFPGA structure.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %SPA_PLUGIN-3-NOPLIM: [chars]: No PLIM subblock.

Explanation An invalid pointer was passed in. Cannot dereference the PLIM subblock pointer. This is an internal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-NOPORT: [chars]: Failed to open IPC port.

Explanation The PLIM client IPC port has not been initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc status** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-PLIM_CREATE: [chars]: PLIM subblock creation failed.

Explanation Cannot allocate memory for a PLIM structure.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %SPA_PLUGIN-3-RETRY_EXHAUSTED: [chars]: plugin initialization failed(retries exhausted).

Explanation One or more critical conditions happened that prevented plug-in initialization from moving forward, after the designated number of retries. Preceding messages may specify a failure cause.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-ROMMON: [chars]: ROMMON reports error. SPA status([hex]), host status([hex]).

Explanation ROMMON has reported a fatal condition during bootup. It may be caused by outdated ROMMON or FPGA images or by defective hardware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-SPI4_CREATE: [chars]: Device SPI4 creation failed.

Explanation Cannot allocate memory for a SPI4 structure.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %SPA_PLUGIN-3-SPI4_INIT: [chars]: SPI4 initializaion failed.

Explanation SPI4 initialization has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-SPI4_NOTSYNC: [chars]: Can not synchronize SPI4 bus.

Explanation The SPI4 bus between the modular services card and the SPA is not synchronized. It indicates either an improperly seated SPA, a hardware failure, or an outdated ROMMON or FPGA image.

Recommended Action Power down and reseat the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-SPI4_SETCB: [chars]: IPC SPI4 set callback failed(status [dec]).

Explanation Cannot set up a callback function for the SPI4 bus. It might be caused by an improperly seated SPA, an outdated ROMMON or FPGA image, or a hardware failure.

Recommended Action Power down and reseat the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-3-SPI4_SETCB_PORT: [chars]: IPC SPI4 set callback failed(error: [dec]) for port [dec].

Explanation Cannot set up a callback function for the SPI4 bus for the specified interface port. It might be caused by an improperly seated SPA, an outdated ROMMON or FPGA image, or a hardware failure.

Recommended Action Power down and reseat the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_PLUGIN-4

Error Message %SPA_PLUGIN-4-LED_CREATE: [chars]: LED driver initialization failed.

Explanation Cannot allocate memory for LED structure.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %SPA_PLUGIN-4-LED_READ: [chars]: LED read failed for port [dec], status [dec].

Explanation Cannot read LED register values. This error indicates either an improperly seated SPA or a hardware failure.

Recommended Action Power down and reseal the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PLUGIN-4-LED_WRITE: [chars]: LED write failed for port [dec], status [dec].

Explanation Cannot write to the LED register. This error indicates either an improperly seated SPA or a hardware failure.

Recommended Action Power down and reseal the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_PLUGIN-6

Error Message %SPA_PLUGIN-6-EFC_SYNC: [chars]: EFC bus synchronization achieved.

Explanation Extended flow control between the modular services card and the SPA is synchronized.

Recommended Action This is an informational message only. No action is required.

Error Message %SPA_PLUGIN-6-FIRMWARE_APPS_DOWNLOADING: [chars]: Downloading SPA firmware application ([chars])...

Explanation Downloading SPA firmware application.

Recommended Action This is an informational message only. No action is required.

Error Message %SPA_PLUGIN-6-FIRMWARE_DOWNLOADING: [chars]: Downloading SPA firmware ([chars])...

Explanation Downloading SPA firmware.

Recommended Action This is an informational message only. No action is required.

Error Message %SPA_PLUGIN-6-SPI4_SYNC: [chars]: SPI4 bus synchronization achieved.

Explanation The SPI4 bus between the modular services card and the SPA is synchronized.

Recommended Action This is an informational message only. No action is required.

SPA_PMB Messages

This section contains SPA-specific power management bus messages.

Error Message %SPA_PMB-4-CANTREADSPAIDPROM: The SPA in Subslot [int]/[int] could not be accessed. The error code received is [dec]

Explanation An internal software consistency issue regarding the SPA has been detected.

Recommended Action If the SPA's operation is affected, perform an OIR for the line card on which the SPA or SPAs are located. The slot and subslot of the affected SPA is specified in the message. If this does not fix the problem, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PMB-4-CARDPWREDON: The line card in slot [dec] is powered on due to out of range electrical signals

Explanation The SPAs in the line card in the specified slot could not be accessed because of out-of-range electrical signals. There might be problems in reading in startup configuration for the SPAs in the specified slot.

Recommended Action Check the running and startup config for the specified slot. If the configuration for the ports in the slot is different, then manually copy the startup config to the running config. If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_PMB-4-NOACK: The device with id [hex] in slot [dec] is not responding

Explanation The SPAs in the line card in the specified slot could not be accessed because of a hardware problem. The system might not be able to read the startup configuration for the SPAs.

Recommended Action Check the running and startup config for the specified slot. If the configuration for the ports in the slot is different, then manually copy the startup config to the running config. If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SPA_T3E3 Messages

This section contains T3E3 (SPA_T3E3) messages.

SPA_T3E3-3

Error Message %SPA_T3E3-3-LOVEFAIL: [chars]: failed to send [chars] love letter

Explanation A “love letter” (operating status or configuration message) was not sent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_T3E3-3-MSGERR: Illegal message type [dec] received for Interface [chars]

Explanation An unknown message was received by the RP.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_T3E3-3-SSBINIT: [chars]: Fail to initialize serial IDB

Explanation Serial IDB initialization has failed. The most common reason is lack of system memory. Previous messages might indicate memory allocation failures.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SPA_T3E3-3-SUBRATE_FPGA_LOAD_FAILED2: [chars] Programming [chars] subrate FPGA failed again. The SPA will be disabled as it cannot recover from the FPGA image corruption.

Explanation The specified subrate FPGA image is corrupted after an FPD upgrade. It might indicate an FPD image package problem. The SPA is disabled until this problem is corrected.

Recommended Action Verify the correctness of the FPD image package. The FPD image package used in the upgrade should match the running Cisco IOS release. This can be verified by entering the **show upgrade fpd package default** command.

SPA_T3E3-4

Error Message %SPA_T3E3-4-SUBRATE_FPGA_LOAD_FAILED: [chars] Programming [chars] subrate FPGA failed. The FPGA image is corrupted. One upgrade attempt will be made to recover from the failure.

Explanation The specified subrate FPGA image is corrupted and programming of the FPGA has failed. One upgrade attempt will be made to recover from the failure.

Recommended Action Automatically upgrade the subrate FPGA image using the default FPD image package. The package should match the running Cisco IOS release. This can be verified by entering the **show upgrade fpd package default** command. If the subrate FPGA failure persists after the upgrade, the SPA is disabled. Ensure that the package file is intact.

SPA_T3E3-5

Error Message %SPA_T3E3-5-BERT: Interface [chars], BERT [chars]

Explanation The SPA T3E3 driver processed a BERT task.

Recommended Action This is just a notification upon completion of a BERT task. No action is required.

Error Message %SPA_T3E3-5-DEF_SUBRATE: [chars] [chars]

Explanation The remote subrate configuration has changed.

Recommended Action Inform the network operator that subrate configuration was changed by the remote end.

SPLC_DNLD Messages

SPLC_DNLD-1

Error Message %SPLC_DNLD-1-VS_HA_PS_NOT_SUPPORTED: Chassis Standby is not supported in the current release. Forcing the chassis standby in switch [dec] slot [dec] to drop to rommon

Explanation Chassis Standby is not supported in Cisco IOS Release 12.2 SXI(1).

Recommended Action No action is required.

Error Message %SPLC_DNLD-1-VS_HA_PS_RUNNING_LEGACY_IMAGE: Chassis Standby in switch [dec] slot [dec] is running non Virtual Switch image. Please remove the chassis standby.

Explanation Chassis Standby running non Virtual Switch image is not supported.

Recommended Action No action is required.

SPLC_DNLD-3

Error Message %SPLC_DNLD-3-VS_ADD_VSL_ENTRY_FAILED: Add VSL configured port for vslot [int] port [int] failed. Exceed port member count limit.

Explanation Attempt to add entry for (vslot, port) to VSL configured port list failed. Exceed port member count limit.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %SPLC_DNLD-3-VS_BOOLEAN_CREATE_FAILED: Unable to create watched boolean "[chars]"

Explanation Unable to create the specified watched boolean due to unknown reasons

Recommended Action No action is required.

Error Message %SPLC_DNLD-3-VS_ENQUEUE_FAILED: Unable to enqueue to [chars] queue

Explanation An internal error occurred that prevented a message from being enqueued to the specified process. The packet was dropped

Recommended Action No action is required.

Error Message %SPLC_DNLD-3-VS_HA_HB_NOT_HEARD: Heartbeat messages have not been heard from [[chars]] for [dec] seconds

Explanation Heartbeat messages have not been heard for a significant amount of time. It is likely that a timeout will occur soon which will reset the system.

Recommended Action No action is required.

Error Message %SPLC_DNLD-3-VS_HA_HB_TIMED_OUT: Heartbeat messages have failed, resetting [[chars]]

Explanation Heartbeat messages have failed and the system is no longer operational.

Recommended Action No action is required.

Error Message %SPLC_DNLD-3-VS_ICC_PAK_FAIL: Unable to get ICC packet for opcode [dec], operation [dec]

Explanation Packet allocation failed for sending an ICC message to do the specified operation

Recommended Action Issue the **show tech-support** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %SPLC_DNLD-3-VS_ICC_RESP_PAK_NULL: Failed to obtain response packet

Explanation Response packet pointer is NULL. This could be no memory condition on response packet sending side or failure to get IPC message on receiving side.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %SPLC_DNLD-3-VS_PROC_CREATE_FAILED: Unable to create process "[chars]"

Explanation Unable to create the specified process due to unknown reasons

Recommended Action No action is required.

Error Message %SPLC_DNLD-3-VS_QUEUE_CREATE_FAILED: Unable to create queue "[chars]"

Explanation Unable to create the specified queue due to unknown reasons

Recommended Action No action is required.

Error Message %SPLC_DNLD-3-VS_SPLC_CREATE_DNLD_INSTANCE_FAIL: Dnld instance could not be created for Inchassis-Standby on slot-id [dec] and switch-id [dec]

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_CREATE_DNLD_PROC_FAIL: Dnld proc could not be created by Inchassis-Active for Inchassis standby on slot-id [dec] and switch-id [dec]

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_BAD_EVENT: Bad event for major [int] and minor [int] in Sup-LC download queue

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_CREATE_PROC_FAIL: Process creation for Sup-LC download at the vs_ha subsys init level

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_CREATE_QUEUE_FAIL: Create queue failed for SPLC dnld process at the vs_ha subsys init level

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_ENQUEUE_FAIL: Could not enqueue the message on the splc_dnld_rx_queue

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_IMAGE_INFO_FAIL: Unable to get the correct image size inchassis standby [dec] on switch-id [dec]

Explanation Unable to get the correct image size for the inchassis standby from the inchassis active

Recommended Action No action is required.

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_REQ_ACK_FAIL_SEQ_ABS: Inchassis-Active could not send splc_dnld_req_ack to Inchassis-standby on slot-id [dec] on switch-id [dec] due to missing seq_num

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_REQ_ACK_FAIL_SEQ_ERR: Inchassis-Active could not send splc_dnld_req_ack to Inchassis-standby on slot-id [dec] on switch-id [dec] due to seq_num error

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_REQ_MEM_FAIL: Inchassis-Standby could not get the scp request packet to be sent to Inchassis-Active due to scp get packet memory not present

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_REQ_SEND_FAIL: Inchassis-Standby could not send the dnld_request msg to Inchassis-Active

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_DNLD_UNKNOWN: Unable to get sup-lc image filename for inchassis standby [dec] on switch-id [dec]

Explanation Unable to get the correct image filename for the inchassis standby from the inchassis active

Recommended Action No action is required.

Error Message %SPLC_DNLD-3-VS_SPLC_GET_ARG_PTR_FAIL: Argument pointer for SUP-LC download failed on Inchassis-Standby slot-id :[dec] switch-id:[dec]

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_GET_DNLD_IMAGE_FAIL: Sup-LC Image could not be downloaded to the Inchassis Standby slot-id: [dec] switch-id: [dec]

Explanation Not available

Recommended Action Not available

Error Message %SPLC_DNLD-3-VS_SPLC_SET_DNLD_INSTANCE_FAIL: Dnld instance could not be set on the inchassis-standby for slot-id [dec] switch-id [dec]

Explanation Not available

Recommended Action Not available

SPLC_DNLD-5

Error Message %SPLC_DNLD-5-VS_CONFIG_DIRTY: Configuration has changed. [chars]

Explanation Attempt to reload ignored due to config change

Recommended Action No action is required

Error Message %SPLC_DNLD-5-VS_SWITCH_NUMBER_CHANGE: Switch_number getting changed from [dec] to [dec].

Explanation Not available

Recommended Action Not available.

SPLC_DNLD-6

Error Message %SPLC_DNLD-6-VS_HA_HOT_STANDBY_NOTIFY: Standby switch is in Hot Standby mode.

Explanation Not available.

Recommended Action Not available.

Error Message %SPLC_DNLD-6-VS_HA_ICS_EARL_MISMATCH: In-chassis Standby has an incompatible Earl version and will be put down.

Explanation Not available.

Recommended Action Not available.

Error Message %SPLC_DNLD-6-VS_HA_INCORRECT_ACTIVE: [chars]

Explanation Informational messages regarding the state of the active supervisor.

Recommended Action None.

Error Message %SPLC_DNLD-6-VS_HA_ISSU_SUP_INSERT: The supervisor in switch [dec] in slot [dec] was inserted during the ISSU cycle and was put down.

Explanation As stated above.

Recommended Action Please boot this supervisor manually after the ISSU cycle is complete.

Error Message %SPLC_DNLD-6-VS_ICA_ICS_SWITCHID_MISMATCH: Inconsistent switch id detected on ICS([dec]) compared to ICA([dec]), correcting it to align with ICA

Explanation Not available.

Recommended Action Not available.

Error Message %SPLC_DNLD-6-VS_SPLC_IMAGE_VERSION_MISMATCH: In-chassis Standby in switch [dec] is trying to boot with a different image version than the In-chassis Active

Explanation Not available

Recommended Action Not available

SRC Messages

This section contains Switch Redundancy Controller (SRC) messages.

SRC-3

Error Message %SRC-3-AFOVEN_ERROR: Attempt to enable [chars] protection autofailover on interface [chars] when port status is [hex]

Explanation The software failed in an attempt to enable the autofailover feature.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SRP Messages

This section contains Spatial Reuse Protocol (SRP) messages.

SRP-1

Error Message %SRP-1-WRAPPING_PROCESS_LOCKED: [chars] The wrap/unwrap state-change process is locked

Explanation A wrap and unwrap state change process did not complete in the maximum specified amount of time.

Recommended Action If this message recurs periodically, enter the **shutdown** and **no shutdown** commands on the interface to shut down and restart the interface.

SRP-3

Error Message %SRP-3-FALSE_VAL_ALARM: [chars] - error in [chars]

Explanation A false value has been returned. Some features or commands may not work properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SRP-3-NULL_P_ALARM: Dereferencing NULL pointer [chars] in [chars]

Explanation A pointer with a null value has been detected. Some features or commands may not work properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SRPMIB Messages

This section contains Spatial Reuse Protocol (SRP) MIB messages.

SRPMIB-3

Error Message %SRPMIB-3-FALSE_VAL_ALARM: [chars] - error in [chars]

Explanation A false value has been returned. Some features or commands may not work properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SRPMIB-3-NULL_P_ALARM: Dereferencing NULL pointer [chars] in [chars]

Explanation A pointer with a null value has been detected. Some features or commands may not work properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SSA Messages

This section contains Super Santa Ana ASIC (SSA) messages.

SSA-4

Error Message %SSA-4-FABRICRCERRS: [dec] Fabric CRC error events in 100ms period

Explanation The SSA fabric interface encountered more CRC error events than the supervisor engine CRC error threshold allows.

Recommended Action The module has notified the supervisor engine, and the error has been logged. No action is required.

Error Message %SSA-4-FABRICSYNCERRS: [dec] Fabric sync error events in 100ms period

Explanation The SSA fabric interface encountered more synchronization error events than the supervisor engine synchronization error threshold allows.

Recommended Action The module has notified the supervisor engine, and the fabric interface will be resynchronized. No action is required.

Error Message %SSA-4-SSA_CONFIG_FAIL: The Super Santa Ana ASIC configuration failed

Explanation The Super Santa Ana ASIC could not be configured. If the switch fabric has gone inactive (down), this message can be expected.

Recommended Action If the module comes on line and traffic processing resumes, no action is required. Otherwise, capture the error and copy the message exactly as it appears on the console or in the system log. On the route processor, enter the **show logging** and **show version** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SSA-5

Error Message %SSA-5-CHAN_LINK_SPEED_OOB: Array access bounds violated, channel_num=[int], link_num=[int], speed=[int]

Explanation The Cisco IOS code has attempted to access an internal array with an invalid index for an SSA channel number, link number, or speed.

Recommended Action If there is no system impact, no action is required. If traffic stops or the line card fails, collect the logs and copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSA-5-FABRICDOWN_CRCERRS: [dec] Fabric CRC error events in 100ms period

Explanation The Super Santa Ana Fabric interface encountered more CRC errors than the maximum configured threshold. However, the reason for this error is that the switch fabric is inactive (down). The line card has notified the supervisor engine of this condition and the error has been logged.

Recommended Action This is an informational message only and occurs in normal operation. No action is required.

Error Message %SSA-5-FABRICDOWN_SYNCERRS: [dec] Fabric sync error events in 100ms period

Explanation The Super Santa Ana Fabric interface encountered more synchronization errors than the maximum configured threshold. However, the reason for this error is that the switch fabric is inactive (down).

Recommended Action This is an informational message only and occurs in normal operation. No action is required.

Error Message %SSA-5-FABRICSYNC_DONE: Fabric sync on [chars] channel done.

Explanation The fabric interface ASIC was resynchronized.

Recommended Action No action is required.

Error Message %SSA-5-FABRICSYNC_REQ: Fabric sync requested on [chars] channel ([dec])

Explanation The line card has requested that the supervisor engine resynchronize its fabric interface ASIC.

Recommended Action No action is required.

Error Message %SSA-5-NOFABRICPROCESS: The Super Santa Ana fabric process could not be created

Explanation The SSA fabric interface does not have a link process running because the system failed to create it. This module will not support the fabric interface.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSA-5-NULL_SSA_OBJECT: The Super Santa Ana device object pointer is set to NULL

Explanation The memory location of the SSA device object is invalid. The SSA ASIC operation is disabled, and the device interrupt is now masked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSA-5-SMB_ACCESSERROR: The Module Super Santa Ana ASIC cannot be accessed

Explanation The SSA ASIC read and write access failed. The serial bus that is connected to the SSA ASIC on this module is not functioning correctly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSA-5-SSA_INIT_FAILURE: The Super Santa Ana ASIC initialization failed

Explanation The SSA ASIC could not be initialized. As a result, this device is not operational and has been disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SSH Messages

This section contains Secure Shell (SSH) Protocol messages.

SSH-4

Error Message %SSH-4-SSH2_UNEXPECTED_MSG: Unexpected message type has arrived.
Terminating the connection

Explanation SSH Session closure warning on receiving an inappropriate message from the peer

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support

SSH-5

Error Message %SSH-5-SSH2_CLOSE: SSH2 Session from [chars] (tty = [dec]) for user '[chars]' using crypto cipher '[chars]', hmac '[chars]' closed

Explanation Displays the SSH session closure information.

Recommended Action No action is required.

Error Message %SSH-5-SSH2_SESSION: SSH2 Session request from [chars] (tty = [dec]) using crypto cipher '[chars]', hmac '[chars]' [chars]

Explanation Displays the SSH session request information.

Recommended Action No action is required.

Error Message %SSH-5-SSH2_USERAUTH: User '[chars]' authentication for SSH2 Session from [chars] (tty = [dec]) using crypto cipher '[chars]', hmac '[chars]' [chars]

Explanation Displays the SSH user authentication status information.

Recommended Action No action is required.

Error Message %SSH-5-SSH_CLOSE: SSH Session from [chars] (tty = [dec]) for user '[chars]' using crypto cipher '[chars]' closed

Explanation Displays the SSH session closure information.

Recommended Action No action is required.

Error Message %SSH-5-SSH_SESSION: SSH Session request from [chars] (tty = [dec]) using crypto cipher '[chars]' [chars]

Explanation Displays the SSH session request information.

Recommended Action No action is required.

Error Message %SSH-5-SSH_USERAUTH: User '[chars]' authentication for SSH Session from [chars] (tty = [dec]) using crypto cipher '[chars]' [chars]

Explanation Displays the SSH user authentication status information.

Recommended Action No action is required.

SSP Messages

This section contains State Synchronization Protocol Manager (SSP) messages.

SSP-3

Error Message %SSP-3-DATACREATEFAIL: Creation of required data structures failed.

Explanation SSP will not operate properly due to the abnormal initialization of required data structures.

Recommended Action Reload the device. If the error persists, contact your technical service representative.

Error Message %SSP-3-EXCEEDMAXDOI: SSP maximum DOI exceeded.

Explanation The configuration has exceeded the maximum number of SSP clients allowed on this device at any one time.

Recommended Action Verify your configuration and reduce the number of SSP clients running at the same time. If a large number of SSP clients is required, contact your technical service representative for assistance.

Error Message %SSP-3-NOSTART: SSP could not initialize.

Explanation The SSP process could not successfully initialize. This condition might be caused by unusual protocol startup times in certain topologies.

Recommended Action Ensure that your IP redundancy mechanism (HSRP) configuration is valid and that all protocols have started. Try to configure SSP again. If this error recurs, contact your technical support representative.

Error Message %SSP-3-SRVSOCKCREATEFAIL: SSP socket creation failed.

Explanation The SSP process could not establish a socket connection with the SSP peer. This condition is likely to occur because either the device is under extreme load or it is misconfigured.

Recommended Action Verify that the SSP configuration is valid. Configure SSP to use a different port number. Reduce the load on the device.

SSP-4

Error Message %SSP-4-CANNOTRUNVER: SSP version [dec].[dec] was requested but is not supported in this image.

Explanation The version of SSP requested by the active device is not available in this image. SSP will not run on this device until it is upgraded or the active device is downgraded.

Recommended Action Verify that all SSP peers are running compatible images and that the configuration on each device is correct.

Error Message %SSP-4-GROUPCREATEFAIL: The SSP group could not be created.

Explanation The maximum number of SSP groups has been reached. Only one SSP group is permitted at one time.

Recommended Action No action is required.

Error Message %SSP-4-MISMATCHEDVERRECV: Wrong version on received packet.

Explanation The SSP version information in a received packet does not match the version that is currently running on this device.

Recommended Action Verify the configuration of all the SSP peers. Ensure that all peers are running the correct image.

SSP-5

Error Message %SSP-5-DISABLED: SSP entering disabled state.

Explanation SSP has entered the disabled state. This condition is normal under many circumstances. An example of a normal condition is when the SSP configuration is changed or when a tracked interface is shut down or fails.

Recommended Action If this change occurred because of failure on the active peer, eliminate the cause of failure and reload the failed device.

SSP-6

Error Message %SSP-6-ACTIVE: SSP entering active state.

Explanation SSP has entered the active state.

Recommended Action No action is required.

Error Message %SSP-6-IPREDGRPADD: An IP Redundancy group listed in the SSP config has been added to this device.

Explanation The device might now become the active device or the redundant device if no other configuration items are missing.

Recommended Action No action is required.

Error Message %SSP-6-IPREDGRPDEL: An IP Redundancy group listed in the SSP config has been removed from this device.

Explanation The device might not become the active device or the redundant device if any configuration items are missing.

Recommended Action Add the IP redundancy group to the device, or remove it from the SSP configuration.

Error Message %SSP-6-STANDBY: SSP entering standby state.

Explanation SSP has entered standby state.

Recommended Action No action is required.

SSSMGR Messages

This section contains Subscriber Service Switching (SSS) Manager messages.

SSSMGR-3

Error Message %SSSMGR-3-BAD_CONTEXT_HANDLE: Corrupted SSS handle [[hex]] in SSS message.

Explanation An internal SSS manager error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-DYNAMIC_UPDATE_NOT_SUPPORTED: [%d] Dynamic session updates not allowed on this %s session. It is an unsupported configuration.

Explanation Updates on these sessions are not supported. This is an unsupported configuration.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-INFO_TYPE_NO_COPY_VECTOR: info type has no copy vector (%d) .

Explanation An internal error occurred in the Subscriber Service Switching (SSS) Manager process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-INIT: Initialisation failure, %s

Explanation An initialization failure occurred in the SSS Manager process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-INVALID_FSM_STATE: Encountered an invalid SSS Mgr state [dec] in [chars]

Explanation An internal SSS manager error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-INVALID_INFO_TYPE: Received an INVALID info type value (%d).

Explanation The SSS Manager received an invalid information type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-INVALID_SERVICE_TYPE: Received an INVALID service type (%d)%s.

Explanation The SSS Manager received an invalid service type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-MEMORY_LOW: Memory low (%d times), disconnecting session

Explanation The SSS Manager has disconnected a session due to insufficient memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-NULL_FSM_CONTEXT: Encountered a NULL SSS Mgr context in [chars]

Explanation The system has encountered a null context in the SSS manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-NULL_INFO_STRING: Received a NULL info string value.

Explanation The SSS Manager received a NULL information string value.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-POLICY_CTX_POISONED: Policy context [hex] has bad magic, [hex].

Explanation The magic number in the policy context is wrong.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-RESOURCE_OVERFLOW: Resource overflow

Explanation A fixed-size system resource has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-UNEXPECTED_MSG: Encountered an unexpected message: %s

Explanation The SSS Manager received an unexpected message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-UNEXPECTED_SIP_INFO: Encountered an unexpected SIP info: %s

Explanation The SSS Manager encountered an unexpected SIP.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SSSMGR-3-UNSUPPORTED_CFG: Unsupported configuration detected: [uid: [int]] [chars]

Explanation Unsupported configuration detected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

SSSMGR-5

Error Message %SSSMGR-5-IFCFG_NOTALLWED_IN_SVC: Interface-config not allowed at service config level, ignoring

Explanation The interface configuration attribute is not allowed while in a service profile. It is supported only in user profiles.

Recommended Action Remove the interface configuration attribute from the service profile and reconfigure using a user profile.

Error Message %SSSMGR-5-UNSUPPORTED_CFG_NOTICE: Unsupported configuration detected, [chars]

Explanation The value of the specified configuration parameter was out of range. This is not considered an error as the value was adjusted to be within the supported range. Update the configuration source to a value within the supported range to avoid this message.

Recommended Action No action is required.

STACKMGR Messages

This section contains stack manager controller messages.

STACKMGR-6

Error Message %STACKMGR-6-HDM_GET_DEVICE_RECORD_FAIL: Device Manager could not get device record.

Explanation This switch could not obtain the device record for some or all of the all other switches in the stack.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %STACKMGR-6-MASTER_ELECTED: Switch [dec] has been elected as MASTER of the stack

Explanation The specified switch has been selected as the active switch.

Recommended Action No action is required.

Error Message %STACKMGR-6-MASTER_READY: Master Switch [dec] is READY

Explanation The active switch is ready for use.

Recommended Action No action is required.

Error Message %STACKMGR-6-MSG_FAIL: Failed to retrieve stack message from port-asic [dec] in direction [dec]

Explanation The module for the stack manager module failed to retrieve stack messages.

Recommended Action No action is required.

Error Message %STACKMGR-6-NORECORD: Switch removed event for switch [dec] with no switch record

Explanation The module for the stack manager notifier has detected that a switch has been removed, but no switch record exists for the removed switch.

Recommended Action No action is required.

Error Message %STACKMGR-6-STACK_LINK_CHANGE: Stack Port [chars] Switch [dec] has changed to state [chars]

Explanation The status of the specified stack port has changed to active or inactive (up or down).

Recommended Action No action is required.

Error Message %STACKMGR-6-SWITCH_ADDED: Switch [dec] has been ADDED to the stack

Explanation The specified switch has been added to the stack.

Recommended Action No action is required.

Error Message %STACKMGR-6-SWITCH_ADDED_SDM: Switch [dec] has been ADDED to the stack (SDM_MISMATCH)

Explanation The specified switch has been added to the stack.

Recommended Action No action is required.

Error Message %STACKMGR-6-SWITCH_ADDED_VM: Switch [dec] has been ADDED to the stack (VERSION_MISMATCH)

Explanation The specified switch has been added to the stack.

Recommended Action No action is required.

Error Message %STACKMGR-6-SWITCH_READY: Switch [dec] is READY

Explanation The specified switch is in the ready state.

Recommended Action No action is required.

Error Message %STACKMGR-6-SWITCH_REMOVED: Switch [dec] has been REMOVED from the stack

Explanation The specified switch has been removed from the stack.

Recommended Action No action is required.

STAPL_OPEN Messages

This section contains Standard Test And Programming Language (STAPL) processing messages.

STAPL_OPEN-4

Error Message %STAPL_OPEN-4-ERROR_ALLOC: %Error: Can't allocate [dec] bytes for STAPL data

Explanation The system could not allocate the required memory to access the file.

Recommended Action Check the memory usage of the system and retry the operation.

Error Message %STAPL_OPEN-4-ERROR_OPEN: %Error: Can't open [chars]

Explanation The system is unable to open the specified file.

Recommended Action Ensure that the file name is correct. Enter the **dir** command to verify the file name.

Error Message %STAPL_OPEN-4-ERROR_READ: %Error: STAPL file [chars] read failed

Explanation An unknown error has occurred while the system was copying the STAPL program file to a local buffer.

Recommended Action Enter the **del [chars]** command to remove the file. Enter the **copy** command to copy the file from a known good source to its desired destination [chars]. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %STAPL_OPEN-4-ERROR_SIZE: %Error: Bad file size [chars]

Explanation The file is too small or too large for a STAPL program file.

Recommended Action Enter the **dir** command and check the size of the file. Retry the operation.

STORM_CONTROL Messages

This section contains storm control messages.

STORM_CONTROL-3

Error Message %STORM_CONTROL-3-FILTERED: A [chars] storm detected on [chars]. A packet filter action has been applied on the interface.

Explanation The amount of traffic that has been detected on the interface has exceeded the configured threshold values. The system is filtering excess traffic when packets are received, and the system is not forwarding packet traffic.

Recommended Action Determine and fix the root cause of the excessive traffic on the interface.

STP_ISSU Messages

This section contains Spanning Tree Protocol (STP) in-service software upgrade (ISSU) messages.

STP_ISSU-3

Error Message %STP_ISSU-3-BUFFER: STP ISSU client failed to get buffer for message, error %d

Explanation The Spanning Tree Protocol (STP) ISSU client was unable to get buffer space for building a negotiation message. As a result, it cannot send the negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %STP_ISSU-3-CAPABILITY: STP ISSU client %s

Explanation The STP ISSU client detected an error during capability negotiation. As a result, there is a mismatch in the client capability between the active and standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %STP_ISSU-3-CFM_MISMATCH: Unsupported CFM and STP configuration detected. Reloading standby

Explanation STP ISSU client observed MST PVST simulation capability negotiation failure while CFM was enabled. When this error happens, remove CFM configuration on the active and restart ISSU upgrade.

Recommended Action Issue the **show tech-support** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %STP_ISSU-3-INIT: STP ISSU client initialization failed at %s, error %s

Explanation The STP ISSU client could not be initialized, this will cause catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %STP_ISSU-3-MSG_NOT_OK: STP ISSU client message %d is not compatible

Explanation The STP ISSU client received an incompatible message from the peer unit. The message cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %STP_ISSU-3-MSG_SIZE: STP ISSU client failed to get the message size for message %d

Explanation The STP ISSU client was unable to calculate the message size for the message specified. The client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %STP_ISSU-3-POLICY: STP ISSU client message type %d is %s

Explanation The STP ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %STP_ISSU-3-SEND_FAILED: STP ISSU client failed to send a negotiation message, error %d

Explanation The STP ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %STP_ISSU-3-SESSION: STP ISSU client %s

Explanation The STP ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %STP_ISSU-3-SESSION_UNREGISTRY: STP ISSU client failed to unregister session information. Error: %d (%s)

Explanation The STP ISSU client was unable to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %STP_ISSU-3-TRANSFORM: STP ISSU client %s transform failed, error %s

Explanation The STP ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the STP state will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %STP_SP-3-STP_MODE_CHANGE_NOT_ALLOWED: Unable to program port ASIC MAC match register on one or more slots. Cannot run change STP mode.

Explanation The Spanning Tree Protocol (STP) is unable to reserve and program the port ASIC MAC match registers because insufficient match registers are available. PVST and rapid-PVST cannot be run.

Recommended Action To make available more MAC match registers, disable other protocols that use the MAC match registers. You can view protocols that use port ASIC match registers by entering the **remote command switch show platform mrm info** command.

STP_SP Messages

STP_SP-2

Error Message %STP_SP-2-STP_EARL_MR_PROG_FAIL: Failed to program the EARL match register for STP.

Explanation The STP SSTP MAC address needs to be programmed in the Earl match register for normal STP operations. There are a limited number of Earl match registers. This messages indicates that either a SW error occurred or the HW resource is not available.

Recommended Action Please review the configuration guidelines for the switch features. You can try rebooting the switch. If issue persists, please contact the Cisco Technical Support for further assistance.

SUBSYS Messages

This section contains software subsystems messages.

SUBSYS-3

Error Message %SUBSYS-3-UNORDERED: The subsys class [dec]([chars]) has no initialization order.

Explanation The specified class subsystem has an unknown initialization order.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SUPERVISOR Messages

This section contains supervisor engine messages.

SUPERVISOR-3

Error Message %SUPERVISOR-3-FATAL: [chars]

Explanation An internal error occurred in the supervisor engine ASIC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SUP_LINE_CARD_Messages

Error Message %SUP_LINE_CARD_COMPATIBILITY-6-SW_VERSION_MISMATCH: [chars]

Explanation Compatibility mismatch between software versions of Line Card and Supervisor. Card allowed to bootup.

Recommended Action No action is required.

SUPQ Messages

This section contains supervisor engine queue messages.

SUPQ-3

Error Message %SUPQ-3-THROTTLE_CPU_QUEUE: Invalid application ID [dec] used for throttling

Explanation An application has passed an invalid application ID to the facility that is used for throttle checking operations.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SUPQ-4

Error Message %SUPQ-4-CPUHB_RECV_STARVE: [chars]

Explanation The system has detected that messages directed for the CPU are being delayed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SUPQ-4-CPUHB_SLOW_TRANSMIT: [chars]

Explanation The interface is no longer transmitting at an optimal speed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SUPQ-4-CPUHB_TX_FAIL: [chars]

Explanation The system is discarding system status or operational messages (heartbeat messages).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SUPQ-4-PORT_QUEUE_STUCK: Port queue stuck for ASIC [dec] port [dec] queue [dec]

Explanation The system has detected that the port queue could not be cleared in a reasonable time.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SUPW-4-RECV_QUEUE_STUCK: Receive queue stuck for ASIC [dec] queue [dec]

Explanation The system has detected that the receive queue could not be cleared in a reasonable time.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SUPW_PROCMIB Messages

This section contains supervisor engine MIB messages.

SUPW_PROCMIB-3

Error Message %SUPW_PROCMIB-3-IPC_PORTOPEN_FAIL: Failed to open port while connecting to process statistics: error code = [chars]

Explanation An error occurred during an attempt to open a port for an IPC message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SUPW_PROCMIB-3-IPC_TRANSMIT_FAIL: Failed to send process statistics update : error code = [chars]

Explanation An error occurred during an attempt to send an IPC message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SUPW_PROCMIB-3-MALLOC_FAILURE_IPC: Failed to allocate IPC message to contact process

Explanation A memory allocation failure has occurred during the processing of an IPC message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SVCLC Messages

This section contains service line card (SVCLC) messages.

SVCLC-2

Error Message %SVCLC-2-MAJORTEMP: Module [dec] CPU[dec] has exceeded its allowed operating temperature. (current temp=[dec]C) Module will be shut down immediately

Explanation The specified service line card in the system has sent a thermal shutdown request to the supervisor engine. The first [dec] is the module number, the second [dec] is the CPU number, and the third [dec] is the temperature.

Recommended Action Determine if the environment is too hot. If the environment is not too hot, replace the hardware.

SVCLC-4

Error Message %SVCLC-4-MINORTEMP: Module [dec] CPU[dec] has exceeded its normal operating temperature. (current temp=[dec]C)

Explanation The specified CPU on the specified service line card is too hot. The first [dec] is the module number, the second [dec] is the CPU number, and the third [dec] is the temperature.

Recommended Action Determine if the environment is too hot. If the environment is not too hot, replace the hardware.

Error Message %SVCLC-4-TEMPRECOVER: Module [dec] CPU[dec] has returned to its normal operating temperature. (current temp=[dec]C)

Explanation The specified service line card in the system has sent a thermal recovery event to the supervisor engine. The first [dec] is the module number, the second [dec] is the CPU number, and the third [dec] is the temperature.

Recommended Action No action is required.

SVCLC-5

Error Message %SVCLC-5-FWTRUNK : Firewallled VLANs configured on trunks

Explanation One or more secure VLANs belong to both secured and ordinary trunks. This configuration may compromise the security of the secure VLANs.

Recommended Action Change the trunk or the secure VLAN configuration so that they do not overlap. Enter either the **switchport trunk allowed vlan** command to change trunk configuration or the **firewall vlan group** command to change the secure VLAN configuration.

Error Message %SVCLC-5-INTDOWN: mod [dec] failed to bring up all interfaces

Explanation One or more of the module interfaces failed to come up.

Recommended Action Reset the module.

Error Message %SVCLC-5-SVCLCMULTI: Group [dec] being tied to more than one module

Explanation The specified group is tied to multiple service modules. A group should not be associated with more than one service module unless a failover configuration is being used.

Recommended Action If a failover configuration is in use, no action is required. Otherwise enter the **show svclc module** command to find out which group is being tied to more than one module. Then remove multiple associations by entering the **no svclc module mod vlan-group group** command.

Error Message %SVCLC-5-SVCLCNTP: Could not update clock on the module [dec], rc is [dec]

Explanation Either the line card or the Cisco IOS software encountered some problems while sending a clock update from Cisco IOS to the line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SVCLC-5-SVCLCSCP: Service module SCP communication failed for module [dec], subopcode is [dec]

Explanation Either the line card or the Cisco IOS software encountered some problems while communicating through SCP channels.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SVCLC-5-SVCLCVTPMODE: VTP mode is set to non-transparent

Explanation VTP mode is not transparent, so VTP may dynamically modify VLANs, including those that are associated with the service modules.

Recommended Action Change the VTP to transparent mode by entering the **vtp mode transparent** command.

SW_DAI Messages

This section contains Dynamic ARP Inspection (DAI) messages.

SW_DAI-4

Error Message %SW_DAI-4-ACL_DENY: [dec] Invalid ARPs ([chars]) on [chars], vlan [dec]. ([enet]/[chars]/[enet]/[chars]/[time-of-day]C)

Explanation The switch has received ARP packets that are considered invalid by ARP inspection. The packets are invalid, and their presence indicates that administratively denied packets have been seen in the network. This log message shows up when packet(s) have been denied by ACLs either explicitly or implicitly (with static ACL configuration). The presence of these packets indicates that man-in-the-middle attack(s) may have been attempted in the network.

Recommended Action This is an informational message only. No action is required.

Error Message %SW_DAI-4-DHCP_SNOOPING_DENY: [dec] Invalid ARPs ([chars]) on [chars], vlan [dec]. ([enet]/[chars]/[enet]/[chars]/[time-of-day]C)

Explanation The switch has received ARP packets that are considered invalid by ARP inspection. The packets are invalid, and their presence may be an indication of man-in-the-middle attacks being attempted in the network. This message is logged when the sender's IP and MAC binding for the received VLAN is not present in the DHCP snooping database. The first [chars] is either Req (request) or Res (response), and the second [chars] is the short name of the ingress interface. The second [dec] is the ingress VLAN ID. [enet]/[chars]/[enet]/[chars]/[time-of-day] is the MAC address of the sender, the IP address of the sender, the MAC address of the target, the IP address of the target, and the time of day.

Recommended Action This is an informational message only. No action is required.

Error Message %SW_DAI-4-INVALID_ARP: [dec] Invalid ARPs ([chars]) on [chars], vlan [dec]. ([enet]/[chars]/[enet]/[chars]/[time-of-day]C)

Explanation The switch has received ARP packets that are considered invalid by ARP inspection. The packets do not pass one or more validation checks of the source or destination MAC address or the IP address. The first [dec] is the number of invalid ARP packets. The first [chars] is either Req (request), Res (response), or Invalid Opcode. The second [chars] is the short name of the ingress interface. The second [dec] is the ingress VLAN ID. [enet]/[chars]/[enet]/[chars]/[time-of-day] is the MAC address of the sender, the IP address of the sender, the MAC address of the target, the IP address of the target, and the time of day.

Recommended Action This is an informational message only. No action is required.

Error Message %SW_DAI-4-PACKET_BURST_RATE_EXCEEDED: [dec] packets received in [dec] seconds on [chars].

Explanation The switch has received the given number of ARP packets in the specified burst interval. The interface is in the error-disabled state when the switch receives packets at a higher rate than the configured packet rate every second over the configured burst interval. The message is logged just before the interface is error disabled and if the configured burst interval is more than a second. The first [dec] is the number of packets, the second [dec] is the number of seconds, and [chars] is the affected interface.

Recommended Action This is an informational message only. No action is required.

Error Message %SW_DAI-4-PACKET_RATE_EXCEEDED: [dec] packets received in [dec] milliseconds on [chars].

Explanation The switch has received the specified number of ARP packets in the specified time on the specified interface. This message is logged just before the port is error-disabled because of the exceeded packet rate. This message also is logged when the burst interval is set to 1 second.

Recommended Action This is an informational message only. No action is required.

Error Message %SW_DAI-4-SPECIAL_LOG_ENTRY: [dec] Invalid ARP packets
[[time-of-day]C]

Explanation The switch has received ARP packets considered invalid by ARP inspection. The packets are invalid, and their presence may be an indication of man-in-the-middle attacks being attempted in the network. This message differs from other messages in that while the others can be used to provide as much information about the packet as possible, this message is used as a general message when the rate of incoming packets exceeds the DAI logging rate.

Recommended Action This is an informational message only. No action is required.

SW_DAI-6

Error Message %SW_DAI-6-ACL_PERMIT: [dec] ARPs ([chars]) on [chars], vlan
[dec]. ([[enet]/[chars]/[enet]/[chars]/[time-of-day]C))

Explanation The switch has received ARP packets that have been permitted as a result of an ACL match.

Recommended Action This is an informational message only. No action is required.

Error Message %SW_DAI-6-DHCP_SNOOPING_PERMIT: [dec] ARPs ([chars]) on [chars], vlan
[dec]. ([[enet]/[chars]/[enet]/[chars]/[time-of-day]C))

Explanation The switch has received ARP packets that have been permitted because the sender's IP and MAC address match against the DHCP snooping database for the received VLAN. The first [dec] is the number of valid ARP packets. The first [chars] is either Req (request) or Res (response), and the second [chars] is the short name of the ingress interface. The second [dec] is the ingress VLAN ID. [enet]/[chars]/[enet]/[chars]/[time-of-day] is the MAC address of the sender, the IP address of the sender, the MAC address of the target, the IP address of the target, and the time of day.

Recommended Action This is an informational message only. No action is required.

SWEPA Messages

This section contains software encryption port adapter (SWEPA) and key management messages.

SWEPA-6

Error Message %SWEPA-6-EPA_EXP_RUNNING: Exp Running

Explanation The EXP process is running.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SWEPA-6-EPA_EXP_TIMER_EXPIRED: Exp Timer Expired!

Explanation The EXP timer has expired.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SWEPA-6-FAILED_TO_ALLOCATE_ENCRYPT_QUE: Failed to allocate the encrypt queue.

Explanation The encryption queue could not be allocated.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SWEPA-6-FAILED_TO_START_DES_PROCESS: Failed to start DES process

Explanation The DES process has failed to start.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SWEPA-6-FAILED_TO_START_EXP_PROCESS: Failed to start EXP process

Explanation The EXP process has failed to start.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SWEPA-6-INIT_SW_EPA_IDB: Init swepa idb start ...

Explanation The software encryption port adapter information descriptor block (IDB) is being initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SWEPA-6-START_DES_PROCESS: DES process start ...

Explanation The DES process has started.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SWEPA-6-START_EXP_PROCESS: EXP process start ...

Explanation The EXP process has started.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SWITCH Messages

This section contains switch interface messages.

SWITCH-3

Error Message %SWITCH-1-RF_REGISTRN_FAILED: unable to register switch driver client to RF

Explanation The switch driver client could not be registered to the redundancy facility (RF).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SWITCHOVER Messages

This section contains line card switchover-related messages.

SWITCHOVER-6

Error Message %SWITCHOVER-6-LC_HA_UNAWARE: Line card (type [hex]) in slot [dec] is not configured HA mode aware

Explanation The line card in the specified slot does not support the configured RP redundancy mode. The line card will be reset and reinitialized during RP failover.

Recommended Action No action is required.

SWITCH_QOS_TB Messages

This section contains trusted boundary messages.

SWITCH_QOS_TB-5

Error Message %SWITCH_QOS_TB-5-TRUST_DEVICE_DETECTED: [chars] detected on port [chars], port trust enabled.

Explanation The trusted boundary facility has detected a device that matches the trusted device setting for the port, and the port trust state has been modified.

Recommended Action No action is required.

Error Message %SWITCH_QOS_TB-5-TRUST_DEVICE_LOST: [chars] no longer detected on port [chars], port set to untrusted.

Explanation The trusted boundary facility has lost contact with a trusted device, and has set the port trust state to untrusted.

Recommended Action No action is required.

SWITCH_SPAN_ISSU Messages

This section contains span switch in-service software upgrade (ISSU) messages.

SWITCH_SPAN_ISSU-3

Error Message %SWITCH_SPAN_ISSU-3-BUFFER: span switch ISSU client failed to get buffer for message, error %d

Explanation The SPAN switch ISSU client was unable to get a buffer for building a negotiation message. As a result, it cannot send the negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %SWITCH_SPAN_ISSU-3-CAPABILITY: span switch ISSU client %s

Explanation The SPAN switch ISSU client detected an error during capability negotiation. As a result, there is a mismatch in the client capability between the active and standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SWITCH_SPAN_ISSU-3-INIT: span switch ISSU client initialization failed at %s, error %s

Explanation The SPAN switch ISSU client could not be initialized. This condition will cause a catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SWITCH_SPAN_ISSU-3-MSG_NOT_OK: span switch ISSU client message %d is not compatible

Explanation The SPAN switch ISSU client received an incompatible message from the peer unit. The message cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %SWITCH_SPAN_ISSU-3-MSG_SIZE: span switch ISSU client failed to get the message size for message %d

Explanation The SPAN switch ISSU client was unable to calculate the message size for the message specified. The client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %SWITCH_SPAN_ISSU-3-POLICY: span switch ISSU client message type %d is %s

Explanation The SPAN switch ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %SWITCH_SPAN_ISSU-3-SEND_FAILED: span switch ISSU client failed to send a negotiation message, error %d

Explanation The SPAN switch ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %SWITCH_SPAN_ISSU-3-SESSION: span switch ISSU client %s

Explanation The SPAN switch ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SWITCH_SPAN_ISSU-3-TRANSFORM: span switch ISSU client %s transform failed, error %s

Explanation The SPAN switch ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the SPAN switch state will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

SW_MGR Messages

This section contains segment switch manager messages.

SW_MGR-3

Error Message %SW_MGR-3-CM_ERROR: Connection Manager Error - [chars].

Explanation An error has occurred in the segment switch connection manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_MGR-3-CM_ERROR_CLASS: Connection Manager Error: Class [chars]: - [chars].

Explanation An error has occurred in the connection manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_MGR-3-CM_ERROR_FEATURE: Connection Manager Feature Error: (%s) - %s.

Explanation A segment switch connection manager feature class error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_MGR-3-CM_ERROR_FEATURE_CLASS: Connection Manager Feature Error: Class %s: (%s) - %s.

Explanation A segment switch connection manager feature error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_MGR-3-FHM_ERROR: SSM Feature Handler Manager Error - %s.

Explanation A feature handler manager error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_MGR-3-INVALID_HANDLE: Segment Manager Error - Invalid [chars] handle - [dec].

Explanation The connection manager encountered an invalid handle.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_MGR-3-INVALID_SEGMENT: Segment Switch Manager Error - Invalid segment - [chars].

Explanation The segment switch manager encountered an invalid segment.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_MGR-3-SM_ERROR: Segment Manager Error - [chars].

Explanation An error has occurred in the segment manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_MGR-3-SSM_SEG_ISSU: SSM Segment ISSU: [chars] not supported.

Explanation ISSU of this SSM Segment is not supported.

Recommended Action Not Available.

SW_VLAN Messages

This section contains Virtual LAN (VLAN) manager messages.

SW_VLAN-4

Error Message %SW_VLAN-4-VLAN_ADD_FAIL: Failed to add VLAN [dec] to vlan database: [chars]

Explanation The specified VLAN could not be added to the VLAN database. The platform may not allow the addition or there may be insufficient memory to expand the VLAN database.

Recommended Action Check the usage of the VLAN in the active and standby device to determine whether the VLAN is valid. Check the memory usage in the standby device. Unconfigure the feature that occupies more memory and retry the VLAN creation operation. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN-4-VLAN_CREATE_FAIL: Failed to create VLANs [chars]: [chars]

Explanation The specified VLANs could not be created. The VLAN manager called a VLAN database routine to create one or more VLANs, but the port manager failed the VLAN creation requests. A possible cause of this error is that the VLANs already exist in the port manager as internal VLANs.

Recommended Action Check the internal VLAN usage by entering the **show vlan internal usage** command. Unconfigure the feature that occupies the internal VLAN and retry the VLAN creation operation. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN-4-VLANMGR_INVALID_DATABASE_DATA: VLAN MANAGER received bad data of type %s: value %d from function %s

Explanation The VLAN manager received invalid data from a VLAN configuration database process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN-4-VTP_DB_INVALID_VLANID: Invalid VLAN ID [dec] found in VTP database download

Explanation An invalid VLAN ID was detected in the VTP database during the download of the VTP configuration file. This condition indicates that the VTP configuration file in NVRAM is corrupted.

Recommended Action Save a copy of the vlan.dat file that includes the invalid VLAN ID to help investigate the condition. Copy the message exactly as it appears on the console or in the system log. Enter the **show vtp status** and the **show vlan** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN-4-VTP_DB_SIZE_CHECK_FAILED: The %s VTP database of length %d cannot be supported by the system

Explanation The VLAN trunking protocol (VTP) database size is larger than the system can support.

Recommended Action Reduce the database size by decreasing the configuration parameters. For example, reduce the size of vlan-names.

Error Message %SW_VLAN-6-VTP_DOMAIN_NAME_CHG: VTP domain name changed to [chars].

Explanation The VTP domain name was changed through configuration to the name specified in the message. A management domain is the naming scope of a VLAN name. Each VLAN has a name that is unique within the management domain.

Recommended Action This is an informational message only. No action is required.

Error Message %SW_VLAN-4-VTP_PRIMARY_SERVER_CHG: %e has become the primary server for the %s VTP feature

Explanation The primary server status has changed and the indicated device has become the primary server for the indicated VTP feature.

Recommended Action No action is required.

Error Message %SW_VLAN-4-VTP_SEM_BUSY: VTP semaphore is unavailable for function [chars]. Semaphore locked by [chars]

Explanation The VTP database is currently locked by another task and is not available.

Recommended Action Retry the operation later. If this condition recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SW_VLAN-6

Error Message %SW_VLAN-6-OLD_CONFIG_FILE_READ: Old version [dec] VLAN configuration file detected and read OK. Version [dec] files will be written in the future.

Explanation This message indicates that the VLAN software detected an old version of the VLAN configuration file format. The software was able to interpret the file with no problems but will create files using the new format in the future. The first [dec] is the old version number, and the second [dec] is the new version number.

Recommended Action No action is required.

Error Message %SW_VLAN-6-VTP_DOMAIN_NAME_CHG: VTP domain name changed to [chars].

Explanation The VTP domain name was changed through configuration to the name specified in the message. A management domain is the naming scope of a VLAN name. Each VLAN has a name that is unique within the management domain.

Recommended Action No action is required.

Error Message %SW_VLAN-6-VTP_MODE_CHANGE: VLAN manager changing device mode from [chars] to [chars].

Explanation Some switch devices must automatically change VTP device modes upon receipt of a VLAN configuration database containing more than a set number of VLANs, depending on the device. This message indicates that such a spontaneous conversion has occurred, what the previous mode was, and what the current mode is. [chars] is the VTP device mode. In VTP server mode, the VLAN manager must record each change of VTP configuration and each change of device configuration relating to VTP (such as mode changes, device domain name changes, and password changes) to non-volatile storage using IFS system calls. If a system call fails, the device must spontaneously convert to the VTP client mode. Call failures are usually the result of a hardware failure of the non-volatile storage system, which may require replacement. Other possible causes include software bugs or, in the case of TFTP storage, a transient network or TFTP server failure.

Recommended Action No action is required.

Error Message %SW_VLAN-6-VTP_PRUNING_CHANGE: VTP Operational Pruning [chars].

Explanation VTP operational pruning has been enabled or disabled as shown in [chars], due to either an administrative pruning change, a VTP mode change, or VTP configuration propagation. To view the reason for the change, enter the **show vtp status** command.

Recommended Action No action is required.

SW_SP-VLAN

Error Message %SW_VLAN-SP-6-VTP_DOMAIN_NAME_CHG: VTP domain name changed to %s.

Explanation The VTP domain name was changed through configuration to the name specified in the message. A management domain is the naming scope of a VLAN name. Each VLAN has a name that is unique within the management domain.

Recommended Action No action is required.

SW_VLAN_ISSU Messages

This section contains switch VLAN in-service software upgrade (ISSU) messages.

SW_VLAN_ISSU-2

Error Message %SW_VLAN_ISSU-2-GET_BUFFER: Switch Vlan ISSU client failed to get buffer for message. Error: %d (%s)

Explanation The switch VLAN ISSU client was unable to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-2-INIT: Switch Vlan ISSU client initialization failed to %s. Error: %d (%s)

Explanation The switch VLAN ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-2-SEND_NEGO_FAILED: Switch Vlan ISSU client failed to send negotiation message. Error: %d (%s)

Explanation The switch VLAN ISSU client was unable to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-2-SESSION_NEGO: Switch Vlan ISSU client encountered unexpected client nego_done. Error: %d (%s)

Explanation An ISSU-compliant client transitions through a series of internal states. The switch VLAN ISSU client encountered a client negotiation done state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-2-SESSION_REGISTRY: Switch Vlan ISSU client failed to register session information. Error: %d (%s)

Explanation The switch VLAN ISSU client was unable to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

SW_VLAN_ISSU-3

Error Message %SW_VLAN_ISSU-3-CAP_INVALID_SIZE: Switch Vlan ISSU client capability list is empty.

Explanation The switch VLAN ISSU client capability exchange list is empty, which is an invalid condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu capability entires** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-3-CAP_NOT_COMPATIBLE: Switch Vlan ISSU client capability exchange result incompatible.

Explanation Based on the results of the capability exchange, the switch VLAN ISSU client is not compatible with the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-3-INVALID_SESSION: Switch Vlan ISSU client does not have a valid registered session.

Explanation The switch VLAN ISSU client does not have a valid registered session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-3-MSG_NOT_COMPATIBLE_WITH_PEER: 'Message Type %d' is not supported by Switch Vlan ISSU client at peer

Explanation The switch VLAN ISSU client at the peer supervisor is not compatible for this message type. The switch VLAN client will be marked as incompatible with the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-3-MSG_NOT_OK: Switch Vlan ISSU client 'Message Type %d' is not compatible

Explanation The switch VLAN ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-3-MSG_SIZE: Switch Vlan ISSU client failed to get the MTU for Message Type %d. Error: %d (%s)

Explanation The switch VLAN ISSU client was unable to calculate the MTU for the specified message. As a result, the client is unable to send the message to the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-3-SESSION_UNREGISTRY: Switch Vlan ISSU client failed to unregister session information. Error: %d (%s)

Explanation The switch VLAN ISSU client was unable to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %SW_VLAN_ISSU-3-TRANSFORM_FAIL: Switch Vlan ISSU client %s transform failed for 'Message Type %d'. Error: %d (%s)

Explanation The switch VLAN ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the switch VLAN state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

SW_VLAN_RF Messages

This section contains switch VLAN redundancy facility (RF) messages.

SW_VLAN_RF-3

Error Message %SW_VLAN_RF-3-CREATE_PROCESS: Switch Vlan RF client failed to create %s process

Explanation The switch VLAN redundancy facility (RF) client could not create a process. As a result, bulk synchronization will fail.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SYS Messages

This section contains operating system messages.

SYS-2

Error Message %SYS-2-BAD_BM_ARG: Invalid BM index boolean used as argument ([dec])

Explanation An illegal boolean manager index argument was referenced.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYS-2-CHUNKPARTIAL: Attempted to destroy partially full chunk, chunk [hex].

Explanation A software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYS-2-FAILEDUPDATE: Failed to update Process id: %d in %s

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYS-2-IMMORTAL: Attempt to shut down management process [dec] ([chars]).

Explanation An attempt was made to shut down the specified management process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands, the stack trace, and your pertinent troubleshooting logs.

Error Message %SYS-2-INPUT_GETBUF: Bad getbuffer, bytes= [dec], for interface=[chars]

Explanation The software requested a buffer that is larger than the largest configured buffer size, or it requested a negative-sized buffer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYS-2-NOPID: Process MIB is not aware of Process id: %d

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYS-2-NV_BAD_PTR: Bad NVRAM pointer. NV Header values are, nv: %p .textbase: %p .textsize: %d .magic: 0x%X .checksum: 0x%X .system_version: %d .textptr: %p vl_ptr: %p .priv: %p

Explanation A pointer corruption in NVRAM caused a failure in accessing the NVRAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYS-2-SYSMEMINFO: System Memory: [int]K total, [int]K used, [int]K free

Explanation This is an auxiliary message to several memory-related messages. It provides only additional system memory information usage.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SYS-3

Error Message %SYS-3-BADRESID: Clock hardware returned bad residual [dec].

Explanation A software error occurred.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

Error Message %SYS-3-CHUNK_NO_EXMEM: No handler to [chars] external memory.

Explanation An attempt was made to allocate or free a chunk of external memory, but no handler for managing external memory was registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYS-3-MEMSEMFAIL: Mempool semaphore creation failed for [chars]

Explanation Semaphore creation for the specified memory pool has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYS-3-PREEMPTSUSP: Suspending a preemptive process [chars]

Explanation A preemptive process attempted a suspend, which is not allowed because they are expected to finish their work as quickly as possible and go back to idle queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYS-3-PROCSEMFAIL: Process semaphore creation for preemptive processes failed.

Explanation Creation of a process function semaphore to protect the critical section of the process create routine has failed. The semaphore creation can fail if there is not enough chunk memory to create the event structure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SYS-4

Error Message %SYS-4-CPURESRISE: %s% is seeing %s cpu util %u%% at %s level more than the configured %s limit %u %%

Explanation The system is experiencing high CPU usage, possibly from a process that is monopolizing the CPU. This condition demands immediate attention because packets or calls may be dropped. This message should be matched with a corresponding CPURESFALLING or CPURESUNAPPLY notification.

Recommended Action No action is required.

SYS-5

Error Message %SYS-5-CONFIG: Configured from [chars]

Explanation The router's configuration was changed.

Recommended Action This is a notification message only. No action is required.

Error Message %SYS-5-FIFOBUS_ERR: Flow-control threshold on module [dec] has exceeded the default value. Threshold will be set to lower value

Explanation The FIFO threshold values are monitored for flow-control. When the threshold value exceeds the default, the value is set to a new (lower) value

Recommended Action This is an informational message only. No action is required.

Error Message %SYS-5-PRIV_I: Privilege level set to %d by%s%
%d

Explanation The privileged mode is enabled or the privilege level is changed. As a result, the associated privilege level, user ID, and line information will be logged.

Recommended Action No action is required. To disable logging of these events, enter the **no logging userinfo** command from the global configuration mode.

SYS-6

Error Message %SYS-6-CLOCKUPDATE: System clock has been updated from [chars] to [chars], configured from [chars] by [chars].

Explanation The system clock has been modified.

Recommended Action This is an informational message only. No action is required.

Error Message %SYS-6-CPURESFALLING: %s%s is no longer seeing %s high cpu at %s level for the configured %s limit %u%%, current value %u%%

Explanation The CPU usage has returned to normal after exceeding a threshold of high usage. Any process that was disabled during the period of high CPU use can now be enabled.

Recommended Action No action is required.

Error Message %SYS-6-CPURESUNAPPLY: %s%s is no longer monitoring %s cpu at %s level for the configured %s limit.

Explanation CPU usage is no longer being monitored for the configured threshold level indicated in the message. The corresponding policy is revoked.

Recommended Action No action is required.

Error Message %SYS-6-LOGGINGHOST_STARTSTOP: Logging to host %s%s%s%s

Explanation System logging to the indicated server or host (VRF) has started or stopped.

Recommended Action No action is required.

Error Message %SYS-6-NOBRIDGE: Bridging software not present

Explanation Your system is not configured to be a bridge.

Recommended Action Configure the bridging software.

Error Message %SYS-6-READ_BOOTFILE_SKIP: boot system [chars] command is skipped

Explanation A configured boot system command is skipped. Either the system experienced a crash while loading this image in the last attempt or the filename is not properly specified. Subsequent boot system commands will be tried

Recommended Action Replace the failed boot system image with a good one. There could be various reasons that this specified image failed, for example the image might be with a bad checksum.

SYS-SP

Error Message %SYS-SP-3-LOGGER_FLUSHING: System pausing to ensure console debugging output.

Explanation Debugging or informational messages are being generated faster than they can be displayed on the console. In order to guarantee that they can be seen, the rest of the system is paused until the console output catches up. This can break time-critical behavior, such as maintaining an ISDN link.

Recommended Action Consider using conditional debugging, turning off console logging, or using the o logging console guaranteed command, or turning off link-state messages for some interfaces.

Error Message %SYS-SP-3-LOGGER_FLUSHED: System was paused for %TE to ensure console debugging output.

Explanation Debugging or informational messages are being generated faster than they can be displayed on the console. In order to guarantee that they can be seen, the rest of the system was paused until the console output catches up. This can break time-critical behavior, such as maintaining an ISDN link.

Recommended Action Consider using conditional debugging, turning off console logging, or using the `o logging console guaranteed` command, or turning off link-state messages for some interfaces.

SYSLOGD Messages

This section contains system logging (SYSLOG) messages.

SYSLOGD-3

Error Message %SYSLOGD-3-DROPPED_MESSAGES: A total of [int] messages have been dropped by the syslog daemon, due to [chars]

Explanation The syslogd process has dropped received messages. The syslogd process may be receiving too many messages to process before the buffer fills, or it may have received a message for which there was insufficient memory available. In either case, there may be a bug in the sending process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SYSMGR Messages

This section contains system manager messages.

SYSMGR-3

Error Message %SYSMGR-3-ABNORMTERM: [chars]:[dec] (jid [dec]) abnormally terminated, [chars]

Explanation A process was abnormally terminated.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSMGR-3-ERROR: [chars]:[dec] (jid [dec]) [chars] ([chars])

Explanation The system manager server has encountered an error condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SYSMGR-6

Error Message %SYSMGR-6-ERROR_EOK: [chars]:[dec] (jid [dec]) [chars]

Explanation The system manager server has encountered an error condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSMGR-6-RESTART: Restarting process [chars] by [chars]

Explanation A process was restarted through the CLI.

Recommended Action This is an informational message only. No action is required.

SYSMGR_PLATFORM Messages

This section contains Cisco Catalyst 6000 system manager process messages.

SYSMGR_PLATFORM-5

Error Message %SYSMGR_PLATFORM-5-WAIT_RP: Waiting RP to complete crashinfo and core file collection

Explanation Sysmgr.proc process is waiting for the RP to signal the end of crashinfo or core file collection.

Recommended Action This is an informational message only. No action is required.

SYSTEM_BUS_ASIC Messages

This section contains System Bus Translator ASIC messages.

SYSTEM_BUS_ASIC-3

Error Message %SYSTEM_BUS_ASIC-3-INTR_FATAL: SYSTEM BUS ASIC [dec]: recoverable interrupt [chars]

Explanation The System Bus Translator ASIC detected an unexpected interrupt condition. This message indicates a hardware failure or malfunction. The system will reload to fix the problem.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSTEM_BUS_ASIC-3-INTR_RECOVERY: SYSTEM BUS ASIC [dec]: recoverable interrupt [chars]

Explanation The System Bus Translator ASIC detected an unexpected interrupt condition.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSTEM_BUS_ASIC-3-INTR_RESET: SYSTEM BUS ASIC [dec]: was reset

Explanation The System Bus Translator ASIC was reset as part of the system recovery sequence.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSTEM_BUS_ASIC-3-INTR_STATS_RECOVERY: SYSTEM BUS ASIC [dec]: Recoverable Interrupt warning [chars]

Explanation The System Bus Translator ASIC detected an unexpected condition in the statistics collection module.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSTEM_BUS_ASIC-3-INTR_WARN: SYSTEM BUS ASIC [dec]: Non-fatal Interrupt warning [chars]

Explanation The System Bus Translator ASIC detected an unexpected nonfatal condition.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSTEM_BUS_ASIC-3-INTR_WARN_TYPE2: SYSTEM BUS ASIC [dec]: Non-fatal interrupt Warning [chars] error code [dec]

Explanation The System Bus Translator ASIC detected an unexpected nonfatal condition.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSTEM_BUS_ASIC-3-KUMA_INTR_THROTTLED: SYSTEM BUS ASIC %d: Kuma interrupts throttled

Explanation The system bus translator ASIC detected too many interrupts. To avoid performance degradation, the system has temporarily masked interrupts.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSTEM_BUS_ASIC-3-KUMA_INTR_UNTHROTTLED: SYSTEM BUS ASIC %d: Kuma interrupts unthrottled

Explanation The system has unmasked the interrupts that were masked temporarily.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SYSTEM_CONTROLLER Messages

This section contains system controller messages.

SYSTEM_CONTROLLER-3

Error Message %SYSTEM_CONTROLLER-3-COR_MEM_ERR: Correctable DRAM memory error. Count [dec], log [hex]

Explanation A transient DRAM memory error was detected and corrected.

Recommended Action If the error message appears infrequently, no action is required. If the message recurs, reseat the SDRAM SIMM on the supervisor engine. If errors persist, replace the SIMM. If the errors continue after the SIMM is replaced, the supervisor engine may need to be replaced.

Error Message %SYSTEM_CONTROLLER-3-ERROR: Error condition detected: [chars]

Explanation The most common errors from the Mistral ASIC on the MSFC are TM_DATA_PARITY_ERROR, SYSDRAM_PARITY_ERROR, SYSAD_PARITY_ERROR, and TM_NPP_PARITY_ERROR. Possible causes of these parity errors are random static discharge or other external factors.

Recommended Action If the error message appears only once (or rarely), monitor the system log to determine whether the error message was an isolated incident. If the message recurs, check the environmental conditions for problems such as power brownouts, static discharges, or strong EMI fields. If these environmental conditions are within normal ranges and the error continues to appear, the supervisor engine may need to be replaced.

Error Message %SYSTEM_CONTROLLER-3-EXCESSIVE_RESET: System Controller is getting reset so frequently

Explanation The MISTRAL ASIC is being reset frequently. The usual cause is an improperly seated module or another hardware condition.

Recommended Action Power down and reseat the module. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSTEM_CONTROLLER-3-INVALID_EARL_HANDLER: EARL interrupt handler is not valid

Explanation The EARL interrupt handler is not valid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SYSTEM_CONTROLLER-3-MISTRAL_RESET: System Controller is reset:Normal Operation continues

Explanation The system controller is being reset. Operation will continue, but the message rate will be limited.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TAC Messages

This section contains TACACS system messages.

Error Message %TAC-3-SERVCONF: Server config failure: [chars]

Explanation The server configuration failed.

Recommended Action Please configure the server properly.

Error Message %TAC-3-SERVINT: [chars]

Explanation This is an internal software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %TAC-3-SERVNO: Server [chars] is not configured

Explanation The server is not configured.

Recommended Action Please configure a server before un-configuring it.

Error Message %TAC-4-SERVREFNAME: Warning: Server [chars] is still referenced by server group.

Explanation The server being removed is still referenced by a server group.

Recommended Action Please dereference the server from the server group as soon as possible.

Recommended Action

Error Message %TAC-6-SERVDEP: tacacs-server host CLI will be deprecated soon. Please move to tacacs server CLI

Explanation Migration from tacacs-server host CLI to tacacs server CLI.

Recommended Action Please try to use the new CLI.

TAR_FS Messages

This section contains tar file system messages.

TAR_FS-3

Error Message %TAR_FS-3-IMAGE_FILE_INVALID: [chars] file not found in archive

Explanation The tar file system could not locate the relevant tar element inside the archive.

Recommended Action Check whether the archive is complete and not corrupted, or if it is the wrong format. If the problem can be recreated with **debug ifs file** turned on, you can more quickly identify the problem. Save the output of the **archive tar /table archive-name** command if it is a pure tar archive, or the **show image contents file archive-name** command if the archive is a system image. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TCAM_MGR Messages

This section contains TCAM manager messages.

TCAM_MGR-3

Error Message %TCAM_MGR-3-BAD_FIRST_DYN_REGION: [dec]

Explanation A TCAM error was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAM_MGR-3-BAD_LAST_DYN_REGION: [dec]

Explanation A TCAM error was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAM_MGR-3-INTERNAL_ERROR: [chars], [chars], [dec]

Explanation A TCAM error was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAM_MGR-3-INVALID_OPERATION: [chars], [dec]

Explanation A TCAM error was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAM_MGR-3-INVALID_REG_TYPE: [chars], [dec]

Explanation A TCAM error was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAM_MGR-3-MALLOC_FAIL: [chars], [chars]

Explanation A TCAM error was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAM_MGR-3-OP_FAIL: [chars] failed for application [chars], application entry [hex] with [chars] error

Explanation A TCAM error was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAM_MGR-3-UNUSUAL_BUG_WARNING: [chars] mbu [hex] free_array_index [dec] region_id [dec]

Explanation A TCAM error was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TCAMMGR Messages

This section contains TCAM manager messages.

TCAMMGR-3

Error Message %TCAMMGR-3-GROW_ERROR: cam region [dec] can not grow

Explanation This CAM region is configured as a static region with a fixed number of entries, and a call was requested to add more CAM entries to the specified region.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAMMGR-3-HANDLE_ERROR: cam handle [hex] is invalid

Explanation The CAM handle that was used by the caller is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAMMGR-3-INDEX_ERROR: cam value/mask index [dec] is invalid

Explanation The CAM index that was used by the caller is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAMMGR-3-MOVE_ERROR: cam entry move from index [int] to index [int] failed

Explanation A move operation for a CAM entry from one index to another has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAMMGR-3-REGION_ERROR: cam region [dec] is invalid

Explanation The CAM region is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCAMMGR-3-REGMASK_ERROR: invalid cam region [dec] mask [dec] pair

Explanation Only a predetermined set of masks are allowed in a region. The caller requested to install an entry in the specified region that contained an invalid mask for that region.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TCATM Messages

This section contains ATM tag distribution and control messages.

TCATM-3

Error Message %TCATM-3-INTERNAL: [chars]

Explanation An operation that is required for proper operation of the TCATM has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TCP Messages

This section contains Transmission Control Protocol (TCP) messages.

TCP-2

Error Message %TCP-2-INVALIDTCB: Invalid TCB pointer: [hex]

Explanation An invalid TCB is used.

Recommended Action If this message recurs, copy it down exactly as it appears and contact your technical support representative for assistance.

TCP-3

Error Message %TCP-3-BADMSS: Incorrect mss [dec] observed

Explanation The maximum segment size is incorrect. TCP cannot guarantee further reliable operation for this connection.

Recommended Action Check the MTU for the interface and increase it as required. If, after adjusting the MTU, this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-CHKPT_INIT: TCP failed to initialize checkpoint storage: %s

Explanation The TCP process failed to initialize checkpoint storage for ports.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-ERR_DUMP_DEB: netdump_print_context failed, %d

Explanation Netdump print failed while dumping a process debug context.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-ERR_MD5_INVALID: MD5 validation failed, incoming packet src: %s:%d, dst: %s:%d

Explanation MD5 validation failed on an incoming packet.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-ERR_MD5_WRITE: MD5 option write failed, dst: %s:%d

Explanation The TCP process failed to write an MD5 option.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-ERR_NETWORK_INIT: TCP failed to connect with network layer: %s, error %s

Explanation TCP initialization with the network layer failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-ERR_OUT_BUFF: ran out of buffer with %ld bytes %s to send

Explanation TCP ran out of buffer space while copying segment data.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-ERR_PAK_FSV: %s

Explanation An FSV operation failed on the packet.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-ERR_PAK_DISCARD: %s: %s, <%s:%d> -> <%s:%d>

Explanation Packet information from a discarded packet is displayed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-ERR_PCB_VECTOR: ip_pcb_get_family_vector failed, %d

Explanation The TCP process failed to get a pointer to the PCB family vector.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-ERR_SET_APP_LEN: %s: set_Application_length failed: %s

Explanation The TCP process failed to set an application buffer for the segment.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-FORKFAIL: Failed to start a process to negotiate options.

Explanation The system failed to create a process to handle requests from a client. This condition could be caused by insufficient memory.

Recommended Action Reduce other system activity to ease memory demands.

Error Message %TCP-3-SOCKET_RESMGR_ATTACH: Failed to setup the transport as a resource manager: %s

Explanation The TCP process failed to advertise itself to the system as a resource manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-3-TRACE_ERR: %s error (%d). Premature trace termination for control block 0x%p

Explanation A trace terminated prematurely.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TCP-4

Error Message %TCP-4-ERR_PAK_CLIENT: %s, res %d

Explanation A packet client operation failed in TCP.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-4-WARNING_DEBUG: %s

Explanation TCP failed to open the console device for debug.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TCP-6

Error Message %TCP-6-INFO_RCV_SIG: recieved signal %d

Explanation The TCP process received a signal.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TCP-6-MD5NOSPACE: Insufficient space for MD5 option

Explanation There was insufficient space for the MD5 option. This condition should not occur, because the MD5 option, when requested, is required and is given preference over other TCP options.

Recommended Action Unconfigure other TCP options, if any, in an attempt to create space for the MD5 option. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TCP-7

Error Message %TCP-7-ERR_TCP_INIT: TCP failed to initialize: %s, error %s

Explanation TCP initialization failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TENGIGE_LC Messages

This section contains 10-Gigabit Ethernet line card messages.

TENGIGE_LC-3

Error Message %TENGIGE_LC-3-LASER_TEMP_ERR: Laser Temperature Alarm : [dec]/[dec]

Explanation A laser temperature alarm condition has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TENGIGE_LC-3-MIB_TENGIGE_LASER_FAILURE: Laser failure detected during soft-start procedures : [chars]

Explanation A laser failure has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TENGIGE_LC-3-MIB_TENGIGE_LOSYNC_ALM: Loss of Sync ; [chars]

Explanation The Gigabit Ethernet function lost its synchronization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TENGIGE_LC-3-TENGIGE_LOSYNC_ALM: [chars] side Loss of Sync lock: [chars]

Explanation The Gigabit Ethernet function lost its synchronization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TENGIGE_LC-3-TENGIGE_LOSYNC_ALM_CLR: CLEARED : [chars] Loss of Sync lock: [chars]

Explanation The Gigabit Ethernet function lost its synchronization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TENGIGE_LC-6

Error Message %TENGIGE_LC-6-LASER_DISABLED: Laser disabled as per user configuration [[dec]/[dec]]

Explanation The laser has been disabled as specified by the user configuration.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TENGIGE_LC-6-LASER_DISABLED_BY_HW: Laser disabled as per laser safety configuration [[dec]/[dec]]

Explanation The laser has been disabled as specified by the safety configuration.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TENGIGE_LC-6-MIB_TENGIGE_TRUNK_LOSYNC_PALM: Trunk side Loss of Sync Prealarm; [chars]

Explanation The trunk lost its synchronization while it was receiving data.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TENGIGE_LC-6-TENGIGE_TRUNK_RX_LOSYNC_PALM: Trunk side Loss of Sync lock Prealarm: [chars]

Explanation The trunk lost its synchronization while it was receiving data.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TID_HA Messages

This section contains table ID high availability (HA) messages.

TID_HA-3

Error Message %TID_HA-3-ISSUERR: [chars] [chars]

Explanation An error occurred during an in-service software upgrade (ISSU) versioning operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TID_HA-3-ISSUERRCF: [chars] checkpoint code [dec]

Explanation An error occurred during an ISSU versioning operation due to an error in the checkpoint facility.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TID_HA-3-RXFAIL1: [chars]

Explanation An error occurred while receiving a table ID synchronization message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TID_HA-3-RXFAIL2: [chars], type [dec], version [dec], flags [hex]

Explanation An error occurred while receiving a table ID synchronization message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the gathered information.

Error Message %TID_HA-3-RXFAIL3: [chars] type [dec], version [dec], flags [hex], application [dec], action [dec], tableid [dec], name [chars]

Explanation An error occurred while receiving a table ID synchronization message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TID_HA-3-SYCNCFAIL: [chars]

Explanation Internal table ID information may have not been synchronized to the standby unit correctly.

Recommended Action Reload the standby unit. If the error condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TID_HA-3-SYCNCFAILCF: [chars] checkpoint code [dec]

Explanation Internal table ID information may have not been synchronized to the standby unit correctly due to an error in the checkpoint facility.

Recommended Action Reload the standby unit. If the error condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TID_HA-3-TXFAIL: [chars], name [chars] tableid [dec] action [dec]

Explanation An error occurred while sending the internal table ID information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TID_HA-3-TXFAILCF: [chars], name [chars], tableid [dec], action [dec], checkpoint code [dec]

Explanation Failed to send internal table ID information due to an error in the checkpoint facility.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TIDP Messages

This section contains Threat Information Distribution Protocol (TIDP) messages.

TIDP-3

Error Message %TIDP-3-RESTART: Restarting TIDP due to unexpected error

Explanation An unexpected error has occurred in the Threat Information Distribution Protocol (TIDP) process. TIDP has been restarted in an attempt to restore operation.

Recommended Action Enter the **debug tidp errors** and **debug tidp events** commands to gather data that may help identify the nature of the error. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TIDP-4

Error Message %TIDP-4-AUTHFAIL: Message from %s, %i failed authentication

Explanation The signature of a received message failed authentication. The message has been dropped.

Recommended Action Check the local and peer configurations to make sure that compatible authentication key sets are used.

Error Message %TIDP-4-REPLAYMSG: Unexpected message from %s, %i received

Explanation A message with a sequence number outside of the acceptable range was received and has been dropped. The message might be a replay message and might indicate an intrusion attack.

Recommended Action Verify that the peer's hardware and configuration has not been altered. Verify connectivity to the peer.

Error Message %TIDP-4-SRCCHANGED: Address changed was being used by TIDP

Explanation An interface IP address was changed, but the former address was being used as the Threat Information Distribution Protocol (TIDP) source address. TIDP cannot operate properly if the address is not local.

Recommended Action Restore the original IP address to the original interface or to a new interface, or change the TIDP source address.

TIDP-5

Error Message %TIDP-5-BADMSG: Message from %s, %i failed validation

Explanation A message has failed basic header and range check validation. The message has been dropped.

Recommended Action Check the local and peer configurations to make sure that compatible versions of TIDP and encryption keys are used.

Error Message %TIDP-5-OVERSIZE: Oversized message received from %s, %i

Explanation A larger than expected message was received and has been dropped.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TIDP-5-PEERSRCCHANGED: TIDP source address of the connection to peer %i is changed

Explanation The Threat Information Distribution Protocol (TIDP) source address changed. The change might be caused by DHCP renewal or by the user manually changing the IP address at the interface.

Recommended Action No action is required.

Error Message %TIDP-5-REGFAIL: Failed to register to peer %s, %i, group %u

Explanation Attempts to register with the specified peer have failed. Another attempt will be made after the configured maximum retry interval.

Recommended Action Verify connectivity to the peer and make sure that the configuration between peers is compatible.

TIDP-6

Error Message %TIDP-6-DUPLICATE: Duplicate message from %s, %i received

Explanation A message was received that had the same sequence number as a previously received message. The message has been dropped.

Recommended Action No action is required.

TINY_FRAG_POLICER Messages

This section contains tiny fragment policer messages.

TINY_FRAG_POLICER-6

Error Message %TINY_FRAG_POLICER-6-AGGREGATE_THRESHOLD_EXCEEDED: [dec] bps: it is recommended to reduce the hi threshold value

Explanation The fragment offset == 1 (fo1) packets aggregate threshold has exceeded the acceptable value.

Recommended Action Reduce the interface high-threshold values.

Error Message %TINY_FRAG_POLICER-6-HI_THRESHOLD_EXCEEDED: [dec] bps: installing rate limiter for vlan [int] on interface [chars]

Explanation The fragment offset == 1 (fo1) packets high threshold has exceeded the acceptable value.

Recommended Action This is an informational message only. No action is required.

Error Message %TINY_FRAG_POLICER-6-RATELIMITER_FAILED: could not [chars]install rate limiter for vlan [int] interface [chars]

Explanation The fragment offset == 1 (fo1) rate installer failed due to resource issues.

Recommended Action This is an informational message only. No action is required.

Error Message %TINY_FRAG_POLICER-6-RATELIMITER_REMOVED: removing rate limiter for vlan [int] from interface [chars]

Explanation The fragment offset == 1 (fo1) packets dropped below the low threshold.

Recommended Action This is an informational message only. No action is required.

TMS Messages

This section contains Threat Management Service (TMS) messages.

TMS-2

Error Message %TMS-2-PROCESS_ERR: Router could not create a TMS controller process

Explanation The router was unable to create a TIDP-based Mitigation Services (TMS) controller process.

Recommended Action Reload the device.

TMS-4

Error Message %TMS-4-BAD_PKT: %s | Group=%u | %s Type=%d | Flags=%d

Explanation The controller has received an invalid or unexpected packet from the consumer.

Recommended Action Check the specified consumer for the TIDP-based Mitigation Services (TMS) protocol operation.

Error Message %TMS-4-MSG_ERR: Unknown message event received

Explanation The TIDP-based Mitigation Services (TMS) process received an unknown message event.

Recommended Action If this message recurs, reload the device.

Error Message %TMS-4-PROCESS_STOP: PROCESS=%s | ACTION=%s.

Explanation The specified process is stopped.

Recommended Action Reload the device.

Error Message %TMS-4-UNKN_EVENT_ERR: UNKNOWN Event for Event=%d.

Explanation The TMS controller process received an unknown event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TMS-4-UNKN_PROCESS_ERR: An unknown operational error occurred.

Explanation The TMS process cannot operate due to an internal system error.

Recommended Action Reload the device.

Error Message %TMS-4-UNKN_TIMER_ERR: An unknown Timer operational error occurred

Explanation The TMS process cannot operate due to an internal system error.

Recommended Action Reload the device.

TMS-6

Error Message %TMS-6-CONSUMER_CLEAR: %s

Explanation The consumer has cleared all statistics.

Recommended Action No action is required.

Error Message %TMS-6-CONSUMER_STATE: %s

Explanation This message indicates whether the TIDP-based Mitigation Services (TMS) consumer is configured or unconfigured.

Recommended Action No action is required.

Error Message %TMS-6-DEVICE: %s | Group=%u | %s Status=%s

Explanation This message indicates whether a consumer is registered or unregistered on the specified group.

Recommended Action No action is required.

Error Message %TMS-6-GROUP: %s | Group=%u | %s Status=%s

Explanation This message indicates whether a group is configured or unconfigured on the specified host.

Recommended Action No action is required.

Error Message %TMS-6-RESET: %s | Group=%u | %s Action=%s | Start TID=%d | End TID=%d

Explanation The controller sent a reset request for an action to a specific consumer or a group.

Recommended Action No action is required.

Error Message %TMS-6-STATUS: %s | Group=%u | %s Start TID=%d | End TID=%d

Explanation The controller sent a status request to a specific consumer or a group.

Recommended Action No action is required.

Error Message %TMS-6-THREAT: %s | Group=%u | %s TID=%d

Explanation The controller sent a threat message to a specific consumer or a group.

Recommended Action No action is required.

Error Message %TMS-6-THREATSTATUS: %s | Group=%u | %s Threat=%d | Version=%d | Action=%s

Explanation This message displays the status of a threat on a consumer in the specified group.

Recommended Action No action is required.

Error Message

TN Messages

This section contains Telnet messages.

TN-2

Error Message %TN-2-BADCONN: Bad conn pointer [hex] closing all connections on terminal line [dec]

Explanation An internal software error has occurred.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TOPN_COUNTERS Messages

This section contains switch TopN report counters messages.

TOPN_COUNTERS-3

Error Message %TOPN_COUNTERS-3-MGMT: %s transmit receive byte count is excessive, 1st poll %llu, 2nd poll %llu

Explanation The traffic counter value on the interface is higher than expected. The module might be reporting an erroneous number.

Recommended Action Verify the traffic flow on the interface. If the flow does not match the TOPN report, contact your Cisco technical support representative.

TOPN_COUNTERS-4

Error Message %TOPN_COUNTERS-4-MEM_UNAVAIL: Memory was not available for handling the TopN request

Explanation The system cannot handle the TopN request because of lack of memory.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

TOPN_COUNTERS-5

Error Message %TOPN_COUNTERS-5-AVAILABLE: TopN report [dec] is available

Explanation The specified report is ready and can be viewed by the users.

Recommended Action This is an informational message only. No action is required.

Error Message %TOPN_COUNTERS-5-DELETED: TopN report [dec] deleted by [chars]

Explanation The specified report has been deleted by the specified user.

Recommended Action This is an informational message only. No action is required.

Error Message %TOPN_COUNTERS-5-KILLED: TopN report [dec] task killed by [chars]
[chars]

Explanation The system was in the process of generating the specified report, but the specified user terminated the report before its completion.

Recommended Action This is an informational message only. No action is required.

Error Message %TOPN_COUNTERS-5-NOPORTS: No interfaces in the system match the interface type for the generation of the topN report [dec]

Explanation There were no interfaces in the system that matched the interface type selected in the specified report.

Recommended Action This is an informational message only. No action is required.

Error Message %TOPN_COUNTERS-5-STARTED: TopN collection for report [dec] started by [chars]

Explanation The TopN report that was requested by the specified user starts with the specified report number.

Recommended Action This is an informational message only. No action is required.

TPLUS Messages

This section contains Terminal Access Controller Access Control System (TACACS) protocol messages.

TPLUS-3

Error Message %TPLUS-3-FORKFAIL: Failed to fork process for [chars].

Explanation A process fork failed, probably due to insufficient memory.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TRACKING Messages

This section contains object tracking (TRACKING) messages.

TRACKING-5

Error Message %TRACKING-5-STATE: %d %s %s %s %s-%s

Explanation A tracked object has changed its state.

Recommended Action No action is required.

TRAFFIC_UTIL Messages

This section contains traffic utilization (TRAFFIC_UTIL) messages.

TRAFFIC_UTIL-4

Error Message %TRAFFIC_UTIL-4-MONITOR_BACKPLANE_BELOW_THR: Backplane traffic utilization is %d%%, below threshold(%d%%) within %d second interval

Explanation The backplane traffic utilization is below the utilization threshold.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRAFFIC_UTIL-4-MONITOR_BACKPLANE_REACH_THR: Backplane traffic utilization is %d%%, reached threshold(%d%%) within %d second interval

Explanation The backplane traffic utilization has reached a utilization threshold.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRAFFIC_UTIL-4-MONITOR_FABRIC_EG_BELOW_THR: Module %d, Channel %d egress traffic utilization is %d%%, below or equal threshold(%d%%) within %d second interval

Explanation The fabric channel egress traffic utilization is below a utilization threshold.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRAFFIC_UTIL-4-MONITOR_FABRIC_EG_REACH_THR: Module %d, Channel %d egress traffic utilization is %d%, reached threshold(%d%) within %d second interval

Explanation The fabric channel egress traffic utilization has reached a utilization threshold.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRAFFIC_UTIL-4-MONITOR_FABRIC_IG_BELOW_THR: Module %d, Channel %d ingress traffic utilization is %d%, below or equal threshold(%d%) within %d second interval

Explanation The fabric channel ingress traffic utilization is below a utilization threshold.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRAFFIC_UTIL-4-MONITOR_FABRIC_IG_REACH_THR: Module %d, Channel %d ingress traffic utilization is %d%, reached threshold(%d%) within %d second interval

Explanation The fabric channel ingress traffic utilization has reached a utilization threshold.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TRANGE Messages

This section contains time-range (TRANGE) error messages.

TRANGE-2

Error Message %TRANGE-2-NOMEMORY: Alloc fail for time-range config buffer. Disabling distributed mode on lc

Explanation The system was unable to allocate a buffer to send time-range configuration information to the line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show chunks** commands and your pertinent troubleshooting logs. show chunks

Error Message %TRANGE-2-WRONGREQUEST: Invalid request to allocate chunk of size %d

Explanation A request was made to allocate a time-range chunk greater than the maximum allowed size (TRANGE_LARGE_CHUNK_SZ).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANGE-2-WRONGSIZE: Incorrect length trange ipc xdr of len=%d received

Explanation The RP sent a time-range configuration message of the wrong size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TRANSCEIVER Messages

This section contains transceiver module messages.

TRANSCEIVER-3

Error Message %TRANSCEIVER-3-ATTACH_FAILURE: Detected for transceiver module in [chars], module disabled

Explanation A software device driver attach has failed. This condition could be caused by a software, firmware, or hardware problem, but a software or firmware problem is more likely. As a result of the error, the module is disabled.

Recommended Action Power down and reseal the module. Hardware replacement should not occur on the first occurrence. Before requesting hardware replacement, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-CHECKSUM_ERROR: Detected in the transceiver module in [chars], module disabled

Explanation A checksum error was detected when reading the ID PROM of a transceiver module for the specified interface. As a result of the error, the module is disabled.

Recommended Action Power down and reseal the module. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-INIT_FAILURE: Detected for transceiver module in [chars], module disabled

Explanation An initialization failure occurred for the transceiver module for the specified interface. This condition could be caused by a software, firmware, or hardware problem. As a result of the error, the module is disabled.

Recommended Action Power down and reseal the module. Hardware replacement should not occur on the first occurrence. Before requesting hardware replacement, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-INTERNAL_ERROR: [chars]

Explanation The transceiver subsystem encountered an internal software error. The message contains text that can be used to help identify the nature of the problem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-NOT_COMPATIBLE: Detected for transceiver module in [chars], module disabled

Explanation The transceiver module for the specified interface is not compatible with the interface. As a result of the error, the module is disabled.

Recommended Action Replace the module with a compatible transceiver. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-NOT_IDENTIFIED: Detected for transceiver module in [chars], module disabled

Explanation The transceiver module for the specified interface could not be identified and may not be compatible with the interface. As a result of the error, the module is disabled.

Recommended Action Replace the module with a compatible transceiver. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-NOT_SUPPORTED: Detected for transceiver module in [chars], module disabled

Explanation The transceiver module for the specified interface is not a Cisco supported module. As a result of the error, the module is disabled.

Recommended Action Replace the module with a Cisco supported transceiver. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-OPER_ENABLE_FAILURE: Detected for transceiver module in [chars], module disabled

Explanation Failed to enable the transceiver module for the specified interface. This condition could be caused by a software, firmware, or hardware problem. As a result of the error, the module is disabled.

Recommended Action Power down and reseal the module. Hardware replacement should not occur on the first occurrence. Before requesting hardware replacement, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-RPC_FAILED: Application error rc = [dec]:

Explanation The system failed to retrieve the information required to execute the command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show version** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-RPC_LC_PROC_INIT_FAIL: Transceiver RPC init failure: [chars]

Explanation The system failed to create the resources required to process user interface commands for transceivers. The error is not fatal but some **show** commands could fail.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show version** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-RPC_PROCESSING_ERROR: Transceiver RPC error: [chars]

Explanation A nonfatal error occurred during the processing of an RPC message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show version** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TRANSCEIVER-3-SM_CREATION_FAILURE: Transceiver OIR State Machine creation failed for [chars], module disabled.

Explanation A state machine could not be created for the transceiver OIR operation. If a memory allocation message was also received with this message, this condition indicates insufficient system memory. Other possible causes include an invalid subblock pointer.

Recommended Action If it is insufficient system memory, reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TRANSCEIVER-6

Error Message %TRANSCEIVER-6-INSERTED: transceiver module inserted in [chars]

Explanation The online insertion and removal (OIR) facility detected a newly inserted transceiver module for the interface specified in the error message.

Recommended Action This is an informational message only. No action is required.

Error Message %TRANSCEIVER-6-REMOVED: Transceiver module removed from [chars]

Explanation The online insertion and removal (OIR) facility detected the removal of a transceiver module from the specified interface.

Recommended Action This is an informational message only. No action is required.

TRIFECTA Messages

This section contains Trifecta service module messages.

Error Message %TRIFECTA-6-X86_FPGAVER_MISMATCH: Module [dec]: [chars]

Explanation Trifecta X86 FPGA version mismatch.

Recommended Action No action is required.

Error Message %TRIFECTA-6-X86ONLINE: Trifecta X86 in slot [dec] is online.

Explanation Trifecta X86 has finished booting up and is online.

Recommended Action No action is required.

Error Message %TRIFECTA-6-X86_RESTART_REASON: Module [dec]: [chars]

Explanation Trifecta X86 restart reason.

Recommended Action No action is required.

TTFIB_NP_CLIENT Messages

This section contains Toaster Tag FIB (TTFIB) NP client messages.

TTFIB_NP_CLIENT-3

Error Message %TTFIB_NP_CLIENT-3-ERROR: [chars] [chars] [chars]

Explanation Failed to set or clear port mode flags because the NP returned a failure condition.

Recommended Action Reload the Cisco IOS image on the affected card or platform. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TTFIB_NP_CLIENT-3-INFO: [chars]

Explanation TTFIB NP client failed to initialize properly, which results in improper operation of the any transport over MPLS (AToM) feature.

Recommended Action Reload the Cisco IOS image on the affected card or platform. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TTFIB_NP_CLIENT-3-NOMEM: [chars]

Explanation TTFIB NP client failed to initialize properly, which results in improper operation of the any transport over MPLS (AToM) feature.

Recommended Action This message may indicate that more memory must be installed on the affected card or platform in order to service all the features and related entities enabled via the configuration. Reload the Cisco IOS image on the affected card or platform. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TTFIB_NP_CLIENT-4

Error Message %TTFIB_NP_CLIENT-4-HDLC: [chars]

Explanation Improper usage of SIP-400 for the HDLC over MPLS (HDLCoverMPLS) feature.

Recommended Action This is an informational message only. No action is required.

Error Message %TTFIB_NP_CLIENT-4-PPP: [chars]

Explanation Improper usage of SIP-400 for the PPP over MPLS (PPPoMPLS) feature.

Recommended Action This is an informational message only. No action is required.

Error Message %TTFIB_NP_CLIENT-4-VPLS: [chars]

Explanation Improper usage of SIP-400 for the Virtual Private LAN Service (VPLS) feature.

Recommended Action This is an informational message only. No action is required.

Error Message %TTFIB_NP_CLIENT-4-WARN: [chars] [dec] [chars]

Explanation A TTFIB entry could not be added because the entry passed is invalid.

Recommended Action Reload the Cisco IOS image on the affected card or platform. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TUN Messages

This section contains tunnel messages.

TUN-3

Error Message %TUN-3-API_ARGS: unexpected arguments: [chars], [chars]

Explanation A public tunnel component API was called with arguments outside the expected boundaries.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-3-ENDPOINT_ERROR: [chars] [chars]

Explanation An internal software error occurred during manipulating the tunnel endpoint database.

Recommended Action No action is required.

Error Message %TUN-3-ENDPOINT_STORE: Operation [chars] failed for [chars]

Explanation Manipulation of the tunnel endpoint store has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-3-ILLEGAL_ARGS: Illegal arguments - [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-3-MTUCONFIGEXCEEDSL2MTU_IPV4: [chars] IPv4 MTU configured [int] exceeds tunnel maximum MTU [int]

Explanation An IPv4 MTU value is configured on the tunnel interface and this value exceeds the tunnel's maximum MTU. This message is typically observed when the tunnel header size changes or when the MTU of the underlying exit interface changes. As a result of either, the tunnel maximum MTU can change. This message can also be observed when using an IPv6 tunnel to carry IPv4 since IPv4 MTU config in this case allows for a value to be configured that is greater than the tunnel's maximum MTU. As a result of any of these conditions, packets may be dropped.

Recommended Action If a specific IPv4 MTU value is not required, it is recommended that you leave the value at the default by typing **no ip mtu** on the tunnel interface. If a specific value is required, it is recommended that you check the interface MTU value from the **show interface tunnel** command and adjust **ip mtu** on the tunnel interface to be lower than or equal to this.

Error Message %TUN-3-MTUCONFIGEXCEEDSL2MTU_IPV6: [chars] IPv6 MTU configured [int] exceeds tunnel maximum MTU [int]

Explanation An IPv6 MTU value is configured on the tunnel interface and this value exceeds the tunnel's maximum MTU. This message is typically observed when the tunnel header size changes or when the MTU of the underlying exit interface changes. As a result of either, the tunnel maximum

MTU can change. This message can also be observed when using an IPv6 tunnel to carry IPv6 since IPv6 MTU config in this case allows for a value to be configured that is greater than the tunnel's maximum MTU. As a result of any of these conditions, packets may be dropped.

Recommended Action If a specific IPv6 MTU value is not required, it is recommended that you leave the value at the default by typing **no ipv6 mtu** on the tunnel interface. If a specific value is required, it is recommended that you check the interface MTU value from the **show interface tunnel** command and adjust **ipv6 mtu** on the tunnel interface to be lower than or equal to this.

TUN-4

Error Message %TUN-4-MTUCONFIGEXCEEDSTRMTU_IPV4: [chars] IPv4 MTU configured [int] exceeds tunnel transport MTU [int]

Explanation An IPv4 MTU value has been configured on the tunnel interface and this value exceeds the tunnel's transport (default) MTU. As a result, fragmentation of the transport packet may occur before this goes out of the underlying exit interface.

Recommended Action If a specific IPv4 MTU value is not required, it is recommended that you leave the value at the default by typing **no ip mtu** on the tunnel interface. If a specific value is required, it is recommended that you check the tunnel transport MTU value from the **show interface tunnel** command and adjust **ip mtu** on the tunnel interface to be lower than or equal to this.

Error Message %TUN-4-MTUCONFIGEXCEEDSTRMTU_IPV6: [chars] IPv6 MTU configured [int] exceeds tunnel transport MTU [int]

Explanation An IPv6 MTU value has been configured on the tunnel interface and this value exceeds the tunnel's transport (default) MTU. As a result, fragmentation of the transport packet may occur before this goes out of the underlying exit interface.

Recommended Action If a specific IPv6 MTU value is not required, it is recommended that you leave the value at the default by typing **no ipv6 mtu** on the tunnel interface. If a specific value is required, it is recommended that you check the tunnel transport MTU value from the **show interface tunnel** command and adjust **ipv6 mtu** on the tunnel interface to be lower than or equal to this.

Error Message %TUN-4-MTUCONFIGLESSTHAN_MINIPV4MTU: [chars] IPv4 MTU [int] is lesser than the minimum IP MTU [int], fragmentation may occur

Explanation The IPv4 MTU value calculated on the tunnel interface is less than the minimum IP MTU. The MTU of the underlying exit interface of the tunnel is too small. As a result, fragmentation of the transport packet may occur before this goes out of the underlying exit interface.

Recommended Action If a specific MTU value is not required for the exit interface, it is recommended that you leave the value at the default by typing **no mtu** on the exit interface. If a specific value is required, it is recommended that you check the MTU value from the **show interface** command for the exit interface and adjust **mtu** on the tunnel exit to be higher than this.

Error Message %TUN-4-UDLR_IDB_ERROR: UDLR [chars] - [chars]

Explanation An error was encountered on a unidirectional link routing (UDLR) interface.

Recommended Action No action is required.

TUN-5

Error Message %TUN-5-HW_IF_INDEX_ILLEGAL: Attempt to create tunnel interface for [chars] with illegal index: [dec]

Explanation The creation of a tunnel interface failed due to an invalid index.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-INIT_ERROR: A critical error [chars] occurred during initialization

Explanation The creation of a tunnel subsystem failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-RECURDOWN_SRC: [chars] linestate down, recursive source interface, next output [chars]

Explanation While the tunnel line state was being evaluated, a source interface was revisited.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_DB_IF: Operation on tunnel interface table failed for [chars] - [chars]

Explanation A manipulation of the tunnel interface table failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_HWIDB_DELETE: Failed to delete hwidb for Tunnel [dec] index [dec]

Explanation The deletion of a tunnel interface failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_HWIDB_LIST_DELETE: Failed to delete [chars] from tunnel hwidb list

Explanation The deletion of a tunnel from the hardware IDB list failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_HWIDB_LIST_INSERT: Failed to add [chars] to tunnel hwidb list

Explanation The insertion of a tunnel into the hardware IDB list failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_HWIDB_RECYCLE: Failed to recycle hwidb for Tunnel [dec] index [dec]

Explanation The recycling of a tunnel interface failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_LIST_CREATE: Failed to create tunnel list [chars]

Explanation The creation of a tunnel list failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_SWIDB_DELETE: Failed to delete swidb for Tunnel [dec] index [dec]

Explanation The deletion of a tunnel interface failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_SWIDB_RECYCLE: Failed to recycle swidb for Tunnel [dec] index [dec]

Explanation The recycling of a tunnel interface failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_TABLE: Operation [chars] on tunnel table failed for [chars] - [chars]

Explanation The manipulation of the tunnel table failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_UNIT_LIST_DELETE: Failed to delete entry unit [dec] to tunnel unit list

Explanation A deletion from the tunnel unit failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %TUN-5-TUN_UNIT_LIST_INSERT: Failed to add entry unit [dec] to tunnel unit list

Explanation The insertion of the tunnel unit failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

TUNSS Messages

This section contains tunnel security messages.

Error Message %TUNSS-6-PROTECTION_BAD_TUN_MODE: Tunnel mode [chars] not supported by tunnel protection. Protection removed.

Explanation The chosen tunnel mode is not supported by tunnel protection interfaces. Protection has been turned off and removed.

Recommended Action Unless protection is desired on this interface, no action is required. If protection is desired, a crypto-map must be used instead.

Error Message %TUNSS-3-PROTECTION_PROCESS_FAIL

: Failed to create tunnel security process

Explanation The system failed to start a processes necessary to do tunnel protection.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

UAM Messages

This section contains Upgrade Analysis Module (UAM) messages.

UAM-3

Error Message %UAM-3-IMPACT_FAMILY: UAM is unable to get the impact of the upgrade on '%s' linecards family (SR is '%s')

Explanation The Upgrade Analysis Module (UAM) is unable to determine the impact of the current upgrade for the line cards belonging to the specified family. An upgrade operation will probably result in the resetting of all line cards in that family.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %UAM-3-INVALID_CONTEXT: Trying to stop the upgrade, but there is no upgrade currently

Explanation An application is trying to stop an upgrade cycle, but there is no upgrade in progress.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %UAM-3-INVALID_WB: Trying to set an invalid watched boolean

Explanation During runtime, the UAM is trying to release a process using an invalid internal data structure. The command line interface will probably be blocked or the standby supervisor will be unable to boot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

UBL Messages

This section contains Universal Boot Loader (UBL) messages.

UBL-2

Error Message %UBL-2-SLAVE_FAIL: Could not download image due to - [chars].

Explanation The standby supervisor engine could not carry out its task of downloading an image from the active supervisor engine due to the reason mentioned in the error message. This could be due to an internal error or due to an old image running on the active supervisor engine that does not support UBL. Prior error messages might provide more information about the actual problem.

Recommended Action Ensure the conditions mentioned in the message are met. If preceding error messages in the log indicate that this is an internal error, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

UDLD Messages

This section contains UniDirectional Link Detection (UDLD) protocol messages.

UDLD-3

Error Message %UDLD-3-UDLD_NOKADIS: UDLD unable to create the kadis timer, status [dec]

Explanation A failure occurred during creation of the kadis timer from UDLD pseudo preemptive process.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %UDLD-3-UDLD_NOPREEMP: UDLD unable to create pseudo preemptive process

Explanation A failure occurred during creation of the UDLD pseudo preemptive process.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

UDLD-4

Error Message %UDLD-4-UDLD_PORT_FAILURE: UDLD failure reported per user request, interface [chars], [chars] detected,

Explanation An interface failure was reported because UDLD protocol detected the cause indicated on the interface. Cause is likely due to bad interface hardware or cable misconfiguration. Interface not err-disabled as user choose to see error-report. User should investigate and take action.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

UDLD-6

Error Message %UDLD-6-UDLD_PORT_LINKDOWN: Fast UDLD cache times out for intf [chars], moves port to linkdown state

Explanation Fast UDLD cache entry for the reported interface times out. This could be due to either remote side port shut, LC OIR, or real link failure. UDLD moved the port to linkdown state for all cases. If this is not caused by a link failure, UDLD should receive a PM linkdown notification within the next 4 seconds. If UDLD does not receive any notification, then it will consider this a link failure and will err-disable the port.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

UNICAST_FLOOD Messages

This section contains unicast flooding (UNICAST_FLOOD) messages.

UNICAST_FLOOD-4

Error Message %UNICAST_FLOOD-4-DETECTED: Host [enet] on vlan [dec] is flooding to an unknown unicast destination at a rate greater than/equal to [dec] Kfps

Explanation A host was found going up and down between ports.

Recommended Action Verify the reason why the host is sending traffic to an unknown unicast destination.

Error Message %UNICAST_FLOOD-4-FILTER_TABLE_FULL: The filter table is full

Explanation The system has detected too many unicast floods to unknown destinations.

Recommended Action Investigate the reason why so many hosts in the network are sending traffic to unknown unicast destinations.

UNICAST_FLOOD-5

Error Message %UNICAST_FLOOD-5-FILTER_INSTALLED: Filter for host [enet] has been installed. It will be removed in [dec] minute(s)

Explanation A host was flooding unicast packets to an unknown destination. A filter has been installed.

Recommended Action No action is required.

UTIL Messages

This section contains utility messages.

UTIL-3

Error Message %UTIL-3-DLL: Data structure error -- %s

Explanation A software error occurred, resulting in data structure inconsistency.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %UTIL-3-IDTREE_NOTRACE: [chars]

Explanation A software error occurred, resulting in a data structure inconsistency.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %UTIL-3-IDTREE_TRACE: [chars]

Explanation A software error occurred, resulting in a data structure inconsistency.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VACL Messages

This section contains VLAN ACL messages.

VACL-4

Error Message %VACL-4-VLANACCESSMAP_ACTION_CHANGED: No redirect interfaces, map <[chars]> - sequence [dec] action set to DROP

Explanation One or more redirect interfaces were removed, leaving the redirect interface list empty and changing the sequence action to DROP.

Recommended Action Update the sequence, adding one or more valid redirect interfaces to the affected VLAN access maps.

Error Message %VACL-4-VLANACCESSMAP_CWAN_DELETE: VLAN ACCESS-MAP [chars] applied on [chars] will be removed.

Explanation Logical interface(MFR,MLP) with a VACL Access-map is being removed so the associated vlan filter will be removed to avoid config errors and inconsistencies

Recommended Action User has to re-configure the vlan filter if the removed logical interface is being removed

Error Message %VACL-4-VLANACCESSMAP_RDT_DELETE: [chars] [chars] is removed from redirect list of map: [chars] - sequence [dec]

Explanation One of the redirect interfaces in a VLAN access map needed to be removed from a redirect sequence. This situation can occur if the interface was deleted or became an active member of an Ethernet channel that is not supported.

Recommended Action Revert the state of the interface and add this redirect interface again to the redirect sequence for the affected VLAN access maps.

VALENCIA Messages

This section contains Services SPA Carrier Card (SSC-600) Valencia ASIC messages.

VALENCIA-3

Error Message %VALENCIA-3-GIO: Bay [dec]: [chars].

Explanation A data corruption due to a parity error was detected on the GIO bus.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VALENCIA-3-NP: Bay [dec], [chars][dec]: [chars].

Explanation Data corruption was detected in one of the network processors.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VALENCIA-3-PL3: Bay [dec]: [chars].

Explanation A data corruption due to a parity error was detected on the PL3 interface.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VALENCIA-3-PLL_LOCK: Bay [dec]: [chars] PLL Lock Failure

Explanation The specified phase-locked loop (PLL) failed to lock.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VALENCIA-3-PPE: Bay [dec], [chars]: [chars].

Explanation Data corruption was detected in the VLAN RAM.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VALENCIA-3-SPI_FIFO: Bay [dec], [chars]: [chars] [chars].

Explanation Data corruption was detected in one of the SPI FIFOs.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VALENCIA-3-SPI_SNK: Bay [dec]: [chars].

Explanation There was an error receiving data from the SPA, possibly due to data corruption.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VALENCIA-3-SPI_SNK_CHAN: Bay [dec]: [chars] error on channel [dec].

Explanation There was an error receiving data from the SPA.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VALENCIA-3-SPI_SRC: Bay [dec]: [chars].

Explanation There was an error sending data to the SPA.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VDD Messages

This section contains virtual device driver (VDD) messages.

VDD-3

Error Message %VDD-3-NULL_CB: Supplied %s control block is NULL. %s

Explanation An NULL control block was passed internally as part of an operation to read or write to the required register or memory address. As a result, the operation could not be processed and the address contents are now incorrect.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VDD-3-NULL_SPACE_CB: Supplied %s space control block is NULL. %s

Explanation An NULL space control block was passed internally as part of an operation to read or write to the required address. As a result, the operation could not be processed and the address contents are now incorrect.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VDD-3-SIZE_TOO_LARGE: An attempt was made to create a %s of size %d bits.

Explanation The virtual device driver received a request to create a data entity that is larger than allowed. Because the entry cannot be created, its data will be lost.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VFI Messages

This section contains virtual forwarding instance (VFI) messages.

VFI-3

Error Message %VFI-3-ILLEGAL: %s

Explanation An illegal event was processed by the XCONNECT subsystem.

Recommended Action No action is required.

VFI-4

Error Message %VFI-4-CONFIG: %s

Explanation The specified configuration data for a virtual forwarding instance (VFI) is invalid.

Recommended Action No action is required.

VINES Messages

This section contains Banyan Virtual Integrated Network Service (VINES) messages.

Error Message %VINES-2-INVALIDROUTE: Bad [chars] in route for server entry [v-name]

Explanation While searching the routing table, the code determined that a pointer that should point to a VINES route structure actually points to some other structure.

Recommended Action Copy the message exactly as it appears, and report it your technical support representative. If possible, clear the VINES routing table. This will result in a temporary loss of connectivity until all routes are relearned.

VIP Messages

This section contains Versatile Interface Processor (VIP) messages.

VIP-3

Error Message %VIP-3-SVIP_CRASHINFO_ERROR: Crashinfo initiation failed on the VIP.

Explanation The crash information (crashinfo) file for the VIP could not be collected because the process to collect the crashinfo file could not be properly initiated.

Recommended Action If the error message recurs, copy the message exactly as it appears on the console or in the system log and enter the **show controllers vip slot# tech-support** and **show controllers vip slot# logging** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VIPMLP Messages

This section contains multilink PPP messages.

Error Message %VIPMLP-2-NOINTERLEAVE: [chars] Interleave not configured due to Insufficient memory

Explanation Interleave was not configured due to insufficient memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VLAN_MAPPING_ISSU Messages

This section contains VLAN mapping in-service software upgrade (ISSU) messages.

VLAN_MAPPING_ISSU-3

Error Message %VLAN_MAPPING_ISSU-3-BUFFER: vlan_mapping VLAN Mapping ISSU client failed to get buffer for message, error %d

Explanation The VLAN mapping ISSU client was unable to get a buffer for building a negotiation message. As a result, the client cannot send the negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %VLAN_MAPPING_ISSU-3-CAPABILITY: vlan_mapping VLAN Mapping ISSU client %s

Explanation The VLAN mapping ISSU client detected an error during capability negotiation. As a result, there is a mismatch in the client capability between the active and standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %VLAN_MAPPING_ISSU-3-INIT: vlan_mapping VLAN Mapping ISSU client initialization failed at %s, error %s

Explanation The VLAN mapping ISSU client could not be initialized. This condition will cause a catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VLAN_MAPPING_ISSU-3-MSG_NOT_OK: vlan_mapping VLAN Mapping ISSU client message %d is not compatible

Explanation The VLAN mapping ISSU client received an incompatible message from the peer unit. The message cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %VLAN_MAPPING_ISSU-3-MSG_SIZE: vlan_mapping VLAN Mapping ISSU client failed to get the message size for message %d

Explanation The VLAN mapping ISSU client was unable to calculate the message size for the message specified. The client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %VLAN_MAPPING_ISSU-3-POLICY: vlan_mapping VLAN Mapping ISSU client message type %d is %s

Explanation The VLAN mapping ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %VLAN_MAPPING_ISSU-3-SEND_FAILED: vlan_mapping VLAN Mapping ISSU client failed to send a negotiation message, error %d

Explanation The VLAN mapping ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %VLAN_MAPPING_ISSU-3-SESSION: vlan_mapping VLAN Mapping ISSU client %s

Explanation The VLAN mapping ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %VLAN_MAPPING_ISSU-3-TRANSFORM: vlan_mapping VLAN Mapping ISSU client %s transform failed, error %s

Explanation The VLAN mapping ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the vlan_mapping VLAN Mapping state will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

VOA Messages

This section contains Hamptons variable optical attenuator (VOA) subcards messages.

VOA-3

Error Message %VOA-3-HIGH_ALM_THR: High Alarm Threshold for optical power on port [chars] [chars]

Explanation The high alarm threshold for the optical power level has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VOA-3-HIGH_WARN_THR: High Warning Threshold for optical power on port [chars] [chars]

Explanation The high warning threshold for the optical power level has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VOA-3-LOW_ALM_THR: Low Alarm Threshold for optical power on port [chars] [chars]

Explanation The low alarm threshold for the optical power level has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VOA-3-LOW_WARN_THR: Low Warning Threshold for optical power on port [chars] [chars]

Explanation The low warning threshold for the optical power level has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPD Messages

Error Message %VPD-4-CESCLK_INIT: ATM CES (Voice Processor Deck) clock source initialized to local oscillator.

Explanation Warning indicates that ATM CES (Voice Processor Deck) clock used will be internal.

Recommended Action No action is required.

VPDN Messages

This section contains Virtual Private Dialup Networking (VPDN) messages.

VPDN-3

Error Message %VPDN-3-DROP_ADDR_MISMATCH: [chars]

Explanation The remote server changed its address.

Recommended Action Change initiate-to configuration at the LAC to point to the exact IP address LNS will use.

Error Message %VPDN-3-IP_SWITCH_ERR: 12x ip switching vector not installed

Explanation The platform-dependent Layer 2X IP Cisco Express Forwarding (CEF) switching module is missing.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPDN-3-NORESOURCE: [chars] [chars] [chars] no resources for user [chars] [chars] [chars]

Explanation The platform (for example, the Cisco Network Authentication Server and L2TP access concentrator (NAS/LAC) or the home gateway and L2TP network server (HGW/LNS)) has exhausted its resources for forwarding a VPDN user.

Recommended Action Check the available memory of the platform.

VPDN-4

Error Message %VPDN-4-MIDERROR: [chars] [chars] [chars] unable to terminate user [chars] [chars] [chars]

Explanation The HGW/LNS was unable to complete the forwarding of the VPDN user because of an internal error. This condition may be resource-related or configuration-related. A reason string may be present in the message text to indicate the point of failure.

Recommended Action Check the configuration of the HGW/LNS.

Error Message %VPDN-4-REFUSED: Session for %s Refused status = %x

Explanation The remote server refused this session.

Recommended Action Check the configuration of the home gateway (HGW) or L2TP Network Server (LNS).

Error Message %VPDN-4-SESSIONERROR: [chars] [chars] [chars] unable to terminate user [chars] [chars] [chars]

Explanation The HGW/LNS was unable to complete the forwarding of the VPDN user due to an internal error. This error may be resource related or configuration related. A reason string may be present to indicate the point of failure.

Recommended Action Check the configuration on the HGW/LNS

VPDN-5

Error Message %VPDN-5-NOIDB: [chars] [chars] [chars] unable to terminate user [chars]

Explanation The HGW/LNS has exhausted its resources for creating sessions for VPDN forwarded users. It has reached the maximum number of interfaces allowed on the router.

Recommended Action Limit the number of interfaces to the maximum allowable interfaces.

Error Message %VPDN-5-UNREACH: [chars] [chars] [chars] is unreachable

Explanation The platform (for example, the Cisco NAS/LAC or the HGW/LNS) has timed out while it was attempting to establish a tunnel connection to a HGW/LNS or NAS/LAC. The timeout may be due to network, authentication, or authorization issues.

Recommended Action Check the configuration on the platform and check the network connectivity between the NAS/LAC and HGW/LNS. Check to see if the tunnel setup requires a different source IP address from that of the NAS/LAC.

VPDN-6

Error Message %VPDN-6-AUTHENERR: [chars] [chars] [chars] cannot locate a AAA server for [chars] [chars] [chars][chars][chars]

Explanation Either the NAS/LAC or the HGW/LNS is unable to locate an AAA server for the purposes of authenticating the user or tunnel. This condition indicates that the router was unable to establish a network connection with the designated or configured server. A reason string may be present in the message text to provide further information.

Recommended Action Check the AAA configuration on the platform (for example, the Cisco NAS/LAC or the HGW/LNS) and check the network connectivity to the AAA servers.

Error Message %VPDN-6-AUTHENFAIL: [chars] [chars] [chars], [atalk_address]uthentication failure [chars]for [chars] [chars] [chars][chars][chars]

Explanation The platform (for example, the Cisco NAS/LAC or the HGW/LNS) has failed to authenticate a user or a tunnel, or the HGW/LNS has failed authentication with the client that initiated the session. For authentication failures of the user or tunnel, a reason string should be present in the message text to indicate the point of failure. When a client fails to authenticate the HGW, a reason string may be present, depending upon the point of failure.

Recommended Action Check the username configuration on the platform and, possibly, the client. If the HGW/LNS is failing authentication, removing the negotiation of outbound authentication (that is, authenticating the user only in the inbound direction) is one possible solution. If AAA is applicable to the condition, check the AAA configuration on the NAS/LAC or HGW/LNS and check the network connectivity to the AAA servers.

Error Message %VPDN-6-AUTHORERR: [chars] [chars] [chars] cannot locate a AAA server for [chars] [chars] [chars][chars][chars]

Explanation The platform (for example, the Cisco NAS/LAC or the HGW/LNS) is unable to locate a AAA server for the purposes of authorizing the user or tunnel. The router was unable to establish a network connection with the designated or configured server. A reason string may be present in the message text to provide further information.

Recommended Action Check the AAA configuration on the platform and check the network connectivity to the AAA servers.

Error Message %VPDN-6-AUTHORFAIL: [chars] [chars] [chars], [atalk_address]uthorization failure for [chars] [chars] [chars][chars][chars]

Explanation The platform (for example, the Cisco NAS/LAC or the HGW/LNS) has failed to authorize a user or a tunnel. A reason string may be present in the message text to indicate the point of failure.

Recommended Action Check the authorization configuration on the platform. If AAA is applicable to the condition, check the network connectivity to the AAA servers.

Error Message %VPDN-6-CLOSED: [chars] [chars] [chars] closed [chars] [chars] [chars] [chars] [chars]

Explanation The remote server, typically the HGW/LNS, closed this session. The reason for the closing is encoded in a hexadecimal format and corresponds to the particular protocol descriptions. For the L2F protocol, the values are documented in section 4.4.5 of the Internet Draft. A description string may also be present that describes the reason for the closing.

Recommended Action Check the configuration on the platform (for example, the configuration of the Cisco NAS/LAC or the HGW/LNS).

Error Message %VPDN-6-DOWN: %s %s %s changed state to down %s %s %s%s%s

Explanation The remote server, typically the home gateway (HGW) and L2TP Network Server (LNS), closed this tunnel. The reason for the closure is encoded in a decimal format defined in the particular protocol specification. For example, the closure values for Layer 2 Forwarding (L2F) are documented in section 4.4.5 of the L2F Internet Draft. The closure reason may also be displayed in a description string.

Recommended Action Check the configuration on the network access server (NAS) and L2TP access concentrator (LAC), or on the home gateway (HGW) and L2TP Network Server (LNS).

Error Message %VPDN-6-MAX_SESS_EXCD: %s %s %s has exceeded configured local session-limit and rejected %s %s %s%s%s

Explanation The NAS/LAC or HGW/LNS has refused this session since the configured maximum VPDN session limit has been reached.

Recommended Action No action is required.

Error Message %VPDN-6-RESIZE: Updated [chars] session table size to [int]

Explanation The platform (for example, the Cisco NAS/LAC or the HGW/LNS) has altered the size of the session table using the CLI.

Recommended Action No action is required.

Error Message %VPDN-6-SOFTSHUT: %s %s %s has turned on softshut and rejected %s %s %s%s%s

Explanation The NAS/LAC or HGW/LNS can no longer accept new connections when the **vpdn softshut** command has been entered. Existing sessions will continue until termination.

Recommended Action To allow new connections, enter the **no vpdn softshut** command. Otherwise, no action is required.

Error Message %VPDN-6-TIMEOUT: [chars] [chars] [chars] disconnected [chars] [chars] [chars] [chars] [chars]

Explanation The platform (for example, the Cisco NAS/LAC or the HGW/LNS) has disconnected the user because of the expiration of a timer. This condition may be PPP negotiation-related or might be an absolute timeout for the session.

Recommended Action If the session has timed out automatically, no action is required.

Error Message %VPDN-6-VPDN_DEADCACHE_EVENT: LSG dead cache entry [IP_address] [chars]

Explanation A dead cache entry status is changed in the VPDN Load Sharing Group (LSG) table. The event could be 'Added', where a LSG entry goes Down, 'Deleted', where an entry moves out of the Down status, or 'Cleared', where an entry is cleared by a user.

VPLS_NP_CLIENT Messages

This section contains VPLS NP client messages.

VPLS_NP_CLIENT-3

Error Message %VPLS_NP_CLIENT-3-INFO: [chars]

Explanation The VPLS NP client failed to initialize properly. This condition will result in improper operation of the any transport over MPLS (AToM) feature.

Recommended Action Reload the Cisco IOS image on the affected card or platform. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPLS_NP_CLIENT-3-NOMEM: [chars]

Explanation The VPLS NP client failed to initialize properly. This condition will result in improper operation of the AToM feature. This error may indicate that more memory must be installed on the affected card or platform in order to service all the features and related entities enabled by the configuration.

Recommended Action Reload the Cisco IOS image on the affected card or platform. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPLS_NP_CLIENT-4

Error Message %VPLS_NP_CLIENT-4-WARN: [chars] [dec] [chars]

Explanation The entry could not be added because it is invalid.

Recommended Action Reload the Cisco IOS image on the affected card or platform. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPN_HW Messages

This section contains VPN hardware accelerator for IPSec (VPN_HW) messages.

VPN_HW-0

Error Message %VPN_HW-0-SELF_TEST_FAILURE: Hardware Crypto self-test failed ([chars])

Explanation One of the hardware crypto self-tests has failed. The crypto engine is not operable in this state.

Recommended Action If the failure persists, contact Cisco to replace the hardware.

VPN_HW-1

Error Message %VPN_HW-1-ALIGN: Slot: [dec] - Alignment failure on packet buffer: [hex]

Explanation A software error has occurred. The VPN hardware accelerator driver has detected that the buffer is not aligned correctly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPN_HW-1-ERROR: slot: [dec] - [chars]

Explanation An error occurred in the application that was using the VPN hardware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPN_HW-1-HEARTBEAT: VPN Module in slot: [dec]: Keepalive lost.

Explanation Keepalive messages have been lost, which indicates that the VPN hardware accelerator is no longer operating.

Recommended Action Reboot your router. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPN_HW-1-INITFAIL: Slot [dec]: [chars]

Explanation The VPN hardware accelerator driver could not initialize the accelerator at the slot specified in the error message at the specified point.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPN_HW-1-NOMEMORY: [chars] creation failed for slot [dec]

Explanation During its initialization phase, the VPN hardware driver could not allocate memory for the data structure that is specified in the error message.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPN_HW-1-OWNER: slot: [dec]: [chars] packet buffer, pak=[hex]

Explanation A software or hardware error has occurred. The VPN hardware accelerator driver has detected that the buffer ring is in an inconsistent and unrecoverable state.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPN_HW-1-PACKET_ERROR: slot: [dec] Packet Encryption/Decryption error, [chars]

Explanation An unexpected error occurred during the encryption or decryption of a packet.

Recommended Action This message can occur occasionally during normal operation of the system. It may occur during the transition to a new session key for a security association. In such cases, no action is required. However, if it happens frequently, or is associated with traffic disruption, then note the status value and contact your Cisco technical support representative. The VPN hardware accelerator will most likely need to be replaced.

Error Message %VPN_HW-1-TOOBIG: Slot: [dec] - [chars] received a packet with size [dec].

Explanation A packet was received that was too large. The hardware supports only the MTU size specified in the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPN_HW-1-UNSUPP: VPN Module in slot: [dec]: [chars] ([hex]).

Explanation This revision or version of the VPN hardware accelerator in the slot specified in the error message is not supported.

Recommended Action Verify that the VPN hardware adapter is the proper hardware level and software revision for the running version of the Cisco IOS software. If it is, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools

and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPN_HW-3

Error Message %VPN_HW-3-MULTDEV: Cannot support more than one Encryption AIM

Explanation A second Encryption AIM was discovered present in the system. The Encryption AIM software only supports a single Encryption AIM. All other Encryption AIMS installed will be ignored.

Recommended Action Remove one of the Encryption AIMS that are installed in your system.

VPN_HW-4

Error Message %VPN_HW-4-PACKET_ERROR: slot: [dec] Packet Encryption/Decryption error, [chars]

Explanation An unexpected error occurred during the encryption or decryption of a packet.

Recommended Action This message can occur occasionally during normal operation of the system. It may occur during the transition to a new session key for a security association. In such cases, no action is required. However, if it happens frequently, or is associated with traffic disruption, then note the status value and contact your Cisco technical support representative. The VPN hardware accelerator will most likely need to be replaced.

VPN_HW-6

Error Message %VPN_HW-6-FIPSFAIL: FIPS test_id [dec]([chars]) Test Failure will be induced

Explanation The FIPS test was forced to fail from ROMMON.

Recommended Action If this condition is undesirable, do not set FIPS_FAIL using ROMMON.

Error Message %VPN_HW-6-INFO: slot: [dec] [chars]

Explanation This is an informational message from the VPN hardware accelerator driver.

Recommended Action No action is required.

Error Message %VPN_HW-6-INFO_LOC: Crypto engine: [chars] [chars]

Explanation This is an informational message from the VPN hardware accelerator driver.

Recommended Action No action is required.

Error Message %VPN_HW-6-SHUTDOWN: [chars] shutting down

Explanation The specified VPN hardware is shutting down. It may have been physically removed.

Recommended Action This is an informational message only. No action is required.

VPNMAP Messages

This section contains Virtual Private Network mapper (VPNMAP) messages.

VPNMAP-2

Error Message %VPNMAP-2-REALLOC_ERROR: Exceeded number of resources to support hardware switching of VRF %s. Please unconfigure some of the existing VRFs as some entries will be software switched in the next reload.

Explanation Because no further hardware resources are available to support hardware switching of VRFs, some VRFs must be software switched. Unconfigure the **mls ipv6 vrf** command or some of the existing features that use those resources. Examples of features using hardware switching resources are VRF, EoMPLS, and MDT.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **remote command module**, **show platform software vpn mapping**, **show platform software vpn status**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %VPNMAP-2-SPACE_EXCEEDED: Exceeded number of resources to support hardware switching of VRFs. Please unconfigure some of the existing VRFs as some entries will be software switched.

Explanation Because no further hardware resources are available to support hardware switching of VRFs, some VRFs must be software switched. Unconfigure the **mls ipv6 vrf** command or some of the existing features that use those resources. Examples of features using hardware switching resources are VRF, EoMPLS, and MDT.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **remote command module**, **show platform software vpn mapping**, **show platform software vpn status**, and **show running-config** commands and your pertinent troubleshooting logs.

VPNSM Messages

This section contains Virtual Private Network Services Module (VPNSM) messages.

VPNSM-2

Error Message %VPNSM-2-ACE_PKA_KAT_FAILURE: PKA: Known Answer Test failure: [chars]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-2-ACESCPERROR: Null MAC address pointer in SCP module

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPNSM-3

Error Message %VPNSM-3-ACEI0BADPARAM: PcpManCreateTunn: cannot create tunnel with expiring Sa

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI0TCAMFAILED: SpdSpInstall: cannot install Sp [dec]: TmInsertSp failed

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI1BADPARAM: SpdSpInstall: cannot install generic SP [dec] with non-zero priority

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI1OUTOFSA: PcpQOpCreSaBegin: cannot create new Sa using SpdMan

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI10OUTOFCME: PcpManCreateAcl: cannot allocate new Acl for aclId=[int]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI11NESTOVERFLOW: SpdSaAddTmInsCb: cannot have more than [dec] pending nested callbacks from TcamMan

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI2BADPARAM: PcpManUpdateFlow: cannot update flow [dec] with invalid ID

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI12IDNOTINUSE: PcpManRemoveAcl: cannot remove non-existing access list [int]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI12OUTOFSAPAR: SpdSaSetKeys: cannot allocate new SaPar for Sa [dec]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI13IDINUSE: PcpManRemoveAcl: cannot remove access list [int] while in use

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI3OUTOFSEL: PcpQOpActSaBegin: cannot allocate selector set for outer Sa in flowId [dec]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI14BADCMCID: PcpSpdCreateCme: cannot create Cme with ID=[dec]: too large

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI14NOLOGA: SpdSaSetParams: cannot allocate SPI with TcamMan for Sa [dec]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI15IDNOTINUSE: PcpManRemoveCme: cannot remove non-existing Cme [int]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI18BADPARAM: PcpManCreateSMap: cannot create outbound SPD Map [int] with ingress access list [int]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI19BADCMCID: PcpManActivateFlowAsync: cannot activate flow [dec] with non-existing Cme [dec]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI2BADPARAM: PcpManUpdateFlow: cannot update flow [dec] with invalid ID

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI2NESTOVERFLOW: SpdSaInitTmSaOut: outer outbound Sa [dec] of Sa [dec] is above nesting limit of [dec]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI20OUTOFSEL: PcpUtilSelSetFromPar: cannot allocate new selector set

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI21BADPARAM: PcpAclAppend: got too many denys for aclId=[dec], max is [dec]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI22BADPARAM: PcpAclAppend: got out-of-sequence line number [dec] for aclId=[dec]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI23IDINUSE: PcpSpdCreateCme: cannot create Cme with ID=[int]: already used

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI74IDINUSE: PcpSpdCreateSMap: cannot create SPD map with mapId [int] already in use

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI75TMFAILED: PcpSMapInstall: cannot insert SMap [int] with TcamMan

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI76BADPARAM: PcpSpdCreateSMap: cannot create SPD map [int] with invalid flags [hex]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI77BADPARAM: PcpManCreatesMap: cannot create SPD Map [int] using non-existent access list [int]

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI78OUTOFSMAP: PcpSpdCreateSMap: cannot create SPD map [int]: out of memory

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI79BADPARAM: PcpQOpActSaBegin: cannot activate Sa for cmeId=[dec], entry=[dec] when Cme is not ready

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-3-ACEI80QUEUEFULL: PcpManDestroyFlowAsync: cannot delete flowId [dec]: operation queue is full

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Error Message %VPNSM-4-ICPUPP8: Illegal clear pkt src:[dec].[dec].[dec].[dec]
dst:[dec].[dec].[dec].[dec] proto:[dec].

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSM-4-ICPUPP9: Packet src:[dec].[dec].[dec].[dec]
dst:[dec].[dec].[dec].[dec] seq num:[hex] failed replay check last seq num:[hex]
for SA:[hex].

Explanation IPsec packets have failed the anti-replay check. A common cause is the use of QoS in your network. With QoS, lower priority packets can arrive late, missing the anti-replay check window. When this condition occurs, higher level protocols can request retransmission so that functionality is not lost. Time-sensitive protocols, such as voice traffic, might be degraded due to dropped or late packets.

Recommended Action If anti-replay checking is not needed, disable it by removing the HMAC function from the transform set.

Error Message %VPNSM-4-ICPUPP10: Packet src:[dec].[dec].[dec].[dec]
dst:[dec].[dec].[dec].[dec] proto ESP, but not SA proto!

Explanation An error has been reported by the firmware.

Error Message %VPNSM-6-ACEPKARNGKAT: PKA: RNG failed KAT

Explanation An error has been reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPNSMIOS Messages

This section contains VPNSM crypto connection (VPNSMIOS) messages.

VPNSMIOS-3

Error Message %VPNSMIOS-3-ILLEGALINTERFACE: Traffic matching crypto maps on [chars] will go through unencrypted. Please reconfigure crypto maps as required by VPN service module.

Explanation An attempt was made to apply an encryption (crypto) map set to an interface that is not a VLAN interface. When this IPsec VPN accelerator is being used, crypto map sets can only be applied to a VLAN interface that has a proper encryption (crypto) connection to a physical port. The interface has been disabled. For more information on crypto guidelines, consult the system configuration manuals.

Recommended Action Remove the crypto map set from the virtual interface. For more details, consult the configuration guidelines.

Error Message %VPNSMIOS-3-MACEDONCTVLALLOCFAIL: Failed to allocate Control vlan on stby

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONCTVLTIMERON: Control vlan timer is on on stby

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONNOCCONB2BERR: [chars]no crypto connect is disallowed

Explanation The system cannot remove the cryptographic connection when a module-to-module partner is still active.

Recommended Action Remove the module-to-module configuration before removing the cryptographic connection.

Error Message %VPNSMIOS-3-MACEDONTUNNELADDCBERR: [chars]: tunnel addcb failed: reason[[chars]] tvlan[[dec]] slot[[chars]]

Explanation An error response was received when attempting to seize the tunnel. In a virtual switch system (VSS), slot [[chars]] indicates switch/slot/subslot; otherwise it indicates slot/subslot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELADDERR: [chars]: tunnel add failed: reason[[chars]] ifvlan[[dec]] tvlan[[dec]] slot[[chars]] src[[IP_address]] dst[[IP_address]]

Explanation An attempt to seize the tunnel has failed. In a virtual switch system (VSS), slot [[chars]] indicates switch/slot/subslot; otherwise it indicates slot/subslot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELCREATEPOLOQERR: Failed to create PoloReplicateCfg Q

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELCREATEPROCERR: Failed to create Ace Tunnel Task

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELCREATEQERR: Failed to create watched Q

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELCREATEIDERR: Failed to create Ace Tunnel-id bitvector

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELDELETEIFVLANNOTFOUNDERR: [chars]: no tm found while attempting to delete from ifvlan[[dec]]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELDELETETMNOTFOUNDERR: [chars]: no tm found while attempting to delete

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELNOEVENTMSGHANDLERERR: msgtype[[chars]]: No event msg handler found.

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELNOIDBERR: No tunnel idb

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELNOTMMSGHANDLERERR: msgtype[[chars]]: No tm msg handler found.

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELREMOVECBERR: [chars]: tunnel removecb failed: reason[[chars]] tvlan[[dec]] slot[[chars]]

Explanation An error response was received when attempting to release the tunnel. In a virtual switch system (VSS), slot [[chars]] indicates switch/slot/subslot; otherwise it indicates slot/subslot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELREMOVEERR: [chars]: tunnel remove failed: reason[[chars]] ifvlan[[dec]] tvlan[[dec]] slot[[chars]] src[[IP_address]] dst[[IP_address]] id[[dec]]

Explanation An attempt to release the tunnel has failed. In a virtual switch system (VSS), slot [[chars]] indicates switch/slot/subslot; otherwise it indicates slot/subslot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELVACLERR: vlan[[dec]]: failed to set vacl: action[[dec]] reason[[dec]]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELVLANERR: [chars]: allocated idb has invalid vlan id

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-MACEDONTUNNELVLANIDBERR: [chars]: unable to allocate idb

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSMIOS-3-SLOTMISMATCH: [chars] has mismatch crypto engine binding. Egress interface is binded to crypto engine [int]/[int] but tunnel protection is binded to [int]/[int]. This tunnel is now shutdown.

Explanation To use VPN-SM for tunnel protection, the user must enter the **crypto engine slot slot** command on both the egress interface VLAN and the tunnel interface. The slot on both interfaces must match. When this requirement is not met, this message is displayed. The tunnel is now shut down.

Recommended Action Modify either one or both crypto engine slot values so that they match.

Error Message %VPNSMIOS-3-VLANALLOCFAIL: Failed to allocate vlan for %s

Explanation The system was unable to allocate a VLAN for internal use.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show platform hardware capacity vlan**, and **show vlan internal usage** commands and your pertinent troubleshooting logs.

VPNSMIOS-4

Error Message %VPNSMIOS-4-DIFFCRYPTOENGINE: [chars]. Another interface [chars] has same local-address [chars] but is on a different crypto engine [chars]

Explanation Two crypto interfaces with the same local address must be on the same crypto engine. In a virtual switch system (VSS), crypto engine [chars] indicates switch/slot/subslot; otherwise it indicates slot/subslot.

Recommended Action Reconfigure the **crypto engine** command on the interface.

Error Message %VPNSMIOS-4-LIMITFVRF: System has reached the limit of supported front-door VRF. ([dec])

Explanation The number of front-door VRFs supported by VPNSM has reached its limit.

Recommended Action Unconfigure any unused VRFs.

Error Message %VPNSMIOS-4-PROMISCOUSMODE: Outside port failed to be in [chars] mode

Explanation This message is relevant only if the outside port is an FEPA port.

Recommended Action Reconfigure the **crypto connect** command.

Error Message %VPNSMIOS-4-VPNSMILLEGALQOS0: VPNSM Slot: [dec] can only support [dec] cos maps in high priority queue, CoS configuration ignored, reset cos map by issuing no priority queue cos-map 1 command

Explanation An illegal configuration has been detected.

Recommended Action Reset the CoS map by entering the **no priority-queue cos-map 1** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPNSMIOSSP Messages

This section contains VPN service module (VPNSM) crypto connection SP messages.

Error Message %VPNSMIOSSP-6-MACEDONPOWEROFF: Non crypto image detected, disallowing power to VPN-SM module in slot [chars].

Explanation The chassis was booted up with an image that does not have the necessary crypto subsystems for the VPN-SM to run correctly. In a virtual switch system (VSS), slot [[chars]] indicates switch/slot/subslot; otherwise it indicates slot/subslot.

Recommended Action Contact your Cisco technical support representative to obtain the correct image. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPNSPA Messages

This section contains Virtual Private Network shared port adapter (VPNSPA) messages.

VPNSPA-0

Error Message %VPNSPA-0-ACELOGTEST7: Log test: SEV_EMERG

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPNSPA-1

Error Message %VPNSPA-1-ACELOGTEST6: Log test: SEV_ALERT

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPNSPA-2

Error Message %VPNSPA-2-ACEIKEADRVPKRM: Decode of RSA Private Key %d failed

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-2-ACEIKEANVRWRT: RSA Private Key %d NOT written to NVRAM

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-2-ACEIKEANVWRT: RSA Private Key %d NOT zeroized in NVRAM

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-2-ACEIKEANVWRT2: RSA Private Key %d NOT written to NVRAM

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-2-ACEIKEAPRVCREDRV: Driver refused RSA Private Key

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. Error Message %VPNSPA-3-ACEI10OUTOFCME: PcpManCreateAcl: cannot allocate new Acl for aclId=%u

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI11NESTOVERFLOW: SpdSaAddTmInsCb: cannot have more than %ld pending nested callbacks from TcamMan

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI11OUTOFSEL: PcpAclGetSpSelSet: cannot clone SelSet for ACL %d

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI12IDNOTINUSE: PcpManRemoveAcl: cannot remove non-existing access list %u

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI12OUTOFSAPAR: SpdSaSetKeys: cannot allocate new SaPar for Sa %ld

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI13IDINUSE: PcpManRemoveAcl: cannot remove access list %u while in use

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI14BADCMCID: PcpSpdCreateCme: cannot create Cme with ID=%ld: too large

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI14NOLOGA: SpdSaSetParams: cannot allocate SPI with TcamMan for Sa %ld

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI64BADPARAM: PcpQOpActSaBegin: got invalid ranges for selector set of fully-specified flow %ld

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI65BADPARAM: PcpManSetInitMode: got invalid flags 0x%x for setting fast policy mode

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI66NOTREADY: PcpManUpdateFlow: cannot update flow %ld when SA is not active

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI67BADPARAM: PcpSpdCreateSMap: cannot create SMap %u with Acl %u when Acl state is %u

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI68BADPARAM: PcpAclAppend: got invalid flags 0x%x at lineNo=%d, aclId=%d

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI69BADPARAM: PcpManCreateCme: cannot create Cme %u with spdId %u out of range [0,%u]

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI6BADPARAM: PcpTrInProcess: got invalid size %d for opcode %d

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI6OUTOFSEL: SpdSpInstall: cannot compute SP's permit-SelSets from mixed SelSet list

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI93OUTOFSEL: PcpCmeIntersectSaWithSp: cannot clone deny selectors for flow %ld

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI9BADPARAM: PcpManQueryFlow: cannot query flow %ld: invalid ID

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEI9OUTOFSEL: SpdSaActivateOuterSa: cannot create selector set

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACELOGTEST4: Log test: SEV_ERR

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEPKARSAPRVXCR: PKA: PkaRsaPrivXcrypt() invalid input buffer length %ld

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEPKARSAPUBXCRBUFLLEN: PKA: PkaRsaPubXcrypt() invalid input buffer length %ld

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEPKASK0LENCROP2: PKA: 0 length crypto operation

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEPKASK0LENCRYOP3: PKA: 0 length crypto operation

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEPKASK0LENOP: PKA: 0 length crypto operation

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEPKASK1STFRAGSHRT: PKA: 1st frag too short for crypto operation

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEPKASKDESNOTMUL82: PKA: DES/3DES data length not multiple of 8

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEPKASKDESNOTMULT8: PKA: DES/3DES data length not multiple of 8

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ACEPKASKNOCRNOAUTH: PKA: Can't have PKA_CRYPTONE and PKA_HMAC_NONE

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ICPUBADGRESA: Invalid GRE SA - can't find match. saptr:0x%x

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-ICPUPP22: ICMP received, let it go clear newId %d oldid %d

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-3-SPI_NOT_AVAIL: SPI 0x%x is not available

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPNSPA-4

Error Message %VPNSPA-4-ACEIPCOMPINGPRE: IPC ping (%s): premature ping...awaiting response to previous ping

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ACEXCPUCMRESP5: XcpuCfgMonReqCallback: PerFlow Stats...Can't respond to host.

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ANTIREPLAYWINDOWDEFAULT: Using default replay window for SA SPI 0x%x

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-BULKIP: Wrong type %d size:5d.

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-DUMPMEM: 0x%08x: 0x%08x 0x%08x 0x%08x 0x%08x

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-EDSDEBUG: Already in map: map[0x%x] newid0x%x flags:0x%x mtu:0x%x spdid:0x%x

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-FIPSCHECK2: FIPS RCVD Multi-buffer Packet.

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-FIPSCHECK3: FIPS Failed Packet Comparison.

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-FIPSCHECK4: FIPS Test Completed Successfully.

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ICPUFRAG1: PktReasmSetAction failed.

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ICPUPP10: Packet src:%d.%d.%d.%d dst:%d.%d.%d.%d proto ESP, but not SA proto!

Explanation The received packet's protocol does not match the security association (SA) protocol. The SA expects Authentication Header (AH), but the packet uses Encapsulating Security Payload (ESP).

Recommended Action Check whether the negotiated protocol matches the configured transform sets of both peers.

Error Message %VPNSPA-4-ICPUPP11: Packet src:%d.%d.%d.%d dst:%d.%d.%d.%d proto AH, but not SA proto!

Explanation The received packet's protocol does not match the SA protocol. The SA expects ESP, but the packet uses AH.

Recommended Action Check whether the negotiated protocol matches the configured transform sets of both peers.

Error Message %VPNSPA-4-ICPUPP12: IPPE says IPsec, not pkt src:%d.%d.%d.%d dst:%d.%d.%d.%d proto:%d!

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ICPUPP13: Policy check failed for pkt src:%d.%d.%d.%d dst:%d.%d.%d.%d proto:%d SA index:0x%x

Explanation The decrypted packet does not match the security policy.

Recommended Action Check whether the security policy on both peers is symmetric.

Error Message %VPNSPA-4-ICPUPP14: Pkt src:%d.%d.%d.%d dst:%d.%d.%d.%d proto:%d match deny; SA index 0x%x

Explanation Encrypted packets were received that should have been unencrypted.

Recommended Action Check whether the security policy on both peers is symmetric.

Error Message %VPNSPA-4-ICPUPP15: SecInfo 0x%x doesn't match with SA 0x%x SA index:0x%x

Explanation An unexpected and unsupported nesting of SA was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ICPUPP16: Inner proto %d must be IPSec but is not

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ICPUPP2: SaCheckSelectors: Illegal pkt, no valid SA

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ICPUPP3: Illegal pkt dst:%d.%d.%d.%d proto:%d spi:0x%x, no match on SA SPI 0x%x.

Explanation No matching SA was found for the received encrypted packet. This message is most likely to occur during rekeying when the inbound SA is not yet established.

Recommended Action If the message persists and packets are being lost, check whether the CPU is overloaded or the crypto engine is oversubscribed.

Error Message %VPNSPA-4-ICPUPP4: Illegal pkt dst:%d.%d.%d.%d proto:%d spi:0x%x, no match on SA dst%d.%d.%d.%d

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ICPUPP8: Illegal clear pkt src:%d.%d.%d.%d dst:%d.%d.%d.%d proto:%d.

Explanation Clear packets were received that should have been encrypted.

Recommended Action Check whether the remote peer has a correct security policy and SA to encrypt the packets.

Error Message %VPNSPA-4-ICPUPP9: Packet src:%d.%d.%d.%d dst:%d.%d.%d.%d seq num:0x%x failed replay check last seq num:0x%x for SA:0x%x.

Explanation IPsec packets have failed the anti-replay check. A common cause is the use of QoS in your network. With QoS, lower priority packets can arrive late, missing the anti-replay check window. When this condition occurs, higher level protocols can request retransmission so that functionality is not lost. Time-sensitive protocols, such as voice traffic, might be degraded due to dropped or late packets.

Recommended Action Increase the anti-replay window size. If anti-replay checking is not needed, disable it by removing the HMAC function from the transform set.

Error Message %VPNSPA-4-ICPUSYSIPADDRADD: PktProcAddSysIpAddr: Unable to delete sys IP Addr %d.%d.%d.%d

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-ISAUNCA7: PktProcAtnModSas: Mismatch valid flag unca:invalid index:0x%x

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-RECOVERYFRAG: Ipfrag: Unable to transmit. CP Lockup Occured.

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-4-SINGLEIP: Wrong type %d size:%d.

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-5-ACEPKARESUBPK: BCM5820: Resubmitting PK request 0x%x

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-5-ACEPKARSACKBITSNMULT: PKA: RSA key create request of %d bits not a multiple of 64

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-5-ACEPKARSACKMAXBITS: PKA: RSA key create request of %d bits exceeds max of %d bits

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-5-ACEPKARSACKTOOMANY: PKA: Too many RSA key create requests

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-5-ACEPKARSARMPSEBUSYID: PKA: can't remove busy RSA private session %ld

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-5-ACEPKARST: PKA: BCM5820 in reset

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-5-ACEPKARSTCOMPL: BCM5820: Reset complete

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VPNSPA-6

Error Message %VPNSPA-6-ACEIPSENDMSGLOCAL: %s send msg buf (local)

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-6-ACEIPSENDMSGTOOBIG: %s unable to send msg buf (msg too big)

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-6-ACEIPCSENDMSGTOOMANYCLIENTS: %s unable to send msg buf (client id too big)

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-6-ACELOGTEST1: Log test: SEV_INFO

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VPNSPA-6-ACEPKAHWCRNGT: PKA: HW RNG has duplicate data, discarding

Explanation An error was reported by the firmware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. VRRP Messages

This section contains Virtual Router Redundancy Protocol (VRRP) messages.

VRRP-4

Error Message %VRRP-4-BDAUTH: Bad authentication from %i, group %d, type %d

Explanation Two routers participating in Virtual Router Redundancy Protocol (VRRP) disagree on authentication.

Recommended Action Enter the **vrrp authentication** command to repair the VRRP authentication discrepancy between the local system and the system whose IP address is reported.

Error Message %VRRP-4-BADAUTHTYPE: Bad authentication from %i, group %d, type %d, expected %d

Explanation Two routers participating in VRRP disagree on the valid authentication type.

Recommended Action Enter the **vrrp authentication** command to repair the VRRP authentication discrepancy between the local system and the system whose IP address is reported.

VSDA Messages

This section contains virtual switch dual-active (VSDA) messages.

VSDA-3

Error Message %VSDA-3-ADD_LTL_INDEX_AND_FPOE: Unable to add LTL index 0x%04x and program fpoe for %u/%u

Explanation An internal error occurred.

Recommended Action No action is required.

Error Message %VSDA-3-GET_IDB_FAILED: Failed to get idb for port cookie (linkchange)

Explanation An internal error occurred.

Recommended Action No action is required.

Error Message %VSDA-3-ICC_ERR: %s

Explanation A failure occurred during the intercard communications (ICC) operation.

Recommended Action No action is required.

Error Message %VSDA-3-INVALID_PROC_EVENT: Got event %d:%d

Explanation The process was awakened with an invalid event.

Recommended Action No action is required.

Error Message %VSDA-3-INVALID_TIMER: Invalid timer %d for interface %s

Explanation A timer event occurred, but the timer type was invalid.

Recommended Action No action is required.

Error Message %VSDA-3-INVALID_TIMER_TYPE: Invalid timer %d processed in %s

Explanation A timer event occurred, but the timer type was invalid.

Recommended Action No action is required.

Error Message %VSDA-3-LINK_DOWN: Interface %s is no longer dual-active detection capable

Explanation The specified link is no longer capable of detecting dual-active situations.

Recommended Action No action is required.

Error Message %VSDA-3-PKT_CREATE: Can't create packet: %s

Explanation A dual-active packet cannot be created due to the reason described.

Recommended Action No action is required.

Error Message %VSDA-3-PKT_RX: Can't process the received packet: %s

Explanation A dual-active packet cannot be processed due to the reason described.

Recommended Action No action is required.

Error Message %VSDA-3-PKT_TX: Can't send packet: %s

Explanation A dual-active packet cannot be sent due to the reason described.

Recommended Action No action is required.

Error Message %VSDA-3-PROC_CREATE_FAILED: Unable to create process

Explanation The specified process could not be created.

Recommended Action No action is required.

Error Message %VSDA-3-QUEUE_CREATE_FAILED: Unable to create watched queue

Explanation The specified watched queue could not be created.

Recommended Action No action is required.

Error Message %VSDA-3-SET_PORT_LTL_INDEX: Unable to set LTL index for port %s to 0x%x

Explanation An internal error occurred

Recommended Action No action is required.

Error Message %VSDA-3-TIMER_NULL_INTFC: NULL context for timer %d in %s

Explanation A timer event occurred, but it specified a NULL interface.

Recommended Action No action is required.

Error Message %VSDA-3-TIMER_STARTED: Timer %u on interface %s started

Explanation The specified link is now capable of detecting dual-active situations.

Recommended Action No action is required.

Error Message %VSDA-3-TX_THREAD_FAILURE: Thread %u: %s

Explanation This is a general thread error message.

Recommended Action No action is required.

Error Message %VSDA-3-VSDA_SCP_BAD_STATUS: SCP operation ([chars]) return status [dec]

Explanation A non-blocking SCP operation of the specified type failed for dual-active fast-hello on a line card

Recommended Action No action is required.

Error Message %VSDA-3-VSDA_SCP_PAK_FAIL: Unable to get SCP packet for opcode [dec], operation [dec]

Explanation Packet allocation failed for sending an SCP message to do the specified operation

Recommended Action No action is required.

Error Message %VSDA-3-VSDA_SCP_SEND_FAIL: Unable to send SCP message for opcode [dec], operation subop [dec]

Explanation Packet send failed for the SCP message to perform the specified operation

Recommended Action No action is required.

VSDA-5

Error Message %VSDA-5-LINK_UP: Interface %s is now dual-active detection capable

Explanation The specified link is now capable of detecting dual-active situations.

Recommended Action No action is required.

VSEC Messages

This section contains VLAN security violation messages.

VSEC-4

Error Message %VSEC-4-VLANACCESSLOGRF: FAILED to set VACL-LOG rate limiter. Is strongly suggested to rate limit when using this feature

Explanation The configuration for the VACL logging rate limiter has failed.

Recommended Action Determine the rate limiter usage, free some resources if possible, and then try to set the rate limiter again.

VS_GENERIC Messages

This section contains virtual switch (VS) messages.

VS_GENERIC-1

Error Message %VS_GENERIC-1-VS_HA_PS_NOT_SUPPORTED: Chassis Standby is not supported in the current release. Forcing the chassis standby in switch [dec] slot [dec] to drop to rommon

Explanation The chassis standby function is not supported in this release.

Recommended Action No action is required.

Error Message %VS_GENERIC-1-VS_HA_PS_RUNNING_LEGACY_IMAGE: Chassis Standby in switch [dec] slot [dec] is running non Virtual Switch image. Please remove the chassis standby.

Explanation The standby chassis is running an image that does not support virtual switch.

Recommended Action Remove the standby chassis.

VS_GENERIC-3

Error Message %VS_GENERIC-3-VS_ADD_VSL_ENTRY_FAILED: Add VSL configured port for vslot [int] port [int] failed. Exceed port member count limit.

Explanation An attempt to add an entry for (vslot, port) to the VSL configured port list failed because the port member count limit was exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VS_GENERIC-3-VS_BOOLEAN_CREATE_FAILED: Unable to create watched boolean "[chars]"

Explanation The creation of the specified watched boolean failed.

Recommended Action No action is required.

Error Message %VS_GENERIC-3-VS_ENQUEUE_FAILED: Unable to enqueue to [chars] queue

Explanation An internal error occurred that prevented a message from being enqueued to the specified process. The packet was dropped.

Recommended Action No action is required.

Error Message %VS_GENERIC-3-VS_ICC_PAK_FAIL: Unable to get ICC packet for opcode [dec], operation [dec]

Explanation A packet allocation failed for sending an ICC message to do the specified operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VS_GENERIC-3-VS_ICC_RESP_PAK_NULL: Failed to obtain response packet

Explanation The response packet pointer is NULL. This could be due to an insufficient memory condition on the response packet sending side or to a failure to get an IPC message on the receiving side.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VS_GENERIC-3-VS_NO_PAGP_CHANNEL_HWIDB: No PAGP channel hwidb for PAGP group [dec]

Explanation An internal error occurred. Port Aggregation Protocol (PAgP) could not find the hardware interface descriptor block (IDB) for this channel group.

Recommended Action No action is required.

Error Message %VS_GENERIC-3-VS_PROC_CREATE_FAILED: Unable to create process "[chars]"

Explanation The creation of the specified process failed.

Recommended Action No action is required.

Error Message %VS_GENERIC-3-VS_QUEUE_CREATE_FAILED: Unable to create queue "[chars]"

Explanation The creation of the specified queue failed.

Recommended Action No action is required.

Error Message %VSL-3-VSL_PROC_ARGS_FAILED: Unable to process arguments "[chars]"

Explanation The processing of the specified arguments failed.

Recommended Action No action is required.

VS_GENERIC-5

Error Message %VS_GENERIC-5-VS_CONFIG_DIRTY: Configuration has changed. [chars]

Explanation An attempt to reload was ignored due to a configuration change.

Recommended Action No action is required.

VSL Messages

This section contains virtual switch link (VSL) messages.

VSL-2

Error Message %VSL-2-VSL_STATUS: ===== VSL is [chars] =====

Explanation The VSL status has changed to active (up) or inactive (down).

Recommended Action No action is required.

VSL-3

Error Message %VSL-3-PRE_PEER_COMM_TIMEOUT: A timeout occurred while waiting for vsl_pre_peer_comm_op_done

Explanation All applications failed to respond within the specified time. Operation is continuing.

Recommended Action No action is required.

Error Message %VSL-3-TROUBLESHOOT: Structure type [int]: [chars]

Explanation The specified structure could not be created to save VSL troubleshooting information when VSL goes down.

Recommended Action No action is required.

Error Message %VSL-3-VSL_ICC_PAK_FAIL: Unable to get ICC packet for opcode [dec], operation [dec]

Explanation Packet allocation failed for sending an ICC message to do the specified operation.

Recommended Action No action is required.

Error Message %VSL-3-VSL_ICC_SEND_FAIL: Unable to send ICC message for opcode [dec], operation subop [dec]

Explanation Packet send failed for the ICC message to perform the specified operation.

Recommended Action No action is required.

Error Message %VSL-3-VSL_INST_CREATE_FAIL: Failed to create VSLP instance for VSL

Explanation Unable to create a VSLP instance for VSL.

Recommended Action No action is required.

Error Message %VSL-3-VSL_INTERNAL_ERROR: [chars], port [dec]/[dec]

Explanation An internal error occurred.

Recommended Action No action is required.

Error Message %VSL-3-VSL_INVALID_PROC_EVENT: Got event [dec]:[dec]

Explanation An invalid event activated the process.

Recommended Action No action is required.

Error Message %VSL-3-VSL_INVALID_TIMER_CTXT: NULL or invalid timer context

Explanation A timer expiration event was received with NULL or invalid context information.

Recommended Action No action is required.

Error Message %VSL-3-VSL_INV_PORT_STATUS_CHANGE: Link status change ([chars]) on non-VSL port [dec]/[dec]

Explanation A link status change was detected on a port that is not a VSL member.

Recommended Action No action is required.

Error Message %VSL-3-VSL_MAX_PORTS: Cannot configure more than [dec] ports

Explanation A port could not be added to the VSL because the maximum number of ports in the VSL has been reached.

Recommended Action No action is required.

Error Message %VSL-3-VSL_MODE_BAD_STATUS: VSL-mode programming ([dec]) returned status [dec]

Explanation A VSL-mode operation of the specified type failed on a VSL line card.

Recommended Action No action is required.

Error Message %VSL-3-VSL_PORT_CFG_MOD_OFFLINE: Module [dec] offline when port [dec] added to VSL

Explanation A port was added to the VSL when the corresponding line card was offline.

Recommended Action No action is required.

Error Message %VSL-3-VSL_PROC_CREATE_FAILED: Unable to create process "[chars]"

Explanation The specified process could not be created for an unknown reason.

Recommended Action No action is required.

Error Message %VSL-3-VSL_REGISTRY_ADD_FAIL: [chars] registry addition failed

Explanation An addition to the given registry failed during initialization.

Recommended Action No action is required.

Error Message %VSL-3-VSL_RESERVED_LTL_FAIL: Unable to allocate reserved LTL indices

Explanation Platform-VSLP for VSL uses a number of reserved Local Target Logic (LTL) indices allocated by the LTL Manager. Because this allocation failed, the system can no longer function.

Recommended Action No action is required.

Error Message %VSL-3-VSL_ROLE_RES_BOOL_FAIL: Unable to create watched boolean for role resolution

Explanation A watched boolean for role resolution could not be created.

Recommended Action No action is required.

Error Message %VSL-3-VSL_SCP_BAD_STATUS: SCP operation ([chars]) return status [dec]

Explanation A nonblocking SCP operation of the specified type. failed on a VSL line card

Recommended Action No action is required.

Error Message %VSL-3-VSL_SCP_BLK_SEND_FAIL: [chars] for SCP opcode [dec], subopcode [dec]

Explanation Failed to do the specified operation when sending the specified SCP message through a blocking call.

Recommended Action No action is required.

Error Message %VSL-3-VSL_SCP_FAIL: SCP operation failed

Explanation A nonblocking SCP operation failed on a VSL line card.

Recommended Action No action is required.

Error Message %VSL-3-VSL_SCP_PAK_FAIL: Unable to get SCP packet for opcode [dec], operation [dec]

Explanation Packet allocation failed for sending an SCP message to do the specified operation.

Recommended Action No action is required.

Error Message %VSL-3-VSL_SCP_SEND_FAIL: Unable to send SCP message for opcode [dec], operation subop [dec]

Explanation Packet send failed for the SCP message to perform the specified operation.

Recommended Action No action is required.

Error Message %VSL-3-VSL_UNCFG_BAD_PORT: Unconfigure on non-VSL port [dec]/[dec]

Explanation An attempt was made to unconfigure a port from the VSL, but the port is not part of the VSL.

Recommended Action No action is required.

Error Message %VSL-3-VSL_UNCFG_FAILED: Unconfigure on VSL port [dec]/[dec] failed: [chars]

Explanation While unconfiguring a VSL port, the specified operation failed.

Recommended Action No action is required.

VSL-5

Error Message %VSL-5-VSL_CNTRL_LINK: New VSL Control Link [chars]

Explanation A new VSL control link was detected on a VSL line card.

Recommended Action No action is required.

VSL_BRINGUP Messages

This section contains virtual switch link (VSL) bringup messages.

VSL_BRINGUP-3

Error Message %VSL_BRINGUP-3-MODULE_DOWN: Failed to bring up VSL module in slot [dec] switch [dec]. [chars]

Explanation The bringup of the specified module failed due to the reason indicated.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VSL_BRINGUP-3-NO_MODULE_UP: Failed to bring up any VSL modules on switch [dec]

Explanation An attempt to bring up any VSL line cards or supervisor engines failed due to an internal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VSL_BRINGUP-3-PROC_CREATE_FAILED: Unable to create process "[chars]"

Explanation The creation of the specified process failed.

Recommended Action No action is required.

Error Message %VSL_BRINGUP-3-VS_OVERSUB_MODECHANGE_FAIL: Switching mode failed on Switch %d module %d port-group %d

Explanation The VSL bringup process was unable to change the switching mode of the indicated module.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VSL_BRINGUP-6

Error Message %VSL_BRINGUP-6-MODULE_UP: VSL module in slot [dec] switch [dec] brought up

Explanation The specified VSL module was brought up successfully.

Recommended Action No action is required.

Error Message %VSL_BRINGUP-6-NOT_VS_CAPABLE_EARL: Supervisor card does not have Virtual Switch capable EARL daughter board

Explanation The supervisor engine card does not have an EARL daughterboard capable of running in virtual switch mode. An EARL 7.5 or above is required.

Recommended Action Use a supported supervisor engine card for a virtual switch system.

Error Message %VSL_BRINGUP-6-PREEMPT_DISABLED: Preemption suppressed due to first time VS conversion

Explanation A higher priority standby switch will not preempt a lower priority active switch when a virtual switch (VS) system is converted for the first time from a standalone configuration.

Recommended Action Use the **switch accept mode virtual** command to merge the standby VSL configuration first. Then, if desired, use the **redundancy force-switchover** command to make the other switch active.

Error Message %VSL_BRINGUP-6-SUP720_VS_NOT_SUPPORT: No support for Virtual Switch on SUP720. Booting up in Standalone mode

Explanation The Supervisor Engine 720 is virtual switch capable. However, Cisco does not officially support virtual switch mode on the Supervisor Engine 720.

Recommended Action No action is required.

VSLP Messages

This section contains Virtual Switch Link Protocol (VSLP) messages.

VSLP-2

Error Message %VSLP-2-VSL_DOWN: [chars]

Explanation VSL status changed to DOWN. More detail is provided in the message.

Recommended Action No action is required.

VSLP-3

Error Message %VSLP-3-ICC_ERR: [chars]

Explanation A failure occurred during the inter-card communications (ICC) operation.

Recommended Action No action is required.

Error Message %VSLP-3-ISSU_ERROR: %s

Explanation The virtual switch link protocol (VSLP) was unable to perform an ISSU operation.

Recommended Action No action is required.

Error Message %VSLP-3-PKT: VSLP packet error: [chars]

Explanation A VSLP packet error occurred for the reason described.

Recommended Action No action is required.

Error Message %VSLP-3-PKT_CREATE: Can't create packet: [chars]

Explanation A VSLP packet cannot be created due to the reason described.

Recommended Action No action is required.

Error Message %VSLP-3-PKT_RX: Can't process the received packet: [chars]

Explanation A VSLP packet cannot be processed due to the reason described.

Recommended Action No action is required.

Error Message %VSLP-3-PKT_TX: Can't send packet: [chars]

Explanation A VSLP packet cannot be sent due to the reason described.

Recommended Action No action is required.

Error Message %VSLP-3-REGISTRY_ADD_ERR: Failure in adding to [chars] registry

Explanation A function could not be added to the registry.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_ERR_MSG: [chars]

Explanation The VSLP role resolution protocol detected an error.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_INSTANCE_OUT_OF_BOUNDS: Instance value [dec] is outside the expected range

Explanation The instance value received is out of bounds.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_INVALID_INSTANCE: Instance value [dec] is invalid

Explanation The instance value received corresponds to an invalid instance.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_MEMORY_ALLOC_ERR: (Instance:[dec], Peer:[dec]): No memory available for [chars]

Explanation The VSLP could not obtain the requested memory.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_PEER_INFO_ERR: (Instance:[dec], Peer:[dec]): Peer [chars]

Explanation The role resolution protocol has encountered an error associated with this peer.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_PEER_INSTANCE_ERROR: (Instance:[dec], Peer:[dec], Up:[dec], Valid:[dec], Switch:[dec], Role:[chars], PeerRole:[chars]): [chars]

Explanation An error occurred pertaining to the instance and peer group specified.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_PEER_SUP_PSLOT_ERR:
save_rrp_tlv_data->peer_sup_pslot:[int], my_sup_pslot:[int]

Explanation The role resolution protocol detected a difference in the peer supervisor engine pslot.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_RESERVED_PEER_ERR: (Instance:[dec], Peer:[dec]): Reserved peer [dec] [chars]

Explanation The role resolution protocol has detected an error related to the reserved peer.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_SESSION_ID_ERR: (Instance:[dec], Peer:[dec]): Session id mismatch. Expected [dec], got [dec]

Explanation The VSLP role resolution protocol has detected a session ID mismatch.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_SLOT_PORT_ERR: (Slot:[dec], Port:[dec]): [chars]

Explanation The role resolution protocol has detected an error related to the specified slot and port.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_TIMER_CREATE_FAIL: (Instance:[dec], Peer:[dec]): Unable to create RRP timer

Explanation The role resolution protocol was unable to create a timer for the specified instance and peer.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_UNEXPECTED_ROLE: Unexpected roles. Local role = [chars], Peer role = [chars]

Explanation The role resolution protocol has encountered inconsistent role information.

Recommended Action No action is required.

Error Message %VSLP-3-RRP_VALUE_ERR: [chars]: [dec]

Explanation The role resolution protocol has encountered an unknown value.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_BOOLEAN_CREATE_FAILED: Unable to create watched boolean "[chars]"

Explanation The specified watched boolean could not be created.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_INST_INVALID_CAP: Invalid capability [dec] for VSLP instance [dec]

Explanation A VSLP capability was requested that is beyond the current list of supported capabilities.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_INST_OUT_OF_RANGE_CREATE: Cannot create VSLP instance [dec]

Explanation A VSLP instance could not be created for the switch ID because it is not within the acceptable range.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_INST_OUT_OF_RANGE_DESTROY: Cannot destroy VSLP instance [dec]

Explanation The given VSLP instance could not be destroyed because it is not within the acceptable range.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_DOMAIN_MISMATCH: Domain ID in probe packet from peer %d is not the same as local Domain ID %d. The packet was dropped.

Explanation The virtual switch domain ID in a probe packet from the peer is not the same as the local domain ID. The packet was dropped.

Recommended Action Investigate and correct this misconfiguration.

Error Message %VSLP-3-VSLP_LMP_FAIL_REASON: [chars]: [chars]

Explanation This message displays the reason for a link to leave the LMP operational state.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_FLAG_SET: Incorrect flag value (0x%x) on port %d/%d

Explanation The system detected an unexpected value for the flag field of a VSL link. This condition is caused by an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show vslp lmp summary**, and **show vslp lmp fsm** commands and your pertinent troubleshooting logs.

Error Message %VSLP-3-VSLP_LMP_FSM_INVALID_TIMER: Invalid timer [dec] for port [dec]/[dec] in [chars] operation

Explanation A timer event occurred, but the timer type was invalid.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_FSM_NULL_CTXT: NULL context for FSM action [chars]

Explanation An FSM action routine was invoked, but with a NULL context argument.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_FSM_TIMER_BAD_CTXT: Invalid or NULL context for timer [dec] in [chars] operation

Explanation A timer event occurred, but the FSM infrastructure passed to the handler a context pointer that is currently not in use or is NULL.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_INVALID_PROC_EVENT: Got event [dec]:[dec]

Explanation An invalid event woke up the process.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_MAX_PGS: Cannot create more than [dec] LMP peer groups

Explanation The number of LMP peer groups has reached the maximum per-LMP instance.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_MAX_PORTS: Cannot configure more than [dec] ports

Explanation LMP could not be configured on a port because the maximum number of ports per-LMP instance has been reached.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_PG_CREATE_FAIL: Unable to create PG ([enet]:[dec]) for port [dec]/[dec]

Explanation The peer group could not be created for the given port. This port is the first port connected to this peer to move into the operational state.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_PG_GET_FAIL: Unable to get PG (%e) for port %d/%d

Explanation The system was unable to get the peer group for the given port.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_PG_INCONSISTENT: PG [enet]:[dec] should have [dec] links, but none found

Explanation A link has left a peer group that seems to have more links, but no other links were found.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_PG_NO_CTRL_LINK: No control link for preferred PG [dec]

Explanation A peer group with no control link has been set as the preferred peer group.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_PG_OUT_OF_RANGE: Peer group [dec] is out of range

Explanation A peer group has been passed to an API that is out of range.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_RX_BAD_FIRST_TLV: Bad first TLV ([dec]) in received packet on port [dec]/[dec]

Explanation The received LMP packet was dropped because its first type-length value (TLV) was not a Probe TLV or a Hello TLV.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_RX_BAD_INTERFACE: Incorrect port [dec]/[dec] for received packet

Explanation A received LMP packet was dropped because it had incorrect received packet information. The LMP packet may have been received from an interface on which VSLP is not enabled.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_RX_BAD_TLV_COUNT: Bad TLV count in received packet ([dec])

Explanation A received LMP packet was dropped because it had an incorrect number of type-length values (TLVs). This includes the case where no TLVs are received.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_RX_PLATFORM_REJECT: Platform TLV rejected for received [chars] packet

Explanation A received LMP packet was dropped because one or more platform type-length values (TLVs) were rejected.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_RX_QUEUE_FAIL: Unable to enqueue received packet for processing

Explanation An internal error occurred that prevented a packet from being enqueued to the packet processing queue. The packet was dropped.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_RX_XFORM: Failed to transform received %s packet

Explanation An ISSU transformation failed on the received packet. The packet was dropped

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_LMP_SAME_SWITCH_ID: Switch id in probe packet is the same as the local switch id %d. The packet was dropped.

Explanation The switch ID in a probe packet from the peer is the same as the local switch ID. The packet was dropped.

Recommended Action Investigate and correct this misconfiguration

Error Message %VSLP-3-VSLP_NULL_ENTRY: Null [chars] entry in [chars] operation

Explanation A NULL entry was passed in the specified operation.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_PROC_CREATE_FAILED: Unable to create process "[chars]"

Explanation The specified process could not be created due to unknown reasons.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_QUEUE_CREATE_FAILED: Unable to create watched queue "[chars]"

Explanation The specified watched queue could not be created due to unknown reasons.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_REGISTRY_ADD_FAIL: [chars] registry addition failed

Explanation The given registry addition failed during initialization.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_THREAD_CREATE_FAILURE: tid %u/intvl %u: %s

Explanation VSLP transmit thread creation failed for the specified reason.

Recommended Action No action is required.

Error Message %VSLP-3-VSLP_THREAD_FAILURE: tid %u: %s

Explanation A general VSLP transmit thread failure occurred for the specified reason.

Recommended Action No action is required.

VSLP-4

Error Message %VSLP-4-ASIC_DUMP: [chars]

Explanation The VSL physical link is up and the role was not resolved in RRP.

Recommended Action No action is required.

Error Message %VSLP-4-VSL_PREEMPT_TIMER: Preempt timer configured to [dec] minutes. Standby will takeover as active in [dec] minute(s)

Explanation The preempt timer is configured on the standby unit. The standby unit will become active after the timer expires.

Recommended Action No action is required.

VSLP-5

Error Message %VSLP-5-RRP_ACTIVE_PEER_DOWN: Communication to active peer went down. Triggering switchover...

Explanation The role resolution protocol has received an indication that communication with the active peer has gone down. This condition will trigger a switchover.

Recommended Action No action is required.

Error Message %VSLP-5-RRP_RT_CFG_CHG: Configured [chars] value is different from operational value. Change will take effect after config is saved and switch [dec] is reloaded.

Explanation Role resolution protocol configuration changes by user

Recommended Action No action is required.

Error Message %VSLP-5-RRP_MSG: [chars]

Explanation A role resolution protocol event was received.

Recommended Action No action is required.

Error Message %VSLP-5-RRP_NO_PEER: No VSLP peer found. Resolving role as Active

Explanation Because VSLP could not communicate with any peer, it will boot up as active.

Recommended Action No action is required.

Error Message %VSLP-5-RRP_PEER_TIMEOUT: VSLP peer timer expired without detecting peer. Resolving role as Active

Explanation Because the role resolution protocol could not communicate with any peer before the peer timer expiry, it will boot up as active.

Recommended Action No action is required.

Error Message %VSLP-5-RRP_PREEMPT: [chars]
Switch [int]: Priority [int]: Preempt [chars]
Switch [int]: Priority [int]: Preempt [chars]

Explanation Displays preemption configuration.

Recommended Action No action is required.

Error Message %VSLP-5-RRP_PREEMPT_IGNORE: %s

Explanation The preemption configuration is ignored due to unsaved configurations.

Recommended Action No action is required.

Error Message %VSLP-5-RRP_ROLE_RESOLVED: Role resolved as [chars] by VSLP

Explanation The role resolution protocol has communicated with a peer and has resolved its role.

Recommended Action No action is required.

Error Message %VSLP-5-RRP_RT_CFG_CHANGE: [chars]

Explanation The role resolution protocol configuration has been changed by a user.

Recommended Action No action is required.

Error Message %VSLP-5-RRP_UNSAVED_CONFIG: Ignoring system reload since there are unsaved configurations.
Please save the relevant configurations

Explanation The role resolution protocol received an indication that the system must be reloaded due to a role change from active to standby. No reload will occur because unsaved configurations exist and would be lost.

Recommended Action No action is required.

Error Message %VSLP-5-RRP_WR_MEM_PROGRESS: Ignoring system reload since config save operation is in progress. Please wait till the configs are saved

Explanation The role resolution protocol (RRP) received an indication that a system reload is required due to a role change from active to standby. Since a configuration save operation is in progress, the system will not be reloaded.

Recommended Action No action is required.

Error Message %VSLP-5-VSL_UP: [chars]

Explanation VSL status has changed to UP, with more details provided in message.

Recommended Action No action is required.

VSLP-6

Error Message %VSLP-6-ACTIVE: [chars]

Explanation Displays the state of the virtual switch active supervisor engine.

Recommended Action No action is required.

Error Message %VSLP-6-STANDBY: [chars]

Explanation Displays the state of the virtual switch standby supervisor engine.

Recommended Action No action is required.

VSLP_ISSU Messages

This section contains Virtual Switch Link Protocol (VSLP) in-service software upgrade (ISSU) messages.

VSLP_ISSU-3

Error Message %VSLP_ISSU-3-CAP_RESULT_INCOMPAT: VSLP ISSU client capability exchange result incompatible.

Explanation Based on the results of the capability exchange, the VSLP ISSU client is not compatible with the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %VSLP_ISSU-3-INIT: VSLP ISSU client initialization failed at %s, error %s

Explanation The VSLP ISSU client could not be initialized. This condition will cause a catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VSLP_ISSU-3-INTERNAL: An internal error occurred: %s

Explanation A software error occurred during the specified operation.

Recommended Action No action is required.

Error Message %VSLP_ISSU-3-INVALID_PROC_EVENT: Got event %d:%d

Explanation The process was awakened with an invalid event.

Recommended Action No action is required.

Error Message %VSLP_ISSU-3-ISSU_ERROR: %s failed with error code %d for peer %e

Explanation An ISSU application program interface (API) was unable to perform an operation for the VSLP layer. The message includes the error code from the ISSU library.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu fsm** commands and your pertinent troubleshooting logs.

Error Message %VSLP_ISSU-3-MSG_NOT_OK: VSLP ISSU client message %s is not compatible

Explanation The VSLP ISSU client received an incompatible message from the peer unit. Since the message is not compatible, it cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %VSLP_ISSU-3-NEGO_FAILED: VSLP ISSU start nego session with peer %e with error code %s

Explanation The VSLP ISSU could not start its negotiation process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu fsm** commands and your pertinent troubleshooting logs.

Error Message %VSLP_ISSU-3-NULL_ENTRY: Null %s entry in %s

Explanation A NULL entry was passed in the specified operation.

Recommended Action No action is required.

Error Message %VSLP_ISSU-3-PROC_CREATE_FAILED: Unable to create process

Explanation The specified process could not be created.

Recommended Action No action is required.

Error Message %VSLP_ISSU-3-QUEUE_CREATE_FAILED: Unable to create watched queue

Explanation The specified watched queue could not be created.

Recommended Action No action is required.

Error Message %VSLP_ISSU-3-RX_BAD_INTERFACE: Incorrect port %d/%d for received packet

Explanation A VSLP ISSU packet was received that contains incorrect received packet info. This VSLP ISSU packet may have been received from an interface on which VSLP is not enabled. The packet was dropped.

Recommended Action No action is required.

Error Message %VSLP_ISSU-3-RX_QUEUE_FAIL: Unable to enqueue received packet for processing

Explanation An internal error occurred that prevented a packet from being enqueued to the packet processing queue for processing. The packet was dropped.

Recommended Action No action is required.

Error Message %VSLP_ISSU-3-SEND_FAILED: VSLP ISSU client failed to send a negotiation message

Explanation The VSLP ISSU client could not send a session negotiation message to the peer. When a problem occurs in the negotiation, the peer switch unit cannot be brought up as standby, resulting in two active switches in the system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %VSLP_ISSU-3-SESSION: VSLP ISSU client %s

Explanation The VSLP ISSU client detected an error during a session negotiation with the peer unit. As a result, the peer switch cannot be brought up as standby and two switches will be active in the system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %VSLP_ISSU-3-TRANSFORM: VSLP ISSU client %s transform failed for %s message, error %s

Explanation The VSLP ISSU client could not transform the message. If the transmit transformation failed, the VSLP message cannot be sent to the standby unit. If the receive transformation failed, the VSLP message cannot be processed on the standby unit. In either case, the VSLP ISSU client state will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

VS_MERGE Messages

VS_MERGE-3

Error Message %VS_MERGE-3-SAME_ACT_STDBY_PO: Invalid configuration - standby VSL port channel number [int] is same as active VSL port channel. Auto-merge process is aborted.

Explanation This is an invalid configuration. Active and standby must use different VSL port channel numbers. Auto-merge process is aborted. If this situation happens, standby switch will come up in RPR mode.

Recommended Action Use different port channel numbers for active and standby VSL port channels and its members. This change can be done by bringing down all VSL links so that standby switch comes up as active switch. Then enter configuration mode and make changes to use different VSL port channel number for local VSL port members. Once completed, reload this switch to start auto-merge procedure again.

VS_MERGE-4

Error Message %VS_MERGE-4-STDBY_VSL_PO_EXIST: Overwriting existing port channel [int] with standby VSL port channel

Explanation There exists a port channel that uses the same channel number as standby VSL port channel. Overwrite the existing port channel configuration with standby VSL port channel configuration.

Recommended Action If the existing port channel configuration is required, then reconfigure the port channel and its related configuration with a different port channel number

VS_MERGE-6

Error Message %VS_MERGE-6-SAVE_MERGED_CFG: Saving merged configuration...

Explanation The merged configuration is being copied to startup-config.

Recommended Action No action is required.

VS_MOD_PROV Messages

This section contains virtual switch module provisioning messages.

VS_MOD_PROV-3

Error Message %VS_MOD_PROV-3-AUTO_ADD_SLOT_FAILED: Auto module provision add failed for chassis [dec] slot [dec]

Explanation A call to add module provisioning information to a red-black tree (RBTree) has failed.

Recommended Action No action is required.

Error Message %VS_MOD_PROV-3-AUTO_REM_SLOT_FAILED: Auto module provision remove failed for chassis [dec] slot [dec]

Explanation Remove module provisioning slot information failed.

Recommended Action Reproduce the issue after execute 'debug switch virtual ridprom all'CLI on both active RP and SP before bringing up standby chassis. Collect the debug trace information from console.

Error Message %VS_MOD_PROV-3-ICC_PAK_NULL: Pak pointer for icc msg is NULL

Explanation An ICC packet buffer pointer could not be obtained.

Recommended Action No action is required.

Error Message %VS_MOD_PROV-3-MSGBUF_PTR_NULL: Data buffer pointer is NULL

Explanation A message or data buffer pointer could not be obtained.

Recommended Action No action is required.

Error Message %VS_MOD_PROV-3-MTU_ZERO: MTU size is zero due to ISSU session negotiation failure.

Explanation ISSU return negotiated message size equal to zero for this session. Most likely, there is an issue with IPC transport mechanism that causes ISSU negotiated message to time out.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %VS_MOD_PROV-3-NO_AUTO_PROV_PROC: Unable to create VS Auto Module Prov process.

Explanation The virtual switch automatic module provisioning process could not be created.

Recommended Action No action is required.

Error Message %VS_MOD_PROV-3-NO_AUTO_PROV_WB: Unable to create watched boolean(s). vs_auto_prov_add_wb = , vs_auto_prov_ha_wb =

Explanation The specified watched booleans could not be created.

Recommended Action No action is required.

Error Message %VS_MOD_PROV-3-SEND_PROV_DATA_FAILED: Sending of module provision info to ACTIVE failed.

Explanation The ICC sending of module provisioning information from the standby module to the active module failed.

Recommended Action No action is required.

VSPA Messages

This section contains VPN Services Port Adapter (VSPA) messages.

VSPA-3

Error Message %VSPA-3-FIPSEERROR: FIPS POST Failed.

Explanation The power-on self test (POST) failed. The crypto engine is disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VSPA-3-HARDWARE_ERR: WS-IPSEC-3 Error: %s

Explanation A hardware error occurred on the WS-IPSEC-3, causing an interrupt. The module will automatically reload in the case of an unrecoverable error.

Recommended Action Copy the error message (and any recent error messages) as it appears on the console. In case of a WS-IPSEC-3 crash, collect the crashinfo file from the sup-bootdisk. Contact your Cisco technical support representative and provide the gathered information.

VSPA-4

Error Message %VSPA-4-FIPS_CRNG_NOTIFY: Same Random Number was generated twice in succession!

Explanation The same random number was generated twice in succession.

Recommended Action No action is required.

VSPA-5

Error Message %VSPA-5-FIPSNOTIFY: FIPS POST Successful.

Explanation The power-on self test (POST) succeeded.

Recommended Action No action is required.

Error Message %VSPA-5-ILLEGALCLEAR: Illegal Clear Packet: Src =%u.%u.%u.%u, Dst =%u.%u.%u.%u, Proto =%u

Explanation An unexpected clear (unencrypted) packet was received from the WAN.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VSPA-5-REPLAYERR: Replay Error: Current Seq. No. =%u, Highest Seq No. =%u

Explanation A replay error was detected on IPsec inbound processing.

Recommended Action Make sure the IPSec packets are not being reordered in the network, such as by a QoS process.

Error Message %VSPA-5-SELCHECKERR: Selector Check Error: Src =%u.%u.%u.%u:%u, Dst =%u.%u.%u.%u:%u, Proto =%u, saidx =%u

Explanation A packet was received that did not fall within the appropriate selector range.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %VSPA-5-SEQOVERFLOW: Sequence number overflow: Src =%u.%u.%u.%u, Dst =%u.%u.%u.%u, Proto =%u, saidx =%u

Explanation The sequence number in the security association has overflowed.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

VS_PARSE Messages

This section contains virtual switch (VS) messages.

VS_PARSE-3

Error Message %VS_PARSE-3-ALLOC_ICC_PAK_FAIL: Unable to allocate memory for ICC packet

Explanation A packet allocation failed for sending an ICC message to do the specified operation.

Recommended Action No action is required.

Error Message %VS_PARSE-3-CONFIG_MISMATCH: [chars]

Explanation The VSL configuration in the standby module's configuration differs from either the active module's startup configuration or the active module's running configuration.

Recommended Action Use the **show switch virtual redundancy config-mismatch** command to display the mismatch configuration. If the standby configuration differed from the active's startup configuration or the active's running configuration, you must fix the discrepancy in VSL configuration between the active and standby switch. Then, enter a **write mem** command to update the standby's startup configuration and reload the standby.

Error Message %VS_PARSE-3-MISMATCH: %s

Explanation Configuration mismatches were detected between the active and standby units in either the running configuration, the startup configuration, or the EARL operating mode.

Recommended Action Enter the **show switch virtual redundancy mismatch** command to display the mismatch. Correct any discrepancy in the VSL configuration between the standby switch's configuration and the active switch's startup configuration or running configuration. Correct any discrepancy in the EARL operating mode between the standby switch's configuration and the active switch's configuration. Enter the **write mem** command and reload the standby switch.

Error Message %VS_PARSE-3-VS_HWSB_CREATE_FAIL: Unable to create VS HW SB for vslot [int], port [int]

Explanation An attempt to create a virtual switch hardware standby has failed due to unknown reasons. During virtual switch mode conversion, the standby VSL port would flap when attempting to reconfigure the port on the active. It is recommended to have at least two physical links for a virtual switch mode conversion attempt in order to avoid a dual active scenario due to this error.

Recommended Action No action is required.

VS_PARSE-4

Error Message %VS_PARSE-4-CONFIG_WARNING: %s: %d

Explanation Errors were detected while parsing the virtual switch (VS) configuration. The switch will be in standalone mode with a switch number setting.

Recommended Action If the VS conversion process is successful in bringing up virtual switch mode, no action is required. If the process fails, check the VS configuration.

Error Message %VS_PARSE-4-NO_VSL_CONFIG: No VSL interface is configured

Explanation There are no VSL interfaces configured. This switch cannot communicate with the other switch to form the virtual switch.

Recommended Action No action is required.

Error Message %VS_PARSE-4-SWITCH_NUM: %s: %d

Explanation A valid ROMMON variable SWITCH_NUMBER must be configured before the switch can be brought up as a virtual switch.

Recommended Action Configure a valid SWITCH_NUMBER in ROMMON.

VS_QOS_ACL Messages

This section contains virtual switch QoS ACL messages.

VS_QOS_ACL-3

Error Message %VS_PORT_QOS_ACL-3-PIDX_BASE_MSG_FAILED: Setting of PIDX_BASE to value [hex] failed

Explanation A message from the TCAM application to set the Tycho's PDIX_BASE has failed.

Recommended Action No action is required.

VTSP Messages

This section contains Voice Telephony Service Provider (VTSP) messages.

Error Message %VTSP-3-MSGSNDFAIL: channel:[chars] DSP ID:[hex] Message ID:[hex]

Explanation A message could not be sent to the DSP. The call continued but may have experienced problems.

Recommended Action Verify that the DSP is still functioning properly by attempting to place a call on the affected voice port. Contact your technical support representative, include the full text of the error message.

WARMUPGRADE Messages

This section contains warm upgrade messages.

WARMUPGRADE-3

Error Message %WARMUPGRADE-3-char: Image file open/read failure.

Explanation The warm upgrade process could not open or read from the image file specified.

Recommended Action Check whether the specified image is present at the desired location and has the required read permissions. If the location is remote, check whether connectivity exists.

Error Message %WARMUPGRADE-3-CHECKSUM: [chars] image checksum mismatch.

Explanation The checksum of the image in memory differs from the expected checksum.

Recommended Action Check whether the image file is complete and uncorrupted.

Error Message %WARMUPGRADE-3-DECOMPRESS: Image file decompression failure.

Explanation The warm upgrade process could not decompress the image file.

Recommended Action Check whether the image file is complete and uncorrupted.

Error Message %WARMUPGRADE-3-FORMAT: Unknown image file format.

Explanation The warm upgrade process could not recognize the format of the image file.

Recommended Action Check whether the specified image is a valid Cisco IOS executable in a supported format. Check the release notes for supported formats.

Error Message %WARMUPGRADE-3-SIZE: [chars] image size mismatch.

Explanation The size of the image in memory differs from the expected size.

Recommended Action Check whether the image file is complete and uncorrupted.

WCCP Messages

This section contains Web Cache Communication Protocol (WCCP) messages.

WCCP-3

Error Message %WCCP-3-SBADDFAIL: Unable to add WCCP subblock on interface [chars]

Explanation This internal error message indicates that the WCCP process was unable to attach interface-specific service information.

Recommended Action Ensure that there is enough memory available for all processes.

Error Message %WCCP-3-SBCREATEFAIL: Unable to allocate WCCP subblock on interface [chars]

Explanation This internal error message indicates that the WCCP process was unable to allocate memory to hold interface specific service information.

Recommended Action Ensure that there is enough memory available for all processes.

WiSM Messages

This section contains WiFi services module messages.

WiSM-3

Error Message WiSM-3-PORTCHANNEL: Portchannel allocation failed for module [dec].

Explanation The system is unable to allocate enough port channel groups for WiSM card. [dec] is the module number.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

WiSM-5

Error Message %WiSM-5-DUP_SRVC_IP: Service IP [IP_address] of Controller [dec]/[dec] is same as Controller [dec]/[dec]

Explanation The Cisco Wireless Services Module software detected that a controller is assigned with an IP address on its service port that is being used by another controller.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %WiSM-5-RESET: Controller [dec]/[dec] not responding, WiSM in slot [dec] is being reset

Explanation The Cisco Wireless Services Module in the specified slot is being reset because one of the controllers failed to respond to 12 consecutive keepalive requests.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %WiSM-5-STATE: Controller [dec] in slot [dec] is [chars]

Explanation A change has been detected in the Cisco Wireless Services Module controller. If the controller status is Oper-Up, WCP communication between the controller and the supervisor engine is up or else it is down.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

WS_ALARM Messages

This section contains Windstar alarm messages.

WS_ALARM-6

Error Message %WS_ALARM-6-INFO: [chars] [chars] [chars] [chars] [chars]

Explanation Displays alarm assertion or deassertion information.

Recommended Action No action is required.

WS_IPSEC_3 Messages

Error Message %WS_IPSEC_3-3-FIPSError: FIPS POST Failed.

Explanation Power On Self Test failed. Crypto engine disabled.

Recommended Action Contact TAC.

Error Message %WS_IPSEC_3-3-HARDWARE_ERR: WS_IPSEC_3 Error: [chars]

Explanation A hardware error occurred on the WS_IPSEC_3 causing an interrupt

Recommended Action Copy the error message (and any recent error messages) as it appears on the console. In case of a WS_IPSEC_3 crash, collect the crashinfo file from the sup-bootdisk. Contact your Cisco technical support representative and provide the gathered information. The SPA will automatically reload itself in case of a crash

Error Message %WS_IPSEC_3-4-FIPS_CRNG_NOTIFY: Same Random Number was generated twice in succession!

Explanation Same random number was generated twice in succession.

Recommended Action No Action Required.

Error Message %WS_IPSEC_3-5-FIPSNOTIFY: FIPS POST Successful.

Explanation Power On Self Test succeeded.

Recommended Action No Action Required.

Error Message %WS_IPSEC_3-5-ILLEGALCLEAR: Illegal Clear Packet: Src
=[int].[int].[int].[int], Dst =[int].[int].[int].[int], Proto =[int]

Explanation An unexpected clear packet was received from the WAN.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support

Error Message %WS_IPSEC_3-5-REPLAYERR: Replay Error: Current Seq. No. =[int],
Highest Seq No. =[int]

Explanation Failed anti-replay check on IPsec inbound processing.

Recommended Action Make sure the IPSec packets are not reordered in the networks. Follow up with TAC.

Error Message %WS_IPSEC_3-5-SELCHECKERR: Selector Check Error: Src
=[int].[int].[int].[int]:[int], Dst =[int].[int].[int].[int]:[int], Proto =[int],
saidx =[int]

Explanation A packet was received that did not fall within the appropriate Selector range.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %WS_IPSEC_3-5-SEQOVERFLOW: Sequence number overflow: Src =[int].[int].[int].[int], Dst =[int].[int].[int].[int], Proto =[int], saidx =[int]

Explanation The sequence number in the Security Association has overflowed.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

X40G Messages

This section contains X40G client error messages.

X40G-2

Error Message %X40G-2-TCAM_MGR_CRIT_ERR: GTM ERROR: [chars] ([dec])

Explanation An X40G TCAM critical error was detected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

X40G-3

Error Message %X40G-3-TCAM_MGR_ERR: GTM ERROR: [chars] ([dec])

Explanation An X40G TCAM MGR interaction error was detected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %X40G-3-TCAM_MGR_HW_ERR: GTM HW ERROR: [chars] ([dec]) [[dec]:[hex]]

Explanation An X40G TCAM hardware error was detected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %X40G-3-TCAM_MGR_HW_PERR: GTM HW ERROR: [chars] ([dec])

Explanation An X40G TCAM interface parity error was detected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

X40G-4

Error Message %X40G-4-TCAM_MGR_ALLOC_ERR: [chars] NP ([dec]), Region Id ([dec])

Explanation An NP TCAM entry allocation failure was detected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **remote command module sh platform software xtcammgr instance info** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support representative and provide the representative with the gathered information.

X40G-5

Error Message %X40G-5-TCAM_MGR_INFO: [chars]

Explanation An X40G TCAM driver error was detected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

X40G_PC_QOS-3

Error Message %X40G_PC_QOS-3-X40G_EXCEED_NUM_QUEUES: %Exceed number of supported queues for this interface

Explanation Not available.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %X40G_PC_QOS-3-X40G_WRED_QLIMIT: %Queue limit and WRED cannot be configured together

Explanation Not available.

Recommended Action This error indicates a qos policymap configuration error occurred. Qos processing on the interface might not work as expected. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

X40G_PC_QOS-4

Error Message %X40G_PC_QOS-4-X40G_PC_PMAP_INCOMPATIBLE: Warning - Policymap attached to port-channel EVC is incompatible with X40G member link.

Explanation Policymap attached to port-channel EVC is with an X40G member link.

Recommended Action Remove policymap attached to port-channel EVC before adding a X40G member link to port-channel.

X40G_QOS-3

Error Message %X40G_QOS-3-ACTN: [chars]

Explanation The x40g qos client detected a qos feature processing error event, specified in the message

Recommended Action This error indicates a qos policymap configuration error occurred. Qos processing on the interface might not work as expected. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %X40G_QOS-3-CFN: [chars]

Explanation The x40g qos client detected a classification configuration error event, specified in the message.

Recommended Action This error indicates a qos policymap configuration error occurred. Qos processing on the interface might not work as expected. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %X40G_QOS-3-NOMEM: Memory Allocation Failure - [chars])

Explanation Memory required by the qos client to service one or more Network Processors could not be allocated.

Recommended Action This error may indicate that more memory must be installed on the affected card or platform in order to service all the features and related entities enabled via the configuration. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %X40G_QOS-3-NP: [chars]

Explanation The x40g qos client detected an npu programming error event, specified in the message.

Recommended Action This error indicates a qos policymap configuration error occurred. Qos processing on the interface might not work as expected. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %X40G_QOS-3-PMAP_CONFIG: [chars]

Explanation QoS processing on the interface specified in the msg is not functional

Recommended Action This configuration error is not considered fatal to the operation of the Network Processors. The software is designed to detect and report the error condition. Please refer to the cisco.com documentation for configuration to correct the problem.

Error Message %X40G_QOS-3-PRFL: [chars]

Explanation The x40g qos client detected a hardware profile run out. Hardware profile type is mentioned in the message

Recommended Action Identify the QoS hardware profile that got exhausted on the ES+ linecard. Modify the QoS configuration on the interface such that it can get a QoS profile shared with any other policymap on linecard or else remove policymap from the interface. Else Qos processing on the interface might not work as expected. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %X40G_QOS-3-SVI_PMAP: [chars]

Explanation Only one policymap is allowed to be attached to either direction of interface vlan at a time.

Recommended Action Please remove previous attached policymap and reattach the policymap. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

X40G_QOS-4

Error Message %X40G_QOS-4-CFG: [chars]

Explanation When applying policymap, configuration may be changed by the NP because of hardware support

Recommended Action This error indicates a qos policymap configuration error occurred. Qos processing on the interface might not work as expected. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

XCONNECT Messages

This section contains xconnect-related event and error messages.

XCONNECT-3

Error Message %XCONNECT-3-CONFIG: %s

Explanation An invalid XCONNECT configuration or an error in processing the XCONNECT configuration has occurred.

Recommended Action No action is required.

Error Message %XCONNECT-3-ILLEGAL: %s

Explanation An illegal event has been processed by the XCONNECT subsystem.

Recommended Action No action is required.

XCONNECT-5

Error Message %XCONNECT-5-PW_STATUS: %s

Explanation An event caused the pseudowire to change status.

Recommended Action No action is required.

Error Message %XCONNECT-5-REDUNDANCY: %s

Explanation An event caused the XCONNECT redundancy facility to generate a switchover to the specified backup member.

Recommended Action No action is required.

XCPA Messages

Error Message %XCPA-3-HWVER: bay [[dec]] incompatible microcode (hw:[int].[int],[int].[int]).

Explanation An incompatibility exists between the port adapter hardware and the version of microcode that the system image attempted to load.

Recommended Action Use the **show microcode** command to display the default and configured versions of microcode for this port adapter hardware type. Assure that the correct version of microcode exists in flash. Use the **microcode reload** command to load the microcode. If the error still occurs, record the output from the following commands: **show tech**, **show microcode**, **dir slot0:**, **dir slot1:**, **show log**. Provide this information to your technical support representative.

XCVR Messages

This section contains transponder messages.

XCVR-3

Error Message %XCVR-3-UNKNOWN_SFP_INSERTED: Unknown SFP inserted [chars]

Explanation An unknown Small Form Factor Pluggable (SFP) transceiver has been inserted.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

XDR Messages

This section contains eXternal Data Representation (XDR) messages.

XDR-3

Error Message %XDR-3-BYPASSFOFNego: Bypassing FOF ISSU client %s (%u) nego for XDR client %s, slot %s as FOF ISSU client is not present in %s image.

Explanation This XDR client has a dependency on another ISSU client due to having foreign-owned fields (FOFs). Because the ISSU client that owns the FOFs is not in the image, the XDR client will not wait for that client to finish ISSU negotiation. The missing client must be added to the image.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSUBADENTITY: Unable to register ISSU entity for [chars], reason: [chars]

Explanation Unable to register this XDR client's ISSU entity due to problems with registering the item given as a reason in the error message. ISSU will stop working for this client and may lead to unpredictable behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSUBADGROUP: New m/cast group (slots [chars]) has multiple members before nego complete.

Explanation A new multicast group has been created with multiple slots before ISSU negotiation for each client has completed. This condition will lead to unpredictable results.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSUBADNEGOMSG: Unexpected nego msg - slot [chars], client [chars], ctxt [dec]

Explanation XDR has received a negotiation message unexpectedly as this client is either not ISSU aware or has already completed negotiation for this slot. This condition is likely a precursor to unpredictable behavior for this client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSU_FOF_NEGOFAIL: ISSU negotiation failed for FOF client %u, for peer %s (ISSU peer %d), blocking ISSU client %s (%d) reason - %s

Explanation The ISSU negotiation failed for a client that has registered ISSU foreign-owned field (FOF) client dependencies. The dependent clients on this slot and the remote slot cannot interoperate in SSO mode. Synchronizing of information to and from this slot cannot proceed for this client and the dependent clients. Enter the **show xdr multicast** command for full details.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show xdr multicast** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSU_FOF_REGERROR: ISSU client %s (%d), entity %d, message %d (%s), failed ISSU FOF registration: %s, reason: %s,

Explanation This ISSU client has a message containing a foreign-owned field (FOF) owned by another client, but the client failed to register this dependency. This is an internal software error.

Recommended Action Update to a later software release.

Error Message %XDR-3-CLIENTISSUNEGATIVEPADDING: Negative padding for [chars], slots [chars], msg [dec] (padded: [dec], unpadded: [dec])

Explanation An internal error occurred involving a mismatch of internal data structures.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSU_NEGOFAIL: ISSU negotiation failed for [chars], slot [chars] [chars]

Explanation ISSU negotiation failed. The XDR client on this slot and the remote slot cannot interoperate in SSO mode. Synchronizing of information to and from this slot will not happen for this client and dependent clients. See the output of the **show xdr multicast** command for full details.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSUNEGONOTDONE: Attempting to push send XDR message ([dec]) to slots [chars] for [chars] before nego complete.

Explanation An internal error occurred that may result in unpredictable behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSU_NEGOREGERROR: XDR client %s, failed ISSU negotiation result notification registration for ISSU client %s (%d), reason: %s,

Explanation This client has a dependency on the successful ISSU negotiation of another client and has failed to register this dependency. This is an internal software error.

Recommended Action Update to a later software release.

Error Message %XDR-3-CLIENTISSU_NEGOUNREGERROR: Failed to unregister ISSU negotiation result notification registration for ISSU client %s (%d), reason: %s,

Explanation This client has a dependency on the successful ISSU negotiation of another client and has failed to unregister this dependency when not required. This is an internal software error.

Recommended Action Update to a later software release.

Error Message %XDR-3-CLIENTISSUNOMSGGRP: Cannot determine ISSU message group for slot %d. Unknown %s

Explanation Because the line card type for the specified slot is not recognized, the ISSU client cannot determine the set of ISSU messages to be used between the local and remote slot. This condition might be due to a new line card type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSU_PUSHFAIL: Attempting to push send XDR message ([chars]) to slots [chars] via client [chars] failed due to [chars]

Explanation An internal error occurred that may result in unpredictable behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSU_REGERROR: ISSU client [dec] ([chars]), entity [dec], failed ISSU registration: [chars]

Explanation The ISSU negotiation failed for this XDR client. This is a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSUSENDFAILED: Can't send XDR client ISSU nego msg: reason [chars], slot [chars], client [chars]

Explanation XDR has failed to send an ISSU negotiation message for the given client. The slot will be marked as ISSU-unaware, and communication with this slot will proceed on that basis. However, this is likely to lead to unpredictable behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-CLIENTISSUSTARTNEGOFAIL: Can't start nego: reason [chars], slot [chars], client [chars], sid [dec]

Explanation XDR has failed to start ISSU negotiation with the remote slot for the reason given. The slot will be marked as ISSU-unaware, and communication with this slot will proceed on that basis. However, this is likely to lead to unpredictable behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-ISSUBADREGPARAMS: Client [chars] trying to register with incomplete ISSU support.

Explanation This client does not properly support ISSU and will be registered as not supporting ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-ISSUCAPNEGOFAIL: Client [chars] failed to [chars] capability/ies due to [chars]

Explanation An internal software error occurred. The capability negotiation failed unexpectedly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-ISSU_ENUM_ERROR: Enum for [chars] ([chars] component) is not ISSU-compliant: [chars]

Explanation The given enumeration is not ISSU-compliant for the reason given. Unpredictable behavior will result when interoperating with different Cisco IOS versions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-ISSUINITFAIL: Unable to register XDR ISSU [chars], reason: [chars]

Explanation Unable to register the given XDR ISSU parameter due to the reason given. This will stop ISSU working for this client and may lead to unpredictable behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-ISSU_NEGOFAIL: ISSU negotiation failed for XDR, slot [chars] [chars]

Explanation ISSU negotiation failed. XDR on this slot and the remote slot cannot interoperate. Synchronizing of information to and from this slot for all XDR clients will not be allowed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-MSGSIZEFAIL: The IPC message size is out of boundsThe ipc_msg_size is : [dec] while the maximum size we can handle is theXDR_IPC_BUFFER_SIZE : [dec] .

Explanation The size of the IPC message that was received is larger than the maximum size that can be handled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-PRIOCLIENTISSU_NEGOFAIL: ISSU negotiation failed for [chars], slot [chars] [chars]

Explanation ISSU negotiation failed for a core XDR client. XDR on this slot and the remote slot cannot interoperate in SSO mode. Synchronizing of information to and from this slot will not happen for any XDR client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRBADSL0T: An invalid slot %d was obtained during - %s

Explanation An invalid slot was obtained.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show xdr linecard**, and **show xdr multicast** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRDEQUEUE: Failed to dequeue from [chars] with [dec] elements still queued

Explanation A queueing failure has occurred. A nonempty queue could not be dequeued.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRIPC: XDR IPC error on multicast-group [hex] due to [chars].

Explanation A general IPC-related error occurred, which may prevent transfer of data to other peers using the IPC mechanism .

Recommended Action Enter the **show xdr multicast** command immediately after this error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRMCASTJOIN: Attempt to join [chars] to [chars] failed because client [chars] returned an error

Explanation An internal error occurred that may result in unpredictable XDR behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRMCASTJOINREQ: Client [chars] returned an invalid response to a join request for groups [chars] and [chars]

Explanation An internal error occurred that may result in unpredictable XDR behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRMCAST_PEER_BINDING: XDR peer [chars] bind to group [chars] (was bound to [chars]): [chars]

Explanation An internal error occurred that may result in unpredictable XDR behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRNOMEM: XDR failed to allocate memory during [chars] creation.

Explanation Allocation of memory by the XDR subsystem has failed. This failure may result in unpredictable XDR behavior.

Recommended Action Make sure that there is enough memory for the operations being performed by your system. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDROOS: Received an out of sequence IPC message. Expected [dec] but got [dec]

Explanation An out-of-sequence or unknown IPC message was received. This condition indicates that an IPC is not working properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRPEER: An XDR peer error for slot [chars]. Due to [chars].

Explanation An error relating to an XDR peer has occurred.

Recommended Action Enter the **show xdr linecard** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRQUEUE: XDR queue error: [chars].

Explanation The XDR subsystem queueing operation failed. This may result in unpredictable behavior of XDR.

Recommended Action Make sure that there is enough memory for the operations being performed by your machine. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-3-XDRSLOTFROMMASK: Cannot determine slot from mask [chars]
(client [chars])

Explanation Mapping from slot mask to slot has failed. During ISSU negotiation, the message destination cannot be determined, and the message will be dropped.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

XDR-6

Error Message %XDR-6-CLIENTISSUBADRCVTFM: Failed to rcv_transform message - from slot [chars], client [chars], context [dec]

Explanation The system cannot perform an ISSU receive transform. This condition is likely due to an earlier failure in negotiation, or when one side of an ISSU-enabled XDR connection is out of synchronization with the other.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-CLIENTISSUBADTXTFM: Failed to xmit_transform message - to slot [chars], client [chars], context [dec]

Explanation The system cannot perform an ISSU transmit transform. This condition is likely due to an earlier failure in negotiation, or when one side of an ISSU-enabled XDR connection is out of synchronization with the other.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-CLIENTISSU_BLOCKED: Client [chars] cannot sync info to/from slot [chars] due to ISSU negotiation failure of client [chars]

Explanation This client depends on another XDR client for which ISSU negotiation has failed. As a result, this client is prevented from communicating with the remote slot. This is due to ISSU incompatibilities between the two images. Functionality for this client will revert to RPR mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-CLIENTISSU_UNBLOCKED: Client [chars] can now sync info to/from slot [chars] due to ISSU negotiation success of client [chars]

Explanation This client depends on another XDR client for which ISSU negotiation had previously failed but has now succeeded. As a result, this client can resume communication with the remote slot. Functionality for this client will revert to SSO mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-CLIENTISSUUNREG: Failed to unregister session - client [chars], slot [chars], reason [chars]

Explanation The system was unable to unregister this session. This condition will likely cause problems when reregistering.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-CLIENTNOTREGONRP: Client [chars] has registered on slot [chars] before RP.

Explanation The XDR client has registered on a non-RP card before an RP card. If this has occurred while toggling the client's registration status rapidly, it may be a transient problem that will resolve itself. If not, the client's status may be unpredictable, and ISSU negotiation (if platform is ISSU-aware) may not take place correctly.

Recommended Action Verify whether the client's registration status is the same on both the RP and the card on which the problem is reported by comparing the output of the **show xdr client all** command to see if the client is present or absent in both. If so, and no other error messages have been seen, then this is a transient issue and no further action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-ISSUBADRCVTFM_DUMP: CSCsh95828 detected. Please collect 'show xdr linecard', 'show monitor event-trace xdr all', and the full system log, on both the RP and the related LC, and report this occurrence. Slot %s, data 0x%08x %08x %08x %08x %08x %08x %08x

Explanation This message contains a decoded packet dump and trace log information for investigating CSCsh95828.

Recommended Action Copy the message exactly as it appears and contact your Cisco technical support representative.

Error Message %XDR-6-ISSUBADTXTFM: Failed to xmit_transform message - slot [chars], reason [chars]

Explanation The system was unable to perform an ISSU transform on an outgoing XDR header. The message will be ignored.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-ISSUCLIENTABSENT: ISSU client [chars] absent on slot [chars]. Client functionality may be affected.

Explanation The remote slot does not support this ISSU client. The software will handle this by reducing client functionality locally to continue in SSO mode, or by forcing the remote peer into RPR mode as appropriate. This is expected behavior in ISSU-capable systems.

Recommended Action No action is required.

Error Message %XDR-6-ISSUBADRCVTFM: Failed to rcv_transform message - slot [chars], reason: [chars]

Explanation The system was unable to perform an ISSU transform on an incoming XDR header. The message will be ignored.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-XDRDISABLEREQUEST: Peer in slot [chars] requested to be disabled due to: [chars]. Disabling linecard

Explanation The line card has requested to be disabled due to an error condition.

Recommended Action Enter the **show monitor event-trace xdr** command from the RP and the line card in question. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message XDR-6-XDRINVALIDHDR: XDR for client ([chars]) dropped (slots:[chars] from slot:[dec] context:[dec] length:[dec]) due to: [chars]

Explanation The XDR client specified in the message text could not be registered. A failure has occurred that prohibits the XDR client from registering with the core.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-XDRINVALIDHDRISSU: XDR ISSU negotiation message for client ([chars]) dropped (slots:[chars] from slot:[chars] context:[int] length:[int]) due to: [chars]

Explanation The XDR ISSU negotiation message was dropped for the reason given.

Recommended Action If the message occurred during an ISSU upgrade then it may be safely ignored. Otherwise: Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %XDR-6-XDRIPCNOTIFY: Message not sent to slot [chars] because of IPC error [chars]. Disabling linecard. (Expected during linecard OIR)

Explanation A general IPC-related error has occurred that may prevent transfer of data to other peers using the IPC mechanism.

Recommended Action Enter the **show xdr multicast** and **show xdr linecard internal** commands immediately after this error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-XDRIPCPEER: XDR IPC error occurred for peer in slot [chars] due to [chars][chars].

Explanation A general IPC-related error has occurred that may prevent transfer of data to other peers using the IPC mechanism.

Recommended Action Enter the **show xdr multicast** and **show xdr linecard** commands immediately after this error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-XDRLCDISABLEREQUEST: Client [chars] requested to be disabled. [chars]

Explanation The line card has requested to be disabled due to an error condition.

Recommended Action Enter the **show monitor event-trace xdr** from the RP and the line card in question. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-XDRMCASTINIT: XDR mcast subsystem initilisation error: [chars]

Explanation A failure occurred that prohibits the XDR client from registering with the core.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %XDR-6-XDRREGISTRATION: XDR failed to register [chars] client due to [chars]

Explanation The XDR client specified in the message text could not be registered. A failure has occurred that prohibits the XDR client from registering with the core.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

GLOSSARY

The following glossary of acronyms expands acronyms and initialisms that are used in *Cisco IOS System Messages, Release 12.2 SX*.

Numerals

10GE 10-Gigabit Ethernet

A

AAA authentication, authorization, and accounting

AAL5 ATM adaptation layer 5

ABM asynchronous balanced mode

ABR Area Border Router

AC alternating current

ACE Allegro Crypto Engine

ACIP ATM Cable Interface Processor

ACK acknowledgment

ACL access control list

ACO alarm cutoff

ACTLU activate logical unit

ACTPU activate physical unit

ADSL asymmetric digital subscriber line

AFI Address Family Identifier

AH Authentication Header

AIC Alarm Interface Controller

AIM Advanced Interface Module

AIM advanced integration module

AIP ATM Interface Processor

AIS alarm indication

ALC	ATM line card
ALPS	Airline Product Set
AMD	Advanced Micro Devices
ANR	Automatic Network Routing
ANSI	American National Standards Institute
ANY-PHY	Any physical layer-data link layer
AP	access point
AP	authentication proxy
API	application programming interface
APING	APPC Ping
APN	access point name
APPC	Advanced Program-to-Program Communications
APPN	Advanced Peer-to-Peer Networking
APS	automatic protection switching
AQD	average queue depth
ARAP	AppleTalk Remote Access Protocol
ARB	Adaptive Rate-Based
ARP	Address Resolution Protocol
ARQ	automatic repeat request
AS	autonomous system
ASCU	agent-set control unit
ASIC	application-specific integrated circuit
ASP	ATM switch processor
ATA	Advanced Technology Attachment
ATA	Analog Telephone Adapter
ATF	area to free
ATM	Asynchronous Transfer Mode
AToM	Any Transport over MPLS
AURP	AppleTalk Update-Based Routing Protocol

AutoRP	Auto-Rendezvous Point
AVL	approved vendor list or Adelson-Velskii and Landis

B

BAP	Bandwidth Allocation Protocol
BB	broadband
BBI	begin bracket indicator
BCS	business critical solution
BERT	bit error rate tester
BFR	Bigger, Faster Router
BFRP	big fast route processor
BGP	Border Gateway Protocol
BGPPA	Border Gateway Protocol Policy Accounting
BIC	backplane interface card
BIDI	bidirectional bus
BIND	Berkeley Internet Name Domain
BIP	bit interleaved parity
BIS	Broadband Interface Shelf
BLLI	Broadband Low Layer Information
BMA	Buffer Management ASIC
BOOM	10BASE-T Ethernet LAN interface card
BOOTP	Bootstrap Protocol
BPDU	bridge protocol data unit
BPI	baseline privacy interface
BPVC	Bridged Permanent Virtual Circuit
BRI	Basic Rate Interface
BRF	Bridge Relay Function
BSC	Binary Synchronous Communications

BSS	Business Support System
BSTUN	Block Serial Tunnel
BTU	British thermal unit
BUS	broadcast-and-unknown server

C

CA	certification authority
CAIM	Compression Advanced Interface Module
CAM	content-addressable memory
CAMR	Cisco Access Metro Router
CAS	channel-associated signaling
CASA	Cisco Appliance and Services Architecture
CBAC	Context-Based Access Control
CBC	Cell Bus Controller
CBI	Cell Bus Interface
CBus	CiscoBus
CBWFQ	Class Based Weighted Fair Queueing
CCA	Common Configuration Architecture
CCAPI	call control API
CCB	call control block
CCB	configuration control block
CCO	Cisco Connection Online
CCW	channel command word
CDI	Common Driver Interface
CDL	Converged Data Link
CDM	cable data modem
CDP	Cisco Discovery Protocol
CDR	clock and data recovery

CE	certificate enrollment
CEB	Common EMS Base
CEBI	conditional end bracket indicator
CEF	Cisco Express Forwarding
CES	circuit emulation service
CET	Cisco Encryption Technology
CF	Checkpoint Facility
CFI	Common Flash Interface
CGMP	Cisco Group Management Protocol
CGX	CryptoGraphics eXtensions
CHAP	Challenge Handshake Authentication Protocol
cHPI	compact Host Port Interface
CI	connection identifier
CICS	Customer Information Control System
CIP	Channel Interface Processor
CIR	committed information rate
CIS	Card Information Services
CIU	Communication Interface Unit
CLAW	Common Link Access for Workstations
CLI	command-line interface
CLNS	Connectionless Network Service
CLS	Cisco link services
CLSI	Cisco link services interface
CMCC	Cisco Mainframe Channel Connection
CMNS	Connection Mode Network Service
CMPC	Cisco Multipath Channel
CMTS	cable modem termination system
CNR	Cisco Network Registrar
CNOS	change number of sessions

CNS	Cisco Networking Services
CNSP	Complete Number Sequence PDU
COAPS	Count of APS switchovers
codec	coder-decoder
CoS	class of service
CoSQ	Class of Service Queues
COT	continuity testing
CP	control point
CP	coprocessor
CPA	Channel Port Adapter
CPE	customer premises equipment
CPI	common part indicator
CPI-C	common programming interface for communications
CPM	Combination Port Module
CRC	cyclic redundancy check
CRF	Concentrator Relay Function
CRL	certificate revocation list
cRTP	compressed Real-Time Protocol
CRV	call reference value
CSA	compression service adapter
CSAR	Cisco Cell Segmentation and Reassembly
CSC	clock switch card
CSG	Content Services Gateway
CSI	called subscriber identification
CSM	call switching mode
CSM	call switching module
CSNA	Cisco SNA
CSNP	Complete Sequence Number PDU
CSU	channel service unit

CTC	Cisco Transport Controller
CTL	Certificate Trust List
CTRC	Cisco Transaction Connection
CTS	Clear To Send
CV	Cisco View
CWAN	Constellation WAN
CWTLC	Constellation Wan Toaster Line Card
CyBus	Cisco Extended Bus

D

DAE	data aggregator end
DBus	diagnostic bus
DC	direct-connect
DC	direct current
DCD	data carrier detect
DCE	data communications equipment
dCEF	distributed Cisco Express Forwarding
DDOS	distributed denial of service
DDR	dial-on-demand routing
DDSM	Digital Data Services Manager
DECnet	Digital Equipment Corporation network
DEMUX	demultiplexer
DFC	dial feature card
DFP	Dynamic Feedback Protocol
DFRAC	Dual Frammer and RAC
DHCP	Dynamic Host Configuration Protocol
DHCPv6	Dynamic Host Configuration Protocol, version 6
DIB	Directory Information Base

DIP-4	4-bit Diagonal Interleaved Parity
DLC	data-link connection
DLC	data-link control
DLCI	data-link connection identifier
dLFI	Distributed Link Fragmentation and Interleaving
dLFloATM	Distributed Link Fragmentation and Interleaving over ATM
dLFloFR	Distributed Link Fragmentation and Interleaving over Frame Relay
DLR	designated local retransmitter
DLSw	data-link switching
DLU	dependent logical unit
DLU	destination logical unit
DLU	dynamic logical unit
DLUR	dependent logical unit requester
DLUS	dependent logical unit server
DM	dense mode
DM	disconnect mode
DMA	direct memory access
DMAC	destination MAC
DML	distributed multilink
DMLP	Distributed Multilink Point-to-Point Protocol
DNIS	dialed number identification service
DNS	Domain Name Server
DNS	Domain Name Service
DNS	Domain Name System
DOCSIS	Data-over-Cable Service Interface Specifications
DOI	domain of interpretation
DoS	denial of service
DPRAM	dual-port RAM
DR	Designated Router

DR	dynamic replenishment
DRAM	dynamic RAM
DRDA	Distributed Relational Database Architecture
DRiP	Duplicate Ring Protocol
DRP	Director Response Protocol
DRQ	Direct memory access Receive Queue
DS	dial shelf
DSA	delayed stop accounting
DSC	dial shelf control
DSC	dial shelf controller
DSCP	differentiated service code pointer
DSI	dial shelf interconnect
DSI	dial shelf interface
DSIP	Dial Shelf Interconnect Protocol
DSL	digital subscriber line
DSLAM	digital subscriber line ATM multiplexer
DSMP	Distributed Stream Media Processor
DSP	digital signal processor
DSP	Domain Specific Part
DSP	digital signal processor
DSPFARM	digital signal processor farm
DSPM	digital signal processor module
DSPRM	Digital Signal Processor Resource Manager
DSPU	downstream physical unit
DSR	data set ready
DSU	data service unit
DSU	digital service unit
DTE	data terminal equipment
DTP	Dynamic Trunking Protocol

DTQ	Direct memory access Receive Queue
DTR	data terminal ready
DVMRP	Distance Vector Multicast Routing Protocol

E

E1T1	E1 line or T1 line
EADI	Extended Availability Drop and Insert
EAIM	Encryption AIM
EAP	Extensible Authentication Protocol
EAPoUDP	Extensible Authentication Protocol over User Datagram Protocol
EARL	enhanced address recognition logic
EC	EtherChannel
ECA	ESCON Channel Adapter
ECC	error-correcting code
ECC	Error-Check Code
ECC	error checking and correction
ECM	Extensible Call Model
ECM	External Control Memory
EEM	Embedded Event Manager
EEPROM	electronically erasable programmable read-only memory
EFC	extended flow control
EGP	exterior gateway protocol
EHSA	enhanced high system availability
EID	endpoint identifier
EIGRP	Enhanced Interior Gateway Routing Protocol
EIO	Elastic I/O
ELAN	emulated LAN
ENUM	enumeration

ENVM	Constellation WAN Environmental Monitor
EOBC	Ethernet Out-of-Band Channel
EOC	embedded operations channel
EOF	end-of-frame
EOIR	enhanced online insertion and removal
EoMPLS	Ethernet over MPLS
EOU	Extensible Authentication Protocol over User Datagram Protocol
EPM	External Packet Memory
ESCON	Enterprise System Connection
ESMP	Even Simpler Management Protocol
ESP	Extended Services Processor
ESP	Extended Services Platform
ESW	Ethernet Switch
ESWILP	Ethernet Switch with Inline Power
ETM	Enhanced Timing Module
EXAR	Chip manufacturer

F

FAQ	frequently asked question
FB	feature board
FBB	fast back-to-back
FBB	from backplane buffer
FCFS	First Come First Served
FCIT	Fiber Channel Idle Time
FC-PFQ	feature card per-flow queueing
FCPA	Fibre Channel Port Adapter
FCS	frame check sequence
FDDI	Fiber Distributed Data Interface

FDL	Facility Data Link
FDM	frequency-division multiplexing
FE	Fast Ethernet
FEC	Fast EtherChannel
FECPM	Fast Ethernet Combo Port Module
FI	format indicator
FIA	Fabric Interface ASIC
FIB	forwarding information base
FIFO	first-in, first-out
FIR	Finite Impulse Response
FM	fault monitoring
FMSP	Fax Media Services Provider
FO1	fragment offset == 1
FPGA	field-programmable gate array
FPI	Forwarding Path Identifier
FQDN	fully qualified domain name
FQPCID	fully qualified procedure correlation identifier
FREEDM	Frame Engine and Data link Manager
FRMR	Frame Reject
FRoM	FrameRelay over MPLS
FRoMPLS	FrameRelay over MPLS
FRR	Fast ReRoute
FRU	field-replaceable unit
FSIP	Fast Serial Interface Processor
FSM	finite state machine
FTBB	from/to backplane buffer
FTP	File Transfer Protocol

G

GBIC	Gigabit Interface Converter
GC	global configuration
GDS	general data stream
GE	Gigabit Ethernet
GEFC	Gigabit Ethernet/Fibre Channel
GEIP	Gigabit Ethernet Interface Processor
GGSN	gateway GPRS support node
GKTMP	Gatekeeper Transaction Message Protocol
GLBP	Gateway Load Balancing Protocol
GLC	gigabit line card
GP	Global Pointer
GPRS	general packet radio service
GRP	gigabit route processor
GSN	GPRS support node
GSR	Internet router
GTF	Generalized Trace Facility
GTP	GPRS tunneling protocol
GULF	GULF-2488 ASIC

H

HA	High Availability
HA	Home Agent
HAL	Halcyon
HAPX	Hardware Assisted Packet Classification
HDLC	High-Level Data Link Control
HDV	High Density Voice

HDX	half-duplex
HEC	header error control
HGW	home gateway
HMAC	hash message authentication codes
HMS	Home Media Server
HPI	Host Port Interface
HPR	High-Performance Routing
HQF	Hierarchical Queuing Framework
HSA	high system availability
HSRP	Hot Standby Router Protocol
HSSI	High Speed Serial Interface
HT-FPGA	Hyper Transport Field-Programmable Gate Array
HWAF	Hardware Address Filtering
HWIC	High-Speed WAN Interface Card
HWICD	High-Speed WAN Interface Card, double-wide
HWIDB	hardware interface descriptor block

I

I2C	Inter-Integrated Circuit
IDB	interface descriptor block
IBGP	internal BGP
IBL	Input Buffer Logic
IBOC	in-band bit-oriented code
ICC	Inter Card Communication
ICC	Interface Controller Card
ICMP	Internet Control Message Protocol
ICPIF	Calculated Planning Impairment Factor
ICS	Integrated Communication System

IDAP	Internet Data Access Presentation
IDB	interface descriptor block
IDPROM	Identification PROM
IDS	Internal Data Services
IDT	Integrated Digital Terminal
IDU	indoor unit
IE	information element
IEEE	Institute of Electrical and Electronics Engineers
IETF	Internet Engineering Task Force
IF	intermediate frequency
IGMP	Internet Group Management Protocol
IGRP	Interior Gateway Routing Protocol
IIF	Input interface
IIH	IS to IS Hello PDU
IKE	Internet Key Exchange
ILMI	Integrated Local Management Interface
ILP	inline power
ILPM	inline power module
IMA	inverse multiplexing over ATM
IMSI	international mobile subscriber identity
IP	Internet Protocol
IPC	interprocess communication
IPDC	Internet Protocol device control
IPDLC	IP data link connection
IPE	Inter-PRE Ethernet
IPG	Inter Packet Gap
IPHC	IP Header Compression
IPM	Cisco Internetwork Performance Monitor
IPPCP	IP Payload Compression Protocol

IPRM	IP Router Manager
IPS	IP Storage
IPSec	IP Security
IPv6	IP version 6
IPX	Internetwork Packet eXchange
ISA	Integrated Services Adapter
ISAKMP	Internet Security Association and Key Management Protocol
ISDN	Integrated Services Digital Network
ISE	Internet Services Engine
IS-IS	Intermediate System-to-Intermediate System
ISL	Inter-Switch Link
ISR	intermediate session routing
ISRHOG	Interrupt Service Routine HOG
ISSU	In-Service Software Upgrade
IST	Internal Spanning Tree
IVR	interactive voice response
IXP	Internet Exchange Point

L

L2	Layer 2
L2F	Layer 2 Forwarding
LAC	L2TP access concentrator
LACP	Link Aggregate Control Protocol
LAIS	SONET Line-level Alarm Indication Signal
LANCE	Local Area Network Controller Ethernet
LANE	LAN Emulation
LAPB	Link Access Procedure, Balanced
LAT	local-area transport

LC	line card
LCATM	Label controlled ATM
LCB	Line Control Block
LCC	Line card Configuration Coordinator
LCD	liquid crystal display
LCDOS	line card operating system software
LCI	local channel identifier
LCN	logical channel number
LDLC	LocalDirector link control
LDN	local directory number
LDP	Label Distribution Protocol
LEC	LANE Client
LECS	LANE Configuration Server
LED	light-emitting diode
LEN	low-entry networking
LES	LANE Server
LFD	Label Forwarding Database
LFSID	local-form session identifier
LIR	link incident report
LIU	line interface unit
LLC	logical link control
LLC2	Logical Link Control, type 2
LLD	low level design
LMI	Local Management Interface
LNM	LAN Network Manager
LNS	L2TP network server
LOF	Loss of Frame
LOS	Loss of Signal
LPD	line printer daemon

LRC	line card redundancy controller
LRJ	location rejection
LRQ	location request
LS	LightStream
LSA	link-state advertisement
LSD	label switching database
LSIPC	LightStream interprocess communication
LSP	label switch path
LSP	link-state packet
LSP	Link-State PDU
LSS	LightStream switching
LTL	local target logic
LU	logical unit
LU6.2	logical unit type 6.2
LVC	label switched controlled virtual circuits
LYRA	Constellation+ Advanced Forwarding Engine Layer2

M

MAC	Media Access Control
MAR	Midrange Access Routers
MARS	Multicast Address Resolution Server
MATM	MAC Address Table Manager
MAU	media attachment unit
MAX	maximum
MBE	multiple-bit error
MBRI	Multi-BRI
MBRI	Multiport Basic Rate Interface
MBus	maintenance bus

MCNS	Multimedia Cable Network System Partners, Ltd.
MCOM	Microcom carrier card
MCDMA	Multi-Channel DMA
MCSC	Multi-Channel Serial Controller
MD5	message digest 5
MDB	Multicast Descriptor Block
MDL	maintenance data link
MDRR	Modified Deficit Round Robin
MDS	multicast distributed switching
MDSS	Multicast Distributed Shortcut Switching
MDT	multicast distribution tree
MEMD	memory device
MFD	Multicast Fast Drop
MFE	Multi-port Fast Ethernet
MFI	MPLS forwarding infrastructure
MFIB	Multicast Forwarding Information Base
MGCP	Media Gateway Control Protocol
MIB	Management Information Base
MIB/SMT	Management Information Base/Station Management
MIC	media interface connector
MICA	Modem ISDN channel aggregation
MID	Multiplex ID
MIDB	multicast interface data block
MII	media-independent interface
MLD	Multicast Listener Discovery
MLP	Multilink Point-to-Point Protocol
MLPPP	Multilink Point-to-Point Protocol
MLS	multilayer switching
MLSM	multilayer switching for multicast

MLTG	multilink trunk group
MMAP	memory map
MMI	Modem Management Interface
MMLS	multicast multilayer switching
MNCNS	Multimedia Cable Network System Partners, Ltd.
MNP4	Microcom Networking Protocol 4
MP	Multilink Protocol
MPC	MultiPath Channel
MPC	Multiprotocol-over-ATM client
MPLS	Multiprotocol Label Switching
MPOA	Multiprotocol over ATM
MPPE	Microsoft Point to Point Encryption
MPS	Multiprotocol-over-ATM server
MQC	Modular Quality of Service (QoS) command line interface (CLI)
MRIB	Multicast Routing Information Base
MRP	Multiservice Routing Processor
MPT	Ministry of Posts and Telecommunications
mroute	Multicast route
MS	Management Services
MS	mobile subscriber
MSC	Modular Services Card
MSDP	Multicast Source Discovery Protocol
MSFC	Multilayer Switch Feature Card
MSP	Media Service Provider
MSR	Multiservice Switch Router
MSS	maximum segment size
MST	Multiple Spanning-Tree Protocol
MSTOO	multiple spanning tree root
Mtree	matings tree

MTU	maximum transmission unit
MURIB	Multicast Unicast Routing Information Base
mutex	mutual exclusivity lock
MVIP	Versatile Interface Processor
MWAM	Multi-Processor WAN Application Module
Mx	Mueslix

N

NAK	negative acknowledgment
NAM	Network Analysis Module
NAS	network access server
NAT	Network Address Translation
NBAR	network-based application recognition
NBP	Name Binding Protocol
NCE	network connection endpoint
NCP	Network Control Program
NCP	Network Control Protocol
NEAT	E1 and T1 processor
NFAS	Non Facility Associated Signaling
NHDR	Network Layer Header
NHRP	Next Hop Resolution Protocol
NHS	Next Hop Server
NIM	network interface module
NIP	Nitro Interconnect Protocol
NLP	network-layer packet
NLSP	NetWare Link Services Protocol
NM	network module
NM-HD	high density network module

NME	Network Management Ethernet
NMI	nonmaskable interrupt
NMP	Network Management Processor
NMS	network management system
NMVT	network management vector transport
NNI	Network-to-Network Interface
NNS	network node server
NPE	network processing engine
NRM	normal response mode
NRP	Network Routing Processor
NRP	node route processor
NSAP	network service access point
NSDB	Network Security Database
NSE	network services engine
NSF	Non-stop forwarding
NSP	Network Switch Processor
NSP	node switch processor
NTP	Network Time Protocol
NVRAM	nonvolatile RAM

O

OAM	Operation, Administration, and Maintenance
OBL	Output Buffer Logic
OC	Optical Carrier
OCE	output chain elements
ODU	outdoor unit
OER	Optimized Edge Routing
OFC	open fiber control

OIF	Output interface
OIR	online insertion and removal
ONS	Optical Networking Systems
OOBP	out-of-band port
OOD	Online Offline Diagnostics
OOS	out of service
ORF	outbound route filter
OSCP	Optical Supervisory Channel Protocol
OSM	Optical Services Module
OSP	Open Settlements Protocol
OSPF	Open Shortest Path First
OSS	Operations Support System
OU	organizational unit

P

PA	port adapter
PAD	packet assembler/disassembler
PAgP	Port Aggregation Protocol
PAM	port adapter module card
PAM	pulse amplitude modulation
PAN	4-Port and (8+1) Port ESWILP HWIC
PAP	Password Authentication Protocol
PASCB	port adapter system control block
PASV	passive mode FTP
PBP	packet-by-packet
PC	program counter
PCA	Parallel Channel Adapter
PCF	Packet Control Function

PCF	Profile Configuration File
PCI	protocol control information
PCID	procedure correlation identifier
PCM	pulse code modulation
PCMCIA	Personal Computer Memory Card International Association
PCR	peak cell rate
PDP	policy decision point
PDSN	Packet Data Serving Node
PDU	protocol data unit
PEMF	Power Entry Module and Filter
PF	protocol filtering
PGM	Pragmatic General Multicast
PHAD	Physical Layer Interface Module (PLIM) header add-drop ASIC
PHY	physical layer interface
PIC	Peripheral Interface Controller
PIC	point in call
PIE	protocol information element
PIF	Packet Input FIFO
PIM	Protocol Independent Multicast
PIM-SM	Protocol Independent Multicast Sparse Mode
PIMv2	Protocol Independent Multicast version 2
PIU	PCM Interface Unit
PKCS	Public Key Cryptographic Standards
PKI	public key infrastructure
PLD	programmable logic device
PLIM	Physical Layer Interface Module
PLU	primary logical unit
PLX	PCI to local bus bridge vendor
PM	port management

PMA	Packet Memory Access
PMB	power management bus
PMC	PCI Mezzanine Card
PMON	Performance Monitor
PNNI	Private Network-Network Interface
PNSP	Partial Number Sequence PDUs
POE	Power Over Ethernet
PoS	Packet over SONET
PoS	Packet over SONET/SDH
POST	power-on self test
POT1E1	Packet Over T1 E1
POTS	plain old telephone service
PPC	primary point code
PPP	Point-to-Point Protocol
PQUICC	Quad Integrated Communications Controller
PRBS	Pseudo-Random Bit Sequence
PRE	Performance Routing Engine
PRI	Primary Rate Interface
PROM	programmable read-only memory
PRP	Performance Route Processor
PSA	Packet Switching ASIC
PSC	processor and switch card
PSM	Protection Switch Module
PSNP	Partial Sequence Number PDU
PTB	Peer Transaction Bus
PU	physical unit
PU 2.0	Physical Unit type 2.0
PU 2.1	Physical Unit type 2.1
PVC	permanent virtual circuit

PVC	permanent virtual connection
PVDM	Packet Voice DSP Module
PVID	Port VLAN ID
PVP	permanent virtual path
PVST+	Per-VLAN Spanning Tree
PXF	Parallel eXpress Forwarding
PXM	Processor Switching Module

Q

QA	queue and accumulator
QEM	QEM driver
QLLC	Qualified Logical Link Control
QM	QoS manager
QMAC	Quad Token Ring Media Access Controller ASIC
QoS	quality of service

R

RA	registration authority
RAC	Resource Availability Confirm
RAC	Ring Access Controller
RADIUS	Remote Authentication Dial-In User Service
RARP	Reverse Address Resolution Protocol
RAS	Registration, Admission, and Status
RAS	remote access server
RBCP	Router Blade Configuration Protocol
RBD	receive buffer descriptor
RBS	Robbed-Bit Signaling
RCP	remote copy protocol

RDB	relational database
RED	redundancy
REQACTPU	request to activate a physical unit
REQDACTPU	request to deactivate a physical unit
REQ(D)ACTPU (RSP)	Route Switch Processor request to activate or deactivate a physical unit
REXEC	remote execution
RF	radio frequency
RF	Redundancy frequency
RIB	Routing Information Base
RIP	Routing Information Protocol
RISC	reduced instruction set computing
RJE	remote job entry
RLM	Redundant Link Manager
RMON	Remote Network Monitoring
RNR	receive not ready
ROM	read-only memory
RP	Route Processor
RPA	Resource Pool Allocation
RPC	Remote Procedure Call
RPF	Reverse Path Forwarding
RPM	Route Processor Module
RPM	Resource Pool Management
RPMXF	Route Processor Module, express forwarding
RPR	Route Processor Redundancy
RPR+	Route Processor Redundancy plus
RPS	Ring Parameter Server
RR	receive ready
RRP	Redundant Route Processor

RS	router shelf
RS-232	EIA/TIA-232
RSA	Rivest, Shamir, and Adelman (a public-key cryptographic system)
RSC	route switch controller
RSCP	RSC front panel push button
RSCV	Route Selection Control Vector
rsh	remote shell
RSL	remote switch link
RSM	Route Switch Module
RSP	Route Switch Processor
RSPAN	Remote Switched Port Analyzer
RSRB	remote source-route bridging
RSRC	Resource
RSVP	Resource Reservation Protocol
RTAL	Receive Telecomb Bus Aligner/Interface
RTC	real-time console
RTM	Real Time Monitor
RTP	Rapid Transport Protocol
RTP	Real-Time Transport Protocol
RTR	response time reporter
RTS	Request To Send
RTT	round-trip time
RTTMON	Round Trip Time Monitor
RU	request/response unit
RUDP	Reliable User Data Protocol
Rx	Receive
RXP	Resonate Exchange Protocol

S

SA	security association
SA	Source-Active
SA	Service Assurance
SADB	security association database
SAF24	SAR adapter FPGA OC24
SAFI	Subsequent Address Family Identifier
SAP	service access point
SAR	segmentation and reassembly
SBE	single-bit error
SCB	storage control blocks
SCB	system control board
SCC	Signaling Connection Control
SCCP	Signaling Connection Control Part
SCM	Service Connection Manager
SCP	Service Control Point
SCP	Switch-Module Configuration Protocol
SCP	System Control Protocol
SCR	sustained cell rate
SDCC	Serial Data Communication Channel
SDEE	Security Device Event Exchange
SDF	Signature Definition File
SDLC	Synchronous Data Link Control
SDLLC	Synchronous Data Logical Link Control
SDM	Security Device Manager
SDP	Session Description Protocol
SDP	Shelf Discovery Protocol
SDRAM	synchronous DRAM

SDT	Start Data Transfer
SEF	severely errored frames
SERDES	Serializer-Deserializer
SFC	switch fabric card
SFP	Small Form Factor Pluggable
SGBP	Stack Group Bidding Protocol
SGCP	Simple Gateway Control Protocol
SGSN	Serving GPRS Support Node
SID	Service ID
SIMM	single in-line memory module
SIP	Session Initiation Protocol
SLARP	Serial Line Address Resolution Protocol
SLB	Server Load Balancing
SLC	signaling link code
SLCI	Signaling Link Code Interface
SLIC	Subscriber Line Interface Circuit
SLIP	Serial Line Internet Protocol
SLU	secondary logical unit
SM	sparse mode
SM	state machine
SMbus	System Management bus
SMDS	Switched Multimegabit Data Service
SME	Signature Micro Engine
SMRP	Simple Multicast Routing Protocol
SMTP	Simple Mail Transfer Protocol
SNA	Systems Network Architecture
SNASw	SNA Switching Services
SNMP	Simple Network Management Protocol
SNR	signal-to-noise ratio

SNRM	Set Normal Response
SO-DIMM	Small Outline Dual In-line Memory Modules
SOF	start-of-frame
SOP	Second-Generation Packet-over-SONET
SP	Switch Processor
SPA	Shared Port Adapter
SPACP	SPA bus communications protocol
SPAN	Switched Port Analyzer
SPD	Security Policy Database
SPE	service processing element
SPI	security parameter index
SPI4	System Packet Interface Level 4
SPID	service profile identifier
SPM	source path message
SPMM	SIMM DSP module
SRA	source routing accelerator
SRAM	static RAM
SRC	Switch Redundancy Controller
SRCP	Simple Resource Coordination Protocol
SRDB	source route relational database
SRIC	Sculptor Input Controller
SRIF	Sculptor Interface
SROC	Sculptor Output Controller
SRP	Server Redundancy Protocol
SRP	Spatial Reuse Protocol
SRR	Single Ring Recovery Protocol
SSA	Serial Storage Architecture
SSCOP	Service-Specific Connection-Oriented Protocol
SSCP	system services control points

SSE	silicon switching engine
SSG	Service Selection Gateway
SSH	Secure Shell
SSL	Secure Socket Layer
SSM	Single State Mode
SSM	Source Specific Multicast
SSO	Stateful SwitchOver
SSP	Silicon Switch Processor
SSP	state synchronization protocol
SSRAM	synchronous static RAM
SSRP	Simple Server Redundancy Protocol
SSS	Subscriber Service Switching
SSTP	Shared Spanning-Tree Protocol
STP	Spanning-Tree Protocol
STUN	serial tunnel
SU	service unit
SU	signaling unit
SVC	switched virtual circuit
SVI	switched virtual interface
SVIP	Versatile Interface Processor 2
SW56	switched 56K
SWIDB	software for Interface Descriptor Block
SYSMGT	system management

T

TAC	Cisco Technical Assistance Center
TACACS	Terminal Access Controller Access Control System
TBB	to backplane buffer

TBI	Ten Bit Interface
TBM	Transmit Buffer Manager
TCA	telecommunications access method
TCATM	Tag Control ATM
TCAM	Ternary Content Addressable Memory
TCB	Transmission Control Block
TCL	Toolkit Command Language
TCP	Transmission Control Protocol
TDM	time-division multiplexing
TDP	Tag Distribution Protocol
TDR	time domain reflectometer
TE	terminal equipment
TE	traffic engineering
TE	tunnel equipment
TE3	T3 or E3
TED	Tunnel Endpoint Discovery
TEI	terminal endpoint identifier
TFIB	Tag Forwarding Information Base
TFTP	Trivial File Transfer Protocol
TG	transmission group
TIB	Tag Information Base
TIM	Tree Information Base
TIC	Toaster Input Controller
TID	Terminal Identifier
TIFF	tagged image file format
TLB	translation look-aside buffer
TLV	type, length, value
TMQ	terminal port queueing
ToS	Type of Service

TP	Transport Protocol
TR	Token Ring
TRANGE	time-range
TSC	Tag Switch Controller
TSCAM	Traffic Shaping Carrier Access Module
TSI	transmitting subscriber information
TSP	tag-switched path
TT2RP	Toaster-to-RP
TTAL	Transmit Telecombuss Aligner/Interface
TTL	time to live
TVC	tag switched controlled virtual circuit
TVC	tag virtual circuits
Tx	transmit

U

UA	unnumbered acknowledgement
UART	Universal Asynchronous Receiver/Transmitter
UCB	University of California, Berkeley
Ucode	Microcode
UDLD	UniDirectional Link Detection
UDP	User Datagram Protocol
UPS	uninterruptible power supply
URM	Universal Router Module
uRPF	Unicast Reverse Path Forwarding

V

VACL	VLAN access control list
VAD	voice activity detection

VBR	variable bit rate
VBR-nRT	variable bit rate—non-real time
VC	virtual circuit
VCC	virtual channel connection
VCD	virtual circuit descriptor
VCCI	Virtual Channel Common Index
VCHAN	virtual channel
VCI	virtual channel identifier [<i>ATM only</i>]
VCN	virtual circuit number
VFC	voice feature card
VFC	VoIP feature card
VFR	Virtual Fragment Reassembly
VG	voice gateway
VIC	voice interface card
VIP	Versatile Interface Processor
VLAN	virtual LAN
VMAC	Virtual MAC
VMPS	VLAN Membership Policy Server
VMR	value, mask, result
VNM	Voice Network Manager
VOA	variable optical attenuator
VoIP	Voice over IP
VP	virtual path
VPC	virtual path connection
VPD	voice packet driver
VPDN	Virtual Private Dialup Network
VPI	virtual path identifier
VPLS	Virtual Private LAN Service
VPN	Virtual Private Network

VPNv4	Virtual Private Network version 4
VQP	VLAN Query Protocol
VQPC	VQP client
VRF	VPN Routing and Forwarding
RRP	Virtual Router Redundancy Protocol
VSI	Virtual Switch Interface
VSM	Voice Service Manager
VT	virtual terminal
VTAM	virtual telecommunications access method
VTMS	Versatile Traffic Management and Shaping
VTP	VLAN Trunk Protocol
VTSP	voice telephony service provider
VTT	voltage termination
VVIC	Voice/WAN interface card

W

WCCP	Web Cache Communication Protocol
WCS	writable control store
WDS	Wireless Domain Services
WIC	WAN interface card
WLM	Workload Manager
WRED	Weighted Random Early Detection
WWW	World Wide Web

X

XCA	external communication adapter
XCVR	transceiver
XDR	eXternal Data Representation

XID	exchange identification
XML	eXtensible Markup Language
XNS	Xerox Network Systems
XOT	X.25-over-TCP
XTagATM	extended tag ATM

Z

ZBT	zero bus turnaround
