Cisco IOS System Message Guide, 12.2 SX

This publication lists and describes system messages for Cisco IOS Release 12.2 SX, up to and including 12.2(33)SXI. During operation, the system software sends these messages to the console and, optionally, to a logging server on another system. Not all system messages indicate problems with your system. Some messages are purely informational, and others may help diagnose problems with communications lines, internal hardware, or the system software. This guide also includes messages that appear when the system crashes.

This guide contains the following topics:

- [How The Messages Are Organized, page 1](#)
- [How to Read System Messages, page 2](#)
- [System Message Example, page 39](#)
- [Message Traceback Reports, page 40](#)
- [Message Overrun and Continuation, page 40](#)
- [Using the Error Message Decoder to Search for System Messages, page 41](#)
- [Searching for System Messages in Online Documentation, page 41](#)
- [Obtaining Documentation and Submitting a Service Request, page 42](#)
- [System Messages, page 1](#)
- [GLOSSARY](#)

How The Messages Are Organized

The system messages provide descriptions of system messages related to the Cisco IOS software. The messages are organized according to the particular system facility that produces the messages. The facility sections appear in alphabetical order, and within each facility section, messages are listed alphabetically by mnemonic. Each message is followed by an explanation and a recommended action.

For alphabetizing purposes, lowercase and uppercase letters are treated the same.

The index of messages is alphabetized as follows:

1. Facility code
2. Mnemonic

Americas Headquarters:
Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA

© 2008 Cisco Systems, Inc. All rights reserved.

3. Severity level

Note

You can also view online system messages that pertain to Cisco IOS Release 12.2S-based releases. See *System Messages for 12.2S*.

How to Read System Messages

System messages begin with a percent sign (%) and are structured as follows. The text in bold are required elements of the System Message, the text in italics are optional elements of the System Message.

%FACILITY-SUBFACILITY-SEVERITY-MNEMONIC: Message-text

FACILITY is a code consisting of two or more uppercase letters that indicate the facility to which the message refers. A facility can be a hardware device, a protocol, or a module of the system software. [Table 1](#) lists the system facility codes.

SUBFACILITY is used only for Cisco Catalyst 6500 series switches that are operating in a distributed system. The subfacility can consist of one code, or two codes that are divided by a hyphen, and describes the part of the distributed system from where the message is coming. For example, the **%DIAG-SP-STDBY-6-RUN_MINIMUM** system message is the **%DIAG-6-RUN_MINIMUM** message coming from the switch processor (SP) that is in redundant or standby (STDBY) mode.

SEVERITY is a single-digit code from 0 to 7 that reflects the severity of the condition. The lower the number, the more serious the situation. [Table 2](#) lists the severity levels.

MNEMONIC is a code that uniquely identifies the system message.

Message-text is a text string describing the condition. This portion of the message sometimes contains detailed information about the event, including terminal port numbers, network addresses, or addresses that correspond to locations in the system memory address space. Because the information in these variable fields changes from message to message, it is represented here by short strings enclosed in square brackets ([]). A decimal number, for example, is represented as [dec]. [Table 3](#) lists the representations of variable fields and the type of information in them.

The following is a sample system message:

```
%LINK-2-BADVCALL: Interface [chars], undefined entry point
```

Some messages also indicate the card and slot reporting the error. These messages begin with a percent sign (%) and are structured as follows:

%CARD-SEVERITY-MSG:SLOT %FACILITY-SEVERITY-MNEMONIC: Message-text

CARD is a code that describes the type of card reporting the error. CIP, CIP2, ECPA, ECPA4, FEIP, PCPA, and VIP are possible card types.

MSG is a mnemonic that indicates that this is a message. It is always shown as **MSG**.

SLOT indicates the slot number of the card reporting the error. It is shown as **SLOT** followed by a number (for example, **SLOT5**).

Note

The prepended portion of the message (**%CARD-SEVERITY-MSG:SLOT**) is not shown in the system message listings in this manual.

Table 1 Facility Codes

Code	Facility
AAA	Authentication, authorization, and accounting
AAA_CACHE	Authentication, authorization, and accounting cache
AAAA	TACACS+ authentication, authorization, and accounting security
AAL5	ATM Adaptation Layer 5
AC	Attachment circuit
ACCESS_IE	Access information element
ACE	Access control encryption
ACL_ASIC	Access control list ASIC
ACLMERGE	Access control list merge
ACLMGR	Access control list manager
ADAPTER	CMCC adapter task
ADJ	Adjacency subsystem
AESOP_AIM	Service engine advanced interface module
AFLSEC	Accelerated Flow Logging Security
AHDLC_TRINIAN	PPP in HDLC-like framing device driver
AICMGMT	Alarm interface controller management
AIM	Advanced Interface Module (AIM)
AIP	ATM Interface Processor
ALARM	Telco chassis alarm related
ALC	ATM line card (ALC)
ALIGN	Memory optimization in Reduced Instruction Set Computer (RISC) processor
ALPS	Airline Protocol Support
AMD79C971_FE	Am79C971 Fast Ethernet device driver
AMDP2_FE	AMDP2 Ethernet and Fast Ethernet
AP	Authentication Proxy (AP)
APFW	APFW for HTTP subsystem
APS	Automatic Protection Switching
ARAP	Apple Remote Access Protocol (ARAP)
ARCHIVE_CONFIG	Archive configuration-related
ARCHIVE_DIFF	Archive Diff and Rollback-related
AS5400	Cisco AS5400 platform
AS5400_ENV	Cisco AS5400 environmental monitor
ASPP	Asynchronous Security Protocol (ASPP)
AT	AppleTalk (AT)
ATM	Asynchronous Transfer Mode

Table 1 Facility Codes (continued)

Code	Facility
ATM_AIM	ATM advanced module
ATMCES	ATM access concentrator PCI port adapter driver
ATMCORE	ATM core
ATMLC	Cisco 7300 ATM line card software
ATMOC3	ATM OC-3 network module
ATMOC3POM	ATM- OC3-POM module
ATMPA	ATM port adapter
ATMSIG	ATM signaling subsystem
ATMSPA	ATM Shared Port Adapter
ATMSSCOP	ATM Service Specific Connection Oriented Protocol (SSCOP)
ATOM_NP_CLIENT	Any Transport over MPLS NP client
ATOM_SEG	Any Transport Over MPLS (AToM) Segment Handler
ATOM_TRANS	Layer 2 Transport over MPLS
AUDIT	Audit feature
AUTORP	PIMv2 AUTORP
AUTOSEC	AutoSecure
AUTOSHUT	Autoshut
AUTOSTATE	Autostate feature
BACKPLANE_BUS_ASIC	Backplane bus ASIC
BAMBAM	One-port Fast Ethernet with coprocessor assist
BAP	PPP Bandwidth Allocation Protocol (BAP)
BAT	Power supply (BAT)
BCM	Broadcom switch controller
BCM3220	Cable modem MAC controller interface
BCM56XX	BCM56XX control layer
BCM_GEWAN	Messages related to the Cisco 3800 system controller
BERT	Bit error rate tester (BERT)
BFD	Bidirectional Forwarding Detection
BFDFSM	BFD finite state machine
BGP	Border Gateway Protocol
BGP_MPLS	BGP MPLS common
BIT	Dynamic bitlist
BOOMERANG	Boomerang distributed reverse proxy server
BRI	ISDN Basic Rate Interface
BRIMUX	Cisco AS5200 BRIMUX board

Table 1 Facility Codes (continued)

Code	Facility
BSC	Binary Synchronous Communications protocol
BSQ	Buffer status queue processing
BSR	Bootstrap router
BSTUN	Block serial tunneling (BSTUN)
BUNDLES	Bundles
C1400	Cisco 1400 platform
C_GIGE	Dual-port Gigabit Ethernet back card subsystem
C10K	Cisco 10000
C10K_APS	NSP APS
C10KATM	Cisco 10000 ATM
C10KCARDISSU	Cisco 10000 Card ISSU
C10KCHE1T1	Cisco 10000 T1 line card
C10KCHKPT	Cisco 10000 Checkpoint Facility
C10KET	Cisco 10000 ET
C10KEVENTMGR	Event Manager subsystem
C10KGE	Gigabit Ethernet subsystem
C10KHHCT3	Cisco 10000 HH Channelized T3
C10KINT	Cisco 10000 interrupt infrastructure
C10KISSU	Cisco 10000 In Service Software Upgrade
C10K_IEDGE	Cisco 10000 iEdge
C10K_LFI_GENERAL	Cisco 10000 Link Fragmentation and Interleaving
C10K_MULTILINK_FRAGSIZE_BELOW_MIN_WARNING	Cisco 10000 PXF Multilink fragment size below minimum warning
C10K_QOS_GENERAL	Cisco 10000 Quality of Service (QoS)
C10K_QUEUE_CFG_GENERAL	Cisco 10000 PXF queuing configuration
C10K_TOASTER	Cisco 10000 toaster
C1400_PCI	Protocol control information (PCI) bus for Cisco 1400 platform
C1600	Cisco 1600 platform
C1700	Cisco 1700 platform
C1700_EM	Cisco 1700 VPN module hardware accelerator for IP security
C1800	Cisco 1800 platform
C1800_HW_CRYPT0	Cisco 1800, Cisco 1810 Motorola SEC 2.0
C2400_DSX1	Cisco 2400 DSX1 subsystem
C2600	Cisco 2600 platform

Table 1 Facility Codes (continued)

Code	Facility
C2600_MAINBOARD_ASYNC_PQUICC	MPC860 quad integrated communications controller for the Cisco 2600 platform
C2950	Catalyst 2950 series switch
C29ATM	Catalyst 2900XL ATM module
C2KATM	Catalyst 2820 ATM module
C3200_FE	Cisco 3200 FEC
C3600	Cisco 3600 platform
C3800	Cisco 3800 platform
C3800_ENVMM	Environmental
C3825	Cisco 3825 platform
C4GWY_DSPRM	DSP Resource Manager
C4K	Catalyst 4000 platform
C542	Voice driver for modular access routers
C5421	Voice over IP
C54x	VoIP DSP driver
C54X	VoIP driver
C5510	Voice Over IP (VoIP) driver
C5RSP	Cisco Catalyst 5000 platform
C6KENV	Cisco Catalyst 6500 environmental system
C6K_MWAM_CENTRALIZED_CONFIG	Multiprocessor WAN Application Module (MWAM) centralized configuration
C6KPWR	Cisco Catalyst 6500 power control system
C6MSFC	C6MSFC (Draco)
C6SUP	C6SUP-specific
C7200	Cisco 7200 platform - deleted for 12.2
C7200_TDM	Cisco 7200 midplane TDM bus
C7600_RSP	Cisco 7600 Route Switch Processor
C7600_SIP200	SPA Interface Processor 200
C7600_SIP200_MP	Cisco 7600, Catalyst 6500 SIP-200 Multiprocessing
C7600_SIP200_SPIRX	Cisco 7600, Catalyst 6500 SIP-200 SPI4.2 bus ingress interface
C7600_SIP200_SPITX	Cisco 7600, Catalyst 6500 SIP-200 SPI4.2 bus egress interface
C7600_SSC600	Services SPA Carrier Card (SSC600)
C830_HW_CRYPT0	C830 Hifn
C870_FE	Cisco 870 Fast Ethernet
C870_HW_CRYPT0	Cisco 850, Cisco 870 Motorola SEC 1.0
C950	Cisco 950

Table 1 Facility Codes (continued)

Code	Facility
CAIM	Compression Advanced Interface Module (CAIM)
CALL_CONTROL	Call control
CALL_HOME	Call Home
CALL_MGMT	Call management subsystem
CALLPROG	Call progress notification subsystem
CALLRECORD	Modem Call Record
CALLTREAT	Call treatment
CALLTREAT_NOSIGNAL	Call Treatment (TREAT)
CALLTRKR	Call Tracker subsystem
CAMP	Cooperative Asymmetric Multiprocessing
CAPI	Card API
CAPI_EC	Card or EtherChannel limitation
CARDMGR	SIP-400 Card Manager (data plane)
CARRIER	DFC carrier
CASA	Cisco Appliance and Services Architecture (CASA)
CBUS	CiscoBus controller
CBUS_ATTEN	CMCC CIP for Cisco bus controller statistics routine
CBUS_WRITE	CMCC CIP for Cisco bus controller write support
CCA	CMCC CIP for channel card adapter
CCH323	Call Control for H.323
CCPROXY	H.323 proxy
CDM	Cable Data Modem subsystem
CDMA_PDSN	CDMA PDSN
CDNLD_CLIENT	Client NRP2 configuration download
CDNLD_SERVER	Server NSP configuration download
CDP	Cisco Discovery Protocol (CDP)
CDSX_MODULE	Network module
CE3	CE3 port adapter (CE3)
CEIPNM	Circuit Emulation over IP Network Module
CERF	Cache Error Recovery Function (CERF)
CES	Circuit Emulation Service (CES)
CES_CLIENT	Client circuit emulation service (CESt
CES_CONN	TDM connection
CFG	Invalid Cisco 1840 configuration
CFGMGR	Configuration Manager

Table 1 **Facility Codes (continued)**

Code	Facility
CFIB	Constellation FIB
CFM	Connectivity Fault Management
CHANNEL_BANK	Channel Bank
CHARLOTTE	Dual OC-3 PoS port adapter
CHKPT	Checkpoint facility
CHOC12	CHOC12 port adapter
CHOPIN	Versatile Interface Processor (VIP) Multi-channel Port Adapter
CHOPIN_ MAINBOARD_ ASYNC_PQII	Chopin Main Board Asynchronous driver
CHSTM1	CHSTM1
CI	Cisco 7500 platform chassis interface
CIOS	CMCC channel adapter Cisco IOS wrapper
CIP and CIP2	Channel Interface Processor (CIP) and enhanced CIP
CIPDUMP	CIP core dump
CIRRUS	CD2430 asynchronous controller
CIRRUS_PM	Slow-speed asynchronous/synchronous port module
CLAW	CMCC CIP for Common Link Access for Workstations (CLAW) facility
CLEAR	Clear facility
CLIENT_CLOCK_SYNC	Clock synchronization server
CLNS	OSI Connectionless Network Service
CLOCK	Clock and calendar
CLOCKSW	Cisco 6400 network clocking
CLS	Cisco link services (CNS)
CLSDR	Cisco link services (CNS) driver
CM622_CM155	ATM OC12 and QOC3 line card driver
CMAPP	Call Manager application
CMBPKM	Multimedia Cable Network System Partners, Ltd. (MNCNS), baseline privacy key management
CMCC	Cisco Mainframe Channel Connection (CMCC)
CM_DSPRM	Digital Signal Processor Resource Manager (DSPRM)
CM_MONITOR	UBR900 Cable Access Router Personal Monitor
CMP	Cluster Membership Protocol
CMPCTG	CMCC Logical Link Control Transmission Group
CNS	Cisco Networking Services (CNS)
CNS_AGENT_CFGCHG	Cisco Network Service (CNS) Configuration Change Agent
CNSAD_IPSEC_AGENT	Cisco Network Service (CNS)/AD IPsec Agent

Table 1 Facility Codes (continued)

Code	Facility
CNSES	Cisco Network Services Event Service client
COBALT	COBALT
COMMON_FIB	CEF address family independent (FIB)
COMP	Point-to-point compression
CONFIG	CMCC Channel Interface Processor (CIP) messages for the configuration processing facility
CONST_BOOT	Constellation boot
CONST_DIAG	On-line diagnostics
CONST_V6	IP version 6
CONTROLLER	Controller
COPTMONMIB	Cisco Optical Monitoring MIB
COT	Continuity test (COT)
COUGAR_EHSA	Pulse amplitude modulation (PAM) port driver
CP	Control plane protection notification
CPAD	Compression service adapter (CSA)
CPE_MMI	Customer Premises Equipment Modem Management Interface
CPM	Combo Port Module (CPM) device driver
CPOS	Packet-over-SONET
CPU_INTF_FPGA	CPU Interface FPGA
CPU_MONITOR	CPU monitor
CRYPTO	Encryption
CRYPTO_HA	Crypto High Availability
CRYPTO_HA_IKE	Crypto High Availability
CRYPTO_HA_IPSEC	Crypto High Availability
CSG	Content Services Gateway
CSM	Call switching module
CSM_TGRM	CSM TGRM interaction
CSM_TRUNK	Call switching trunk manager
CSM_VOICE	Call switching mode (CSM) voice subsystem
CT3	Channelized T3 (CT3) port adapter
CTA	CMCC CIP for the channel transport architecture device task/mapper
CTLPROVIDERSERV	CTL provider service
CTRC	Cisco Transaction Connection
CWAN_ALARM	Constellation WAN alarm
CWAN_ATM	Constellation WAN ATM
CWAN_HA	WAN module High Availability

Table 1 **Facility Codes (continued)**

Code	Facility
CWAN_QINQ	Constellation CWAN-QINQ linecard
CWAN_RP	Constellation WAN ATM Route Processor driver
CWAN_SP	Constellation WAN ATM Switch Processor driver
CWAN_SPA	Shared Port Adapter on OSR
CWANLC	Constellation WAN line card
CWANLC_ATM	Constellation WAN ATM Route Processor driver
CWAN_POSEIDON	Optical Services Module (OSM) GE-WAN Route Processor (RP) driver
CWPA	Route Processor for Constellation Supervisor router module
CWPABRIDGE	CWPA bridging
CWRMP	Wireless radio point-to-multipoint driver
CWRPSPA	Shared Port Adapter on OSR RP
CWRSU	Wireless radio point-to-multipoint subscriber unit (SU)
CWRTEST	Wireless radio point-to-multipoint test driver
CWSLC	Constellation WAN SiByte module
CWTLC	Constellation Supervisor router module line card
CWTLC_ATM	ATM line card for Constellation Supervisor router module
CWTLC_ATOM	Constellation WAN Toaster linecard – AToM
CWTLC_CHOC	Cyclops Channelized OC48/OC12-related
CWTLC_CHOC_DSX	Optical Services Module (OSM) CHOC DSX LC common
CWTLC_CHOCX	Optical Services Module (OSM) Channelized OC12/OC3 Module
CWTLC_GEWAN	Gigabit Ethernet WAN Module
CWTLC_QOS	Optical Services Module (OSM) Supervisor line card QoS
CWTLC_RP	Catalyst 6500 Series Switch and Cisco 7600 Series Router WAN Toaster-based Module Route Processor
DAS_ENV	RSC environmental monitor subsystem
DBCONN	Database Connection
DBUS	Data bus
DCU	ATM access concentrator PCI port adapter
DEBUGGER	Debug mode
DEC21140	DEC21140 Fast Ethernet controller
DFC	Dial feature card
DFC_CARRIER	Dial feature card carrier
DFP	Dynamic Feedback Protocol
DHCP	Dynamic Host Configuration Protocol
DHCP_SNOOPING	DHCP snooping
DHCPD	Dynamic Host Configuration Protocol (DHCP) server

Table 1 Facility Codes (continued)

Code	Facility
DHCPV6C	DHCPv6 client
DHCPV6S	DHCPv6 server
DIAG	CMCC CIP for diagnostic testing
DIALER	Dial-on-demand routing
DIALPEER_DB	Dial peer configuration
DIALSHELF	Dial shelf
DIRECTOR	Director server
DISKMIRROR	NSP disk mirror
DLC	Data-link control
DLSWC	Data-link switching (DLSw)
DLSWMasterSlave	Data-link switching (DLSw) core
DLSWP	Data-link switching (DLSw) peer module
DM	Diagnostic Monitor or Dispatch Manager
DMA	Direct memory access
DMTDSL	Digital/discrete multitone digital subscriber line (DMTDSL)
DNET	DECnet
DNLD	Auto-config/download
DNSSERVER	Domain Name System (DNS) server
DOSFS	DOS file system
DOS_TRACK	IP source tracker
DOT11	802.11 subsystem
DOT1Q	802.1q
DOT1X	802.1X authorization
DOT1X_MOD	Messages encountered in platform dependent code for 802.1x
DP83815	DP83815 10/100 Mbps Integrated PCI Ethernet Media Access Controller
DPM	AS5200 T1 BRIMUX
DRIP	Duplicate Ring Protocol
DRP	Director Response Protocol
DRVGRP	Interface driver
DS3E3SUNI	DS3E3SUNI driver
DS_MODEM	FB modem card
DS_TDM	Dial shelf time-division multiplexing
DS1337	DS1337 RTC
DSA	Delayed stop accounting
DSC	Dial shelf controller (DSC)
DSC_ENV	Cisco AS5800 environment monitor

Table 1 Facility Codes (continued)

Code	Facility
DSC_REDUNDANCY	Cisco AS5800 dial shelf controller (DSC) redundancy
DSCC4	DSCC4 driver
DSCCLOCK	Dial shelf controller (DSC) clock
DSCEXTCLK	Dial shelf controller (DSC) clock
DSCREDCLK	Dial shelf controller (DSC) redundancy clock
DSI	Cisco AS5800 dial shelf interconnect board
DSIP	Distributed system interconnect protocol
DSIP_IOSDIAG	DSIP diagnostic test
DSIPPF	Nitro Interconnect Protocol
DLSAR	DSL segmentation and reassembly
DSM	DSP Stream Manager
DSMP	DSP Stream Manager
DSP_CONN	TDM connection
DSPDD	Digital Signal Processor Device Driver (DSPDD)
DSPDUMP	Digital Signal Processor crash dump facility
DSPFARM	DSP resource management
DSPRM	Digital Signal Processor Device Driver (DSPDD)
DSPU	Downstream physical unit
DSX0	CT1 RBS time slot status
DSX1	Channelized E1 (Europe) and T1(US) telephony standard
DS_TDM	Dial shelf time-division multiplexing (TDM)
DSXPNM	TE3 network module
DTP	Dynamic Trunking Protocol filtering
DUAL	Enhanced Interior Gateway Routing Protocol
DVMRP	Distance Vector Multicast Routing Protocol
E1T1_MODULE	E1T1 module
EAP	Extensible Authentication Protocol
EARL	Enhanced Address Recognition Logic
EARL_ACL_FPGA	Enhanced Address Recognition Logic ACL FPGA
EARL_DRV_API	EARL driver API
EARL_L2_ASIC	Enhanced Address Recognition Logic Layer 2 ASIC
EARL_L3_ASIC	Enhanced Address Recognition Logic Layer 3 ASIC
EARL_NETFLOW	Enhanced Address Recognition Logic NetFlow
EC	EtherChannel, Link Aggregation Control Protocol (LACP), and Port Aggregation Protocol (PAgP)
ECC	Single bit errors in ECC

Table 1 Facility Codes (continued)

Code	Facility
ECPA and ECPA4	Escon Channel Port Adapter and enhanced Escon Channel Port Adapter
EGP	Exterior Gateway Protocol
EHSA	Cisco 6400 Enhanced High System Availability (EHSA)
EM	Event Manager
EM_FPGA	Cisco 1840 FPGA encryption, decryption and hash message authentication codes (HMAC) for IP Security (IPSec)
ENSP	Enhanced Network Services Provider (ENSP)
ENT_API	Entity MIB API
ENT_ALARM	Entity alarm
ENTITY_ALARM	Entity alarm
ENVM	Environmental monitor
ENV_MON	Cisco 12000 environmental monitor
ENVM	Environmental monitor
EOBC	Ethernet out-of-band channel
EOS	Eos ASIC
EOU	Extensible Authentication Protocol (EAP) over User Datagram Protocol (UDP)
EPAD	Encryption port adapter driver (EPAD)
EPLD	EPLD
EPLD_STATUS_OPEN	EPLD Programming Status File Data Processing
EPAMCM	Ethernet Port Adapter Module Configuration Manager
EPIF_PORT	MMC Networks Ethernet Port L3 Processor Port
ESCON	Enterprise Systems Connection
ESF_CRASHINFO	Extended SuperFrame crashinfo
ESF_DRIVER	SIP-400 ESF driver
ESF_IPC	IPX2800 IPC
ESWILP_CFG	Ethernet switch module configuration
ESWILP_FLTMG	ESWILP fault management
ESWITCH	Ethernet switch port adapter
ESWMOD	Ethernet switch module
ESWMRVL_FLTMG	Ethernet switch fault management
ESW_STORM_CONTROL	Storm control
ESW_WIC_FLTMG	Ethernet Switch WIC fault management
ET2_MODULE	Ernest-T2 network module
ETHERNET	Ethernet for the C1000 series
EVENT	Event MIB

Table 1 **Facility Codes (continued)**

Code	Facility
EVENT_TRACE	Event trace subsystem
EXFREE	External memory manager
EXPRESSION	Expression MIB
FABRIC	Fabric Interface ASIC (FIA)
FALLBACK	Voice over IP (VoIP) fallback
FAN	Fan
FARM_DSPRM	Farm DSPRM
FASTBLK	Fast Block
FB	Cisco AS5800 feature board
FB_COREDUMP	Feature board core dump
FBINFO	Cisco AS5800 feature board crash information subsystem
FCIP	FCIP driver
FCL	Forward Control Layer (FCL)
FDDI	Fiber Distributed Data Interface (FDDI)
FDM	Firewall Service Module (FWSM) Device Manager
FDM_HA	High availability FWSM Device Manager
FECPM	Fast Ethernet (FE) Combination Port Module (CPM) device driver
FESMIC_FLTMG	FESMIC fault management-related
FF	FF module-specific
FIB	Forwarding Information Base
FIB_HM	FIB health monitor
FIB_HM_MVL	Platform dependent, FIB Health Monitor
FILESYS	File system
FIO_TDM	Messages related to the Cisco 3700XM TDM device
FLASH	Flash nonvolatile memory
FLEX_DNLD	Voice Over IP (VoIP) driver
FLEXDSPRM	Flex DSPRM operation
FM	Feature Manager (FM)
FM	Forwarding Manager (FM)
FMCORE	Core Feature Manager
FM_EARL6	EARL 6 Feature Manager
FM_EARL7	EARL 7 Feature Manager
FPD_MGMT	FPD Management Subsystem
FPGA	LS1010 chip-specific
FR	Frame Relay
FR_ADJ	Frame Relay Adjacency

Table 1 **Facility Codes (continued)**

Code	Facility
FR_ELMI	Frame Relay enhanced Local Management Interface
FR_FRAG	Frame Relay Fragmentation
FR_LMI	Frame Relay Local Management Interface
FR_RP	Frame Relay RP
FR_VCB	Frame Relay VC bundle
FRATM	Frame Relay ATM
FREEDM	CT3 trunk card Freedm
FS_IPHC	Fast IP Header Compression
FTC_TRUNK	Cisco 3801 platform
FTPSERVER	FTP server processes
FTSP	Fax Telephony Service Provider subsystem
FTTM	Full Ternary TCAM Manager
FW	Inspection subsystem
FW_HA	Firewall High Availability
FX1000	FX1000 Gigabit Ethernet controller
GBIC_SECURITY	GBIC security check
GBIC_SECURITY_CRYPT	GBIC SECURITY serial EEPROM verification
GBIC_SECURITY_UNIQUE	GBIC security uniqueness verification
GDOI	Group Domain of Interpretation
GE	Gigabit Ethernet subsystem
GENERAL	Zenith route processor
GET_DATA	CMCC CIP for allocating transfer elements
GK	GK-H.323 Gatekeeper
GK_OSP	H.323 Gatekeeper OSP
GLBP	Gateway Load Balancing Protocol
GLCFR	Internet router
GPRSFLTMG	Global Packet Radio Service fault management
GPRSMIB	Global Packet Radio Service MIB
GRIP	Xerox Network Systems (XNS) Routing Protocol
GRP	Gigabit Route Processor
GRP_C10K_CH_DS3	Cisco 10000 CH-DS3 RP driver
GRP_OC12_CH_DS3	Gigabit Route Processor (GRP) driver
GRPGE	Gigabit Ethernet Route Processor (RP)
GRPPOS	POS Route Processor
GSHDSL	G.Symetric High DSL

Table 1 Facility Codes (continued)

Code	Facility
GSI	G.Symetric high bit rate DSL
GSR_ENV	Internet router environment monitor
GSRIPC	Internet router IPC service routines
GT64010	GT64010 DMA controller driver
GT64011	GT64011 DMA controller driver
GT64120	GT64120 DMA controller driver
GT96K_FE	Cisco 3700 series and Cisco 3631 systems controller
GT96K_FEWAN	Cisco 3700 series and Cisco 3631 systems controller for WAN
GT96K_TDM	Cisco 37xx, Cisco 2691, and Cisco 3631 TDM subsystem
GTP	GPRS Tunnel Protocol
GUIDO	GUIDO network module
HA	High availability system
HA_CLIENT	High availability client
HA_EM	Embedded Event Manager
HA_IFINDEX	High Availability system
HAL	Halcyon
HARDWARE	Hardware resources
HA_WD	High Availability system
HAWKEYE	Token Ring PCI port adapter
HD	HD64570 serial controller
HDLC	High-Level Data Link Control
HDLC32	PAS HDLC32
HDV	High Density Voice (HDV) driver
HDV2	HDV2 network module
HDX	Half-duplex (HDX) finite state machines (FSM)
HEALTH_MONITOR	Health Monitor
HEARTBEAT	Heartbeat
HHM	Cisco AS5400 health monitor
HIFN79XX	Hifn 79xx
HLFM	Forwarding Manager
HMM_ASYNC	Hex modem network module asynchronous driver
HOOD	LAN controller 100VG-AnyLAN interface
HP100VG	100VG-AnyLAN port adapter driver
HPI	Host Port Interface
HSRP	Hot Standby Router Protocol (HSRP)
HTSP	Analog voice hardware adaptation layer software

Table 1 Facility Codes (continued)

Code	Facility
HTTP	Hypertext Transfer Protocol (HTTP)
HTTPC	HTTP client
HUB	Cisco Ethernet hub
HW	Hardware
HW_API	Hardware API
HW_VPN	Encryption Advanced Interface Module (EAIM)
HWEKAN	HWEKAN echo canceller
HWIC_1GE_SFP	Gigabit Ethernet High-speed WAN Interface Card (HWIC)
HWIC_ADSL	HWIC ADSL
HWIC_ADSL_BRI	HWIC ADSL/BRI
HWIC_BRI	HWIC BRI
HWIC_HOST	High-speed WAN Interface Card (HWIC) Host Driver Library
HWIC_SERIAL	High-speed WAN Interface Card (HWIC) Serial Device Driver
HWIF_QOS	HWIF QoS
HYPERION	Hyperion ASIC
I82541	Intel 82541 Ethernet/Fast Ethernet/Gigabit Ethernet controller
I82543	Intel 82543 Ethernet/Fast Ethernet/Gigabit Ethernet controller
I82544	I82544 Fast Ethernet controller
I82559FE	Intel 82559 Fast Ethernet controller
IAD2420_VOICEPORT	IAD2420 Voice Port
IBM2692	IBM Token Ring chipset
ICC	Inter-Card Communication
IDBINDEX_SYNC	Interface Descriptor Block (IDB) index synchronization
IDBMAN	Interface description block manager
IDCONF	Intrusion Detection Configuration
IDMGR	ID manager
IDNLD	NSP IDNLD
IDS	IP datagram subsystem (IDS)
IDTATM25	IDT ATM25 network module
IEDGE	Intelligent Services Gateway (ISG)
IF	Interface
IFINDEX	SNMP IF_MIB persistence
IFMGR	Interface Manager
IFS	Cisco IOS file system
IGRP	Interior Gateway Routing Protocol
ILACC	ILACC driver

Table 1 Facility Codes (continued)

Code	Facility
ILPM_FAULT	Inline Power Management (ILPM)-related
ILPOWER	Inline power
IMA	Inverse multiplexing over ATM (IMA)
IMAGEMGR	Image manager
IMAGE_SIMFS	In-Memory System Image File System
IMAGE_VFS	Image Virtual File System
INBAND	Inband management
INDXOBJ	Index object
INSTANCE_LOG	Instance log
INT	CIP for the interrupt handler interface
INTERFACE_API	Binary API for the interface descriptor block
INTR_MGR	Interrupt manager
IOCARD	I/O card-specific
IOS_RESILIENCE	Cisco IOS software image and configuration resilience
IP	Internet Protocol
IP_DEVICE_TRACKING	Switch IP Host Tracking
IP_DEVICE_TRACKING_HA	Switch IP Host Tracking HA
IPA	Intelligent port adapter
IPACCESS	IP security
IPC	Interprocess communication
IPC_DRVR	CMCC interprocess communication driver
IPCGRP	Route Processor (RP) interprocess communication (IPC)
IPCOIR	IPC Online Insertion and Removal (OIR)
IPC_RPM	Interprocess communication (IPC)
IPC_RSP_CBUS	Interprocess communication ciscoBus (CBUS)
IPC_URM	Interprocess communication universal router module
IPCLC	Internet router line card interprocess communication
IPDCAPP	Internet Protocol Device Control application
IPFAST	IP fast switching
IPFLOW	IP flow
IPM_C54X	Voice over IP (VoIP) driver
IPM_DSPRM	Digital Signal Processor (DSP) Resource Manager
IPM_NV_EEPROM	Integrated port module NVRAM driver
IPMCAST	Cisco 12000 series Internet router line card IP multicast
IPMCAST_LIB	IP Multicast library

Table 1 Facility Codes (continued)

Code	Facility
IPMOBILE	IP Mobility
IPNAT	IP Network Address Translation
IPP	CMCC encryption feature
IPPHONE	IP Phone register/unregister
IPRT	IP routing
IPS	Intrusion prevention system
IPSECV6	Encryption feature
IP_SNMP	Simple Network Management Protocol specific to IP
IPV6	IP version 6
IPV6FIB	IP version 6 forwarding-based on destination IP addresses
IPV6_FW	IPv6 Inspection subsystem
IPV6_VFR	IPv6 virtual fragment reassembly subsystem
IPV6_VRF	VRF common
IP_VFR	IP Virtual Fragment Reassembly (VFR) subsystem
IP_VRF	IP VPN routing/forwarding instance common
IPX	Novell Internetwork Packet Exchange Protocol (IPX)
IRECAGENTSERVER	IREC agent server
IRONBUS	Iron bus
ISA	Integrated Services Adapter (ISA)
ISDN	Integrated Services Digital Network (ISDN)
ISRHOG	Interrupt Service Routine Hog
ISSU	In Service Software Upgrade
ISSU_CS	ISSU configuration synchronization
IUA	ISDN User Adaptation Layer
IVR	Interactive Voice Response (IVR)
IVR_MSB	Media Stream module
IVR_NOSIGNALING	Interactive Voice Response (IVR) system messages not related to call signaling
IXP1200_CP	One port Fast Ethernet with coprocessor assist
IXP_MAP	ESF Network Processor Client Mapper
JAGGER	Constellation WAN line card
JETFIRE_SM	NAM Sensor network module
KERBEROS	Voice over IP (VoIP) for Cisco AS5800
KEYMAN	Keysting encryption
KINEPAK	Voice over IP (VoIP) for Cisco AS5800
L2	Layer 2

Table 1 **Facility Codes (continued)**

Code	Facility
L2_AGING	Layer 2 aging
L2_APPL	Layer 2 application
L2_ASIC	Layer 2 forwarding engine
L2CAC	Layer 2 CAC
L2HW_CM	Layer 2 hardware connection manager
L2R	L2RLY
L3_ASIC	Layer 3 CEF engine
L3MM	Layer 3 Mobility Manager
L3_MGR	Layer 3 manager
L3TCAM	Layer 3 TCAM manager
LANCE	Local Area Network Controller Ethernet
LANE	LAN Emulation
LANMGR	IBM LAN Network Manager
LAPB	X.25 Link Access Procedure, Balanced
LAPP_OFF	Fax offramp calls
LAPP_ON_MSGS	Fax onramp calls
LAT	DEC local-area transport
LC	Line card
LC_10G	Hamptons 10G trunk card
LC_2P5G	Hamptons 2.6G trunk card
LCB	Line Control Block (LCB) event process
LCCEF	ATM Cisco Express Forwarding (CEF) adjacency
LCCOREDUMP	Line card core dump subsystems
LCFE	Fast Ethernet line card (LC) driver
LCGE	Gigabit Ethernet line card (LC) driver
LCINFO	Line card crash information subsystem
LCLOG	Internet router line card logger subsystem
LCMDC	ONS 15540 Extended Services Platform
LCOC12_CH_DS3	Internet router OC-12-channelized-to-D3 line card
LCPLIM	Line card physical layer interface module
LCPOS	Packet over SONET (POS) line card driver
LCR	Line card registry
LCRED	LC and Port redundancy
LDP	Label Distribution Protocol (LDP)
LES_FDDI	LAN Emulation Server/Fiber Distributed Data Interface
LEX	LAN extension

Table 1 **Facility Codes (continued)**

Code	Facility
LFD	Label Forwarding Database
LFD	MFI Label Switching Database (LFD)
LIBT2F	Text to fax library
LIBTIFF	Tagged Image File Format (TIFF) library
LINECARD	Node Route Processor (NRP) line card
LINEPROTO	Line Protocol
LINK	Data link
LLC	Logical Link Control (LLC), type 2
LLDP	Link Layer Discovery Protocol
LLIST	Linked list facility
LNM	Link noise monitor for the E1T1 module
LNMC	LAN network manager
LOADER	CIP for relocating loader facility
LOGIN	Login
LOVE	Statistics from the CIP to the router
LPD	Line printer daemon
LRE	Long Reach Ethernet for the Catalyst 2950 switch
LSD	MPLS Forwarding Infrastructure (MFI) Label Switching Database
LSPV	MPLS Label-Switched Path Verification
LSS	LS switching message definition
M32X	M32X Basic Rate Interface trunk card
MAC_LIMIT	MAC address table entries
MAC_MOVE	Host activity
MAILBOX	ChipCom mailbox support
MARS_NETCLK	Network clock system
MARVEL_HM	Platform-dependent health monitor rules
MASTER_LED	Master LED
MBRI	Multi-BRI port modules
MBUF	CMCC memory buffer
MBUS	CMCC maintenance bus (MBus)
MBUS_SYS	Maintenance bus (MBus) system
MC3810_DSX1	MC3810 DSX1 subsystem
MCAST	Layer 2 multicast
MCT1E1	CT1/CE1 shared port adapter
MCX	Voice port adapter
MDEBUG	Memory debug

Table 1 Facility Codes (continued)

Code	Facility
MDR_SM	Minimum Disruption Restart State Machine
MDS	Multicast distributed switching
MDT	PIM MDT
MDX	
MEM_ECC	Memory write parity errors detected by ECC control
MEM_HM	Memory health monitor
MEMD	CMCC CIP related to the memory device facility
MEM_MGR	Memory management
MEMPOOL	Enhanced Memory pool MIB
MEMSCAN	Memory scan
METOPT	ONS 15540 Extended Services Platform
METS	Memory-leak analysis
MFI	MPLS Forwarding Infrastructure
MFIB	Multicast Forwarding Information Base
MFIB_CONST_LC	MFIB-Constellation platform
MFIB_CONST_RP	MFIB Constellation information
MFIB_STATS	MFIB statistics
MGCP	Media Gateway Control Protocol (MGCP)
MGCP_APP	Media Gateway Control Protocol (MGCP) application-specific
MGCP_RF	Media Gateway Control Protocol (MGCP) High Availability
MHA	Marvel high availability
MHA_LINE	Marvel high availability line
MHA_MODE	Marvel high availability
MHA_RF	Marvel high availability redundancy feature
MIC	Port adapter
MICA	Modem ISDN Channel Aggregation (MICA)
MIF68840	PCI MC68840 FDDI port adapter
MIMIC	MCOM integrated modem network modules
MIPC	Marvel IPC
MISA	Multiple Crypto Engine subsystem
MISTRAL	Mistral ASIC
MK5	MK5025 serial controller
MLD_PROT	Multicast Listener Discovery
MLOAD	Module Loader
MLS_ACL_COMMON	Multilayer switching ACL
MLS_RATE	Multilayer Switching Rate Limit

Table 1 Facility Codes (continued)

Code	Facility
MLSCEF	Multilayer Switching Cisco Express Forwarding
MLSM	Multilayer Switching Multicast
MMLS	Multicast Multilayer Switching
MMLS_RATE	Multicast Multilayer Switching Rate Limit
MMODEM	Integrated modem network module
MODEM	Router shelf modem management
MODEM_HIST	Router shelf modem history and tracing
MODEM_NV	Modem NVRAM
MODEM_CALLREC	Modem call record
MODEMCALL RECORD	Modem Call Record
MOHAWK_SM	IDS sensor network module
MONITOR	Cisco IOS software ROM monitor
MOTCR	Hardware accelerator for IPSec
MPA68360	VIP Multi-channel Port Adapter
MPC	Multipath Channel Protocol
MPF	Multi-Processor Forwarding (MPF)
MPLS	Multiprotocol Label Switching
MPLS_ATM_TRANS	ATM Transport over MPLS
MPLS_PACKET	MPLS packet
MPLS_TE	Label Switch Path (LSP) tunnel
MPLS_TE_PCALC	MPLS TE path calculation facility
MPOA	Multiprotocol over ATM (MPOA)
MPLSOAM	MPLS management
MRIB	Multicast Routing Information Base
MRIB_API	MRIB client API
MRIB_PROXY	MRIB proxy
MROUTE	Multicast route
MSACDSPRM	Media Conferencing DSP Resource Manager
MSC100_SPA_CC	Cisco 7304 SPA carrier card
MSDP	Multicast Source Discovery Protocol
MSDSPRM	Media Services DSP Resource Manager
MSFC2	Multilayer Switch Feature Card 2
MSFW	Media Services DSP Firmware Manager
MSG802	CMCC CIP 802 for IEE 802.2cx LLC Protocol
MSPI	Mail Service Provider

Table 1 Facility Codes (continued)

Code	Facility
MTRIE	Mtrie
MUESLIX	Mx serial application-specific integrated circuit (ASIC)
MV64340_ETHERNET	MV64340 Ethernet controller
MVR_RP	Multicast VLAN Registration (MVR) route processor
MWAM	Multiprocessor WAN Application Module (MWAM)
MWAM_FILESYSTEM	Multiprocessor WAN Application Module (MWAM) crashinfo and bootflash file system
MWAM_FLASH	Multiprocessor WAN Application Module (MWAM) flash memory
MWAM_FUR	Multiprocessor WAN Application Module (MWAM) FUR
MWAM_NVRAM	Multiprocessor WAN Application Module (MWAM) NVRAM
MWAM_VRTC	Multiprocessor WAN Application Module (MWAM) VTRC
MWR1900_QOS_GENERAL	MWR1900 Quality of Service (QoS)
MWR1900_CFG_GENERAL	MWR1900 PXF queuing configuration
MWR1900_REDUNDANCY	MWR1900 redundancy
MXT_FREEDM	8PRI/4T board
NATMIB_HELPER	NAT MIB helper
NBAR	Network-based application recognition (NBAR)
NETFLOW_AGGREGATION	NetFlow aggregation
NETGX_CRYPTO	NETGX CRYPTO hardware accelerator module for IPsec
NET_SERV	Networking Services
NETWORK_CLOCK_SYNCHRONIZATION	Network clock synchronization
NETWORK_PORT_SATELLITE	Network port satellite
NETWORK_RF_API	Network redundancy feature API
NEVADA	CMCC CIP interrupt controller
NHRP	Next Hop Resolution Protocol (NHRP)
NIM	Network interface module
NM_8_16AM_V2_MODULE	NM-8/16AM-V2 module
NP	NextPort (NP)
NP_BS	NextPort (NP) Bootstrap and Crash Monitor
NP_CLIENT	NextPort (NP) client
NP_DDSDM	NextPort (NP) Digital Data Services Manager

Table 1 Facility Codes (continued)

Code	Facility
NP_DSPLIB	NextPort (NP) DSPLIB
NP_EST	NextPort (NP) error, status, and trace
NP_MD	NextPort (NP) modem driver
NP_MM	NextPort (NP) module manager
NP_SIGLIB	NextPort (NP) signaling library
NP_SPE_DS	NextPort (NP) Dial Shelf Service Processing Element (SPE) Manager
NP_SSM	NextPort (NP) Session and Service Manager
NP_UCODE	NextPort (NP) microcode
NP_VPD	NextPort (NP) Voice Packet Driver
NP_VSM	NextPort (NP) Voice Service Manager
NRP	Network Routing Processor (NRP)
NRP2	Network Route Processor, type 2
NRP2_NVMANAGE	Network Route Processor, type 2 NVRAM management
NRP2_SE64	SE64 upper and lower layer device driver
NRP2EHSA	NRP2 EHSA
NSE	Network services engine
NSE100	Network services engine NSE100
NSP	Network Switch Processor (NSP)
NSP_APS	Cisco 6400 node switch processor (NSP)
NSP_DISK	NSP disk
NSP_OIR	Cisco 6400 online insertion and removal (OIR)
NSPINT	Network switch processor (NSP) interrupt infrastructure
NTP	Network Time Protocol (NTP)
OBFL	Onboard Failure Logging
OCE	Output chain elements
ODM	Online diagnostics manager
OER_BR	Optimized Edge Routing (OER) border router
OER_MC	Optimized Edge Routing (OER) master controller
OER_TT_FLOW	Optimized Edge Routing (OER) top talkers flow border router
OIR	Online insertion and removal (OIR)
OLM	Optical Link Management
ON_DIAG	Online diagnostics subsystem
ONLINE	SCP (Switch-module Configuration Protocol) download processor
ONS15530	Cisco ONS 15530 trunk card
OOBP	Out-of-band port (OOBP)
OPTICAL_MONITOR	Optical monitoring

Table 1 Facility Codes (continued)

Code	Facility
OSM_MULTILINK	Optical Services Module (OSM) distributed multilink
OSPF	Open Shortest Path First (OSPF)
OSPFv3	Open Shortest Path First version 3
P2IPC	Fast IPC event
P2IPC_TRACE	Fast IPC trace
PA	Port adapter
PACC	Cisco 7300 port adapter carrier card (PACC)
PACC_IPC	Port Adapter Carrier Card (PACC) interprocess communication (IPC)
PACKET	Packet
PAD	X.25 packet assembler/disassembler
PAGP_DUAL_ACTIVE	Port aggregation protocol (PAgP)
PAMMBOX	Platform-independent PAM mailbox serial interface
PARSE_RC	Parser return code
PARSER	Parser
PBI_OPEN	Programmable Binary File (PBI) Data Processing
PBR	Policy Based Routing
PCI_FE	PCI Fast Ethernet
PCMCIAFS	PCMCIA disk
PCPA	Parallel Channel Port Adapter
PDSN_CLUSTER	PDSN cluster controller or PDSN cluster member
PERUSER	PPP per-user configuration
PF	Protocol filtering
PFINIT	Platform initialization
PF_OBFL	Platform onboard failure logging
PFREDUN	Policy Feature Card Redundancy
PGM	Pragmatic General Multicast (PGM)
PGMHOST	Pragmatic General Multicast (PGM) host module
PHY	Physical layer
PIF	RSC PIF
PIM	Protocol Independent Multicast
PIMP	Process interrupt mask profiler
PIMSN	Protocol Independent Multicast Snooping
PIM_PROT	Protocol Independent Multicast
PIM_REG_TUN	PIM register tunnel
PIMSN	PIM snooping
PINNACLE	Pinnacle ASIC

Table 1 Facility Codes (continued)

Code	Facility
PKI	PKI feature
PLAT_MP	Platform MP support
PLATFORM	Platform-specific
PLATFORM_IMAGE_PREFIX	Multilayer Switch Feature Card (MSFC)
PM	Port Manager
PM3387	One-port Gigabit Ethernet HWIC-1GE-SFP
PM_DB_HA	Port management database high-availability client
PMIP	WLAN Proxy Mobile IP Subsystem
PM_MODEM_HIST	Modem history and tracing
PM_MODEM_MAINT	Modem maintenance
PM_SCP	Port manager Switch-Module Configuration Protocol
PMSN	Port State Machine
PNNI	Private Network-Network Interface
POLICY_API	Policy API
POLICY_MANAGER	Policy Manager
PORT	Port Management
PORT_SECURITY	Port security
POS	Packet over SONET subsystem
POS_GIGE	Packet over SONET Gigabit Ethernet
POSDW	Packet over SONET double-wide PCI port adapter driver
POS LC	Packet over SONET line card
POT1E1	Versatile Interface Processor (VIP) multichannel port adapter
POTS	Plain old telephone service (POTS)
PPP	Point-to-Point Protocol (PPP)
PQ3_TSEC	PQ3 TSEC
PQII	MPC860 quad integrated communications controller
PQUICC	MPC860 quad integrated communications controller
PQUICC_ASYNC	Asynchronous MPC860 quad integrated communications controller
PQUICC_ASYNC_NOMEM	Integrated Port Module Asynchronous Driver
PQUICC_ETHER	Ethernet MPC860 quad integrated communications controller
PQUICC_ETHERNET	Ethernet MPC860 quad integrated communications controller
PQUICC_FE	Fast Ethernet MPC860 quad integrated communications controller
PQUICC_SERIAL	Serial MPC860 quad integrated communications controller
PQUICC3	MPC8500 PowerQUICC3

Table 1 **Facility Codes (continued)**

Code	Facility
PRBS	Pseudo-random bit sequence
PROCYON	CPU daughter card for the Supervisor Engine 720
PS	Power supply
PTRANSFORM	Protocol transformation
PT	Protocol Translation
PV	Private VLAN
PVDM2	PVDM2 SIMM
PW_WATCHER	Portware Watcher
PXF	Parallel eXpress Forwarding (PXF)
PXF_ACL	Parallel eXpress Forwarding (PXF) ACL-specific
PXF_API	Parallel eXpress Forwarding (PXF) API-related
PXF_DMA	Parallel eXpress Forwarding (PXF) DMA subsystem
PXF_FIB	Parallel eXpress Forwarding (PXF) FIB select-specific
PXF_FLOW	Parallel eXpress Forwarding (PXF) Netflow-related
PXF_GEC	PXF EtherChannel
PXF_GRE	Parallel eXpress Forwarding (PXF) GRE tunnel-related
PXF_NAT	Parallel eXpress Forwarding (PXF) Network Address Translation (NAT)-related
PXF_QOS	Parallel eXpress Forwarding (PXF) Quality of Service (QoS)-related
PXF_VRFS	Parallel eXpress Forwarding (PXF) VRF selection-specific
QA	Queue and accumulator
QEM	QEM driver
QLLC	Qualified Logical Link Control
QM	Quality of service management
QNQ	Q-in-Q
QOS	Quality of Service
QOSMGR	Quality of Service (QoS) manager
QUICC	MC68360 quad integrated communications controller
QUICC_ASYNC	Asynchronous MC68360 quad integrated communications controller
QUICC_ETHER	Ethernet MC68360 quad integrated communications controller
QUICC_SERIAL	Serial MC68360 quad integrated communications controller
R4K_MP	Central processing unit
RAC	Ring Access Controller
RADIO	Radio driver
RADIO_DRIVER	Radio driver
RADIUS	RADIUS

Table 1 Facility Codes (continued)

Code	Facility
RADIX	Radix
RADSRV	Embedded RADIUS server
RAIKO	RAIKO-based feature board
RANDOM	Random number generator
RASP16	Interface Multiplexer ASIC
RBCP	Router Blade Control Protocol
RCMD	Remote command
RE	RE subsystem
RECONCILIATION_HA	Reconciliation high availability
RED	Redundancy-related
RED_MODE	High-availability redundancy mode
RED_REMOTE	Redundancy remote
REDUNDANCY	High Availability redundancy
REDUNDANCY_UTILS	High Availability redundancy utilities
Regen	Cisco optical regenerator
Regen_MAINBOARD_ASYNC_PQUICC	Asynchronous MPC860 quad integrated communications controller for the Cisco optical regenerator
REGISTRY	Registry
RESOURCE_MGR	Resource manager
RESOURCE_MON	Resource monitor subsystem
RESYNCH	Route Processor Module (RPM) resynchronization process
RF	Redundancy facility
RF_INTERDEV	Redundancy facility (RF) interdevice
RF_ISSU	Redundancy facility (RF) In Service Software Upgrade
RFS	Remote file system
RIM	Redundant Interface Manager (RIM)
RIP	IP Routing Information Protocol (RIP)
RITE	IP traffic export
RLM	Redundant Link Manager (RLM)
RM	Resource Manager
RMON	Remote Monitoring Protocol
ROUTEMAP	Route map
ROUTEMAP_IPC	Route map interprocess communication (IPC)
RPA	Resource Pool Allocation (RPA)
RPC	Remote Procedure Call (RPC)
RPF	Multicast RPF

Table 1 Facility Codes (continued)

Code	Facility
RPM	Route Processor Module (RPM)
RPB_BKCD	RPM back card
RPM_BULK	RPM-specific bulk file
RPM_CONFIG_COPY	RPM config copy feature
RPM_CONN_MGMT	RPM Connection Management-related
RP_MLP	Distributed Point-to-Point Protocol (PPP) Multilink
RPM_RED	RPM redundancy
RPM_TRAP_CLIENT	RPM trap client
RPM_VIRTUAL	Route Processor Module (RPM) virtual port
RPM_VIRTUAL_PORT	RPM virtual port
RPMXF	Route Processor Module, express forwarding (RPM-XF) card level
RPMXF_DMLP	Route Processor Module, express forwarding DMLP configuration
RPMXF_QOS_GENERAL	Route Processor Module, express forwarding (RPM-XF) Quality of Service (QoS)
RPMXF_QUEUE_CFG_GENERAL	Route Processor Module, express forwarding (RPM-XF) queuing configuration
RPMXF_QUEUE_CFG_STR	Route Processor Module, express forwarding (RPM-XF) queuing configuration
RPMXF_TOASTER	Route Processor Module, express forwarding (RPM-XF) Toaster
RPMXFEVENTMGR	Route Processor Module, express forwarding (RPM-XF) event manager subsystem
RPS	Redundant power system
RS_TDM	Router shelf time-division multiplexing
RRR_PCALC	Routing with Resource Reservation (RRR) path calculation
RSC	Route Switch Controller (RSC)
RSC_CF	Compact flash error
RSC_FPFE_IOSDIAGS	RSC front panel Fast Ethernet IOS diagnostics
RSC_MBUS	Mbus on RSC
RSC_PIF_IOSDIAGS	Cisco IOS diagnostic test
RSCMSM	Resource Measurement
RSCPB	RSC push button
RSP	Route Switch Processor
RSP_ISSU	Cisco 7500 In Service Software Upgrade system
RSRB	Remote source-route bridging
RSVP	RSVP protocol
RSVP_HA	RSVP protocol high availability

Table 1 Facility Codes (continued)

Code	Facility
RTT	Round-trip time monitor
RUDP	Reliable User Datagram Protocol
RUNCFGSYNC	Auto-Running Configuration Synchronization
RVTCVT_INFO	RVT/CVT Runtime Informational messages
RW_TOO_LONG	Windstar MPLS rewrite
S4T68360	Four-port synchronous serial adapter based on the 68360 processor
SASL	Simple Authentication and Security Layer
SARMGR	Segmentation and reassembly (SARMGR)
SATVS	Satellite Switch Virtual Switch (VS)
SBETH	MAC controller (SBETH)
SBFIFO	Packet first-in, first-out (FIFO) MAC controller
SCCP	Signaling connection control part
SCHED	Scheduler
SCP	Downstream physical unit (DSPU)
SDEE	SDEE subsystem
SDLC	Synchronous Data Link Control
SDLLC	Synchronous Data Logical Link Control (SDLLC) Logical Link Control Type 2 (LLC2) translation
SDP	Session Description Protocol
SDLC	GSHDSL
SDM	Security Device Manager
SDSPFARM	SDSP FARM register and unregister
SEC	IP security
SEC_LOGIN	Secure login
SENSOR	Voltage and temperature sensor
SERIAL	WS SERIAL line card
SERVER_CLOCK_SYNC	Clock synchronization service
SERVICE_MODULE	Service module
SERVICEMODULE	Service module monitor
SFF8472	Floating-point subsystem (SFF8472)
SFP	SFP
SFP_SECURITY	SFP Security
SGBP	Stack Group Bidding Protocol
SGCP	Simple Gateway Control Protocol (SGCP)
SGCP_APP	Simple Gateway Control Protocol (SGCP) application-related
SGPRSWARNING	SGPRS warning

Table 1 Facility Codes (continued)

Code	Facility
SHELF	Router shelf
SHMWIN	Shared memory
SIBYTE	SiByte processor complex
SIGSM	Signaling Service Manager
SIP	Session Initiation Protocol
SIP200	SPA Interface Processor 200
SIP400	SPA Interface Processor 400
SIP600	SPA Interface Processor 600
SIP600_PARSING_ENGINE	SIP-600 parsing engine
SIP600_QOS	SIP-600 QoS
SIPSPA	Shared Port Adapter on GSR line card
SKINNYSECURE_SERVER	Skinny secure server
SKINNYSECURE_SERVICE	Skinny secure service
SKINNYSERVER	Skinny server
SLB	Server load balancing
SLB_DFP	Server Load Balancing Dynamic Feedback Protocol agent
SLICE_TOASTER	Slice
SLIP	Serial Line Internet Protocol
SLOT	AS5850 slot state machine and OIR-related events
SLOT_FPD	Common line card FPD
SLOT_HM	RSC slot health monitor
SLOTDUMP	Slot dump
SM	State machine (SM)
SMC	Services Management Channel
SMF	Software MAC Filter
SMIC	2FE2W, 1FE2W, 1FE1R2W, 2W network module-related
SMRP	Simple Multicast Routing Protocol
SMSC_RP	Short message service center route processor
SNAPSHOT	Snapshot dial-on-demand routing
SNASW	Systems Network Architecture (SNA) Switching Services
SNMP	Simple Network Management Protocol (SNMP)
SNMP_BULKSTAT	SNMP bulk-data collection
SNMP_MGR	Simple Network Management Protocol (SNMP) proxy

Table 1 Facility Codes (continued)

Code	Facility
SOI	Simple Network Management Protocol (SNMP) over interprocess communication (IPC)
SONET	Synchronous Optical Network
SONETMIB	Synchronous Optical Network Management Information Base
SONICT	SONIC Ethernet driver
SPA	Shared Port Adapter (SPA)
SPA_CCB	SPA CCB command
SPA_CHOC_DSX	Common Channelized Shared Port Adapter
SPA_CHOCX	Common Channelized Shared Port Adapter
SPA_CHOCX_CWRP	Common Channelized Shared Port Adapter
SPA_CONSOLE	Shared Port Adapter (SPA) virtual console
SPA_CT3	CT3 Shared Port Adapter
SPA_DATABUS	SPA data bus interface
SPA_EEPROM	Shared Port Adapter (SPA) EEPROM
SPA_ETHER	Ethernet Shared Port Adapter
SPA_FPD	Shared Port Adapter (SPA) field-programmable device (FPD)
SPA_HA	SPA High Availability
SPA_IPSEC	IPsec SPA Card (SPA-IPSEC)
SPA_MIB	SPA MIB
SPA_OIR	Shared Port Adapter (SPA) online insertion and removal (OIR)
SPA_PLIM	Shared Port Adapter (SPA) physical layer interface module
SPA_PLUGIN	Shared Port Adapter (SPA) plugin
SPA_PMB	SPA specific power management bus
SPA_T3E3	Shared Port Adapter (SPA) T3E3
SPACP	SPA CP
SPAN	Spanning Tree Protocol
SPANTREE	Spanning Tree
SPANTREE_FAST	Spanning Tree Fast Convergence
SPANTREE_VLAN_SW	Spanning Tree VLAN switch
SPARC	3800 SPARC coprocessor subsystem
SPE	Service Processing Element (SPE)
SRC	Switch Redundancy Controller
SRCP_APP	Simple Resource Coordination Protocol (SRCP) application
SRP	Spatial Reuse Protocol (SRP)
SRPMIB	Spatial Reuse Protocol (SRP) MIB
SSA	Super Santa Ana ASIC

Table 1 Facility Codes (continued)

Code	Facility
SSE	Silicon switching engine
SSG	Service Selection Gateway
SSH	Secure Shell (SSH) Protocol
SSI	SSI event
SSLVPN	SSL-based VPN
SSP	State Synchronization Protocol Manager
SSRP	SONET/SDH based SRP Double Wide PCI port adapter driver
SSSMGR	Subscriber Service Switching (SSS) Manager
STACKMGR	Stack manager controller
STAPL_OPEN	Standard Test And Programming Language (STAPL) Processing
STANDBY	Hot Standby Router Protocol (HSRP)
STORM_CONTROL	Storm control
STRING	String database
STUN	Serial tunneling
SUBSYS	Software subsystems
SUPERVISOR	Supervisor
SUPQ	Supervisor queue
SUPW_PROCMIB	Supervisor MIB
SVCLC	Service line card (SVCLC) firewall SP
SW56	Switch 56K
SW_DAI	Dynamic ARP Inspection
SWEPA	Software encryption port adapter and key management
SWITCH	Switch interface
SWITCH_IF	Switch interface subsystem
SWITCHOVER	Line card switchover-related
SWITCH_QOS_TB	Quality of Service trusted boundary
SW_MGR	Segment switch manager
SW_VLAN	Virtual LAN (VLAN) manager
SYS	Operating system
SYSCTLR	System controller subsystem
SYSLOGD	System logging
SYSLOG_SERVER	Syslog-server file system routines
YSMGR	System Manager
YSMGR_PLATFORM	Cisco Catalyst 6500 system manager process
YSMGT_RPC	System management
SYSTEM_BUS_ASIC	System Bus Translator ASIC

Table 1 Facility Codes (continued)

Code	Facility
SYSTEM_CONTROLLER	System controller
SYSTEM_HM	System health monitor
T1E1SUNI	PAM port driver
TAC	Terminal Access Controller Access Control System
TAGCON	Tag distribution and control
TAGCOS	Tag switching class of service
TAR_FS	Tar file system
TBRIDGE	Transparent bridging
TCAM_MGR	TCAM manager
TCAMMGR	TCAM manager
TCATM	ATM tag control
TCMIPC	Toaster-RP IPC-related
TCMSP	Call control for telephony-style hardware interfaces
TCP	Transmission Control Protocol
TDM	Time-division multiplexing (TDM)
TDM_CLOCK_SYNCHRONIZATION	Time-division multiplexing (TDM) frame clock
TDM_CONN	TDM connections
TDP	Tag Distribution Protocol
TENGIGE_LC	10-Gigabit Ethernet line card
TESTPA	TestPA port adapter
TFIB	Tag Forwarding Information Base
TI1570	PCI/TI1570-based ATM port adapter
TIB	Tag Information Base
TID_HA	Table ID High Availability (HA)
TIDP	Threat Information Distribution Protocol
TIGER	Error-correcting code (ECC) and parity-related
TINY_FRAG_POLICER	Tiny frag policer
TLV	EEPROM
TMS	Threat Management Service
TMQ	Inbound terminal port queuing
TN	Telnet
TN3270	TN3270 protocol
TOASTER_CP	Toaster-based coprocessor assist
TOASTER_IPC	Toaster interprocess communication
TOPN_COUNTERS	Switch TopN report counters

Table 1 **Facility Codes (continued)**

Code	Facility
TPLUS	TACACS Protocol
TR	Token Ring
TRANSCEIVER	Transceiver module
TRINITY	Trinity System
TRUNK	E1/T1 trunk card
TRUNK_CLOCK	AS5400 clocking
TRUNK_DFC	Trunk dial feature card
TRUNK_SERIAL	Trunk serial device
TSP	Tag-switched path (TSP)
TTFIB_NP_CLIENT	Toaster Tag FIB (TTFIB) NP client
TTY	Tty-related for all platforms
TTYDRIVER	Router shelf asynchronous driver
TUN	Tunnel
TUNSS	Tunnel security
TURBORSC	Platform-specific RSC
TWOBT	WS 2BT protocol driver
TWO_GIGE	Two Gigabit Ethernet subsystem
TXCONN	Cisco Transaction Connection (CTRC)
UBL	Universal Boot Loader
UBR7200	Cable modem termination system
UBR900	Cisco uBR900 Series Cable Access Routers
UCODE	Microcode
UDLD	UniDirectional Link Detection (UDLD) protocol
UNICAST_FLOOD	Unicast flooding
UNIX	UNIX
UNIXRP	UNIX RP
UPS	Uninterruptible power supply
URLF	URL filtering subsystem
USBFLASH	USB flash device
USB_HOST_STACK	USB host stack
USB_TOKEN	USB security token
USB_TOKEN_FILESYS	USB Token File System
UTIL	Utility
VACL	VLAN ACL
VALENCIA	Valencia ASIC on Services SPA Carrier Card (SSC-600)
VFC	Voice over IP (VoIP)

Table 1 **Facility Codes (continued)**

Code	Facility
VINES	Banyan VINES
VIP	Versatile Interface Processor
VIP_MDR	Versatile Interface Processor Minimum Disruption Restart system
VIPMLP	Multilink PPP
VOA	Hamptons variable optical attenuator (VOA) card
VOICE_ELOG	Voice event logger
VOICE_FSM	MC3810 voice FSM subsystem
VOICE_IEC	Voice internal error code (IEC)
VOICE_RC	MC3810 voice resource subsystem
VOICE_UTIL	Voice call control utilities
VOIPAAA	VoIP AAA
VOIPFIB	VoIP FIB
VOLANT	Content engine NM
VPA	Voice port adapter
VPD	ATM CES (Voice Processor Deck) driver
VPDN	Virtual Private Dialup Networking
VPLS_NP_CLIENT	Virtual Private LAN Service NP client
VPN_HW	VPN hardware accelerator
VPNSM	VPN Services Module
VPNSMIOS	VPNSM crypto connection
VPNSMIOSSP	VPNSM crypto connection SP
VRM	Voice Resource Management
VRRP	Virtual Router Redundancy Protocol
VSAT	Satellite Module
VSEC	VLAN security violation
VS_GENERIC	Virtual switch
VSL	Virtual switch link
VSI_M	Virtual switch interface (VSI) master
VSL_BRINGUP	Virtual switch link bringup
VSLP	Virtual Switch Link Protocol
VS_MOD	Virtual switch module provisioning
VS_PARSE	Virtual switch
VS_QOS_ACL	Virtual switch QoS ACL
VSTATS	Voice statistics push data
VTSP	Voice telephony security parameter index (SPI)
WA_ENGINE	WA engine network module

Table 1 Facility Codes (continued)

Code	Facility
WARMUPGRADE	Warm upgrade feature
WCCP	Web Cache Communication Protocol (WCCP)
WIC_AM	WIC-AM modem initialization
WiSM	WiFi services module
WLAN_CONTROLLER	WLAN controller network module
WLCCP_WDS	Wireless LAN Context Control Protocol (WLCCP) for WDS
WS_ALARM	Windstar alarm
WSHTF	HT_FPGA data plane driver
WSIPC	Windstar IPC
X25	X.25
XCCTSP_VOICE	External Call Control Telephony Service Provider
XCPA	Mainframe Channel Port Adapter
XCVR	Transponder
XDR	eXternal Data Representation
XDSLWIC	Cisco 2600 series and 3600 series xDSL drivers
XTAGATM	Extended Tag ATM (XTagATM)
Y88E8K	Yukon 88E8000 E/FE/GE controller
ZAM	Zenith Alarm Management

Table 2 System Message Severity Levels

Level	Description
0 – emergency	System unusable
1 – alert	Immediate action needed
2 – critical	Critical condition
3 – error	Error condition
4 – warning	Warning condition
5 – notification	Normal but significant condition
6 – informational	Informational message only
7 – debugging	Appears during debugging only

System message severity levels correspond to the keywords assigned by the **logging console** and **logging monitor** global configuration commands that define where and at what level these messages appear. In general, the default is to log messages from level 0 (emergencies) to level 7 (debugging). However, the default level varies by platform. For more information, see the system configuration chapter and descriptions of the **logging console** and **logging monitor** commands in the appropriate Cisco IOS configuration guide and command reference publications.

Table 3 Representation of Variable Fields in Messages

Representation	Type of Information
[atalk_address]	AppleTalk address
[atalk_net]	AppleTalk network, either 600 or 600-601
[char]	Single character
[chars]	Character string
[dec]	Decimal number
[enet]	Ethernet address (for example, 0000.FEED.00C0)
[hex]	Hexadecimal number
[hex_addr]	Hexadecimal address
[inet]	Internet address (for example, 10.0.2.16)
[int]	Integer
[ipv6_addr]	IP version 6 (IPv6) address
[node]	Address or node name
[p]	IPv6 address
[sci_notation]	Scientific notation
[t-line]	Terminal line number in octal (or decimal if the decimal-TTY service is enabled)
[v-name]	VINES name; or service number (hex or decimal)

System Message Example

The following is an example of a system error message:

%LINK-2-BADVCALL: Interface [chars], undefined entry point

- LINK is the facility code.
- 2 is the severity level.
- BADVCALL is the mnemonic code.
- “Interface [chars], undefined entry point” is the message text.

Some messages also indicate where the system condition occurred. These messages are structured as follows:

%FACILITY-SOURCE-SEVERITY-MNEMONIC: Message-text

SOURCE indicates the location of the condition. Examples of SOURCE are SP, which indicates that the condition occurred in the switch processor, or DFC5, which indicates that the condition occurred in the Distributed Forwarding Card on the module in slot 5.

Using the Error Message Decoder to Search for System Messages

The Error Message Decoder (EMD) is a tool that will help you to research and resolve error messages for Cisco software. The EMD helps you to understand the meaning of the error messages that display on the console of Cisco routers, switches, and firewalls.

To use the EMD, copy the message that appears on the console or in the system log, paste it into the window, and press the **Submit** button. You will automatically receive an Explanation, Recommended Action, and, if available, any related documentation for that message.

The EMD is located here:

<http://www.cisco.com/cgi-bin/Support/Errordecoder/index.cgi?locale=en>

Searching for System Messages in Online Documentation

To search for messages in online documentation, use the search function of your browser by copying and pasting the message that appears on the console or in the system log.

Some messages that appear on the console or in the system log indicate where the system condition occurred. These messages are structured as follows:

%FACILITY-SOURCE-SEVERITY-MNEMONIC: Message-text

SOURCE indicates the location of the condition. Examples of SOURCE are SP, which indicates that the condition occurred in the switch processor, or DFC5, which indicates that the condition occurred in the Distributed Forwarding Card on the module in slot 5.

If you search for the explanation and recommended action of a message that contains a SOURCE, remove the SOURCE from the text first, and then search for the message in the documentation.

For example, instead of searching the documentation for the message C6KPWR-SP-4-DISABLED, remove the SOURCE identifier and search for the message C6KPWR-4-DISABLED.

Related Documentation

The following publications are available for the Catalyst 6500 series switches:

- *Catalyst 6500 Series Switch Module Installation Guide*
- *Catalyst 6500 Series Switch Cisco IOS Command Reference*
- Cisco IOS Configuration Guides and Command References

For information about MIBs, refer to:

<http://www.cisco.com/public/sw-center/netmgmt/cmtk/mibs.shtml>

For Cisco IOS system messages not contained in this publication, refer to the following Cisco IOS documentation:

- *System Messages for IOS:*

http://www.cisco.com/en/US/docs/ios/system/messages/guide/consol_smg.html

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

<http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html>

Subscribe to the *What's New in Cisco Product Documentation* as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service and Cisco currently supports RSS Version 2.0.

System Messages

This section lists messages alphabetically by facility and mnemonic.

AAA Messages

This section contains authentication, authorization, and accounting messages.

AAA-2

Error Message %AAA-2-AAAMULTILINKERROR: [chars]([hex]): Acct db for Id [hex] absent

Explanation A AAA internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-2-FORKFAIL: Cannot fork process [chars]

Explanation Attempted to fork a process and failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AAA-3

Error Message %AAA-3-ACCT_IOMEM_LOW: AAA ACCT process suspended : low I/O memory

Explanation The authentication, authorization, and accounting (AAA) accounting process has been suspended due to insufficient memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-BADSERVERTYPEERROR: Cannot process [chars] server type [chars]

Explanation A method list function encountered a server type that was unknown, or could not be handled. This may be due to a server misconfiguration.

Recommended Action Research the cause of the misconfiguration and attempt to correct it, otherwise take the following action.

Error Message %AAA-3-ACCT_LOW_MEM_TRASH: AAA unable to handle accounting requests due to insufficient memory. So, we trash all queued accounting requests, which may worry customer Please upgrade your memory or plan to get more free memory by optimizing your configuration.

Explanation An accounting request was dropped because there is not enough processor memory. All queued accounting requests will be discarded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-ACCT_LOW_MEM_UID_FAIL: AAA unable to create UID for incoming calls due to insufficient processor memory

Explanation The AAA accounting process is unable to create a user ID (UID) due to insufficient memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-ATTRFORMATERR: Attribute with unknown format [dec]

Explanation An attribute was found with an invalid format.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-AUTH_LOW_IOMEM: RADIUS process is unable to handle the requests due to insufficient low I/O memory

Explanation The RADIUS process is unable to handle requests due to insufficient memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-AUTHORMLISTUNDEF: Authorization method list '[chars]' is not defined. Please define it.

Explanation A given method list was listed in a command without defining it first. The method list should be defined before use.

Recommended Action Define the method list before using it.

Error Message %AAA-3-BADCURSOR: invalid cursor index [dec] max [dec] service [chars] protocol [chars]

Explanation A AAA client has provided an invalid attribute cursor to AAA.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-BADHDL: invalid hdl AAA ID [int], hdl [hex], [chars]

Explanation A AAA client has provided an invalid attribute list handle to AAA.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-BADLIST: invalid list AAA ID [int]

Explanation A AAA client has provided an invalid attribute list to AAA.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-BADMAGIC: Data structure failed magic number sanity check

Explanation A corrupted data structure has been found which was stored internally.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-BADMETHOD: Cannot process [chars] method [int]

Explanation A method list function encountered a method list that was unknown or could not be handled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-BADMETHODERROR: Cannot process [chars] method [chars]

Explanation A method list function encountered a method type that was unknown or could not be handled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-BADPROTOCOL: Unknown protocol [int]

Explanation The AAA subsystem encountered an unknown protocol type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-BADSERVICE: Unknown service [int]

Explanation The AAA subsystem encountered an unknown service type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-BUFFER_OVERFLOW: Radius I/O buffer has overflowed

Explanation An unusually large number of Radius attributes has caused AAA to overflow its Radius I/O buffer.

Recommended Action This is an internal software error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-DROPACCTFAIL: Accounting record dropped, send to server failed:
[chars]

Explanation An attempt to send an accounting record to a server has failed.

Recommended Action Check that the server (TACACS+ or RADIUS) is operational, that the network access server (NAS) is configured properly, and that the NAS can communicate with the server.

Error Message %AAA-3-INVALIDPARG: invalid parameter was used when accessing AAA
function

Explanation A AAA client tried to use a AAA function with an invalid parameter.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-IPILLEGALMSG: Invalid use of ip_pid([int])

Explanation A process sent an illegal message to IP for which IP has not subscribed.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-ISDNINTF: [chars] [chars]: Can not apply configuration to ISDN
channel:
" [chars] "

Explanation The current configuration cannot be applied to individual ISDN channels. You need virtual-profiles and virtual-access interfaces to apply a configuration to ISDN.

Recommended Action Refer to the “Configuring virtual profiles by AAA Configuration” section in the Cisco IOS Dial Technologies Configuration Guide.

Error Message %AAA-3-MLIST_INTERNAL_ERROR: method list '[chars]': [chars]

Explanation This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-MLIST_TOO_MANY_METHODS: method list '[chars]'

Explanation A AAA client attempted to add too many methods to a method list. This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-NOTABLE: AAA ID [int]

Explanation There has been a resource failure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-NULLCURSOR: Null cursor

Explanation A AAA client has provided a nonexistent attribute cursor to AAA.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-NULLVRF: Null vrf entry

Explanation A NULL virtual routing and forwarding (VRF) entry was found while comparing the AAA VRF attributes.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-PARSEERR: Error([dec]) parser is unable to parse [chars]
per-user command

Explanation All attempts to parse this per_user unconfigure command have failed. The specified unconfigure command was not unconfigured.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-SERVER_INTERNAL_ERROR: Server '[IP_address]': [chars]

Explanation This is an internal software error in the AAA server group subsystem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-SG_DEADTIME_FORKFAIL: Failed to fork process for [chars].

Explanation Most likely, the device has run out of memory, though other explanations are possible.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-SG_INTERNAL_ERROR: server group '[chars]': [chars]

Explanation This is an internal software error in the AAA server group subsystem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-SG_TESTPROC_FORKFAIL: Failed to fork process for [chars].

Explanation Most likely, the device has run out of memory, though other explanations are possible.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAA-3-SORTFAIL: [chars] :Peruser Could not sort the [chars] attributes

Explanation Sorting of the attributes received from the AAA server has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AAA-6

Error Message %AAA-6-ACCTSESSIDWRAP: Accounting-Session-ID [dec] exceeded max value allowed

Explanation The Accounting-Session-ID has exceeded the maximum value allowed.

Recommended Action This is an informational message only. No action is required.

Error Message %AAA-6-USER_BLOCKED: Enable view requires to be authenticated by non-none methods, Please use the appropriate method with the login authentication

Explanation None method authentication is not allowed in CLI

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AAAA Messages

This section contains TACACS+ authentication, authorization, and accounting security messages.

AAAA-3

Error Message %AAAA-3-AAAFORKFAIL: Failed to start AAA process. AAA requests may not be processed.

Explanation The device has failed to create the AAA process.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %AAAA-3-ACCTFORKFAIL: Failed to start accounting process. Accounting records may not be sent.

Explanation The device has failed to create the accounting process.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %AAAA-3-BADSTR: Bad accounting data: [chars]

Explanation During AAA accounting operations, the internal database of accounting information for a user was found to be corrupt. In all cases, this indicates an internal software error, and that accounting information for a particular user session has been lost.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAAA-3-DROPACCTFULLQ: Accounting record dropped due to a full aaa accounting queue: [chars]-[chars] [chars] [chars]

Explanation An accounting record was dropped because too many accounting packets are enqueued.

Recommended Action Disable periodic accounting if it is on. The accounting queue may have grown to be large, which is usually due to a non-responsive AAA server. Enter the **show radius statistics** or the **show tacacs** command to see if the number of timeouts is increasing or if the response delay is unusually high.

Error Message %AAAA-3-DROPACCTLOWMEM: Accounting record dropped due to low memory: [chars]-[chars] [chars] [chars]

Explanation An accounting record dropped due to low memory.

Recommended Action Disable periodic accounting if it is on. Try to reduce the load on the router.

Error Message %AAAA-3-DROPACCTQUEUEEXCEEDED: accounting record dropped, output record queue full: [chars]-[chars] [chars] [chars]

Explanation An accounting record was dropped. The record could not be enqueued because the number of records in the output queue has exceeded the system limit.

Recommended Action If periodic accounting is enabled, disable it by entering the **no aaa accounting update newinfo periodic** command.

Error Message %AAAA-3-DROPACCTSNDFAIL: Accounting record dropped, send to server failed: [chars]-[chars] [chars] [chars]

Explanation An attempt to send an accounting record to a server failed.

Recommended Action Check that the server (TACACS+ or RADIUS) is operational. Next, check that the NAS is configured properly. Finally, check that the NAS can communicate with the server.

Error Message %AAAA-3-NOADMINISOC: [chars]

Explanation The socket setup for the administrative process has failed. The process is exiting.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAAA-3-NULPORT: Could not establish port information

Explanation This message indicates an internal software error. AAA could not determine a valid port string based on the information provided to it via a client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAAA-3-NULUSR: accounting for null user

Explanation This message indicates an internal software error. During shutdown of a line or interface, the system tried to send accounting information via AAA, but could not find the user to which the accounting information belonged. The most likely reason for this error is trying to do accounting twice for the same event. This error message can occur without any loss of accounting information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAAA-3-RELOGIN: sanity check in re-login [chars] to [chars]

Explanation A software or hardware error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AAAA-3-SGDUPFREE: Duplicate free of server group [hex]

Explanation This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AAAA-4

Error Message %AAAA-4-BADSGTYPE: Server-group [chars] is not of type [chars].

Explanation The server group name does not match the specified type.

Recommended Action Verify that the group exists and has the correct type.

Error Message %AAAA-4-NOCACHEPROC: The aaa cache process is not created. Please configure aaa cache profile first

Explanation Cache was listed in a method-list without defining it first. Cache profile should be defined before use.

Recommended Action Define the cache profile before using it.

Error Message %AAAA-4-SERVNOGRP: Warning: Server %i:[dec],[dec] is not part of server group [chars].

Explanation The server does not belong to the specified server group.

Recommended Action Check that the server belongs to the correct server group.

Error Message %AAAA-4-SERVNORADIUS: The server-group "[chars]" is not a radius server group. Please define "[chars]" as a radius server group.

Explanation The protocol used by the server-group doesn't support the configured aaa action.

Recommended Action Use a radius server-group.

Error Message %AAAA-4-SERVNOTACPLUS: The server-group "[chars]" is not a tacacs+ server group. Please define "[chars]" as a tacacs+ server group.

Explanation The protocol used by the server-group does not support the configured AAA action.

Recommended Action Use a TACACS+ server-group.

Error Message %AAAA-4-UNSUPWAITSTART: % AAA: Unsupported option wait-start mapped to start-stop.

Explanation Wait-start accounting is not supported. It is being mapped to start-stop .

Recommended Action This is an informational message only. No action is required.

AAA_CACHE Messages

This section contains authentication, authorization, and accounting cache messages.

Error Message %AAA_CACHE-3-NULL_TREE_PERIODIC_PROC: Cache Tree pointer is of null value

Explanation The cache tree pointer is of null value.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AC Messages

This section contains Attachment Circuit messages.

Error Message %AC-3-AC_PROVISION: [chars]

Explanation An error was encountered during Attachment Circuit [un]provisioning.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AC-3-AC_SUBBLOCK: [chars]

Explanation An error was encountered during Attachment Circuit sub-block creation or removal.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AC-3-AC_VECTOR: [chars]

Explanation An error was encountered during Attachment Circuit configuration which caused problems in the setting or restoration of the interface vectors.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ACCESS_IE Messages

This section contains access information element messages.

Error Message %ACCESS_IE-3-INVALID_HANDLE: Caller passed in invalid handle -
traceback to follow.

Explanation An invalid handle was encountered in the access information element (IE) library.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ACE Messages

This section contains access control encryption messages.

ACE-2

Error Message %ACE-2-CRYPTOENGER: Crypto engine error: [chars] ([dec])

Explanation A crypto engine operation did not complete. This error condition can indicate that the crypto engine cannot bind or unbind an interface to a crypto engine. It can also indicate that the crypto engine cannot query an interface ID.

Recommended Action Remove the cryptomap set from the interface by entering the **no crypto map** command. Then reattach the cryptomap set to the interface by entering the **crypto map** command. Although removing and reattaching the crypto map might fix the cryptographic engine operation failure, report the failure to your Cisco technical support representative along with the sequence of commands that led to the failure.

ACE-3

Error Message %ACE-3-BOOTMSGERR: [chars]: boot error: [chars]

Explanation The ACE completed booting, but with an error status code. ACE will not operate and it will not register with the crypto subsystem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ACE-3-CEAL_REGISTRATION: ACE [chars] failed to register.

Explanation The ACE failed to register with the Crypto Engine Acceleration Layer (CEAL).

Recommended Action Reset the module. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ACE-3-NOENGINESLOT: Interface [chars] has no crypto engine slot

Explanation An IKE SA was requested for a given interface, but no crypto engine slot was assigned to that interface. [chars] is the name of the interface that is missing the **crypto engine slot** command.

Recommended Action Configure the interface in question with the **crypto engine [sub]slot** command.

Error Message %ACE-3-OUTOFID_RL: Too may [chars] IDs in the system. Cannot allocate a new one

Explanation All the IDs of the specified type are in use.

Recommended Action Reduce the traffic load, the number of IPsec tunnels, or the frequency of changing the value of a cryptographic key. If this message was seen under light loading conditions, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ACE-6

Error Message %ACE-6-BOOTMSGINFO: [chars]: boot info: [chars]

Explanation The ACE completed booting, but with a non-zero informational status code. This does not indicate an error and ACE will run normally.

Recommended Action This is an informational message only. No action is required.

Error Message %ACE-6-INFO: [chars]: [chars]

Explanation This is an informational message from ACE

Recommended Action This is informational message only and occurs in normal operation. No action is required.

Error Message %ACE-6-SWITCHOVER: VPN-SM switchover: [dec]/[dec] has been [chars] [dec]/[dec]

Explanation A module-to-module switchover has occurred. System performance is not affected.

Recommended Action No action is required.

Error Message %ACE-6-TUNNEL_ACE_CONGESTED: All crypto engines are congested, assigning [chars] to [chars]

Explanation The congestion manager has assigned a new tunnel to an already congested crypto engine. All crypto engines have indicated congestion, so the least congested engine was selected for the tunnel. Packets may be lost on some tunnels.

Recommended Action Reduce the bandwidth requirements of existing tunnels or install additional crypto engines.

Error Message %ACE-6-TUNNEL_MOVE: [chars] has been moved from [chars] to [chars] to relieve congestion

Explanation The congestion manager has moved a tunnel from a congested crypto engine to an uncongested crypto engine.

Recommended Action No action is required.

Error Message %ACE-6-UNEXP_INBOUND_IPSEC: [chars]: received unexpected IPsec packet: src IP: [IP_address]; dst IP: [IP_address]; (count=[dec])

Explanation An IPsec packet was unexpectedly forwarded to the RP.

Recommended Action If this message was seen in the context of the router booting, enabling the hardware crypto accelerator, then this message is normal and can be safely ignored. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ACE-6-UNEXP_OUTBOUND_IPSEC: [chars]: received unexpected IPsec packet: src IP: [IP_address]; dst IP: [IP_address]; firsthop/lasthop = [chars]/[chars] (count=[dec])

Explanation An IPsec packet was unexpectedly forwarded to the RP.

Recommended Action If this message was seen in the context of the router booting, enabling the hardware crypto accelerator, or with an invalid peer IP address then this message is normal and can be safely ignored. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ACL_ASIC Messages

This section contains Access Control List ASIC messages.

Error Message %ACL_ASIC-4-INTR_THROTTLE: Throttling "[chars]" interrupt exceeded permitted [int]/[dec] interrupts/msec

Explanation Excessive interrupts were generated by the EARL ASIC. The system will enforce interrupt throttling to protect the SP.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ACLMGR Messages

This section contains Access Control List (ACL) manager messages.

ACLMGR-2

Error Message %ACLMGR-2-NOMAP: Cannot create ACL Manager data structures for VLAN Map [chars]

Explanation The ACL manager could not allocate the data structures needed to describe a VLAN map in a form that can be loaded into hardware. This situation was probably caused by a lack of free memory.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %ACLMGR-2-NOVLB: Cannot create memory block for VLAN [dec]

Explanation The ACL manager was unable to save per-VLAN information needed for its correct operation. Some per-interface features, such as access groups or VLAN maps, will not be configured correctly.

Recommended Action Use a less complicated configuration that requires less memory.

Error Message %ACLMGR-2-NOVMR: Cannot create VMR data structures for access list [chars]

Explanation The ACL manager could not allocate the data structures needed to describe an ACL in a form that can be loaded into hardware. There may not be enough available memory.

Recommended Action Use a less complicated configuration that requires less memory.

ACLMGR-3

Error Message %ACLMGR-3-ACLTCAMFULL: Acl Tcam Full! Software Forwarding packets on [chars] label [dec] on [chars] [chars]

Explanation There are too many ACL configurations for the platform-specific ACL TCAM table to support.

Recommended Action Reduce the number IP or MAC access lists to be configured to interfaces.

Error Message %ACLMGR-3-AUGMENTFAIL: Augmenting of access-map [chars] on [chars] label [dec] failed

Explanation The system ran out of CPU DRAM when attempting to merge internally required elements with the configured access map(s).

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %ACLMGR-3-INSERTFAIL: Insert of access-map [chars] #[dec] into [chars] label [dec] failed

Explanation The system ran out of CPU DRAM when trying to merge sections of an access map.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %ACLMGR-3-MAXRECURSION: Too many ([dec]) levels of recursion while merging ACLs (code [dec]).

Explanation The configuration is too complicated for the platform-specific ACL merge code to support. This may be caused by including too many separate access lists in a single VLAN map or policy map.

Recommended Action Reduce the number of IP or MAC access lists (considered separately) in any one VLAN or policy map to fewer than the number of levels reported by this log message.

Error Message %ACLMGR-3-MERGEFAIL: [chars] ACL merge error [dec] ([chars]) on [chars] label [dec]

Explanation The ACL manager was unable to complete the merge of the configured features into a form suitable for loading into the hardware. Packets potentially affected by this feature will be sent to the CPU for processing instead. The most likely cause is specifying an ACL that is too large or too complex for the system to handle.

Recommended Action Try specifying a smaller and less complicated configuration.

Error Message %ACLMGR-3-NOLABEL: Cannot allocate [chars] label for vlan-id [dec]

Explanation The ACL manager was unable to allocate a label for the features on this interface. This means that the hardware cannot be programmed to implement the features, and packets for this interface will be filtered in software. There is a limit of 256 labels per direction.

Recommended Action Allocate more space to the relevant section of the TCAM and reboot, or else use a simpler configuration. Use the same ACLs on multiple interfaces, if possible.

Error Message %ACLMGR-3-RELOADED: Reloading [chars] label [dec] feature

Explanation The ACL manager was able to fit more of the configured features on this label into the hardware. One or more features had previously been unloaded because of lack of space.

Recommended Action No action is required.

Error Message %ACLMGR-3-UNKNOWNACTION: Unknown VMR access group action [hex]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ACLMGR-3-UNLOADING: Unloading [chars] label [dec] feature

Explanation The ACL manager was unable to fit the complete configuration into the hardware, so some features will have to be applied in software. This prevents some or all of the packets in a VLAN from being forwarded in hardware, and requires them to be forwarded by the CPU. Multicast packets may be dropped entirely instead of being forwarded.

Recommended Action Allocate more space to the relevant section of the TCAM and reboot, or else use a simpler configuration. Use the same ACLs on multiple interfaces, if possible.

ADJ Messages

This section contains adjacency (ADJ) subsystem messages.

ADJ-3

Error Message %ADJ-3-ADJGENALLOCATEFAIL: Failed to allocate memory [chars]

Explanation An internal software error occurred. This error was probably caused by insufficient available memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ADJGENDEALLOCATEFAIL: Failed to deallocate memory [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ADJLISTREINSERTING: [chars] adj (addr [chars] int [chars] cid [dec]) in adj list for [chars] while still in adj list for [chars]

Explanation An inconsistency was detected when attempting to maintain the list of CEF adjacencies pertaining to an interface. An adjacency was inserted into more than one list.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ADJMGRDISPATCHFAIL: Failed to enqueue an adjacency summary event block

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ADJMGRRREFRESHFAIL: Failed to dispatch a refresh adjacency summary event

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ADJSTACK2: Adj stack2 error [chars]: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ALLOCATEFAIL: Failed to allocate an adjacency

Explanation An internal software error occurred. This error was probably caused by insufficient available memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ALLOCATEONDOWN: Allocating adj when adj subsystem down

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-BADADDRLLEN: Zero address length detected distributing adj [chars]

Explanation An internal software error occurred. An attempt was made to reference an adjacency with an unsupported address type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-BADADDRTYPE: Using an unsupported address type [dec] when trying to add/delete/modify/find an adjacency

Explanation An internal software error occurred. An attempt was made to reference an adjacency with an unsupported address type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-BADLINKTYPE: Using an unsupported linktype [chars] when trying to add/delete/modify/find an adjacency

Explanation An internal software error occurred. An attempt was made to reference an adjacency with an unsupported address type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-BADMACALIGN: adjacency mac string end [hex] not [chars] aligned

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-BADMAGIC: adjacency [chars] is followed by bad magic

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-BOARDENCAP: Generation of encapsulation string for [chars] failed

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-BROKERINITFAIL: Failed to initialise adjacency RP broker facility

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-BUNDLES: Adj bundles: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-DBGFILTERALLOCATEFAIL: Failed to allocate an adjacency debug filter block

Explanation An internal software error occurred. This is probably because not enough memory was available.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ILALLOCATEFAIL: Failed to allocate an adjacency interest list subblock

Explanation An internal software error occurred. This is probably because not enough memory was available.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ILDEALLOCATEFAIL: Failed to deallocate an adjacency interest list subblock

Explanation An internal software error occurred. This is probably because not enough memory was available.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ILINITFAIL: Failed to initialise adjacency interest list facility

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-ILLEGALARGS: Illegal arguments - [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-IPC: Adj [chars], [chars] [chars] cid [int] - [chars] distributing to [chars]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-LCXDRCLIENT: Adjacency distribution client: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-NOFIBIDB: CEF Interface not found - [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-RESOLVE_REQ: Adj resolve request: [chars] [chars] [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-RPXDRCLIENT: Adjacency distribution client: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-SBINITFAIL: Failed to initialise adjacency subblock facility

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-STATETRANSITION: Unexpected state transition from [chars] to [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ADJ-3-TYPENOTISSUAWARE: Bundle type [chars] must be ISSU aware to send to slot(s) [chars]

Explanation The bundle type is not ISSU aware, so it cannot be distributed to a slot with which ISSU negotiation has occurred. This indicates a design problem that requires code changes to fix.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ADJ-5

Error Message %ADJ-5-ADJISSUINCOMPATIBLE: All or part of sdjacency message for [chars] not sent to incompatible CEF instance for [chars]

Explanation The adjacency is not distributed in whole to the remote CEF instance. This may impact traffic forwarding on the remote CEF instance.

Recommended Action No action is required.

Error Message %ADJ-5-PARENT: Midchain parent maintenance for [chars] - [chars]

Explanation A midchain adjacency failed to stack onto an output chain because a loop was detected. Traffic through the adjacency will be dropped until the adjacency is restacked. This condition is typically transient and is resolved by the control plane that drives the stacking. For example, if an IP tunnel destination resolves through the tunnel transiently this message will appear. The situation would be resolved either by learning the tunnel destination through an interface other than the tunnel itself or by bringing the tunnel down.

Recommended Action No action is required.

AFLSEC Messages

This section contains Accelerated Flow Logging Security (AFLSEC) messages.

AFLSEC-6

Error Message %AFLSEC-6-OALDP: [chars] icmp [IP_address] -> [IP_address] ([dec]/[dec]), [dec] packet[chars]

Explanation Packet(s) matching the optimized ACL log criteria have been detected.

Recommended Action No action is required.

Error Message %AFLSEC-6-OALNP: [chars] ip protocol=[dec] [IP_address] -> [IP_address], [dec] packet[chars]

Explanation Packet(s) matching the optimized ACL log criteria have been detected.

Recommended Action No action is required.

Error Message %AFLSEC-6-OALP: [chars] [chars] [IP_address]([dec]) -> [IP_address]([dec]), [dec] packet[chars]

Explanation Packet(s) matching the optimized ACL log criteria have been detected.

Recommended Action No action is required.

Error Message %AFLSEC-6-OALRL: Oal logging rate-limited or missed [dec] packet[chars]

Explanation Some packet matching logs were missed because the log messages were rate-limited or the cache table was full, or no log buffers were available.

Recommended Action No action is required.

Error Message %AFLSEC-6-OALRP: [chars] igmp [IP_address] -> [IP_address] ([dec]), [dec] packet[chars]

Explanation Packet(s) matching the optimized ACL log criteria have been detected.

Recommended Action No action is required.

ALIGN Messages

This section contains ALIGN messages.

ALIGN-3

Error Message %ALIGN-3-CORRECT_S0: Alignment correction made at [chars] [chars]ing [chars]

Explanation A software component within the router needs memory optimization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ALIGN-3-TRACE_S0: -Traceback= [chars]

Explanation A trace that shows where the previous ALIGN error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ALIGN-3-TRACEX: [chars]

Explanation A trace that shows where the previous ALIGN error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ALPS Messages

This section contains Airline Product Set (ALPS) messages.

ALPS-3

Error Message %ALPS-3-ASCU_IF_STUCK: Polling for ASCU [hex] on interface [chars] is stalled.

Explanation The polling mechanism for agent set control units (ASCUs) on an ALPS interface has become stuck.

Recommended Action No action is required.

ALPS-5

Error Message %ALPS-5-ASCU_DISABLED_ASCU_STUCK: ASCU [hex] on interface [chars] has been disabled since 4 consecutive messages were received from same SID.

Explanation An ALPS agent set control unit (ASCU) has been automatically disabled.

Recommended Action No action is required.

Error Message %ALPS-5-ASCU_DOWN: ASCU [hex] on interface [chars] is down.

Explanation An ALPS agent set control unit (ASCU) has transitioned from up to down.

Recommended Action No action is required.

Error Message %ALPS-5-ASCU_UP: ASCU [hex] on interface [chars] is up.

Explanation An ALPS agent set control unit (ASCU) has transitioned from down to up.

Recommended Action No action is required.

Error Message %ALPS-5-CIRCUIT_CLOSED: Circuit [chars] changed state to closed, rsn = [chars].

Explanation An ALPS circuit has transitioned from open to closed

Recommended Action No action is required.

Error Message %ALPS-5-CIRCUIT_OPEN: Circuit [chars] changed state to open.

Explanation An ALPS circuit has transitioned from closed to open.

Recommended Action No action is required.

Error Message %ALPS-5-PEER_CLOSED_DYNAMIC_INACTIVITY: Peer ([IP_address], [chars]) closed due to inactivity.

Explanation An ALPS peer connection is now closed due to inactivity.

Recommended Action No action is required.

Error Message %ALPS-5-PEER_CONN_ID_CHANGE: Peer ([IP_address], [chars]) ID modified to ([IP_address], [chars]).

Explanation An ALPS peer connection identifier has changed.

Recommended Action No action is required.

Error Message %ALPS-5-PEER_OPEN: Peer ([IP_address], [chars]) changed state to open.

Explanation An ALPS peer connection is now open.

Recommended Action No action is required.

ALPS-6

Error Message %ALPS-6-CIRCUIT_ASCU_REJECT: Circuit [chars] received a Circuit Open Confirm with a list of rejected ascus

Explanation An ALPS circuit sent a Circuit Open Request message and received a Circuit Open Confirm with a list of rejected ascus.

Recommended Action No action is required.

Error Message %ALPS-6-CIRCUIT_BUSY_START: Circuit [chars] has entered a congested state.

Explanation An ALPS circuit is experiencing congestion.

Recommended Action No action is required.

Error Message %ALPS-6-CIRCUIT_OPEN_FAILED: Circuit [chars] received a Circuit Open Failed message, rsn = [chars].

Explanation An ALPS circuit sent a Circuit Open Request message and received a Circuit Open Failed message as a reply.

Recommended Action No action is required.

Error Message %ALPS-6-CIRCUIT_UPDATE_FAILED: Circuit [chars] received a Circuit Open Failed message, rsn = [chars].

Explanation An ALPS circuit sent a Circuit Update message and received a Circuit Open Failed message as a reply.

Recommended Action No action is required.

Error Message %ALPS-6-CIRCUIT_X25_VC_STUCK: Host unresponsive on X.25 VC for circuit [chars]

Explanation The X.25 or EMTOX host is not advancing the transmit window for extended periods of time. This may be indicative of a temporary problem with the host application. An X.25 Reset is sent to reset the transmit and receive windows to allow communication to proceed.

Recommended Action None

Error Message %ALPS-6-PEER_BUSY_END: Peer ([IP_address], [chars]) has exited a congested state.

Explanation An ALPS peer connection is no longer experiencing congestion.

Recommended Action No action is required.

Error Message %ALPS-6-PEER_BUSY_START: Peer ([IP_address], [chars]) has entered a congested state.

Explanation An ALPS peer connection is experiencing congestion.

Recommended Action No action is required.

Error Message %ALPS-6-PEER_OPEN_FAIL: Peer ([IP_address], [chars]) open failed, rsn = [chars]

Explanation An ALPS peer connection attempted to open, but failed to open.

Recommended Action No action is required.

ALPS-7

Error Message %ALPS-7-CIRCUIT_BUSY_END: Circuit [chars] has exited a congested state.

Explanation An ALPS circuit is no longer experiencing congestion.

Recommended Action No action is required.

Error Message %ALPS-7-CIRCUIT_DROPS_CKT_DISABLED: Threshold exceeded for circuit disabled drops for circuit [chars]

Explanation The number of ALPS circuit drops due to circuit disabled exceeds the ALPS circuit threshold value.

Recommended Action No action is required.

Error Message %ALPS-7-CIRCUIT_DROPS_INVALID_ASCU: Threshold exceeded for invalid ASCU drops for circuit [chars]

Explanation The number of ALPS circuit drops due to invalid ASCU identifier exceeds the ALPS circuit threshold value.

Recommended Action No action is required.

Error Message %ALPS-7-CIRCUIT_DROPS_LIFETIME_EXPIRED: Threshold exceeded for lifetime timer expiration drops for circuit [chars]

Explanation The number of ALPS circuit drops due to lifetime timer expiration exceeds the ALPS circuit threshold value.

Recommended Action No action is required.

Error Message %ALPS-7-CIRCUIT_DROPS_QUEUE_OVERFLOW: Threshold exceeded for queue overflow drops for circuit [chars]

Explanation The number of ALPS circuit drops due to queue overflow exceeds the ALPS circuit threshold value.

Recommended Action No action is required.

Error Message %ALPS-7-CIRCUIT_DROPS_VC_RESET: Threshold exceeded for X.25 VC Reset drops for circuit [chars]

Explanation The number of ALPS circuit drops due to X.25 VC Reset exceeds the ALPS circuit threshold value.

Recommended Action No action is required.

Error Message %ALPS-7-PEER_DROPS_MAX_SIZE_EXCEEDED: Threshold exceeded for maximum size exceeded drops for peer ([IP_address], [chars]).

Explanation The number of ALPS peer drops due to maximum size exceeded, exceeds the ALPS peer threshold value.

Recommended Action No action is required.

Error Message %ALPS-7-PEER_DROPS_PEER_UNREACHABLE: Threshold exceeded for peer unreachable peer drops for peer ([IP_address], [chars]).

Explanation The number of ALPS peer drops due to a peer unreachable condition exceeds the ALPS peer threshold value.

Recommended Action No action is required.

Error Message %ALPS-7-PEER_DROPS_QUEUE_OVERFLOW: Threshold exceeded for TCP Queue overflow peer drops for peer ([IP_address], [chars]).

Explanation The number of ALPS peer drops due to queue overflow exceeds the ALPS peer threshold value.

Recommended Action No action is required.

Error Message %ALPS-7-PEER_DROPS_VERSION_MISMATCH: Threshold exceeded for version mismatch peer drops for peer ([IP_address], [chars]).

Explanation The number of ALPS peer drops due to version mismatch exceeds the ALPS peer threshold value.

Recommended Action No action is required.

AP Messages

This section contains Authentication Proxy (AP) messages.

AP-1

Error Message %AP-1-POSTURE_POLICY_ERROR: POLICY=[chars] | POLICYNAME=[chars] | IP=[IP_address] | ERROR=<[chars][chars]>

Explanation The specified policy was not applied for the host IP due to the reason specified as Error.

Recommended Action When the “POLICY” character string is “HOST ACL,” verify that an input access list is defined and configured on the interface. A “URL REDIRECT ACL” policy needs a URL-redirect VSA to have an associated access control list URL-redirect-ACL VSA that can be

used to determine HTTP redirect criteria. HTTP packets that match the ACL are subject to redirection. When a URL-redirect-ACL access control list is not specified or is not configured, the host will not be set up for HTTP redirection.

AP-4

Error Message %AP-4-AUTH_PROXY_NOMEM: Sufficient memory was not available to [chars]

Explanation There was not enough memory to perform the specified operation.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %AP-4-POSTURE_EXCEED_MAX_INIT: Exceeded maximum limit ([dec]) on entries in authentication proxy posture cache in initializing state

Explanation The number of entries that are in the Authentication Proxy posture cache and in an initializing state has exceeded the maximum limit.

Recommended Action This condition might indicate a Denial of Service attack. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AP-5

Error Message %AP-5-AP_AAA_DOWN: Event=AAA [chars]. HOST=%i | POLICY [chars]=[chars]. | AUDITSESSID=[chars]

Explanation The AAA servers defined by the method list are unreachable for the host and the policy being applied.

Recommended Action Determine the status and availability of the AAA servers.

AP-6

Error Message %AP-6-FALLBACK_REQ: IP=%i | MAC=%u | PROFILE_NAME=[chars] | EVENT=[chars] | AUDITSESSID=[chars]

Explanation A fallback to authentication proxy has been initiated or terminated for the host.

Recommended Action No action is required.

Error Message %AP-6-POSTURE_DOWNLOAD_ACL: Send AAA request to download ([chars]) named access control list

Explanation The system has sent a request to AAA to retrieve the contents of the specified downloadable ACL.

Recommended Action This message is informational. No action is required.

Error Message %AP-6-POSTURE_POLICY: [chars] [chars] ([chars]) policy for host ([IP_address])

Explanation This message specifies the policy that was enforced for or removed from the specified host. The policy can be either an ACL or a URL to which any intercepted HTTP traffic is redirected.

Recommended Action This message is informational. No action is required.

Error Message %AP-6-POSTURE_START_VALIDATION: IP=[IP_address] | Interface=[chars]

Explanation The system has created an entry for the host in the Authentication Proxy posture cache and has initiated the posture validation process.

Recommended Action This message is informational. No action is required.

Error Message %AP-6-POSTURE_STATE_CHANGE: IP=[IP_address] | STATE=[chars]

Explanation The state of posture validation changed for the specified host in the Authentication Proxy posture validation cache.

Recommended Action This message is informational. No action is required.

APS Messages

This section contains Automatic Protection Switching (APS) messages.

APS-2

Error Message %APS-2-INITSYS: [chars]

Explanation A software error occurred during initialization of the APS subsystem.

Recommended Action Check for sufficient processor memory. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %APS-2-NOSOCKET: Failed To Open Socket

Explanation This message is posted when the APS subsystem fails to create a UDP socket for exchanging APS channel protocol messages over APS message channel configured for IP. This is usually caused by a low memory condition in the system

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

APS-6

Error Message %APS-6-BIDIRSWCH: Group [chars]: Remote Request - [chars]

Explanation This message is posted by the local network element after an APS switchover that is triggered by an APS request from the remote network element.

Recommended Action No action is required.

Error Message %APS-6-CHNLACTIVE: Group [chars] - [chars] channel is now ACTIVE

Explanation This message is posted when a previously standby channel becomes the active channel.

Recommended Action No action is required.

Error Message %APS-6-ENAUTFOVR: Enable Auto-Failover On [chars]

Explanation This message is posted when APS software enables hardware to perform APS actions for failures detected by the hardware.

Recommended Action No action is required.

ARAP Messages

This section contains Apple Remote Access Protocol messages.

Error Message %ARAP-0-VSERROR: TTY [dec]: VS queued error

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ARAP-4-NOEXTTACACS: TTY [dec]: arap TACACS is configured but extended TACACS is not.

Explanation Terminal Access Controller Access Control System (TACACS) authentication failed because extended TACACS is not configured.

Recommended Action Configure extended TACACS.

ARCHIVE_CONFIG Messages

This section contains ARCHIVE_CONFIG messages.

ARCHIVE_CONFIG-4

Error Message %ARCHIVE_CONFIG-4-ARCHIVE_DELETE_FAILED: Delete of a previously saved archive of the router configuration could not be completed.

Explanation The router could not delete a file that had previously been written. The file that was being deleted contains an archive of the router configuration. This condition could occur if the file was manually deleted.

Recommended Action No action is required.

Error Message %ARCHIVE_CONFIG-4-ARCHIVE_SKIPPED: Archive of router configuration was skipped due to a previous initiation.

Explanation An attempt to create an archive was started while one archive operation had already been started. Only one archive can be created at a time. Two or more simultaneous archive operations are not allowed. This condition could occur if two users attempt to create an archive simultaneously.

Recommended Action Retry the archive creation when the current archive operation has finished being written.

ARCHIVE_CONFIG-6

Error Message %ARCHIVE_CONFIG-6-ARCHIVE_CREATE_FAILED_STANDBY: Could not create an archive of the router configuration on the standby RP.

Explanation The router could not create an archive file on the standby route processor (RP). The file that was being created contains an archive of the router configuration. This condition can occur if the active RP cannot communicate with the standby RP.

Recommended Action No action is required.

Error Message %ARCHIVE_CONFIG-6-ARCHIVE_DELETE_FAILED_STANDBY: Delete of a previously saved archive of the router configuration could not be completed on the standby RP.

Explanation The router could not delete a file that was previously written on the standby route processor (RP). The file that was being deleted contains an archive of the router configuration. This condition might occur if the file was manually deleted or if the active RP cannot communicate with the standby RP.

Recommended Action No action is required.

ARCHIVE_DIFF Messages

This section contains ARCHIVE_DIFF messages.

ARCHIVE_DIFF-3

Error Message %ARCHIVE_DIFF-3-DIFF_CMD_INIT_FAILED: Failed to register the special case [chars] command:"[chars]" during initialization. Config Diff and Rollback cannot be used as a result of this error.

Explanation An internal software error occurred during initialization of the Archive Diff program. As a result of this error, checking configuration differences (config diff) and rollback operations cannot be performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ARCHIVE_DIFF-3-DIFF_INIT_FAILED: Could not initialize the Config Diff and Rollback subsystem

Explanation An internal software error occurred during initialization. Config diff and rollback cannot be used as a result of this error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ARCHIVE_DIFF-5

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_BACKUP: Backing up current running config to [chars]

Explanation The current running configuration is saved so that when the timer expires, if no confirmation has been received from the user to confirm configuration changes, the system will roll back to the saved configuration.

Recommended Action This message occurs during normal operation of the rollback confirmed change. No action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_CANCEL: User: [chars]: Rollback Confirmed Change is cancelled due to [chars] failure

Explanation Rollback confirmed change is normally configured along with other configuration operations, such as **config term** or **config replace**. If those operations failed, rollback confirmed change should not be activated.

Recommended Action Remove the error condition and retry.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_CONFIRM: User: [chars]: Confirm the configuration change

Explanation The configuration change is confirmed. The timer for rolling to the previously saved configuration is cancelled.

Recommended Action This message occurs in normal operation of the rollback confirmed change. No action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_RESET_ABSTIMER: User: [chars]: Reset Rollback Confirmed Change timer(absolute) to %lu minute

Explanation The rollback confirmed change timer (absolute) was reset to a new value.

Recommended Action This message occurs in normal operation of the rollback confirmed change. No action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_RESET_IDLETIMER: User: [chars] Reset Rollback Confirmed Change timer(idle) to %lu minute

Explanation The rollback confirmed change timer (idle) was reset to a new value.

Recommended Action This message occurs in normal operation of the rollback confirmed change. No action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_REVERTNOW: User: [chars]: Rollback immediately.

Explanation A rollback will happen immediately and the timer will be cancelled.

Recommended Action This message occurs in normal operation of the rollback confirmed change. No action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_ROLLBACK_RETRY: Failed to acquire configuration lock. Rollback did not start. Schedule to retry in 5 minutes

Explanation Because the system was unable to acquire a configuration lock, configuration rollback did not start. A retry will be scheduled.

Recommended Action This message occurs in normal operation of the rollback confirmed change. No action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_ROLLBACK_START: Start rolling to: [chars]

Explanation The timer for rollback confirmed change has expired. System will roll back to the previously saved configuration.

Recommended Action This message occurs in normal operation of the rollback confirmed change. No action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_START_ABSTIMER: User: [chars]: Scheduled to rollback to config [chars] in %lu minutes

Explanation The system will wait until the timer expires for the user to confirm the configuration changes. If the confirmation is not received before the timer expires, the router will roll back to the previous configuration.

Recommended Action To keep your configuration changes, enter the **configure confirm** command. Otherwise, no action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_START_IDLETIMER: User: [chars]: Scheduled to rollback to config [chars] if session has been idle for %lu minutes

Explanation The system will wait until the timer expires for the user to confirm the configuration changes. If the confirmation is not received before the timer expires, the router will roll back to the previous configuration.

Recommended Action To keep your configuration changes, enter the **configure confirm** command. Otherwise, no action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_WARNING_ABSTIMER: System will rollback to config [chars] in one minute. Enter

Explanation Rollback to the previous configuration will start in one minute unless the user confirms the configuration changes.

Recommended Action To keep your configuration changes, enter the **configure confirm** command. Otherwise, no action is required.

Error Message %ARCHIVE_DIFF-5-ROLLBK_CNFMD_CHG_WARNING_IDLETIMER: User [chars] on tty [dec] has been idle for %lu minutes. System will rollback to config [chars] in oneminute if it continues to be idle. Enter

Explanation Rollback to the previous configuration will start in one minute unless the user confirms the configuration changes.

Recommended Action To keep your configuration changes, enter the **configure confirm** command. Otherwise, no action is required.

ARCHIVE_ISSU Messages

This section contains message related to the In Service Software Upgrade facility.

ARCHIVE_ISSU-2

Error Message %ARCHIVE_ISSU-2-GET_BUFFER: Archive ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The Archive ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show logging and show checkpoint client** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ARCHIVE_ISSU-2-INIT: Archive ISSU client initialization failed to [chars]. Error: [dec] ([chars])

Explanation The Archive ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ARCHIVE_ISSU-2-SEND_NEGO_FAILED: Archive ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The Archive ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Issue the **show logging and show checkpoint client** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ARCHIVE_ISSU-2-SESSION_NEGO_FAIL_START: Failed to start Archive ISSU session negotiation. Error: [dec] ([chars])

Explanation The Archive ISSU client failed to start session negotiation. If a problem occurs with the ISSU session start, the standby device cannot be brought up properly.

Recommended Action Issue the **show issu session** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ARCHIVE_ISSU-2-SESSION_REGISTRY: Archive ISSU client failed to register session information. Error: [dec] ([chars])

Explanation The Archive ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Issue the **show issu capability entries** and **show issu session** and **show issu negotiated capability** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter

<https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

ARCHIVE_ISSU-3

Error Message %ARCHIVE_ISSU-3-INVALID_SESSION: Archive ISSU client does not have a valid registered session.

Explanation The Archive ISSU client does not have a valid registered session.

Recommended Action Issue the **show issu capability entries** and **show issu session** and **show issu negotiated capability** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter

<https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ARCHIVE_ISSU-3-MSG_NOT_OK: Archive ISSU client 'Message Type [dec]' is not compatible

Explanation The Archive ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action Issue the **show issu message group** and **show issu session** and **show issu negotiated version** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter

<https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ARCHIVE_ISSU-3-MSG_SIZE: Archive ISSU client failed to get the MTU for Message Type [dec].Error: [dec] ([chars])

Explanation The Archive ISSU client failed to calculate the MTU for the specified message. The Archive ISSU client is not able to send the message to the standby device.

Recommended Action Issue the **show issu message group** and **show issu session** and **show issu negotiated version** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ARCHIVE_ISSU-3-SESSION_UNREGISTRY: Archive ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The Archive ISSU client failed to unregister session information.

Recommended Action Issue the **show issu capability entries** and **show issu session** and **show issu negotiated capability** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ARCHIVE_ISSU-3-TRANSFORM_FAIL: Archive ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

Explanation The Archive ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the Archive state between the active device and the standby device is not identical.

Recommended Action Issue the **show issu session** and **show issu negotiated version** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

ATM Messages

This section contains ATM messages.

ATM-1

Error Message %ATM-1-ISSU_NOMEMORY: Unit [dec], no memory for [chars]

Explanation The requested operation could not be accomplished because of a low-memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

ATM-3

Error Message %ATM-3-ISSU_SENDFAILED: ATM ISSU: send message failed, rc = [dec]

Explanation The sending of a message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ATM-4

Error Message %ATM-4-ISSU_INCOMPATIBLE: atm-issu-compat: returned FALSE

Explanation The compatibility checking has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATM-4-ISSU_XFORM: [chars]: failed, rc=[chars]

Explanation The transform has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ATMPA Messages

Error Message %ATMPA-1-INVALIDCONFIG: VIP2-40 and below only supports one OC-3 ATM PA. The other PA bay needs to be emptied in order for the ATM PA to function.

Explanation The bandwidth requirements of the installed port adapters exceed the processor's rated capability.

Recommended Action Either remove one of the port adapters or upgrade the VIP.

Error Message %ATOM_TRANS-3-INIT_FAIL: Failed to start AToM Manager

Explanation Failed to start and initialize AToM Manager.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

ATMSPA Messages

This section contains ATM Shared Port Adapter (ATMSPA) messages.

ATMSPA-2

Error Message %ATMSPA-2-INITFAIL: [chars] - Init Failed return code: [int]

Explanation The shared port adapter (SPA) failed to complete hardware initialization. One of the devices in the SPA failed to initialize successfully. Information about the failed device is specified in the message text on the console or in the system log.

Recommended Action Power down and reseal the indicated SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ATMSPA-3

Error Message %ATMSPA-3-DATA_ERROR: [chars] Error [hex] [chars]

Explanation A data path protocol violation or sequence error has been detected. The message text on the console or in the system log provides more information on the specific cause of the error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATMSPA-3-FATAL_ERROR: occurred on [chars]. Resetting SPA

Explanation The shared port adapter (SPA) has been reset because of a critical error in one of its devices. The error could either be a single occurrence of an event or multiple occurrences within a period of time. The message text on the console or in the system log provides more information on the specific cause of the error.

Recommended Action If the SPA is reset more than once, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATMSPA-3-FPD_VER_DEPENDENCY_NOTE: Cannot perform the requested FPD update operation because [chars] in subslot [int]/[int] has incompatible HW version [int].[int] with FPD image version [dec].[dec] for FPD ID [dec]. Only image version greater than [int].[int] can be used in the update operation of [chars] with HW version greater than [int].[int].

Explanation The version of the field-programmable device (FPD) image from the FPD image bundle or package is not compatible with the hardware (HW) version of the target card.

Recommended Action If the SPA is reset more than once, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATMSPA-3-GEN_ERROR: [chars] Error [hex] [chars]

Explanation The error that is specified in the message has been detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATMSPA-3-HW_ERROR: [chars] Error [hex] [chars]

Explanation A hardware error has been detected. The message text on the console or in the system log provides more specific information about the error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATMSPA-3-QOS_ALLOC_FAILED: [chars] [chars] [chars]: [dec]

Explanation Traffic-shaping parameters could not be configured because the number of unique shaping parameters that are configured on the PVCs or PVPs in this specified ATM SPA is over the maximum limit. The maximum number of unique shaping parameters that can be configured on the PVCs or PVPs is 4096.

Recommended Action Ensure that the total number of unique shaping parameters that are configured on both PVCs and PVPs does not exceed the maximum limit of 4096.

Error Message %ATMSPA-3-SW_ERROR: [chars] Error [hex] [chars]

Explanation A software error has been detected. The message text on the console or in the system log provides more specific information about the error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATMSPA-3-VCQ_ERROR: [chars]: VC queue configuration failed due to un-initialized queue table(global identifier [dec])

Explanation The software configuration of a virtual circuit (VC) queue failed because of an uninitialized queue table.

Recommended Action Attempt to perform a soft OIR operation by entering the command that is described in the shared port adapter software configuration guide. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve

the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ATMSPA-4

Error Message %ATMSPA-4-VCSETUP: [chars]: VC setup command received on the LC for an existing VC (VCD [dec])

Explanation A command to set up a virtual circuit (VC) has been received for a VC that has already been set up and configured by a previous **setup** VC command from the RP. A duplicate **setup** command may indicate that the RP did not receive a response from the line card for the previous **setup** command.

Recommended Action No action is required.

Error Message %ATMSPA-4-VCTEARDOWN: [chars]: VC tear down command received on the LC for a non-existing VC (VCD [dec])

Explanation The virtual circuit (VC) does not exist on the line card. The VC probably has been torn down by a previous **teardown** command from the route processor (RP). A duplicate **teardown** command may indicate that the RP did not receive a response from the line card for the previous **teardown** command.

Recommended Action No action is required.

Error Message %ATMSPA-4-VPSETUP: [chars]: VP setup command received on the LC for an existing VP (VPI [dec])

Explanation A command to set up a virtual path (VP) has been received for a VP that has already been set up. The VP has already been configured by a previous **setup** VP command from the route processor (RP). A duplicate **setup** command may indicate that the RP did not receive a response from the line card for the previous **setup** command.

Recommended Action No action is required.

Error Message %ATMSPA-4-VPTEARDOWN: [chars]: VP tear down command received on the LC for a non-existing VP (VPI [dec])

Explanation The virtual path (VP) does not exist on the line card. The VP probably has been torn down by a previous **teardown** command from the route processor (RP). A duplicate **teardown** command may indicate that the RP did not receive a response from the line card for the previous **teardown** command.

Recommended Action No action is required.

ATOM_NP_CLIENT Messages

This section contains Any Transport Over MPLS (AToM) NP client messages.

ATOM_NP_CLIENT-3

Error Message %ATOM_NP_CLIENT-3-INFO: [chars]

Explanation The AToM NP client failed to initialize properly, which will result in improper operation of the Any Transport Over MPLS feature.

Recommended Action Attempt to reload the IOS image on the affected card or platform. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATOM_NP_CLIENT-3-NOMEM: [chars]

Explanation The AToM NP client failed to initialize properly, which will result in improper operation of the Any Transport Over MPLS feature.

Recommended Action This error may indicate that more memory must be installed on the affected card or platform to service all the features and related entities enabled by the configuration. Attempt to reload the IOS image on the affected card or platform. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ATOM_NP_CLIENT-4

Error Message %ATOM_NP_CLIENT-4-WARN: [chars] [dec] [chars]

Explanation An ATOM entry could not be added because the entry passed is invalid.

Recommended Action Attempt to reload the IOS image on the affected card or platform. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ATOM_SEG Messages

This section contains Any Transport Over MPLS (AToM) Segment Handler messages.

ATOM_SEG-3

Error Message %ATOM_SEG-3-CHUNKFREE: Error freeing [chars] [hex]

Explanation An error has occurred in the ATOM segment handler.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATOM_SEG-3-ILLEGALUPD: Illegal label [dec] update [chars]

Explanation An error has occurred in the AToM Segment Handler.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATOM_SEG-3-NOTSUPP: Unsupported update [chars]

Explanation An error has occurred in the AToM segment handler.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ATOM_TRANS Messages

This section contains Any Transport Over MPLS (AToM) Layer 2 messages.

ATOM_TRANS-3

Error Message %ATOM_TRANS-3-INIT_FAIL: Failed to start AToM Manager

Explanation Failed to start and initialize AToM Manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ATOM_TRANS-3-LABEL_ALLOC_FAIL: Failed to allocate local label for peer:%i, vcid:%u

Explanation The system was unable to allocate a local label for the specified AToM virtual circuit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ATOM_TRANS-4

Error Message %ATOM_TRANS-4-CONFIG: [chars]

Explanation The AToM pseudowire is using an unacceptable configuration.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AUDIT Messages

This section contains audit messages.

AUDIT-1

Error Message %AUDIT-1-FILE_ROLLOVER: Audit File Roll-over: [dec]

Explanation The audit circular file has rolled over.

Recommended Action Increase the size of the audit file.

AUTHMGR Messages

This section contains Auth Manager messages.

AUTHMGR-5

Error Message %AUTHMGR-5-FAIL: Authorization failed for client ([chars]) on Interface [chars]

Explanation The client was unable to obtain authorization on the interface.

Recommended Action No action is required.

Error Message %AUTHMGR-5-MACMOVE: MAC address ([enet]) moved from Interface [chars] to Interface [chars]

Explanation Client has moved to a new interface without logging off of the previous one.

Recommended Action No action is required.

Error Message %AUTHMGR-5-MACREPLACE: MAC address ([enet]) on Interface [chars] is replaced by MAC ([enet])

Explanation A new client has triggered a violation causing an existing client to be replaced

Recommended Action No action is required.

Error Message %AUTHMGR-5-SECURITY_VIOLATION: Security violation on the interface [chars], new MAC address (%e) is seen

Explanation A host on the specified interface is attempting to gain access to the network or is trying to authenticate in a host mode that does not support the number of hosts attached. This incident is treated as a security violation and the port has been error-disabled.

Recommended Action Ensure that the port is configured to support the number of hosts attached. Enter the **shutdown** command followed by **no shutdown** command to restart the port.

Error Message %AUTHMGR-5-SECURITY_VIOLATION_VLAN: Security violation on the interface [chars], new MAC address ([enet]) is seen on vlan [dec].

Explanation A host on the specified interface is attempting to gain access into the network or is trying to authenticate in a host mode that does not support the number of hosts attached. This is treated as a security violation and the port has been error-disabled. This log provides vlan information along with the mac.

Recommended Action Ensure that the port is configured to support the number of hosts attached. Enter the **shutdown** command followed by **no shutdown** command to restart the port.

Error Message %AUTHMGR-5-START: Starting '[chars]' for client ([chars]) on Interface [chars]

Explanation The authentication manager is starting an authentication method for the client.

Recommended Action No action is required.

Error Message %AUTHMGR-5-SUCCESS: Authorization succeeded for client ([chars]) on Interface [chars]

Explanation Authorization was successful for the client.

Recommended Action No action is required.

Error Message %AUTHMGR-5-UNAUTHORIZED: Interface [chars] unauthorized

Explanation The specified port has become unauthorized.

Recommended Action No action is required.

Error Message %AUTHMGR-5-VLANASSIGN: VLAN [dec] assigned to Interface [chars]

Explanation A VLAN was assigned to the interface.

Recommended Action No action is required.

AUTHMGR-7

Error Message %AUTHMGR-7-FAILOVER: Failing over from '[chars]' for client ([chars]) on Interface [chars]

Explanation The authorization manager will fail over from the current authentication method to another method.

Recommended Action No action is required.

Error Message %AUTHMGR-7-NOMOREMETHODS: Exhausted all authentication methods for client ([chars]) on Interface [chars]

Explanation All available authentication methods have been tried for the client, but authentication has failed.

Recommended Action No action is required.

Error Message %AUTHMGR-7-RESULT: Authentication result '[chars]' from '[chars]' for client ([chars]) on Interface [chars]

Explanation The authentication result and method are displayed for the client.

Recommended Action No action is required.

AUTH_MGR_ISSU Messages

This section contains Auth Manager in-service software upgrade (ISSU) messages.

AUTH_MGR_ISSU-2

Error Message %AUTH_MGR_ISSU-2-GET_BUFFER: Auth Mgr ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The authentication manager ISSU client was unable to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-2-INIT: Auth Mgr ISSU client initialization failed to [chars]. Error: [dec] ([chars])

Explanation The authentication manager ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-2-SEND_NEGO_FAILED: Auth Mgr ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The authentication manager ISSU client was unable to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-2-SESSION_NEGO: Auth Mgr ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

Explanation An ISSU-compliant client transitions through a series of internal states. The authentication manager ISSU client encountered a client negotiation done state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-2-SESSION_REGISTRY: Auth Mgr ISSU client failed to register session information. Error: [dec] ([chars])

Explanation The authentication manager ISSU client was unable to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Recommended Action **show tech-support** commands and your pertinent troubleshooting logs.

AUTH_MGR_ISSU-3

Error Message %AUTH_MGR_ISSU-3-CAP_INVALID_SIZE: Auth Mgr ISSU client capability list is empty.

Explanation The authentication manager ISSU client capability exchange list is empty, which is an invalid condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu capability entries** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-3-CAP_NOT_COMPATIBLE: Auth Mgr ISSU client capability exchange result incompatible.

Explanation Based on the results of the capability exchange, the authentication manager ISSU client is not compatible with the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu capability entries** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-3-INVALID_SESSION: Auth Mgr ISSU client does not have a valid registered session.

Explanation The authentication manager ISSU client does not have a valid registered session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-3-MAUTH_VLAN_ASSIGN_NOT_COMPATIBLE: Multi Auth VLAN Assignment is active in one of the ports and the peer does not support Multi Auth VLAN Assignment.

Explanation At least one of the ports have Multi Auth host mode and VLAN assignment simultaneously enabled and ISSU cannot proceed since Standby does not support Multi Auth VLAN assignment. Shut down the ports in which Multi Auth VLAN assignment is enabled and retry ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-3-MSG_NOT_COMPATIBLE_WITH_PEER: 'Feature Id [dec], Tag [dec]' is not supported by Auth Mgr ISSU client at peer

Explanation The authentication manager ISSU client at the peer supervisor does not support this message type. The authentication manager client will be marked as incompatible with the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-3-MSG_NOT_OK: Auth Mgr ISSU client 'Feature Id [dec], Tag [dec]' is not compatible

Explanation The authentication manager ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-3-MSG_SIZE: Auth Mgr ISSU client failed to get the MTU for Feature Id [dec], Tag [dec]. Error: [dec] ([chars])

Explanation The authentication manager ISSU client was unable to calculate the MTU for the specified message. The authentication manager ISSU client is not able to send the message to the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-3-SESSION_UNREGISTRY: Auth Mgr ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The authentication manager ISSU client was unable to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %AUTH_MGR_ISSU-3-TRANSFORM_FAIL: Auth Mgr ISSU client [chars] transform failed for 'Feature Id [dec], Tag [dec]'. Error: [dec] ([chars])

Explanation The authentication manager ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the authentication manager state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

AUTORP Messages

This section contains Protocol Independent Multicast (PIM) version 2 Auto-Rendezvous Point (AUTORP) messages.

AUTORP-2

Error Message %AUTORP-2-RADIXINIT: Error initializing the Auto-RP radix tree

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AUTORP-4

Error Message %AUTORP-4-OVERLAP: AutoRP [chars] packet, group %i with mask %i removed because of multicast boundary for %i with mask %i

Explanation The multicast boundary has a longer network mask than the Auto-Rendezvous Point encoded group.

Recommended Action Use positive permit clauses in the AutoRP access control list.

Error Message %AUTORP-4-PAK_ERR: AutoRP [chars] packet is received on interface [chars] with Source address=[IP_address], Destination address=[IP_address], TTL=[int], IP length=[int] Datagram size/UDP length=[int]

Explanation The AutoRP packet was received with wrong packet length. The packet has been dropped as it may be a malformed packet.

Error Message No action is required.%AUTORP-4-PRM_DEL: Error expiring semi-static RP-mapping entry (%i/[dec], RP:%i)

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %AUTORP-4-RADIXINSERT: Error inserting a new entry into the RP-mapping radix tree

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AUTORP-5

Error Message %AUTORP-5-CRP_REMOVED: C-RP %i on interface [chars] has been removed

Explanation PIM is disabled on the interface or the interface card has been removed.

Recommended Action No action is required.

Error Message %AUTORP-5-MAPPING: RP for %i/[dec] is now %i

Explanation A new Auto-Rendezvous Point has been elected for the subject group prefix.

Recommended Action No action is required.

AUTORP-6

Error Message %AUTORP-6-RP_MAPPING_IDB_DEL: AutoRP RP-MAPPING IDB [chars] is deleted

Explanation The configured rp-mapping IDB has been deleted.

Recommended Action No action is required.

AUTOSHUT Messages

This section contains automatic shutdown (utoshut) messages.

AUTOSHUT-4

Error Message %AUTOSHUT-4-MOD_AUTOSHUT: Module [dec] shutdown automatically, reset [dec] times within [dec] minutes due to [chars].

Explanation This message includes information about the automatic shutdown of a module.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

AUTOSHUT-5

Error Message %AUTOSHUT-5-MOD_AUTOSHUT_SLOW: Module [dec] reset frequency exceeded threshold but over [dec] minutes. Hence NOT powering down module.

Explanation The module's reset frequency has exceeded the threshold, but over a period more than the preset period.

Recommended Action No action is required.

BACKPLANE_BUS_ASIC Messages

This section contains backplane bus ASIC messages.

BACKPLANE_BUS_ASIC-3

Error Message %BACKPLANE_BUS_ASIC-3-FAILURE_INTR_CFG: Failure to setup the Backplane Bus ASIC device interrupts.

Explanation The line card internal ASIC could not be initialized. As a result, the device has been disabled and the datapath will not be operational.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BACKPLANE_BUS_ASIC-4

Error Message %BACKPLANE_BUS_ASIC-4-DEV_RESET: Backplane Bus Asic reset, interrupt [chars]

Explanation The backplane bus ASIC in the MSC/FlexWAN-ENH has received a fatal error. The ASIC will be reset and the MSC/FlexWAN-ENH will attempt to continue normal operation.

Recommended Action No action is required if traffic recovers. Otherwise, enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BACKPLANE_BUS_ASIC-4-EARL_BUS_SYNC_ERR: Failed to sync Earl bus, Backplane Bus Asic version [dec]

Explanation The backplane bus ASIC in the line card failed to synchronize with the EARL bus.

Recommended Action No action is required if traffic recovers. Otherwise, enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BACKPLANE_BUS_ASIC-4-UNEXPECTED_VERSION: Unexpected Backplane Bus ASIC version.

Explanation The line card is unable to recognize the version of the Hyperion ASIC.

Recommended Action No action is required if traffic passes through the line card. Otherwise, check the Bug Toolkit on Cisco's web site to determine a version in which the bug is fixed and upgrade accordingly. If traffic does not pass after the upgrade, enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BACKPLANE_BUS_ASIC-5

Error Message %BACKPLANE_BUS_ASIC-5-BUS_MODE_CHANGE: The System Switching Bus Mode changed to [chars] mode

Explanation The supervisor engine has instructed this line card to change the mode on the switching bus.

Recommended Action No action is required.

Error Message %BACKPLANE_BUS_ASIC-5-BUS_SEQ_ERR: Constellation bus Sequence Error. Resetting Backplane Bus Asic.

Explanation The switch processor has detected a sequence error on the backplane bus. A reset sequence from the EARL has been called to recover from this error. System traffic should recover and continue normally.

Recommended Action No action is required if traffic recovers. Otherwise, enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BACKPLANE_BUS_ASIC-5-DEV_INIT_FAILURE: The Backplane Bus Asic initialization failed

Explanation The backplane bus ASIC could not be initialized. As a result, this device is not operational and has been disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BACKPLANE_BUS_ASIC-5-DEV_INTR_INFO: [chars]

Explanation This message provides more information about the interrupts from the backplane bus ASIC to the line card CPU.

Recommended Action No action is required if traffic recovers. Otherwise, enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BACKPLANE_BUS_ASIC-5-DEV_RESET_INFO: [chars]

Explanation This message provides more information about the interrupts leading to the reset of the backplane bus ASIC.

Recommended Action No action is required if traffic recovers. Otherwise, enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BACKPLANE_BUS_ASIC-5-NULL_DEV_OBJECT: The Backplane Bus Asic device object pointer is set to NULL

Explanation The memory location of the backplane bus ASIC device object is invalid. The backplane bus ASIC operation is disabled and the device interrupt is now masked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BCM Messages

This section contains Broadcom (BCM) switch messages.

BCM-4

Error Message %BCM-4-ECC_L2CACHE: Corrected ECC from L2 cache

Explanation A soft-parity error from the Layer 2 cache has been detected and corrected. Normal system operation should continue.

Recommended Action If there is a regular or sustained occurrence of this message, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BCM-4-ECC_MEMORY: Corrected ECC from memory

Explanation A soft-parity error from the memory has been detected and corrected. Normal system operation should continue.

Recommended Action If there is a regular or sustained occurrence of this message, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BFD Messages

This section contains Bidirectional Forwarding Detection (BFD) messages.

BFD-3

Error Message %BFD-3-BUFPOOL: Creation of BFD Private Buffer Pool failed

Explanation A private buffer pool could not be created in memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-CHUNK: Chunk malloc failure - [chars] - [hex]

Explanation The system was unable to allocate memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-CHUNK_DESTROY: Unable to destroy [chars]

Explanation The system was unable to deallocate memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-DBSCAN: Session data removed durring scan [dec]

Explanation An adjacency database corruption occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-IF_IN_USE: Interface [chars]([dec]) already in use

Explanation The specified interface number is already in use.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-IF_NO_CLEAN: Could not free bfd idb array - still in use

Explanation The bidirectional forwarding detection (BFD) interface descriptor blocks (IDBs) are still in use and cannot be freed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-ILL_IF: Illegal interface [dec][chars]

Explanation The interface number is out of range for the platform.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-INVQLEM: Invalid queue element - [chars]

Explanation An invalid queue element was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-INVVER: Invalid version type

Explanation An invalid version type was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-NBR: bfd_neighbor - client not found

Explanation A client does not exist in the client list.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-NOCLIENT: Client not found

Explanation No client exists in the BFD client list.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-NOIOUPROC: Failed to create BFD IOU Process

Explanation The IOU process failed to start.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-NOKADIS: Failed to start Kadis. Status [dec]

Explanation The Kadis timer process failed to start.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-NOPPPROC: Failed to create BFD PP Process

Explanation The pseudo-preemptive (PP) process failed to start.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-NO_TYPE: Neighbor address type not specified as ADDR_IP([dec]), [dec]

Explanation A BFD client called a BFD neighbor with an uninitialized address type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-NULLDISC: Invalid Discriminator [hex], state [dec]

Explanation An invalid discriminator value was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-PACKET: bfd_pak_coalesce - [chars] failed

Explanation The packet buffer could not be obtained or coalesced.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-SWIDB: Failed to create BFD swidb subblock for interface [chars]

Explanation An interface descriptor block (IDB) sub-block could not be created.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-VERSION: Version change [chars]

Explanation A version change error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-WAVL_DELETE_FAIL: Failed deleting node %x from wavl tree thread [dec]

Explanation The BFD process was unable to delete a node from a wrapped AVL (WAVL) tree.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-WAVL_INIT_FAIL: Failed initializing wavl tree.

Explanation The BFD process was unable to initialize a wrapped AVL (WAVL) tree.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-WAVL_INSERT_FAIL: Failed inserting node %x to wavl tree thread [dec]

Explanation The BFD process was unable to insert a node into a wrapped AVL (WAVL) tree.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-3-WAVL_TREE: Failed to malloc space for wavl tree.

Explanation The BFD process was unable to allocate memory space for a wrapped AVL (WAVL) tree.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BFD-6

Error Message %BFD-6-MAX_DESCR: BFD discriminators exhausted. No more sessions can be created.

Explanation The maximum number of BFD discriminators has been assigned.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-6-MAX_SESSION: Maximum session creation limit [dec] reached.

Explanation The maximum number of BFD sessions has been created.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD-6-TX_ON_STANDBY: BFD transmit detected on standby

Explanation The standby device attempted to transmit a packet.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BFD FSM Messages

This section contains Bidirectional Forwarding Detection (BFD) Finite State Machine (FSM) messages.

BFD FSM-3

Error Message %BFD FSM-3-INVEVENT: Invalid event_id [hex]

Explanation An invalid event occurred in the state machine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFDFSM-3-INVSTATE: Invalid current state [hex]

Explanation An invalid state occurred in the state machine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFDFSM-3-INVTRANS: obj: [[hex]] event_id: [[hex]] er_p: [[hex]] arg: [[hex]] session state [chars] -> [chars]

Explanation An invalid transition occurred in the state machine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFDFSM-3-NOEVENT: Unable to apply event [hex]

Explanation A transition failure occurred in the state machine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFDFSM-3-NULLMACH: Invalid machine pointer [hex]

Explanation The state machine contains an invalid pointer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BFD_HA Messages

This section contains Bidirectional Forwarding Detection (BFD) high availability (HA) messages.

BFD_HA-2

Error Message %BFD_HA-2-CF: [chars] [dec]

Explanation An error occurred with the CompactFlash device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_HA-2-RESOURCE: [chars]

Explanation An error occurred in a system resource.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_HA-2-RF: [chars] [dec]

Explanation An error occurred in the RF system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BFD_HA-3

Error Message %BFD_HA-3-DELSESS: [chars] [dec]

Explanation An error occurred while deleting a session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BFD_ISSU Messages

This section contains Bidirectional Forwarding Detection (BFD) in-service software upgrade (ISSU) messages.

BFD_ISSU-2

Error Message %BFD_ISSU-2-GET_BUFFER: BFD ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The BFD ISSU client was unable to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %BFD_ISSU-2-INIT: BFD ISSU client initialization failed to [chars]. Error: [dec] ([chars])

Explanation The BFD ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_ISSU-2-SEND_NEGO_FAILED: BFD ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The BFD ISSU client was unable to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %BFD_ISSU-2-SESSION_NEGO: BFD ISSU client encountered unexpected client nego_done. Error: [dec] ([chars])

Explanation An ISSU-compliant client transitions through a series of internal states. The BFD ISSU client encountered a client negotiation done state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %BFD_ISSU-2-SESSION_REGISTRY: BFD ISSU client failed to register session information. Error: [dec] ([chars])

Explanation The BFD ISSU client was unable to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

BFD_ISSU-3

Error Message %BFD_ISSU-3-INVALID_SESSION: BFD ISSU client does not have a valid registered session.

Explanation The BFD ISSU client does not have a valid registered session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %BFD_ISSU-3-MSG_SIZE: BFD ISSU client failed to get the MTU for Message Type [dec]. Error: [dec] ([chars])

Explanation The BFD ISSU client was unable to calculate the MTU for the specified message. The BFD ISSU client is not able to send the message to the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %BFD_ISSU-3-SESSION_UNREGISTRY: BFD ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The BFD ISSU client was unable to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %BFD_ISSU-3-TRANSFORM_FAIL: bfd ISSU client [chars] transform failed for message [dec]'. Error: [dec] ([chars])

Explanation The BFD ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the BFD state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

BFD_SCALE Messages

This section contains Bidirectional Forwarding Detection (BFD) credit-based workload messages.

BFD_SCALE-6

Error Message %BFD_SCALE-6-INSUFFICIENT_RESOURCES: Configuration not changed, exceeds maximum resource limit.

Explanation The configuration could not be changed due to a resource limitation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_SCALE-6-RESOURCES_EXHAUSTED: BFD adjacency can not be created due to resource limitation.

Explanation A BFD adjacency cannot be created due to a resource limitation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BFD_TEST Messages

This section contains Bidirectional Forwarding Detection (BFD) test messages.

BFD_TEST-3

Error Message %BFD_TEST-3-BAD_ADDR_TYPE: Invalid address type [dec]

Explanation The BFD test process detected an invalid address type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_TEST-3-BAD_TYPE: Invalid session type [dec]

Explanation The BFD test process detected an invalid session type.

Explanation Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_TEST-3-WAVL_INIT_FAIL: Failed initializing wavl tree.

Explanation The BFD test process was unable to initialize a wrapped AVL (WAVL) tree.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_TEST-3-WAVL_INSERT_FAIL_IPV4: Failed inserting neighbor address %30i to wavl tree thread [dec]

Explanation The BFD test process was unable to insert an IPv4 node in a wrapped AVL (WAVL) tree.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_TEST-3-WAVL_INSERT_FAIL_IPV6: Failed inserting neighbor address %30P to wavl tree thread [dec]

Explanation The BFD test process was unable to insert an IPv6 node in a wrapped AVL (WAVL) tree.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_TEST-3-WAVL_TREE: Failed to malloc space for wavl tree.

Explanation The BFD test process was unable to allocate memory for a wrapped AVL (WAVL) tree.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_TEST-3-WAVL_WALK_FAIL: wavl_walk failed while walking wavl tree thread [dec] interface [dec]

Explanation A thread failed while walking the wrapped AVL (WAVL) tree.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BFD_TEST-7

Error Message %BFD_TEST-7-FSM_STATE: Session [[IP_address],[IP_address],[chars],[int]], event [chars], state [chars] -> [chars]

Explanation State information is shown in the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BFD_TEST-7-RCV_START: First packet has come in.

Explanation The first packet has been received.

Recommended Action This is an informational message only. No action is required.

BGP Messages

This section contains Border Gateway Protocol (BGP) messages.

BGP-2

Error Message %BGP-2-INSUFMEM: Insufficient memory for [chars] entry

Explanation The requested operation could not be accomplished because of a low memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

BGP-3

Error Message %BGP-3-ADDRROUTE: Unable to add route for [chars] to radix trie

Explanation An addition to the radix trie could not be completed because of an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-3-BADMASK: Attempt to install route for %i without valid mask in [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-3-BADROUITEMAP: Bad parameters in the route-map [chars] applied for [chars]

Explanation The route map contains incorrect entries.

Recommended Action Correct the route map.

Error Message %BGP-3-BGP_INCONSISTENT: [chars] Inconsistent [chars]

Explanation An error was detected in a data structure. This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-3-DELPATH: Attempted to delete path from an empty net for [chars]

Explanation A BGP path could not be deleted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-3-DELRROUTE: Unable to remove route for [chars] from radix trie

Explanation The system was unable to delete a route from the radix trie.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-3-INSUFCHUNKS: Insufficient chunk pools for [chars], requested size [dec]

Explanation The static chunk pools size is too small.

Recommended Action Collect the chunk and BGP summary. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-3-INVALID_MPLS: Invalid MPLS label ([dec]) received in update for prefix [chars] from [chars]

Explanation An invalid MPLS label was found in a received BGP message. This indicates that there is some problem on the remote router.

Recommended Action Check the configuration of the remote router.

Error Message %BGP-3-MARTIAN_IP: [chars] Martian prefix [chars] in [chars]

Explanation A Martian prefix was found in the BGP message. This indicates that there is some problem on the remote router.

Recommended Action Check the configuration of the remote router.

Error Message %BGP-3-MAXPFEXCEED: No. of prefix received from [chars][chars][chars] (afi [dec]): [dec] exceed limit [dec]

Explanation The number of prefixes received from a neighbor exceeds the configured limit. The message displays the session number or VRF identifier, if applicable.

Recommended Action Check the number of prefixes received from the neighbor and determine whether the limit should be increased.

Error Message %BGP-3-NOBITFIELD: Could not allocate bitfield. Cannot open session to [chars]

Explanation The allocation of a neighbor index for this neighbor has failed because of a low memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %BGP-3-NOTIFICATION: [chars] neighbor [chars] [dec]/[dec] ([chars]) [dec] bytes [chars]

Explanation An error condition has been detected in the BGP session. A notification message is being sent or received and the session will be reset. This message appears only if the **log-neighbor-changes** command is configured for the BGP process.

Recommended Action This message represents an error in the session and its origin should be investigated. If the error is reported periodically, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-3-ORF_PFXLIST: Received misformatted prefixlist ORF from [chars]

Explanation The received prefix list outbound route filter (ORF) is misformatted.

Recommended Action Check the prefix list ORF implementation on the neighboring router.

Error Message %BGP-3-PER_VRF_AGGR: pervrfaggr label: [chars]

Explanation The TFIB asks for a label for a prefix in the VRF routing table. The per-VRF-aggregate label will be assigned to the connected type or BGP aggregate prefix when BGP runs a best-path calculation. This message might appear when a prefix changes to a connected type or BGP aggregate type.

Recommended Action No action is required. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-3-RADIXINIT: Radix trie initialization failed

Explanation Initialization of the radix tree could not be accomplished because of a low memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

BGP-4

Error Message %BGP-4-AFIMPORT: [chars] prefixes imported to [chars] vrf reached the limit [dec]

Explanation The number of prefixes imported from an address family to a VRF has reached the configured limit

Recommended Action Check the number of imported prefixes from the address family and determine whether the limit should be increased or if the **ip vrf import route-map** command is configured correctly.

Error Message %BGP-4-ATTRNULL: A NULL attribute has been assigned to a path

Explanation The path was incorrectly assigned a value of NULL instead of a valid attribute.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-4-BFD_NOT_ONEHOP: BFD is supported for single hop neighbors. [chars] is not single hop neighbor

Explanation Bidirectional forwarding detection (BFD) is not enabled because the configured neighbor is not a single hop. BFD is supported only for single hop neighbors.

Recommended Action Unconfigure BFD from BGP.

Error Message %BGP-4-MAXDYNBR: BGP:DN: Cannot create new neighbor [chars], for range [chars]: maximum number of [dec] dynamic neighbors limit reached

Explanation The number of dynamically created subnet range neighbors has reached a warning limit.

Recommended Action Check the number of listen range limit configured for dynamic subnet neighbors and determine whether the limit should be increased.

Error Message %BGP-4-MAXPFX: No. of prefix received from [chars][chars][chars] (afi [dec]) reaches [dec], max [dec]

Explanation The number of prefixes received from a neighbor has reached a warning limit. The message displays the session number or VRF identifier, if applicable.

Recommended Action Check the number of prefixes received from the neighbor and determine whether the limit should be increased.

Error Message %BGP-4-MAX_EXTCOMM_EXCEED: Exceeded limit of [dec] extended communities per advertised prefix

Explanation An attempt was made to advertise a prefix with an extended community attribute containing more extended communities than the allowed limit.

Recommended Action Reduce the configured number of route targets or other extended communities that will be added to prefix advertisements.

Error Message %BGP-4-NBRTRACK: Route Tracking failed on memory. Neighbor tracking for route-fall-over will stop

Explanation The route tracking system failed to allocate memory. Neighbor route fallover will stop tracking neighbor routes in order to free some memory.

Recommended Action If the system is stable, then reconfigure neighbor route fallover. If this message reappears, neighbor route fallover has been unconfigured.

Error Message %BGP-3-NEG COUNTER: Prefix-accepted counter negative for peer [chars], prefix [chars]

Explanation The counter value for accepted prefixes is less than zero, which is an illegal value. This indicates an internal software error.

Recommended Action Reset the session.

Error Message %BGP-4-NORTRID: BGP could not pick a router-id. Please configure manually.

Explanation The BGP router ID has not been manually configured and BGP is unable to allocate a router ID from the IPv4 address of one of its interfaces.

Recommended Action Make sure that at least one interface is up and has a valid IPv4 address, or configure the router ID manually.

Error Message %BGP-4-RIDSYNC: BGP routes are redistributed to OSPF. For synchronization to work, you must manually configure the BGP router-id to be the same as the OSPF router-id.

Explanation For synchronization to work, the BGP router ID must be the same as the OSPF router ID at all times that the router is up.

Recommended Action If synchronization is turned on between one instance of OSPF and BGP, make sure to manually configure a BGP router ID that is identical to the router ID of the particular OSPF instance.

Error Message %BGP-4-VPNv4NH_MASK: Nexthop %i may not be reachable from neighbor [chars] - not /32 mask

Explanation We are sending to an IBGP neighbor a VPNv4 route whose next hop address is our loopback, which does not have a 32 bit mask. In addition, we are using OSPF on this loopback, and the OSPF network type of this interface is loopback. OSPF advertises this address as a host route (with mask /32) regardless of what mask is configured. This conflicts with the Tag Distribution Protocol (TDP), which uses configured masks, so our TDP neighbors may not receive a tag for this route. As a result, connectivity could be lost between sites that belong to the same VPN.

Recommended Action Configure the loopback used as the next hop with a 32 bit IP host mask (/32), or configure the **ip ospf network point-to-point** command on this loopback.

Error Message %BGP-4-VPN_NH_IF: Nexthop [chars] may not be reachable from neighbor [chars] - not a loopback

Explanation We are sending to an IBGP neighbor a VPN route whose the next hop is one of our directly-connected physical interfaces. The label for the next hop address may be removed in the MPLS cloud one hop soon. Since the P routers do not have VPN information, they do not know where to forward packets with the BGP label. As a result, connectivity could be lost between VPN sites.

Recommended Action Use loopback interfaces as the next hops for VPN IBGP neighbors.

BGP-5

Error Message %BGP-5-ADJCHANGE: neighbor [chars][chars][chars][chars] [chars]

Explanation A BGP neighbor has either come up or gone down, as indicated. This message appears only if the **log-neighbor-changes** command is configured for the BGP process.

Recommended Action This informational message normally appears as routers and BGP neighbors go up or down. However, unexpected neighbor loss might indicate high error rates or high packet loss in the network and should be investigated.

Error Message %BGP-5-DAMPENING_DECAY_TIME: Decay time from maximum penalty to suppress penalty is [dec] secs. Maximum penalty: [dec], suppress penalty: [dec]

Explanation The configured dampening parameters may not be feasible. The time window between maximum penalty and suppress penalty may be low.

Recommended Action If the decay time from maximum penalty to suppress penalty is too low, increase the half-life time or the maximum penalty values.

Error Message %BGP-5-DAMPENING_HIGH_MAX_PENALTY: Maximum penalty ([dec]) is more than allowed maximum ([dec]). Dampening is OFF

Explanation The configured dampening parameters may not be feasible. The maximum penalty is more than the allowed maximum. As a result, dampening will be off.

Recommended Action Depending on the value of the maximum penalty, adjust the maximum suppress time. Because the maximum penalty is more than the allowed maximum, reduce maximum suppress time. The maximum penalty should be greater than the suppress penalty but less than the maximum allowable penalty.

Error Message %BGP-5-DAMPENING_LOW_MAX_PENALTY: Maximum penalty ([dec]) is less than suppress penalty ([dec]), Dampening is OFF

Explanation The configured dampening parameters may not be feasible. The maximum penalty is less than the configured suppress penalty. As a result, dampening will be off.

Recommended Action Depending on the value of the maximum penalty, adjust the maximum suppress time. Because the maximum penalty is less than the suppress penalty, increase the maximum suppress time. The maximum penalty should be greater than the suppress penalty but less than the maximum allowable penalty.

Error Message %BGP-5-VERSION_WRAP: bgp version wrapped of [chars]

Explanation The BGP table version has reached its maximum value and has wrapped around. The message describes this event.

Recommended Action This message is informational. However, frequent occurrences of such an event might indicate high error rates or high packet loss in the network and should be investigated.

BGP-6

Error Message %BGP-6-ASPATH: [chars] AS path [chars] received from [chars]: [chars]

Explanation The remote BGP peer sent an update with an invalid autonomous system (AS) path.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP-6-BIGCHUNK: Big chunk pool request ([dec]) for [chars].
Replenishing with malloc

Explanation This is an informational message describing an internal software operation. If the static chunk pool size can not service the request, it will be serviced with a memory allocation (malloc) process.

Recommended Action No action is required.

Error Message %BGP-6-NEXTHOP: Invalid next hop (%i) received from [chars]: [chars]

Explanation The remote BGP peer sent a route with an illegal next hop. The route was ignored.

Recommended Action No action is required.

BGP_MPLS Messages

This section contains BGP MPLS common messages.

BGP_MPLS-3

Error Message %BGP_MPLS-3-GEN_ERROR: [chars]

Explanation This message describes a general runtime error related to BGP MPLS.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP/MPLS-3-IPRMCONNECT: [chars]

Explanation BGP VPNv4 failed to register to the IP rewrite manager (IPRM) component.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP/MPLS-3-LABELALLOC: [chars]

Explanation An MPLS label could not be allocated for a prefix.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP/MPLS-3-LSDCONNECT: [chars]

Explanation BGP VPNv4 failed to register to the MPLS forwarding component.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP_MPLS-3-NBR_ROUTE: [chars]

Explanation An error occurred in manipulating the BGP neighbor route needed for MPLS operations.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP_MPLS-3-PERVRF: pervrfaggr label: [chars]

Explanation An error occurred related to the per-VRF label feature.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP_MPLS-3-PER_VRF_AGGR: pervrfaggr label: [chars]

Explanation An error occurred related to the per-VRF aggregate label feature.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP_MPLS-3-SIZEMISMATCH: Label table size ([dec]) mismatch, checkpt key creation failed

Explanation A BGP MPLS label table size mismatch was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP_MPLS-3-VPN_REWRITE: [chars]

Explanation An error occurred in installing, updating, or removing a VPN rewrite entry in the MPLS forwarding table.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BGP_MPLS-4

Error Message %BGP_MPLS-4-LABELALLOC: Label allocation failure

Explanation A resource limitation was encountered while allocating a local label on the router.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BGP_MPLS-7

Error Message %BGP_MPLS-7-IASLABELALLOC: Failed to create rewrite for prefix [chars], reason: [chars]

Explanation A BGP MPLS VPN rewrite creation failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BGP_MPLS-7-IPv4LABELALLOC: Failed to allocate label for IPv4 prefix %i/[dec]

Explanation A BGP MPLS IPv4 label allocation failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

BSR Messages

This section contains Bootstrap Router (BSR) messages.

BSR-5

Error Message %BSR-5-CBSR_REMOVED: Candidate-BSR on interface [chars] has been removed

Explanation The interface card has been removed.

Recommended Action No action is required.

Error Message %BSR-5-CRP_REMOVED: Candidate-RP on interface [chars] has been removed

Explanation The interface card has been removed.

Recommended Action No action is required.

BUNDLES Messages

This section contains Bundles messages.

BUNDLES-3

Error Message %BUNDLES-3-ALLOCATION: Bundle allocation error: [chars]

Explanation An internal software error occurred. This error is probably caused by a low-memory condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BUNDLES-3-PLATFORMSPACE: Platform attempted to access unreserved space

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %BUNDLES-3-TYPENOTISSUAWARE: Bundle type [chars] must be ISSU aware to send to slot(s) [chars]

Explanation The bundle type is not In Service Software Upgrade (ISSU) aware so cannot be distributed to a slot with which ISSU negotiation has occurred. This indicates a design problem that requires code changes to fix.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C2950_MONITOR Messages

This section contains Catalyst 2950 series switch monitor messages.

C2950_MONITOR-3

Error Message %C2950_MONITOR-3-C2950MONITOR_UNKNOWN_PARAM: Unknown trap type:[dec] received in emt_call function.

Explanation An unknown trap type occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C4K_IOSSYS Messages

This section contains Catalyst 4000 series switch Cisco IOS system messages.

C4K_IOSSYS-7

Error Message %C4K_IOSSYS-7-INVALIDVALUE: [chars] Type [dec] not handled, returning a default of 0

Explanation This message is for debugging purposes. When you see this message, report it to your technical support representative.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C4K_REDUNDANCY Messages

This section contains Catalyst 4000 series switch redundancy messages.

C4K_REDUNCANCY-2

Error Message %C4K_REDUNDANCY-2-IOS_VERSION_CHECK_FAIL: [chars]

Explanation For the redundancy utility to operate properly, the system must be configured with symmetrical hardware and software. A mismatch in versions of Cisco IOS software between the active and standby systems has been detected. Redundancy operations cannot be guaranteed.

Recommended Action Configure the system so that the active and standby supervisor engines are using the same versions of Cisco IOS software.

Error Message %C4K_REDUNDANCY-2-NON_SYMMETRICAL_REDUNDANT_SYSTEM: [chars]

Explanation For the redundancy utility to operate properly, the system must be configured with symmetrical hardware and software. A mismatch in hardware has been detected between the active and standby systems. Redundancy operations cannot be guaranteed.

Recommended Action Configure the hardware so that the active and standby supervisor engines are identical.

Error Message %C4K_REDUNDANCY-2-POSTFAIL: POST failure on [chars] supervisor detected

Explanation An active supervisor engine failed during a POST operation. The standby supervisor engine will reset the current active supervisor engine, and the standby supervisor engine will attempt to become the active supervisor engine.

Recommended Action Perform offline diagnostic operations on the failed supervisor engine to isolate the failure.

C6KENV Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router environmental (C6KENV) messages.

C6KENV-2

Error Message %C6KENV-2-BADFLOWCTRL: Module [dec] not at an appropriate hardware revision level to support DFC. Power denied

Explanation The fabric-capable module in the specified slot is not at an appropriate hardware revision level and cannot support a DFC. If a DFC is present, the module will not be activated and remains powered down.

Recommended Action Remove the DFC to enable the module to operate at its current hardware revision level. To enable DFC operation, ensure that the module is at an appropriate hardware revision level.

Error Message %C6KENV-2-BADFLOWCTRL_WARN: WARNING: Module [dec] not at an appropriate hardware revision level to support DFC3

Explanation The fabric-capable module in the specified slot is not at an appropriate hardware revision level to support a DFC3 or higher.

Recommended Action When you upgrade the DFC daughter card, also upgrade the module to an appropriate hardware revision level.

Error Message %C6KENV-2-BADPINN1: Module [dec] not at an appropriate hardware revision level to coexist with PFC3 system. Power denied

Explanation The module specified in the error message has a revision of 2.x or below. Modules with this revision will experience problems when they are used with a supervisor engine with a PFC3 installed and should not be used.

Recommended Action Upgrade the module to an appropriate hardware revision level.

Error Message %C6KENV-2-BADTRANSCEIVER: Module [dec] will be power disabled because an inappropriate transceiver is inserted at [chars].

Explanation An incompatible transceiver is inserted at the interface specified in the error message. This transceiver should not be used in this system.

Recommended Action Remove the specified transceiver and restore power to the module. If this transceiver was purchased from Cisco, contact your Cisco technical support representative to get the transceiver replaced.

Error Message %C6KENV-2-C2PLUSWITHNODB: The constellation 2 plus module in slot [dec] has no forwarding daughter board. Power denied

Explanation The module in the slot specified has no forwarding daughter card and is expected to have either a distributed, accelerated, or centralized forwarding card. This module will not be activated and will remain powered down.

Recommended Action Enter the **show module** command to view error message details.

Error Message %C6KENV-2-DFCMISMATCH: Module [dec] DFC incompatible with Supervisor DFC. Power denied

Explanation The DFC in the specified module is different from the DFC in the supervisor engine. The module will not be activated and remains powered down.

Recommended Action Enter the **show module** command to view the difference between the DFC in the module and the DFC in the supervisor engine.

Error Message %C6KENV-2-DFCMISMATCHMINOR: Module [dec] DFC installed is incompatible with system operating mode. Power denied. To enable Module [dec] DFC, the system must be reset.

WARNING: Any system reset will change the system operating mode which can result in degradation of system performance. To eliminate this from occurring, remove Module [dec] DFC or replace with a system compatible DFC.

Explanation The DFC in the specified slot does not have the same software operating mode as the rest of the system. The DFC will remain powered down and cannot be activated.

Recommended Action Enter the **show module** and **show platform earl-mode** commands to view the difference between the DFC in the specified slot and the operating mode of the rest of the system.

Error Message %C6KENV-2-FANUPGREQ: Module [dec] not supported without fan upgrade

Explanation The supervisor engine and the DFC in the specified slot require a fan tray upgrade. A system shutdown is scheduled.

Recommended Action Upgrade the system fan tray.

Error Message %C6KENV-2-SHUTDOWN_NOT_SCHEDULED: Major sensor alarm for [chars] is ignored, [chars] will not be shutdown.

Explanation The system detected that the specified module should be shut down because it exceeded major sensor thresholds. However, the command that shuts down the module in the event of a major sensor alarm has been overridden, so the specified module will not be shut down. The command used to override the shutdown is **no environment-monitor shutdown**.

Recommended Action Remove the configuration that bypasses the module shutdown due to sensor thresholds being exceeded. Shut down the module after removing the configuration.

Error Message %C6KENV-2-SHUTDOWN_SCHEDULED: shutdown for [chars] scheduled in [dec] seconds

Explanation A major alarm condition will be corrected by shutting down the affected component. [chars] is the component, and [dec] is the time in seconds before shutdown.

Recommended Action Replace the component as soon as possible.

C6KENV-4

Error Message %C6KENV-4-ALARMCLR: [chars] alarm cleared

Explanation The specified alarm condition has been cleared. The shutdown has been cancelled.

Recommended Action No action is required.

Error Message %C6KENV-4-FANCOUNTFAILED: Required number of fan trays is not present

Explanation The system is missing the number of required fan trays to operate properly. Although this is a minor alarm, system components could overheat and be shut down.

Recommended Action Insert the required fan tray as soon as possible.

Error Message %C6KENV-4-FANCOUNTOK: Required number of fan trays is present

Explanation The number of required fan trays has been restored.

Recommended Action No action is required.

Error Message %C6KENV-4-FANHIOOUTPUT: Version [dec] high-output fan-tray is in effect

Explanation The system has detected that the fan tray is a high-output (version 2) fan tray. The system has updated the cooling capacity for the fan tray.

Recommended Action No action is required.

Error Message %C6KENV-4-FANLOOUTPUT: Version [dec] low-output fan-tray is in effect

Explanation The system has detected that the fan tray is a low-output (version 1) fan tray. The system has updated the cooling capacity for the fan tray.

Recommended Action No action is required.

Error Message %C6KENV-4-FANPSINCOMPAT: Fan tray and power supply [dec] are incompatible

Explanation An upgrade of the power supply is required to sufficiently operate this fan tray. Although this is a minor alarm, overcurrent protection on the power supply could start without further warning.

Recommended Action Upgrade the power supply.

Error Message %C6KENV-4-FANTRAYFAILED: fan tray failed

Explanation One or more fans in the system fan tray have failed. Although this is a minor alarm, system components could overheat and be shut down.

Recommended Action Reseat the fan tray. If the error recurs, replace the system fan tray at the earliest opportunity.

Error Message %C6KENV-4-FANVERCHK: Power-supply [dec] inserted is only compatible with Version [dec] fan-tray. Please make sure fan is low-output fan-tray

Explanation The system has detected that the fan tray is a low-output (version 1) fan tray. If the fan tray is a low-output tray, no action is required. If the fan tray is actually a high-output (version 2) fan tray, the specified power supply is not able to support the high-output fan tray.

Recommended Action If the fan tray is a high-output (version 2) fan tray, enter the **hw-module fan-tray version 2** command to update the system with the upgrade information. Replace the 1000 W or 1300 W power supply, as these two power supplies are not compatible in this chassis with the version 2 fan tray.

Error Message %C6KENV-4-INSUFFCOOL: Module [dec] cannot be adequately cooled

Explanation The fan tray cannot adequately cool the specified module. Although this is a minor alarm, system components could overheat and be shut down.

Recommended Action Upgrade the system fan tray.

Error Message %C6KENV-4-MINORTEMPOKALARM: [chars] all temperature sensor have failed. If the module temperature sensor does not recover by itself, please power cycle the module when it is feasible

Explanation All module temperature sensors have failed.

Recommended Action If the module temperature sensors do not recover, power cycle the module when possible.

Error Message %C6KENV-4-MINORTEMPOKALARMRECOVER: [chars]. It has returned to normal operating status.

Explanation All module temperature sensors have returned to normal operating status.

Recommended Action No action is required.

Error Message %C6KENV-4-MINORTEMPSUPOKALARM: All temperature sensors of Supervisor in slot [dec] have failed. If the temperature sensor does not recover by itself, please power cycle the chassis when it is feasible

Explanation All temperature sensors have failed in the supervisor engine.

Recommended Action If the temperature sensors do not recover, power cycle the chassis when possible.

Error Message %C6KENV-4-MINORTEMPSUPOKALARMRECOVER: Supervisor in slot [dec] has returned to normal operating status.

Explanation The supervisor engine temperature sensors have returned to normal operating status.

Recommended Action No action is required.

Error Message %C6KENV-4-MINORVTTOKALARM: All the backplane vtt temperature sensor have failed. If the backplane vtt temperature sensor does not recover by itself, please power cycle the chasis when it is feasible

Explanation All backplane VTT temperature sensors have failed.

Recommended Action If the backplane VTT temperature sensors do not recover, power cycle the chassis when possible.

Error Message %C6KENV-4-MINORVTTOKALARMRECOVER: Backplane VTT has returned to normal operating status.

Explanation The backplane VTT has returned to normal operating status.

Recommended Action No action is required.

C6KENV-SP

Error Message %C6KENV-SP-4-FANTRAYFAILED: Fan tray failed.

Explanation One or more fans in the system fan tray have failed. Although this is a minor alarm, system components can overheat and be shut down.

Recommended Action Replace the system fan tray as soon as possible.

Error Message %C6KENV-SP-4-MINORTEMPALARM: [chars] has exceeded normal operating temperature range.

Explanation Message indicates that the normal operating temperature range has been exceeded. This message can indicate a trend for the module or component, and also a trend for other components in the system.

Recommended Action Inspect the indicated module or component closely to determine why it operates out of normal operating temperature range and determine if it eventually exceeds the allowed operating temperature range. Verify the air flow to the device is not blocked and that the fan is operational. Enter the **show environment temperature** command to see temperature readings and the **show environment alarm threshold** command to see the alarm thresholds.

C6KERRDETECT Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router bus error detection (C6KERRDETECT) messages.

C6KERRDETECT-2

Error Message %C6KERRDETECT-2-SWBUSSTALL: The switching bus is experiencing stall for [dec] seconds

Explanation During an Online Insertion or Removal (OIR), some switching modules will assert a stall signal on the backplane to pause data transmission for the duration of the OIR. When the OIR is performed smoothly and quickly, traffic is usually interrupted for less than one second. If the OIR is performed slowly or is paused, the longer traffic interruption will result in this error message being reported.

Recommended Action Perform the OIR smoothly and quickly. Do not pause with the module partially inserted.

C6K_IVRF Messages

This section contains Catalyst 6500 series switch internal VRF (IVRF) messages.

C6K_IVRF-3

Error Message %C6K_IVRF-3-C6K_IVRF_ERROR: [chars]

Explanation A VRF infrastructure failure occurred involving the platform's internal VRFs (IVRFs).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_MPLS_COMMON Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router LAN and WAN Multiprotocol Label Switching (C6K_MPLS_COMMON) messages.

C6K_MPLS_COMMON-3

Error Message %C6K_MPLS_COMMON-3-L2_CONFIG_NOT_RECOMMENDED: xconnect is configured on interface vlans and WAN interfaces are facing the MPLS Core. Do not configure LAN interfaces facing the MPLS Core.

Explanation An attempt was made to configure a LAN interface to face the MPLS core. The current network configuration has cross-connection services configured on interface VLANs and has WAN interfaces facing the MPLS core.

Recommended Action Do not configure MPLS on LAN interfaces facing the MPLS core if the network has cross-connect services configured on an interface VLAN and WAN interfaces that face the MPLS core.

Error Message %C6K_MPLS_COMMON-3-L3_CONFIG_NOT_RECOMMENDED: LAN interfaces are facing the MPLS Core. Do not configure xconnect on interface vlans.

Explanation An attempt was made to configure a cross-connection service on an interface VLAN. The current network configuration has MPLS configured on a LAN interface that is facing the MPLS core.

Recommended Action Do not configure cross-connection services on an interface VLAN if the network has MPLS configured on a LAN interface.

Error Message %C6K_MPLS_COMMON-3-OSM_BB1_CONFIG_UNSUPPORTED: The maximum label range configured for this system exceeds the [int] limit supported by the module in slot [int]. For proper MPLS functionality on any of the interfaces on this module the maximum label range should be set to [int].

Explanation The OSM cannot support the MPLS label range configured for this system.

Recommended Action Change the maximum MPLS label range by using the **mpls label range** command.

Error Message %C6K_MPLS_COMMON-3-VPLS_CONFIG_EXCEEDED: The number of EoMPLS/VPLS VCs exceeded the maximum supported on [IP_address]/[int].

Explanation The number of destination routers or the global number of virtual circuits exceeded the maximum limit supported by the device.

Recommended Action Refer to network configuration guidelines for the maximum limits.

C6K_MPLS_LC Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router Multiprotocol Label Switching (MPLS) switch processor or module (C6K_MPLS_LC) messages.

C6K_MPLS_LC-3

Error Message %C6K_MPLS_LC-3-INFINITE_OCE: In label: [dec] Invalid OCE previous oce type: [dec] prev ptr: **Unrecognized format ‘ %p’**, next oce type: [dec] next oce ptr: **Unrecognized format ‘ %p’**

Explanation The Output Chain Element(OCE) specified in the system message is invalid because it has exceeded the maximum depth. One known cause is invalid static route configuration. Traffic for this path will be dropped.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %C6K_MPLS_LC-3-INVALID_TABLEID: Invalid tableid([dec]) for label([dec])

Explanation The system has received an invalid table identifier number. The table identifier should be in the range from 0 to 4095. This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_LC-3-INVALID_TE_IF_NUMBER: An invalid Traffic Engineering interface number [[int]] was passed to the statistics update routine

Explanation The traffic engineering interface number sent to the statistics update routine is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_LC-3-INVALID_VRFID: Invalid vrf_id(%u) for label([dec])

Explanation An invalid VRF identifier (ID) was received. The VRF ID should be in the range of 0 to 4095. This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_LC-3-LABEL_STACK_SIZE: Label [[dec]] is not added to label stack. Current label stack is [[dec] [dec] [dec] [dec] [dec]]

Explanation The label specified in the system message was not added to the label stack because the stack already contains the maximum number of allowed labels. The system cannot forward data correctly. This condition is an internal software error.

Recommended Action Enter the **show mpls forwarding-table labels** command, and gather label information about the label that was not added to the stack and about the labels that are in the stack already. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_LC-3-MALLOCFAIL: failed to create [chars]

Explanation The system failed to allocate memory for an MPLS entry for the incoming label. Some MPLS packets might be forwarded by the software.

Recommended Action Reduce other system activity to ease memory demands. If necessary, increase system memory. When more memory is available, wait for a few minutes and enter the **clear ip route** command. If sufficient memory has not been made available, this message will display again. If this problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_LC-3-OCE_ERROR: Invalid OCE [[chars]] [hex]

Explanation The Output Chain Element (OCE) specified in the system message is invalid because it cannot be processed. This issue can cause problems in data forwarding. This condition is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_LC-3-REWRITEFAIL: null adj for incoming label [dec]

Explanation The specified incoming label has a NULL adjacency entry. The hardware adjacency entry might not be programmed because the incoming label has the NULL adjacency entry. This condition is an internal software error.

Recommended Action Enter the **show mpls forwarding-table labels** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_LC-3-SIX_PE_REW_LBL_ENTRY_MISMATCH: The label entry([hex]) in the 6PE rewrite table for incoming label [dec] does not match the passed in label entry([hex])

Explanation The label entry in the IPv6 on Provider Edge router (6PE) rewrite table does not match the label entry for an incoming label. This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_LC-3-TCAMFAIL: TCAM validation check failed for label [dec]

Explanation The validation check on an inserted TCAM entry failed for the specified label.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_MPLS_LC-5

Error Message %C6K_MPLS_LC-5-TCAM_EXCEPTION: TCAM exception occurred for MPLS, traffic will be software switched

Explanation The switch failed to insert an MPLS entry into the hardware FIB TCAM because the total number of software forwarding entries exceeds the hardware FIB TCAM limit. As a result, some MPLS packets might be forwarded by the software.

Recommended Action Reduce the number of routes in the system to free up TCAM space. When enough free TCAM space is available, the software starts the TCAM recovery mechanism automatically, which will reinstall into TCAM those MPLS label entries that failed before. If the number of labels has been tuned down with the **mls cef maximum-routes** configuration command, increase the number of labels, save the configuration, and reload the router, because this configuration will only be effective on reloading the router. The maximum number of routes currently configured can be observed with the **show mls cef maximum-routes** command, and the current number of routes in the system can be observed with the **show mls cef summary** command.

Error Message %C6K_MPLS_LC-5-TCAMEXPRECOVER: TCAM exception recovered for MPLS, traffic will be hardware switched

Explanation At some earlier point in time some of the MPLS forwarding table could not fit into the hardware TCAM. The complete MPLS forwarding table is now in hardware, and forwarding for the incoming MPLS packets will be done in hardware.

Recommended Action No action is required.

C6K_MPLS_RP Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router LAN Multiprotocol Label Switching (C6K_MPLS_RP) messages.

C6K_MPLS_RP-2

Error Message %C6K_MPLS_RP-2-INIT: [chars]

Explanation The initialization of the Constellation MPLS forwarding infrastructure failed. This condition causes problems in the MPLS packet forwarding. The router will be forced to reboot to recover from the problem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-2-NO_IP_ACL_RSVD_VLAN: IP ACL features will not be applied to MPLS->IP packets due to a lack of internal VLAN resources

Explanation This error might occur if the total number of VLANs in use exceeds 4096. The VLAN resources are shared by VLANs used for SVI, VLANs used for subinterfaces, hidden VLANs used for routed ports, and internal VLANs used for some VRFs. An internal VLAN is needed when an IP ACL feature is applied to a VRF interface. If the total number of VLANs in use exceeds 4096, no more internal VLANs can be allocated, so IP ACL features will not be applied to MPLS-to-IP packets.

Recommended Action Reduce the total number of VLANs in use by removing SVI interfaces, subinterfaces, or VRF interfaces.

Error Message %C6K_MPLS_RP-2-NO_IP_QOS_RSVD_VLAN: IP QoS features will not be applied to MPLS->IP packets due to a lack of internal VLAN resources

Explanation This message indicates a condition that might occur if the total number of VLANs in use exceeds 4096. The VLAN resources are shared by VLANs used for SVI, VLANs used for subinterfaces, hidden VLANs used for routed ports, and internal VLANs used for some VRFs. An internal VLAN is needed when an IP QoS feature is applied to a VRF interface. If the total number of VLANs in use exceeds 4096, no more internal VLANs can be allocated, so IP QoS features will not be applied to MPLS-to-IP packets.

Recommended Action Reduce the total number of VLANs in use by removing SVI interfaces, subinterfaces, or VRF interfaces.

C6K_MPLS_RP-3

Error Message %C6K_MPLS_RP-3-GET_RSVD_VLAN_TABLEID_MISMATCH: Tableid [int] in reserved VLAN idb [chars] mismatched application tableid [int]

Explanation An application provided a table ID for a reserved VLAN, but the table ID does not match the value in the reserved VLAN interface descriptor block (IDB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-GET_RSVD_VLAN_VRFID_MISMATCH: Tableid %u in reserved VLAN idb [chars] mismatched application tableid %u

Explanation An application gave a table identifier (ID) to get a reserved VLAN interface descriptor block (IDB) but the table ID within the IDB does not match the specified value.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-INFINITE_OCE: In label: [dec] Invalid OCE previous oce type: [dec] prev ptr: **Unrecognized format ‘ %p’**, next oce type: [dec] next oce ptr: **Unrecognized format ‘ %p’**

Explanation The Output Chain Element(OCE) specified in the system message is invalid because it has exceeded the maximum depth. One known cause is invalid static route configuration. Traffic for this path will be dropped.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-INVALID_TABLEID: Invalid tableid([dec]) for label([dec])

Explanation An invalid table ID was received. The table ID should be in the range of 0 to 4095. This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-INVALID_VRFID: Invalid vrfid(%u) for label([dec])

Explanation An invalid VRF identifier (ID) was received. The VRF ID should be in the range of 0 to 4095. This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-L2_CONFIG_NOT_RECOMMENDED: xconnect is configured on interface vlans and WAN interfaces are facing the MPLS Core. Do not configure LAN interfaces facing the MPLS Core.

Explanation An attempt was made to configure a LAN interface to face the MPLS core. The current network configuration has cross-connection services configured on interface VLANs and has WAN interfaces facing the MPLS core.

Recommended Action Do not configure MPLS on LAN interfaces facing the MPLS core if the network has cross-connection services configured on an interface VLAN and WAN interfaces that face the MPLS core.

Error Message %C6K_MPLS_RP-3-L3_CONFIG_NOT_RECOMMENDED: LAN interfaces are facing the MPLS Core. Do not configure xconnect on interface vlans.

Explanation An attempt was made to configure a cross-connection service on an interface VLAN. The current network configuration has MPLS configured on a LAN interface that is facing the MPLS core.

Recommended Action Do not configure cross-connection services on an interface VLAN if the network has MPLS configured on a LAN interface.

Error Message %C6K_MPLS_RP-3-NO_RSVD_VLAN_ERROR: Failed to allocate reserved VLAN for vrf [int]

Explanation The system failed to allocate an MPLS-reserved VLAN.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-PKT_DROP_NO_RSVD_VLAN_IDB: Packet dropped, no idb for reserved VLAN [int]

Explanation A packet received on a reserved VLAN was dropped because it did not contain an interface descriptor block (IDB) for the VLAN.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-RECIRC_DROP: Re-circulated packet dropped due to error.
Possible causes: MTU or TTL fail
Total drops = [int] pkts, Last packet size [int] Bytes
Top 3 Labels and partial packet dump -

```
{[int](exp:[dec] eos:[dec] ttl:[dec]), [int](exp:[dec] eos:[dec] ttl:[dec]),
[int](exp:[dec] eos:[dec] ttl:[dec])}
[hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]
```

Explanation A recirculated packet was dropped due to an error. This condition might occur if the size of a recirculated packet exceeds the egress interface MTU.

Recommended Action Increase the MTU size on the egress interface to accommodate the incoming packets. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message 6K_MPLS_RP-3-RSVD_VLAN_CLEAR_ACL_ERROR: Failed to clear ACL default for reserved VLAN [int] for vrf [int]

Explanation The system failed to clear the ACL default for an MPLS-reserved VLAN.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-RSVD_VLAN_RELEASE_ERROR: Failed to release reserved VLAN [int] from vrf [int]

Explanation The system failed to release an MPLS-reserved VLAN from a VRF either because the VRF was not found or because a failure occurred when dissociating the VLAN from the VRF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-RSVD_VLAN_SET_ACL_ERROR: Failed to set ACL default for reserved VLAN [int] for vrf [int]

Explanation The system failed to set an ACL default for an MPLS-reserved VLAN.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-3-RSVD_VLAN_SET_IDB_ERROR: Failed to set idb of reserved VLAN [int] for vrf [int]

Explanation The system failed to set the IDB for an MPLS-reserved VLAN.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_MPLS_RP-6

Error Message %C6K_MPLS_RP-6-PKT_DROP_RSVD_VLAN_TABLEID: Packet dropped, reserved VLAN idb [chars] has incorrect tableid [int]

Explanation A packet received on a reserved VLAN was dropped due to an incorrect table ID in the IDB. This situation might occur during VRF removal. The aggregate label will stay in the H state for a few minutes, while the table ID in the reserved VLAN IDB has already cleared.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_MPLS_RP-6-PKT_DROP_RSVD_VLAN_VRFID: Packet dropped, reserved VLAN idb [chars] has incorrect tableid %u

Explanation A packet received on a reserved VLAN was dropped due to an incorrect table identifier (ID) in the interface descriptor block (IDB). This condition might occur when, during VRF removal, an aggregate label will stay in the H state for a few minutes, while the table ID in the reserved VLAN IDB has already cleared.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_PLATFORM Messages

This section contains general Catalyst 6500 series switch and Cisco 7600 series router platform (C6K_PLATFORM) messages.

C6K_PLATFORM-0

Error Message %C6K_PLATFORM-0-UNKNOWN_CHASSIS: The chassis type is not known. ([hex])

Explanation The Cisco IOS software installed on the system does not recognize the chassis type specified in the error message.

Recommended Action Ensure that your Cisco IOS software release train supports the chassis type. Upgrade your system to the latest Cisco IOS software release in your release train.

C6K_PLATFORM-2

Error Message %C6K_PLATFORM-2-PEER_RESET: [chars] is being reset by the [chars]

Explanation The local CPU is being reset by the peer CPU when the peer CPU reloads because of exceptions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_PLATFORM-3

Error Message %C6K_PLATFORM-3-INFO1: [chars]=[hex] [chars]=[hex]

Explanation This message provides information regarding the internal state of the SiByte processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_PLATFORM-4

Error Message %C6K_PLATFORM-4-CONFREG_BREAK_ENABLED : The default factory setting for config register is 0x2102.It is advisable to retain 1 in 0x2102 as it prevents returning to ROMMON when break is issued.

Explanation The SP configuration register has been changed from the default factory setting of 0x2102 to another hexadecimal value.

Recommended Action No action is required.

Error Message %C6K_PLATFORM-4-ENVMON: System shutdown due to temperature alarms is [chars].

Explanation The system has a configuration to shut down a module if its operating temperature exceeds a temperature threshold. This configuration has been bypassed, and a module will still operate in an over-temperature condition. Operating at an over-temperature condition can damage the hardware.

Recommended Action Do not override the sensor alarms that act on an over-temperature condition. Enter the **environment-monitor shutdown temperature** command to bring the system back to standard temperature detection.

Error Message %C6K_PLATFORM-4-RTC_OSCILLATOR: The oscillator in the Real Time Clock is [chars]. Calendar [chars] be maintained during the powered down state of the switch.

Explanation A command has been entered that will cause the system calendar not to be maintained during a power down of the switch. The system date and time will require manual setting when the system is powered up during the next boot time. This command is useful to conserve the battery power of the CMOS, which is used to keep the real-time clock active while the switch is powered down. This condition is useful only if the switch is powered down for a long period of time.

Recommended Action If the switch need not be powered down for a long period of time, remove the configuration by entering the **no hw-module rtc-oscillator shutdown** command.

C6K_PLATFORM-5

Error Message %C6K_PLATFORM-5-LESS_SPACE : May not have enough space to save the crash info. on flash of [chars] on module: [dec]

Explanation The flash memory device does not have enough memory to save the crash information. The crash information might not be saved on the flash memory device.

Recommended Action Remove unnecessary files from the flash memory device, and enter the **squeeze** command for the flash memory device.

Error Message %C6K_PLATFORM-5-MISMATCH : '[chars]' device programming algorithm mismatch detected on [chars] (module: [dec]), formatting is recommended.

Explanation The flash memory device programming algorithm that was written to the device when the flash memory was formatted is different from what the current running software has detected. The first [chars] is the device, the second [chars] is where the mismatch was detected, and [dec] is the module number. This conditions occurs when a flash memory is installed into a system with a different Cisco IOS release or when a Cisco IOS upgrade is performed on the switch.

Recommended Action Reformat the flash memory device. Otherwise, no action is required.

C6K_PLATFORM-6

Error Message %C6K_PLATFORM-6-PACKET_BUFFER: This setting will cause a packet buffer error to [chars]

Explanation This warning message appears when the configuration contains the **error-detection packet-buffer action** command. Upon detecting a packet buffer failure on an ASIC, the supervisor engine takes the action specified by the **error-detection packet-buffer action** command (and shown in [chars]). The choices include error-disabling the ports on a particular ASIC, error-disabling the the module, or automatically power-cycling the module. To view the default and configured actions on all modules, enter the **show error-detection packet-buffer** command.

Recommended Action .This message is informational only. No action is required.

C6K_POWER Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router power (C6K_POWER) messages. For more power messages, see the [C6KPWR Messages](#) section of this chapter.

C6KPWR

Error Message %C6KPWR-SP-2-PSFAIL: power supply [dec] output failed.

Explanation Power supply [dec] has failed.

Recommended Action Replace the power supply.

Error Message %C6KPWR-SP-4-PSOK: power supply [dec] turned on.

Explanation Power supply [dec] is turned on.

Recommended Action No action is required.

Error Message %C6KPWR-SP-4-PSREDUNDANTBOTHSUPPLY: in power-redundancy mode, system is operating on both power supplies.

Explanation When the system is in power redundancy mode, it operates on both power supplies.

Recommended Action No action is required.

C6K_POWER-3

Error Message %C6K_POWER-3-NOTIFY_FAIL: Failed to notify RP of change in operator status for [chars] number [dec] from '[chars]' to '[chars]'

Explanation The SP is unable to acquire the resources needed to notify the RP of the event specified in the error message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_POWER-4

Error Message %C6K_POWER-4-PD_NOLINKUP: The device connected to [dec]/[dec] is powered up but its link is not up in [dec] seconds. Therefore, power is withdrawn from the port.

Explanation The system withdrew the power that was allocated to the specified port because the port link was not operational in the specified number of seconds.

Recommended Action Try to connect the device to a different port or connect a different device to the port specified in the message.

C6K_POWER-6

Error Message %C6K_POWER-6-NOLPP: Because of lack of system power, devices that require the system to power them on may not come up within one second.

Explanation The local power pools have been deallocated. The module firmware cannot power up the device until it has received authorization for power allocation from the software running on the supervisor engine.

Recommended Action No action is required.

C6K_PROCMIB Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router Process MIB SP CPU (C6K_PROCMIB) messages.

C6K_PROCMIB-3

Error Message %C6K_PROCMIB-3-IPC_PORTOPEN_FAIL: Failed to open port while connecting to process statistics: error code = [chars]

Explanation An error occurred during an attempt to open a port for an IPC message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_PROCMIB-3-IPC_TRANSMIT_FAIL: Failed to send process statistics update : error code = [chars]

Explanation An error occurred during an attempt to send an IPC message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_PROCMIB-3-MALLOC_FAILURE_IPC: Failed to allocate IPC message to contact process

Explanation A memory allocation failure occurred during the processing of an IPC message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6KPWR Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router power (C6KPWR) messages.

C6KPWR-2

Error Message %C6KPWR-2-INSUFFICIENTPOWER: Powering down all linecards as there is not enough power to operate all critical cards

Explanation The switch was operating with two power supplies in combined mode. One of power supplies has failed. Available power is insufficient to support all critical service modules. Critical service modules include modules that support VPNs or IP security. If these critical modules fail, security issues could arise; therefore, all modules have been powered down.

Recommended Action Replace the failed power supply.

Error Message %C6KPWR-2-MAJORPOWERALARM: In the absence of power supply 1, system power usage exceeds allowed range of [chars]W. Power total will be reduced in [dec] seconds

Explanation This message indicates a major power alarm condition. The power supply in slot 2 has exceeded its allowed range. The range is specified in the error message.

Recommended Action Enter the **show power** command to determine the actual power usage. Insert a power supply in power supply slot 1, or power down some modules to reduce system power usage. If downtime can be scheduled, move the power supply from slot 2 to slot 1. If this condition persists, the environmental monitor will shut down some modules to prevent a complete power failure.

Error Message %C6KPWR-2-MAJORPOWERALARMRECOVER: System power usage has returned to allowed operating range

Explanation This message indicates that system power usage has returned to the permitted operating range. The scheduled shutdown is cancelled, and the system will continue operating.

Recommended Action No action is required.

Error Message %C6KPWR-2-MINORPOWERALARM: In the absence of power supply 1, system power usage exceeds the recommended range of [chars]W

Explanation This message indicates a minor power alarm condition. The power supply in slot 2 has exceeded its allowed range. The range is specified in the error message. Selected modules will be shut down to prevent a complete power failure.

Recommended Action Enter the **show power** command to determine the actual power usage. Insert a power supply in power supply slot 1, or power down some modules to reduce system power usage. If downtime can be scheduled, move the power supply from slot 2 to slot 1.

C6KPWR-3

Error Message %C6KPWR-3-PSUNKNOWN: Unknown power supply in slot [dec] (idprom read failed).

Explanation The IDPROM of the power supply in the specified slot cannot be read.

Recommended Action Remove and reinsert the power supply. Fasten the screw and attempt to operate the power supply again. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6KPWR-4

Error Message %C6KPWR-4-INPUTCHANGE: Power supply [dec] input has changed. Power capacity adjusted to [chars]W

Explanation The power supply in the specified slot has detected a change in its input supply. The power capacity for the power supply has been adjusted accordingly.

Recommended Action Enter the **show power** command to see the current power status. Otherwise, no action is required.

Error Message %C6KPWR-4-MAJORPOWERALARMRECOVER: System power usage has returned to allowed operating range

Explanation This message indicates that system power usage has returned to the allowed operating range, so the scheduled shutdown was cancelled. The system will continue operating.

Recommended Action No action is required.

Error Message %C6KPWR-4-MINORPOWERALARM: In the absence of power supply 1, system power usage exceeds the recommended range of [chars]W

Explanation This message indicates a minor power alarm condition. The power supply in slot 2 has exceeded its allowed range. The range is specified in the error message. Selected modules will be shut down to prevent a complete power failure.

Recommended Action Enter the **show power** command to determine the actual power usage. Insert a power supply in power supply slot 1, or power down some modules to reduce system power usage. If downtime can be scheduled, move the power supply from slot 2 to slot 1.

Error Message %C6KPWR-4-MINORPOWERALARMRECOVER: System power usage has returned to normal operating range

Explanation This message indicates that system power usage has returned to the normal operating range.

Recommended Action No action is required.

Error Message %C6KPWR-4-PS1FAILALERT: Do not remove power supply 1 without inserting another supply. In the absence of power supply 1, system power capacity will be reduced to [chars]W after a [dec] second grace period.

Explanation The system is experiencing heavy traffic. In this condition, the single power supply should be used in slot 1 rather than in slot 2.

Recommended Action Insert a power supply in slot 1, or move the power supply from slot 2 to slot 1.

Error Message %C6KPWR-4-PS2ONLY: Single power supply system should utilize power supply slot 1

Explanation The system is experiencing heavy traffic. In this condition, the single power supply should be used in slot 1 rather than in slot 2.

Recommended Action Move the power supply from slot 2 to slot 1.

Error Message %C6KPWR-4-PSINPUTDROP: Power supply [dec] input has dropped

Explanation The power supply in the specified slot has detected a drop in its input supply. The power capacity for the power supply has been adjusted accordingly.

Recommended Action Enter the **show power** command to see the current power status. Otherwise, no action is required.

Error Message %C6KPWR-4-PSMISMATCH: power supplies rated outputs do not match.

Explanation The two power supplies in the system have different output ratings.

Recommended Action For more efficient load sharing, use power supplies with the same output rating.

Error Message %C6KPWR-4-PSNOREDUNDANCY: Power supplies are not in full redundancy, power usage exceeds lower capacity supply

Explanation The two power supplies in the system have different output ratings. Current power usage exceeds the capacity of the lower-rated power supply. If the higher-rated power supply fails, the lower-rated power supply will not be able to support all modules that are currently powered up.

Recommended Action To ensure that the system power supplies are optimally redundant, use power supplies with identical output ratings or reduce system power consumption.

C6K_VSD_ROIR Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router messages.

C6K_VSD_ROIR-2

Error Message %c6k_VSD_ROIR-2-ROIR_INVALID_MODULE_TYPE: Remote switch module type is invalid : slot [dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-2-ROIR_INVALID_SYNC_EVENT: ROIR: [chars] receiver process has received an invalid sync event OrIt can't sync the event to its standby counter part

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-2-ROIR_NULL_MODULE_DATA_STRUCTURE: [chars] bay(per-module) data structure ptr is NULL

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-2-ROIR_NULL_MODULE_DATA_STRUCTURE_TYPE: ROIR: [chars] bay(per-module) data structure ptr is not NULLmodule data structure TYPE is NULL

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-2-UNKNOWN_OR_NULL_EVENT_RECEIVED: [chars]: Received [chars] event

Explanation The system was unable to create a watched boolean for the ROIR event receiver process, which is used to receive ROIR messages. This message could indicate a catastrophic software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-2-VECTOR_IS_NULL: [chars] [chars]: Vector is NULLResource or config callbacks couldn't be called when module hadProblems coming online

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_VSD_ROIR-3

Error Message %c6k_VSD_ROIR-3-ROIR_HUGE_BAY_SIZE: ROIR: [chars], failed to send bulk sync for bay type [dec] due to its huge unit size [dec]

Explanation Remote OIR failed to bulk sync for one bay type because of its huge unit size.

Recommended Action This is a system error. Please contact Cisco tech-support.

Error Message %CDP-3-CHUNK: Chunk_malloc Failure

Explanation chunk malloc failure

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-3-ROIR_ISSU_SESS_INCOMPLETE: ROIR ISSU SESSION INVALID: issu nego session not completed

Explanation The remote OIR did not complete the ISSU session negotiation. The system is trying to transform a message sent or received. This is a system error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-3-ROIR_LATE_EVENT_RESPONSE: ROIR: sender dropped late response for slot [dec] type [dec] seq [dec] result [dec]

Explanation The remote OIR sender received a late processing response. The request timed out while waiting for a response. This is a system error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-3-ROIR_TIMER_WB_FAIL: ROIR Timer Process : Unable to create watched boolean

Explanation The system was unable to create a watched boolean for a timer process of ROIR. This message could indicate an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_VSD_ROIR-6

Error Message %c6k_VSD_ROIR-6-BAD_IDPROM: ROIR:idprom error [chars] for index [chars], switch_id [dec]physical_slot [dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-BAY_IS_NULL: [chars], bay is NULL bay_type:[dec], index:[dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-BULK_SYNC_MSG_SEND_FAILED: [chars] Failure sending Bulk sync msg

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-ERR_GET_SWID: [chars] Error ([dec]) in getting swid and phy_idx for vid_x [dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-EVENT_SEND_FAILED: Remote Oir::Sender: Events for for Module Type [dec] Slot [dec] could not be sent to core because [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-FAILED_TO_GET_PAK: ROIR:Notify Failed to get pak for [chars] notification

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-FAILED_TO_SEND_NOTIFICATION: ROIR:Notify Failed to send [chars] notification

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-GETBUFFER_FAILED: ROIR: [chars] getbuffer failed. Mod type = [dec], slot# = [dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-INVALID_SM_INSTANCE: Unable to get remote module State Machine instance forswitch [dec] slot [dec] module_type [dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-MALLOC_FAILURE: Switch Id: [dec] : malloc for [chars] failed

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-NACKED_EVENT: [chars] Remote Oir::CORE NACK'ed event status [dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-POST_PROCESSING_NOTIFY_FAILED: ROIR:sender [chars]
Post processing notifications to local applns failed

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-PROCESSING_FAILED: ROIR::Sender:: For Bay type [dec]
slot [dec] - Core unsuccessful in processing event type [dec] status [dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-RECEIVED_NULL_ARG: [chars] received NULL argument

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-UNABLE_TO_CREATE_THREAD_INSTANCE: Remote Oir::Sender::Unable to create a [chars] for process type [dec] slot [dec]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-UNABLE_TO_CREATE_WB: ROIR: [chars] Unable to create [chars] watched boolean

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-UNABLE_TO_GET_THREAD_SUBLOCK: Unable to get thread sub-block. Unable to continue. Remote switch sender thread aborting.

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-UNABLE_TO_INIT: ROIR: Core: Unable to init [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-UNABLE_TO_RETRIEVE_MODULE_DATA_STRUCTURE: Unable to get module data structure for remote module

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-WORKER_THREAD_IDENT_FAILED: ROIR::Recvr [chars] - Could not get identify worker thread id

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-WORKER_THREAD_INVALID_THREAD: ROIR::Recvr - Bay sw[dec] type[dec] slot[dec] - [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-WORKER_THREAD_PACK_DROPPED: ROIR::Rcvr Worker Thread [dec] dropped packet because data section NULL!

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %c6k_VSD_ROIR-6-WORKER_THREAD_SET_OR_CREATE_WORKER_THREAD: ROIR::Rcvr Worker Unable to [chars] thread [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C6K_WAN_C2W Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN C2Wire (C6K_WAN_C2W) messages.

C6K_WAN_C2W-4

Error Message %C6K_WAN_C2W-4-READERROR: C2Wire read failed reg [hex] on device [chars]

Explanation The SMBus driver failed to read from the specified C2W device.

Recommended Action No action is required if this warning message appears occasionally. If the message appears often in a short period of time, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C6K_WAN_C2W-4-WRITEERROR: C2Wire write failed reg [hex] on device [chars]

Explanation The Smbus driver failed to write to the specified C2W device.

Recommended Action No action is required if this warning message appears occasionally. If the message appears often in a short period of time, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C7600_ES Messages

This section contains Ethernet Services linecard messages.

C7600_ES-2

Error Message %C7600_ES-2-CRITICAL_ERR: C7600-ES Line Card Failure: [chars]

Explanation A critical error has occurred on the C7600-ES Line Card. The message that was previously received on the console or in the system log and cash dump should provide more information of the problem.

Recommended Action If the problem persists, then collect crash dump and File a DDTS. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_ES-2-IOFPGA_IO_BUS_ERROR: C7600-ES Line Card IOFPGA IO [chars]
Bus Error: Error = [hex] Error Address = [hex], Error Data = [hex]

Explanation An unexpected hardware error condition has occurred on the C7600-ES Line Card. SELENE/LINKFPGA/PEFPGA FPGA failed to respond to a read or write access. This message indicates a hardware failure or a malfunction. The linecard will reload to attempt to fix the problem.

Error Message %C7600_ES-2-NMI_RESET: C7600-ES Line Card NMI reset by SUP

Explanation The Supervisor detected C7600-ES line card as unresponsive and attempted to recover line card by issuing a Non Maskable Interrupt.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_ES-2-NP_FAILURE: C7600-ES Line Card NP [dec] Failure: [chars]

Explanation An unexpected fatal condition has occurred on the C7600-ES Line Card. The message that was previously received on the console or in the system log and cash dump should provide more information of the problem. This message indicates a NP failure or malfunction. The LC will reset to attempt to fix the problem.

Recommended Action If the problem persists, then collect crash dump and File a DDTs. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_ES-2-NP_WORKAROUND: C7600-ES Line Card NP[[dec]] Workaround [chars] after [[dec]] retries

Explanation The NP workaround routine on the C7600-ES Line Card Passed/Fail.If the workaround failed, it will result in packets not being forwarded.

Recommended Action Attempt to reload the line card. If the problem persists, then copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug

Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_ES-2-PEX_INIT_FAILED: C7600-ES Line Card PCI Express Initialization failed at [chars][[dec]]

Explanation The C7600-ES Line Card received an error during initialization when attempting to initialize the PCI Express interface with the forwarding hardware. A hardware problem has prevented the target line card from fully initializing. This will result in packets not being forwarded.

Recommended Action Attempt to reload the line card. If the problem persists, then copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %C7600_ES-2-UNRECOVERABLE_FAILURE: C7600-ES Line Card Unrecoverable Failure for Device: [chars]

Explanation An unexpected fatal condition has occurred on the C7600-ES Line Card. The message that was previously received on the console or in the system log should provide more information on the specific nature of the problem. This message indicates a hardware failure or malfunction. The system will reload to attempt to fix the problem.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

C7600_ES-3

Error Message %C7600_ES_LINK-3-FPGA_NOT_READY: [chars] reports Link FPGA is not ready (ConfigPLD status [hex])!

Explanation The Link FPGA configuration is not done properly. This could be caused by an incompleting Link FPGA update in a previous FPD upgrade process.

Recommended Action Restart the FPD upgrade. If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %C7600_ES-3-KPFPGA_FIFO_INT: C7600-ES Line Card Packet Engine Supertycho KPFPGA Interrupt

Explanation An unexpected hardware error condition has occurred on the C7600-ES Line Card. Some data traffic between EARL and the firmware ASIC Metropolis is flow controlled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_ES-3-KPFPGA_PARITY_ERR_INT: C7600-ES Line Card Packet Engine Supertycho KPFPGA Parity Error

Explanation An unexpected hardware error condition has occurred on the C7600-ES Line Card. A parity error occurred during KPFPGA register access.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_ES-3-PE_INT_BUS_ACL_PARITY: C7600-ES Line Card Packet Engine ACL Counter FPGA Parity ErrorIO Bus Error Address = [hex], IO Bus Error Data = [hex]

Explanation An unexpected hardware error condition has occurred on the C7600-ES Line Card. A parity error is detected when reading from the ACL Counter FPGA.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_ES-3-PE_INT_BUS_INV_ADDR_ERR: C7600-ES Line Card Packet Engine Invalid Address Access on Earl CardIO Bus Error Address = [hex], IO Bus Error Data = [hex]

Explanation An unexpected hardware error condition has occurred on the C7600-ES Line Card. An IO Bus transfer from the Baseboard goes to an undefined address on the EARL card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_ES-3-PE_INT_BUS_PARITY: C7600-ES Line Card Packet Engine Bus Parity ErrorIO Bus Error Address = [hex], IO Bus Error Data = [hex]

Explanation An unexpected hardware error condition has occurred on the C7600-ES Line Card. A parity error is detected on the IO Bus from the Baseboard.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %C7600_ES-3-PE_INT_BUS_PROTOCOL_ERR: C7600-ES Line Card Packet Engine IO Bus Protocol ErrorIO Bus Error Address = [hex], IO Bus Error Data = [hex]

Explanation An unexpected hardware error condition has occurred on the C7600-ES Line Card. A transfer on the IO Bus between the Baseboard and the Earl FPGA did not follow the bus protocol.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %C7600_ES-3-PE_INT_BUS_ST_PARITY: C7600-ES Line Card Packet Engine Supertycho Parity ErrorIO Bus Error Address = [hex], IO Bus Error Data = [hex]

Explanation An unexpected hardware error condition has occurred on the C7600-ES Line Card. A parity error is detected when reading from the Supertycho register.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %C7600_ES-3-PE_INT_BUS_TIMEOUT: C7600-ES Line Card Packet Engine Bus Timeout: IO Bus Error Address = [hex], IO Bus Error Data = [hex]

Explanation An unexpected hardware error condition has occurred on the C7600-ES Line Card. Supertycho or the ACL Counter FPGA failed to respond to a read or write access within 1 usec.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

C7600_ES-5

Error Message %C7600_ES-5-BRIDGE_ASIC_INTR: The Bridge-ASIC-[chars][[dec]] interrupt asserted. Addr[[hex]]=[hex]

Explanation The Bridge-ASIC on the linecard has experienced an interrupt. The recovery action is already taken and no further action is needed.

Recommended Action No action is required.

Error Message %C7600_ES-5-FPGA_IMAGE_CORRUPTED: [chars] failed to program at power up, presumed corrupted.

Explanation One of the FPGAs failed to program at boot. The board will not and cannot forward traffic in this state. Failure to program presumably caused by corrupted FPGA image. Likely cause of corrupted FPGA image: write failure during FPGA FPD upgrade. Likely cause of FPGA FPD upgrade failure: unexpected LC reset during FPD upgrade.

Recommended Action If failure occurred during a FPGA FPD upgrade, ensure that LC was not or will not be inadvertently reset during upgrade. Some FPGA FPD upgrades might require a longer time to complete, and an inadvertent reset during the programming interval will corrupt the FPGA image. If failure did not occur during an FPD upgrade, the FPGA recovery logic will nevertheless necessitate a FPGA FPD upgrade. As a reminder, this requires an FPD bundle file on the supervisor to complete.

Error Message %C7600_ES-5-FPGA_RECOVERY: [chars] recovery invoked.

Explanation FPD is being invoked to recover corrupted FPGA FPD image. Allow a few minutes for programming to complete. FPD will report results from programming FPGA. If FPD reports success, recovery has completed successfully.

Recommended Action Verify that FPD successfully recovered image.

Error Message %C7600_ES-5-MET_TIMEOUT: Rewrite Engine Multicast Expansion Table access timeout recovery action invoked, Address = [hex]

Explanation The linecard experienced an IO-BUS timeout while accessing the Multicast Expansion Table. The recovery action is already taken and no further action is needed.

Recommended Action No action is required

C7600_ES-LINK-3

Error Message %C7600_ES_LINK-3-FPGA_NOT_READY: [chars] reports Link FPGA is not ready (ConfigPLD status [hex])!

Explanation The Link FPGA configuration is not done properly. This could be caused by an incompleting Link FPGA update in a previous FPD upgrade process.

Recommended Action Restart the FPD upgrade. If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %C7600_ES_LINK-3-INIT_FAILED: Failed to initialize Link Daughtercard.

Explanation Link Daughter card initialization process failed caused by a Link FPGA not ready, memory allocation failure, or a fatal OS kernel error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_ES_LINK-3-INTR_THROTTLE: Interface [chars] PHY interrupt is throttled. Total throttle count [dec].

Explanation A 10GE PHY interrupt burst has occurred on one of the interfaces on the link daughter card. The error message indicates that a throttling mechanism has been applied to this port to avoid any operational damage that could be provoked by this event. Possible causes of this problem include a bad transceiver, frequently flapping optical signals, or mismatched path signals (that is, receiving a 10GBASE-W signal on 10GE LAN interface).

Recommended Action Check the interface configuration and received signal characteristics. Verify the XFP transceiver and receive signal path to determine the exact root cause. If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %C7600_ES_LINK-3-SEND_MSG: Link DC failed to notify driver process about a line state change in the interface port [dec]

Explanation A line state change has occurred on one of the interface ports on the link daughter card. The error message indicates the port number. The state change notification could not be sent to the link daughter card processor. The cause for this problem could be memory exhaustion.

Recommended Action Enter the **show memory summary** command to attempt to determine the cause of the error. If it is insufficient system memory, Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

C7600_ES-LINK-4

Error Message %C7600_ES_LINK-4-SCPBUF_ERR: Failed to get packet from SCP packet pool for [chars]

Explanation The Line Card failed to allocate a packet from the SCP packet pool for the transceiver control message specified in the error message.

Recommended Action No action is required.

C7600_ES-LINK-5

Error Message %C7600_ES_LINK-5-ALS_RESTARTREJ: ALS manual restart command on the Interface [chars] is rejected.

Explanation The most recent Automatic Laser Shutdown manual restart command (**als restart mode manual**) on the given interface was issued when the ALS statemachine was not in the IDLE state and could not be accepted.

Recommended Action No action is required.

C7600_SIP200 Messages

This section contains SPA Interface Processor 200 (C7600_SIP200) messages.

C7600_SIP200-3

Error Message %C7600_SIP200-3-BADIFCTRL: Corrupted sip-200 information for interface [chars] [[hex]]

Explanation The interface SIP 200 information is not valid. This message indicates an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show memory** command on the line card. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SIP200-3-SONET_CLOCK_FAILED: SPA Sonet clock has failed (status = [hex])

Explanation The SPA SONET clock has failed. SPAs that rely on the SPA SONET clock for proper operation, such as PoS and ATM, will be affected.

Recommended Action If the SPA SONET clock does not recover, perform an OIR.

Error Message %C7600_SIP200-3-SONET_CLOCK_RECOVERED: SPA Sonet clock has recovered (status = [hex])

Explanation The SPA SONET clock has recovered.

Recommended Action No action is required.

C7600_SIP200-4

Error Message %C7600_SIP200-4-MEM_MODULE_MISMATCH: Memory modules are not identical

Explanation The memory modules do not have identical parameters. This condition might impact performance.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show memory** command on the line card. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C7600_SIP200_MP Messages

This section contains SIP 200 multiprocessing (C7600_SIP200_MP) messages.

C7600_SIP200_MP-1

Error Message %C7600_SIP200_MP-1-UNSAFE: Multiprocessor error on [chars]

Explanation The line card CPU contains two CPU cores, one of which is the master CPU. The CPU specified in the error message attempted to perform an operation that is illegal for multiprocessor operation between the two CPU cores.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C7600_SIP200_MP-3

Error Message %C7600_SIP200_MP-3-INIT_FAILURE: Second CPU initialization failed

Explanation The line card CPU unit has two CPU cores in it. The second CPU core is not initialized successfully, so the line card is operating with one CPU core only. You may also see a SYS-2-MALLOCFAIL warning message.

Recommended Action If this message appears when a line card boots up, reload the line card by entering the **hw-module module slot reset** command. Also, check the amount of memory on the line card by entering the **show controller cwan** command.

C7600_SIP200_MP-4

Error Message %C7600_SIP200_MP-4-PAUSE: Non-master CPU is suspended for too long, from [hex]([int]) to [hex] for [int] CPU cycles. [chars]

Explanation The line card CPU contains two CPU cores, one of which is the master CPU. The master CPU caused the second nonmaster CPU to be suspended for too long a time. This condition could cause the nonmaster CPU to drop packets. This warning indicates a transient software problem, and the line card should continue to operate normally.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SIP200_MP-4-TIMEOUT: Master CPU request timed out [chars]

Explanation The line card CPU contains two CPU cores, one of which is the master CPU. The nonmaster CPU is not responding in time to the request from the master CPU. This warning indicates a transient software problem. The line card should continue to operate normally.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C7600_SIP200_SPIRX Messages

This section contains SIP 200 SPI4.2 bus ingress interface (C7600_SIP200_SPIRX) messages.

C7600_SIP200_SPIRX-3

Error Message %C7600_SIP200_SPIRX-3-INITFAIL: Failed to configure the ingress SPI4.2 device. Error = [hex]

Explanation The system cannot program or configure the ingress SPI4.2 device on the line card. This condition indicates an internal hardware error.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPIRX-3-SPA_INTERRUPT: SPA [int] - [chars], SPA Int status = [hex]

Explanation A SPA interrupt from the ingress SPI4.2 device has occurred.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPIRX-3-SPI4_LINKERROR: SPA Bay [int], [int] SPI4 Link Failures

Explanation Link errors from the ingress SPI4.2 device have occurred.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPIRX-3-SRAM_ERROR_DATA: SRAM[dec] Address = [hex] [hex]
Data = [hex] [hex] [hex]_[hex] [hex] [hex]_[hex] [hex] [hex]_[hex] [hex] [hex]

Explanation An SRAM address and data dump has occurred.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPIRX-3-SRAM_INTERRUPT: [chars], Sram Int status = [hex]

Explanation An SRAM interrupt has occurred from the ingress SPI4.2 device.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPIRX-3-STATUS_INTERRUPT: [chars], Global Int status = [hex]

Explanation A status interrupt has occurred from the ingress SPI4.2 device.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

C7600_SIP200_SPITX Messages

This section contains SIP 200 SPI4.2 bus egress interface (C7600_SIP200_SPIRX) messages.

C7600_SIP200_SPITX-3

Error Message %C7600_SIP200_SPITX-3-BADDESC: descriptor [hex], tag [hex], global channel [int]

Explanation The egress SPI4.2 device on the line card returns a descriptor entry that is corrupted.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-BADPAK: corrupted packet to [chars]

Explanation The egress SPI4.2 device on the line card is handling a packet that is corrupted. This condition indicates that an internal software error has occurred. The corrupted packet has been dropped.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-CHANNEL_ENABLE_FAIL: SPI4 Channel [int] for Bay [int], [chars] Failed

Explanation The specified SPI4 channel could not be enabled or disabled.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-DESCR_ERR_SPA0: SPAsatus=[hex], syndrome=[hex], RdRspOvf=[int], RdRspTo=[int], OvfVal=[int], OvfCh=[int], OvfDescHi=[hex], OvfDescLo=[hex], DisChk=[int], SeqErrVal=[int], SeqErrCh=[int]

Explanation The egress SPI4.2 device on the line card detected a sequence or FIFO overflow error while processing a TX descriptor. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-DESCR_ERR_SPA1: SPAsatus=[hex], syndrome=[hex], RdRspOvf=[int], RdRspTo=[int], OvfVal=[int], OvfCh=[int], OvfDescHi=[hex], OvfDescLo=[hex], DisChk=[int], SeqErrVal=[int], SeqErrCh=[int]

Explanation The egress SPI4.2 device on the line card detected a sequence or FIFO overflow error while processing a TX descriptor. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-DESCR_ERR_SPA2: SPAstatus=[hex], syndrome=[hex], RdRspOvf=[int], RdRspTo=[int], OvfVal=[int], OvfCh=[int], OvfDescHi=[hex], OvfDescLo=[hex], DisChk=[int], SeqErrVal=[int], SeqErrCh=[int]

Explanation The egress SPI4.2 device on the line card detected a sequence or FIFO overflow error while processing a TX descriptor. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-DESCR_ERR_SPA3: SPAstatus=[hex], syndrome=[hex], RdRspOvf=[int], RdRspTo=[int], OvfVal=[int], OvfCh=[int], OvfDescHi=[hex], OvfDescLo=[hex], DisChk=[int], SeqErrVal=[int], SeqErrCh=[int]

Explanation The egress SPI4.2 device on the line card detected a sequence or FIFO overflow error while processing a TX descriptor. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-DMA_SQERR: Syndrome=[hex], SPA=[int], Ch=[int], RdSz=[int], RdOff=[int] [chars]

Explanation The egress SPI4.2 device on the line card detected a sequence error while processing a DMA operation. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFC_ERR_SPA0: SPAstatus=[hex] [chars]

Explanation The egress data path device on the line card detected an error condition with the extended flow control (EFC) bus interface. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFC_ERR_SPA1: SPAstatus=[hex] [chars]

Explanation The egress data path device on the line card detected an error condition with the extended flow control (EFC) bus interface. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFC_ERR_SPA2: SPAstatus=[hex] [chars]

Explanation The egress data path device on the line card detected an error condition with the extended flow control (EFC) bus interface. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFC_ERR_SPA3: SPAstatus=[hex] [chars]

Explanation The egress data path device on the line card detected an error condition with the extended flow control (EFC) bus interface. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFCEVNT_ERR: [chars]

Explanation The egress data path device on the line card detected an error while processing internal extended flow-control events. This condition could cause a reduced packet rate.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFC_QUEUE_STUCK: [chars]

Explanation The egress data path device on the line card detected an error condition with the Extended Flow Control Bus interface. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFCSTAT_FAIL_SPA0: [chars]

Explanation The egress SPI4.2 device on the line card detected an EFC status clock or synchronization failure. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFCSTAT_FAIL_SPA1: [chars]

Explanation The egress SPI4.2 device on the line card detected an EFC status clock or synchronization failure. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFCSTAT_FAIL_SPA2: [chars]

Explanation The egress SPI4.2 device on the line card detected an EFC status clock or synchronization failure. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-EFCSTAT_FAIL_SPA3: [chars]

Explanation The egress SPI4.2 device on the line card detected an EFC status clock or synchronization failure. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-FCSTAT_FAIL_SPA0: [chars]

Explanation The egress SPI4.2 device on the line card detected a SPI4.2 status clock or synchronization failure. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. Error Message %C7600_SIP200_SPITX-3-FCSTAT_FAIL_SPA3: [chars]

Explanation The egress SPI4.2 device on the line card detected a SPI4.2 status clock or synchronization failure. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-INITFAIL: Failed to configure the egress SPI4.2 device. Error = [hex]

Explanation The egress SPI4.2 device on the line card could not be programmed or configured. This indicates an internal hardware error.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-INT_PERR_SPA0: IntMemPerr=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an internal memory parity error. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-INT_PERR_SPA1: IntMemPerr=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an internal memory parity error. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-INT_PERR_SPA2: IntMemPerr=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an internal memory parity error. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-INT_PERR_SPA3: IntMemPerr=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an internal memory parity error. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-MISMATCH: Descriptor ring mismatch: expects [int] got [int]

Explanation The egress SPI4.2 device on the line card returned a descriptor entry that did not match what the line card CPU expected. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-OVERRUN_DROP: SPI4 overrun drops packet for SPA [int], queue [int], count [int]

Explanation While the egress SPI4.2 device on the line card sends a packet on the extended flow controlled channel, it overruns the SPI4 channel but cannot queue it to the internal hold queue. This indicates an internal software error.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-SPI4_ERR_SPA0: SPAstatus=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an error condition with the SPI4.2 bus interface. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-SPI4_ERR_SPA1: SPAstatus=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an error condition with the SPI4.2 bus interface. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-SPI4_ERR_SPA2: SPAstatus=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an error condition with the SPI4.2 bus interface. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %C7600_SIP200_SPITX-3-SPI4_ERR_SPA3: SPAstatus=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an error condition with the SPI4.2 bus interface. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel** [channel-id] command for the SPA.

Error Message %C7600_SIP200_SPITX-3-SRAM_ECCERR: EccSynd=[hex], Err1bit=[int], ErrMbit=[int], SecHalf=[int], SPA=[int], Ch=[int], Addr=[hex], DataHi=[hex], DataLo=[hex], DataEcc=[hex]

Explanation The egress SPI4.2 device on the line card detected a parity error in the egress packet memory. This condition could cause packets to drop.

Recommended Action If this problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel** [channel-id] command for the SPA.

C7600_SSC Messages

This section contains Services SPA Carrier Card (C7600_SSC) messages.

C7600_SSC-3

Error Message %C7600_SSC-3-BRDTYPE_INDEX_MISMATCH: [chars]: Board type ([dec]) and card index ([dec]) do not match

Explanation A mismatch was detected between the card index and board type. The C7600-SSC-400 board type is 4 and the card index is 191. The C7600-SSC-600 board type is 5 and the card index is 224.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-DCM_FAIL: [chars]: [chars] FPGA module DCM Lock Failure, status:[hex]

Explanation One or more of the Digital Clock Managers (DCMs) for the data path FPGAs failed to lock. This indicates a hardware failure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-DP_COUNTERS: [chars]: Failed to create DP counter process.

Explanation A process is initiated on bootup to monitor the counters of the data path FPGAs. There was an error creating this process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-DP_ERROR: [chars]: Bus Error initializing [chars] FPGA, addr: [hex].

Explanation This FPGA could not be initialized due to a bus error. This condition indicates a hardware failure, possibly due to a failed FPD upgrade.

Recommended Action Enter the **show hw-module slot fpd** command. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-DP_PROGRAMMING: [chars]: [chars] FPGA failed to program.

Explanation This FPGA failed to program. This condition indicates a hardware failure, possibly due to a failed FPD upgrade.

Recommended Action Enter the **show hw-module slot fpd** command. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-DPRX_ERR: [chars]. [chars]

Explanation There was an error receiving data from the SPA, possibly due to data corruption.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-DPTX_ERR: [chars]: [chars].

Explanation There was an error sending data to the SPA, possibly due to data corruption.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-DPTX_ERR_MECC: [chars]: [chars]. ERR addr register:[hex].

Explanation There was an error sending data to the SPA, possibly due to data corruption.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-DPTX_ERR_SECC: [chars]: [chars]. Single bit error count:[hex], ECC ERR addr register:[hex].

Explanation A data corruption error that was automatically fixed was detected while sending data to the SPA.

Recommended Action No action is required if you see this message once. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-DPTX_QDR: [chars]: Error clearing QDR queue [dec].

Explanation One of the QDR queues did not flush completely.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-SINGLE_SPA_MODE: [chars]: Module will use only bay [dec]. Bay [dec] is shut.

Explanation The 7600-SSC is in single SPA mode.

Recommended Action No action is required.

Error Message %C7600_SSC-3-SSC_BAY_SHUT: [chars]: Bay [dec] is shutdown because [chars] is in single-spa-mode

Explanation The specified bay is shut down. In single SPA mode, only one bay is active.

Recommended Action Refer to the IPsec VPN SPA documentation for information about single SPA mode.

Error Message %C7600_SSC-3-SW_ERROR: [chars]: [chars]

Explanation This error is seen when there is a problem in internal software coding; it should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC-3-UNKNOWN_BRDTYPE: [chars]: SSC board type [dec] is not supported

Explanation Board type does not belong to either C7600-SSC-600 or C7600-SSC-400.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C7600_SSC-7

Error Message %C7600_SSC-7-DP_DISABLE: [chars]: [chars] FPGA is forced disabled.

Explanation This FPGA has been disabled. Forced disabling is a debugging feature.

Recommended Action No action is required.

C7600_SSC600 Messages

This section contains Services SPA Carrier Card (C7600_SSC600) messages.

C7600_SSC600-3

Error Message %C7600_SSC600-3-DCM_FAIL: [chars] FPGA module DCM Lock Failure, status: [hex]

Explanation One or more of the Digital Clock Managers (DCM) for the data path FPGAs failed to lock. This condition indicates a hardware failure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC600-3-DP_COUNTERS: Failed to create DP counter process.

Explanation A process is initialized at bootup to monitor the counters of the data path FPGAs. There was an error in creating this process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC600-3-DP_ERROR: Bus Error initializing [chars] FPGA, addr: [hex].

Explanation This FPGA could not be initialized because of a bus error. This condition indicates a hardware failure, possibly due to a failed FPD upgrade.

Recommended Action Enter the **show hw-module slot fpd** command to gather more information on the specific nature of the condition. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will

supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC600-3-DP_PROGRAMMING: [chars] FPGA failed to program.

Explanation This FPGA failed to program. This condition indicates a hardware failure, possibly due to a failed FPD upgrade.

Recommended Action Enter the **show hw-module slot fpd** command to gather more information on the specific nature of the condition. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC600-3-DPRX_ERR: [chars].

Explanation There was an error receiving data from the SPA, possibly due to data corruption.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC600-3-DPTX_ERR: [chars].

Explanation There was an error sending data to the SPA, possibly due to data corruption.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC600-3-DPTX_QDR: Error clearing QDR queue [dec].

Explanation One of the QDR queues did not clear completely.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %C7600_SSC600-3-SINGLE_SPA_MODE: Module will use only bay [dec]. Bay [dec] is shut.

Explanation The 7600-SSC-400 is in single SPA mode.

Recommended Action This message is informational. No action is required.

Error Message %C7600_SSC600-3-SSC_BAY_SHUT: Bay [dec] is shutdown because 7600-SSC-400 is in single-spa-mode

Explanation The specified bay is shut down. In single SPA mode, only one bay is active.

Recommended Action Refer to the IPsec VPN SPA documentation for information about single SPA mode.

Error Message %C7600_SSC600-3-SW_ERROR: NULL

Explanation This condition occurs when there is a problem in internal software coding; it should not occur under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

C7600_SSC600-7

Error Message %C7600_SSC600-7-DP_DISABLE: [chars] FPGA is forced disabled.

Explanation This FPGA has been disabled. Forced disabling is a debugging feature.

Recommended Action No action is required.

CALL_HOME Messages

This section contains Call Home messages.

CALL_HOME-3

Error Message %CALL_HOME-3-CLI_CMD_RUN_FAILED: No VTY connection available to run CLI command for event notification message (ERR [dec])

Explanation Call Home was unable to open a VTY connection to run CLI commands and collect output for use in notification messages.

Recommended Action Increase the number of configured VTY lines or change the Alert Group subscriptions to make them more restrictive (to reduce the number of simultaneous event triggers).

Error Message %CALL_HOME-3-HTTP_REQUEST_FAILED: Call-Home HTTP request failed (ERR [dec])

Explanation The Call Home HTTP message failed to send to an HTTPS server.

Recommended Action Check whether you have configured a valid trustpoint certificate for secure HTTP messages.

Error Message %CALL_HOME-3-MESSAGE_SIZE_OVER_LIMIT: XML message size over limit, failed to send call-home message. configured message size limit ([dec]) is less than current message minimum length required ([dec]).

Explanation Unable to create the message because the message size exceeds the configured message size limit.

Recommended Action Increase the destination message size limit.

Error Message %CALL_HOME-3-REQUEST_MESSAGE_FAILED: call-home request message failed to send (ERR [dec], [chars])

Explanation An attempt to send a call-home request message has failed.

Recommended Action Configure Call Home to send call-home request messages.

Error Message %CALL_HOME-6-REQUEST_MESSAGE_SUCCEEDED: call-home request message succeeded

Explanation A call-home request message was sent successfully.

Recommended Action No action is required.

Error Message %CALL_HOME-3-SMTP_SEND_FAILED: Unable to send notification using all SMTP servers (ERR [dec], [chars])

Explanation Call Home was unable to send notification using any of the configured SMTP servers.

Recommended Action Verify the configuration of the Call Home SMTP servers and ports used to connect to the servers. Verify that the remote SMTP servers are reachable and that they are operating correctly.

CALL_HOME-4

Error Message %CALL_HOME-4-MESSAGE_IS_TRUNCATED: message size over limit, call-home message is truncated. configured message size limit ([dec]) is less than current message total length required ([dec]).

Explanation The Call Home message is truncated because it exceeds the configured message size limit.

Recommended Action Increase the destination message size limit.

CALL_HOME-5

Error Message %CALL_HOME-5-HTTPS_NOT_SUPPORTED: This image version does not support HTTPS

Explanation The configured message destination is a secure HTTP (HTTPS) URL, but this image does not support secure HTTP.

Recommended Action Upgrade your system image to a crypto image, which supports secure HTTP.

CAMP Messages

This section contains Cooperative Asymmetric Multiprocessing (CAMP) messages.

CAMP-3

Error Message %CAMP-3-MP_INIT_FAILURE: Second CPU initialization failed

Explanation The module CPU unit has two CPU cores in it. The second CPU core did not initialize successfully, so the module is operating with only one CPU core.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CAPI_EC Messages

This section contains card and EtherChannel limitation (CAPI_EC) messages.

CAPI_EC-4

Error Message %CAPI_EC-4-GROUP_RATE_LIMITED: Adding interfaces of the same port-group ([dec]-[dec]) on [chars] to an etherchannel will not increase the channel throughput!

Explanation Because ports on the specified slot use oversubscription, the total throughput of the port channel is limited by the port group.

Recommended Action If more throughput is required, either use ports from a line card that does not use oversubscription, or use ports from different line cards or port groupings on oversubscribed line cards. For example, if the line card has 48 ports in groups of 8, you can select ports 1, 9, 17, 25, 33, and 41 for the same port channel.

Error Message %CAPI_EC-4-RATE_LIMITED: Adding [chars] interfaces to an etherchannel will limit channel throughput to 1 Gbps!

Explanation Because ports on the indicated card type use oversubscription, throughput of the port channel is limited.

Recommended Action If more throughput is required, either use ports from a line card that does not use oversubscription, or use ports from different line cards or port-groupings on oversubscribed line cards. For example, if the line card has 48 ports in groups of eight, you can select ports 1, 9, 17, 25, 33, and 41 for the same port channel.

Error Message %CAPI_EC-4-SLOT_RATE_LIMITED: Adding interfaces on slot [dec] to an etherchannel will limit channel throughput to 1 Gbps!

Explanation Because ports on the indicated slot use oversubscription, the total throughput of the port channel is limited.

Recommended Action If more throughput is required, either use ports from a line card that does not use oversubscription, or use ports from different line cards or port-groupings on oversubscribed line cards. For example, if the line card has 48 ports in groups of eight, you can select ports 1, 9, 17, 25, 33, and 41 for the same port-channel.

CARDMGR Messages

This section contains SIP 400 Card Manager (data plane) (CARDMGR) messages.

CARDMGR-2

Error Message %CARDMGR-2-ESF_DEV_ERROR: An error has occurred on [chars]: [chars]

Explanation The ESF encountered an error during normal operation. Steps need to be taken to resolve the problem and allow traffic through the SIP 400 line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CARDMGR-2-ESF_LOAD_FAIL: [chars] failed to load: [chars]

Explanation The ESF could not be loaded because one of the steps in the startup sequence failed. This ESF is now not operational, which stops the traffic through the SIP-400 line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CARDMGR-2-SPABUS_ERROR: A [chars] FSM SPA bus error has occurred in subslot [dec]

Explanation An FSM SPA bus error occurred during normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CARDMGR-4

Error Message %CARDMGR-4-ESF_DEV_RELOADED: The ESF microcode has automatically recovered from an internal inconsistency.

Explanation An ESF internal inconsistency was detected during normal operation. The ESF microcode was reloaded to resolve the inconsistency.

Recommended Action No action is required unless this message appears multiple times. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CARDMGR-4-ESF_LOAD_WARN: [chars] microcode load: [chars]

Explanation The ESF was loaded even though a potential problem exists.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CARDMGR-4-ESF_LOOPBACK_FAIL: ESF loopback packet test failed: tried [dec] sent [dec] received [dec]

Explanation The ESF loopback packets sent after a microcode reload experienced excessive packet loss. This condition is usually an indication that data traffic through this line card is impacted as well.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CARDMGR-5

Error Message %CARDMGR-5-ESF_DEV_INFO: ESF internal inconsistency corrected on [chars]: [chars]

Explanation An ESF internal inconsistency was detected and corrected during normal operation.

Recommended Action No action is required unless this message appears multiple times. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CARDMGR-5-ESF_UCODE_DONE: Microcode download complete for [chars], time elapsed [time-stamp]

Explanation The ESF microcode was successfully downloaded and started. The forwarding engine is now configured and operational. The time elapsed is measured from the ESF_UCODE_START message.

Recommended Action This is a normal activity at Cisco IOS boot time or after a fatal ESF error occurs. No action is necessary.

Error Message %CARDMGR-5-ESF_UCODE_START: Downloading microcode [chars] for [chars], version=[chars], [chars]

Explanation The platform code was starting to download a particular ESF microcode image.

Recommended Action This is a normal activity at Cisco IOS boot time or after a fatal ESF error occurs. No action is necessary.

CAT6000_SSC Messages

This section contain Services SPA Carrier Card (SSC) messages.

CAT6000_SSC-3

Error Message %CAT6000_SSC-3-BRDTYPE_INDEX_MISMATCH: [chars]: Board type ([dec]) and card index ([dec]) do not match

Explanation A mismatch was detected between the card index and board type. For the C7600-SSC-400, the board type is 4 and the card index is 191. For the C7600-SSC-600, the board type is 5 and the card index is 224.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-DCM_FAIL: [chars]: [chars] FPGA module DCM Lock Failure, status:%08x

Explanation One or more of the digital clock managers (DCM) for the data path FPGAs failed to lock. This indicates a hardware failure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-DPRX_ERR: [chars]. [chars]

Explanation An error occurred while receiving data from the SPA, possibly due to data corruption.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-DPTX_ERR: [chars]: [chars].

Explanation An error occurred while sending data to the SPA, possibly due to data corruption.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-DPTX_ERR_MECC: [chars]: [chars]. ERR addr register:0x%08lx.

Explanation An error occurred while sending data to the SPA, possibly due to data corruption.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-DPTX_ERR_SECC: [chars]: [chars]. Single bit error count:0x%08lx, ECC ERR addr register:0x%08lx.

Explanation A data corruption error was detected and automatically fixed while sending data to the SPA.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-DPTX_QDR: [chars]: Error clearing QDR queue [dec].

Explanation One of the QDR queues did not flush completely.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-DP_COUNTERS: [chars]: Failed to create DP counter process.

Explanation A process is spawned on bootup to monitor the counters of the data path (DP) FPGAs. There was an error creating this process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-DP_ERROR: [chars]: Bus Error initializing [chars] FPGA, addr: 0x%08x.

Explanation This FPGA could not be initialized due to a bus error. This condition indicates a hardware failure, possibly due to a failed FPD upgrade.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show hw-module slot fpd** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-DP_PROGRAMMING: [chars]: [chars] FPGA failed to program.

Explanation This FPGA failed to program. This condition indicates a hardware failure, possibly due to a failed FPD upgrade.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show hw-module slot fpd** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-SINGLE_SPA_MODE: [chars]: Module will use only bay [dec]. Bay [dec] is shut.

Explanation The 7600-SSC is in single SPA mode.

Recommended Action No action is required.

Error Message %CAT6000_SSC-3-SSC_BAY_SHUT: [chars]: Bay [dec] is shutdown because [chars] is in single-spa-mode

Explanation The specified bay is shut down. In single SPA mode, only one bay is active.

Recommended Action Refer to the IPsec VPN SPA documentation for information about single SPA mode.

Error Message %CAT6000_SSC-3-SW_ERROR: [chars]: [chars]

Explanation This error indicates a problem in internal software coding.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SSC-3-UNKNOWN_BRDTYPE: [chars]: SSC board type [dec] is not supported

Explanation The board type is not supported.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CAT6000_SSC-7

Error Message %CAT6000_SSC-7-DP_DISABLE: [chars]: [chars] FPGA is forced disabled.

Explanation This FPGA has been forced disabled. This is a debugging feature.

Recommended Action No action is required.

CAT6000_SVC Messages

Error Message %CAT6000_SVC_APP_HW-0-DPFPGAINTFATALERR: [chars], hardware register offset [hex] value [hex]

Explanation DPFGA fatal error

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-2-APP_PROC_ALERT: Service Application Processor alert: [chars]

Explanation A hardware problem was detected on the Service Application Processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-2-HW_INTERRUPT: Hardware interrupt for Device: [chars]

Explanation A hardware interrupt occurred on the Line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-2-UNSUPPORTED_HW: Unsupported Hardware: [chars]

Explanation Unsupported hardware was found on the Line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-BAD_IFCOMTYPE: Bad ifcom message type=[int]

Explanation A Trifecta module passed down a message that the RP software was not prepared to handle.

Recommended Action lcp-services

Error Message %CAT6000_SVC_APP_HW-3-DPFPGAADRVFAIL: DPFPGA object driver [chars] failure

Explanation DPFPGA object driver create or pll check or TSE and XAUIs bring-up or check all blocks except GLOBAL and XAUIs or check global interrupt register or check XAUIs global status or check XAUIs global error status failure

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-DPFPGAHWFAIL: Hardware bring-up failure

Explanation The DPFPGA manager failed to bring-up the hardware prior to constructing the device object driver.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-DPFPGAIMAGE: DPFPGA image [chars] error, IOFPGA config flash status register [hex]

Explanation DPFPGA image download or CRC error, the actual hardware reason is stored in IOFPGA config flash register

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-DPFPGAINTERR: [chars], hardware register offset [hex] value [hex]

Explanation DPFPGA error

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-DPFPGAMNGRFAIL: DPFPGA manager [chars] failure

Explanation The DPFPGA manager create various processes failure or initialization failure

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-DPFPGASEUERR: A [chars] occurred on the DPFPGA. SEU_EMR_REG = [hex]

Explanation DPFPGA error

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-DPFPGATIMEOUT: DPFPGA [chars] timeout after [dec]ms

Explanation DPFPGA init done or pll lock timeout during bring-up

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-IPCALLOCFAIL: Failed to allocate IPC buffer [chars]

Explanation The Linecard failed to allocate a buffer for communication with the Route Processor (Draco).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-IPCPORT: Failed to [chars] IPC port '[chars]', error [chars]

Explanation The Linecard failed to create a port for communication with the Route Processor (Draco).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-IPCSENDFAIL: Failed to send IPC message [chars]

Explanation The Linecard failed to send a message to the Route Processor (Draco).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-3-SHMEMFAIL: Shared memory write time out after [dec]ms

Explanation The DPFPGA manager failed to get into the critical section for update the statistics counters in the PCI shared memory

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CAT6000_SVC_APP_HW-6-APP_FPGAVER_MISMATCH: Module [dec]: [chars]

Explanation Service application FPGA version mismatch.

Recommended Action No action is required.

Error Message %CAT6000_SVC_APP_HW-6-APP_RESTART_REASON: [chars] : [chars]

Explanation Service application restart reason.

Recommended Action No action is required.

Error Message %CAT6000_SVC_APP_HW-6-APPONLINE: Service application in slot [int] is online.

Explanation Service application has finished booting up and is online

Recommended Action No action is required.

CAT6000_TRIFECTA Messages

CAT6000_TRIFECTA-0

Error Message %CAT6000_TRIFECTA-0-DPFPGAINTFATALERR: [chars], hardware register offset [hex] value [hex]

Explanation A DPFPGA fatal error has occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support**

command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

CAT6000_TRIFECTA-2

Error Message %CAT6000_TRIFECTA-2-APP_PROC_ALERT: Service Application Processor alert: [chars]

Explanation A hardware problem was detected on the Service Application Processor.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-2-HW_INTERRUPT: Hardware interrupt for Device: [chars]

Explanation A hardware interrupt occurred on the line card.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

CAT6000_TRIFECTA-3

Error Message %CAT6000_TRIFECTA-3-BAD_IFCOMTYPE: Bad ifcom message type=[int]

Explanation A Trifecta module passed down a message that the RP software was not prepared to handle.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the

Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-DPFPGADRVFAIL: DPFPGA object driver [chars] failure

Explanation DPFPGA object driver create or pll check or TSE and XAUIs bring-up or check all blocks except GLOBAL and XAUIs or check global interrupt register or check XAUIs global status or check XAUIs global error status failure

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-DPFPGAHWFAIL: Hardware bring-up failure

Explanation The DPFPGA manager failed to bring-up the hardware prior to construct the device object driver

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-DPFPGAIMAGE: DPFPGA image [chars] error, IOFPGA config flash status register [hex]

Explanation DPFPGA image download or CRC error, the actual hardware reason is stored in IOFPGA config flash register

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-DPFPGAINTErr: [chars], hardware register offset [hex] value [hex]

Explanation A DPFPGA error has occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-DPFPGAMNGRFAIL: DPFPGA manager [chars] failure

Explanation The DPFPGA manager has created a processes failure or an initialization failure.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-DPFPGATIMEOUT: DPFPGA [chars] timeout after [dec]ms

Explanation DPFPGA init done or pll lock timeout during bring-up

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-IPCALLOCFAIL: Failed to allocate IPC buffer [chars]

Explanation The linecard failed to allocate a buffer for communication with the Route Processor (Draco).

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-IPCPORT: Failed to [chars] IPC port '[chars]', error [chars]

Explanation The linecard failed to create a port for communication with the Route Processor (Draco).

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-IPCSENDFAIL: Failed to send IPC message [chars]

Explanation The linecard failed to send a message to the Route Processor (Draco).

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CAT6000_TRIFECTA-3-SHMEMFAIL: Shared memory write time out after [dec]ms

Explanation The DPFPGA manager failed to get into the critical section for update the statistics counters in the PCI shared memory.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

CBUS Messages

This section contain Cisco Bus Controller (CBUS) messages.

CBUS-3

Error Message %CBUS-3-CCBCMDFAIL3: Controller [dec], cmd ([dec] [hex], [hex], [hex]) failed ([hex])

Explanation A command control block (CCB) command sent from the system to an interface processor failed to complete successfully.

Recommended Action The system recovered by generating an error code for the requester. No action is necessary.

Error Message %CBUS-3-CCBSEMINFO: CCB semaphore [chars] traceback

Explanation Displays information about the sending and receiving of command control block (CCB) semaphores.

Recommended Action No action is required if the frequency of the message is not affecting the operation of the switch. Frequent messages may be the result of software bugs (CSCee82681, CSCin54713) in earlier Cisco IOS releases. If conditions warrant, upgrade to a later Cisco IOS release.

Error Message %CBUS-3-SRPRSET: Interface [chars], Error ([hex]) [chars] - srp_reset()

Explanation A command to reset an SRP interface was issued by the RSP, but the interface did not respond to the command within the expected time delay. The delay is given for the processor to return the buffers that it has allocated and to perform any necessary cleanup. This condition may be caused by a large number of buffers that have been allocated by the interface due to either heavy traffic or a hardware problem with the interface.

Recommended Action Verify that the card is properly seated. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CCE_DP Messages

This section contains Common Classification Engine Data Plane (CCE_DP) messages related to the application firewall for HTTP.

CCE_DP-4

Error Message %CCE_DP-4-CCE_DP_DYNAMIC_CLASS: Sig:[dec] Content type does not match the specified type - [chars] [chars] from %i:[dec] to %i:[dec]

Explanation The HTTP message violates the content-type-verification application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

Error Message %CCE_DP-4-CCE_DP_ICMP: ICMP Classification Result Invalid

Explanation The HTTP message violates the request-method application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

Error Message %CCE_DP-4-CCE_DP_NAMED_DB: Sig:[dec] Content type not found - [chars] [chars] from %i:[dec] to %i:[dec]

Explanation The HTTP message violates the content-type-verification application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

Error Message %CCE_DP-4-CCE_DP_PACKET_PATH: Sig:[dec] Content type: [chars] does not match the Accept-Type from %i:[dec] to %i:[dec]

Explanation The HTTP message violates the content-type-verification application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

Error Message %CCE_DP-4-CCE_DP_POLICY: Sig:[dec] HTTP protocol violation detected - [chars] [chars] from %i:[dec] to %i:[dec]

Explanation The HTTP message violates the strict-http application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

Error Message %CCE_DP-4-CCE_DP_TARGET: content-length

Explanation The HTTP message violates the content-length application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

Error Message %CCE_DP-4-CCE_DP_TIMERS: Sig:[dec] Content size %lu out of range - [chars] [chars] from %i:[dec] to %i:[dec]

Explanation The HTTP message violates the content-type-verification application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

Error Message %CCE_DP-4-CCE_DP_UDP: UDP Classification Result Invalid

Explanation The HTTP message violates the request-method application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

Error Message %CCE_DP-4-CCE_DP_VFR: Fragment classification result invalid

Explanation The HTTP message violates the max-uri-len application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

Error Message %CCE_DP-4-CCE_DP_VTCP: Virtual VTCP Classification result invalid

Explanation The HTTP message violates the max-hdr-len application firewall inspection rule.

Recommended Action This message is informational only, but may indicate a security problem.

CCH323 Messages

Error Message %CCH323-3-CANNOT_CREATE_CCB: [chars]: cannot create the H.323 ccb Tree

Explanation Creation of the H.323 CCB Tree failed. The system memory pool may be exhausted.

Recommended Action This can be a catastrophic error.

CE3 Messages

Error Message %CE3-1-CONFIGURE: Failed to configure [dec] interfaces in bay [dec], shutting down bay

Explanation The CE3 hardware failed. Some components on the board failed to initialize.

Recommended Action Replace the CE3 port adapter.

CFGMGR Messages

This section contains Configuration Manager (CFGMGR) messages.

CFGMGR-1

Error Message %CFGMGR-1-UNABLE_TO_SEND_RUN_CFG: unable to send running-cfg, bits: [hex], retrying...

Explanation The system is attempting to push the running configuration to the slaves.

Recommended Action No action is required.

Error Message %CFGMGR-1-UNABLE_TO_SEND_STARTUP_CFG: unable to send startup-cfg, bits: [hex], retrying...

Explanation The system is attempting to push the startup configuration to the slaves.

Recommended Action No action is required.

CFGMGR-3

Error Message %CFGMGR-3-ERROR_APPLYING_STARTUP_CFG: Error Applying Startup Config to Running Config

Explanation The system encountered an error while automatically applying the startup configuration to the running configuration.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CFGMGR-4

Error Message %CFGMGR-4-SLAVE_WRITING_STARTUP_CFG: only master can do that

Explanation An attempt to write to the startup configuration was made on a slave, but is allowed only on the master.

Recommended Action No action is required.

CFGMGR-6

Error Message %CFGMGR-6-APPLYING_RUNNING_CFG: as new master

Explanation The new master is applying a backed-up running configuration.

Recommended Action No action is required.

Error Message %CFGMGR-6-SPURIOUS_SLAVE_ADD: CFG MGR Recvd Spurious New Slave Notification: [int]

Explanation Configuration Manager was notified about a slave that it already knows about.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CFGMGR-6-UNABLE_TO_NVGEN_BUSY_RUNNING_CFG: config file busy, retrying...

Explanation The master is temporarily unable to complete the nonvolatile generation process (NVGEN) to construct the running configuration.

Recommended Action No action is required.

Error Message %CFGMGR-6-UNABLE_TO_NVGEN_RUNNING_CFG: config file too large...

Explanation The master is unable to complete the nonvolatile generation process (NVGEN) to construct the running configuration because the configuration file is too large.

Recommended Action Remove some configuration commands.

CFIB Messages

This section contains Constellation Forwarding Information Base (CFIB) messages.

CFIB-3

Error Message %CFIB-3-CFIB_UNEXPECTED_OCE_CHAIN: Unexpected oce length
obj : **Unrecognized format** ‘ %p’ type: [dec]

Explanation The Output Chain Element(OCE) specified in the system message is invalid because it has exceeded the maximum depth. One known cause is invalid static route configuration. Traffic for this path will be dropped.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CFIB-3-REQ_VPN_MAPPER_IPV4_FAIL: CFIB vpn mapper request fails for
ipv4 appId [chars]

Explanation All vpn ids for ipv4 app are used

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CFIB-3-REQ_VPN_MAPPER_IPV6_FAIL: CFIB vpn mapper request fails for ipv6 appid in [chars]

Explanation All vpn ids for ipv6 app are used.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

CFIB-7

Error Message %CFIB-7-CFIB_ADJBASE: Failed to free adjacency base from hash table (entry not found)

Explanation An error has occurred while attempting to free an adjacency from a hash table. This condition might be caused by an inconsistent use of hash key during creation of the adjacency hash table. This condition might cause a memory leak

Recommended Action Copy the message exactly as it appears on the console or in the system log. To check memory usage over time, enter the **show process memory** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CFIB-7-CFIB_EXCEPTION: FIB TCAM exception, Some entries will be software switched

Explanation Because there are no free memory blocks in the FIB TCAM, some switching will be done in software rather than hardware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CFIB-7-END_CFIB_EXCEPTION: FIB TCAM exception cleared, all CEF entries will be hardware switched

Explanation Because free memory blocks have become available in the FIB TCAM, switching will be done in hardware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CFIB_TUNNEL_RP Messages

This section contains Constellation Forwarding Information Base (CFIB) messages.

CFIB_TUNNEL_RP-4

Error Message %CFIB_TUNNEL_RP-4-TUN_RECIR_FORCED: The current configuration of hardware and software requires MPLS tunnel recirculation to be enabled. 'mls mpls tunnel-recir' has been added to the running configuration

Explanation When the chassis contains a SIP-600 line card, and VRF forwarding is configured on a tunnel interface, MPLS tunnel recirculation must be enabled to prevent the creation of corrupted packets from EARL. The **mls mpls tunnel-recir** command has been added to the running configuration automatically.

Recommended Action No action is required.

CFM_CONST Messages

This section contains Connectivity Fault Management (CFM) messages.

CFM_CONST-3

Error Message %CFM_CONST-3-AEB_ON_EC_UNSUPPORTED: CFM AEB mode is unsupported on etherchannels. Cannot set CFM AEB mode

Explanation CFM AEB mode is unsupported on etherchannels.

Recommended Action Set CFM AEB mode only on physical (unbundled) ports.

Error Message %CFM_CONST-3-CFM_ON_SUPERVISOR_PORTS_DISABLED: CFM is enabled system wide except it's disabled on supervisor ports due to spanning tree configuration.

Explanation Unable to program all port ASIC MAC match registers on supervisor ports for CFM due to hardware limitations on these ports. Continued with enabling CFM system-wide to allow coexistence with other protocols such such as PVST.

Recommended Action System has handled this by disabling CFM on all supervisor ports. If this is unacceptable configure STP mode to MST and re-enable CFM or disable CFM completely.

Error Message %CFM_CONST-3-CFM_ON_SUPERVISOR_PORTS_DISALLOWED: CFM is enabled system wide except on supervisor ports due to spanning tree configuration.

Explanation Unable to program all port ASIC MAC match registers on supervisor ports for CFM due to hardware limitations on these ports. Continued with enabling CFM system-wide to allow coexistence with other protocols such such as PVST.

Recommended Action Administrator action may be required. Ensure no CFM traffic is presented to any supervisor ports via configuration. If not possible configure STP mode to MST and re-enable CFM or disable CFM completely

Error Message %CFM_CONST-3-MAC_OPERATIONALLY_ERROR: The set MAC operationally action on interface [chars] has encountered an error.

Explanation The set MAC operationally action failed and ended abnormally.

Recommended Action No action is required.

Error Message %CFM_CONST-3-MATCH_REG_GLOBAL_RESERVE_FAILED: Unable to program port ASIC MAC match register on one or more slots. Cannot run CFM

Explanation The Content Flow Monitor (CFM) attempted to reserve and program the port ASIC MAC match registers, but there are insufficient match registers available. CFM cannot be run.

Recommended Action To free MAC match registers, disable protocols that use the MAC match register. Protocols using port ASIC match registers can be viewed with the **remote command switch show platform mrm info** command.

Error Message %CFM_CONST-3-MATCH_REG_RESERVE_FAILED: Unable to reserve port ASIC MAC match register on slot [dec]. Cannot run CFM

Explanation CFM attempted to reserve a port ASIC MAC match register for the slot indicated and there is no register available. CFM cannot be run without support from all line cards.

Recommended Action To free MAC match registers, disable protocols that use the MAC match register. Protocols using port ASIC match registers can be viewed with the **remote command switch show platform mrm info** command.

Error Message %CFM_CONST-3-MATCH_REG_RESERVE_ON_SUPERVISOR_FAILED: Unable to program port ASIC MAC match register on supervisor slot [dec]. Cannot run CFM on supervisor ports

Explanation CFM attempted to reserve a port ASIC MAC match register for the indicated supervisors' slot and there is no register available. CFM cannot run on supervisors ports.

Recommended Action Protocols that use the MAC match register must be disabled to free MAC match registers. Protocols using port ASIC match registers can be viewed with **remote command switch show platform mrm info**.

Error Message %CFM_CONST-3-MST_SIMULATE_PVST_PLAT_ENABLED_FAILED: Unable to enable CFM when spanning tree mode is MST and PVST simulation is enabled on the platform

Explanation CFM does not work along with MST plus PVST simulation.

Recommended Action Disable PVST simulation on the platform.

Error Message %CFM_CONST-3-STP_MODE_CHANGE_NOT_ALLOWED: Unable to change STP mode while CFM is enabled

Explanation STP modes PVST and rapid PVST are not compatible with CFM due to hardware limitations.

Recommended Action Either configure STP mode MST or disable CFM.

CFM_CONST-6

Error Message %CFM_CONST-6-CFM_ON_SUPERVISOR_PORTS_ENABLED: CFM is enabled on supervisor ports also due to spanning tree mode change to mst configuration.

Explanation Able to program all port ASIC MAC match registers on supervisor ports for CFM due to spanning tree mode change to mst configuration.

Recommended Action No action is required.

Error Message %CFM_CONST-6-MAC_OPERATIONALLY: Interface [chars] is MAC operationally [chars].

Explanation The specified interface is MAC operationally up or down.

Recommended Action No action is required.

CH-1 Messages

Error Message %CH-1-RM_STATE: _state_ attribute still available

Explanation The _state_ attribute was still available in CH db re_auth recand it should have been removed by now as part of the re_auth process.

Recommended Action No action required.

CHARLOTTE Messages

This section contains Dual OC-3 PoS port adapter (CHARLOTTE) messages.

CHARLOTTE-1

Error Message %CHARLOTTE-1-INITFAIL: Failed to initialize port [dec].

Explanation The dual OC-3 PoS port adapter failed to complete IDB initialization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CHARLOTTE-1-PCIINITFAIL: PCI initialization failed.

Explanation The dual OC-3 PoS port adapter failed to complete hardware initialization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CHARLOTTE-3

Error Message %CHARLOTTE-3-INVALIDPCI: Device reported [hex]

Explanation The dual OC-3 PoS port adapter hardware failed. The PCI device has an invalid ID.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CHARLOTTE-3-UNSUPPORTED: [chars]

Explanation The dual OC-3 PoS port adapter hardware is not supported on the specified platform.

Recommended Action Upgrade your system so that it supports the dual OC-3 PoS port adapter.

CHKPT Messages

This section contains checkpointing (CHKPT) messages.

CHKPT-3

Error Message %CHKPT-3-INVALID_CALLBACK_ARG: Attempt to add a checkpointing client with an invalid [chars] argument

Explanation An invalid argument was supplied to an internal application program interface (API). As a result, the system state between one or more checkpointing clients might not be properly synchronized. The message output identifies the type of error that occurred. This failure is probably caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-3-ISSU_MSG_NOT_COMPATIBLE: Checkpointing message type not compatible

Explanation An error was detected when verifying the checkpointing message type compatibility between checkpointing client peers. As a result, the system state between one or more checkpointing clients might not be properly synchronized. This failure is probably caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-3-ISSU_NEGO_FAILED: Checkpointing Facility failed to start ISSU negotiation with the peer ([chars])

Explanation The checkpointing facility was unable to start the ISSU negotiation successfully. The failure to start negotiation is a fatal error condition and is probably caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-3-ISSU_RCV_TRANSFORM_FAILED: Checkpointing receive message header transformaton failed ([chars])

Explanation An error was detected while performing a receive-level transformation on a checkpointing message. As a result, the system state between one or more checkpointing clients might not be properly synchronized. The message output identifies the type of error that occurred. This failure is probably caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-3-ISSU_XMIT_TRANSFORM_FAILED: Checkpointing transmit message header transformaton failed ([chars])

Explanation An error was detected while performing a transmit-level transformation on a checkpointing message. As a result, the system state between one or more checkpointing clients might not be properly synchronized. The message output identifies the type of error that occurred. This failure is probably caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-3-RMI_CALLBACK: Checkpointing Facility encountered an error while processing a callback from the Resource Manager (RMI), [chars]

Explanation The checkpointing facility registers with the Resource Manager (RMI) to receive status notifications about resources (such as IPC) and uses them to throttle the sending of messages to the peer. The checkpointing facility encountered an error while processing a callback from RMI. This error is probably caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-3-RMI_FAILED: Checkpointing Facility failed to register with the Resource Manager (RMI), [chars]

Explanation The checkpointing facility registers with the Resource Manager (RMI) to get status notifications about resources (such as IPC) and uses them to throttle the sending of messages to the peer. The checkpointing facility was unable to register itself with RMI and cannot throttle the sending of any messages. The system may still operate normally. This error is probably caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-3-SYSMGR_LOOKUP: Failed to get process Job ID from SysMgr

Explanation The checkpointing facility was unable to get a job ID for an ION (run-time Modular IOS) process from the System Manager. The job ID lookup is done when any ION checkpointing facility client first registers itself with the checkpoint facility. The error does not affect the checkpointing capabilities of the system. The job ID is used by the reset manager for tracking process restarts.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-3-TRANSFORMFAILED: Checkpointing msg header transform failed ([dec])

Explanation A transform error related to check pointing occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-3-TRANSMIT_FAILED: Checkpointing message transmission failure ([chars])

Explanation An error was detected when transmitting a checkpointing message between checkpointing client peers. As a result, the system state between one or more checkpointing clients might not be properly synchronized. The failure is probably caused by a software error. The message output identifies the type of error that occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

CHKPT-4

Error Message %CHKPT-4-GET_BUFFER: Checkpointing ISSU session ([dec]) failed to get buffer

Explanation The checkpointing ISSU session failed to get a buffer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-4-INIT: Checkpoint [chars] initialization failed in RF state ([chars])

Explanation The checkpointing standby initialization failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-4-INVALID_STATE: Checkpoint State ([dec]) is invalid

Explanation The checkpointing state is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-4-MSG_SEND: Checkpointing ISSU session ([dec]) failed to send message

Explanation The checkpointing ISSU session failed to send a negotiate message to the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CHKPT-4-NOCLIENT: CF client is NULL, ([chars])

Explanation The checkpointing facility cannot send the message because the client is NULL.

Recommended Action This is a warning message; no action is required.

Error Message %CHKPT-4-NOIPCPORT: IPC port is NULL, ([chars])

Explanation The checkpointing facility cannot send the message because the IPC port information is NULL.

Recommended Action This is a warning message; no action is required.

Error Message %CHKPT-4-NOMESSAGE: Message is NULL, ([chars])

Explanation The checkpointing facility cannot send the message because the message is NULL.

Recommended Action This is a warning message; no action is required.

CHOPIN Messages

This section contains Versatile Interface Processor (VIP) multichannel port adapter messages.

CHOPIN-2

Error Message %CHOPIN-2-TXBADVC: [chars], vc [dec]

Explanation The VIP multichannel port adapter had a bad transmit VC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech** and **show controllers vip slot tech-support** commands and your pertinent troubleshooting logs.

CI Messages

This section contains chassis interface (CI) messages and temperature alarms.

CI-0

Error Message %CI-0-SHUT_LC_CRITICALTEMP: Line cards shutdown as critical temperature exceeded [chars]

Explanation The chassis temperature has exceeded a critical threshold and line cards have been shut down.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-0-SHUT_LC_FANFAIL: Line cards are being shut on fan failure

Explanation The chassis fan tray failure timer has expired and line cards have been shut down.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-0-SHUT_LC_FANGONE: Line cards are being shut as fan tray is missing

Explanation The chassis fan missing timer has expired and line cards have been shut down.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CI-1

Error Message %CI-1-CHASSISFAULTYSENSOR: Alarm: Chassis temperature sensor is faulty

Explanation This error indicates that the chassis temperature sensor is faulty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-1-CHASSISTEMP_CRITICAL: Chassis temperature CRITICAL limit exceeded

Explanation The system chassis temperature critical limit has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-1-CRITICALTEMP_LC_SHUT: Alarm: [chars], [chars], [chars], [chars], [chars]

Explanation This error indicates that line cards have been shut down due to the core temperature exceeding the critical threshold.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-1-FAN_FAILURE_LC_SHUT: Alarm: [chars], [chars], [chars], [chars], [chars]

Explanation This error indicates that line cards have been shut down due to total fan failure or a missing fan tray.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CI-3

Error Message %CI-3-CHASSISTEMPLOW: Chassis temperature too low

Explanation The system chassis temperature is below -15 degrees Celsius.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-3-CHASSISTEMPMAJOR: Chassis temperature major limit exceeded

Explanation The system chassis temperature major limit has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-3-CHASSISTEMPMINOR: Chassis temperature minor limit exceeded

Explanation The system chassis temperature minor limit has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-3-MIB_ALM_SUBMIT: MIB alarm: [chars], [chars], [chars], [chars], [chars]

Explanation An alarm message is contained in the MIB.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-3-PS_FAIL: Power supply module [dec] failure

Explanation The specified power supply module has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CI-4

Error Message %CI-4-MULTIPLE_FAN_FAILURE: [chars] [dec] [chars]
[chars]

Explanation When two or more of the fans in the chassis fan tray have failed or the fan tray is missing, the line cards will be powered down after the user-configured timer interval. This warning message is generated one minute after the fans have failed or the fan tray is detected to be missing.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CI-6

Error Message %CI-6-CHASSIS_SHUTDOWN: Chassis shutdown. Card/subcard not powered up

Explanation The chassis is shut down. Line cards will not be powered up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-6-FANOK: Fan tray module OK

Explanation The chassis fan tray is operating normally.

Recommended Action No action is required.

Error Message %CI-6-LINECARD_SHUTDOWN: [chars]

Explanation When two or more of the fans in the chassis fan tray have failed or the fan tray is missing, the line cards will be powered down after a user configured timer interval. This message is generated before shutting down line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-6-PS_MISSING: Power supply module [dec] missing

Explanation The specified power supply module is not present in the system

Recommended Action No action is required.

Error Message %CI-6-PSNORMAL: Power supply [int] normal

Explanation A failed power supply is working normally now.

Recommended Action If the situation does not correspond with a normal operation of the system's power supplies, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CI-6-PS_OK: Power supply module [dec] OK

Explanation The specified power supply module is operating normally.

Recommended Action No action is required.

Error Message %CI-6-PS_PRESENT: Power supply module [dec] present

Explanation The specified power supply module is present in the system .

Recommended Action No action is required.

CLNS Messages

This section contains OSI Connectionless Network Service messages.

CLNS-3

Error Message %CLNS-3-CKSUMERR: [chars]: L[dec] LSP [chars] database checksum error, restarting

Explanation A hardware or software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CLNS-3-IPLIST: ISIS: [chars] [hex], [IP_address] [IP_address]

Explanation An internal error has occurred in the intermediate system-to-intermediate system (ISIS).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CLNS-3-LSPLIST: ISIS: [chars] [hex], index [dec]

Explanation An internal error has occurred in the intermediate system-to-intermediate system (ISIS).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CLNS-3-NSF_CP_INIT_ERR: Checkpoint initialization error ([chars])

Explanation An unrecoverable error occurred during initialization of the check point client.

Recommended Action At this time there is no workaround. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CLNS-4

Error Message %CLNS-4-AUTH_FAIL: [chars]: [chars] authentication failed

Explanation An ISIS packet (IIH, CSNP, PSNP, or LSP) was received and did not pass the authentication check.

Recommended Action If the error persists, check the originating router for matching authentication mode and password.

Error Message CLNS-4-BADINTFCLNSMTU: [chars] Invalid interface clns MTU [dec]

Explanation The interface MTU has become unusable while ISIS is running on the interface. This condition may be temporary and recoverable.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CLNS-4-LSP_MAXSEQ: [chars][chars]: attempt to exceed LSP maximum sequence number for LSP [chars]

Explanation An attempt was made to exceed the maximum sequence number for an LSP.

Recommended Action Protocol will shut down for a period of (max-lsp-lifetime) + 1 minute. This is an improbable natural occurrence. Investigate to find the source of any out-of-order reception, generation, or incrementing of this LSP's sequence number.

CLNS-5

Error Message %CLNS-5-NSF_ISSU_NEGO_FAIL: ISIS NSF cancelled - ISSU negotiation failed for NSF CISCO

Explanation ISIS cancelled the nonstop forwarding (NSF) restart because ISSU negotiation failed in Cisco mode.

Recommended Action Enter the **show issu negotiated version** command and look for additional information in the output of the command.

CLUE Messages

This section contains Compact Local Unit Exchange (CLUE) messages.

CLUE-3

Error Message %CLUE-3-CHECKSUM_ERROR: CLUE record checksum error in record, id [dec], record starting address %#x, new checksum %#x, previous checksum %#x

Explanation A Compact Local Unit Exchange (CLUE) record stored in the CLUE memory has a bad checksum and cannot be accessed. The CLUE record was either modified by a CLUE client but not committed or it was modified by memory corruption.

Recommended Action Internal CLUE client software will attempt to automatically correct the error. If the error persists, reload the unit.

Error Message %CLUE-3-CLIENT_REGISTRY_FULL: Maximum of [dec] CLUE clients registered. Cannot register callback %#x

Explanation No more Compact Local Unit Exchange (CLUE) clients can be registered because the client registry for callback service is full. Unregistered CLUE clients will not be informed about CLUE service events such as CLUE service ready status or CLUE record corruptions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show clue** commands and your pertinent troubleshooting logs.

Error Message %CLUE-3-COMMIT_FAILED: CLUE cannot commit record, id [dec]

Explanation The specified CLUE record was not committed in the CLUE storage memory, so the CLUE record cannot be accessed. Either the CLUE record was not allocated by the CLUE client before committing or there was an error in the internal CLUE record index table.

Recommended Action The internal CLUE client software will attempt to automatically correct the error. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CLUE-3-EOR_CORRUPT: CLUE record corruption in end of record field, record id [dec], record starting address %#x

Explanation A CLUE record's end of record delimiter was corrupted in the CLUE storage memory, so the CLUE record cannot be accessed. The CLUE record was overwritten by the previous CLUE record or by a memory corruption.

Recommended Action Internal CLUE client software will attempt to automatically correct the error. If the error persists, reload the unit.

Error Message %CLUE-3-INDEX_BUILD_FAIL: Failed to build CLUE internal record index due to [chars]

Explanation CLUE could not build an internal record index table, so the CLUE service will not be available and any data in the CLUE storage cannot be accessed. This failure can occur either when CLUE storage does not exist or when any CLUE record within the CLUE storage is corrupted.

Recommended Action Internal CLUE client software will attempt to automatically correct the error. If the error persists, reload the unit.

Error Message %CLUE-3-INIT_ERROR: Failed to initialise the reserved memory for new CLUE context due to [chars]

Explanation Reserved memory for the Compact Local Unit Exchange (CLUE) storage area was not initialized due to the reason given. The CLUE storage area will not be available to provide any CLUE service.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show clue** commands and your pertinent troubleshooting logs.

Error Message %CLUE-3-INTERNAL_SW_ERROR: [chars]

Explanation An internal Compact Local Unit Exchange (CLUE) software error was reported.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show clue** commands and your pertinent troubleshooting logs.

Error Message %CLUE-3-INVALID_AREA: Either address %#x or size [dec] reserved for CLUE storage area is invalid

Explanation An internal Compact Local Unit Exchange (CLUE) software error occurred. In order to initialize and use the reserved area as a CLUE storage area, CLUE expected a non-zero reserved memory address and a non-zero reserved memory size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show clue** commands and your pertinent troubleshooting logs.

Error Message %CLUE-3-INVALID_REC_DATA_SIZE: CLUE record size [dec] is invalid to allocate CLUE record [dec]

Explanation An internal Compact Local Unit Exchange (CLUE) software error occurred. When the CLUE client requested to allocate the CLUE record, the record size was zero or was not the same as expected. The CLUE record was not allocated.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show clue** commands and your pertinent troubleshooting logs.

Error Message %CLUE-3-INVALID_REC_ID: Invalid CLUE record id [dec] has been received so CLUE cannot [chars] it

Explanation An internal Compact Local Unit Exchange (CLUE) software error occurred. The indicated action cannot be carried out on the specified CLUE record ID because the record ID is not valid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show clue** commands and your pertinent troubleshooting logs.

Error Message %CLUE-3-NOT_ENOUGH_CLUE_STORAGE: CLUE storage has not enough space to allocate record, id [dec] and data size [dec]

Explanation An internal Compact Local Unit Exchange (CLUE) software error occurred. The CLUE record was not allocated for the record ID because not enough space for CLUE storage was reserved or the CLUE storage contingency space was full.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show clue** commands and your pertinent troubleshooting logs.

Error Message %CLUE-3-NOT_ENOUGH_MEMORY: [dec]-bytes of local memory has not enough space left to reserve [dec]-bytes of CLUE storage

Explanation Insufficient local memory was available to reserve the required Compact Local Unit Exchange (CLUE) storage space.

Recommended Action Add more local memory.

Error Message %CLUE-3-NO_SIGNATURE: CLUE cannot [chars] record, id [dec]

Explanation The specified CLUE record was not serviced because CLUE storage was not available or because the CLUE storage signature was invalid.

Recommended Action The internal CLUE client software will attempt to automatically correct the error. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CLUE-3-SOR_CORRUPT: CLUE record corruption in start of record field, record id [dec], record starting address %#x

Explanation A CLUE record's start of record delimiter was corrupted in the CLUE storage memory, so the CLUE record cannot be accessed. The CLUE record was overwritten by the previous CLUE record or by a memory corruption.

Recommended Action The internal CLUE client software will attempt to automatically correct the error. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CMP Messages

This section contains Cluster Membership Protocol (CMP) module messages.

CMP-5

Error Message %CMP-5-NBR_UPD_SIZE_TOO_BIG: Number of neighbors in neighbor update is [int], maximum number of neighbors allowed in neighbor update is [int]

Explanation The number of cluster neighbors in the clustering neighbor update packet exceeds the number of neighbors supported by the clustering module design.

Recommended Action No action is required.

CNS Messages

This section contains Cisco Networking Services (CNS) messages.

CNS-3

Error Message %CNS-3-MEMORY: [chars]

Explanation CNS subsystem has experienced a problem getting the required memory to complete this operation.

Recommended Action Check system memory for other memory allocation errors and contact Technical support for problem resolution. In the absence of IOS errors, upgrading the memory in the network device may be required.

Error Message %CNS-3-TRANSPORT: [chars]

Explanation The CNS subsystem has experienced a problem contacting an external application.

Recommended Action See specific message text for an indication of what the cause might be. Check the network configuration and cables to make sure that the remote application is running and the address is accessible.

Error Message %CNS-3-WARNING: [chars]

Explanation The CNS subsystem has encountered an unexpected condition while executing a set of commands that did not cause a failure but suggests things did not go totally correctly.

Recommended Action Check the error log for additional information. This is an informational message and does not necessarily indicate that an error occurred.

Error Message %CNS-3-XML_SEMANTIC: [chars]

Explanation The CNS subsystem has encountered an error while processing the XML encapsulation of configuration command.

Recommended Action The externally supplied XML has errors in it and cannot be processed. See the specific message text for an indication of what the cause might be. This condition could possibly require that the command be checked and reissued from the server.

CNS-5

Error Message %CNS-5-CONFIG_SUCCESS: SUCCESSFUL_COMPLETION

Explanation The configuration download has been applied successfully.

Recommended Action No action is required.

CNS-6

Error Message %CNS-6-NO_EVENT_AGENT: CNS EVENT AGENT IS NOT CONFIGURED

Explanation The CNS event agent is not configured. The event that was to be sent to it will be dropped

Recommended Action Configure the CNS event agent.

COLLECTION Messages

This section contains COLLECTION messages.

COLLECTION-3

Error Message %COLLECTION-3-MODE_PROCESS_MISMATCH: Attempted to start a walk with incompatible mode and process (mode [chars] process [chars])

Explanation An internal error occurred in the collection process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %COLLECTION-3-PROC_INIT: Initialization of process [chars] failed, unable to [chars]

Explanation An internal error occurred in the collection process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

COMMON_FIB Messages

This section contains CEF address Forwarding Information Base (FIB) messages.

COMMON_FIB-3

Error Message %COMMON_FIB-3-ACL_PBR_NAMETOOLONG: IPV6_SWSB_CTRL name length error, [chars] (acl_in [dec] ([dec]), acl_out [dec] ([dec]), pbr [dec] ([dec]))

Explanation In an IPC eXternal Data Representation (XDR) message, the name of an IPv6 ACL or an IPv6 policy-based route (PBR) was too long. To prevent buffer overrun errors, the names will not be used. Either the XDR message or an internal IPv6 FIB structure may be corrupted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

COMMON_FIB-4

Error Message %COMMON_FIB-4-CHAIN_REMOVE_INCONS1: Attempting to remove [hex] but it has no prev [hex]

Explanation COMMON_FIB_INTERNAL_ERROR.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %COMMON_FIB-4-CHAIN_REMOVE_INCONS2: Attempting to remove [hex] but prev [hex] points at [hex] instead

Explanation COMMON_FIB_INTERNAL_ERROR.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %COMMON_FIB-4-CHAIN_REMOVE_INCONS3: Attempting to remove [hex] with next thinks its prev is [hex]

Explanation COMMON_FIB_INTERNAL_ERROR.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

COMMON_FIB-6

Error Message %COMMON_FIB-6-FIB_RECURSION_VIA_SELF: [chars] is found to resolve via itself during [chars]

Explanation Cisco Express Forwarding (CEF) discovered that the routing for a prefix has recursive paths that lead back to itself. CEF was forced to terminate an operation on the entry for that prefix.

Recommended Action If the problem persists, use **show** commands to display the RIB and CEF information for the prefix in question and check its configuration.

COMP_MATRIX Messages

This section contains ISSU Compatibility Matrix messages.

COMP_MATRIX-3

Error Message %COMP_MATRIX-3-PRST_VBL_DELETE: ISSU Compatibility Matrix was unable to delete a persistent variable from the [chars] system (rc = [dec]).

Explanation The ISSU compatibility matrix was unable to delete a persistent variable. There is no way to determine whether ISSU image version compatibility checking should be enabled or disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show persistent variable** commands and your pertinent troubleshooting logs.

Error Message %COMP_MATRIX-3-PRST_VBL_GET: ISSU Compatibility Matrix was unable to read a persistent variable from the local system (rc = [dec]).

Explanation The ISSU compatibility matrix was unable to access a persistent variable. There is no way to determine whether ISSU image version compatibility checking should be enabled or disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show persistent variable** commands and your pertinent troubleshooting logs.

Error Message %COMP_MATRIX-3-PRST_VBL_WRITE: ISSU Compatibility Matrix was unable to write to persistent variables on the [chars] system (rc = [dec]).

Explanation The ISSU compatibility matrix was unable to write a persistent variable. There is no way to determine whether ISSU image version compatibility checking should be enabled or disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show persistent variable** commands and your pertinent troubleshooting logs.

COMP_MATRIX-4

Error Message %COMP_MATRIX-4-DISABLED: Compatibility Matrix has been disabled. No image compatibility checking will be done.

Explanation The ISSU compatibility matrix check has been disabled by the **no service image-version compatibility** configuration command. When the standby comes up, no image compatibility checking will be done. The system will enter SSO redundancy mode even if the active and standby supervisors are running different images.

Recommended Action If you require ISSU compatibility matrix checking, enter the **service image-version compatibility** command.

CONST_BOOT Messages

This section contains Constellation boot messages.

CONST_BOOT-3

Error Message %CONST_BOOT-3-QUEUE_CLEANUP: Could not clean up reload netboot buffer after error

Explanation The error processing encountered problems trying to free buffers while attempting to clean up the allocated buffer for reload netboot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CONST_DIAG Messages

This section contains Online Diagnostics (CONST_DIAG) messages.

CONST_DIAG-2

Error Message %CONST_DIAG-2-DIAG_SW_LPBK_TEST_MAJ: Module [[dec]/[dec]]: TestMgmtPortsLoopback detected a major error for port [dec]

Explanation The module failed the loopback test. The module will be power cycled.

Recommended Action Re-run the test with the NO RESET option after resetting the module. If it fails again with the same error message, copy the message exactly as it appears. Include the system configuration along with any other relevant information. Contact your technical support representative for assistance.

Error Message %CONST_DIAG-2-HM_FAB_SWOVER: Fabric card switchover due to unrecoverable errors, Reason: Failed [chars]

Explanation The fabric module has switched over because of unrecoverable error. The failure is specified in the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-2-HM_LC_CRSH: Module [dec] crashed due to unrecoverable errors, Reason: Failed [chars]

Explanation The system detected an unrecoverable error that caused the specified module to fail.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-2-HM_MOD_RESET: Resetting Module [dec] for software recovery, Reason: Failed [chars]

Explanation The system detected an unrecoverable error that caused the specified module to reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-2-HM_SUP_CRSH: Standby supervisor crashed due to unrecoverable errors, Reason: Failed [chars]

Explanation The system detected an unrecoverable error that caused the redundant supervisor engine to fail.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-2-HM_SUP_CRSH: Supervisor crashed due to unrecoverable errors, Reason: Failed [chars]

Explanation The supervisor engine has halted or restarted due to unrecoverable errors.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-2-HM_SUP_SWOVER: Supervisor card switchover due to unrecoverable errors, Reason: Failed [chars]

Explanation The system detected an unrecoverable error that caused this supervisor engine switchover.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-2-HM_TEST_FAIL: Module [dec] [chars] consecutive failure count: [dec]

Explanation The system detected an unrecoverable error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-2-HM_TEST_WARNING: Sup switchover will occur after [dec] consecutive failures

Explanation The system detected an unrecoverable error. A supervisor engine switchover will occur after the specified number of consecutive failures.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-2-MOD_PWR_DOWN: [chars] is powering down. Reason: Failed [chars]

Explanation The module will power down due to the detection of an unrecoverable error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-2-MOD_RESET_AFTER_DISRUPTIVE_DIAG: The following action is required after disruptive diagnostic test:

```
*****
* WARNING: Please reset [chars] prior to normal use
*****
```

Explanation You must reset the module after a disruptive diagnostic test.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CONST_DIAG-3

Error Message %CONST_DIAG-3-BOOTUP_TEST_FAIL: [chars]: [chars] failed [chars]

Recommended Action The indicated test failed during startup diagnostics.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-3-DIAG_FIB_TCAM_TEST: Fib Tcam test: Missed at address [hex], device #[dec], HRR = [hex], lookup value = [hex]-[hex]

Explanation The FIB TCAM device might not be functional because the test failed to get a response at the reported address and look-up value.

Recommended Action Rerun the test with the NO RESET option after resetting the module. If the test fails again at the same address, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-3-DIAG_FW_TEST_CARD_DOWN: Failed to disable module [dec]

Explanation The module could not be powered down after firmware diagnostics failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-3-DIAG_FW_TEST_CARD_RESET: Failed to reset module [dec]

Explanation The module could not be reset after firmware diagnostics failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-3-DIAG_TEST_PORT_SKIP: Module [dec] [chars] skipped multiple ports due to high traffic (Traffic=[dec]%)

Explanation Online diagnostics did not take place on multiple ports in the specified module because of high traffic volume.

Recommended Action No action is required.

Error Message %CONST_DIAG-3-DIAG_TEST_SKIP: Module [dec] [chars] skipped due to high traffic (Traffic=[dec]%)

Explanation Online diagnostics were not performed on the specified module because of high traffic volume.

Recommended Action No action is required.

Error Message %CONST_DIAG-3-HM_ALL_PORT_ERR: All ports on module [dec] failed [chars].

Explanation The data paths that correspond to all ports of the module have failed.

Recommended Action Check your network configuration for spanning tree loops, excessive flooding, and other related conditions. Reset the line card to see if the problem resolves itself. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-3-HM_CHAN_ERR: All ports in channel [dec] on module [dec] failed [chars]. Disabled the channel.

Explanation The data path that corresponds to the channel has failed. All ports that are part of the channel are put into errdisable state.

Recommended Action Check your network configuration for spanning tree loops, excessive flooding, and other related conditions. Reset the line card to see if the problem resolves itself. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-3-HM_CONFIG_FAIL: [chars] failed in health monitoring configuration (error code [dec])

Explanation The system has detected an unrecoverable error.

Recommended Action Contact your Cisco technical support representative.

Error Message %CONST_DIAG-3-HM_FCI_0_STUCK: Flow control stuck at 0 error on module [dec]!

Explanation The signal LDBUS_FCI_L0 is stuck on active-low. The line card is powered down.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-3-HM_PORT_ERR: Port [dec] on module [dec] failed [dec] consecutive times. Disabling the port.

Explanation The data path that corresponds to the port has failed. The port is put into errdisable state.

Recommended Action Reset the line card to see if the problem resolves itself. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-3-HM_PORT_ERR_3X: Port [dec] on module [dec] is not allowed to clear err-disabled state due to 3rd series of [chars] failures. Port will remain in err-disabled state.

Explanation The data path that corresponds to the port has failed. The port is put into a disabled state.

Recommended Action Reset the line card to see if the problem resolves itself. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-3-LTL_PORT_ERR: Port [dec] on module [dec] failed [chars]. Disabling the port.

Explanation The datapath corresponding to the port is bad. The port is put into err-disabled state.

Recommended Action No action required.

Error Message %CONST_DIAG-3-SUP_FAILURE: [chars] supervisor has [chars] online diagnostic failure [hex]: [chars]

Explanation The specified supervisor engine has experienced an online diagnostic failure.

Recommended Action Depending on whether failure is minor, major, or critical, the supervisor engine will display a warning message during the boot process, or the supervisor engine will fail and go into ROM monitor mode.

CONST_DIAG-4

Error Message %CONST_DIAG-4-DIAG_DETECT_FABRIC_CHAN_LOW_RATE: Module [dec] fabric channel [dec] [chars] is low ([hex] instead of [hex]).

Explanation The diagnostic test has detected a fabric low buffer rate for the fabric channel.

Recommended Action Flow control is occurring in the system. Analyze the system traffic, and remove the traffic source that causes flow control. Enter the **show fabric utilization** command to determine the overall traffic pattern.

Error Message %CONST_DIAG-4-DIAG_RESET_WARNING: Please reset module [dec] prior to normal use

Explanation The specified module must be reset after the diagnostic test.

Recommended Action Reset the specified module after the diagnostic test.

Error Message %CONST_DIAG-4-DIAG_SUGGEST_ACTION_DUE_TO_FABRIC_CHAN_FLOW_CONTROL: Flow control is occurring in the system. Analyze the system traffic and remove the traffic source that causes flow control.

Explanation This message appears when a diagnostic test has detected a low buffer rate in the switch fabric.

Recommended Action Flow control is occurring in the system. Analyze the system traffic and remove the traffic source that causes flow control. Enter the **show fabric utilization** command to check the overall traffic pattern.

Error Message %CONST_DIAG-4-DIAG_SUGGEST_ACTION_DUE_TO_FABRIC_CHAN_LOW_RATE: Flow control is occurring in the system. Analyze the system traffic and remove the traffic source that causes flow control.

Explanation The diagnostic test has detected a low buffer rate for the fabric channel. Flow control is occurring in the system.

Recommended Action Analyze the system traffic and remove the traffic source that is causing flow control. Enter the **show fabric utilization** command to determine the overall traffic pattern.

Error Message %CONST_DIAG-4-ERROR_COUNTER_WARNING: Module [dec] Error counter exceeds threshold, system operation continue.

Explanation The TestErrorCounterMonitor has detected that an error counter in the specified module has exceeded a threshold. Specific data about the error counter will be sent in a separate system message. The TestErrorCounterMonitor is a non-disruptive health-monitoring background process that periodically polls the error counters and interrupt counters of each line card or supervisor module in the system.

Recommended Action To determine the cause of the error, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show module**, **show logging**, and **show diagnostic events** commands, the contents of the CONST_DIAG-4-ERROR_COUNTER_DATA system message, and your pertinent troubleshooting logs.

Error Message %CONST_DIAG-4-ERROR_COUNTER_DATA: ID:[dec] IN:[dec] PO:[dec] RE:[dec] RM:[dec] DV:[dec] EG:[dec] CF:[dec] TF:[dec]

Explanation The TestErrorCounterMonitor has detected that an error counter in the specified module has exceeded a threshold. This message contains specific data about the error counter, including the ASIC and register of the counter, and the error count.

Recommended Action To determine the cause of the error, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show module**, **show logging**, and **show diagnostic events** commands and your pertinent troubleshooting logs.

CONST_DIAG-6

Error Message %CONST_DIAG-6-DIAG_ONDEMAND_NOT_SUPPORTED: [chars] is not supported on-demand for module [dec]

Explanation The specified on-demand online diagnostics are not supported on the specified module.

Recommended Action This message is informational. No action is required.

Error Message %CONST_DIAG-6-DIAG_PORT_SKIPPED: Module [dec] port [dec] is skipped in [chars] due to: [chars].

Explanation The specified diagnostic test was not performed on this port because the port loopback could not be configured at test time.

Recommended Action No action is required. Although the test cannot be run at this time, this message does not indicate a problem.

Error Message %CONST_DIAG-6-DIAG_RERUN_RESET: Resetting Module [dec] to re-run [chars] diagnostic

Explanation The system is resetting the module to rerun diagnostics.

Recommended Action No action is required. The system is working properly.

Error Message %CONST_DIAG-6-DIAG_SW_LPBK_TEST_INFO: Module [[dec]/[dec]]: TestMgmtPortsLoopback detected a minor error for port [dec]

Explanation The module failed the loopback test. This is an informational message.

Error Message Re-run the test with the NO RESET option after resetting the module. If it fails again with the same error message, copy the message exactly as it appears. Include the system configuration along with any other relevant information. Contact your technical support representative for assistance.%CONST_DIAG-6-HM_MESSAGE: High traffic/CPU util seen on Module [dec] [SP=[dec]%,RP=[dec]%,Traffic=[dec]%

Explanation The system bypassed the health-monitoring test on the specified module because of high utilization of system resources.

Recommended Action This message is informational. No action is required.

Error Message %CONST_DIAG-6-HM_TEST_INFO: CPU util(5sec): SP=[dec]% RP=[dec]% Traffic=[dec]% netint_thr_active[[dec]], Tx_Rate[[dec]], Rx_Rate[[dec]]

Explanation This message provides system resource information during an event.

Recommended Action This message is informational. No action is required.

Error Message %CONST_DIAG-6-HM_TEST_RECOVERED: Module [dec] [chars] recovered after [dec] consecutive failure(s)

Explanation The health-monitoring test recovered from transient failure on the specified module.

Recommended Action This message is informational. No action is required.

Error Message %CONST_DIAG-6-HM_TEST_SP_INFO: [chars][[dec]]:
last_busy_percent[[dec]%), Tx_Rate[[dec]], Rx_Rate[[dec]]

Explanation This message provides system resource information during an event.

Recommended Action This message is informational. No action is required.

Error Message %CONST_DIAG-6-RW_ENGINE_DROP_INFO: Rewrite engine over-subscription
detected for module [dec] channel [dec]: At least [int] packets were dropped.

Explanation Rewrite engine over-subscription detected.

Recommended Action No action required.

CONST_V6 Messages

This section contains IP version 6 (CONST_V6) messages.

CONST_V6-5

Error Message %CONST_V6-5-FIB_EXCEP_OFF: Protocol IPv6 recovered from FIB exception

Explanation The IPv6 CEF table successfully reloaded to the hardware FIB TCAM. All IPv6 packets will be switched by the hardware.

Recommended Action No action is required.

Error Message %CONST_V6-5-FIB_EXCEP_ON: Failed to insert an IPv6 prefix in hardware FIB TCAM

Explanation The switch failed to insert an IPv6 entry into the hardware FIB TCAM because the total number of software-forwarding entries exceeded the hardware FIB TCAM limit. Some IPv6 packets might be switched by the software.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CONTROLLER Messages

This section contains controller messages.

Error Message %CONTROLLER-5-DOWNDETAIL: Controller [chars], changed state to [chars] due to [chars]

Explanation A configurable controller has changed its state.

Recommended Action This is an informational message only. No action is required.

Error Message %CONTROLLER-3-INBAND_BAD_PAK: Possibly un-encapsulated packet passed to Mistral: int [chars], type [int], stat [hex], flags [hex], size [dec], offset [dec], total [int]

Explanation A badly encapsulated packet was received from the process level.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONTROLLER-3-INBAND_INVALID_IBL_FILL: Attempting to issue IBL Fill when IBL is void of packet.

Explanation The input buffer logic (IBL) did not contain any packets. An IBL fill operation was attempted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONTROLLER-3-MISTRAL_INVALID_OBL_PAGE_REQUEST: Invalid request for free 'Output Buffer Logic' pages = [dec]

Explanation There was an invalid output buffer logic (OBL) page request. The maximum number of OBL pages has been set to its maximum value of 40 and processing will continue through the normal switching path.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONTROLLER-3-NO_GIG_SYNC: Inband Gig interface not synchronized, status [hex]

Explanation The hardware for transmitting and receiving packets from and to the router is not functioning properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONTROLLER-3-NO_OBL_TO_INBAND: The System Controller OBL to INBAND semaphore not obtained.

Explanation The system controller output buffer logic (OBL) to inband semaphore could not be properly obtained.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONTROLLER-3-NO_SYSTEM_CONTROLLER_INIT_STATUS: The System Controller init status of 0xf not obtained, status [hex]

Explanation The system controller initialization status could not be properly obtained.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONTROLLER-3-NOT_IDLE: Receive path not idle after the reset.

Explanation The receiving hardware is not idle after it has been reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONTROLLER-3-SYSTEM_CONTROLLER_BUSY: The System Controller could not finish [chars] operation in time.

Explanation The system controller failed in completing its operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONTROLLER-3-TOOBIG: An attempt made to send giant packet on [chars] ([dec] bytes from [hex], max allowed [dec])

Explanation An attempt was made to send an oversized packet.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CONTROLLER-5-UPDOWN_BERT: BERT test [chars] on Controller [chars].
Forced state to [chars]

Explanation A configurable controller has changed its state.

Recommended Action This is an informational message only. No action is required.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

COPTMONMIB Messages

This section contains Cisco Optical Monitoring MIB (COPTMINMIB) messages.

COPTMONMIB-3

Error Message %COPTMONMIB-3-ENTRYADDFAILED: Registering of the interface with
ifIndex [dec] to local data structure failed

Explanation An attempt to make an entry for the registering interface failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %COPTMONMIB-3-ENTRYPRESENT: An entry is already present for the
registering interface with ifIndex [dec]

Explanation An entry in the OPTICAL MONITORING MIB already exists for the registering interface.

Recommended Action No action is required.

Cougar Messages

This section contains Cougar line card messages.

Error Message %COUGAR_EHSA-3-NCLK_FUNCVER_MISMATCH: Mismatch in the Network Clock Module Functional Version number. The Functional Version of the Network clock module in the Primary = [dec].[dec]

Explanation This may lead to loss of Network Clocking functionality if and when a CPU switchover occurs. The system is now running CONDITIONALLY REDUNDANT - subject to the above mentioned restriction

Error Message No action required.%COUGAR_EHSA-3-TWO_PRIM_DETECT: Other RP has declared PRIMARY, two primaries active in chassis. This RP will now crash to avoid this condition.

Explanation N/A

Recommended Action No action required.

CPU_INTF_FPGA Messages

This section contains CPU interface field programmable gate array (FPGA) messages.

CPU_INTF_FPGA-2

Error Message %CPU_INTF_FPGA-2-DEV_INIT_FAILURE: The CPU Interface FPGA initialization failed due to [chars]

Explanation The CPU interface FPGA initialization was not successful due to a hardware problem. This condition will cause packet drops.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CPU_INTF_FPGA-2-INT: [chars]

Explanation A fatal interrupt has occurred and the device has been reinitialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CPU_INTF_FPGA-2-NULL_DEV_OBJECT: The CPU Interface FPGA device object pointer is set to NULL

Explanation The memory location of the CPU Interface FPGA device object is invalid. The CPU interface FPGA operation is disabled and the device interrupt is now masked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CPU_INTF_FPGA-3

Error Message %CPU_INTF_FPGA-3-DEV_UNPAUSE_FAIL: Status register is [hex]

Explanation An attempt to unpauses traffic from the CPU interface FPGA to the backplane interface ASIC has timed out. This failure may lead to traffic disruption.

Recommended Action If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CPU_INTF_FPGA-3-QUEUE_ALLOC_FAILED: Failed to allocate queue in the CPU Interface FPGA for SPA in bay ([dec])

Explanation Failed to allocate a queue for the SPA in the given bay. This failure may lead to traffic disruption.

Recommended Action If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CPU_INTF_FPGA-4

Error Message %CPU_INTF_FPGA-4-DEV_WARN_INT: [chars]

Explanation The CPU interface FPGA received a nonfatal interrupt. This event should not affect the normal operation of the device.

Recommended Action No action is required.

CPU_INTF_FPGA-5

Error Message %CPU_INTF_FPGA-5-PAUSE_FAIL: FPGA status register is [hex]

Explanation An attempt to pause traffic from the CPU interface FPGA to the backplane interface ASIC has timed out. This event may lead to traffic disruption.

Recommended Action If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CPU_MONITOR Messages

This section contains CPU monitor (CPU_MONITOR) messages.

CPU_MONITOR-2

Error Message %CPU_MONITOR-2-NOT_RUNNING: CPU_MONITOR messages have not been sent for [dec] seconds [[chars] [dec]/[dec]% ([time-stamp] [dec]/[dec]%) [[chars] [time-stamp]] [[chars] [time-stamp]] [[chars] [time-stamp]]

Explanation CPU monitor messages have not been detected for a significant amount of time. A timeout is likely to occur soon, which will reset the system.

Recommended Action No action is required.

Error Message %CPU_MONITOR-2-NOT_RUNNING_TB: CPU_MONITOR traceback: [hex] [hex] [hex] [hex] [hex] [hex]

Explanation This message provides additional debugging information for the NOT_RUNNING message. The message displays the traceback of the interrupted functions.

Recommended Action No action is required.

CPU_MONITOR-3

Error Message %CPU_MONITOR-3-KERNEL_OPERATION: CPU_MONITOR kernel operation failed: [chars]

Explanation A CPU_MONITOR kernel operation required to identify suspect threads has failed.

Recommended Action This is an informational message only. No action is required.

Error Message %CPU_MONITOR-3-PEER_EXCEPTION: CPU_MONITOR peer has failed due to exception , resetting [[dec]/[dec]]

Explanation The CPU monitor messages failed on the peer processor. The system is no longer operational.

Recommended Action No action is required.

Error Message %CPU_MONITOR-3-PEER_FAILED: CPU_MONITOR peer process has failed to receive heartbeats, reset by [%d/%d]

Explanation The CPU monitor messages have failed on the peer process and the system is no longer operational.

Recommended Action No action is required.

Error Message %CPU_MONITOR-3-TIMED_OUT: CPU_MONITOR messages have failed, resetting %s [%d/%d]

Explanation The CPU monitor messages failed and the system is no longer operational.

Recommended Action No action is required.

CPU_MONITOR-6

Error Message %CPU_MONITOR-6-NOT_HEARD: CPU_MONITOR messages have not been heard for %d seconds [%d/%d]

Explanation CPU monitor messages have not been detected for a significant amount of time. [dec] is the number of seconds. A timeout is likely to occur soon, which will reset the system. This error can be caused by a badly seated module or by high traffic in the EOBC channel.

Recommended Action Verify that all modules are seated properly in the chassis. Pull out the module mentioned in the message and inspect the backplane and module for bent pins or hardware damage. If the message persists after reseating all the modules, a hardware problem may exist, such as a defective module or chassis.

CRYPTO Messages

This section contains encryption (CRYPTO) messages.

CRYPTO-3

Error Message %CRYPTO-3-CONNID_ALLOC_FAIL: Crypto engine failed to allocate a connection ID for negotiation from [IP_address] to [IP_address]

Explanation The crypto engine has exhausted all available connection IDs or is otherwise malfunctioning.

Recommended Action Decrease the number of concurrent connections or inspect the crypto engine.

Error Message %CRYPTO-3-CRYPTO_INV_ACL: Crypto ACL with GT/LT/NEQ operator is not supported.

Explanation Crypto map ACL is an invalid map.

Recommended Action Remove the invalid ACL .

Error Message %CRYPTO-3-ENGINE_BAD_ID: Crypto Engine id [dec] is invalid

Explanation The engine ID of the packet is set to something other than software crypto or hardware crypto. The system cannot determine which encryption (crypto) engine to use. The packet will be sent to the default crypto engine, which is the software crypto engine.

Recommended Action No action is required.

Error Message %CRYPTO-3-EZVPN_VINTERFACE_CREATE_ERR: EZVPN([chars]): Virtual-access interface creation failed

Explanation The virtual interface feature will not work without a virtual access interface. The EZVPN configuration is unusable. You can remove the virtual interface configuration from EZVPN as a workaround.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO-3-IKMP_QUERY_KEY: Querying key pair failed.

Explanation Querying public key and private key using a subject name failed.

Recommended Action Check the subject name in the certificate.

Error Message %CRYPTO-3-MTREE_CMD_BLOCK: Mtree command [dec] was blocked from the the mtree process queue.

Explanation An attempt was made to enqueue a command to the crypto mtree manager process even though IPsec is currently operating in HAPX mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO-3-RSA_SELFTEST_FAILED: Generated RSA key failed self test

Explanation An automatic test of the newly generated RSA key pair has failed and the RSA key has been automatically deleted.

Recommended Action Retry the operation and attempt to create another RSA key pair. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO-3-TOKENADMINLOCKEDOUT: Cryptographic Token [chars]
Administrator PIN Locked due to too many unsuccessful login attempts

Explanation The cryptographic token has disabled the Admin PIN due to too many login failures .

Recommended Action If the user PIN is also locked out, it will be necessary to reinitialize the card. The data on the card will be lost.

Error Message %CRYPTO-3-TOKENADMINLOGINFAILED: Cryptographic Token [chars] ADMIN
Login FAILED

Explanation The cryptographic token has rejected the administrator PIN offered by the router.

Recommended Action Enter the **crypto pki token admin-pin** command to enter the correct PIN.

Error Message %CRYPTO-3-TOKENAPIFAILURE: Cryptographic Token [chars] API FAILED,
error = [dec]

Explanation The cryptographic token returned an unexpected error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO-3-TOKENCHANGEPINFAILED: Cryptographic Token [chars] Change PIN FAILED

Explanation The cryptographic token has rejected the new PIN offered by the router.

Recommended Action Be sure you are logged in to the token as administrator. Try a longer PIN.

Error Message %CRYPTO-3-TOKENLOCKEDOUT: Cryptographic Token [chars] PIN Locked due to too many unsuccessful login attempts

Explanation The cryptographic token has disabled the user PIN due to too many login failures.

Recommended Action Enter the **crypto pki token admin-pin** command to enter the correct administrator PIN.

Error Message %CRYPTO-3-TOKENLOGINFAILED: Cryptographic Token [chars] Login FAILED

Explanation The cryptographic token has rejected the PIN offered by the router.

Recommended Action Enter the **crypto pki token user-pin** command to enter the correct PIN.

Error Message %CRYPTO-3-TOKENSTOREKEYFAILED: Key [chars] store on Cryptographic Token [chars] Failed

Explanation An error occurred attempting to write a new key pair out to the cryptographic token.

Recommended Action Try logging in to the token. If the error persists, try logging in as administrator.

CRYPTO-4

Error Message %CRYPTO-4-ENC_METHOD_NOT_SUPPORTED: Invalid encryption method for IKE policy [int]

Explanation The configured encryption method is not supported

Recommended Action Use any of the valid encryption methods for the ISAKMP policy.

Error Message %CRYPTO-4-EZVPN_SA_LIMIT: [chars]

Explanation The maximum number of EZVPN tunnels that can be set up on the platform has been reached. Active SAs will not be terminated, but additional SAs can not be established until the number of existing SAs decreases.

Recommended Action No action is required.

Error Message %CRYPTO-4-IA_CLEARTEXT: Unencrypted traffic [chars] [IP_address] because crypto optional is configured

Explanation Cleartext traffic is passing through an interface that is configured for encryption. This traffic is accepted because the router has the CRYPTO IPSEC OPTIONAL ENABLE setting, which allows such traffic.

Recommended Action If you did not intend to configure the crypto optional setting, reconfigure the system to turn it off.

Error Message %CRYPTO-4-IA_ENABLE: Security warning: crypto ipsec optional is configured

Explanation The router has the CRYPTO IPSEC OPTIONAL setting enabled. This setting allows data that would normally be encrypted to be sent without encryption.

Recommended Action If you did not intend to configure the crypto optional setting, reconfigure the system to turn it off.

Error Message %CRYPTO-4-IKE_DENY_SA_REQ: IKE denied an [chars] SA request from [chars] to [chars] due to [chars]

Explanation Call Admission Control is configured globally or at the IKE level on this device. As a result, an IKE SA request was denied due to the reason described in the error message.

Recommended Action Depending on the reason that the request was denied, either reduce the load on the system so that it can handle new IKE SA requests, or increase the maximum allowed IKE sessions if more are needed.

Error Message %CRYPTO-4-IKE_QUICKMODE_BAD_CERT: encrypted connection attempted with a peer without the configured certificate attributes

Explanation An encrypting peer attempted to establish an IPsec session with an interface for which it was not authorized. This condition might be considered to be a hostile event.

Recommended Action Verify that the peer is authorized to establish an IPsec session with the interface. If the peer is authorized, this condition might be caused by an incorrect configuration. Contact the administrator of the peer.

Error Message %CRYPTO-4-IKE_SA_LIMIT: IKE active SA count is [int] but SA limit has been set to [int].

Explanation The IKE SA limit that was set is less than the number of active IKE SAs. Active SAs will not be terminated but no additional IKE SAs can be established unless the limit is increased or the number of active SAs decreases.

Recommended Action Increase the IKE SA limit if necessary to establish connectivity.

Error Message %CRYPTO-4-IKE_SA_NEGO_LIMIT: IKE in-negotiation SA count currently is [int] but new limit has been set to [int].

Explanation The IKE in-negotiation SA limit that was set is less than the current number of in-negotiation IKE SA. As of a result, no more new IKE SAs can be created. However, those already in negotiation are allowed to finish.

Recommended Action Increase the IKE SA limit if necessary to establish connectivity.

Error Message %CRYPTO-4-IKMP_ISR_LIMIT_MAX: INV SPI RECOV LIMIT [dec] maxed [IP_address] [IP_address]

Explanation The maximum limit of INVALID SPI RECOVERY SAs has been reached.

Recommended Action You may need to reload the local system.

Error Message %CRYPTO-4-IPSEC_AAA_START_FAILURE: IPSEC Accounting was unable to send start record

Explanation The AAA subsystem was unable to send the accounting start record on behalf of IPsec. This condition can occur if the AAA server is unreachable.

Recommended Action Ensure that the AAA server is reachable and enabled for accounting.

Error Message %CRYPTO-4-IPSEC_AAA_STOP_FAILURE: IPSEC Accounting was unable to send stop record

Explanation The AAA subsystem was unable to send the accounting stop record on behalf of IPsec. This condition can occur if the AAA server is unreachable.

Recommended Action Ensure that the AAA server is reachable and enabled for accounting.

Error Message %CRYPTO-4-IPSEC_ENC_METHOD_NOT_SUPPORTED: Transform [chars] not valid under IPsec transform [chars]

Explanation The configured encryption algorithm is not supported.

Recommended Action Specify a valid encryption algorithm for the IPsec transform.

Error Message %CRYPTO-4-IPSEC_ENC_METHOD_NOT_SUPPORTED_FULL_SPEED: Transform [chars] will run with reduced performance because of IPsec transform [chars]

Explanation The configured encryption algorithm will not run on the hardware encryption card. The transform is still usable but will run with reduced performance.

Recommended Action To reach the full performance of the encryption card, specify another encryption algorithm for the IPsec transform.

Error Message %CRYPTO-4-IPSEC_ENC_METHOD_NOT_SUPPORTED_WITH_IKE: Transform [chars] not usable with IKE because of IPsec transform [chars]

Explanation The configured encryption algorithm is not usable with IKE with the current hardware configuration.

Recommended Action If IKE is required, specify a valid encryption algorithm for the IPsec transform.

Error Message %CRYPTO-4-NOAUTOSAVE: Configuration was modified. Issue "write memory" to save new certificate

Explanation Auto Enrollment has obtained a new router key pair and certificate. However, the running configuration was previously modified.

Recommended Action Enter the **write memory** command to save the new certificates and keys.

Error Message %CRYPTO-4-RECV_PKT_INV_UDP_WRAPPER: Rec'd packet has invalid udp wrapper protocol. cryptoflags = [hex], sa->udp_wrapper_support = [dec], transform = [hex]

Explanation Either a UDP or encapsulated packet was received that is not a correct negotiation transform, or the system expected a UDP-encapsulated packet but received a non-UDP packet. There might be a policy setup error on the peer. This activity could be considered a hostile event.

Recommended Action Contact the administrator of the router or host that sent the packet to compare policy settings.

Error Message %CRYPTO-4-TOKENKEYSDEACTIVATED: RSA keypairs from token [chars] and associated IPSEC sessions being deactivated now

Explanation Router RSA key pairs and associated IPsec sessions are being deactivated because the token containing them was removed.

Recommended Action Reinsert the crypto token.

Error Message %CRYPTO-4-TOKENKEYTIMEOUT: RSA keypairs for token [chars] and associated IPSEC sessions will be deactivated in [dec] seconds

Explanation Router RSA key pairs and associated IPsec sessions will be deactivated when the timeout expires.

Recommended Action Reinsert the crypto token before the timeout expires.

CRYPTO-5

Error Message %CRYPTO-5-GM_REGSTER: Start registration for group [chars] using address [chars]

Explanation Registration for one group has started.

Recommended Action No action is required.

Error Message %CRYPTO-5-IKE_SA_HA_STATUS: IKE sa's if any, for vip [IP_address] will change from [chars] to [chars]

Explanation This is a notification message for crypto IKE SAs changing HA status.

Recommended Action No action is required.

Error Message %CRYPTO-5-IKMP_AG_MODE_DISABLED: Unable to initiate or respond to Aggressive Mode while disabled

Explanation The router is configured to not accept or respond to ISAKMP aggressive mode with any peer.

Recommended Action If you did not intend to disable aggressive mode, remove the command.

Error Message %CRYPTO-5-IPSEC_SA_HA_STATUS: IPsec sa's if any, for vip [IP_address] will change from [chars] to [chars]

Explanation This is a notification message for crypto IPsec SAs changing HA status.

Recommended Action No action is required.

Error Message %CRYPTO-5-SESSION_STATUS: Crypto tunnel is [chars]. Peer [IP_address]:[dec] [chars] [chars] [chars] [chars] [chars] [chars] [chars] [chars]

Explanation This is a notification message for IPsec tunnel status.

Recommended Action This is an informational message only. No action is required.

CRYPTO-6

Error Message %CRYPTO-6-AUTOGEN: Generated new [dec] bit key pair

Explanation Auto Enrollment has generated a new router key pair.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-AUTOSAVE: Running configuration saved to NVRAM

Explanation Auto Enrollment has obtained a new router key pair and certificate, and has done an automatic write to memory to save them.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-CERTIFSRECV: Could not receive router's Certificate from file system.

Explanation The router's certificate could not be received from the file system.

Recommended Action Verify the enrollment URL and verify that the router is able to read from the file system.

Error Message %CRYPTO-6-CERTIFSEND: Could not send Certificate enrollment request to file system.

Explanation The certificate enrollment request could not be sent to the file system.

Recommended Action Verify the enrollment URL and verify that the router is able to write to the file system.

Error Message %CRYPTO-6-EZVPN_CONNECTION_DOWN: [chars]

Explanation The EZVPN connection is being closed. The IPsec and IKE security associations will also be brought down along with it.

Recommended Action No action is required.

Error Message %CRYPTO-6-EZVPN_CONNECTION_UP: [chars]

Explanation The EZVPN connection is up for the specified client. Both IPsec and IKE security associations are up now.

Recommended Action No action is required.

Error Message %CRYPTO-6-ISAKMP_ON_OFF: ISAKMP is [chars]

Explanation The ISAKMP process has been switched on or off either by the CLI or because no crypto map or EZVPN configuration is applied to any interface.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-PKCS12EXPORT_FAIL: PKCS #12 Export Failed.

Explanation An attempt to generate and export a PKCS #12 has failed.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-PKCS12EXPORT_SUCCESS: PKCS #12 Successfully Exported.

Explanation A PKCS #12 has been generated and successfully exported.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-PKCS12IMPORT_FAIL: PKCS #12 Import Failed.

Explanation An attempt to import a PKCS #12 has failed.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-PKCS12IMPORT_SUCCESS: PKCS #12 Successfully Imported.

Explanation A PKCS #12 has been successfully imported.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-3-POLICY_CKSUM_ERROR: Crypto policy checksum failure.
Crypto access list [chars], crypto map [chars], interface [chars]

Explanation A crypto policy checksum failure has been detected in this router, whose traffic is protected by the crypto policy. This event may be caused by memory corruption occurring in crypto policy data or the memory area has been illegally modified. It may also be caused by software defects. As a result of this event, the router has been forced to reload.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO-6-PRNG_SEED_KEY_ERROR: Pseudo-random number generator seed and seed key was identical

Explanation The X9.17 random number specification requires checking for the same value appearing as the seed and the seed key. This message indicates that the identical seed and seed key condition was discovered.

Recommended Action The X9.17 random number will occasionally produce this condition, and this is not a problem. If this message occurs frequently, the system should be manually reloaded. If the message is persistent across reloads, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO-6-TOKENADMINCHANGEPIN: Cryptographic Token [chars] ADMIN PIN change Successful

Explanation The cryptographic token has accepted the new administrator PIN offered by the router.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-TOKENADMINLOGIN: Cryptographic Token [chars] ADMIN Login Successful

Explanation The cryptographic token has accepted the administrator PIN offered by the router.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-TOKENCHANGEPIN: Cryptographic Token [chars] PIN change Successful

Explanation The cryptographic token has accepted the new PIN offered by the router.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-TOKENINSERTED: Cryptographic token [chars] inserted in [chars]

Explanation A cryptographic token has been detected.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-TOKENLOGIN: Cryptographic Token [chars] Login Successful

Explanation The cryptographic token has accepted the PIN offered by the router.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-TOKENLOGOUT: Cryptographic Token [chars] Logout Successful

Explanation The router has logged out from the cryptographic token.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-TOKENREMOVED: Cryptographic token [chars] removed from [chars]

Explanation A cryptographic token has been detected.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-TOKENSTOREKEY: Key [chars] stored on Cryptographic Token [chars] Successfully

Explanation A new key pair has been written out to the cryptographic token.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-TOKENTIMEOUTCANCELLED: Cryptographic Token [chars] re-inserted. removal timeout cancelled

Explanation A cryptographic token containing private keyfiles has been reinserted before the timeout. Router RSA key pairs and associated IPsec sessions will not be deactivated.

Recommended Action This is an informational message only. No action is required.

Error Message %CRYPTO-6-VPN_TUNNEL_STATUS: [chars]

Explanation VPN tunnel status.

Recommended Action This is an informational message only. No action is required.

CRYPTO_HA Messages

This section contains crypto high availability messages.

CRYPTO_HA-3

Error Message %CRYPTO_HA-3-IKEADENTRYFAIL: (VIP=[IP_address])ISAKMP SA entry insertion on standby device failed for src=[IP_address], dst=[IP_address]

Explanation An attempt to insert an SA entry transferred from the active device has failed. The SA database is no longer synchronized with that on the active device.

Recommended Action Initiate a manual resynchronization of the ISAKMP SA table.

Error Message %CRYPTO_HA-3-IKEDELENTYFAIL: (VIP=[IP_address])ISAKMP SA entry deletion on standby device failed for src=[IP_address], dst=[IP_address]

Explanation An attempt to delete an SA entry that was removed on the active device has failed. The SA database is no longer synchronized with that on the active device.

Recommended Action Initiate a manual resynchronization of the ISAKMP SA table.

Error Message %CRYPTO_HA-3-IKEINSERTKEYFAIL: (VIP=[IP_address])ISAKMP SA entry key insertion on standby device failed for src=[IP_address], dst=[IP_address]

Explanation An attempt to insert keys for a new SA entry on the standby device has failed. The standby device will not receive this entry.

Recommended Action Initiate a manual resynchronization of the ISAKMP SA table from the standby device.

Error Message %CRYPTO_HA-3-IKEQUERYKEYFAIL: (VIP=[IP_address])ISAKMP SA entry key query on active device failed for src=[IP_address], dst=[IP_address]

Explanation An attempt to query an SA entry for key information to send to the standby device has failed. The standby device will not receive this entry.

Recommended Action Initiate a manual resynchronization of the ISAKMP SA table from the standby device.

Error Message %CRYPTO_HA-3-IPSECADDENTYFAIL: (VIP=[IP_address])IPSEC SA entry insertion on standby device failed

Explanation An attempt to insert an SA entry transferred from the active device has failed. The SA database is no longer synchronized with the database on the active device.

Recommended Action Initiate a manual resynchronization of the IPsec SA table.

Error Message %CRYPTO_HA-3-IPSECDELENTYFAIL: (VIP=[IP_address])IPSEC SA entry deletion on standby device failed

Explanation An attempt to delete an SA entry that was removed on the active device has failed. The SA database is no longer synchronized with the database on the active device.

Recommended Action Initiate a manual resynchronization of the IPsec SA table.

CRYPTO_HA-6

Error Message %CRYPTO_HA-6-IKEDOWN: (VIP=[IP_address])Disabling High Availability functionality for the ISAKMP failover group.

Explanation This is a normal notification message when HA is unconfigured for this failover group, or a tracked interface is shut down. However, it may also be a result of a failure.

Recommended Action If the failover was initiated deliberately (for example, by shutting down a tracked interface), then no action is required. Otherwise, investigate the status of the redundancy protocol (HSRP, for example) that may have lead to the Down state notification to the high availability framework.

Error Message %CRYPTO_HA-6-IKEFAILOVER: (VIP=[IP_address])Taking over as the new Active device for the ISAKMP failover group.

Explanation This is a normal notification message when an active device is first elected. Alternatively, it is triggered when a failover occurs within the high availability group. In that case, the formerly active device within the ISAKMP failover group has gone down and this device is taking over as the new active device for the group.

Recommended Action If the failover was initiated deliberately (for example, by shutting down a tracked interface), then no action is required. Otherwise, investigate the status of the previous active device to troubleshoot the reason for failure and take appropriate action.

Error Message %CRYPTO_HA-6-IKEHAINFINITEMSGLOOP: (VIP=[IP_address])Dropping remainder of this HA IKE SSP message because of suspected infinite message loop.

Explanation HA IKE SSP message processing seems to be looping on this message. The processing of this message will be dropped to prevent an infinite loop.

Recommended Action Turning on detailed IKE HA debugs on both HA pairs can help determine what message may be causing this problem.

Error Message %CRYPTO_HA-6-IKEHANOTENABLE: IKE HA is not enabled.

Explanation IKE HA received a state notification or an SSP message for a VIP that does not have HA enabled.

Recommended Action Verify that IKE stateful failover is configured for the interface with this VIP.

Error Message %CRYPTO_HA-6-IKEHASYNCCOMPLETE: (VIP=[IP_address])IKE HA state synchronization with Active device complete.

Explanation This is a normal notification message after the standby has received either REPLY_ENTRY or DELETE_ENTRY messages for all requests during synchronization.

Recommended Action No action is required.

Error Message %CRYPTO_HA-6-IKESTANDBY: (VIP=[IP_address])Setting up as a Standby device for the ISAKMP failover group.

Explanation This is a normal notification message after a standby device comes up.

Recommended Action No action is required.

Error Message %CRYPTO_HA-6-IKEUPDATEENTRYFAIL: (VIP=[IP_address])ISAKMP SA entry update on standby device failed for src=[IP_address], dst=[IP_address]

Explanation An attempt to update an SA entry as specified by the active device has failed. The SA entry will be missing the latest packet level update until another update entry is sent by the active device.

Recommended Action Normally, a subsequent update entry message will self-correct the problem. Manual resynchronization of the ISAKMP SA table by the standby device may be necessary if this message appears repeatedly.

Error Message %CRYPTO_HA-6-IPSECDOWN: (VIP=[IP_address])Disabling High Availability functionality for the IPSEC failover group.

Explanation This is a normal notification message when HA is unconfigured for this failover group, or a tracked interface is shut down. However, it may also be a result of a failure.

Recommended Action If the failover was initiated deliberately (for example, by shutting down a tracked interface), then no action is required. Otherwise, investigate the status of the redundancy protocol (HSRP, for example) that may have lead to the Down state notification to the high availability framework.

Error Message %CRYPTO_HA-6-IPSECFALLOVER: (VIP=[IP_address])Taking over as the new Active device for the IPSEC failover group.

Explanation This is a normal message when a device first becomes active, or when failover occurs within the high availability group. In the failover case, the former active device within the IPsec failover group has gone down and this device is taking over as the new active device for the group.

Recommended Action If the failover was initiated deliberately (for example, by shutting down a tracked interface), then no action is required. Otherwise, investigate the status of the previous active device to troubleshoot the reason for failure and take appropriate action.

Error Message %CRYPTO_HA-6-IPSECHAMAXINSERTERRORS: IPsec HA has failed inserting SAs for the last [int] seconds, the box is either out of resources or has suffered a hardware failure

Explanation The device is normally out of resources for short periods of time, and retries will automatically occur. In this case, however, the retries have not succeeded and have stopped. Action is required from the administrator.

Recommended Action Verify that both devices in the HA pair are identical and that the hardware is working properly.

Error Message %CRYPTO_HA-6-IPSECHANOTENABLE: (VIP=[IP_address])IPSEC HA is not enabled.

Explanation IPsec HA received a state notification or an SSP message for a VIP that does not have HA enabled.

Recommended Action Verify that IPsec stateful failover is configured for the interface with this VIP.

Error Message %CRYPTO_HA-6-IPSECHASYNCCOMPLETE: (VIP=[IP_address])IPSEC HA state synchronization with Active device complete.

Explanation This is a normal notification message after the standby has received either a REPLY_ENTRY or a DELETE_ENTRY message for all requests during synchronization.

Recommended Action No action is required.

Error Message %CRYPTO_HA-6-IPSECSTANDBY: (VIP=[IP_address])Setting up as a Standby device for the IPSEC failover group.

Explanation This is a normal notification message when a standby device comes up.

Recommended Action No action is required.

Error Message %CRYPTO_HA-6-IPSECUPDATEENTRYFAIL: (VIP=[IP_address])IPSEC SA entry update on standby device failed

Explanation An attempt to update an IPsec SA entry as specified by the active device failed. The SA entry will be missing the latest packet level update, until another update entry is sent by the active device.

Recommended Action Normally, a subsequent update entry message will self-correct the problem. Manual resynchronization of the IPsec SA table by the standby device may be necessary, if this message appears repeatedly.

CRYPTO_HA_IKE Messages

This section contains encryption (CRYPTO) high availability (HA) IKE messages.

CRYPTO_HA_IKE-3

Error Message %CRYPTO_HA_IKE-3-FAILOVER_ERROR: Attempt to failover IKE SA ([IP_address]:[IP_address]) failed due to [chars]. No stateful failover available for this SA.

Explanation The HA active device attempted to checkpoint the state of an IKE SA to the standby device, but the standby device was unable to create the standby IKE SA.

Recommended Action Search for other error messages at WARNING log level or turn on debugging messages to find the specific cause of the failure.

CRYPTO_HA_IKE-4

Error Message %CRYPTO_HA_IKE-4-CRYPTO_HA_NOT_SUPPORTED_BY_HW: Crypto hardware is enabled and it does not support HA operation '[chars]'

Explanation Crypto hardware is enabled, but the hardware does not support HA operations such as insertion and extraction of keys.

Recommended Action Replace the crypto module with one that supports HA operations, or disable the hardware and use the software crypto engine.

CRYPTO_HA_IPSEC Messages

This section contains encryption (CRYPTO) high availability (HA) IPsec messages.

CRYPTO_HA_IPSEC-3

Error Message CRYPTO_HA_IPSEC-3-FAILOVER_ERROR: Attempt to failover IPsec SA ([IP_address]:[IP_address]) failed due to [chars]. No stateful failover available for this SA.

Explanation The HA active device attempted to checkpoint the state of an IKE SA to the standby device, but the standby device was unable to create the standby IKE SA.

Recommended Action Search for other error messages at log level WARNING or turn on debugging messages to find the specific cause of the failure.

Error Message CRYPTO_HA_IPSEC-3-HA_IPSEC_UPDATE_PROC_FAIL: Start of HA IPsec update process failed

Explanation The IPsec HA process failed to start. Updates will not be sent from the active device to the standby device.

Recommended Action The module may need to be rebooted if this is a part of an IPsec HA setup.

CRYPTO_HA_IPSEC-4

Error Message CRYPTO_HA_IPSEC-4-CRYPTO_HA_NOT_SUPPORTED_BY_HW: Crypto hardware is enabled and it does not support HA operation '[chars]'

Explanation Crypto Hardware is enabled, but the hardware does not support HA operations such as insertion and extraction of keys.

Recommended Action Replace the crypto module with one that supports HA operations, or disable the hardware and use the software crypto engine.

CRYPTO_RSA_ISSU Messages

This section contains encryption (CRYPTO) RSA in-service software upgrade (ISSU) messages.

CRYPTO_RSA_ISSU-3

Error Message %CRYPTO_RSA_ISSU-3-GET_BUFFER: Crypto RSA ISSU client failed to get buffer for message. Error: %d (%s)

Explanation The crypto RSA ISSU client was unable to obtain a buffer for building a negotiation message. As a result, the client cannot send the negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO_RSA_ISSU-3-INIT: Crypto RSA ISSU client initialization failed to %s. Error: %d (%s)

Explanation The crypto RSA ISSU client could not be initialized. This condition will cause a catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO_RSA_ISSU-3-INVALID_SESSION: Crypto RSA ISSU client does not have a valid registered session.

Explanation The crypto RSA ISSU client does not have a valid registered session. This condition will prevent the standby unit from coming up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO_RSA_ISSU-3-MSG_NOT_OK: Crypto RSA ISSU client message type %d is not compatible

Explanation The crypto RSA ISSU client received an incompatible message from the peer unit. Because the message is not compatible, it cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO_RSA_ISSU-3-MSG_SIZE: Crypto RSA ISSU client failed to get the MTU for message type %d. Error: %d (%s)

Explanation The crypto RSA ISSU client was unable to calculate the MTU for the message specified. The 802.1X ISSU client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO_RSA_ISSU-3-SEND_NEGO_FAILED: Crypto RSA ISSU client failed to send negotiation message. Error: %d (%s)

Explanation The crypto RSA ISSU client failed to send a session negotiation message to the peer. This condition will prevent the standby unit from coming up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO_RSA_ISSU-3-SESSION_NEGO: Crypto RSA ISSU client encountered unexpected client nego_done. Error: %d (%s)

Explanation The crypto RSA ISSU client encountered an unexpected 'client negotiation done'. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging, show tech-support, show logging, show issu session, and show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO_RSA_ISSU-3-SESSION_REGISTRY: Crypto RSA ISSU client failed to register session information. Error: %d (%s)

Explanation The crypto RSA ISSU client failed to register session information. This condition will prevent the standby unit from coming up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging, show tech-support, show logging, show issu capability entries, show issu session, and show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO_RSA_ISSU-3-SESSION_UNREGISTRY: Crypto RSA ISSU client failed to unregister session information. Error: %d (%s)

Explanation The crypto RSA ISSU client failed to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging, show tech-support, show logging, show issu session, and show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %CRYPTO_RSA_ISSU-3-TRANSFORM_FAIL: Crypto RSA ISSU client %s transform failed for message type %d. Error: %d (%s)

Explanation The crypto RSA ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the crypto RSA state will not match with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

CSG Messages

This section contains Content Services Gateway (CSG) messages.

CSG-3

Error Message %CSG-3-ERROR: Module [dec]: [chars]

Explanation An error occurred in a CSG module.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CSG-3-RELOADNOTOK: CSG ACCOUNTING [chars] reload on module [dec] failed.

Explanation This informational message appears whenever a CSG configuration is reloaded as a result of power cycling a CSG card.

Recommended Action This is an informational message only. No action is required.

CSG-4

Error Message %CSG-4-WARNING: Module [dec]: [chars]

Explanation An undesired event has occurred in a CSG module.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CSG-6

Error Message %CSG-6-LIRELOADOK: CSG LI reload on module [dec] successful

Explanation The CSG lawful intercept (LI) configuration was reloaded because of the power cycling of a CSG module.

Recommended Action No action is required.

Error Message %CSG-6-RELOADOK: CSG ACCOUNTING [chars] reload on module [dec] successful

Explanation This informational message appears whenever a CSG configuration is reloaded as a result of power cycling a CSG card.

Recommended Action This is an informational message only. No action is required.

CSM_SLB Messages

This section contains Content Switching Module (CSM) server load balancing (SLB) messages.

CSM_SLB-4

Error Message %CSM_SLB-4-ENV_VARIABLE: Module %d warning: %s %s

Explanation There is a mismatch between the configuration and the specified environment variable.

Recommended Action Check the documentation for any caveats regarding the use of the specified environment variable.

CT3 Messages

This section contains CT3 shared port adapter messages.

Error Message %CT3-3-CT3NOACC: [chars] - Accumulator is not available

Explanation An invalid TX accumulator is detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CT3-3-MBOXRECV: Failed to receive reply [dec] from bay [dec] firmware

Explanation A message was not received from CT3 firmware.

Recommended Action Copy the error message exactly as it appears, collect the output of the **show tech-support** command immediately, and report it to your technical support representative. If possible, try to do an OIR (Online Insertion and Removal). Please refer to the Cisco documentation for information on 'Online Insertion and Removal' for your platform

Error Message %CARRIER-2-TOOMANY_CT3: Too many CT3 DFC cards, do not power up invalid card in slot [dec]

Explanation The user has put too many CT3 DFC cards in the chassis.

Recommended Action Remove the extra CT3 DFC card, or 8PRI DFC card causing the problem.

CTS Messages

This section contains Cisco TrustSec (CTS) messages.

CTS-0

Error Message %CTS-0-AUTHZ_OUT_OF_MEM: %s failed to create %s due to insufficient memory

Explanation A Cisco TrustSec (CTS) process failed due to insufficient system memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-0-CTS_EMERG: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-0-IFC_OUT_OF_MEM: %s failed to create %s due to insufficient memory

Explanation A Cisco TrustSec (CTS) process failed due to insufficient system memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CTS-1

Error Message %CTS-1-CTS_ALERT: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CTS-2

Error Message %CTS-2-CTS_CRIT: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the show tech-support command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

CTS-3

Error Message %CTS-3-AUTHZ_ADD_DATA_FAILED: %s failed to add %s to %s

Explanation An error occurred while the Cisco TrustSec (CTS) authorization attempted to build its database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_DATA_CREATE_FAILED: %s failed to create %s

Explanation Cisco TrustSec (CTS) authorization was unable to create an internal data structure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_DATA_EXCEEDS_LIMIT: %s encountered %s(%d) exceeds max(%d)

Explanation Cisco TrustSec (CTS) authorization data exceeded the maximum allowed limit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_DATA_FAILED: %s failed to obtain %s

Explanation Cisco TrustSec (CTS) authorization was unable to get or create a data structure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_DATA_NULL: %s encounters NULL %s

Explanation Cisco TrustSec (CTS) authorization encountered an unexpected NULL pointer or data.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_DATA_UNINIT: %s appears uninitialized

Explanation Cisco TrustSec (CTS) authorization unexpectedly encountered uninitialized data.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_FAILED_SYNC_RCV: Standby failed receive sync msg(%s)

Explanation An error occurred while the standby unit was receiving synchronization data from the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_GENERIC_FAILURE: %s %s

Explanation Cisco TrustSec (CTS) authorization encountered an internal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_INSTALL_FAILED: %s failed to install %s %s

Explanation An error occurred while Cisco TrustSec (CTS) authorization attempted to build its database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_INVALID_DATA: %s encountered invalid %s

Explanation Cisco TrustSec (CTS) authorization encountered an invalid data type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_NOT_SUPPORTED: %s encountered %s not unsupported

Explanation Cisco TrustSec (CTS) authorization encountered an unsupported data type or feature, possibly due to incompatibility.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_POLICY_FALLBACK_FAILED: Failed to %s Fallback policy for %s

Explanation Cisco TrustSec (CTS) was unable to install a fallback authorization policy.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_POLICY_INGRESS_FAILED: Failed to %s Ingress policy for %s

Explanation Cisco TrustSec (CTS) was unable to acquire or install an ingress policy from the access control server.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_POLICY_INTERNAL_FAILED: Failed to acquire/install policy for %s due to internal error

Explanation Cisco TrustSec (CTS) was unable to acquire or install a policy due to an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_POLICY_PEER_DOWNLOAD_FAILED: Failed to download peer policy for %s

Explanation Cisco TrustSec (CTS) was unable to acquire a peer policy from the access control server.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_POLICY_RBACL_FAILED: Failed to %s RBACL %s for SGT=%d

Explanation Cisco TrustSec (CTS) was unable to acquire a role-based access control list (RBACL) policy from the access control server.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_POLICY_WILDCARD_FAILED: Failed to download wildcard policy

Explanation Cisco TrustSec (CTS) was unable to acquire a wildcard policy from the access control server.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-AUTHZ_SYNC_FAILED: Failed to send %s sync msg(%s) to Standby

Explanation An error occurred while Cisco TrustSec (CTS) authorization was performing a synchronization of the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-CTS_ERR: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-DOT1X_CONFIG_FAILED: Failed to configure dot1x for int(%s)

Explanation Cisco TrustSec (CTS) was unable to configure 802.1X for a CTS link.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-DOT1X_FORCE_PORT_AUTHORIZED_FAILED: Failed to force dot1x port authorized for int(%s)

Explanation Cisco TrustSec (CTS) authorization was unable to FORCE AUTHORIZED an 802.1X port on a CTS link.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-DOT1X_INIT_FAILED: Failed to initialize dot1x for int(%s)

Explanation Cisco TrustSec (CTS) was unable to initialize 802.1X for a CTS link.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-DOT1X_PAE_FAILED: Failed to %s dot1x PAE(%s) for int(%s)

Explanation Cisco TrustSec (CTS) was unable to start or stop an 802.1X Port Access Entity (PAE) for a CTS link.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-GENERIC_FAILURE: %s %s

Explanation Cisco TrustSec (CTS) encountered an internal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-GLOBAL_DOT1X_DISABLED: Global dot1x config is currently disabled - CTS will not run

Explanation Because global 802.1X is not enabled, Cisco TrustSec (CTS) will not run.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-IFC_DATA_DESC_DECODE_FAILED: %s failed to decode the data-descriptori - swidb unknown

Explanation Cisco TrustSec (CTS) was unable to decode the data descriptor in order to obtain the software interface descriptor block (SWIDB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-IFC_DATA_DESC_ENCODE_FAILED: %s failed to encode the data-descriptor for int(%s)

Explanation Cisco TrustSec (CTS) was unable to encode the software interface descriptor block (SWIDB) into the data descriptor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-IFC_DATA_NULL: %s encounters NULL %s

Explanation Cisco TrustSec (CTS) encountered an unexpected NULL pointer or data.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-IFC_LINK_OBJ_FAILED: %s failed to get link_obj for int(%s)

Explanation Cisco TrustSec (CTS) IFC was unable to access the link object.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-IFC_SYNC_FAILED: Failed to send %s sync msg(%s) to Standby

Explanation An error occurred while Cisco TrustSec (CTS) IFC was performing a synchronization of the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-IFC_SYNC_FAILED_2: %s, Failed to send %s sync msg(%s) to Standby

Explanation An error occurred while Cisco TrustSec (CTS) IFC was performing a synchronization of the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-INVALID_MSGID_RCV: %s received invalid HA/ISSU msgId(%d)

Explanation Cisco TrustSec (CTS) encountered an unexpected invalid HA/ISSU message ID.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-PORT_AUTHORIZED_FAILED: Failed to authorize Port for int(%s)

Explanation A port could not be authorized on a Cisco TrustSec (CTS) link.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-PP_CTS_EC_NOT_CTS: Physical port is not configured for CTS, but port-channel is.

Explanation A physical port cannot join the channel group (port channel) because its Cisco TrustSec (CTS) configuration does not match the channel group's CTS configuration.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-PP_CTS_MODE_EC_MISMATCH: Physical port CTS mode does not match the port-channel's CTS mode.

Explanation A physical port cannot join the port channel because its Cisco TrustSec (CTS) mode does not match the port channel's CTS mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-PP_CTS_TIMER_REAUTH_EC_MISMATCH: Cannot bundle interface. CTS Reauth Timer mismatch. %s = %d %s = %d

Explanation A physical port cannot join the port channel because its Cisco TrustSec (CTS) reauthentication timer value does not match the port channel's timer value.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-PP_NOT_CTS_EC_CTS: Physical port is configured for CTS, but port-channel is not.

Explanation A physical port cannot join the channel group (port channel) because its Cisco TrustSec (CTS) configuration does not match the channel group's CTS configuration.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-SEND_MSG_TO_CORE_FAILED: Failed to send msg([dec]) to core process

Explanation An error occurred while CTS attempts to send a message event to the core process

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-SXP_BINDING_ERR: Binding [chars]- [chars]

Explanation SXP binding update error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-SXP_CONN_STATE_CHG_OFF: Connection [chars]-[dec] state changed from [chars] to Off.

Explanation SXP Connection with the specified instance number changed state.

Recommended Action No action is required.

Error Message %CTS-3-SXP_LISTENER: Fail to start global listening socket after TCP process restart.

Explanation The Security Exchange Protocol (SXP) process could not start after a restart.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-3-SXP_MSG_PARSE: Connection [chars] [chars]

Explanation An error occurred while parsing SXP message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CTS-4

Error Message %CTS-4-CTS_WARNING: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-4-SXP_INTERNAL: CTS SXP [chars]

Explanation The CTS SXP system encountered internal failure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CTS-5

Error Message %CTS-5-CTS_NOTICE: [chars]

Explanation Normal but significant conditions

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS-5-SXP_BINDING_ADD: Binding [chars]- added to SXP database.

Explanation Binding added to the SXP database.

Recommended Action No action is required.

Error Message %CTS-5-SXP_BINDING_CHG: Binding [chars]- changed: old connection instance number:[dec], old sgt:[dec].

Explanation Binding changed in the SXP database.

Recommended Action No action is required.

Error Message %CTS-5-SXP_BINDING_DEL: Binding [chars]- deleted in SXP database.

Explanation Binding deleted in the SXP database.

Recommended Action No action is required.

Error Message %CTS-5-SXP_BINDING_FWD: Binding [chars]- is forwarded to the peer.

Explanation SXP forwarded binding to the peer.

Recommended Action No action is required.

Error Message %CTS-5-SXP_BINDING_REQ: SXP received binding forwarding request ([chars]) binding [chars].

Explanation SXP received a binding forwarding request.

Recommended Action No action is required.

Error Message %CTS-5-SXP_BINDING_UPD: Binding [chars] [chars]. Update binding manager.

Explanation SXP updated binding manager with the binding change.

Recommended Action No action is required.

Error Message %CTS-5-SXP_DFT_PASSWORD_CHANGE: CTS SXP password changed.

Explanation The SXP system password has been changed.

Recommended Action No action is required.

Error Message %CTS-5-SXP_DFT_SRCIP_CHG: SXP default source IP is changed [IP_address] -- [IP_address].

Explanation SXP default source IP is changed on this device.

Recommended Action No action is required.

Error Message %CTS-5-SXP_VRF_DEL: SXP Connection configuration in VRF:[chars] is removed.

Explanation A VRF is removed, the connections configured in this VRF should be removed.

Recommended Action No action is required.

Error Message %CTS_HA_ISSU-3-CAP_INVALID_SIZE: CTS HA empty tlv size.

Explanation Received empty tlv list during capability negotiation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CTS-6

Error Message %CTS-6-DOT1X_FORCE_PORT_AUTHORIZED_SUCCESS: Successfully forced dot1x port authorized for int(%s)

Explanation Cisco TrustSec (CTS) authorization caused FORCE AUTHORIZED on an 802.1X port on a CTS link.

Recommended Action No action is required.

Error Message %CTS-6-DOT1X_PAE_CONFIG: %s dot1x PAE(%s) for int(%s)

Explanation The specified interface has been configured to be an 802.1X Port Access Entity (PAE).

Recommended Action No action is required.

Error Message %CTS-6-IFC_CACHE_APPLIED: Cache data applied for int(%s)

Explanation The Cisco TrustSec (CTS) link was brought up using cache data.

Recommended Action No action is required.

Error Message %CTS-6-CTS_INFO: [chars]

Explanation Informational messages

Recommended Action No action is required.

Error Message %CTS-6-PORT_AUTHORIZED_SUCCESS: Port authorized for int(%s)

Explanation A port was authorized on a Cisco TrustSec (CTS) link.

Recommended Action No action is required.

Error Message %CTS-6-PORT_UNAUTHORIZED: Port unauthorized for int(%s)

Explanation A port has become unauthorized on a Cisco TrustSec (CTS) link.

Recommended Action No action is required.

Error Message %CTS-6-SXP_CONFIG: Connection [chars] [chars]

Explanation A SXP configuration error occurred. The connection can not be setup correctly.

Recommended Action Ensure that the connection configure on both ends have the matched mode, IP addresses.

Error Message %CTS-6-SXP_CONN_STATE_CHG: Connection [chars]-[dec] state changed from [chars] to [chars].

Explanation SXP Connection with the specified instance number changed state.

Recommended Action No action is required.

Error Message %CTS-6-SXP_SRC_IP: Source IP address ([chars] [IP_address]) does not belong to this device.

Explanation An error occurred while using this source IP address to set up SXP connection.

Recommended Action Re-configure SXP connection to have a valid source IP address.

Error Message %CTS-6-SXP_TIMER_START: Connection [chars] [chars] timer started.

Explanation The specified SXP timer started.

Recommended Action No action is required.

Error Message %CTS-6-SXP_TIMER_STOP: Connection [chars] [chars] timer stopped.

Explanation The specified SXP timer stopped.

Recommended Action No action is required.

CTS-7

Error Message %CTS-7-CTS_ASSERT: Assertion Failure ([chars] @[chars]:[dec]) : [chars]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

CTS_HA Messages

This section contains Cisco TrustSec (CTS) high availability (HA) messages.

CTS_HA-3

Error Message %CTS_HA-3-CHKPT_REG_FAIL: CTS HA add CTS checkpoint client failure

Explanation The Cisco TrustSec (CTS) high availability (HA) process failed to add a checkpoint client. No CTS data will be synchronized with the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS_HA-3-RECEIVE_FAILED: CTS HA client failed to process message recieved from Active device.

Explanation The Cisco TrustSec (CTS) high availability (HA) client on the standby device failed to process a checkpoint message from the active device. The CTS state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS_HA-3-SEND_FAILED: CTS HA client on Active device failed to send checkpoint message. CTS component Id %d, message Id %d

Explanation The Cisco TrustSec (CTS) high availability (HA) client on the active device failed to send a checkpoint message to the standby device. The CTS state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CTS_HA_ISSU Messages

This section contains Cisco TrustSec (CTS) high availability (HA) in-service software upgrade (ISSU) messages.

CTS_HA_ISSU-3

Error Message %CTS_HA_ISSU-3-CAP_INVALID_SIZE: CTS HA empty tlv size.

Explanation Received empty tlv list during capability negotiation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS_HA_ISSU-3-CAP_NOT_COMPATIBLE: CTS HA capability not compatible

Explanation CTS HA failed during capability negotiation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS_HA_ISSU-3-GET_BUFFER: CTS HA ISSU client failed to get buffer for message. Error: %d (%s)

Explanation The Cisco TrustSec (CTS) high availability (HA) ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CTS_HA_ISSU-3-INIT: CTS HA ISSU client initialization failed to %s. Error: %d (%s)

Explanation The Cisco TrustSec (CTS) high availability (HA) ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS_HA_ISSU-3-MSG_NOT_COMPATIBLE_WITH_PEER: Message [dec] in component [dec] is not compatible with the peer.

Explanation Message not compatible with the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CTS_HA_ISSU-3-SEND_NEGO_FAILED: CTS HA ISSU client failed to send negotiation message. Error: %d (%s)

Explanation The Cisco TrustSec (CTS) high availability (HA) ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %CTS_HA_ISSU-3-SESSION_REGISTRY: CTS HA ISSU client failed to register session information. Error: %d (%s)

Explanation The Cisco TrustSec (CTS) high availability (HA) ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %CTS_HA_ISSU-3-SESSION_UNREGISTRY: CTS HA ISSU client failed to unregister session information. Error: %d (%s)

Explanation The Cisco TrustSec (CTS) high availability (HA) ISSU client failed to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

CTS_HA_ISSU-6

Error Message %CTS_HA_ISSU-6-INCOMPAT: CTS HA ISSU client negotiation results incompatible

Explanation The Cisco TrustSec (CTS) high availability (HA) ISSU client message version is not compatible on the active and standby devices. As a result, no CTS data will be synchronized to the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

CWAN_ALARM Messages

This section contains Constellation WAN (CWAN) alarm messages.

CWAN_ALARM-6

Error Message %CWAN_ALARM-6-INFO: [chars] [chars] [chars] [chars] [chars]

Explanation This message provides alarm assertion or deassertion information.

Recommended Action This is an informational message only. No action is required.

Error Message %CWAN_ALARM-6-SONET: [chars] [chars] [chars] [chars] [chars]

Explanation This message is generated whenever an alarm is present in the system (and the alarm status has been reported to the RP) or an alarm has been removed from the system (and the alarm status has been reported to the RP).

Recommended Action This is an informational message only. No action is required.

Error Message %CTS-6-SXP_PASSWORD_CHANGE: CTS SXP password changed

Explanation The Cisco TrustSec (CTS) Security Exchange Protocol (SXP) system password has been changed.

Recommended Action No action is required.

Error Message %CTS-6-SXP_STATE_CHANGE: CTS SXP %s

Explanation The Cisco TrustSec (CTS) Security Exchange Protocol (SXP) system component has changed its operational state.

Recommended Action No action is required.

CWAN_ATM Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN ATM port (CWAN_ATM) messages.

CWAN_ATM-3

Error Message %CWAN_ATM-3-LOWMEM: Could not allocate memory for RFC 1483 packet cloning.

Explanation Memory is running low.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %CWAN_ATM-3-PORT_ERR: Invalid PORT [dec]

Explanation The specified port does not exist.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_ATM-3-VCD_ERR: Invalid PortVCD [hex]

Explanation The specified port VCD does not exist.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_ATM-3-VC_ERR: Invalid VC [hex]

Explanation The specified VC does not exist on the port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_ATM-3-VC_OR_PORT_ERR: Invalid VCD [hex] or Port: [dec]

Explanation Either the port or the VCD is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_ATM-5

Error Message %CWAN_ATM-5-UNKNOWN_VCD: Unknown port vcd [hex] in egress packet

Explanation An unknown VCD has been received in the egress path of the module. This condition is most likely a transient condition, and it is usually caused by VCs that are being disassembled and reassembled while traffic is being passed.

Recommended Action No action is required.

CWAN_ATOM-HA Messages

This section contains Any Transport over MPLS (AToM) high availability messages.

CWAN_ATOM-HA-2

Error Message %CWAN_ATOM_HA-2-ISSU_ERROR: [chars] [chars]

Explanation Platform ATOM HA ISSU client error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

CWAN_ATOM-HA-3

Error Message %CWAN_ATOM_HA-3-CF_ERROR: [chars] [dec]

Explanation Platform ATOM HA CF client error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %CWAN_ATOM_HA-3-RF_ERROR: [chars] [dec]

Explanation Platform ATOM HA RF client error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

CWAN_CHOC Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN Channelized OC48/OC12-related (CWAN_CHOC) messages.

CWAN_CHOC-4

Error Message %CWAN_CHOC-4-CORRUPT: [chars] information seems to be corrupted, bad value =[int]

Explanation Incorrect parameters were detected internally.

Recommended Action This is only a debug warning message. The unexpected value is discarded.

CWAN_CHOC_DSX Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN CHOC DSX LC Common (CWAN_CHOC_DSX) messages.

CWAN_CHOC_DSX-3

Error Message %CWAN_CHOC_DSX-3-NODESTROYSUBBLOCK: The [chars] subblock named [chars] was not removed

Explanation A software error occurred. This message displays when IDB subblocks cannot be removed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_CT3 Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module Channelized T3 (CWAN_CT3) messages.

CWAN_CT3-3

Error Message %CWAN_CT3-4-CORRUPT: [chars] information seems to be corrupted, bad value =[int]

Explanation Incorrect parameters were detected internally.

Recommended Action This is only a debug warning message. The unexpected value is discarded.

CWAN_FWD_TABLES Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module forwarding tables messages.

CWAN_FWD_TABLES-3

Error Message %CWAN_FWD_TABLES-3-CHUNK_CREATE_FAIL: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_FWD_TABLES-3-CHUNK_DESTROY_FAIL: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_FWD_TABLES-3-CHUNK_MALLOC_FAIL: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_FWD_TABLES-3-ENTRY_BUILD_FAIL: [chars] [int]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_FWD_TABLES-3-INVALID_DEST_INFO: [chars] [hex] [hex] [hex]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_FWD_TABLES-3-INVALID_INDEX: [chars] [int]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_FWD_TABLES-3-INVALID_OPR_TYPE: [chars] [dec]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_FWD_TABLES-3-MALLOC_FAILED: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_FWD_TABLES-3-TABLE_ERROR: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_HA Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module high availability (CWAN_HA) messages.

CWAN_HA-2

Error Message %CWAN_HA-2-CCB_PLAYBACK_ERROR: CCB playback failed for slot [dec].

Explanation The high availability component for WAN modules failed to synchronize new state information for the specified slot.

Recommended Action Reload the redundant supervisor engine to force a fresh bulk synchronization. If this error recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. Examine both the active supervisor engine and the redundant supervisor engine for messages.

Error Message %CWAN_HA-2-CCB_RECORD_ERROR: CCB record failed for slot [dec].

Explanation The high availability component for WAN modules failed to record new state information for the specified slot. The system is falling back to RPR mode for high availability.

Recommended Action Examine both the active supervisor engine and the redundant supervisor engine for messages. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved

software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-2-IFCFG_PLAYBACK_ERROR: Interface Configuration command [int] playback failed for slot [int]/[int].

Explanation The high availability component for WAN modules failed to synchronize new state information for the specified slot. The redundant system is no longer synchronized with the active system. The redundant supervisor engine was reloaded shortly after this error was encountered.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-2-IFCFG_RECORD_ERROR: Interface Configuration command [int] record failed for slot [int]/[int].

Explanation The high availability component for WAN modules failed to record some new state information for the specified slot. The system is falling back to RPR mode for high availability.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_HA-3

Error Message %CWAN_HA-3-CCB_INIT_ERROR: Failed to initialize CCB list for slot [dec].

Explanation The high availability component for WAN modules failed to properly initialize state information for the specified slot. The system is falling back to RPR mode for high availability.

Recommended Action Examine both the active supervisor engine and the redundant supervisor engine for messages. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-3-IFCFG_CMD_NOT_UNIQUE: More than one command registered for unique-key generator for interface configuration command [int].

Explanation The high availability component for WAN modules is unable to properly synchronize state information for the current configuration due to a conflict in command identifiers.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-3-IFCFG_INIT_ERROR: Failed to initialize Interface Configuration list for slot [int]/[int].

Explanation The high availability component for WAN modules failed to properly initialize state information for the specified slot. The system is falling back to RPR mode for high availability.

Recommended Action Examine both the active supervisor engine and the redundant supervisor engine for messages. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. Examine both the active supervisor engine and the redundant supervisor engine for messages.

Error Message %CWAN_HA-3-IFCFG_NO_UNIQUE_KEY: No unique-key generator registered for interface configuration command [int].

Explanation The high availability component for WAN modules is unable to properly synchronize state information for the current configuration. The system is falling back to RPR mode for high availability.

Recommended Action Examine both the active supervisor engine and the redundant supervisor engine for messages. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_HA-4

Error Message %CWAN_HA-4-CCB_PLAYBACK_ERROR: CCB playback failed for slot [dec].

Explanation The high availability component for WAN modules failed to synchronize some new state information for the specified slot.

Recommended Action Reload the standby supervisor engine to force a fresh bulk synchronization. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-4-CCB_RECORD_ERROR: CCB record failed for slot [dec].

Explanation The high availability component for WAN modules failed to record some new state information for the specified slot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-4-IFCFG_DFLT_LIST_ERROR: For Interface Configuration command %u, default retval list search resulted 0x%x for slot %u/%u

Explanation The high availability (HA) component for WAN modules failed to synchronize new state information for the specified slot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show platform redundancy if-config default-retvals** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-4-IFCFG_PLAYBACK_ERROR: Interface Configuration command [int] playback failed for slot [int]/[int].

Explanation The high availability component for WAN modules failed to synchronize some new state information for the specified slot.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the gathered information.

Error Message %CWAN_HA-4-IFCFG_RECORD_ERROR: Interface Configuration command [int] record failed for slot [int]/[int].

Explanation The high availability component for WAN modules failed to record some new state information for the specified slot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-4-LTLSYNCFAIL: Failed to sync LTL data during [chars] for [chars] [int]: (slot=[dec],slotunit=[dec],if_num=[dec]) to standby (vlan=[int],hash=[int],ltl=[int])

Explanation Some local target logic (LTL) data did not synchronize correctly from the active to the standby RP.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-4-NOSRPBULKSYNC: Failed to [chars] srp bulk data (slot=[dec], intf=[dec], type=[dec]), ret code [dec]

Explanation The synchronization of RP bulk data and SRP bulk data failed from the active supervisor engine to the redundant supervisor engine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-4-NOSRPSYNC: Failed to sync srp packet (slot=[dec], intf=[dec]) to standby, HA_SYNC_STATUS=[dec]

Explanation The RP dynamic synchronization of SRP packets failed from the active supervisor engine to the redundant supervisor engine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HA-4-SRPSYNC: Slot [dec]: [chars]

Explanation The specified error occurred while synchronizing the SRP states from the active supervisor engine RP to the redundant supervisor engine RP.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_HAL Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module Halcyon (CWAN_HAL) messages.

CWAN_HAL-3

Error Message %CWAN_HAL-3-CHUNK_CREATE_FAIL: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-CHUNK_MALLOC_FAIL: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-DELETION_FAILED: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-FILL_OCE_INFO_FAIL: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-ILLEGAL_DEAGG_PROT_TYPE: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-ILLEGAL_OBJ_TYPE: [chars] [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-INSERTION_OR_UPDATION_FAILED: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-LABEL_SPACE_INCONSISTENT: [chars] [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-NULL_OBJ_HANDLE: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-NULL_PLT_SPACE: [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-TABLE_CREATION_FAILED: [chars] [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_HAL-3-TABLE_DELETION_FAILED: [chars] [chars]

Explanation There is a problem with internal software coding. This message should not appear under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_HAL-4

Error Message %CWAN_HAL-4-UN_SUPPORTED_CONFIG: %s

Explanation The configuration of the WAN module is not supported. A common cause is configuring TE on a GRE tunnel.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_IFMGR Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module Interface Manager (CWAN_IFMGR) messages.

CWAN_IFMGR-4

Error Message %CWAN_IFMGR-4-CREATEFAIL: IM Driver Creation Failed: Interface [dec]/[dec]: [chars]

Explanation Driver failed to create an interface with the interface manager.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %CWAN_IFMGR-4-DESTROYFAIL: IM Driver Destroy Failed: Interface [dec]/[dec]: [chars]

Explanation Driver failed to destroy the interface with the interface manager.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %CWAN_IFMGR-4-REGISTERFAIL: IM Registration Failed: [chars]

Explanation Driver failed to register with the interface manager.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

CWANLC Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN module (CWANLC) messages.

CWANLC-3

Error Message %CWANLC-3-FPD_INCOMPATIBLE: FPD ID=[int] image in this FPD package is for revision [int].x boards. It is incompatible with current board revision of [int].[int]

Explanation This FPD package does not contain images that are compatible with the current line card revision.

Recommended Action Perform the FPD upgrade operation with a newer version of an FPD image package that is compatible with the Cisco IOS software that is operating on the switch. Consult with the FPD image package section of the Cisco IOS software release note to confirm that your line card revision is supported for a particular release.

Error Message %CWANLC-3-CWANLC_EARL_VERSION_NOTICE: CWAN receives mismatch Earl version notification. New Earl[int] vs Earl[int]

Explanation The RP determined through an SCP find operation that the version of the EARL switching engine on the module has changed. This message occurs during a switchover operation. The version of the EARL switching engine is specified in the message text.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWANLC-3-FATAL: [chars]

Explanation The OSM encountered a fatal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWANLC-3-FPD_INCOMPATIBLE: FPD ID=[int] image in this FPD package is for revision [int].x boards. It is incompatible with current board revision of [int].[int]

Explanation This FPD package does not contain images that are compatible with the current board revision.

Recommended Action Perform the FPD upgrade operation with a newer version of the FPD image package that is compatible with the running Cisco IOS software. Consult with the FPD image package section of the Cisco IOS software release note to confirm if your board revision is supported for a particular release.

Error Message %CWANLC-3-IPCPORT: Failed to %s IPC port '%s', error %s

Explanation The line card failed to create a port for communication with the route processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWANLC-3-LTL_NOPPEPORTMAP: Failed to retrieve default port mapping for packet processor [int]

Explanation The line card software initialization was not completed correctly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWANLC-3-TVPN_NOMEM: Failed to start vpn, not enough memory

Explanation The OSM could not start VPN due to insufficient memory.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWANLC-5

Error Message %CWANLC-5-NOSCPPING: Linecard has not sent SCP PING responses for too long

Explanation The SCP ping mechanism is used by the RP and SP processors to monitor whether the line card that is executing Cisco IOS is in a healthy state. This SCP ping response has not been sent by the line card for a long time; the line card has exported its context information to the RP and may be power cycled. The exported context is available in the output of the **show diag** command.

Recommended Action Save the **show diag** command output and contact your Cisco technical support representative if the line card is reset.

CWANLC_ATM Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN ATM module (CWANLC_ATM) messages.

CWANLC_ATM-3

Error Message %CWANLC_ATM-3-NOVPSPACE: [chars]: out of VP space for VPI [dec]

Explanation Out of virtual paths (VPs) on the segmentation and reassembly (SAR) engine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWANLC_ATM-3-VCCLOSEFAIL: [chars]: Failed to remove VC [dec]/[dec] cause [int]

Explanation An attempt to remove a virtual circuit on the module failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_POSEIDON Messages

This section contains Optical Services Module (OSM) GE-WAN Route Processor (RP) driver messages.

Error Message %CWAN_POSEIDON-6-ALARM_INFO: [chars] [chars] [chars] [chars] [chars]

Explanation This message is generated whenever an alarm is present in the system and the alarm status has been reported to the RP, or an alarm has been removed from the system and the alarm status has been reported to the RP.

Recommended Action This is an informational message only. No action is required.

CWAN_QINQ Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN QinQ (CWAN_QINQ) messages.

CWAN_QINQ-3

Error Message %CWAN_QINQ-3-CWAN_POCH_QINQ_NULL_EGRESS: [chars] QinQ Ether VC have received invalid egress assignment on phyport [chars]for trunk encapsulation dot1q [int]

Explanation The port channel QinQ Ether VC subinterface being configured contains an invalid egress port assignment. The egress traffic of the OSM port will be stopped for this EVC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. At the line card, enter the **show cwan qinq** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_QINQ-3-CWAN_QINQ_TRUNK_DATAINCONSISTENCY: QinQ data integrity check failed for bridge-vlan [int] dot1q [int] using trunk encapsulation dot1q [int], existing record shows mapping with encapsulation dot1q [int].

Explanation A data integrity error related to QinQ was detected while a trunk was being configured for the bridge VLAN that is indicated in the message text. The error will be ignored, and the QinQ update will proceed normally.

Recommended Action Enter the **show cwan qinq** command on the module. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_RP Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN route processor driver (CWAN_RP) messages.

CWAN_RP-0

Error Message %CWAN_RP-0-LCLOG_MSG : slot [dec]/[dec]: [chars]

Explanation An error has occurred on a module. The slot and CPU number are indicated after the CWAN_RP-0-LCLOG_MSG text. The error message that appears after the slot number is the original message from the module.

Recommended Action Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_RP-1

Error Message %CWAN_RP-1-LCLOG_MSG : slot [dec]/[dec]: [chars]

Explanation An error has occurred on a module. The slot and CPU number are indicated after the CWAN_RP-1-LCLOG_MSG text. The error message that appears after the slot number is the original message from the module.

Recommended Action Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-1-OVERRIDE_MAC_INVALID: [chars] has invalid override-mac-address.

Explanation The user issued an override MAC address that does not match the MAC address of the MSFC. This condition can occur if the configuration was moved to new hardware or the MAC address command was used on another interface. While the system automatically corrects this condition, the configuration needs to be adjusted.

Recommended Action Modify the override MAC address command in the configuration.

CWAN_RP-2

Error Message %CWAN_RP-2-LCLOG_MSG : slot [dec]/[dec]: [chars]

Explanation An error has occurred on a module. The slot and CPU number are indicated after the CWAN_RP-2-LCLOG_MSG text. The error message that appears after the slot number is the original message from the module.

Recommended Action Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_RP-3

Error Message %CWAN_RP-3-FAILED_CONFIG: Failed to send line card config message [chars] for slot [int] port [int]

Explanation The RP could not send the specified configuration message to the line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-3-IFCFG_CMD_NOT_OWNER: Process '[chars]' waiting for interface configuration command ([hex]) to slot [int]/[int] without acquiring lock owned by process '[chars]'

Explanation A process on the RP sent a configuration command to the slot specified in the message and a different process waited for the result. This condition could cause incorrect line card configuration states.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-3-LCLOG_MSG : slot [dec]/[dec]: [chars]

Explanation An error has occurred on a module. The slot and CPU number are indicated after the CWAN_RP-3-LCLOG_MSG text. The error message that appears after the slot number is the original message from the module.

Recommended Action Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-3-MODULE_TYPE: cannot find FCI for module type [int] in slot [int]

Explanation An internal software error occurred while the system was detecting the module type in the specified slot. The module operation will be affected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-3-PROCMSG: Process msg send failed for process[dec]

Explanation An attempt to send a process message failed for the specified process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-3-UPGRADE_ERROR: Slot [int]: The ROMMON upgrade failed to complete.

Explanation An error occurred during the upgrade process.

Recommended Action If the module reloads successfully, examine the file and try the upgrade process. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-3-WAN_BRIDGING_CONFIG_EXCEEDED: The number of VPLS/EoMPLS/Bridging/QinQ VCs exceeded the maximum supported by the platform

Explanation The user attempted to configure more VPLS, EoMPLS, and bridging VCs than the number that is supported by the platform.

Recommended Action Review the configuration guidelines for the features that are being configured, and reduce the number of VPLS, EoMPLS, and bridging VCs to the number that is supported by the platform.

CWAN_RP-4

Error Message %CWAN_RP-4-CONFIG_MISMATCH: Irreconcilable Configuration difference between Active & Standby Supervisors due to OIR/Config Event -> Reloading Standby Supervisor to synchronize the configuration.

Explanation An unexpected configuration difference exists between the active and standby supervisor engines.

Recommended Action The standby supervisor engine is being reloaded. No action is required.

Error Message %CWAN_RP-4-EMPTY_CWANBAYS: FLEXWAN in slot [dec] is empty. Please remove the Flexwan or insert it with atleast one PA

Explanation The FlexWAN in the specified slot does not contain any port adapters.

Recommended Action The FlexWAN should be removed. This is an unsupported configuration.

Error Message %CWAN_RP-4-IFCFG_CMD_TIMEOUT: Interface configuration command ([hex]) to slot [int]/[int] timed out

Explanation The RP sent a configuration command to the slot specified in the message and received no confirmation for the command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-4-INCR_CFG_SYNC_FAIL: 7600 incremental running-config sync for [[dec]/[dec]] failed - [chars]([dec]), Reload Standby

Explanation The specified 7600 series router incremental running configuration synchronization has failed.

Recommended Action Power cycle the redundant supervisor engine.

Error Message %CWAN_RP-4-INVALID_UNIT: Invalid 7600 Unit: [[dec]/[dec]].

Explanation The specified 7600 series router slot and CPU are beyond the chassis limit.

Recommended Action Power cycle the redundant supervisor engine.

Error Message %CWAN_RP-4-LCLOG_MSG : slot [dec]/[dec]: [chars]

Explanation An error has occurred on a module. The slot and CPU number are indicated after the CWAN_RP-4-LCLOG_MSG text. The error message that appears after the slot number is the original message from the module.

Recommended Action Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-4-MODULE_CONFIG_MISSING: configuration missing for slot [int]

Explanation Some information is missing regarding the configuration of the module in the specified slot. Any startup configuration for the interfaces will not be applied. If the module in the specified slot is a FlexWAN, details about the port adapters in the FlexWAN are missing from the configuration information. This information is missing from the **SLOTCACHE** ROMMON variable.

Recommended Action If the module in the slot specified in the error message has not previously been inserted, it has no previous configuration; therefore, no action is required. If the configuration for the specified slot in the startup configuration is suitable for the module in that slot, after the module has loaded, manually apply the configuration by using one of the following two methods. The second method requires a system reload.

- Enter the **copy nvram:startup-config system:running-config** command to reapply your saved configuration and then enter the **no shutdown** command on all interfaces whose configuration was rejected. Enter the **copy system:running-config nvram:startup-config** command to save your configuration and the WAN module slot configuration.
- Enter the **copy** command to copy your startup configuration to a temporary location (for example, **copy nvram:startup-config bootflash:tmp-config**), and then enter the **copy system:running-config nvram:startup-config** command to update the WAN module slot configuration. Enter the **copy** command to restore the temporary copy of the startup configuration (for example, **copy bootflash:tmp-config nvram:startup-config**), and then enter the **reload** command to reload the system.

After using the second method, you may want to use the **delete** command to remove the temporary copy of the startup configuration. To prevent this condition from recurring, ensure that the **SLOTCACHE** variable is updated whenever modules that require it (FlexWANs, but not OSMs) are moved between slots in the chassis. The **SLOTCACHE** variable is updated when the running configuration is written to the startup configuration using the **copy system:running-config nvram:startup-config** command (or the deprecated **write memory** equivalent). The two methods of restoring the configuration for the module ensure that the **SLOTCACHE** variable is updated.

CWAN_RP-5

Error Message %CWAN_RP-5-LCLOG_MSG : slot [dec]/[dec]: [chars]

Explanation An error has occurred on a module. The slot and CPU number are indicated after the CWAN_RP-5-LCLOG_MSG text. The error message that appears after the slot number is the original message from the module.

Recommended Action Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_RP-6

Error Message %CWAN_RP-6-ADF_FILE: Slot [int]: Using VPN-SM Upgrade File: "[chars]"

Explanation The system is booting the specified upgrade image for the VPN Services Module.

Recommended Action No action is required.

Error Message %CWAN_RP-6-AUX_FILE: Slot [int]: Found VPN-SM Firmware in File: "[chars]"

Explanation The file specified in the message was found and will be loaded instead of the bundled image by the VPN Services Module.

Recommended Action No action is required.

Error Message %CWAN_RP-6-LCLOG_MSG : slot [dec]/[dec]: [chars]

Explanation An error has occurred on a module. The slot and CPU number are indicated after the CWAN_RP-6-LCLOG_MSG text. The error message that appears after the slot number is the original message from the module.

Recommended Action Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-6-LC_RESET: The RP is reloaded, resetting slot [dec] is necessary. Please ignore errors if any, till the linecard comes up.

Explanation If the system is running Catalyst operating system software on the supervisor engine and Cisco IOS software on the MSFC, the WAN line cards that power up before the RP powers up will be reset automatically.

Recommended Action This is an informational message only. No action is required.

Error Message %CWAN_RP-6-NO_LC_IMAGE: Line card image in slot [dec] for card_id [dec] is not bundled with IOS.

Explanation The line card in the specified slot will be powered down to prevent it from running an image that is not supported by the RP. If the line card image is compatible with the image running on the RP, there might be another problem with the software.

Recommended Action Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_RP-6-OUT_OF_RESOURCE: [chars] configuration has exceeded available internal resources.

Explanation The resources required for configuration are no longer available. They may have been acquired by another application.

Recommended Action If the requested resources have not been allocated to another application, contact your Cisco technical support representative for further assistance.

Error Message %CWAN_RP-6-OVERRIDE: Slot [int]: ...Overriding Intrinsic VPN-SM Firmware.

Explanation The specified image will be used instead of the bundled image.

Recommended Action No action is required.

Error Message %CWAN_RP-6-UPGRADE_COMPLETE: Slot [int]: ROMMON upgrade complete. Reset the card for the changes to take effect.

Explanation The ROMMON upgrade has completed successfully. The module must be reloaded for the changes to take effect.

Recommended Action No action is required.

CWAN_RP-7

Error Message %CWAN_RP-7-LCLOG_MSG : slot [dec]/[dec]: [chars]

Explanation An error has occurred on a module. The slot and CPU number are indicated after the CWAN_RP-7-LCLOG_MSG text. The error message that appears after the slot number is the original message from the module.

Recommended Action Follow any instructions provided in the error message text. If no instructions are provided, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_SLOT Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN slot (CWAN_SLOT) messages.

CWAN_SLOT-1

Error Message %CWAN_SLOT-1-CF_ADDFAILED: Failed to register chkpt client, client = %d

Explanation The checkpoint facility client could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SLOT-1-CF_NOBUF: Failed to get chkpt buffer, client = %d

Explanation The checkpoint facility could not obtain buffer memory.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

CWAN_SP Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router WAN switch processor (CWAN_SP) messages.

CWAN_SP-3

Error Message %CWAN_SP-3-INIT_FAIL: Failed to allocate [dec] bytes memory needed for CWAN SP module initialization

Explanation A memory allocation failure has occurred during initialization of WAN SP module.

Recommended Action Upgrade to a higher memory size on the switch processor (SP).

CWAN_SP-4

Error Message %CWAN_SP-4-UNKNOWN_PW: Unknown CWAN pseudo wire on vlan [dec], port [dec] / [dec]

Explanation An unknown WAN pseudowire is being used.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWAN_SPA Messages

This section contains shared port adapter (SPA) on OSR messages.

Error Message %CWAN_SPA-3-CREATION_FAILURE: slot=[dec] subslot=[dec], spa_type=[hex], lc_type=[hex].

Explanation An attempt to create a SPA object has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-DIAG_CONFIG: [chars] did not complete [dec]/[dec]

Explanation An error has occurred during diagnostic test.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-INVALID_DATA_INSTANCE: interface type [chars], slot [dec] port [dec] vc [dec] : [chars]

Explanation The data required to support the specified interface is not available.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-INVALID_IF_INDEX: index= [dec], cardType=[hex], spaType=[hex], slot [dec] subSlot [dec] slotunit [dec] vc [dec]

Explanation The index for the interface is not valid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-INVALID_INDX_RANGE: index1= [dec], index2= [dec], maxIndex= [dec]

Explanation Invalid index range.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-MEM_ALLOC_ERROR: [chars]

Explanation A memory allocation error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-NULL_SPA_PTR:

Explanation The pointer to a SPA object is null.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-NULL_VFT: [chars] virtual function table is not initialized. spaType=[hex]

Explanation A required function table is not initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-NULL_VFUNC: [chars] vector is not initialized. spaType=[hex]

Explanation A required function vector is not initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-POWER_CYCLE: [chars] occurred on Shared Port Adapter [int]/[int]

Explanation An error has occurred that will cause the shared port adapter to be power cycled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWAN_SPA-3-SPA_CREATION_FAILURE: slot=[dec] subslot=[dec], PID=[chars] lc_type=[hex].

Explanation An attempt to create a SPA object has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWPA Messages

This section contains Catalyst 6500 series switch and Cisco 7600 series router port adapter module (CWPA) messages.

CWPA-2

Error Message %CWPA-2-BAD_HWVERS: Unable to determine board hardware version

Explanation The module software cannot read the module hardware version. This condition indicates a hardware error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWPA-2-PAOIR: Port adapter OIR not supported, reloading

Explanation An OIR operation occurred on the port adapters of the specified module, but OIR is not supported on the port adapter. This error has caused the module to fail and reload.

Recommended Action Do not attempt OIR on the port adapters of the specified module.

Error Message %CWPA-2-PA_VOLFAIL: Port adapter [dec]V failed, Reloading flexwan

Explanation The module encountered an error involving power delivery to the module. Probable causes for this error are an environmental condition, an overtemperature condition, or inconsistent voltage to the module.

Recommended Action Verify that the input voltage and the temperature of the module are within acceptable ranges.

Error Message %CWPA-2-WHICH_INT: Unexpected [chars] interrupt, INT status = [hex]

Explanation The module specified in the error message has encountered an unexpected interrupt.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWPA-3

Error Message %CWPA-3-DIAGFAIL: Failed to handle diag [chars] [dec]

Explanation The module failed to execute a diagnostics command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWPA-3-PROCCREATEFAIL: Failed to create [chars] process

Explanation A module failed to create a process that is necessary for proper functioning of the module.

Recommended Action If a statistics export process was not created, check the I/O rate and the bytes that are getting incremented in the **show interface** command output for the nonchannelized interfaces on the FlexWAN and Enhanced FlexWAN modules. You can also get the statistics from the **show interface acc** command output or the **show interface stats** command output. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWPA-4

Error Message %CWPA-4-HEADER_TOO_BIG: Needs [dec] bytes, with only [dec] bytes available. Packet size [int], received from [chars], buffer [hex] packet start [hex]:

[hex]:[hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

[hex]:[hex] [hex] [hex] [hex] [hex] [hex] [hex] [hex]

Explanation A packet was sent from the port adapter to either the route processor or the line card. That packet did not have enough available space to append the header. A new particle has been linked to the packet to store the header.

Recommended Action No action is required.

CWPABRIDGE Messages

This section contains CWPA bridging messages.

Error Message %CWPABRIDGE-3-BADLTL: [chars] got bad LTL index [hex] for vlan [int] ckt_id [int] sent from RP

Explanation The RP has provided the line card with an invalid value for the local target logic (LTL) index value.

Recommended Action If the bridging traffic stops going through, copy the message exactly as it appears on the console or in the system log. At the RP console exec prompt, enter the following commands:

```
show log,  
show cwan bridge,  
show atm vlan,  
show mac-address-table dynamic detail,  
show cwan ltl
```

The output of these commands will enable the engineer to gather more information about the condition. Contact your Cisco technical support representative, and provide the representative with the gathered information.

Error Message %CWPABRIDGE-3-NOCLONEDPAK: Unable to allocate pak header for cloned pak

Explanation A line card is not able to allocate a pak header for a cloned pak that is used for flooding packets among bridged WAN links.

Recommended Action On the Cisco support website, use the online Software Advisor and check the release notes for the code you are running to determine the minimum amount of memory. If you have sufficient memory and are still seeing this error message, load the previous image on the unit to return the unit to an operational state and retrieve the information needed to report this problem. Copy the contents of the line card's **crashinfo** data from the **cwan slot/bay bootflash:** command, where slot and bay belong to the line card. When you open a TAC case, provide the line card's **crashinfo** data and the output of the **show tech** command from the router.

CWRPSPA Messages

This section contains messages for shared port adapters (SPAs) on the Catalyst 6500 Series Switch and Cisco 7600 Series Router WAN route processor (RP).

CWRPSPA-3

Error Message %CWRPSPA-3-HWIDB_FAILURE: Creation: slot [dec] subSlot [dec] port [dec] vc [dec]

Explanation Failed to create a hardware interface descriptor block (HWIDB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWRPSPA-3-INVALID_PORT_NUM: slot=[dec] port=[dec], hwidbType=[hex], max_port_num=[dec], LCtype=[hex]

Explanation The port number is out of range.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWRPSPA-3-MAX_SPA: Power to IPSEC-SPA-2G in [chars] is denied because it has exceeded the number allowed([dec])

Explanation The number of IPSEC-SPA-2G port adapters in a chassis is limited. This message displays when the number of IPSEC-SPA-2G port adapters in the chassis has exceeded the limit.

Recommended Action Use only the number of supported IPSEC-SPA-2G port adapters.

Error Message %CWRPSPA-3-NO_HOST_INFO: slot [dec] subSlot [dec], spaType [hex]

Explanation Failed to get information about the host line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWRPSPA-4

Error Message %CWRPSPA-4-SPA_CMD_NO_RESP: [chars]: No response for interface configuration command [int]

Explanation A timeout occurred while the RP was waiting for a response from the line card. This condition may occur when the line card CPU is too busy to respond to the configuration command.

Recommended Action Retry the configuration command.

Error Message %CWRPSPA-4-SPA_RESP_CMD_MISMATCH: [chars]: Expecting response to interface configuration command [int] but received response to command [int].

Explanation An internal synchronization error occurred while configuring the interface. The configuration may not have succeeded.

Recommended Action Check that the running configuration for the interface is correct. If this message occurred on the standby, try reloading the standby to ensure that its configuration is in sync. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWRPSPA-6

Error Message %CWRPSPA-6-CARDRELOAD: Module [int] reload due to SPA insert in [int]/[int].

Explanation When inserting a SPA on the specified module, the module resets.

Recommended Action This message is informational. No action is required.

CWSLC Messages

This section contains WAN SiByte Module (CWSLC) messages.

CWSLC-3

Error Message %CWSLC-3-DIAGFAIL: Failed to handle diag [chars] [dec]

Explanation The module failed to execute a diagnostics command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWSLC-3-DIAGSKIP: Skipped diag for port [dec]

Explanation The module skipped diagnostics for the specified port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWSLC-3-DIAGWARNING: Backplane DIP switches settings incorrect

Explanation The backplane DIP switches need to be set properly.

Recommended Action Refer to the *7600 SIP and SPA Hardware Installation Guide* for information about how DIP switches must be set.

Error Message %CWSLC-3-IPCALLOCFAIL: Failed to allocate IPC buffer [chars]

Explanation An Enhanced FlexWAN module failed to allocate a buffer for communication with the route processor (MSFC).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWSLC-3-IPCSENFFAIL: Failed to send IPC message [chars]

Explanation An Enhanced FlexWAN module failed to send a message to the route processor (MSFC).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWSLC-3-LC_ENCAP_UPDATEFAIL: Could not update encapsulation on [chars] to [int]

Explanation The line card failed to update the new encapsulation that was requested. The interface data structures could not be temporarily locked to perform the encapsulation change

Recommended Action If the interface does not come up with the new encapsulation, remove and reconfigure the encapsulation on the interface. If the error persists after a few attempts at reconfiguration, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC Messages

This section contains WAN Optical Services Module (CWTLC) messages.

CWTLC-0

Error Message %CWTLC-0-FATAL_EXCEPTION: [chars]

Explanation The OSM encountered a fatal exception.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC-2

Error Message %CWTLC-2-FATAL_ATM: [chars]

Explanation The OSM encountered a fatal line management interrupt. This error is not recoverable and will cause the system to fail.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-2-PCITIMEOUT: Fatal Local I-O Bus [dec] Timeout Addr = [hex]

Explanation The OSM encountered a PCI timeout.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-2-PLIM_RX: [chars]

Explanation The OSM encountered an FPGA error that caused a sequence error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-2-SLAVEPCI: [chars]

Explanation The OSM encountered a PCI error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-2-TESTCRASH: [chars]

Explanation The user entered a command that caused the module to fail.

Recommended Action No action is required.

CWTLC-3

Error Message %CWTLC-3-ATMTXFIFO: [chars]

Explanation The OSM encountered an error with the FPGA that has caused the FIFO queue to exceed the maximum limit. This condition will cause the system to fail.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-CONST_SWITCHING_BUS_INTERFACE_ASIC_ERR: Constellation Switching Bus Interface Asic [[dec]] error: [chars]

Explanation The CWTLC switching bus interface ASIC received an error.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-CONST_SWITCHING_BUS_INTERFACE_ASIC_HWERR: Constellation Switching Bus Interface Asic [[dec]] HW error: [chars]

Explanation The CWTLC switching bus interface ASIC received a hardware error and will be reset.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-DMA_ENGINE_ASIC_ERR: DMA Engine Asic [[dec]] error: [chars]

Explanation The CWTLC DMA engine ASIC received an error.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-0-DMA_ENGINE_ASIC_FATAL_ERR: DMA Engine Asic[[dec]] fatal error: [chars]

Explanation The CWTLC DMA engine ASIC received a fatal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-ERR_DETAIL: [chars]

Explanation This message provides additional error details for a previous message, which may be of use to your technical support representative.

Recommended Action Follow the instructions for any system messages preceding this one and be sure to include the text from this error.

Error Message %CWTLC-3-EXCEPTION_ERR: [chars]

Explanation The OSM encountered an error exception.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLIC-3-FABRIC_INTERFACE_ASIC_FATAL: OSM Fabric Interface ASIC Fatal Error. ERROR CODE: [chars]

Explanation The OSM fabric interface ASIC received a fatal error.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLIC-3-FABRIC_INTERFACE_ASIC_PXF: CWAN PXF Client [[dec]] Not Running

Explanation An ASIC device on the OSM has detected that the designated PXF client is not running.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLIC-3-FR_BAD_BRIDGING: Frame Relay: old bridge-vlan([int]) or new bridge-vlan([int]) on the bridged interface [chars] is malformed

Explanation This is an unexpected update from the route processor and should be ignored.

Recommended Action This is an informational message only. No action is required.

Error Message %CWTLC-3-FR_INTLEVEL: unexpected interrupt level invocation of frame-relay handler:[chars] if_number([dec]) dlci([dec])

Explanation Some feature code mistakenly invoked the module Frame Relay handler, which is designed to run at process level. This condition may lead to data corruption and a module failure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-LTL_ERR: Inconsistent port selection [hex] assignment for PXF([dec]) Vlan([dec]) on PXF([int])

Explanation The port selection information stored in the database is not valid.

Recommended Action Shut down the interface VLAN and restart the interface VLAN.

Error Message %CWTLC-3-MCAST_REPL_ENGINE_FATAL: Multicast Replication Engine Asic Fatal Error. Resetting ASIC.

Explanation The OSM multicast replication engine ASIC received a fatal error.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-MEDUSA_FATAL: OSM Medusa ASIC Fatal Error. ERROR CODE: [chars]

Explanation The OSM Medusa ASIC received the specified fatal error.

Recommended Action No action is required if traffic recovers. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLIC-3-MEDUSAPXF: CWAN PXF Client [[dec]] Not Running

Explanation An ASIC device on the OSM has detected that the specified PXF client is not running.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLIC-3-NOMEM: [chars]

Explanation The OSM could not obtain statistics due to depleted memory.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLIC-3-NO_STATID: PXF([dec]): no stat_id is available for statistics collection

Explanation The OSM has used up all resources for statistics collection. No additional resources are available for further statistics collection.

Recommended Action Reduce the number of features configured on the specified PXF. If conditions warrant, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-OLDIOFPGA: Upgrade your I/O FPGA

Explanation The OSM has an earlier release of the I/O FPGA software.

Recommended Action Contact your Cisco technical support representative to upgrade the I/O FPGA software.

Error Message %CWTLC-3-PLIM_TX: [chars]

Explanation The OSM encountered an FPGA error that caused a sequence error. The module will attempt to recover from the error.

Recommended Action If the system recovers, no action is required. If the system does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-PORTERROR: Port control error, cmd=[chars], port=[dec]

Explanation The port control command function has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-SECPAIRINT: Unexpected VA/Toaster interrupt from second pair

Explanation The OSM experienced an unexpected interrupt.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-TITANFATAL: Titan Fatal Error. Resetting ASIC.

Explanation The OSM Titan ASIC received a fatal error.

Recommended Action No action is required if traffic recovers. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-TMC_STATID_INCONSISTENCY: PXF([dec]):Inconsistent stats id([hex]) [int] packets dropped.

Explanation The WAN module received inconsistent statistics from the PXF. The PXF reported that a packet was dropped, but the PXF did not report the correct packet count.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-TMTRIE_ALLOC_FAILED: Failed to allocate toaster mtrie nodes.

Explanation The system encountered an error while it was attempting to allocate memory from a WAN OSM component.

Recommended Action Reduce the number of routes associated with a VRF identifier or upgrade the WAN OSM to a higher version.

Error Message %CWTLC-3-UNSUPPORTED_LABEL_RANGE: The maximum label range configured for this system exceeds the [int] limit supported by the OSM module.

Explanation The MPLS label range configured for this system is not supported. The maximum label range limit is specified in the message.

Recommended Action Change the maximum MPLS label range by entering the **mpls label range** command.

Error Message %CWTLC-3-VTMS: [chars]

Explanation The OSM could not schedule the wheel entry. The reason for the error is specified in the error message text.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-3-VTMSQ_NOTIDLE: Queue not idle when modifying Q([hex])

Explanation The VTMS queue was in the process of being modified for a change in QoS configuration, but packets were still going through the queue. When the queue is being modified, there is usually no traffic in the queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC-4

Error Message %CWTLC-4-ASIC_RESET: Reset asics - [chars]

Explanation The ASICs on the OSM are resetting. System traffic should recover and continue normally after the module resets.

Recommended Action No action is required.

Error Message %CWTLC-4-CONST_SWITCHING_BUS_INTERFACE_ASIC_CONFIG_ERR: Constellation Switching Bus Interface Asic [[dec]] configuration failed after [dec] retries.

Explanation The CWTLC switching bus interface ASIC failed to be configured correctly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-4-MEDUSAERROR: Medusa Error. [chars]

Explanation The CWTLC Medusa ASIC received a recoverable error.

Recommended Action No action is required if traffic recovers. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-4-PINNACLE_OLDIOFPGA: Link negotiation maybe be affected, upgrade I/O FPGA

Explanation The system detected an earlier release of the I/O FPGA software. The I/O FPGA software needs to be upgraded to the latest release.

Recommended Action Upgrade the I/O FPGA software to the newest release. If you require assistance, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved

software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-4-PORT_ASIC_OLDIOFPGA: Link negotiation maybe be affected, upgrade I/O FPGA

Explanation An earlier version of the I/O FPGA software has been detected.

Recommended Action Upgrade the I/O FPGA software to the latest version. If you require assistance, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-4-TMC_INVALID_STATID: PXF:Invalid-Statid ([dec]) for vc [int] under interface [int]

Explanation The OSM has encountered an internal error while setting up the statistics system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC-5

Error Message %CWTLC-5-BUS_SEQ_ERR: Constellation bus Sequence Error. Resetting port ASICs.

Explanation The SP detected a sequence error on the backplane bus of the OSM. The system called a reset sequence from the EARL to recover from this error. System traffic should recover and continue normally.

Recommended Action If traffic recovers, no action is required. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-5-DATAPATH_RECOVERY_PATCH: EARL reset patch invoked.

Explanation The ASICs on the OSM were reset so that the module could recover from a bus sequence error. This condition usually occurs under heavy traffic with HA-related switchover or a module OIR operation. System traffic should recover and continue normally.

Recommended Action If traffic recovers, no action is required. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-5-FABRIC_INTERFACE_ASIC_RE_INIT: Fabric Interface Asic Re-initialize.

Explanation The OSM fabric interface ASIC is being reinitialized because of a system backplane bus sequence error, a fatal ASIC error, or a line card error.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-5-MEDUSA_RE_INIT: Medusa Re-initialize.

Explanation The OSM Medusa ASIC is being reinitialized because of a system backplane bus sequence error or a fatal ASIC error on the module itself.

Recommended Action If traffic recovers, no action is required. If traffic does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC-5-PENDING_PATCH: Invoke pending data recovery patch.

Explanation The ASICs on the OSM line card has been reset so that it can recover from backplane switching bus sequence errors or local hardware ASIC errors. This condition is usually occurs under stress trafficwith HA-related switchover or a line card OIR operation. System traffic should recover and continue normally.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC-6

Error Message %CWTLC-6-FABRIC_INTERFACE_ASIC_MODECHANGE: Fabric Interface Asic switching bus Mode changed to [chars]

Explanation The supervisor engine has changed the CWTLC fabric interface ASIC switching bus mode.

Recommended Action No action is required.

CWTLC_ATOM Messages

This section contains Any Transport over MPLS messages for WAN Optical Services Modules (CWTLC_ATOM).

CWTLC_ATOM-3

Error Message %CWTLC_ATOM-3-INTFID_ERR: The internal interface ID [hex] for the AToM interface [chars] is invalid for the connection ID [hex]

Explanation The internal interface ID that is required by the OSM to establish an AToM connection is either invalid or is mismatched with the control plane MPLS data structure for this connection. The current interface ID of the OSM has lost its synchronization with the interface ID of the control plane for this connection. This condition is usually caused by unfavorable network conditions such as a failover operation and can occur during normal system operation.

Recommended Action Enter the appropriate AToM commands for either the Frame Relay over MPLS, Cell Relay over MPLS, AAL5 over MPLS, or Frame Relay local switching to remove the AToM connection, then add the connection again. Performing this action once should successfully reestablish the connection.

Error Message %CWTLC_ATOM-3-OSM_BB1_CONFIG_UNSUPPORTED: Attempt to configure Frame Relay over MPLS or Frame Relay localswitching on a non-enhanced OSM

Explanation Frame Relay over MPLS and Frame Relay local switching features are supported only on enhanced Optical Services Modules. Nonenhanced OSMs do not support these features.

Recommended Action Remove the configuration of the unsupported features, or upgrade this module to an enhanced OSM.

CWTLC_CHOC Messages

This section contains Cyclops Channelized OC48/OC12 (CWTLC_CHOC) messages.

CWTLC_CHOC-3

Error Message %CWTLC_CHOC-3-HWERROR: [chars]

Explanation The module hardware has experienced the specified error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC_CHOC_DSX Messages

This section contains Optical Services Module (OSM) CHOC DSX LC common messages.

Error Message %CWTLC_CHOC_DSX-3-HWERROR: [chars]

Explanation A hardware error involving the OSM line card has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC_CHOCX Messages

This section contains Optical Services Module (OSM) Channelized OC12/OC3 module (CWTLC_CHOCX) messages.

CWTLC_CHOCX-3

Error Message %CWTLC_CHOCX-3-HWERROR: [chars]

Explanation The module hardware has experienced the specified error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC_GEWAN Messages

This section contains Gigabit Ethernet WAN module (CWTLC_GEWAN) messages.

CWTLC_GEWAN-3

Error Message %CWTLC_GEWAN-3-FPGA_PROG_FAILED: [chars] FPGA initialization failed due to [chars]

Explanation The FPGA could not be initialized. The cause of this condition is specified in the message text on the console or in the system log. As a result of this condition, the device is not operational and has been disabled.

Recommended Action Reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show module** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_GEWAN-3-GEMAC_9K_MODE_FIX_FAILED: Fix for 9k buffer mode failed for GEMAC[[dec]]

Explanation An error has occurred while the system was setting the GEMAC component of the Gigabit Ethernet WAN module in 9,000-buffer mode (a buffer mode that supports jumbo frames). This condition occurred on the port specified in the error message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_GEWAN-3-GEMAC_INIT_FAILED: Device initialization failed for GEMAC[[dec]]

Explanation An error occurred during initialization of the GEMAC device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_GEWAN-3-IF2PORT: Cannot determine port from interface [dec] for operation [dec] with [[enet]]

Explanation The port number could not be determined from the given interface number.

Recommended Action Reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show module** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_GEWAN-3-MAC_OP_BAD: Unknown MAC address operation [dec] with [[enet]] on port [dec]

Explanation The specified MAC address operation is unknown and cannot be performed.

Recommended Action Reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show module** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_GEWAN-3-PORT_AUTONEG_FAIL: Failed to [chars] auto-negotiation [chars] on port [dec]

Explanation The enabling/disabling of the auto-negotiation functionality on a GE-WAN port has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_GEWAN-3-PORT_CMD_FAIL: Port [chars] failed on port [dec]

Explanation A GE-WAN port command has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_GEWAN-3-TABLE_ADD_REMOVE_FAILED: MAC address table [chars] with [[enet]] failed on port [dec]

Explanation The addition or removal of a MAC address from the MAC address table has failed.

Recommended Action Reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show module** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_GEWAN-3-ZICO_INIT_FAILED: Device initialization failed for Zico FPGA[[dec]]

Explanation An error occurred during initialization of the protocol converter FPGA.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC_GEWAN-5

Error Message %CWTLC_GEWAN-5-GEMAC_INTR: [chars]:[chars]

Explanation The GEMAC component of the Gigabit Ethernet WAN module caused an error interruption.

Recommended Action Reload the module. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_GEWAN-5-LINKFPGA_INTR: Index[[dec]] Cause[[hex]]: [chars]

Explanation The link FPGA component of the Gigabit Ethernet WAN module caused an error interruption to occur.

Recommended Action Reload the module. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

CWTLC_QOS Messages

This section contains Optical Services Module (OSM) supervisor engine line card QoS messages.

Error Message %CWTLC_QOS-3-CHUNK_INIT_FAIL: [chars]: [chars] allocation failed

Explanation The OSM detected a memory allocation failure. The installed amount of memory could be insufficient for the software features that are configured.

Recommended Action If this message appears continuously, a memory upgrade might be required.

Error Message %CWTLC_QOS-3-CHUNK_MALLOC_FAIL: [chars]: chunk_malloc for [chars] failed

Explanation The OSM detected a memory allocation failure. The installed amount of memory could be insufficient for the software features that are configured.

Recommended Action If this message appears continuously, a memory upgrade might be required.

Error Message %CWTLC_QOS-3-MISC: [chars]: [chars] [dec]

Explanation The OSM detected the software error event that is specified in the message text.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_QOS-4-STATS_CLASS_INFO_INVALID: Stats process found invalid class_info [[hex]], stat_type [[hex]] caller_pc [[hex]] caller_pc1 [[hex]].

Explanation The OSM has detected invalid class data. This condition is transient when the policy map is modified and the update is propagated to the OSM.

Recommended Action If this message appears continuously, reset the line card by entering the **hw-module module <> reset** command. Copy the message exactly as it appears on the console or in the system log. Enter the **show tech-support** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %CWTLC_QOS-3-WRED_CLASS_INDEX_NOT_FOUND: sub-class limit has exceeded

Explanation The OSM supports only 29 WRED classes: 8 CS, 12 AF, 1 EF, and 8 user-defined DSCP values.

Recommended Action Refer to the technical documentation for more information about WRED configurations on the OSM.

CWTLC_RP Messages

This section contains WAN Toaster-based module route processor (CWTLC_RP) messages.

CWTLC_RP-3

Error Message %CWTLC_RP-3-TMEM_IMPROPER_SEL: Improperly nested PXF [int] memory select/deselect at nested level [int]. Value stored with select ([hex]) does not match the value passed with deselect ([hex])

Explanation The last PXF select operation was not followed by a deselect operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DBUS Messages

This section contains data bus (DBUS) messages.

DBUS-3

Error Message %DBUS-3-MSGPABADCONFIG: Slot [dec] has an unsuccessfully configured PA in bay [dec]

Explanation The port adapter (PA) in the slot is not successfully configured, either because the VIP is incompatible with it or because the Cisco IOS has no pertinent drivers.

Recommended Action Refer to the documentation of the PA to get a list of compatible VIPs. If the VIP that contains the PA is listed as supported, verify that your Cisco IOS version supports the PA. Otherwise, place the PA in one of the supported VIPs and verify that the Cisco IOS version supports the PA.

Error Message %DBUS-3-MSGPAUNSUP: Slot [dec] has an unsupported PA in bay [dec]

Explanation The port adapter (PA) in the slot is not supported, either because the VIP is incompatible with it or because the Cisco IOS has no pertinent drivers.

Recommended Action Refer to the documentation of the PA to get a list of compatible VIPs. If the VIP that contains the PA is listed as supported, verify that your Cisco IOS version supports the PA. Otherwise, place the PA in one of the supported VIPs and verify that the Cisco IOS version supports the PA.

Error Message %DBUS-3-ORFS_NOTINITIALIZED: ORFS is not initialized

Explanation When the OIR Remove Failing Slot (ORFS) feature is configured, the software attempts to initialize parameters. This initialization failed and the service will not be available.

Recommended Action Try entering the **service oir-remove-failing-slot** command again. This error message should not cause any functional failures. If the message causes a Cisco IOS performance issue, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DEV_SELENE Messages

This section contains messages related to the Selene FPGA device.

DEV-SELENE-3

Error Message %DEV_SELENE-3-DEV_INIT_FAILURE: Selene [dec] initialization failed.

Explanation The initialization of the Selene FPGA device on this linecard failed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-EFIFO_ECC: Selene [dec] Egress [dec] Burst FIFO Read ECC error

Explanation A FIFO ECC error condition was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-FIFO_ECC: Selene [dec] Ingress [dec] [chars] Priority FIFO Read ECC Error

Explanation An ECC Error was detected while reading from a queue in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-FIFO_FULL: Selene [dec] Ingress [dec] [chars] Priority FIFO Full

Explanation An ingress packet queue full condition was detected in a FPGA device on the linecard. This may be caused by a flow-control misconfiguration due to incorrect software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-FIFO_SEQ: Selene [dec] Egress [dec] Burst FIFO Read Sequence error

Explanation A FIFO sequence error condition was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-INV_POE: Selene [dec] Egress [dec] Invalid POE error, [hex]

Explanation An invalid Port of Exit error condition was detected in a FPGA device on the linecard. This may be caused by incorrect software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-INV_VLAN: Selene [dec] Egress [dec] Invalid Vlan error

Explanation An invalid vlan error condition was detected in a FPGA device on the linecard. This may be caused by a software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-MRX_CRC: Selene [dec] Metropolis Rx [dec] Packet CRC Error

Explanation A packet checksum error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-MRX_FCS: Selene [dec] Metropolis Rx [dec] Packet Header Checksum Error

Explanation A packet header checksum error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-MRX_GNT: Selene [dec] Metropolis Rx [dec] Giant Packet Error

Explanation A giant frame was received in a FPGA device on the linecard. This may be due to incorrect software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-MRX_LEN: Selene [dec] Metropolis Rx [dec] Packet Length Mismatch

Explanation An incorrect length was detected for packet received in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-MRX_MIN: Selene [dec] Metropolis Rx [dec] Minimum Packet Length Error

Explanation A frame smaller than the minimum size was received in a FPGA device on the linecard. This may be due to incorrect software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-MRX_SEQ: Selene [dec] Metropolis Rx [dec] Sequence Error

Explanation A sequence error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-SRAM_ECC: Selene [dec] SRAM [chars] [chars] ECC error, error status: [hex]

Explanation An ECC error was detected in SRAM memory in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_CODE: Selene [dec] XAUI [dec] Coding Error

Explanation A XAUI lane coding error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_CRC: Selene [dec] XAUI [dec] Checksum Error

Explanation A XAUI interface checksum error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support**

command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_FRM: Selene [dec] XAUI [dec] Framing error

Explanation XAUI interface framing error was detected on a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_GNT: Selene [dec] XAUI [dec] Giant Frame Error

Explanation A giant frame was detected in a FPGA device on the linecard. This may be due to incorrect software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_LEN: Selene [dec] XAUI [dec] Packet Length Error

Explanation A packet with bad length value was detected in a FPGA device on the linecard. This may be caused by incorrect Network Processor software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_MIN: Selene [dec] XAUI [dec] Min Packet Size Error

Explanation A frame smaller than the minimum allowed size was detected in a FPGA device on the linecard. This may be due to incorrect software.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_RX_RDY: Selene [dec] XAUI [dec] Rx Rdy changed state

Explanation XAUI interface on a FPGA device on the linecard changed receive ready state. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_SEQ: Selene [dec] XAUI [dec] Sequence Error

Explanation A XAUI interface sequence error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_TX_ECC: Selene [dec] XAUI [dec] Tx FIFO ECC error

Explanation A FIFO queue ECC error was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support**

command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_TX_FULL: Selene [dec] XAUI [dec] Tx FIFO Full

Explanation A FIFO queue full condition was detected in a FPGA device on the linecard. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DEV_SELENE-3-XAUI_TX_RDY: Selene [dec] XAUI [dec] Tx Rdy changed state

Explanation XAUI interface on a FPGA device on the linecard changed transmit ready state. This may be caused by a hardware malfunction.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

DEV-SELENE-5

Error Message %DEV_SELENE-5-FC_CS: Selene [dec] Channel [int] Egress Flow-control Status change

Explanation A flow-control status change was detected between a FPGA device and a network processor on the linecard.

Recommended Action No action is required.

DFP Messages

This section contains Dynamic Feedback Protocol messages.

Error Message %DFP-4-ENQUEUE: Process enqueue failed: [chars]

Explanation An unexpected error occurred while enqueueing a DFP element.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DHCPD Messages

This section contains Dynamic Host Configuration Protocol daemon (DHCPD) messages.

DHCPD-2

Error Message %DHCPD-2-(-1): DHCP could not start its [chars] process.

Explanation The DHCP process could not start one of its processes.

Recommended Action Upgrade to a larger memory configuration.

DHCP_SNOOPING Messages

This section contains Dynamic Host Configuration Protocol Snooping (DHCP_SNOOPING) messages.

DHCP_SNOOPING-3

Error Message %DHCP_SNOOPING-3-DHCP_SNOOPING_INTERNAL_ERROR: DHCP Snooping internal error, [chars]

Explanation A software verification test failed in the DHCP snooping process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DHCP_SNOOPING-4

Error Message %DHCP_SNOOPING-4-AGENT_OPERATION_FAILED: DHCP snooping binding transfer failed. [chars]

Explanation This message provides the reason for failure when a database transfer has failed.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-4-AGENT_OPERATION_FAILED_N: DHCP snooping binding transfer failed([dec]). [chars]

Explanation This message provides the reason for failure when a database transfer has failed. This log message is rate limited.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-4-DHCP_SNOOPING_ERRDISABLE_WARNING: DHCP Snooping received [dec] DHCP packets on interface [chars]

Explanation DHCP Snooping detected a DHCP packet rate limit violation on a particular interface. The interface will be error disabled.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-4-IP_SOURCE_BINDING_PVLAN_WARNING: IP source filter may not take effect on secondary vlan [dec] where IP source binding is configured. [chars]

Explanation If the private VLAN feature is enabled, the IP source filter on the primary VLAN will automatically propagate to all secondary VLANs.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-4-QUEUE_FULL: Fail to enqueue DHCP packet into processing queue: [chars], the queue is most likely full and packet will be dropped.

Explanation DHCP packets are coming into the CPU at a much higher rate than the DHCP snooping process can handle them. These unhandled DHCP packets will be dropped to prevent system from denial of service attack.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-4-SSO_SYNC_ACK_ERROR: Error is encountered in processing acknowledgement for DHCP snooping binding sync, %s. ack message txn id: 0x%x

Explanation An error occurred in handling the acknowledgement of DHCP snooping binding synchronization. This message is usually caused by the ACK message being ignored.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-4-STANDBY_AGENT_OPERATION_FAILED: DHCP snooping binding transfer failed on the Standby Supervisor. %s

Explanation This message provides the reason of failure when a database transfer has failed on the standby supervisor.

Recommended Action No action is required.

DHCP_SNOOPING-5

Error Message %DHCP_SNOOPING-5-DEST_NOT_FOUND: %s: Could not find destination port. Destination MAC %e

Explanation The switch is unable to determine the destination port for a DHCP reply. This message may be an indication of a malicious user connected to the port.

Recommended Action Using debug commands, identify the users that are attached to the port. Enter the **debug ip dhcp snooping mac-addr** command, where *mac-addr* is the MAC address shown in the error message. Any subsequent DHCP packet that is received with *mac-addr* as the source MAC or DHCP CHADDR (client hardware address) will cause a message to appear on the console indicating the port from which the packet originated. If the error message recurs, check the user connected to the port indicated in the debug message.

DHCP_SNOOPING-6

Error Message %DHCP_SNOOPING-6-AGENT_OPERATION_SUCCEEDED: DHCP snooping database [chars] succeeded.

Explanation The given binding transfer has succeeded. This message is logged only once after some failure to indicate that the switch has recovered from failures.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-6-BINDING_COLLISION: Binding collision. [dec] bindings ignored

Explanation The given number of bindings from the database file have been ignored when the file is read. The bindings are ignored because the system has a binding for the given MAC address and VLAN combination by the time the switch read the ignored binding from the file.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-6-INTERFACE_NOT_VALID: Interface not valid. [dec] bindings ignored.

Explanation The given number of bindings from the database file have been ignored when the file is read. The bindings are ignored because the interface specified by the ignored binding either does not exist in the system or it's a router or DHCP snooping trusted port.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-6-LEASE_EXPIRED: Lease Expired. [dec] bindings ignored.

Explanation The specified number of bindings from the database file have been ignored when the file is read. The bindings are ignored because their lease has expired.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-6-PARSE_FAILURE: Parsing failed for [dec] bindings.

Explanation The specified number of bindings from the database file have been ignored when the file is read. The bindings are ignored because of parsing failures.

Recommended Action No action is required.

Error Message %DHCP_SNOOPING-6-VLAN_NOT_SUPPORTED: Vlan not supported. [dec] bindings ignored.

Explanation The specified number of bindings from the database file have been ignored when the file is read. The bindings are ignored because the VLAN specified by the ignored binding no longer exists in the system.

Recommended Action No action is required.

DHCP_SNOOPING_CAT3550 Messages

This section contains Dynamic Host Configuration Protocol Snooping (DHCP_SNOOPING) messages for the Cisco Catalyst 3550.

DHCP_SNOOPING_CAT3550-3

Error Message %DHCP_SNOOPING_CAT3550-3-MVR_INSTALL: Cannot install [chars] ACLs for DHCP Snooping, probably no TCAM space

Explanation There is insufficient space in the TCAM to install the specified ACLs for DHCP snooping.

Recommended Action Reduce the number of PACLs or VACLs to make space in the TCAM.

Error Message %DHCP_SNOOPING_CAT3550-3-UNEXPECTED_EVENT: Process received unknown event (major [hex], minor [hex]).

Explanation A process can register to be notified when various events occur in the router. This message indicates that a process received an event it did not know how to handle.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DHCP_SNOOPING_ISSU Messages

This section contains Dynamic Host Configuration Protocol Snooping (DHCP_SNOOPING) in-service software upgrade (ISSU) messages.

DHCP_SNOOPING_ISSU-2

Error Message %DHCP_SNOOPING_ISSU-2-GET_BUFFER: DHCP Snooping ISSU client failed to get buffer for message. Error: %d (%s)

Explanation The DHCP snooping ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %DHCP_SNOOPING_ISSU-2-INIT: DHCP Snooping ISSU client initialization failed to %s. Error: %d (%s)

Explanation The DHCP snooping ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DHCP_SNOOPING_ISSU-2-SEND_NEGO_FAILED: DHCP Snooping ISSU client failed to send negotiation message. Error: %d (%s)

Explanation The DHCP snooping ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %DHCP_SNOOPING_ISSU-2-SESSION_NEGO: DHCP Snooping ISSU client encountered unexpected client nego_done. Error: %d (%s)

Explanation An ISSU-compliant client transitions through a series of internal states. The DHCP snooping ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %DHCP_SNOOPING_ISSU-2-SESSION_REGISTRY: DHCP Snooping ISSU client failed to register session information. Error: %d (%s)

Explanation The DHCP snooping ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

DHCP_SNOOPING_ISSU-3

Error Message %DHCP_SNOOPING_ISSU-3-INVALID_SESSION: DHCP Snooping ISSU client does not have a valid registered session.

Explanation The DHCP snooping ISSU client does not have a valid registered session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %DHCP_SNOOPING_ISSU-3-MSG_NOT_OK: DHCP Snooping ISSU client 'Message Type %d' is not compatible

Explanation The DHCP snooping ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %DHCP_SNOOPING_ISSU-3-MSG_SIZE: DHCP Snooping ISSU client failed to get the MTU for Message Type %d. Error: %d (%s)

Explanation The DHCP snooping ISSU client was unable to calculate the MTU for the specified message. The DHCP snooping ISSU client is not able to send the message to the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %DHCP_SNOOPING_ISSU-3-SESSION_UNREGISTRY: DHCP Snooping ISSU client failed to unregister session information. Error: %d (%s)

Explanation The DHCP snooping ISSU client failed to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %DHCP_SNOOPING_ISSU-3-TRANSFORM_FAIL: DHCP Snooping ISSU client %s transform failed for 'Message Type %d'. Error: %d (%s)

Explanation The DHCP snooping ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the DHCP snooping state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

DHCPV6C Messages

This section contains DHCPv6 client messages.

Error Message %DHCPV6C-3-NOPACKET: Cannot setup or duplicate a socket packet

Explanation An error occurred that is probably related to a resource problem within the system.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %DHCPV6C-3-NOSOCKET: Cannot create DHCPv6 client socket

Explanation A DHCPv6 socket could not be created. This error is probably the result of either IP not being enabled on any interface or a resource problem with the system.

Recommended Action Enable IP on the interface. Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

DHCPV6S Messages

This section contains DHCPv6 server messages.

Error Message %DHCPV6S-3-DBNOTLOADED: Binding database not loaded

Explanation A DHCPv6 binding database could not be loaded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DHCPV6S-3-DBOPEN: Opening [chars]: [chars]

Explanation A DHCPv6 binding database file could not be opened.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DHCPV6S-3-DBREAD: Reading file: [chars]

Explanation A DHCPv6 binding database file could not be read.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DHCPV6S-3-DBWRITE: Writing file: [chars]

Explanation The system could not write to a DHCPv6 binding database file.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DHCPV6S-3-NOPACKET: Cannot setup or duplicate a DHCPv6 server socket packet

Explanation An error occurred that is probably due to a resource problem within the system.

Recommended Action No action is required.

DIAG Messages

This section contains online diagnostics (DIAG) messages.

DIAG-3

Error Message %DIAG-3-ALWAYS_ENABLE_TEST: [chars]: The users are not allow to disable monitoring for Test #[dec]

Explanation The specified health monitoring test cannot be disabled.

Recommended Action No action is required. The system is working properly.

Error Message %DIAG-3-FIXED_INTERVAL_TEST: [chars]: The users are not allow to change monitoring interval of Test #[dec]

Explanation The specified health monitoring test interval cannot be changed.

Recommended Action No action is required. The system is working properly.

Error Message %DIAG-3-INVALID_DEVICE: Invalid device number : [chars]

Explanation The system made a diagnostics request on a device that does not exist.

Recommended Action Ensure that the specified device number exists and is valid.

Error Message %DIAG-3-INVALID_MONITORING_INTERVAL: [chars]: The [chars][ID=[dec]] monitoring interval must be at least [dec] millisecc

Explanation The specified test monitoring interval is too small.

Recommended Action No action is required. The system is working properly.

Error Message %DIAG-3-INVALID_TEST: Invalid test: [chars]

Explanation A test that does not exist was requested. [chars] describes the test.

Recommended Action Ensure the specified test is supported by the switching module. The list of available tests and their associated test IDs can be retrieved using the **show diagnostic content** command.

Error Message %DIAG-3-MONITOR_DISABLE: [chars]: The monitoring test:[dec] is disable since default interval is Zero

Explanation The specified test is no longer a health-monitoring test.

Recommended Action No action is required. The system is working properly.

Error Message %DIAG-3-MONITOR_INTERVAL_ZERO: [chars]: Monitoring interval is 0. Cannot enable monitoring for Test #[dec]

Explanation The system cannot enable health monitoring for the specified test because the interval is set to zero.

Recommended Action Reset the health monitoring interval for the test, and reenable health monitoring.

Error Message %DIAG-3-NOT_MONITORING_TEST: [chars]: The test:[dec] cannot be used as health monitoring test

Explanation The specified test is not a health-monitoring test.

Recommended Action No action is required. The system is working properly.

Error Message %DIAG-3-TEST_SKIPPED: [chars]: [chars]{ID=[dec]} is skipped

Explanation The diagnostic test cannot be run.

Recommended Action No action is required. The system is working properly.

DIAG-4

Error Message %DIAG-4-CONFIG_REAPPLY: Please reapply config command [chars] after the card is online.

Explanation This message appears when the specified configuration command cannot be applied. [chars] is the configuration command that you must reapply.

Recommended Action The system is working properly and the specified command cannot be applied. Reapply the configuration command after the module is online.

DIAG-6

Error Message %DIAG-6-SCHEDULE_IS_REMOVED: [chars]: Schedule Diagnostic for [[chars] [chars] [dec]:[dec].] is removed

Explanation The scheduled online diagnostics test was removed because the test is no longer applicable.

Recommended Action No action is required. The system is working properly.

Error Message %DIAG-6-SIMULATED_TEST_RESULT: [chars]: [chars] test result is simulated.

Explanation The result of the specified test is simulated. The message does not indicate a software or hardware fault. The first [chars] is the message notification and the second [chars] is the test name.

Recommended Action No action is required. The test failure is simulated as specified by the user.

Error Message %DIAG-6-SKIP_ONDEMAND_ACTIVE_TO_STANDBY_TEST: [chars]: [chars] cannot be executed.

Explanation The diagnostics test is bypassing the specified redundant test because the redundant test cannot be executed.

Recommended Action No action is required. The system is working properly.

Error Message %DIAG-6-TEST_SKIPPED_FROM_ACTIVE: [chars]: [chars] cannot be executed from active supervisor.

Explanation The specified test cannot be run from the active supervisor engine.

Recommended Action No action is required. The test cannot be run, but the system is working properly.

DIAG-SP

Error Message %DIAG-SP-6-DIAG_OK: %s: Passed %s

Explanation The diagnostic tests did not detect any error on the card.

Recommended Action This is an informational message stating that the line card passed the diagnostic tests.

Error Message %OIR-SP-6-DOWNGRADE_EARL: Module %d %s installed is not identical to system PFC and will perform at current system operating mode.

Explanation The PFC/DFC module is at a higher hardware revision than the level of the system PFC. The PFC/DFC module will operate at the same level as that of the system PFC.

Recommended Action No action is required.

Error Message %DIAG-SP-6-RUN_MINIMUM: %s: Running Minimal Diagnostics...

Explanation Minimum Diagnostic is running on the card

Recommended Action This is an informational message and the system is working properly.

DLSWC Messages

This section contains Data-link Switching System messages.

DLSWC-3

Error Message %DLSWC-3-NOPEER: [chars]

Explanation A data-link switching system error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

DLSWP Messages

Error Message %DLSWP-3-PEERFAILURE: [chars] [chars]

Explanation A DLSW peer failed:

- keepalive failure, dlsw between cisco peers is sending a peer keepalive by default every 30 sec. After missing 3 consecutive keepalives the peer is taken down.

- We are not promiscuous, Rej conn from peer a.b.c.d

The local dlsw peer is not configured for promiscuous and we receive a request to open a dlsw peer for which we have no corresponding dlsw remote peer statement.

- received tcp fini, dlsw peer code has received a tcp fini from the underlaying tcp subsystem. To obey the tcp fini dlsw wring bring down the peer connection for which the tcp fini was received.

Recommended Action - keepalive failure. Check end to end connectivity between the DLSW peers

- We are not promiscuous, Rej conn from peer a.b.c.d correct your configuration.

- received tcp fini, Check the underlaying tcp connection between the two dlsw peers.

DM Messages

This section contains Dispatch Manager (DM) messages.

Error Message %DM-1-CORRUPT_MLIST: [chars]: attached-message list corrupted -- [[dec],[dec]] overlaps [[dec],[dec]]

Explanation A Dispatch Manager list of attached messages was found to be corrupt.

Recommended Action This is an internal error and should be reported to TAC. A memory dump should be taken (to assist TAC) and the application should be restarted.

Error Message %DM-4-FATTACH: [chars]: event_file_attach failure for fd [dec], cond [dec]: [chars].

Explanation An ionotify call to request a file-state notification has failed.

Recommended Action This is an internal error and should be reported to TAC. The server process for the failed fd has died or there is a connectivity failure. If you can determine which server failed, restart that server and the application with the ionotify error. If that fails, reboot the router.

Error Message %DM-1-HANDLE: [chars]: invalid dispatch manager handle -- [hex]

Explanation A Dispatch Manager call was made with an invalid dispatch manager handle.

Recommended Action This is an internal error and should be reported to TAC. The application process making the call has corrupted data or some other internal error. Restart the application. If that fails, reboot the router.

Error Message %DM-7-HEAP: [chars]: could not allocate from heap

Explanation A Dispatch Manager library function was not able to obtain HEAP memory space.

Recommended Action Either some process is using too much memory or there is not enough physical memory available in the router. Determine if an application is misbehaving by checking the amount of memory allocated to each application and noting whether one is unusually large. If there are no misbehaving applications, memory should be added to the router.

Error Message %DM-4-RMCONTEXT: [chars]: could not allocate memory for Resource Manager context

Explanation The Dispatch Manager could not allocate memory to construct a Resource Manager context when delivering an RM message.

Recommended Action Either some process is using too much memory or there is not enough physical memory available in the router. Determine if an application is misbehaving by checking the amount of memory allocated to each application and noting whether one is unusually large. If there are no misbehaving applications, memory should be added to the router.

Error Message %DM-4-SIGACTION: [chars]: could not install signal handler for signal [dec] [chars]

Explanation The Dispatch Manager signal thread must install a signal handler for each signal that it is watching.

Recommended Action This is an internal error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DM-4-SIGHEAP: [chars]: could not allocate memory to deliver signal [dec] [attempt [dec] of [dec]]

Explanation The Dispatch Manager signal thread could not allocate memory needed to deliver a signal message to the Dispatch Manager message channel. The Dispatch Manager will try to work around the problem by sending itself the same signal a few times.

Recommended Action Either some process is using too much memory or there is not enough physical memory available in the router. Determine if an application is misbehaving by checking the amount of memory allocated to each application and noting whether one is unusually large. If there are no misbehaving applications, memory should be added to the router.

Error Message %DM-1-SIGPATCH: [chars]: unexpected signal [dec] received

Explanation The Dispatch Manager signal handler should never be invoked directly.

Recommended Action This is an internal error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DM-1-TIMEOUT: [chars]: timeout call failed, handle [hex]

Explanation A Dispatch Manager blocking call was made with an invalid timeout specification. The application process making the call has corrupted data or some other internal error.

Recommended Action Restart the application. If that fails, reboot the router. This is an internal error and should be reported. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at

<http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DMA Messages

This section contains dynamic memory access (DMA) messages.

DMA-3

Error Message %DMA-3-DTQ_DISPATCH_DIRTY_PAK: pak not cleaned up by Egress processing (appId [dec])

Explanation After DTQ dispatched a packet to egress processing, the packet was not cleaned up by the application.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. If possible, also provide the **show log** on the reporting VIP.

DMB Messages

This section contains Dynamic Message Broker (DMB) messages.

DMB-0

Error Message %DMB-0-DMB_EMERG: %s

Explanation An internal error occurred in the Dynamic Message Broker (DMB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DMB-1

Error Message %DMB-1-DMB_ALERT: %s

Explanation An internal error occurred in the Dynamic Message Broker (DMB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DMB-2

Error Message %DMB-2-DMB_CRIT: %s

Explanation An internal error occurred in the Dynamic Message Broker (DMB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DMB-3

Error Message %DMB-3-DMB_ERR: %s

Explanation An internal error occurred in the Dynamic Message Broker (DMB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DMB-4

Error Message %DMB-4-DMB_WARNING: %s

Explanation An internal error occurred in the Dynamic Message Broker (DMB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DMB-5

Error Message %DMB-5-DMB_NOTICE: %s

Explanation An internal error occurred in the Dynamic Message Broker (DMB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DMB-6

Error Message %DMB-6-DMB_INFO: %s

Explanation This message displays information from the Dynamic Message Broker (DMB).

Recommended Action No action is required.

DMB-7

Error Message %DMB-7-DMB_ASSERT: Assertion Failure (%s @%s:%d) : %s

Explanation An internal error occurred in the Dynamic Message Broker (DMB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DNET Messages

Error Message %DNET-3-HEARSELF: Hello type [hex] for my address from [dec].[dec] via [chars]

Explanation The system is receiving its own DECnet packets. Either a serial line is looped back or another host with the same DECnet address is already present on the LAN.

Recommended Action Check the serial lines (if present) and the DECnet configuration.

DOSFS Messages

This section contains DOS file system (DOSFS) messages.

DOSFS-3

Error Message %DOSFS-3-RESETEERR: [chars] [chars]

Explanation The disk could not be reset while the system has initiated reload. A transient disk error or disk timeout error will occur when the ROMMON initialization code tries to read the device information block. This is a transient error and the system will be able to access the disk and continue normal operation.

Recommended Action No action is required.

DOSFS-4

Error Message %DOSFS-4-DFS_FCK_ERR: Error while running fsck on the file [chars].

Explanation The file system consistency check (fsck) program became stuck in a loop while walking through the cluster chain of a file and has aborted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DOSFS-5

Error Message %DOSFS-5-DFS_CLOSE_ERR: Error during close of the file [chars].
[chars]

Explanation An error occurred during a file-close operation.

Recommended Action Enter the **fsck filesystem prefix:** command to check and attempt to repair the disk. If this does not fix the problem, format the disk.

Error Message %DOSFS-5-DIBERR: [chars] [chars]

Explanation The system cannot boot an image from the flash disk because the device information block (DIB) is different. The flash disk can be read by the router, but will require formatting by the router before an image can be booted from it.

Recommended Action Follow any instructions provided in the error message. Before storing an image to the flash disk and trying to boot from this device, enter the **format** command to format the flash disk from the router. Copy the desired image to the flash disk and boot from the device.

DOT1AD Messages

This section contains 801.1ad messages.

DOT1AD-4

Error Message %DOT1AD-4-DOT1QTUNNEL_PORT: Port %s is a dot1q-tunnel port, it conflicts with Dot1ad configuration

Explanation IEEE 802.1ad configuration cannot coexist with 802.1q tunnel ports.

Recommended Action Disable the 802.1q tunnel configuration on the ports before enabling 802.1ad.

Error Message %DOT1AD-4-DOT1X_PORT: Port %s is configured for DOT1X, it conflicts with Dot1ad configuration

Explanation IEEE 802.1ad configuration cannot coexist with 802.1X enabled ports.

Recommended Action Disable the 802.1X configuration on the ports before enabling 802.1ad.

Error Message %DOT1AD-4-ETHERTYPEMISMATCH_PORT: Port %s ethertype cannot be changed to Dot1ad ethertype, it conflicts with Dot1ad configuration

Explanation The Ethertype on the port cannot be changed to 802.1ad Ethertype.

Recommended Action Replace the module with a unit that supports Ethertype change, or power down the module before enabling 802.1ad.

Error Message %DOT1AD-4-L2PT_PORT: Port %s is a l2protocol-tunnel port, it conflicts with Dot1ad configuration

Explanation IEEE 802.1ad configuration cannot coexist with a Layer 2 protocol tunnel port.

Recommended Action Disable the Layer 2 protocol tunnel configuration on the port before enabling 802.1ad.

Error Message %DOT1AD-4-LACP_PORT: Port %s is a part of an LACP channel, it conflicts with Dot1ad configuration

Explanation IEEE 802.1ad configuration cannot coexist with LACP ports.

Recommended Action Disable the LACP configuration on the port before enabling 802.1ad.

Error Message %DOT1AD-4-OAM_PORT: Port %s is configured for OAM, it conflicts with Dot1ad configuration

Explanation IEEE 802.1ad configuration cannot coexist with OAM-enabled ports.

Recommended Action Disable the OAM configuration on the port before enabling 802.1ad.

Error Message %DOT1AD-4-PLATFORM_RESOURCE_UNAVAILABLE: Platform does not have resources to support dot1ad configuration

Explanation The hardware match registers required by 802.1ad are not available.

Recommended Action Unconfigure the features that use the match registers (such as CFM or CGVRP) before enabling 802.1ad.

Error Message %DOT1AD-4-STP_CONFLICT: STP mode conflicts with Dot1ad configuration as it is not in MST mode

Explanation The current Spanning Tree Protocol (STP) mode conflicts with the 802.1ad configuration.

Recommended Action Change the STP mode to Multiple Spanning Tree (MST) before enabling 802.1ad.

DOT1Q_TUNNELLING Messages

This section contains 801.1Q tunnelling messages.

DOT1Q_TUNNELLING-4

Error Message %DOT1Q_TUNNELLING-4-MTU_WARNING:
System MTU of [dec] might be insufficient for 802.1Q tunnelling.
802.1Q tunnelling requires system MTU size of [dec] to handle maximum size ethernet frames.

Explanation The system MTU setting might not be a large enough value to support 802.1Q tunnelling. When 802.1Q tunnelling is being used, the system MTU setting might need to be adjusted to add the 4-byte overhead associated with the additional 802.1Q tag.

Recommended Action Enter the **system mtu** command in global configuration mode to adjust the system MTU setting to take into account the additional 802.1Q tag.

DOT1X Messages

This section contains IEEE 802.1X (DOT1X) messages.

DOT1X-4

Error Message %DOT1X-4-UNKN_ERR: An unknown operational error occurred.

Explanation The 802.1X process cannot operate due to an internal system error.

Recommended Action Reload the device.

DOT1X-5

Error Message %DOT1X-5-DROP_MAC: Disallowed MAC address [enet] trying to authenticate.

Explanation Authentication using 802.1X is not allowed for a host whose MAC address is configured as a drop entry in the MAC address table.

Recommended Action Remove the drop entry if this host is to be allowed access.

Error Message %DOT1X-5-ERR_INVALID_AAA_ATTR: Got invalid AAA attribute settings [chars]

Explanation The authorization settings that were obtained are either unsupported or are invalid.

Recommended Action Change the value so that the correct settings are obtained.

Error Message %DOT1X-5-ERR_INVALID_TUNNEL_MEDIUM_TYPE: Got an invalid value [chars] for TUNNEL_MEDIUM_TYPE [chars]

Explanation The provided TUNNEL_MEDIUM_TYPE is either unsupported or invalid.

Recommended Action Change the tunnel medium type value to one that is supported.

Error Message %DOT1X-5-ERR_INVALID_TUNNEL_TYPE: Got an invalid value of [chars] for TUNNEL_TYPE [chars]

Explanation The provided TUNNEL_TYPE is either unsupported or invalid.

Recommended Action Change the tunnel type value to one that is supported.

Error Message %DOT1X-5-ERR_PER_USR_IP_ACL: Applied per-user IP ACL was unsuccessful on interface [chars]

Explanation The 802.1X process could not successfully apply a per-user IP ACL. A possible reason for this condition could be an invalid per-user base (or pub) ACL from the RADIUS server.

Recommended Action Examine the per-user base configuration for the RADIUS server and configure a correct one.

Error Message %DOT1X-5-ERR_PER_USR_MAC_ACL: Applied per-user MAC ACL was unsuccessful on interface [chars]

Explanation The 802.1X process could not successfully apply a per-user MAC ACL. A possible reason for this condition could be an invalid per-user base (or pub) ACL from the RADIUS server.

Recommended Action Examine the per-user base configuration for the RADIUS server and configure a correct one.

Error Message %DOT1X-5-ERR_PVLAN: Dot1x cannot be enabled on private vlan port [chars]

Explanation 802.1X could not be enabled on the specified private VLAN port. This condition was caused by trying to set 802.1X port control to automatic mode on a PVLAN port.

Recommended Action Change the port to access or routed mode, and retry enabling 802.1X on the port.

Error Message %DOT1X-5-ERR_PVLAN_EQ_VVLAN: Dot1x can not be enabled on a port with Access VLAN equal to Voice VLAN.

Explanation A port could not enable 802.1X because the access VLAN is equal to a voice VLAN. This condition was caused by trying to set 802.1X port control to automatic or force-unauthorized mode on a voice VLAN that is equal to an access VLAN port.

Recommended Action Change the voice VLAN or the access VLAN on the interface, and retry the 802.1X operation.

Error Message %DOT1X-5-ERR_PVLAN_TRUNK: Dot1x can not be enabled on private VLAN trunk ports.

Explanation 802.1X cannot coexist with private VLAN trunking on the same port.

Recommended Action This is an informational message only. No action is required.

Error Message %DOT1X-5-ERR_RADIUSVLAN_EQ_VVLAN: RADIUS attempted to assign a VLAN to Dot1x port [chars] whose Voice VLAN is same as AccessVlan

Explanation The RADIUS server attempted to assign a VLAN to a supplicant on a port with a voice VLAN that is equal to an access VLAN.

Recommended Action Either update the RADIUS configuration so that an access VLAN is not equal to voice VLAN or change the voice VLAN on the specified port.

Error Message %DOT1X-5-ERR_STATIC_MAC: Dot1x can not be enabled on a port configured with Static MAC addresses.

Explanation A port could not enable 802.1X because the port is configured with static MAC addresses. This condition was caused by trying to set 802.1X port control to auto or force-unauthorized mode on a port that is configured with static MAC addresses.

Recommended Action Remove the static MAC addresses on the port, and retry the 802.1X operation.

Error Message %DOT1X-5-ERR_VLAN_INTERNAL: The VLAN [dec] is being used internally and cannot be assigned for use on the Dot1x port [chars] Vlan

Explanation The VLAN is used internally and cannot be assigned for use again on this port

Recommended Action Update the configuration to not use this VLAN.

Error Message %DOT1X-5-ERR_VLAN_INVALID: The VLAN [dec] is invalid and cannot be assigned for use on the Dot1x port [chars] Vlan

Explanation The VLAN specified is out of range and cannot be assigned for use on this port.

Recommended Action Update the configuration to use a valid VLAN.

Error Message %DOT1X-5-ERR_VLAN_RESERVED: The VLAN [dec] is a reserved vlan and cannot be assigned for use on the Dot1x port [chars] Vlan

Explanation The VLAN specified is a reserved VLAN and cannot be assigned for use on this port.

Recommended Action Update the configuration to not use this VLAN.

Error Message %DOT1X-5-ERR_VVID_NOT_SUPPORTED: Dot1x can not be enabled on this port with Voice VLAN configured.

Explanation 802.1X cannot coexist on the same port with Voice VLANs.

Recommended Action Remove voice VLANs configuration on this port and retry the 802.1X operation.

Error Message %DOT1X-5-FAIL: Authentication failed for client (%s) on Interface %s

Explanation Authentication was unsuccessful for the specified client.

Recommended Action No action is required.

Error Message %DOT1X-5-SUCCESS: Authentication successful for client (%s) on Interface %s

Explanation Authentication was successful for the specified client.

Recommended Action No action is required.

DOT1X_SWITCH Messages

This section contains 802.1X switch messages.

DOT1X_SWITCH-4

Error Message %DOT1X_SWITCH-4-PROC_START_ERR: Unable to start dot1x switch process.

Explanation The system failed to create the 802.1X switch process.

Recommended Action Reload the device.

DOT1X_SWITCH-5

Error Message %DOT1X_SWITCH-5-ERR_ADDING_ADDRESS: Unable to add address %e on %s

Explanation The authenticated host's address could not be added. This is probably because either the TCAM is full or the address exists as a secure address on another port.

Recommended Action If the TCAM is full, clear some dynamic addresses to make room for the host's address. If the host's address is secured on another port, manually remove it from that port.

Error Message %DOT1X_SWITCH-5-ERR_INVALID_PRIMARY_VLAN: Attempt to assign primary VLAN %d to 802.1x port %s

Explanation An attempt was made to assign a primary VLAN to an 802.1x port, which is not allowed.

Recommended Action Update the configuration to use a different VLAN.

Error Message %DOT1X_SWITCH-5-ERR_INVALID_SEC_VLAN: Attempt to assign invalid secondary VLAN %d to PVLAN host 802.1x port %s

Explanation An attempt was made to assign a non-secondary VLAN to a PVLAN host 802.1x port.

Recommended Action Change the mode of the port so that it is no longer a PVLAN host port or use a valid secondary VLAN.

Error Message %DOT1X_SWITCH-5-ERR_PRIMARY_VLAN_NOT_FOUND: Primary VLAN for VLAN [dec] does not exist or is shutdown for dot1x port [chars]

Explanation An attempt was made to use a private VLAN whose primary VLAN does not exist or is shut down.

Recommended Action Make sure the primary VLAN exists and is not shut down. Also verify that the private VLAN is associated with a primary VLAN.

Error Message %DOT1X_SWITCH-5-ERR_RADIUS_VLAN_NOT_FOUND: Attempt to assign non-existent VLAN %s to dot1x port %s

Explanation An attempt was made by RADIUS to assign a VLAN with a particular name or ID to a supplicant on a port, but the name or ID could not be found on the switch.

Recommended Action Make sure a VLAN with the specified name or ID exists on the switch.

Error Message %DOT1X_SWITCH-5-ERR_SEC_VLAN_INVALID: Attempt to assign secondary VLAN %d to non-PVLAN host 802.1x port %s

Explanation An attempt was made to assign a secondary VLAN to a port that is not a PVLAN host port, which is not allowed.

Recommended Action Change the mode of the port so that it is configured as a PVLAN host port or use a different VLAN that is not configured as a secondary VLAN.

Error Message %DOT1X_SWITCH-5-ERR_SPAN_DST_PORT: Attempt to assign VLAN %d to 802.1x port %s, which is configured as a SPAN destination

Explanation An attempt was made to assign a VLAN to an 802.1x port that is configured as a SPAN destination port.

Recommended Action Change the SPAN configuration so that the port is no longer a SPAN destination port or change the configuration so that no VLAN is assigned.

Error Message %DOT1X_SWITCH-5-ERR_VLAN_EQ_MDA_INACTIVE: Multi-Domain Authentication cannot activate because Data and Voice VLANs are the same on port %s

Explanation Multi-Domain Authentication (MDA) host mode cannot be activated if the configured data VLAN on a port is the same as voice VLAN.

Recommended Action Change either the voice VLAN or the access (data) VLAN on the interface so they are not equal.

Error Message %DOT1X_SWITCH-5-ERR_VLAN_EQ_VVLAN: Data VLAN [dec] on port [chars] cannot equal to Voice VLAN.

Explanation The 802.1x assigned VLAN on a port cannot be the same as the voice VLAN.

Recommended Action Change either the voice VLAN or the access 802.1X assigned VLAN on the interface so they are not equal anymore. This change will cause the authentication to proceed normally on the next retry.

Error Message %DOT1X_SWITCH-5-ERR_VLAN_INTERNAL: The VLAN [dec] is being used internally and cannot be assigned for use on the Dot1x port [chars] Vlan

Explanation The VLAN is used internally and cannot be assigned for use again on this port.

Recommended Action Update the configuration to not use this VLAN.

Error Message %DOT1X_SWITCH-5-ERR_VLAN_INVALID: The VLAN [dec] is invalid and cannot be assigned for use on the Dot1x port [chars] Vlan

Explanation The VLAN specified is out of range and cannot be assigned for use on this port.

Recommended Action Update the configuration to use a valid VLAN.

Error Message %DOT1X_SWITCH-5-ERR_VLAN_NOT_FOUND: Attempt to assign non-existent or shutdown VLAN [dec] to dot1x port [chars]

Explanation An attempt was made to assign a VLAN to a supplicant on a port, but the VLAN was not found in the VTP database.

Recommended Action Make sure the VLAN exists and is not shutdown or use another VLAN.

Error Message %DOT1X_SWITCH-5-ERR_VLAN_NOT_VALID: Attempt to assign non-existent group or shutdown VLAN to 802.1x port [chars]

Explanation An attempt was made to assign a VLAN to an 802.1x port, but the VLAN was not found in the VTP database. Group not found.

Error Message Make sure the VLAN exists and is not shutdown or use another VLAN.%DOT1X_SWITCH-5-ERR_VLAN_ON_ROUTED_PORT: Attempt to assign VLAN %d to routed 802.1x port %s

Explanation An attempt was made to assign a VLAN to a routed 802.1x port, which is not allowed.

Recommended Action Change the mode of the port so that it is no longer a routed port or change the configuration so that no VLAN is assigned.

Error Message %DOT1X_SWITCH-5-ERR_VLAN_PROMISC_PORT: Attempt to assign VLAN %d to promiscuous 802.1x port %s

Explanation An attempt was made to assign a VLAN to a promiscuous 802.1x port, which is not allowed.

Recommended Action Change the mode of the port so that it is no longer a promiscuous port or change the configuration so that no VLAN is assigned.

Error Message %DOT1X_SWITCH-5-ERR_VLAN_RESERVED: The VLAN [dec] is a reserved vlan and cannot be assigned for use on the Dot1x port [chars] Vlan

Explanation The VLAN specified is a reserved VLAN and cannot be assigned for use on this port.

Recommended Action Update the configuration not to use this VLAN.

Error Message %DOT1X_SWITCH-5-ERR_VLAN_RSPAN: Attempt by 802.1x to assign RSPAN VLAN [dec]. 802.1x is incompatible with RSPAN

Explanation Remote SPAN should not be enabled on a VLAN in which ports are configured with 802.1X enabled.

Recommended Action Either disable the remote SPAN configuration on the VLAN OR disable 802.1X on all of the ports in this VLAN.

DP83815 Messages

This section contains DP83815 10/100 Mbps Integrated PCI Ethernet Media Access Controller messages.

DP83815-1

Error Message %DP83815-1-DISCOVER: Only found [dec] interfaces on bay [dec], shutting down bay

Explanation The software could not identify the interface card.

Recommended Action Reseat the interface card. If the message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DP83815-1-INITFAIL: [chars] failed to initialized

Explanation The software failed to initialize or restart an Ethernet or Fast Ethernet interface.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DP83815-1-MEMERR: [chars] status = [hex]

Explanation The interface could not access system resources for a long time. This problem may occur under very heavy loads.

Recommended Action The system should recover. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DP83815-3

Error Message %DP83815-3-OWNERR: [chars] packet buffer, pak=[hex]

Explanation The software detected an error in descriptor ownership.

Recommended Action Clear the interface. If the problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DP83815-3-UNDERFLO: [chars] transmit error

Explanation While transmitting a frame, the controller chip's local buffer received insufficient data because data could not be transferred to the chip fast enough to keep pace with its output rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

Recommended Action The system should recover. No action is required.

DP83815-5

Error Message %DP83815-5-LATECOLL: [chars] transmit error

Explanation Late collisions occurred on the Ethernet or Fast Ethernet interface.

Recommended Action If the interface is Fast Ethernet, verify that both peers are in the same duplex mode. For regular Ethernet, the system should recover. No action is required.

Error Message %DP83815-5-LOSTCARR: [chars] cable/transceiver problem?

Explanation The cable or transceiver is not connected.

Recommended Action Connect the cable or transceiver. No action is required.

DP83815-6

Error Message %DP83815-6-EXCESSCOLL: [chars]

Explanation Ethernet or Fast Ethernet is seeing multiple collisions. This condition may occur under heavy loads.

Recommended Action The system should recover. No action is required.

Error Message %DP83815-6-NOTDP83815: Slot [dec] device ID seen as [hex], expected [hex]

Explanation The software did not recognize the interface chips.

Recommended Action Reseat the interface card. If the message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

DTP Messages

This section contains Dynamic Trunking Protocol (DTP) filtering messages.

Error Message %DTP-5-DOMAINMISMATCH: Unable to perform trunk negotiation on port [chars] because of VTP domain mismatch.

Explanation The two ports involved in trunk negotiation belong to different VTP domains. Trunking is possible only when the ports involved belong to the same VTP domain.

Recommended Action Ensure that the two ports that are involved in trunk negotiation belong to the same VTP domain.

DUAL Messages

This section contains Distributed Update Algorithm (DUAL) Enhanced Interior Gateway Routing Protocol (EIGRP) messages.

DUAL-3

Error Message %DUAL-3-BADIGRPSAP: Cannot send incremental SAP update to peer on %s. Increasing output-sap-delay may help

Explanation An incremental SAP update could not be sent because it might cause a loss of synchronization of the SAP tables between peers.

Recommended Action Increase the output SAP delay on the listed interface to reduce buffer usage. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DUAL-3-BADIGRPSAPTYPE: Unsupported SAP type for EIGRP being %s - type %x

Explanation This message appears when you receive or attempt to send a SAP message with a type code that is neither a general query nor a general response, or when you receive a general query that is not addressed to the broadcast address.

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative. If possible, also provide the output of the **debug ipx sap activity** and **debug ipx sap event** commands for the period during which this message appeared.

Error Message %DUAL-3-PFXLIMIT: %s %d: %s prefix limit reached.

Explanation The number of prefixes for the Enhanced Interior Gateway Routing Protocol (EIGRP) has reached the configured or default limit.

Recommended Action Take preventive action by identifying the source of the prefixes. Enter the **show ip eigrp accounting** command for details.

DUAL-4

Error Message %DUAL-4-PFXLIMITTHR: %s %d: %s threshold prefix level reached.

Explanation The number of prefixes in the topology database has reached the configured or default threshold level.

Recommended Action Take preventive action by identifying the source of the prefixes. Enter the **show ip eigrp accounting** command for details.

DUAL-5

Error Message %DUAL-5-NBRCHANGE: [chars] [dec]: Neighbor [chars] ([chars]) is [chars]: [chars]

Explanation A neighbor has gone up or down. The displayed information is [routing protocol] [Autonomous System number]: Neighbor [IP address] ([interface]) is [up or down]: [reason].

Recommended Action No action is required.

DUAL_ACTIVE Messages

This section contains dual-active chassis (DUAL_ACTIVE) messages.

DUAL_ACTIVE-1

Error Message %DUAL_ACTIVE-1-DETECTION: Dual-active condition detected: shutting down all non-VSL interfaces

Explanation A dual-active situation has occurred because VSL went down. The VSL has become inactive and both virtual switches have taken over the role of the active virtual switch. To fix this condition, the standby virtual switch has become active and taken control of the network. All non-VSL interfaces on the original active virtual switch will be internally shut down in hardware.

Recommended Action Attempt to determine the reason why VSL has gone down and correct it. Once VSL has been reestablished, the original active virtual switch will reload. Enter all variations of the commands:

```

show switch virtual troubleshooting last
show vslp lmp status
show switch virtual dual-active summary
show switch virtual dual-active pagp
show switch virtual dual-active bfd

```

If you cannot determine the cause of the problem from the commands you entered, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DUAL_ACTIVE-1-RECOVERY: BFD running on [chars] triggered dual-active recovery

Explanation Bidirectional Forwarding Detection (BFD) detected a dual-active scenario on the specified interface and caused the switch to go into recovery mode.

Recommended Action No action is required.

Error Message %DUAL_ACTIVE-1-VSL_DOWN: VSL is down - switchover, or possible dual-active situation has occurred

Explanation The virtual switch link (VSL) between the active and standby switches has gone offline. The following are possible reasons for the switchover condition:

- -A switchover has occurred and the standby virtual switch has become the active virtual switch.
- A dual-active situation has occurred, and the original active virtual switch has gone into recovery mode, which would bring down all non-VSL interfaces on the original active virtual switch.
- A dual-active situation has occurred, but the original active virtual switch did not detect the dual active state and did not go into recovery mode. This condition may be the result of multiple system failures or an incorrect configuration that caused the dual-active situation to not be detected.

Recommended Action Attempt to determine the reason why the VSL has gone offline and correct it if it is a dual-active situation. Enter all variations of the commands:

```

show switch virtual troubleshooting last
show vslp lmp status
show switch virtual dual-active summary
show switch virtual dual-active pagp
show switch virtual dual-active bfd

```

If you cannot determine the cause of the problem from the commands you entered, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools

and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %DUAL_ACTIVE-1-VSL_RECOVERED: VSL has recovered during dual-active situation: Reloading switch [dec]

Explanation The virtual switch link (VSL) between the two active virtual switches in a dual-active situation has gone online. The virtual switch in recovery mode must be reloaded to reenable all non-VSL interfaces that were shut down when the dual-active situation first occurred.

Recommended Action No action is required.

DUAL_ACTIVE-3

Error Message %DUAL_ACTIVE-3-PORT_ERR_IN_RECOVERY: Port [chars] [chars] error

Explanation Port information could not be extracted or a non-VSL port could not be disabled while the active virtual switch was going into recovery mode.

Recommended Action Attempt to determine why the port information could not be extracted or why the non-VSL port could not be disabled.

Error Message %DUAL_ACTIVE-3-REGISTRY_ADD_ERR: Failure in adding to [chars] registry

Explanation Could not add a function to the registry.

Recommended Action No action is required.

DUAL_ACTIVE-4

Error Message %DUAL_ACTIVE-4-CONFIG: [chars]

Explanation If VSL goes down due to any reason, standby switch will take over as active immediately. If the original active chassis is still operational, both chassis are now active. This situation is called a dual-active scenario. A dual-active scenario can have adverse effects on network stability, because both chassis use the same IP addresses, SSH keys, and STP bridge ID. The virtual switching system (VSS) must detect a dual-active scenario and take recovery action for which at least one of the following detection methods should be configured: a/ Enhanced Pagp b/ IP BFD c/ Fast-hello. Please refer to Software configuration guide for more details.

Recommended Action Configure one or more dual-active detection methods as per configuration guide.

DVMRP Messages

This section contains Dense wavelength division multiplexing messages.

DVMRP-5

Error Message %DVMRP-5-NBRUP: Neighbor [IP_address] is up on [chars]

Explanation A DVMRP multicast neighbor is active on the specified interface. This is caused by the arrival and acceptance of DVMRP probes via that interface. This may indicate that a multicast session has been subscribed via a path passing through this router. Note that DVMRP activity is mutually exclusive of tagswitching, so this will cause tagswitching to be disabled on that interface.

Recommended Action No action is required.

DWDM Messages

This section contains EDistance Vector Multicast Routing Protocol (DVMRP) messages.

DWDM-3

Error Message %DWDM-3-CLEAR_G709_CTR: 23414.2.c:205:64: backslash and newline separated by spaceUnable to clear g709 counter in slot [dec] rc = [dec]

Explanation The SPA driver was unable to clear the G.709 OTN protocol counters for bit errors.

Recommended Action Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative.

Error Message %DWDM-3-CONFIG_ALARM_REPORT: Failed to config report alarm [chars] slot [dec] rc = [dec]

Explanation The SPA driver could not configure one of the reporting status of the alarms.

Recommended Action Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative.

Error Message %DWDM-3-CONFIG_ALARM_THRESHOLD: Failed to config threshold alarm [chars] slot [dec] rc = [dec]

Explanation The SPA driver could not configure one of the threshold alarms for the optical data or transport unit.

Recommended Action Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative

Error Message %DWDM-3-CONFIG_TX_POWER: Failed to config transmit power [dec] on slot [dec] rc = [dec]

Explanation The SPA driver detected a error in configuring the Tx power level for the UT2 transponder module

Recommended Action Please power down and reseal the indicated SPA card. If the condition persists, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DWDM-3-DWDM_CONFIG_FAIL: Failed to [chars] [chars] in slot [dec] rc = [dec]

Explanation The SPA driver detected failure during configuring one of the DWDM parameters

Recommended Action Reload the SPA card and if the problem persists, contact the technical support representative.

Error Message %DWDM-3-DWDM_GET_INFO_FAIL: Failed receiving [chars] from slot [dec] rc = [dec]

Explanation The SPA driver did not receive the necessary optics information from the slot.

Recommended Action Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative.

Error Message %DWDM-3-DWDM_NULL_INFO: DWDM info is NULL in [dec]

Explanation The SPA driver detected NULL information for DWDM.

Recommended Action Reload the SPA and if the problem persists contact the technical support representative.

Error Message %DWDM-3-IPC_SHIM_INIT: DWDM IPC SHIM init failed

Explanation The SPA driver detected failure during DWDM IPC SHIM initialization

Recommended Action Please power down and reseal the indicated SPA card. If the problem persists please contact your technical support representative

Error Message %DWDM-3-LC_ERR_STATS: error sending LC stats to RP

Explanation The SPA driver encountered an error while sending the LC stats to the RP.

Recommended Action Reload the SPA card and if the problem persists call the technical support representative.

Error Message %DWDM-3-MALLOC_FAIL: malloc failure creating G.709 port on slot [dec]

Explanation The SPA driver detected a memory error on the SPA card.

Recommended Action Reload the card and if the problem persists call TAC.

Error Message %DWDM-3-RPC_FAILED: Application error rc = [dec]:

Explanation The system failed to retrieve the information required to execute the command.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DWDM-3-RPC_INIT_FAIL: DWDM RPC init failure

Explanation The system failed to create the resources required to process user interface commands for transceivers. The error is not fatal but some **show** commands could fail.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DWDM-3-RPC_PROCESSING_ERROR: DWDM RPC error: [chars]

Explanation Non Fatal error occurred in processing an RPC message.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %DWDM-3-RX_G709_INFO: Failed receiving G709 info from slot [dec] rc = [dec]

Explanation The SPA driver did not receive the necessary G.709 OTN protocol information from the slot.

Recommended Action Please check the configuration of the interfaces and controllers and correct the configuration if necessary. If the problem persists contact your Cisco technical support representative.

Error Message %DWDM-3-RX_LOS_THRESHOLD: Failed to config rx los threshold = [dec] on slot [dec] rc = [dec]

Explanation The SPA driver detected an error in configuring the transponder receive power threshold.

Recommended Action Reload the SPA card and if the problem persists call TAC.

Error Message %DWDM-3-TIMER_ERR: Timer error

Explanation The Driver did not obtain an expired timer from the timer tree for the DWDM process.

Recommended Action The SPA driver has encountered an error event on the SPA card. If the condition persists, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

DWDM-4

Error Message %DWDM-4-G709ALARM: [chars]: [chars] [chars]

Explanation The specified G709 Alarm has been declared or released.

Recommended Action Repair the source of the alarm.

EAP Messages

This section contains Extensible Authentication Protocol (EAP) messages.

EAP-2

Error Message %EAP-2-PROCESS_ERR: [chars]

Explanation A critical condition exists that prevents the system from performing an operation related to an EAP process.

Recommended Action Reload the system.

EAP-4

Error Message %EAP-4-BADPKT: IP=[IP_address] | HOST=[chars]

Explanation The system received an invalid or malformed EAP packet from the specified host.

Recommended Action Check the specified host for the EAP operation.

EAP-6

Error Message %EAP-6-MPPE_KEY: IP=[chars] | MPPE_RECV_KEY_LENGTH=[dec]

Explanation The system received an MPPE key for the specified host.

Recommended Action No action is required.

EARL Messages

This sections contains Enhanced Address Recognition Logic (EARL) messages.

EARL-0

Error Message %EARL-0-TASK_SPAWN_FAIL: Failed to initialize task "[chars]"

Explanation The EARL component failed to start a task required by the system to work properly. The task name is specified in the error message. Most errors will cause a system reload. However, in some cases, only the feature that failed to start will be affected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL-2

Error Message %EARL-2-PATCH_INVOCATION_LIMIT: [dec] Recovery patch invocations in the last 30 secs have been attempted. Max limit reached

Explanation The system attempted the EARL recovery for the maximum number of times that are permitted in the last 30 seconds. The module has been automatically reset instead of attempting recovery.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL-2-SWITCH_BUS_IDLE: Switching bus is idle for [dec] seconds

Explanation The EARL did not switch any packets on the EARL bus. A module or line card attempted to access the bus and could not. In most cases, this error appears when a card is not properly seated. A recovery mechanism will attempt to fix the problem. The system reloads if the problem cannot be corrected.

Recommended Action Reseat all modules and line cards on the switch. If the error message recurs after reseating the cards, a hardware problem may exist.

Error Message %EARL-2-SWITCH_BUS_STALL: Switching bus stall detected. Backplane bus stall status: [dec]

Explanation The EARL did not switch any packets on the EARL bus. A recovery mechanism will attempt to fix the problem. The system reloads if the problem cannot be corrected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL-3

Error Message %EARL-3-FABRIC_CONNECTION : Recovering from sequence error detected on fabric connection.

Explanation A sequence error was detected by the crossbar and bus fabric interface. This error can be fatal. Recovery is being attempted.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL-3-RESET_LC: Resetting module in slot [dec]. (Errorcode [dec])

Explanation The specified module did not respond to a critical message. This condition indicates a hardware error and might be a transient error only. The system has reset the module to fix the error.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL-4

Error Message %EARL-4-BUS_CONNECTION : Interrupt [chars] occurring in EARL bus connection.

Explanation An error interrupt is occurring for the switching bus interface.

Recommended Action Enter the **show earl status** command on the consoles of the switch supervisor engine and any DFC-enabled modules. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL-4-EBUS_SEQ_ERROR: Out of Sync error.

Explanation The EARL has detected an out-of-synchronization condition on the bus. A recovery mechanism will attempt to fix the problem.

Recommended Action Reseat and then reset the module. If the error remains, upgrade the software to Cisco IOS Release 12.2(18)SXF or later.

Error Message %EARL-4-NF_USAGE: Current Netflow Table Utilization is [dec]%

Explanation The NetFlow table utilization exceeds a preset threshold percentage.

Recommended Action No action is required.

EARL_ACL_FPGA Messages

This section contains Enhanced Address Recognition Logic ACL field-programmable gate array (EARL_ACL_FPGA) messages.

EARL_ACL_FPGA-2

Error Message %EARL_ACL_FPGA-2-INTR_FATAL: EARL ACL FPGA : Non-fatal interrupt [chars]

Explanation The EARL ACL FPGA detected the specified unexpected fatal condition. This message indicates a hardware failure or malfunction. The system will reload to attempt to fix the problem.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_ACL_FPGA-3

Error Message %EARL_ACL_FPGA-3-INTR_WARN: EARL ACL FPGA : Non-fatal interrupt [chars]

Explanation The EARL ACL FPGA detected the specified unexpected nonfatal condition.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_ACL_FPGA-4

Error Message %EARL_ACL_FPGA-4-CPU_PAR_ERR: EARL ACL FPGA : CPU Parity error [chars]

Explanation The EARL ACL FPGA detected a CPU parity error.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_ACL_FPGA-4-MEM_PAR_ERR: EARL ACL FPGA: Counter Memory Parity error. Error address [hex]

Explanation The EARL ACL FPGA detected a memory parity error.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_DRV_API Messages

This section contains Enhanced Address Recognition Logic Driver API (EARL_DRV_API) messages.

EARL_DRV_API-0

Error Message %EARL_DRV_API-0-TASK_SPAWN_FAIL: Failed to spawn task "[chars]"

Explanation The system failed to perform the specified task.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_DRV_API-2

Error Message %EARL_DRV_API-2-SIG_INST_FAIL: [chars]: Failed to install signal handler

Explanation The system failed to install the process signal handler.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_DRV_API-4

Error Message %EARL_DRV_API-4-NOMEM: Malloc failed: [chars] [dec]

Explanation The system is running out of memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_L2_ASIC Messages

This section contains Enhanced Address Recognition Logic Layer 2 ASIC (EARL_L2_ASIC) messages.

EARL_L2_ASIC-0

Error Message %EARL_L2_ASIC-0-EXCESSIVE_FT_TBL_ECC_ERR: EARL L2 ASIC [dec]: Too many bad entries in L2 Forwarding Table

Explanation The EARL Layer 2 ASIC detected too many errors in the forwarding table. This condition indicates hardware malfunction and causes the system to reload.

Recommended Action If this problem is seen more than once, it could be a case of faulty hardware. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L2_ASIC-0-FATAL_INTR: L2 Forwarding Engine: fatal interrupt: interrupt status [hex], interrupt mask [hex]

Explanation Critical interrupts might have caused system forwarding to cease.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_L2_ASIC-2

Error Message %EARL_L2_ASIC-2-PARITY_ERR: L2 Forwarding Engine: parity interrupt
#[dec]: address [hex], Data: [hex], [hex], [hex], [hex]

Explanation A parity error was detected while accessing the Layer 2 forwarding table.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_L2_ASIC-3

Error Message %EARL_L2_ASIC-3-INTR_FATAL: EARL L2 ASIC [dec]: fatal interrupt
[chars]

Explanation The EARL Layer 2 ASIC detected an unexpected fatal condition. This message indicates a hardware failure or malfunction. The system will reload to fix the problem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L2_ASIC-3-INTR_WARN: EARL L2 ASIC [dec]: Non-fatal interrupt
[chars]

Explanation The EARL Layer 2 ASIC detected an unexpected nonfatal condition.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_L2_ASIC-4

Error Message %EARL_L2_ASIC-4-DBUS_HDR_ERR: EARL L2 ASIC #[dec]: Dbus Hdr. Error occurred. Ctrl11 [hex]

Explanation The EARL Layer 2 ASIC detected an invalid header in the DBUS. This error is due to hardware that has failed, an incorrect configuration of the module software, or invalid packets that were dropped because of an OIR operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L2_ASIC-4-DBUS_SEQ_ERR: EARL L2 ASIC #[dec]: Dbus Seq. Error occurred (Ctrl11 [hex])

Explanation The EARL Layer 2 ASIC detected a DBUS sequence mismatch error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L2_ASIC-4-FT_ERR: EARL L2 ASIC [dec]: Forwarding table bank [dec] encountered [chars] ecc error at address [hex]

Explanation The EARL Layer 2 ASIC detected a nonfatal condition in one of the banks of the forwarding table. The bank and address of the forwarding table are specified in the error message.

Recommended Action This message is informational. The device has detected and corrected the error.

Error Message %EARL_L2_ASIC-4-FT_INVLD_ADDR: Forwarding table bank [dec] encountered invalid address [hex]

Explanation The EARL Layer 2 ASIC attempted to access an invalid address in the forwarding table. Because there are only 12 pages (0–11) per line, access to page 12–15 will be invalid.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L2_ASIC-4-INTR_THROTTLE: Throttling "[chars]" interrupt exceeded permitted [int]/[dec] interrupts/msec

Explanation Excessive interrupts were generated by the EARL ASIC. Interrupt throttling has been performed to protect the supervisor engine.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L2_ASIC-4-INV_REG: EARL L2 ASIC: Attempt to [chars] invalid register

Explanation An attempt was made to read or write to an invalid register of the EARL Layer 2 ASIC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L2_ASIC-4-L2L3_SEQ_ERR: EARL L2 ASIC #[dec]: L2L3 Mismatch seq #[hex]

Explanation The EARL Layer 2 ASIC detected a Layer 2-Layer 3 sequence mismatch error. A recovery mechanism will attempt to fix the problem.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L2_ASIC-4-SRCH_ENG_FAIL: EARL L2 ASIC Search Engine has failed

Explanation The EARL Layer 2 ASIC search engine failed to terminate a search. A recovery mechanism fixes the unexpected condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_L3_ASIC Messages

This section contains Enhanced Address Recognition Logic (EARL) Layer 3 ASIC messages.

EARL_L3_ASIC-3

Error Message %EARL_L3_ASIC-3-INTR_FATAL: EARL L3 ASIC: fatal interrupt [chars]

Explanation The EARL Layer 3 ASIC detected an unexpected fatal condition. This message indicates a hardware failure or malfunction. The system will reload to attempt to fix the problem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L3_ASIC-3-INTR_WARN: EARL L3 ASIC: Non-fatal interrupt [chars]

Explanation The EARL Layer 3 ASIC detected an unexpected non-fatal condition. This indicates that a bad packet was received and dropped. Several conditions can cause a packet to be considered bad; for example, the size of an Ethernet frame was reported to be different than the expected IP packet size. In older Cisco IOS releases, these packets are normally dropped without being logged.

Recommended Action This message is informational only, and can occur due to conditions such as bad NIC cards, bad NIC drivers, or a bad application. Use a network sniffer or configure a SPAN session to identify the source device that is sending the erroneous packets. Also, examine the adjacent Cisco device for errors. The following commands can be configured to stop verifying checksum or length errors:

no mls verify ip checksum — Disables checking of packets for checksum errors

no mls verify ip length — Disables checking of packets for length errors

no mls verify ip same-address — Disables checking of packets for having the same source and destination IP address

EARL_L3_ASIC-4

Error Message %EARL_L3_ASIC-4-CPU_PAR_ERR: EARL L3 ASIC: CPU Parity error. Error data [hex]. Error address [hex]

Explanation The EARL Layer 3 ASIC detected a CPU parity error. This condition is caused by an interprocess communication error between the CPU and Layer 3 ASIC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_L3_ASIC-4-INTR_THROTTLE: Throttling "[chars]" interrupt exceeded permitted [int]/[dec] interrupts/msec

Explanation Excessive interrupts were generated by the EARL ASIC. Interrupt throttling has been performed to protect the supervisor engine.

EARL_NETFLOW Messages

This section contains Enhanced Address Recognition Logic NetFlow (EARL_NETFLOW) messages.

EARL_NETFLOW-0

Error Message %EARL_NETFLOW-0-NF_ECC_MAX: Netflow ECC Error Threshold Reached, Total Ecc Errors [[dec]]

Explanation The total number of NetFlow ECC errors has crossed the maximum threshold. The maximum allowable of NetFlow ECC errors is 2000. The system will perform a crash dump and will be inoperable. The output of the **show tech-support** command will also be displayed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_NETFLOW-3

Error Message %EARL_NETFLOW-3-NF_ECC_RSRV: Netflow ECC Error Occured, Reserved NF location [[hex]]

Explanation The number of ECC errors per NetFlow TCAM entry has reached the maximum threshold (three or more ECC errors). The NetFlow TCAM location will now be marked as reserved and can no longer be used.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_NETFLOW-3-NF_ECC_SOFT_MAX: Too many Netflow ECC errors have occurred, Total Ecc Errors [[dec]]

Explanation The total number of NetFlow ECC errors has exceeded the soft limit number. The soft limit of NetFlow ECC errors is 2500. The hard limit is 5000. When the hard limit is reached, the line card will reboot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_NETFLOW-4

Error Message %EARL_NETFLOW-4-ICAM_THRLD: Netflow ICAM threshold exceeded, ICAM Utilization [[dec]]%

Explanation The NetFlow ICAM is almost full. Aggressive aging is temporarily enabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_NETFLOW-4-NF_AGG_CACHE_THR: Netflow [chars] aggregation cache is almost full.

Explanation The aggregation cache for NetFlow is almost full. This condition might cause a high CPU load.

Recommended Action Consider increasing the size of the aggregation cache, or remove the aggregation cache configuration specified in the error message.

Error Message %EARL_NETFLOW-4-NF_FULL: Netflow Table Full, ICAM occupancy [[dec]%), TCAM occupancy [[dec]%), Entry creation failures [[dec]]

Explanation The NetFlow table is full, possibly because of faulty hashing behavior.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EARL_NETFLOW-4-NF_TIME_SAMPLING: Time-based sampling requests could not be processed in time.

Explanation Time-based sampling requests could not be processed in a timely fashion. This condition means that the sampling result might not be accurate.

Recommended Action Consider using packet-based sampling. Packet-based sampling uses an algorithm that ensures the sampling results will be accurate, even if they are not processed in the allotted time.

Error Message %EARL_NETFLOW-4-TCAM_THRLD: Netflow TCAM threshold exceeded, TCAM Utilization [[dec]%)

Explanation The NetFlow TCAM is almost full. Aggressive aging is temporarily enabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EARL_NETFLOW-5

Error Message %EARL_NETFLOW-5-NF_ECC_REMOVE: Netflow ECC Error Occured, Deleted NF entry [[hex]]

Explanation A NetFlow ECC error occurred. The affected NetFlow entry has been deleted at the address specified so that a new entry will be created.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EC Messages

This section contains EtherChannel, Link Aggregation Control Protocol (LACP), and Port Aggregation Protocol (PAgP) messages.

EC-5

Error Message %EC-5-CANNOT_BUNDLE_QOS1: Removed [chars] from port channel as QoS attributes of port and port-channel are different.

Explanation The port specified in the error message cannot join the port channel, because the QoS attributes of this port are not consistent with the QoS attributes of the port channel.

Recommended Action Match the QoS attributes of the specified port to the QoS attributes of other member ports in the port channel. Use the **show queueing interface** command to display the QoS attributes of a port.

Error Message %EC-5-COMPATIBLE: [chars] is compatible with port-channel members

Explanation The specified port was not operational earlier because its attributes were different from the attributes of the port channel or the attributes of the ports within the port channel. The system detects that the attributes of the specified port now match the port channel attributes.

Recommended Action This is an informational message only. No action is required.

Error Message %EC-5-DONTBNL2: [chars] suspended: port in half-duplex for LACP

Explanation For LACP EtherChannel, if the member port is in half-duplex mode, the port will be in a suspended state.

Recommended Action Configure port duplex to full duplex.

Error Message %EC-5-MINLINKS_MET: Port-channel [chars] is up as its bundled ports ([dec]) meets min-links

Explanation The administrative configuration of minimum links is equal to or less than the number of bundled ports. As a result, this port channel is operational.

Recommended Action No action is required.

Error Message %EC-5-MINLINKS_NOTMET: Port-channel [chars] is down bundled ports ([dec]) doesn't meet min-links

Explanation The administrative configuration of minimum links is greater than the number of bundled ports. As a result, this port channel is no longer operational.

Recommended Action Reduce the number of minimum links for the specified group, or add more ports to this port channel so that they bundle.

Error Message %EC-5-PROTO_MISMATCH: Port-Channel [dec] has one aggregator with protocol mismatch

Explanation EtherChannel software disabled an aggregator under this port-channel and encountered a protocol mismatch on the aggregator. This means that the ports in the port-channel have not been all configured with the same protocol and this needs to be fixed.

Recommended Action Please verify the port-channel members configuration and fix it so that all the ports use the same protocol.

Error Message %EC-5-SUSPENDED: Port [chars] in port-channel [chars] is being suspended

Explanation EtherChannel software is unable to bundle the physical port in the port-channel. As the standalone disable feature is enabled, the port is going in the suspended state. Please check the configuration on the peer side of this port-channel.

Recommended Action Please verify the port-channel configuration of the port connected to the port for which this error message appeared.

Error Message %EC-5-VSS_MINLINKS_MET: Members of the Port-channel [chars] on switch [dec] is up as its bundled ports ([dec]) meets min-links

Explanation The administrative configuration of minimum links is equal or less than the number of bundled ports from the switch. Therefore all the ports in the port channel from that switch has been brought up.

Recommended Action None.

Error Message %EC-5-VSS_MINLINKS_NOTMET: All the members of the Port-channel [chars] is down on switch [dec] as the number of bundled ports ([dec]) doesn't meet min-links

Explanation The administrative configuration of minimum links is greater than the number of bundled ports from the switch. Therefore all the ports in port-channel from that switch has been brought down.

Recommended Action Reduce the min-links configuration for this group or add more ports to this port-channel from the switch to have them bundle.

EM Messages

This section contains Event Manager (EM) messages.

EM-3

Error Message %EM-3-EXCEED: EM exceed maximum open events ([dec]).

Explanation The total number of open events exceeded the maximum number of possible open events. The maximum number that the EM server permits is specified in the error message. EM clients are either opening too many events or not closing events within the permitted time period.

Recommended Action Enter the **show em state | inc em_type** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EM-3-FAIL: The specified EM Function failed ([chars]).

Explanation The specified EM function failed. This condition might be caused by incorrect logic or a memory corruption.

Recommended Action Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EM-3-NOMEM: The EM failed to allocate memory resources for the specified EM function ([chars]).

Explanation The EM failed to allocate memory resources for the specified function because memory is running low.

Recommended Action Enter the **show memory summary** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EM-3-NULLPTR: The pointer in a specified EM function ([chars]) is incorrectly NULL.

Explanation The pointer in the specified EM function is incorrectly NULL. This condition might be caused by incorrect logic or a memory corruption.

Recommended Action Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EM-4

Error Message %EM-4-AGED: The specified EM client (type=[dec], id=[dec]) did not close the EM event within the permitted amount of time ([dec] msec).

Explanation A timeout occurred. This condition is minor and should not affect the functionality of the switch.

Recommended Action Enter the **show em state** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EM-4-INVALID: The specified EM function ([chars]) received Invalid operands <[dec]>.

Explanation The EM client used invalid API parameters.

Recommended Action Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EM-4-LIMIT: EM exceed open events limit ([dec]).

Explanation The EM has exceeded the permitted number of open events. The open event limit is 5000.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EM-4-NOTUP: The EM is not available ([chars]).

Explanation The EM is not available because some basic initialization failed. This condition might be caused by failure of a basic infrastructure functionality or a memory corruption.

Recommended Action Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EM-4-SEARCH: The EM function ([chars]) searched for the specified open event ([dec]), but the search failed.

Explanation The specified EM function could not find the specified open event. This condition might be caused by a memory corruption.

Recommended Action Enter the **show em state** command and the **show em status** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EM-4-SENDFAILED: The specified EM client (type=[dec]) failed to send messages to standby.

Explanation The redundant supervisor engine is not updated because the specified EM client failed to send messages to the redundant supervisor engine. Do not attempt to failover to redundant supervisor engine.

Recommended Action Enter the **show checkpoint clients** command. If you cannot determine the cause of the error from the error message text or from the **show checkpoint clients** output, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EM_ISSU Messages

This section contains Event Manager (EM) in-service software upgrade messages.

EM_ISSU-2

Error Message %EM_ISSU-2-GET_BUFFER: Event Manager ISSU client failed to get buffer for message. Error: %d (%s)

Explanation The Event Manager ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %EM_ISSU-2-INIT: Event Manager ISSU client initialization failed to %s. Error: %d (%s)

Explanation The Event Manager ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EM_ISSU-2-SEND_NEGO_FAILED: Event Manager ISSU client failed to send negotiation message. Error: %d (%s)

Explanation The Event Manager ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %EM_ISSU-2-SESSION_NEGO: Event Manager ISSU client encountered unexpected client nego_done. Error: %d (%s)

Explanation The Event Manager ISSU client encountered a 'client negotiation done' state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %EM_ISSU-2-SESSION_REGISTRY: Event Manager ISSU client failed to register session information. Error: %d (%s)

Explanation The Event Manager ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

EM_ISSU-3

Error Message %EM_ISSU-3-INVALID_SESSION: Event Manager ISSU client does not have a valid registered session.

Explanation The Event Manager ISSU client does not have a valid registered session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %EM_ISSU-3-MSG_NOT_OK: Event Manager ISSU client 'Message Type %d' is not compatible

Explanation The Event Manager ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %EM_ISSU-3-MSG_SIZE: Event Manager ISSU client failed to get the MTU for Message Type %d. Error: %d (%s)

Explanation The Event Manager ISSU client was unable to calculate the MTU for the specified message. The Event Manager ISSU client is unable to send the message to the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, **show issu message group**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %EM_ISSU-3-OPAQUE_MSG_NOT_OK: Event Manager ISSU client 'Opaque Message Type %d' is not compatible

Explanation The Event Manager ISSU client received an incompatible (opaque) message from the peer device. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, **show issu message group**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %EM_ISSU-3-SESSION_UNREGISTRY: Event Manager ISSU client failed to unregister session information. Error: %d (%s)

Explanation The Event Manager ISSU client failed to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %EM_ISSU-3-TRANSFORM_FAIL: Event Manager ISSU client %s transform failed for 'Message Type %d'. Error: %d (%s)

Explanation The Event Manager ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the Event Manager state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

ENT_ALARM Messages

This section contains entity alarm messages.

ENT_ALARM-3

Error Message %ENT_ALARM-3-NOALARMENT: [chars]

Explanation All entities that could have alarm conditions set for them should be registered with the alarm subsystem for the Cisco IOS software. This message indicates that the normal registration of entities in the Cisco IOS software alarm subsystem has failed, and that one or more entities could not be registered. The message text indicates the alarm entity that could not be registered. Any alarm conditions against the entity specified in the message text cannot be reported. This message does not indicate that the entity specified in the message has undergone an error condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ENT_ALARM-6

Error Message %ENT_ALARM-6-INFO: [chars] [chars] [chars] [chars] [chars]

Explanation This message provides alarm assertion or deassertion information.

Recommended Action This is an informational message only. No action is required.

ENT_API Messages

This section contains Entity MIB API (ENT_MIB) messages.

ENT_API-4

Error Message %ENT_API-4-NOALIAS: Physical entity not found when adding an alias with physical index = [dec] and logical index = [dec] to the Entity MIB

Explanation A timing issue was detected when the system or the module is brought up. This issue has no impact on system performance or management functionality.

Recommended Action No action is required.

Error Message %ENT_API-4-NOPORT: Physical entity does not have a Port PhysicalClass when adding an alias with physical index = [int], logical index = [int], phyDescr = [chars], phyName = [chars], phyClass = [int], phyContainedIn = [int], to the Entity MIB

Explanation An attempt to add an alias entry to the Entity MIB was made. The physical entity with the specified index does not have an entPhysicalClass of 10 (Port class) and so the alias entry creation failed. See RFC2737 for the definition of the PhysicalClass textual convention and the aliasMappingEntry object.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ENVIRONMENT Messages

This section contains environment messages.

ENVIRONMENT-3

Error Message %ENVIRONMENT-3-OVERTEMP: [chars] [chars] [chars] [chars]

Explanation The internal chassis temperature has exceeded the maximum temperature threshold.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ENVIRONMENT-3-RPS_FAILED: [chars] [chars] [chars] [chars]

Explanation Only one power supply was detected for the system in dual-power mode, or the power supply is failing.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ENVIRONMENT-3-UNDERTEMP: [chars] [chars] [chars] [chars]

Explanation The internal chassis temperature is below the minimum temperature threshold.

Recommended Action No action is required.

ENVIRONMENT-4

Error Message %ENVIRONMENT-4-CONFIG_OVERTEMP: [chars] [chars] [chars] [chars]

Explanation The chassis inside temperature has exceeded the configured threshold, but is less than or equal to the maximum allowable internal chassis temperature.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ENVM Messages

This section contains environmental monitoring (ENVM) messages.

ENVM-2

Error Message %ENVM-2-TEMP_SENSOR_READFAIL: Failed to access the Temperature sensor on the linecard. Resetting the linecard.

Explanation The local CPU on the Enhanced FlexWAN module was unable to access the temperature sensor on the module. The module will attempt to recover by resetting itself.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ENVM-3

Error Message %ENVM-3-DISABLE: Environmental monitoring for [chars] disabled ([chars])

Explanation Environmental monitoring for the indicated hardware component could not be initiated. This error message is displayed if environmental monitoring for the whole system, or a particular hardware component is disabled. Operating the system with the environmental monitoring disabled can be dangerous.

Recommended Action Address the cause for the environmental monitoring being disabled as indicated in the error message. Depending on whether a particular hardware component is affected or the whole system, either the card should be removed or the entire system taken offline for a power shutdown until the problem is resolved. Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ENVM-3-ENVDATA_MISSING: Environmental monitoring information for card in [chars] is not present in the IDPROM

Explanation Environmental threshold data for the card in the specified slot is not present in the board IDPROM. The system will not monitor the voltage and temperature readings for the specified card.

Recommended Action Enter the **show diag slot-number** command for the specified slot. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ENVM-3-ENVINFO_MISSING: Voltage threshold information for [chars] is not present in the [chars]IDPROM for the card in [chars]

Explanation Environmental threshold data for the specified voltage is missing from the threshold table in the IDPROM. The system will not monitor the voltage and temperature readings for the specified card.

Recommended Action Enter the **show diag** *slot-number* command for the specified slot. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ENVM-3-SUBSLOT_SHUTDOWN: Environmental monitor initiated shutdown of the card in subslot [dec]/[dec] ([chars] measured at [chars])

Explanation The environmental monitor initiated a subslot shutdown due to a temperature or voltage condition.

Recommended Action Look at previous environmental messages to determine the cause of the shutdown and correct if possible. If you think the shutdown was in error, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ENVM-3-TEMP_SENSOR_DISABLED: Access to Temperature sensor on module in slot [dec] is disabled

Explanation During previous reloads, this module experienced a timeout while accessing the temperature sensor. All further access to the temperature sensor will be disabled. This condition indicates a possible problem with the temperature sensor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ENVM-4

Error Message %ENVM-4-LONGBUSYREAD: C2W Interface busy for long time reading temperature sensor [dec]

Explanation The Cisco 2 wire (C2W) interface has taken an unusually long time to read the specified temperature sensor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ENVM-4-LONGBUSYWRITE: C2W Interface busy for long time writing temperature sensor [dec]

Explanation The Cisco 2 wire (C2W) interface has taken an unusually long time to write to the specified temperature sensor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ENVM-4-RPSFAIL: [chars] may have a failed channel

Explanation One of the power supplies in a dual (redundant) power supply may have failed.

Recommended Action Check the inputs to the power supply or replace the faulty power supply as soon as possible to avoid an unplanned outage. If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also

perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support

Error Message %ENVM-4-WRITEERROR: Error writing temperature sensor [dec]

Explanation The Cisco 2 wire (C2W) interface has encountered an error while writing to the specified temperature sensor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ENV_MON Messages

This section contains environmental monitor (ENV_MON) messages.

ENV_MON-2

Error Message %ENV_MON-2-BUSBRD_TEMP: [chars] temperature has reached critical levels

Explanation The specified temperature sensor has signaled an overtemperature condition.

Recommended Action Check the supply. Attempt to resolve the temperature problem. Check to ensure that all router doors are in place and are closed. Check to ensure that the fans are operating. Remove the affected cards, check their temperature and, if required, allow them to cool and reinsert them. Operation of overtemperature equipment is not recommended because the equipment might become damaged. If the condition is not resolved, power the unit off. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ENV_MON-5

Error Message %ENV_MON-5-CSC_FAIL_SUPPLY_POWER_TO_FANS: CSC in slot [dec] could not supply power to fan tray

Explanation The indicated clock and scheduler card (CSC) could not supply power to the fan trays.

Recommended Action Turn the router off and then on to attempt to clear the problem. Remove and reinsert the fan tray, and then the CSC. If the problem persists, contact your Cisco technical support representative to replace the indicated CSC.

ENV_MON-6

Error Message %ENV_MON-6-CANTSHUT: Cannot shut down card in this slot

Explanation The attempt to shut down the line card has failed.

Recommended Action No action is required.

Error Message %ENV_MON-6-INSALM: ALARMCARD [chars] was inserted in slot [dec]

Explanation The OIR facility has detected the insertion of an alarm card from the slot specified in the message text.

Recommended Action No action is required.

Error Message %ENV_MON-6-INSFAN: The Fan tray has been inserted into slot [dec]

Explanation The OIR facility has detected the insertion of a PEM from the slot specified in the message text.

Recommended Action No action is required.

Error Message %ENV_MON-6-INSPEM: PEM number [chars] inserted into slot [dec]

Explanation The OIR facility has detected the insertion of a PEM from the slot specified in the message text.

Recommended Action No action is required.

Error Message %ENV_MON-6-INSPEM_GSR_POWERSELF: Powersupply [chars] inserted

Explanation The OIR facility detected the insertion of a PEM on the power shelf-based internet router.

Recommended Action No action is required.

Error Message %ENV_MON-6-INTERNAL_ERROR: Internal error [dec] in [chars] - contact Cisco technical support

Explanation An unexpected internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ENV_MON-6-REMARM: ALARMCARD [chars] was removed from slot [dec]

Explanation The OIR facility detected the removal of alarm card from the slot specified in the message text.

Recommended Action No action is required.

Error Message %ENV_MON-6-REMFAN: The Fan tray has been removed from slot [dec]

Explanation The OIR facility has detected that the fan tray has been removed.

Recommended Action No action is required.

Error Message %ENV_MON-6-REMPER: PEM number [chars] removed from slot [dec]

Explanation The OIR facility has detected the removal of a PEM from the slot specified in the message text.

Recommended Action No action is required.

Error Message %ENV_MON-6-REMPER_GSR_POWERSHELF: Powersupply [chars] removed

Explanation The OIR facility has detected the removal of a PEM on a power shelf-based internet router.

Recommended Action No action is required.

EOBC Messages

This section contains Ethernet out-of-band channel (EOBC) messages.

EOBC-0

Error Message %EOBC-0-EOBC_JAM_FATAL: [chars] in slot [dec] is jamming the EOBC channel. It has been disabled.

Explanation The primary supervisor engine EOBC hardware is faulty. There is no redundant supervisor engine to take over, so the switch has been shut down.

Recommended Action Immediately replace the supervisor engine in the slot specified in the error message.

EOBC-2

Error Message %EOBC-2-EOBC_JAM: EOBC channel is jammed. Attempting to diagnose the source of the problem and recover if possible.

Explanation The SP is unable to communicate with other processors in the system because of a problem with the EOBC channel. The problem could be due to faulty EOBC hardware on the supervisor engine or due to a module with a faulty connector to the EOBC channel. The SP will attempt to recover automatically. The success of this automatic recovery will be communicated through more messages.

Recommended Action No action is required.

Error Message %EOBC-2-EOBC_JAM_RECOVERED: [chars] in slot [dec] is jamming the EOBC channel. It has been disabled. [chars]

Explanation The specified module has faulty hardware and is adversely affecting the operation of the switch. The remaining modules will be power cycled and brought online.

Recommended Action Immediately replace the module in the slot specified in the error message.

EOBC-3

Error Message %EOBC-3-NOEOBCBUF: No EOBC buffer available. Dropping the packet.

Explanation The EOBC receive buffer pool has been exhausted. No further input packets can be processed until some buffers are returned to the pool.

Recommended Action After buffers are returned to the pool, if processing continues normally, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at

<http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EOS Messages

This section contains EOS ASIC (EOS) messages.

EOS-2

Error Message %EOS-2-EOS_INIT_FAILURE : The EOS FPGA initialization failed due to [chars]

Explanation The EOS FPGA initialization was not successful because of a hardware problem with the board. This condition will cause packet drops.

Recommended Action Contact your Cisco technical support representative to obtain a replacement board.

Error Message %EOS-2-EOS_INT : [chars]

Explanation A fatal interrupt has occurred. As a result, the device has been reinitialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EOS-2-INT : [chars]

Explanation A fatal interrupt has occurred. As a result, the device has been reinitialized. If the reported condition is a CRC or ECC parity error, the device will attempt to correct the error. Infrequent parity errors can usually be ignored, but persistent parity errors may indicate a hardware failure.

Recommended Action Reseat and reset the module. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EOS-2-NULL_EOS_OBJECT : The EOS device object pointer is set to NULL

Explanation The memory location of the EOS device object is invalid. The EOS FPGA operation is disabled and the device interrupt is now masked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EOS-3

Error Message %EOS-3-EOS_PAUSE_FAIL: [chars]

Explanation An attempt to pause the forwarding of traffic from an EOS ASIC interface FPGA to another ASIC has timed out. Depending on the status register value of the ASIC interface FPGA, traffic disruption might occur.

Recommended Action If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EOS-3-EOS_UNPAUSE_FAIL : EOS status register is 0x[hex]

Explanation An attempt to unpause traffic from the EOS FPGA to the Hyperion ASIC timed out. This condition may lead to traffic disruption.

Recommended Action If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EOS-3-QUEUE_ALLOC_FAILED: Failed to allocate queue in the EOS FPGA for SPA in bay ([dec])

Explanation The system failed to allocate the EOS ASIC queue for the SPA in the specified bay. This condition might lead to traffic disruption.

Recommended Action If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EOS-4

Error Message %EOS-4-EOS_WARN_INT: [chars]

Explanation The EOS ASIC interface FPGA received a nonfatal interrupt. This interrupt should not affect normal operation.

Recommended Action No action is required.

EOS-5

Error Message %EOS-5-PAUSE_FAIL: [chars]

Explanation An attempt to pause the forwarding of traffic from an EOS ASIC interface FPGA to another ASIC has timed out. Depending on the status register value of the ASIC interface FPGA, traffic disruption might occur.

Recommended Action If normal traffic processing does not resume, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EOU Messages

This section contains Extensible Authentication Protocol over UDP (EOU) messages.

EOU-2

Error Message %EOU-2-PROCESS_ERR: Router could not create a EAPoUDP process

Explanation The system could not create an Extensible Authentication Protocol over UDP process.

Recommended Action Reload the system.

EOU-4

Error Message %EOU-4-BAD_PKT: IP=[IP_address] | Bad Packet=[chars]

Explanation The system received an invalid or malformed EAP packet from the specified host.

Recommended Action Check the specified host for the EAP operation.

Error Message %EOU-4-MSG_ERR: Unknown message event received

Explanation The EOU authentication process received an unknown message event.

Recommended Action If this message recurs, reload the system.

Error Message %EOU-4-PROCESS_STOP: PROCESS=[chars] | ACTION=[chars].

Explanation The specified process has stopped.

Recommended Action Reload the system.

Error Message %EOU-4-SOCKET: EAPoUDP socket binding fails for PORT=[hex]. Check if the interface has valid IP address.

Explanation The EOU socket could not bind its port to a valid interface address.

Recommended Action This condition is probably caused by a missing IP address on the interface. Configure a valid IP address for the interface.

Error Message %EOU-4-UNKN_EVENT_ERR: UNKNOWN Event for HOST=[IP_address] | Event=[dec].

Explanation An unknown event for the EOU process has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EOU-4-UNKN_PROCESS_ERR: An unknown operational error occurred.

Explanation The EOU process cannot function due to an internal system error.

Recommended Action Reload the system.

Error Message %EOU-4-UNKN_TIMER_ERR: An unknown Timer operational error occurred

Explanation The EOU process cannot function due to an internal system error.

Recommended Action Reload the system.

Error Message %EOU-4-VALIDATION: Unable to initiate validation for
HOST=[IP_address] | INTERFACE=[chars].

Explanation EOU could not start posture validation for the specified host. This condition is probably caused by a failure to bind the EOU port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EOU-4-VERSION_MISMATCH: HOST=[IP_address] | Version=[dec]

Explanation The specified host detected a mismatch in EOU versions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EOU-5

Error Message %EOU-5-AAA_DOWN: AAA unreachable. METHODLIST=[chars] |
HOST=[IP_address] | POLICY=[chars].

Explanation AAA servers defined by the method list are unreachable for the given host and the policy being applied.

Recommended Action Check connectivity to the AAA servers.

Error Message %EOU-5-RESPONSE_FAILS: Received an EAP failure response from AAA for
host=[IP_address]

Explanation The system received an EAP failure response from AAA, which indicates the unsuccessful validation of host credentials.

Recommended Action No action is required.

EOU-6

Error Message %EOU-6-AUTHSTATUS: [chars] | [IP_address]

Explanation This message displays the authentication status (Success, Failure) for the specified host.

Recommended Action This message is informational. No action is required.

Error Message %EOU-6-AUTHTYPE: IP=[IP_address] | AuthType=[chars]

Explanation This message displays the authentication type for the specified host.

Recommended Action This message is informational. No action is required.

Error Message %EOU-6-CTA: IP=[IP_address] | CiscoTrustAgent=[chars]

Explanation This message indicates whether or not Cisco Trust Agent was detected on the specified host.

Recommended Action Install Cisco Trust Agent on the host if it was not detected.

Error Message %EOU-6-IDENTITY_MATCH: IP=[IP_address] | PROFILE=EAPoUDP |
POLICYNAME=[chars]

Explanation Because the system found the specified host in the EOU identity profile, there will be no EOU association with the host and the local policy.

Recommended Action If you do not want the specified host to be exempted from authentication, remove its entry from EOU identity profile.

Error Message %EOU-6-POLICY: IP=[IP_address] | [chars]=[chars]

Explanation The system received policy attributes from AAA for the specified host.

Recommended Action This message is informational. No action is required.

Error Message %EOU-6-POSTURE: IP=[IP_address] | HOST=[chars] | Interface=[chars]

Explanation This message displays the posture validation status for the specified host.

Recommended Action This message is informational. No action is required.

Error Message %EOU-6-SESSION: IP=[IP_address] | HOST=[chars] | Interface=[chars]

Explanation An entry was created or deleted for the host on the specified interface.

Recommended Action This message is informational. No action is required.

Error Message %EOU-6-SQ: IP=[IP_address] | STATUSQUERY| [chars]

Explanation The status query result for the specified host either failed or was invalid.

Recommended Action This message is informational. No action is required.

EPIF Messages

Error Message %EPIF_PORT-0-INTERNAL_PANIC: [chars]

Explanation A Panic Condition.

EPLD_STATUS_OPEN Messages

This section contains EPLD programming status file data processing (EPLD_STATUS_OPEN) messages.

EPLD_STATUS_OPEN-4

Error Message %EPLD_STATUS_OPEN-4-ERROR_ALLOC: %Error: Can't allocate [dec] bytes for epld status data

Explanation The system is unable to allocate required memory to access the file.

Recommended Action Determine the memory usage of the system, and retry the operation.

Error Message %EPLD_STATUS_OPEN-4-ERROR_OPEN: %Error: Can't open [chars]

Explanation The system is unable to open the specified file.

Recommended Action Ensure that the filename is correct. Enter the **dir** command to verify the filename.

Error Message %EPLD_STATUS_OPEN-4-ERROR_READ: %Error: status file [chars] read failed

Explanation An unknown error occurred while the system was reading the status program file to a local buffer.

Recommended Action Delete and recopy the file. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EPLD_STATUS_OPEN-4-ERROR_REMOVE: %Error: status file [chars] remove failed

Explanation An unknown error occurred while the system was removing the status program file from nonvolatile memory.

Recommended Action Delete the file manually. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EPLD_STATUS_OPEN-4-ERROR_SIZE: %Error: Bad file size [chars]

Explanation The file is too small or too large for a programming status file.

Recommended Action Enter the **dir** command, and determine the size of the file. Retry the operation.

Error Message %EPLD_STATUS_OPEN-4-ERROR_WRITE: %Error: status file [chars] write failed

Explanation An unknown error occurred while the system was writing the status program file to nonvolatile memory.

Recommended Action Delete and recopy the file. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EPM Messages

This section contains Policy Enforcement Module (EPM) messages.

EPM-4

Error Message %EPM-4-POLICY_APP_FAILURE: IP=%i | MAC=%e | AUDITSESID=%s | AUTHTYPE=%s | POLICY_TYPE=%s | POLICY_NAME=%s | RESULT=FAILURE | REASON=%s

Explanation The displayed policy for the client could not be applied by the Policy Enforcement Module (EPM) for the reason indicated in the message.

Recommended Action Take appropriate action based the failure reason indicated in the message.

EPM-6

Error Message %EPM-6-AAA: POLICY=%s | EVENT=%s

Explanation A download request has been sent and downloaded successfully for the specified downloadable ACL (dACL).

Recommended Action No action is required.

Error Message %EPM-6-IPEVENT: IP=%i | MAC=%e | AUDITSESID=%s | AUTHTYPE=%s | EVENT=%s

Explanation An IP wait, release, or assignment event has occurred with respect to the specified host.

Recommended Action No action is required.

Error Message %EPM-6-POLICY_APP_SUCCESS: IP=%i | MAC=%e | AUDITSESID=%s | AUTHTYPE=%s | POLICY_TYPE=%s | POLICY_NAME=%s | RESULT=SUCCESS

Explanation The displayed policy for the client has been applied successfully by the EPM.

Recommended Action No action is required.

Error Message %EPM-6-POLICY_REQ: IP=%i | MAC=%e | AUDITSESID=%s | AUTHTYPE=%s | EVENT=%s

Explanation A policy application or remove request has been received by the EPM.

Recommended Action No action is required.

ERR_C6K_Stack_MIB Messages

This section contains error messages.

Error Message %ERR_C6K_STACK_MIB-3-ERR_C6K_STACK_MIB_ICC_NO_PROC: [chars]: Failed to create the vs_stack_mib_sp ICC Process

Explanation Failed to create the vs_stack_mib_sp ICC Process.

Recommended Action No action is required.

Error Message %ERR_C6K_STACK_MIB-3-ERR_C6K_STACK_MIB_ICC_Q_NULL: [chars]: Failed to create the ICC queue for C6K STACK MIB

Explanation Failed to create the ICC queue for C6K STACK MIB.

Recommended Action No action is required.

ERR_DET Messages

This section contains error detection messages.

ERR_DET-5

Error Message %ERR_DET-5-ERR_DET_LOW_MEM: Very low memory, dump debuginfo, local %u, io %u

Explanation A low-memory condition was detected. Debugging information will be dumped.

Recommended Action No action is required.

Error Message %ERR_DET-5-ERR_DET_NO_EOBC_INPUT: No EOBC input, dump debuginfo, interval %u, times %u

Explanation No Ethernet Out-of-Band Channel (EOBC) input was received. Debugging information will be dumped.

Recommended Action No action is required.

ESCON Messages

This section contains Enterprise Systems Connection (ESCON) messages.

ESCON-3

Error Message %ESCON-3-ACCESS_FAIL: LRC access Failed

Explanation Line card redundancy controller (LRC) access has failed.

Recommended Action Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

Error Message %ESCON-3-CRC16_ERR_THR_ALM: ESCON CRC-16 Error Threshold [chars]

Explanation The threshold of allowable CRC-16 errors has been exceeded.

Recommended Action Check the client receive cable and the SFP optics. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESCON-3-CRC32_ERR_THR_ALM: CRC-32 Error Threshold [chars]

Explanation The threshold of allowable CRC-32 errors has been exceeded.

Recommended Action Check the client receive cable and SFP optics. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESCON-3-ESCON_RDWRFAIL: Read/write failed [[chars]]

Explanation A read or write error occurred while the hardware was being accessed.

Recommended Action Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

Error Message %ESCON-3-HEC_ERR_THR_ALM: CDL-HEC Error Threshold [chars]

Explanation The threshold of allowable CDL HEC errors has been exceeded.

Recommended Action Check the network cable for sharp bends, and ensure the connectors are clean and connected properly.

Error Message %ESCON-3-HW_LASER_DOWN_ALM: Remote Loss of Light [chars]

Explanation The optics laser has been disabled.

Recommended Action Check the remote client receive cable and the SFP optics.

Error Message %ESCON-3-IDPROM_ACCESS_FAIL: Access to IDPROM Failed

Explanation The IDPROM could not be accessed.

Recommended Action Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

Error Message %ESCON-3-INT_LPBK_FAIL: Internal CardLoopback Failed

Explanation An internal card loopback has failed.

Recommended Action Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

Error Message %ESCON-3-LASER_TX_FAULT_ALM: Optic Laser Transmit Fault [chars]

Explanation An optical laser transmission fails on an ESCON aggregation card.

Recommended Action Remove and reinsert the ESCON SFP optics. If the problem persists, replace the ESCON SFP optics.

Error Message %ESCON-3-LOCAL_FL_LASER_DOWN_ALM: Local Failure [chars]

Explanation The optics laser has been disabled.

Recommended Action Check the trunk and switch fabric connection.

Error Message %ESCON-3-LOSS_OF_LIGHT_ALM: Transceiver Loss of Light [chars]

Explanation The cable for the transceiver has been cut or removed.

Recommended Action Check the client receive cable and the SFP optics.

Error Message %ESCON-3-LOSS_OF_LOCK_ALM: Transceiver CDR Loss of Lock [chars]

Explanation The CDR cannot lock onto the signal.

Recommended Action Check the client receive cable and the SFP optics.

Error Message %ESCON-3-LOSS_OF_SYNC_ALM: Transceiver Loss of Sync [chars]

Explanation The transceiver has lost its synchronization.

Recommended Action Check the client receive cable and the SFP optics.

Error Message %ESCON-3-LPBK_THRU_PSC_FAIL: Loopback through PSC Failed

Explanation An attempt to loopback through the processor and switch card (PSC) has failed.

Recommended Action Remove and reinsert the ESCON aggregation card. If the problem persists, power cycle the ESCON aggregation card. If the problem still persists, replace the ESCON aggregation card.

Error Message %ESCON-3-MIB_HW_LASER_DOWN_ALM: Laser Disabled [chars] [chars] [chars]

Explanation The client-side laser has been disabled.

Recommended Action Check the remote client receive cable and the SFP optics.

Error Message %ESCON-3-MIB_LASER_TX_FLT_ALM: Laser Transmit Fault [chars] [chars] [chars]

Explanation The client laser encountered a fault during transmittal.

Recommended Action Remove and reinsert the ESCON SFP optics. If the problem persists, replace the ESCON SFP optics.

Error Message %ESCON-3-MIB_LOCAL_FL_LASER_DOWN_ALM: Local Failure, Laser Disabled [chars] [chars] [chars]

Explanation The client-side laser has been disabled.

Recommended Action Check the trunk and switch fabric connection.

Error Message %ESCON-3-MIB_LOSS_OF_LIGHT_ALM: Loss of Light [chars] [chars] [chars]

Explanation The client side transceiver detects a loss of light on an ESCON aggregation card.

Recommended Action Check the client receive cable and the SFP optics.

Error Message %ESCON-3-MIB_LOSS_OF_LOCK_ALM: Loss of Lock [chars] [chars] [chars]

Explanation The client side transceiver detects a loss of lock on an ESCON aggregation card.

Recommended Action Check the client receive cable and the SFP optics.

Error Message %ESCON-3-MIB_LOSS_OF_SYNC_ALM: Loss of Sync [chars] [chars] [chars]

Explanation The client side transceiver detects a loss of synchronization on an ESCON aggregation card.

Recommended Action Check the client receive cable and the SFP optics.

Error Message %ESCON-3-SEQ_ERR_THR_ALM: ESCON SEQ Error Threshold [chars]

Explanation The threshold of allowable sequence errors has been exceeded.

Recommended Action Check the network cable for sharp bends, and ensure that the connectors are clean and connected properly.

Error Message %ESCON-3-SYM_ERR_THR_ALM: 8b/10b Error Threshold [chars]

Explanation The threshold of allowable 8-byte or 10-byte errors has been exceeded.

Recommended Action Check the client receive cable and the SFP optics.

Error Message %ESCON-3-UNKNOWN_SFP_INSERTED: Unknown SFP inserted [chars]

Explanation An SFP has been inserted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ESF_CRASHINFO Messages

This section contains Extended SuperFrame crashinfo data messages.

Error Message %ESF_CRASHINFO-2-CRASHINFO_BAD_REGION: Unable to initialize crashinfo data collection Unknown region type specified: [chars]

Explanation Initialization of the crashinfo data collection facility failed. An unknown region type was specified.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-CRASHINFO_BAD_VENDOR_ID: Unable to initialize crashinfo data collection - the device vendor ID is invalid: [hex], should be: [hex]

Explanation Initialization of the crashinfo data collection facility failed due to an incorrect device vendor ID.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-CRASHINFO_COLLECTION_FAILED: Unable to collect ESF crashinfo data

Explanation ESF crashinfo data collection has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-CRASHINFO_DEV_IN_RESET: Unable to initialize crashinfo data collection - the device is still in reset: [chars]

Explanation Initialization of the crashinfo data collection facility failed due to the device being in reset state.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-CRASHINFO_INIT_FAILED: Unable to initialize ESF crashinfo data collection: [chars]

Explanation Initialization of the ESF crashinfo data collection facility failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-CRASHINFO_PCI_CMD_STAT: Unable to initialize crashinfo data collection PCI_CMD_STAT error indication: [hex]

Explanation Initialization of the crashinfo data collection facility failed due to a PCI_CMD_STAT error indication.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-CRASHINFO_UNSUPPORTED_START_STR: Unable to initialize crashinfo data collection Start string symbol not supported: [chars]

Explanation Initialization of the crashinfo data collection facility failed due to unsupported start string.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-INIT_FAILED: Unable to create crashinfo file, subsystem not properly initialized

Explanation An attempt to produce a crashinfo prior to successful completion of subsystem initialization has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-OPEN_FAILED: Unable to open crashinfo file [chars] ([dec])

Explanation Unable to open the file that was used to gather crashinfo.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-WRITE_FAILED: Unable to write to crashinfo file [chars]: [chars]

Explanation Unable to open the file that was used to gather crashinfo.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_CRASHINFO-2-WRITING_CRASHINFO: Writing crashinfo to [chars]

Explanation Crashinfo data is written to the specified file.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ESF_DRIVER Messages

This section contains SIP-400 ESF driver messages.

Error Message %ESF_DRIVER-2-CHECKSUM_FAILURE: Loading of the CPU code on [chars] failed due to checksum error

Explanation When code is loaded onto the CPU of the ESF engine, the code is read back and a checksum is calculated. The checksum that was read before the code was loaded onto the CPU does not match the checksum that was read after the code was loaded. This condition is an indication of a failure of the Rambus RAM for the ESF engine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-FORWARDING_PROCESSOR_READ_FAILURE: Read of register address [hex] failed on [chars].

Explanation The host processor tried to read a forwarding processor register on the ESF engine. The read failed after several retries because of collisions with other accesses to that register.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-FORWARDING_PROCESSOR_WRITE_FAILURE: Write of register address [hex] failed on [chars].

Explanation The host processor attempted to write a register on the forwarding processor for the ESF engine. The write failed after several retries because of collisions with other messages that were attempting to access that register.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-PCI_BUS_ERROR: A PCI bus error occurred on [chars]: [chars] (addr=[hex]).

Explanation The host processor communicates with the ESF engine by using a PCI interface. While a PCI transaction was being performed, the transaction failed, which caused a bus error on the host processor. The address specified in the message text is the approximate address of the PCI transaction

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-PROD_ID_FAILURE: Retrieving the product id failed on [chars]

Explanation The host processor could not read the product ID register of the ESF engine. This condition occurs if the ESF engine fails to initialize.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-RDRAM_INIT_FAILURE: RDRAM failed to init on [chars]: condition = [chars].

Explanation During initialization of the Rambus DRAM, several waiting conditions occur while the code is polling a register to obtain a lock bit. One of the waiting conditions has exceeded the timeout period.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-RDRAM_SETUP_FAILURE: The initialization of the RDRAM failed on the [chars]

Explanation The Rambus DRAM could not be initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-SRAM_SETUP_FAILURE: The initialization of the SRAM failed on the [chars]

Explanation The SRAM could not be initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-START_FORWARDING_PROCESSOR_FAILURE: The starting of forwarding processor failed on the [chars]

Explanation The forwarding processors of the ESF engine have to be started before processing can begin. The CPU on the ESF engine assists in the starting of the forwarding engines. The CPU reported that an error occurred while the forwarding engines were being started.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-UCODE_LOAD_FAILURE: The loading of microcode failed (rc=[dec]) on [chars]

Explanation Before processing can begin, microcode has to be loaded on each forwarding processor of the ESF engine. The CPU on the ESF engine assists in the loading of the microcode. While microcode was being loaded, the CPU reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-UNEXPECTED_PCI_DOORBELL_INT: Received an unexpected PCI interrupt ([dec]) from [chars] (mb0=[hex] mb1=[hex] mb2=[hex] mb3=[hex])

Explanation The CPU on the ESF engine communicates to the host processor through the PCI interface using various bits in an interrupt register. This error indicates that the host processor does not know how to interpret one of those bits.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_DRIVER-2-UNKNOWN_VENDOR_ID: The vendor id ([hex]) of [chars] does not match any known vendor id.

Explanation The vendor ID on the ESF engine does not match the vendor ID that is supplied by the manufacturer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ESF_IPC Messages

This section contains IPX2800 IPC messages.

ESF_IPC-2

Error Message %ESF_IPC-2-BAD_HANDLER_ID: An invalid handler ID was specified: [hex]

Explanation An invalid handler ID was specified. The handler ID is required to specify which thread the IPC message is being sent to.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-2-INVALID_ARGUMENT: An invalid argument was specified:
[chars]

Explanation An invalid argument was specified to one of the IPC library functions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-2-PRINT_DATA_INDICATION_FAILED: An error occurred trying to process a PRINT DATA request: [hex] ([dec]:[dec]:[dec]): [chars] ([hex] [hex] [hex])

Explanation An error occurred in processing the PRINT DATA request from a thread.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-2-SEND_MSG_TIMEOUT: IPC command timeout: [hex] [hex] [hex] [hex].

Explanation The thread to which an IPC command was issued did not respond in the required time period.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-2-START_MSG_TIMEOUT: A timeout occurred waiting for the NP to register to support processing IPC commands.

Explanation Each network processor (NP) must register to handle processing an IPC soon after startup. If it does not register within the required time period, then initialization cannot be completed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-2-UNABLE_TO_ACCESS_ESF_MEMORY: Unable to access NP memory: [chars]

Explanation An error occurred trying to access network processor (NP) memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-2-UNABLE_TO_CREATE_MSG: Unable to create IPC message

Explanation Insufficient resources exist to create a message used for processing the requested IPC command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-2-UNABLE_TO_SEND_MSG: Unable to send IPC message

Explanation Insufficient resources exist to send a message used for processing the requested IPC command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ESF_IPC-3

Error Message %ESF_IPC-3-FATAL_ERROR_MSG: Fatal Error indication from [hex] ([dec]:[dec].[dec]): [chars]

Explanation A thread has generated a fatal error indication.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-3-NON_FATAL_ERROR_MSG: Error indication from [hex] ([dec]:[dec].[dec]): [chars]

Explanation A thread has generated a nonfatal error indication.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-3-NON_FATAL_ERROR_MSG_ERROR: Error indication from [hex] ([dec]:[dec].[dec]): [hex] [hex] [hex]

Explanation An error occurred trying to process a nonfatal error indication from a thread running on a network processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ESF_IPC-6

Error Message %ESF_IPC-6-PRINT_DATA_INDICATION: Print Data indication from [chars] - [hex] ([dec]:[dec].[dec]): [chars]

Explanation A network processor thread requested the display of a particular section of memory. This is normally used for debugging.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ESF_IPC-6-STATUS_UPDATE_MSG: Status update from [hex] ([dec]:[dec].[dec]): [hex]

Explanation A thread has generated a status update indication.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ETHCNTR Messages

This section contains the Ethernet controller (ETHCNTR) error messages. These messages are a result of a failure of the switch software when trying to program the hardware. Most of these errors lead to incorrect switch behavior, and should be reported to your Cisco technical support representative.

ETHCNTR-2

Error Message %ETHCNTR-2-MOLSENDDTIMEOUT: Molecule send timeout, queue [dec], molecule [hex] [hex]

Explanation An attempt to read or write one or more of the hardware settings failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ETHCNTR-3

Error Message %ETHCNTR-3-FLOWCONTROL_DUPLEX_ERROR: Flowcontrol will not take effect until duplex is set to auto.

Explanation Flow control cannot take effect until the duplex mode has been set to auto.

Recommended Action Set the duplex mode to auto.

Error Message %ETHCNTR-3-HALF_DUX_COLLISION_EXCEED_THRESHOLD: Collisions at [chars] exceed threshold. Considered as loop-back.

Explanation The collision at a half-duplex port has exceeded the threshold, and the port is considered to be a loopback port.

Recommended Action No action is required.

Error Message %ETHCNTR-3-MOLSENDINT: Molecule send from interrupt handler

Explanation An interrupt handler is accessing the hardware in a manner that is not permissible for an interrupt handler.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ETHCNTR-3-NO_HARDWARE_RESOURCES: Not enough hardware resources. Shutting down [chars]

Explanation The system currently contains more VLANs and routed ports than the hardware can support.

Recommended Action Reduce the total number of VLANs and routed ports to fewer than 1,023. To maintain this configuration and connectivity across reboots, save the configuration to NVRAM.

ETHER_CFM Messages

This section contains Ethernet Connectivity Fault Manager (ETHER_CFM) messages.

ETHER_CFM-3

Error Message %ETHER_CFM-3-CROSS_CONNECTED_CSI: Service ID of received CC [chars] does not match local Service ID [chars].

Explanation For a specified service within a domain, the service ID in the continuity check (CC) message should match the locally configured service ID.

Recommended Action Verify that the service IDs are configured correctly using the **show ethernet cfm domain** command.

Error Message %ETHER_CFM-3-LR_FROM_WRONG_FP: received Loopback Reply with correct Transaction Identifier, but from a Maintenance Point different than Loopback Message's destination

Explanation An unknown destination sent a reply to a loopback message that was intended for another device.

Recommended Action Verify that the correct destination MAC address was specified in the CLI while sending the loopback message.

Error Message %ETHER_CFM-3-MEP_NOT_CONFIGURED: received CC from unconfigured remote MEP.

Explanation While performing a crosscheck, a continuity check (CC) message was received from a remote maintenance endpoint (MEP) that is not configured under the domain submode.

Recommended Action Verify whether the remote MEP should be added to the remote MEP list under the domain using the **show ethernet cfm domain** command.

Error Message %ETHER_CFM-3-RCV_LOCAL_MPID: MPID of CC matches local MPID.

Explanation The remote maintenance endpoint identifier (MPID) matches a MPID configured locally for the service.

Recommended Action Either the local MPID or remote MPID should be changed because the MPID should be unique for each service in a network.

Error Message %ETHER_CFM-3-TM_EGRESS_BOUNDRY: egress path found for TM is at a higher level than the traceroute message.

Explanation Traceroute found a domain boundary on egress because the egress port level is higher than the traceroute message level.

Recommended Action Check that the MIP level on the egress port is at an appropriate level.

ETHER_CFM-5

Error Message %ETHER_CFM-5-IGNORED_VLAN: Ignored VLAN %u in '%s'

Explanation An invalid VLAN was ignored in the configuration.

Recommended Action No action is required.

ETHER_LMI Messages

This section contains Ethernet Local Management Interface (ETHER_LMI) messages.

ETHER_LMI-6

Error Message %ETHER_LMI-6-MISMATCHED_VLAN_CONFIGURED: VLAN %s configured but not in VLAN mapping for UNI %s

Explanation VLANs are configured on the user network interface (UNI) but do not exist according to VLAN mapping received from the network by the Ethernet local management interface (LMI).

Recommended Action Verify that the configuration of VLANs on the UNI match those assigned.

Error Message %ETHER_LMI-6-MISMATCHED_VLAN_NOT_CONFIGURED: VLAN %s not configured but in VLAN mapping for UNI %s

Explanation VLAN mappings received from the network by the Ethernet local management interface (LMI) do not match those that are configured on the user network interface (UNI).

Recommended Action Verify that the configuration of VLANs on the UNI match those assigned.

ETHERNET_LACP Messages

This section contains Ethernet Link Aggregation Control Protocol (LACP) messages.

Error Message %ETHERNET_LACP-1-ISSU_NOMEMORY: Unit [dec], no memory for [chars]

Explanation The requested operation could not be accomplished because of a low memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %ETHERNET_LACP-3-ISSU_SENDFAILED: LACP ISSU: send message failed, rc = [dec]

Explanation The sending of a message has failed. This is an informational message only.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETHERNET_LACP-4-ISSU_INCOMPATIBLE: lacp-issu-compat: returned FALSE

Explanation The ISSU compatibility matrix check has failed. This is an informational message only.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETHERNET_LACP-4-ISSU_XFORM: [chars]: failed, rc=[chars]

Explanation The ISSU transform has failed. This is an informational message only.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETHERNET_LACP-4-RF_CLIENT_BUNDLE: LACP HA: Unable initiate checkpoint bundle mode.

Explanation LACP is unable to initialize checkpoint bundle mode. This is an informational message only.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETHERNET_LACP-4-RF_CLIENT_INIT: LACP HA: Unable to initiate RF client.

Explanation LACP is unable to initialize as a RF client. This is an informational message only.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

ETHERNET_MLACP Messages

This section contains Ethernet Multichassis Link Aggregation Control Protocol (LACP) messages.

ETHERNET_MLACP-3

Error Message %ETHERNET_MLACP-3-PEER_ICCP_VERSION_INCOMPATIBLE: Peer ICCP version [dec] is incompatible with local ICCP version [dec].

Explanation mLACP peer is running with a different version of ICCP. Incompatible ICCP would prevent mLACP from working properly.

Recommended Action Reboot peer with identical IOS version would correct the issue. Compatible ICCP version between different IOS images can still be achieved by doing show lacp multichassis group on the both devices to check if ICCP versions are compatible. If ICCP versions are incompatible, repeat IOS image loading and CLI above until a compatible image is loaded.

Error Message %ETHERNET_MLACP-3-SYS_CFG_DUPL_ID: Remote mLACP peer has duplicate mLACP node-id [dec]

Explanation A remote mLACP peer is configured with the same mLACP node-id as this device.

Recommended Action Reconfigure the mLACP node-id to be unique between the two devices with the **mlacp node-id** configuration command. Refer to the mLACP configuration section of the Cisco IOS documentation for more information on configuring mLACP.

Error Message %ETHERNET_MLACP-3-SYS_CFG_INVALID_ID: Received invalid mLACP node-id [dec] from peer

Explanation A remote mLACP peer is configured with an invalid mLACP node-id.

Recommended Action Reconfigure the peer to send a valid mLACP node-id with the **mlacp node-id** configuration command. Refer to the mLACP configuration section of the Cisco IOS documentation for more information on configuring mLACP.

ETHERNET_MLACP-4

Error Message %ETHERNET_MLACP-4-CORE_CONNECTED: mLACP has recovered from a core isolation failure. Attempting to recover [dec] LAGs in redundancy group [int]

Explanation mLACP has recovered from core isolation and has attempted to recover the LAGs in the redundancy group.

Recommended Action This message may not require any action. However the **show lacp multi-chassis group** and **show lacp multi-chassis port-channel** commands may be used to verify the state of the mLACP port-channels. Reference the mLACP section of the IOS documentation for details on core isolation failures and related configuration commands.

Error Message %ETHERNET_MLACP-4-CORE_ISOLATION: mLACP Core isolation failure: Attempting to failover [dec] LAGs in redundancy group [int]

Explanation mLACP has detected isolation from the core and has attempted to failover.

Recommended Action Use the **show redundancy interchassis** command to determine which core facing interface has triggered the isolation failure. Correct the failure for the given interface, this will clear the mLACP core isolation failure. Reference the mLACP section of the IOS documentation for more information on core isolation failures and related configuration commands.

Error Message %ETHERNET_MLACP-4-ICRM_CLIENT_RECV_BAD_LEN: Received an mLACP TLV with bad length [dec], total message length [dec]

Explanation The mLACP TLV length is longer than the total message length.

Recommended Action Issue the **show version** command on the local and remote devices to get the versions of IOS that are running. Reference the mLACP section of the IOS documentation to verify that mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative. Provide the representative with the exact message being seen as well as the output of the following commands, **show version**, **show run**, **show lacp multi-chassis group**, and **show lacp multi-chassis port-channel**.

Error Message %ETHERNET_MLACP-4-ICRM_CLIENT_RECV_NO_TYPELEN: Received an mLACP TLV without a type and/or length field ([dec])

Explanation mLACP received an improperly formatted TLV from the peer. As a result the local and peer devices may have mismatched state data.

Recommended Action Issue the **show version** command on the local and remote devices to get the versions of IOS that are running. Reference the mLACP section of the IOS documentation to verify that mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative and provide the representative with the exact error message being seen as well as the versions of IOS from both devices.

Error Message %ETHERNET_MLACP-4-ICRM_CLIENT_RECV_REJ: Received rejected mLACP TLV from peer with message ID [dec]

Explanation A remote mLACP peer has rejected an mLACP TLV.

Recommended Action Issue the **show version** command on the local and remote devices to get the versions of IOS that are running. Reference the mLACP section of the IOS documentation to verify that mLACP is compatible between the IOS versions on the two devices. If the versions are compatible and the message still appears then please contact your Cisco technical support representative and provide the representative with the exact error message being seen as well as the versions of IOS from both devices.

Error Message %ETHERNET_MLACP-4-PEER_DISCONNECT: An mLACP peer has disconnected from redundancy group [int], attempting to reconnect

Explanation mLACP has detected that a peer device from the specified redundancy group has disconnected. mLACP will attempt to reconnect to the device until successful.

Recommended Action This message is typically caused by a configuration event on the peer router, and so no action may be necessary. However if this message is unexpected then issue the **show redundancy interchassis** command on both the local and peer mLACP devices to determine which peer member IP has lost communication. Use this information to further debug the network communication issue, and re-enable communication with the peer. Reference the mLACP section of the IOS documentation for more information on peer down failures.

Error Message %ETHERNET_MLACP-4-PEER_DOWN: mLACP Peer down failure: Attempting to make [dec] local LAGs active in redundancy group [int]

Explanation mLACP has detected a peer down failure and has attempted to make the local port-channels become active.

Recommended Action The peer down failure should be corrected by re-enabling communication with the peer mLACP device. Use the **show redundancy interchassis** command on both the local and peer mLACP devices to determine which peer member IP has lost communication. Use this information to further debug the network communication issue, and re-enable communication with the peer. Reference the mLACP section of the IOS documentation for more information on peer down failures.

Error Message %ETHERNET_MLACP-4-PEER_RECONNECT_FAILED: The attempt to reconnect to the peer in redundancy group [int] has failed

Explanation After an mLACP peer device disconnected, an attempt was made to reconnect, however that attempt has failed.

Recommended Action To reinitialize the connection, unconfigure **mlacp interchassis group** from the port-channel, and then reconfigure it. After doing that, issue **show redundancy interchassis** to get the peer member IP connection status and the mLACP connection state. If the peer member IP connection status is not CONNECTED then there is a more basic communication issue that needs to be fixed. Otherwise if the peer member IP is CONNECTED but the mLACP state is not CONNECTED, then there could be a software issue. In that case collect the output of **show redundancy interchassis**, **show lacp multi-chassis group**, and **show lacp multi-chassis port-channel**. Then please contact your Cisco technical support representative and provide the collected information.

Error Message %ETHERNET_MLACP-4-PEER_UP: mLACP has recovered from a peer down failure in redundancy group [int]

Explanation mLACP is now in communication with the peer device, and has recovered from a previous peer down failure.

Recommended Action This message may not require any action. However the **show lacp multi-chassis group** and **show lacp multi-chassis port-channel** commands may be used to verify the state of the mLACP port-channels. Reference the mLACP section of the IOS documentation for details on peer down failures and related configuration commands.

ETHERNET_MLACP-6

Error Message %ETHERNET_MLACP-6-PEER_CONNECT: mLACP peer is now connected in redundancy group [int]

Explanation This message indicates that the local mLACP device is now connected to a peer device in the specified redundancy group.

Recommended Action No action is required. To view the peer information the command **show lacp multi-chassis port-channel** or **show lacp multi-chassis group** may be issued.

ETHERNET_OAM Messages

This section contains Ethernet Operation, Administration, and Maintenance (ETHERNET_OAM) messages.

ETHERNET_OAM-2

Error Message %ETHERNET_OAM-2-CRIT_ERR: The Ethernet OAM protocol has encountered the critical error: [chars].

Explanation The protocol has encountered a critical error as specified in the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ETHERNET_OAM-3

Error Message %ETHERNET_OAM-3-LOOPBACK_ERROR: Loopback operation on interface [chars] has encountered an error([chars]).

Explanation Because of the specified error, the loopback operation has ended abnormally.

Recommended Action No action is required.

ETHERNET_OAM-5

Error Message %ETHERNET_OAM-5-EVENTTLV: [chars] is received from the remote client on interface [chars].

Explanation An event TLV is received from the remote OAM client, which detected errors in receiving frames from this local interface.

Recommended Action No action is required.

Error Message %ETHERNET_OAM-5-LINK_MONITOR: [chars] detected over the last [chars] on interface [chars].

Explanation A monitored error has been detected to have crossed the user-specified threshold.

Recommended Action No action is required.

Error Message %ETHERNET_OAM-5-LINK_MONITOR_HT_CROSS: High threshold was crossed on Port Channel [chars]'s last operational member port [chars]. Interface [chars] is kept online.

Explanation A monitored error has been detected to have crossed the user-specified threshold.

Recommended Action No action is required.

ETHERNET_OAM-6

Error Message %ETHERNET_OAM-6-ENTER_SESSION: The client on interface [chars] has entered the OAM session.

Explanation Ethernet OAM client on the specified interface has detected a remote client and has entered the OAM session.

Recommended Action No action is required.

Error Message %ETHERNET_OAM-6-EXIT_SESSION: The client on interface [chars] has left the OAM session.

Explanation Ethernet OAM client on the specified interface has experienced some state change.

Recommended Action No action is required.

Error Message %ETHERNET_OAM-6-LINK_TIMEOUT: The client on interface [chars] has timed out and exited the OAM session.

Explanation The Ethernet OAM client on the specified interface has not received any OAMPDUs in the number of seconds for timeout that were configured by the user. The client has exited the OAM session.

Recommended Action No action is required.

Error Message %ETHERNET_OAM-6-LOOPBACK: Interface [chars] has [chars] the [chars] loopback mode.

Explanation The specified interface has entered or exited loopback mode because of protocol control or an external event, such as the interface link going down.

Recommended Action No action is required.

Error Message %ETHERNET_OAM-6-RFI: The client on interface [chars] has received a remote failure indication from its remote peer(failure reason = [chars])

Explanation The remote client indicates a Link Fault, or a Dying Gasp (an unrecoverable local failure), or a Critical Event in the OAMPDU. In the event of Link Fault, the Fnetwork administrator may consider shutting down the link.

Recommended Action In the event of a link fault, consider shutting down the link.

Error Message %ETHERNET_OAM-6-RFI_CLEAR: The client on interface %s has received a clear of remote failure indication from its remote peer(failure reason = %s action = %s)

Explanation The remote client received a message to clear a link fault, or a dying gasp (an unrecoverable local failure), or a critical event in the operations, administration, and maintenance Protocol Data Unit (OAMPDU). The error-disable state can only be cleared by entering the **shutdown** command followed by the **no shutdown** command on the interface.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ETHER_SERVICE Messages

This section contains Ethernet service messages.

ETHER_SERVICE-6

Error Message %ETHER_SERVICE-6-EVC_STATUS_CHANGED: status of %s changed to %s

Explanation The Ethernet virtual connection (EVC) status has changed.

Recommended Action No action is required.

Error Message %ETHER_SERVICE-6-EVC_VLAN_NOT_CONFIGURED: VLANs %s not configured at %s but is in a CEVLAN/EVC map

Explanation The specified VLANs are part of the CEVLAN/EVC map for an EVC associated with the specified interface, but the VLANs are not configured on that interface.

Recommended Action Verify the configurations of VLANs on the interface.

ETSEC Messages

This section contains messages.

ETSEC-1

Error Message %ETSEC-1-INITFAIL: PQ3/FE([dec]), Init failed, CSR[dec]=[hex]

Explanation The software failed to initialize/restart an Ethernet/Fast Ethernet interface.

Recommended Action Clear the interface. If the message recurs, call your technical support representative for assistance.

Error Message %ETSEC-1-INITFAILP: PQ3/FE([dec]), Init failed at [chars]

Explanation The FEC could not allocate a I/O buffer pool.

Recommended Action Clear the interface. If the message recurs, call your technical support representative for assistance.

Error Message %ETSEC-1-MEMERR: PQ3/FE([dec]), Memory error, CSR[dec]=[hex]

Explanation The interface could not access system resources for a long time. This problem may occur under very heavy loads.

Recommended Action The system should recover. No action is required. If the message recurs, call your technical support representative for assistance.

Error Message %ETSEC-1-SHOWFAIL: PQ3/FE([dec]), Memory error at [chars]

Recommended Action Clear the interface. If the message recurs, call your technical support representative for assistance.

ETSEC-2

Error Message %ETSEC-2-EXCEPTION: Fatal Error, Interface [chars] not transmitting

Explanation The software detected critical error and recovery failed, resulting in system crash.

Recommended Action Collect crashinfo files, syslogs and console dumps.

Error Message %ETSEC-2-NOISL: Interface [chars] does not support ISL

Explanation The interface cannot be configured as an ISL trunk.

Recommended Action Check the configuration.

ETSEC-3

Error Message %ETSEC-3-CREATE_IBC_FAILED: Creation of etsec ibc idb failed

Explanation etsec ibc idb creation has failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETSEC-3-INIT_IBC_FAILED: Initialization of etsec ibc failed

Explanation etsec ibc initialization has failed

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETSEC-3-INIT_ICDM_FAILED: Initialization of icdm driver failed

Explanation icdm driver initialized failed for etsec ibc

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETSEC-3-INIT_MAC_DRIVER_FAILED: Initialization of ethernet mac driver failed

Explanation ethernet mac driver initialized failed for etsec ibc

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETSEC-3-MASKED_RCV_INTR: etsec_ibc_rcv_interrupt called while masked: [int]

Explanation etsec_ibc_rcv_interrupt called while already masked

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETSEC-3-NO_BUFFER_POOLS: Initialization of private buffer pools failed

Explanation Private buffer pools were not created for etsec ibc.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETSEC-3-NO_PARTICLE: no particle available to populate the ethernet dma ring

Explanation No particle available to populate the ethernet dma ring.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETSEC-3-OVERFLO: PQ3/FE([dec]), Receive overflow

Explanation While receiving a frame, the controller chip's local buffer transmitted insufficient data because data could not be transferred to DRAM fast enough to keep pace with its input rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

Recommended Action The system should recover. No action is required.

Error Message %ETSEC-3-OWNERR: PQ3/FE([dec]), Buffer ownership error, pak=[hex]

Explanation The software detected an error in descriptor ownership.

Recommended Action Try a later version of the software. If the message recurs, call your technical support representative for assistance.

Error Message %ETSEC-3-RECOVER_TX: Interface [chars] TX workaround invoked

Explanation The software detected the interface was not transmitting packets. The workaround patch has been invoked.

Recommended Action The system should recover. No action is required.

Error Message %ETSEC-3-RESTART: Interface [chars] Restarted Due to [chars] Error

Explanation The software detected critical error and etsec driver was restarted to restore EoBC traffic flow.

Recommended Action The system should recover. No action is required.

Error Message %ETSEC-3-RX_ADD_BUFFER_FAILED: particle not added to the ethernet dma ring

Explanation Particle not added to the Ethernet dma ring.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ETSEC-3-UNDERFLO: PQ3/FE([dec]), Transmit underflow

Explanation While transmitting a frame, the controller chip's local buffer received insufficient data because data could not be transferred to the chip fast enough to keep pace with its output rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

Recommended Action The system should recover. No action is required.

ETSEC-4

Error Message %ETSEC-4-BABBLE: PQ3/FE([dec]), Babble error, CSR[dec]=[hex]

Explanation The transmitter has been on the channel longer than the time taken to transmit the largest frame.

Recommended Action The system should recover. No action is required.

ETSEC-5

Error Message %ETSEC-5-COLL: PQ3/FE([dec]), Excessive collisions, TDR=[dec], TRC=[dec].

Explanation Ethernet/Fast Ethernet is seeing multiple collisions. This may occur under heavy loads.

Recommended Action The system should recover. No action is required.

Error Message %ETSEC-5-EXCESSCOLL: PQ3/FE([dec]), Excessive collision

Explanation Ethernet/Fast Ethernet is seeing multiple collisions. This may occur under heavy loads.

Recommended Action The system should recover. No action is required.

Error Message %ETSEC-5-FIFO_RECOVER: [chars] ([dec]) detected freeze, last([dec]) new([dec]) tx cntr. tx_pending ([dec]). applying patch

Explanation The interface is used for IPC/SCP communication between RP and SP. In a rare situation when fifo tx engine is stuck and requires a toggle there is no data loss when the recovery patch is executed. Patch is applicable to MPC8548 version 2.0 silicon only.

Recommended Action None - software patch will be executed.

Error Message %ETSEC-5-LATECOLL: PQ3/FE([dec]), Late collision

Explanation Late collisions occurred on the Ethernet/Fast Ethernet interface.

Recommended Action If the interface is Fast Ethernet, verify that both peers are in the same duplex mode. For regular Ethernet, the system should recover. No action is required.

Error Message %ETSEC-5-LOSTCARR: PQ3/FE([dec]), Lost carrier. Transceiver problem?

Explanation The cable is not connected to the port.

Recommended Action Connect the cable to the port.

EVENT_TRACE Messages

This section contains event trace subsystem messages.

EVENT_TRACE-3

Error Message %EVENT_TRACE-3-GROUP_ID: Duplicate registration of group-id [dec]

Explanation Software subsystem is trying to register a group ID for an event trace that has already been used by another subsystem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EXFREE Messages

This section contains external memory manage messages.

EXFREE-2

Error Message %EXFREE-2-EXMEMFREE: Free a non allocated ptr [hex] size [dec].

Explanation The system is trying to free a memory. Not all of it is marked as allocated.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EXFREE-2-EXMEMINIT: EXMEM [dec]: [chars]

Explanation The requested external memory allocator failed to be initialized. The reasons are not clear.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EXFREE-2-EXMEMLOCK: [chars] detected error ptr [hex] size [dec].

Explanation The system is attempting to lock or unlock a memory location that was either already locked or unlocked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EXFREE-2-EXMEMPARAM: Bad parameter ([dec]) when calling to the allocator utility

Explanation An illegal parameter was used when a call to the allocator utility was made. This condition may indicate data corruption.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EXFREE-2-EXMEMRESET: EXMEM [dec]: [chars]

Explanation The requested external memory allocator failed to be reset. The reasons are not clear.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EXFREE-4

Error Message %EXFREE-4-EXMALLOCFAIL: External memory allocation of [int] bytes failed from EXMEM [dec]

Explanation The requested memory allocation is not available from the specified memory pool. The current system configuration, network environment, or possibly a software error might have exhausted or fragmented the router's memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EXPRESS_SETUP Messages

This section contains Express Setup messages.

EXPRESS_SETUP-3

Error Message %EXPRESS_SETUP-3-UNABLE_TO_RESET_CONFIG: [chars]

Explanation The system is unable to reset the configuration.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

EXPRESS_SETUP-6

Error Message %EXPRESS_SETUP-6-CONFIG_IS_RESET: [chars]

Explanation The configuration is reset and the system will now reboot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %EXPRESS_SETUP-6-MODE_ENTERED:

Explanation Express setup mode is now active.

Recommended Action No action is required.

Error Message %EXPRESS_SETUP-6-MODE_EXITED:

Explanation Express setup mode is no longer active.

Recommended Action No action is required.

FABRIC Messages

This section contains Fabric (FABRIC) messages.

FABRIC-3

Error Message %FABRIC-3-DISABLE_FAB: The fabric manager disabled active fabric in slot [dec] due to the error ([dec]) on this channel (FPOE [dec]) connected to slot [dec]

Explanation The firmware detected a severe fabric error and reported the error to the fabric manager. The manager has disabled the active fabric.

Recommended Action The Fabric Manager will automatically resynchronize the fabric channel to recover from the error. The problem may occur when the fabric card or the line card does not have good contact with backplane. You should insert the fabric and line cards firmly into the chassis.

Error Message %FABRIC-3-EM_RECOVERY_ISSU_NEGO_FAILED: Attempting EM recovery for EM type %d, but ISSU negotiation was unsuccessful/incomplete.

Explanation On a switchover, the fabric manager is trying to recover for events that were opened on the peer before the switchover, but not closed. These events are maintained by the event manager (EM). The fabric manager found that ISSU negotiation was either unsuccessful or incomplete. Because the data may not have been synchronized correctly between the active and standby devices, this is an error condition.

Recommended Action No action is required.

Error Message %FABRIC-3-ERRORS_DDRSYNC: Line card DDR channels sync error fpoe/slot [dec]/[dec].

Explanation A transmit FIFO overrun or underrun in the DDR channels has occurred. The error indicates a clock mismatch. If this condition is persistent, the hardware is faulty.

Recommended Action The system will attempt to resynchronize the DDR channel and the fabric channel.

Error Message %FABRIC-3-LOST_SYNC: [chars] endpoint of fpoe:[dec] lost Sync. to [chars] fabric,#[dec] times recovered success, trying to recover now!

Explanation The endpoint has lost synchronization with the fabric and is trying to recover.

Recommended Action No action is required.

FABRIC-4

Error Message %FABRIC-4-DISABLE_FAB: Please disable fabric service: active sup [dec] (error [dec])

Explanation All supervisor engine fabric channels have errors.

Recommended Action Disable fabric services for the switch. Disable power for external switch fabric modules. Disable fabric service for internal switch fabric modules, but keep the supervisor engines powered on.

Error Message %FABRIC-4-LINECARDMODE_CFG_MISMATCH: Service module in the slot [dec] cannot pass traffic to the distributed etherchannel configured.

Explanation Because of the hardware limitation of the service module in the slot specified, traffic from these modules cannot pass through the distributed EtherChannel as configured.

Recommended Action Force the service modules switching mode to bus mode by entering the **fabric switching-mode force busmode** command, or change the channel configuration so that the affected modules do not need to pass traffic through the EtherChannel.

Error Message %FABRIC-4-SERVICEMOD_CHANGE_BUSMODE: The switching mode of service module in slot [dec] can be changed to its default as the distributed etherchannel config is removed.

Explanation The switching mode of the service modules can be reverted to the default by entering the **no fabric switching-mode force busmode** command.

Recommended Action Restore the default by entering the **no fabric switching-mode force busmode** command.

Error Message %FABRIC-4-SUP_SWITCHOVER: Supervisor switchover from slot [dec] (error [dec])

Explanation The active supervisor engine fabric channel has errors.

Recommended Action A switchover to the redundant supervisor engine occurs automatically.

FABRIC-5

Error Message %FABRIC-5-CANNOT_CLEAR_BLOCK: The fabric in slot [dec] cannot support clear-block feature.

Explanation A user enabled the clear-block mechanism, but the fabric in the specified slot cannot support the feature.

Recommended Action No action is required.

Error Message %FABRIC-5-CANNOT_SUPPORT_FP_INVERSION: The module you have installed in slot [dec] is running an older revision of firmware/software which may cause inconsistent system behavior. Please refer to the release notes for a minimum recommended software release for mentioned module.

Explanation The specified module can not support FP bit inversion with the current software release. The fabric clear block will disregard the COS setting for this module.

Recommended Action No action is required.

Error Message %FABRIC-5-CLEAR_BLOCK: Clear block option is [chars] for the fabric in slot [dec].

Explanation The fabric manager has changed the status of the clear-block mechanism for all fabric channels. The status (on or off) is indicated in the message.

Recommended Action No action is required.

Error Message %FABRIC-5-ERRORS_BUFFER: In fabric slot [dec], memory buffer for fpoe/slot [dec]/[dec] is full.

Explanation Either the buffer size is less than the packet size or the uplink buffer cannot respond to flow control from the fabric.

Recommended Action Examine the fabric memory configuration.

Error Message %FABRIC-5-ERRORS_TIMEOUT: Time out for input from fpoe/slot [dec]/[dec] to slot [dec].

Explanation A timeout in the fabric input buffer occurred because of a problem from the destination slot. The transient error is observed when the module is removed. If the error is persistent, the module local bus might be locked.

Recommended Action Reset the module in the destination slot if the error is persistent.

Error Message %FABRIC-5-FABRIC_FAILOVER: The fabric in slot [dec] has failed over due to fabric errors on slot [dec]. Fabric in slot [dec] is now the current active fabric.

Explanation The Switch Fabric Module in the specified slot failed over and active supervisor switch to former standby supervisor.

Error Message No action is required.%FABRIC-5-LINECARDMODE_BUS_FORCED: The switching mode of module in slot [dec] is forced to bus-mode.

Explanation The **fabric switching-mode force busmode** command has been applied.

Recommended Action No action is required.

Error Message %FABRIC-5-NOT_ALLOWED: Power not allowed to module [dec] : [chars] .

Explanation Certain types of linecards is not given power for some reason. Detailed reason is given in the message body.

Recommended Action No action is required.

FABRIC-6

Error Message %FABRIC-6-TIMEOUT_ERR: Fabric in slot [dec] reported timeout error for channel [dec] (Module [dec], fabric connection [dec])

Explanation Firmware code on the fabric detected that the input or output buffer was not moving. To recover from this condition, the system will automatically resynchronize the fabric channel.

Recommended Action The system automatically recovers from this condition by doing a fabric channel resynchronization. If the system experiences this condition persistently, directly connect to the console of the fabric and the module to determine if any errors are being reported by the firmware. Also, reseal and reset the module.

FABRIC_INTF_ASIC Messages

This section contains switch fabric interface ASIC (FABRIC_INTF_ASIC) messages.

FABRIC_INTF_ASIC-4

Error Message %FABRIC_INTF_ASIC-4-DEV_CONFIG_FAIL: The Switch Fabric interface ASIC configuration failed

Explanation The switch fabric interface ASIC could not be configured.

Recommended Action If the switch fabric is inactive (down), this message can be expected. If the module comes online and traffic processing resumes, ignore this message. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. On the Route Processor, capture the **show logging** and **show version** commands.

Error Message %FABRIC_INTF_ASIC-4-FABRICCRCERRS: [dec] Fabric CRC error events in 100ms period

Explanation The switch fabric interface encountered more CRC error events than the supervisor engine CRC error threshold allows.

Recommended Action The line card has notified the supervisor engine and the error has been logged. No action is required from the user.

FABRIC_INTF_ASIC-5

Error Message %FABRIC_INTF_ASIC-5-CHAN_LINK_SPEED_OOB: Array access bounds violated, channel_num=[int], link_num=[int], speed=[int]

Explanation Cisco IOS code has attempted to access an internal array with an invalid index for SSA channel number or link number or speed.

Recommended Action No action is required if there is no system impact. If traffic stops or linecard fails, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FABRIC_INTF_ASIC-5-DEV_INIT_FAILURE: The Switch Fabric interface ASIC initialization failed

Explanation The switch fabric interface ASIC was not successfully initialized. As a result, this device is not operational and has been disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FABRIC_INTF_ASIC-5-FABRICDOWN_CRCERRS: [dec] Fabric CRC error events in 100ms period

Explanation The switch fabric interface encountered more CRC errors than the maximum configured threshold. However, the reason for this error is that the switch fabric is inactive (down). The line card has notified the supervisor engine of this condition and the error has been logged.

Recommended Action This message indicates normal system operation. No action is required.

Error Message %FABRIC_INTF_ASIC-5-FABRICDOWN_SYNCERRS: [dec] Fabric sync error events in 100ms period

Explanation The switch fabric interface encountered more synchronization errors than the maximum configured threshold. However, the reason for this error is that the switch fabric is inactive (down).

Recommended Action This message indicates normal system operation. No action is required.

Error Message %FABRIC_INTF_ASIC-5-FABRICSYNC_DONE: Fabric sync on [chars] channel done.

Explanation The switch fabric interface ASIC was resynchronized.

Recommended Action No action is required.

Error Message %FABRIC_INTF_ASIC-5-FABRICSYNC_REQ: Fabric sync requested on [chars] channel ([dec])

Explanation The line card has requested that the supervisor engine resynchronize its fabric interface ASIC.

Recommended Action No action is required.

Error Message %FABRIC_INTF_ASIC-5-NOFABRICPROCESS: The Switch Fabric interface fabric process could not be created

Explanation The switch fabric interface does not have a link process running; the system failed to create this process. This module will not support the fabric interface.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FABRIC_INTF_ASIC-5-NULL_DEV_OBJECT: The Switch Fabric interface device object pointer is set to NULL

Explanation The memory location of the switch fabric interface device object is invalid. The switch fabric interface ASIC operation is disabled and the device interrupt is now masked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FABRIC_INTF_ASIC-5-SMB_ACCESSERROR: The Module Switch Fabric interface ASIC cannot be accessed

Explanation The switch fabric interface ASIC access (read or write) failed. The serial bus that connected to the switch fabric interface ASIC on this module is not functioning correctly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FABRIC_SP

Error Message %FABRIC-SP-5-CLEAR_BLOCK: Clear block option is [chars] for the fabric in slot [dec].

Explanation The fabric manager has changed the status of the clear-block mechanism for all fabric channels. The status (on or off) is indicated in the message.

Recommended Action No action is required.

Error Message %FABRIC-SP-5-FABRIC_MODULE_ACTIVE: The Switch Fabric Module in slot [dec] became active

Explanation The Switch Fabric Module in the specified slot is active as the switching fabric.

Recommended Action No action is required.

FIB Messages

This section contains Forwarding Information Base (FIB) messages.

FIB-2

Error Message %FIB-2-FIBFEATSESINIT: Error initializing CEF repop feature session queue

Explanation Initialization of a CEF feature session queue could not be accomplished because of a low-memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %FIB-2-FIBRETRY_EXCEEDED: CEF table download to slot [dec] not performed as IPC port did not come up

Explanation The FIB could not be fully downloaded. As a result of this condition, hardware switching might not be functional on the module.

Recommended Action Reset the module to overcome this condition.

Error Message %FIB-2-HW_IF_INDEX_ILLEGAL: Attempt to create CEF interface for [chars] with illegal index: [dec]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FIB-2-IF_NUMBER_ILLEGAL: Attempt to create CEF interface for [chars] with illegal if_number: [dec]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FIB-3

Error Message %FIB-3-FIBSBNOFN: Missing [chars] subblock [chars] function for [chars]

Explanation Functions for distributing this subblock are missing from the image.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FIB-3-MAC_ACCT: [chars]: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FIB-3-PREC_ACCT: [chars]: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FIB-4

Error Message %FIB-3-FIB_STATS_ERROR: Internal Error - type [dec], slot [dec], total_len [dec], msg_len [dec], seg_len [dec]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FIB-4-FIBNULLHWIDB: Missing hwidb for fibhwidb [chars] (ifindex [dec])

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FIB-4-FIBNULLIDB: Missing idb for fibidb [chars] (if_number [dec]).

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FIB-4-FIBRETRY_WARNING: IPC port for slot [dec] to become available for CEF table download (retried [dec] times)

Explanation The FIB table failed to download for the number of times specified in the message.

Recommended Action If the FIB table is successfully downloaded in a subsequent retry, no action is required. If the operation is not successful, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FIB-4-FIBXDRINV : Invalid format. [chars]

Explanation Because the VLAN interface was deleted while still in the administrative up state, the HSRP MAC address remains in the adjacency table. This message is not sent if the VLAN interface is first put into an administrative down state before being deleted.

Recommended Action No action is required.

FIB-6

Error Message %FIB-6-FIBLCTUNDELSEQ: Update received on a linecard for a deleted tunnel([chars]) - ignored.

Explanation An update was received on a line card for a tunnel that has already been deleted. The update was ignored.

Recommended Action No action is required.

FILESYS Messages

This section contains fileys messages.

FILESYS-3

Error Message %FILESYS-3-RUNNING_SYNC_FAILED: The active is unable to synchronize the running configuration to standby, so standby will be reloaded

Explanation The active supervisor engine cannot access its running configuration to synchronize the configuration to the standby supervisor engine. This can be caused by temporary resource issues such as high CPU.

Recommended Action No action is required. This message is for informational purposes only.

FILESYS-4

Error Message %FILESYS-4-CLPDINT: Management interrupts are [chars] for pcmcia device in socket [dec]. [chars]

Explanation A faulty PCMCIA flash device might be generating spurious insert or remove interrupts continuously. The PCMCIA controller's interrupt generation will be disabled temporarily, and will be reenabled after a few seconds. If an alternate PCMCIA device is inserted while the interrupts are disabled, the alternate device may not be readable. In this case, you must remove and reinsert the PCMCIA device.

Recommended Action Replace the PCMCIA flash device.

FILESYS-5

Error Message %FILESYS-5-CFLASH: Compact flash card [chars] [chars]

Explanation A file system's status has changed.

Recommended Action Follow any instructions provided with the message.

Error Message %FILESYS-5-IFLASH : Internal Flash [chars] [chars]

Explanation A file system's status has changed. This can occur after the switch is converted from Catalyst OS software to Cisco IOS software. When you enter the **dir bootflash:** command, an unformatted flash memory returns a "bad device block info" or "invalid magic number" error message.

Recommended Action Format the flash memory using the **format** command and follow any instructions provided with the message. Otherwise, no action is required.

Error Message %FILESYS-5-UNKNDEV : Unknown device [chars] [chars]

Explanation A file system's status has changed. The flash device cannot be recognized by the switch. The 16-MB MEM-C6K-FLC16M and 24 MB MEM-C6K-FLC24M linear flash PC cards are preformatted and are ready to use, but the MEM-C6K-ATA-1-64M and 64 MB MEM-C6K-FLC64M flash PC cards are not preformatted. You must format these cards before using them to store files. In addition, the Supervisor Engine 1 and Supervisor Engine 2 do not support the same flash PC card format. To use a flash PC card with a Supervisor Engine 2, you must format the card with a Supervisor Engine 2. To use a flash PC card with a Supervisor Engine 1, you must format the card with a Supervisor Engine 1.

Recommended Action Format the flash memory using the **format** command and follow any instructions provided with the message. Otherwise, no action is required.

FM Messages

This section contains Feature Manager (FM) messages.

FM-2

Error Message %FM-2-ACL_MERGE_EXCEPTION: ACL merge internal error due to features configured on interface [chars] in [chars] direction, traffic may be switched in software

Explanation The configured features for this interface caused the merge to abort because of an internal error. The traffic on this interface and the interfaces sharing TCAM label with this interface will be sent to the software.

Recommended Action Redefine and reapply or unconfigure one or more features on the interface.

Error Message %FM-2-ACL_MERGE_NUM_ACES: ACL merge aborted due to number of ACEs threshold for features on interface [chars] in [chars] direction, traffic may be switched in software

Explanation The configured features for this interface may have caused the merge to abort because of hitting the 64000 ACE merge threshold. The traffic on this interface and the interfaces sharing the TCAM label with this interface will be sent to the software.

Recommended Action Redefine and reapply or unconfigure one or more features on the interface.

Error Message %FM-2-FIE_EXCEPTION: Feature interaction internal error due to features configured on interface [chars] in [chars] direction, traffic may be switched in software

Explanation The configured features for this interface caused an internal error in the feature interaction. The traffic on this interface and the interfaces sharing the TCAM label with this interface will be sent to the software.

Recommended Action Redefine and reapply or unconfigure one or more features on the interface.

Error Message %FM-2-FLOWMASK_CONFLICT: Features configured on interface [chars] have conflicting flowmask requirements, traffic may be switched in software

Explanation The configured features for this interface have a flow mask conflict. The traffic on this interface and the interfaces sharing the TCAM label with this interface may not comply with the features under this condition. The traffic on these interfaces will be sent to the software.

Recommended Action Redefine and reapply or unconfigure one or more features to avoid the conflict.

Error Message %FM-2-TCAM_ERROR: TCAM programming error %d

Explanation A software error caused a failure in programming ACLs into the TCAM.

Recommended Action Choose the Order Dependent Merge (ODM) algorithm for merging the ACL. Shut down the VLAN interface and reenable the interface after ten minutes. If the error message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FM-2-TCAM_MEMORY: ACL merge abandoned when merging Interface [chars] [chars] ACLs due to insufficient memory. Interface traffic handled in Software.

Explanation The capacity of the hardware TCAM has been exceeded and the packets will be now process-switched. The first [chars] value indicates the VLAN interface for which the ACL merge fails, and the second [chars] indicates whether the ACL is ingress or egress.

Recommended Action Choose the Order Dependent Merge (ODM) algorithm for merging the ACL. Shut down the VLAN interface and reenable the interface after ten minutes. If the error message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FM-2-TCP_FLAG_HW_EXCEPTION: No VLOUs available for TCP FLAGS for interface [chars] in [chars] direction: all features on the interface for the specified direction will be NOT effective

Explanation No VLOUs are available for TCP flags. This condition cannot be handled in the software for all the features configured on the interface. A message is printed on the console to notify the user of this error condition. Because there are no features that the software can handle, the system will program an entry to permit all traffic.

Recommended Action The hardware TCAM can handle up to 9 logical operations per interface and up to 64 logical operations in total. To recover from this error, recompute the ACLs for the features that cannot be handled in the software (for example, VACLs) to move entries using TCP flags before others entries are moved and to minimize the usage of TCP flags.

Error Message %FM-2-TCP_FLAG_SW_EXCEPTION: No VLOUs available for TCP FLAGS on interface [chars] in [chars] direction: traffic will be software switched, features which are NOT processable in software will be NOT effective

Explanation No VLOUs are available for TCP flags. This condition cannot be handled in the software for some features configured on the interface. A message is printed on the console to notify the user of this error condition. Because there are some features that can be handled in the software (for example, VACLs and RACLs), an exception entry and traffic on this interface will be sent to the software.

Recommended Action The hardware TCAM can handle up to 9 logical operations per interface and up to 64 logical operations in total. To recover from this error, recompute the ACLs for the features that cannot be handled in the software (for example, VACLs) to move entries using TCP flags before others entries are moved and to minimize the usage of TCP flags.

FM-3

Error Message %FM-3-LABELERROR: Incorrect label to [chars] vlan label attribute copy callback srclabel [dec], dstlabel [dec]

Explanation The Feature Manager attribute copy callback was called with an incorrect source or destination label.

Recommended Action Enter the **show running-config** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FM-3-NOTEMPTY: Illegal copy of attribute to non empty [chars] vlan label [dec]

Explanation The Feature Manager attribute copy callback was called with a destination label already being used by a VLAN or routed port.

Recommended Action Enter the **show running-config** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FM-3-UNKNOWNACTION: Unknown VMR access group action [hex]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FM-4

Error Message %FM-4-EXCESSESECONDARY: More than [dec] secondary IP addresses configured on interface [chars]

Explanation When secondary IP addresses are configured on an interface, the hardware is usually programmed so that the ICMP redirect functionality on the CPU is not notified of packets sent between two subnets configured on the same interface. If many secondary IP addresses are configured on the same interface it becomes impractical to program the hardware in this manner. This message is logged, and the CPU will be notified of every packet sent between two subnets on this interface. No ICMP redirects will be sent in error, but the CPU usage may increase because of the additional notifications.

Recommended Action Enter the **no ip redirects** command on the interface to reduce the CPU load on the system.

Error Message %FM-4-MPLS_RSVD_VLAN_ERROR: Failed attempt to remove the default feature from MPLS reserved vlan [chars]

Explanation MPLS reserved vlan's have a default 'permit ip any any' ACL configured. In some corner cases an event is generated to unconfigure this default feature. Such instances should be blocked.

Recommended Action No functional impact. Contact TAC with the traceback and also with the configuration steps that lead to the error message.

Error Message %FM-4-FLOWMASK_REDUCED: Features configured on interface [chars] have conflicting flowmask requirements, some features may work in software

Explanation The configured features for this interface have a flow mask conflict. The traffic on this interface and the interfaces sharing the TCAM label with this interface will be sent to the software.

Recommended Action Redefine and reapply or unconfigure one or more features to avoid the conflict.

Error Message %FM-4-IPSG_VACL: VACL Capture & IPSG conflict on i/f [chars]

Explanation Because VACL capture and IPSG is not supported on the same VLAN port, VACL capture will be inactive. To activate VACL capture, reconfigure the feature after removing IPSG.

Recommended Action Remove either IPSG or VACL capture on this interface.

Error Message %FM-4-L2_DYN_TCAM_EXCEPTION: Failed to install Dynamic TCAM entry to filter Layer 2 traffic, error status: [dec], host IP address: [IP_address], interface: [chars]

Explanation There is an error in installing the per-user policies in the Dynamic TCAM region to filter Layer 2 traffic. The TCAM might be full. As a result, host ingress traffic will be subjected to the default interface ACL.

Recommended Action Attempt to free up TCAM resources.

Error Message %FM-4-L2EOU_INSP: INSPECION & L2EOU conflict on i/f [chars]

Explanation The inspection feature and the Layer 2 EAP over UDP (L2EOU) feature are not supported on the same VLAN. The inspection feature will be inactive. To activate the inspection feature, reconfigure it after removing the L2EOU feature.

Recommended Action Remove either the Layer 2 EAP over UDP (L2EOU) feature or the inspection feature from the interface.

Error Message %FM-4-L2EOU_VACL: VACL Capture & L2EOU conflict on i/f [chars]

Explanation Because VACL capture and the Layer 2 EAP over UDP (EOU) feature are not supported on the same VLAN port, VACL capture will be inactive. To activate VACL capture, reconfigure the feature after removing the L2EOU feature.

Recommended Action Remove either the Layer 2 EAP over UDP (EOU) feature or VACL capture on this interface.

Error Message %FM-4-TCAM_ADJ: Hardware ACL adjacency capacity exceeded

Explanation The hardware does not have the capacity to handle all of the configured adjacencies.

Recommended Action The configured policies have too many adjacencies to fit in the hardware. Use the **mls tcam priority** command to prioritize interfaces for hardware switching. Reduce the number of adjacencies in the policies.

Error Message %FM-4-TCAM_DYN_ENTRY_EXCEPTION: Failed to install Dynamic TCAM entry in TCAM for Interface:[chars]

Explanation Dynamic installation of an ACE failed because of TCAM resource exhaustion. Layer 3 traffic will be handled by the software.

Recommended Action Attempt to free up TCAM resources.

Error Message %FM-4-TCAM_MASK: Hardware TCAM MASK entry capacity exceeded

Explanation The hardware TCAM has exhausted its available storage and does not have the capacity to store all configured ACLs.

Recommended Action If the ACL merge algorithm is currently binary decision diagrams (BDD), space could be freed by changing the merge algorithm to order dependent merge (ODM). Enter the **show fm summary** command to determine the current merge algorithm. Enter the **mls aclmerge algorithm odm** command to change the merge algorithm from BDD to ODM. Enter the **mls tcam priority** command to prioritize interfaces for hardware switching. Attempt to share the same ACLs across multiple interfaces in order to reduce TCAM resource contention. If server load balancing is configured, enter the **mls ip slb search wildcard rp** command to reduce the amount of TCAM space used by server load balancing. After you enter the command, server load balancing will increase its utilization of the route processor.

FMCORE Messages

This section contains Core Feature Manager (FMCORE) messages.

FMCORE-2

Error Message %FMCORE-2-ACL_FAILURE: Interface [chars] traffic will not comply with ACLs in [chars] direction(s)

Explanation ACLs will not be applied on traffic for the specified interface because of a TCAM resource contention.

Recommended Action The configured ACLs are too large for all of them to fit in the hardware TCAM. Use the **mls tcam priority** command to prioritize interfaces for hardware switching. Try to share the same ACLs across multiple interfaces to reduce TCAM resource contention.

Error Message %FMCORE-4-RACL_REDUCED: Interface [chars] routed traffic will be software switched in [chars] direction

Explanation TCAM resource contention prevents ACLs from being applied in the TCAM for this interface. The traffic on this interface will be sent to software so that the ACLs can be applied.

Recommended Action The configured ACLs are too large to all fit in the hardware TCAM. Enter the **mls tcam priority** command to prioritize the interfaces for hardware switching. Try to share the same ACLs across multiple interfaces to reduce TCAM resource contention.

Error Message %FMCORE-2-VACL_FAILURE: Interface [chars] traffic will not comply with VACLs in [chars] direction(s)

Explanation VACLs will not be applied on traffic for this interface because of a TCAM resource contention.

Recommended Action The configured ACLs are too large for all of them to fit in the hardware TCAM. Use the **mls team priority** command to prioritize interfaces for hardware switching. Try to share the same ACLs across multiple interfaces to reduce TCAM resource contention.

FMCORE-4

Error Message %FMCORE-4-RACL_REDUCED: Interface [chars] routed traffic will be software switched in [chars] direction

Explanation A TCAM resource contention prevents ACLs from being applied in the TCAM for the specified interface. The traffic on the interface will be sent to software so that the ACLs can be applied.

Recommended Action The configured ACLs are too large for all of them to fit in the hardware TCAM. Use the **mls team priority** command to prioritize interfaces for hardware switching. Try to share the same ACLs across multiple interfaces to reduce TCAM resource contention.

FMCORE-6

Error Message %FMCORE-6-RACL_ENABLED: Interface [chars] routed traffic is hardware switched in [chars] direction

Explanation Earlier TCAM resource contention may have prevented ACLs from being applied in the TCAM for this interface. It has been enabled and traffic on this interface is hardware switched.

Recommended Action No need to take an action for this as it is an informational message not an error message.

FM_EARL6 Messages

This section contains Enhanced Address Recognition Logic 6 Feature Manager (FM_EARL6) messages.

FM_EARL6-4

Error Message %FM_EARL6-4-RACL_REDUCED_MCAST_RATELIM_WARN: Enabling acl [chars] rate-limiter will cause Multicast traffic to be dropped in hardware on interface [chars] in [chars] direction

Explanation A TCAM resource contention prevents routed ACLs from being programmed in the TCAM for the specified interface in the specified direction. All Layer 3 traffic will be sent to CPU to have RACLs enforced in software. Due to a lack of resources, multicast special VMRs cannot be programmed. In this condition, rate limiting for traffic bridged to the CPU by the ACL is incompatible with the status of the multicast interface and will cause multicast traffic to be dropped in the hardware.

Recommended Action Do not enter the **mls unicast acl {input | output}** command.

Error Message %FM_EARL6-4-VACL_PVLAN: VACL config is NOT supported on secondary Vlan: [chars] and will be removed

Explanation Current implementation of the FM does not support the configuration of VACLs on secondary VLANs. The VACL configuration is removed from the VLAN interface once it becomes a secondary private VLAN. Both the hardware and the software will be updated accordingly.

Recommended Action Make the VLAN a primary VLAN or a regular (nonprivate) VLAN. Reapply the VLAN filter.

FM_EARL7 Messages

This section contains Enhanced Address Recognition Logic 7 Feature Manager (FM_EARL7) messages.

FM_EARL7-2

Error Message %FM_EARL7-2-IPV6_PORT_QOS_MCAST_FLOWMASK_CONFLICT: QoS configuration on port [chars] conflicts for flowmask with IPv6 multicast forwarding on SVI interface [chars]

Explanation The port-based QoS microflow policing configuration for this interface has a flow mask conflict with IPv6 multicast forwarding. The traffic on the SVI interface will be sent to the software under this condition.

Recommended Action Unconfigure the latest configuration change, modify the conflicting QoS configuration, and reapply.

Error Message %FM_EARL7-2-IPV6_QOS_MCAST_FLOWMASK_CONFLICT: QoS configuration on interface [chars] conflicts for flowmask with IPv6 multicast forwarding, traffic may be switched in software

Explanation The QoS microflow policing configuration for this interface has a flow mask conflict with IPv6 multicast forwarding. The traffic on this interface will be sent to the software under this condition.

Recommended Action Unconfigure the latest configuration change, modify the conflicting QoS configuration, and reapply.

Error Message %FM_EARL7-2-SWITCH_PORT_QOS_FLOWMASK_CONFLICT: QoS configuration on switch port [chars] conflicts for flowmask with feature configuration on SVI interface [chars]

Explanation The QoS configuration on the specified port has a conflict with a feature configuration on an SVI interface. QoS or other features might not function correctly under these circumstances.

Recommended Action Unconfigure the latest configuration change, modify the conflicting configuration, and reapply the features.

FM_EARL7-4

Error Message %FM_EARL7-4-FEAT_CONFLICT_ON_IDB: IP ADMISSSION feature conflicts with other features on interface [chars], feature will work in software

Explanation The IP admission feature conflicts with other features on this interface.

Recommended Action Unconfigure any conflicting features and reapply the IP admission feature.

Error Message %FM_EARL7-4-FEAT_FLOWMASK_REQ_CONFLICT: Feature [chars] requested flowmask [chars] conflicts with other features on interface [chars], flowmask request Unsuccessful for the feature

Explanation The flow mask requested by the specified feature conflicts with other features. The requested flow mask cannot be programmed for the feature.

Recommended Action Redefine and reapply the feature, or unconfigure one or more features and reapply the specified feature to avoid the conflict.

Error Message %FM_EARL7-4-FEAT_FLOWMASK_REQ_CONFLICT_ON_SP: Flowmask requested on interface [chars] conflicts with other features on interface for Protocol [chars], flowmask request Unsuccessful for the feature

Explanation The flow mask requested by the feature conflicts with other features. The requested flow mask cannot be programmed for the feature.

Recommended Action Redefine and reapply the feature, or reconfigure one or more features and reapply the feature to avoid the conflict.

Error Message %FM_EARL7-4-FLOW_FEAT_FLOWMASK_REQ_FAIL: Flowmask request for the flow based feature [chars] for protocol [chars] is unsuccessful, hardware acceleration may be disabled for the feature

Explanation The flow mask request for the flow-based feature is unsuccessful. This condition might occur because of a TCAM resource exception, a flow mask registers resource exception, or an unresolvable flow mask conflict with other NetFlow-based features. The NetFlow shortcut installation and hardware acceleration for the feature might be disabled under this condition, and the feature might be applied in the software.

Recommended Action Determine the netflow shortcut installation enable/disable status for the feature by entering the **show fm fie flowmask** command. If the NetFlow shortcut installation and hardware acceleration is disabled for the feature, reconfigure or unconfigure some of the other features to remove the TCAM resource exception or the flow mask conflict/flow mask resource exception condition. Reapply the feature for the flow mask request to succeed, and reenable the NetFlow shortcut installation for the feature.

Error Message %FM_EARL7-4-FEAT_QOS_FLOWMASK_CONFLICT:Features configured on interface [chars] conflict for flowmask with QoS configuration on switch port [chars], traffic may be switched in software

Explanation The configured features for the specified interface have flow mask conflicts with the QoS configuration on the switch port. The traffic on this interface will be sent to software.

Recommended Action Undo the latest configuration change, modify the conflicting QoS configuration on the switch port, and reapply the features.

Error Message %FM_EARL7-4-FLOW_FEAT_FLOWMASK_REQ_FAIL: Flowmask request for the flow based feature [chars] for protocol [chars] is unsuccessful, hardware acceleration may be disabled for the feature

Explanation The flow mask request for the flow-based feature is unsuccessful. This may happen due to TCAM resource exception or flow mask registers resource exception or due to unresolvable flow mask conflict with other NetFlow-based features. NetFlow shortcut installation and hardware acceleration for the feature may be disabled under this condition and the feature may be applied in software.

Recommended Action Check the NetFlow shortcut installation enable/disable status for the feature by entering the **show fm fie flowmask** command. If NetFlow shortcut installation/hardware acceleration is disabled for the feature, reconfigure or unconfigure some of the other features to remove the TCAM resource exception or the flow mask conflict/flow mask resource exception condition. Reapply the feature for the flow mask request to succeed and reenable the NetFlow shortcut installation for the feature.

Error Message %FM_EARL7-4-MLS_FLOWMASK_CONFLICT: mls flowmask may not be honored on interface [chars] due to flowmask conflict

Explanation The configured MLS flow mask conflicts with other features or with the QoS configuration. The traffic on the specified interface will be sent to the software. NDE might not function correctly for the specified interface under this condition.

Recommended Action Remove the conflicting configuration, and reconfigure the MLS flow mask.

Error Message %FM_EARL7-4-MLS_FLOWMASK_NO_TCAM_RESOURCES: mls flowmask may not be honored on interface [chars] due to TCAM resource shortage

Explanation The requirements for the configured features exceed the TCAM resources. The flow mask may not be programmed in the hardware. Under this condition, the traffic on the specified interface is sent to the software. NDE may not function correctly for this interface.

Recommended Action Redefine and reapply some of the features, or unconfigure one or more features.

Error Message %FM_EARL7-4-MLS_IPV6_FORCED_COMPRESS_MODE: Use IPv6 mask values of 88 or lower in forced compress mode for consistent processing of incompressible IPv6 addresses in both hardware and software.

Explanation IPv6 compress mode is a hardware feature. If compress mode is force-enabled and IPv6 ACLs are built with mask values 89 or greater, inconsistent behavior in IPv6 ACL processing could result with incompressible addresses. Using IPv6 mask values of 88 and lower while forcing compress mode ensures proper hardware processing of IPv6 ACL entries.

Recommended Action Use IPv6 mask values of 88 or lower in forced compress mode for consistent processing of incompressible IPv6 addresses in both hardware and software.

Error Message %FM_EARL7-4-NO_FLOWMASK_REGISTERS: Feature configuration on interface [chars] could not allocate required flowmask registers, traffic may be switched in software

Explanation The flow mask requirements for configured features on the specified interface cannot be met because there are no available flow mask registers. The traffic on this interface will be sent to software.

Recommended Action Remove one or more NetFlow-based features or QoS microflow policing from the configuration, and reapply the features.

Error Message %FM_EARL7-4-RACL_REDUCED_MCAST_RATELIM_WARN: Enabling acl [chars] rate-limiter will cause Multicast traffic to be dropped in hardware on interface [chars] in [chars] direction

Explanation A TCAM resource contention prevents routed ACLs from being programmed in TCAM for the specified interface in the specified direction. All Layer 3 traffic will be sent to CPU to have RACLs enforced in software. Due to a lack of resources, multicast special VMRs cannot be programmed. In this condition, rate limiting for traffic bridged to CPU by the ACL is incompatible with the status of the multicast interface and will cause multicast traffic to be dropped in hardware.

Recommended Action Do not enter the `mls unicast acl {input | output}` command.

Error Message %FM_EARL7-4-VACL_PVLAN: VACL config is NOT supported on secondary Vlan: [chars] and will be removed

Explanation The current implementation of the Feature Manager does not support the configuration of VACLs on secondary VLANs. The VACL configuration is removed from the VLAN interface once it becomes a secondary private VLAN. Both the hardware and the software will then be updated accordingly.

Recommended Action Change the VLAN to be a primary VLAN or a regular (nonprivate) VLAN and reapply the VLAN filter.

FPD_MGMT Messages

This section contains FPD Management Subsystem (FPD_MGMT) messages.

FPD_MGMT-2

Error Message %FPD_MGMT-2-CREATE_FAIL: Couldn't create [chars].

Explanation The system does not have enough free main memory to create the specified resource.

Recommended Action Make sure that the system main memory size meets the minimum requirement that is specified in the Cisco IOS software release note. If the system meets the minimum requirement for this Cisco IOS software release, make sure that the amount of free main memory in the system also meets the minimum memory required to use this software feature. Enter the **show memory** command to find out this information and add more main memory if it is necessary. If the system meets all the memory requirements, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FPD_MGMT-3

Error Message %FPD_MGMT-3-BNDL_CARD_TYPE_MISMATCH: The [chars] file does not contain the card type ([hex]) in the image bundle to indicate the support of the target card. Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The image bundle in the specified file does not contain a correct card type value for the target card.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-BNDL_CRC_CHECK_FAIL: The [chars] file contains a corrupted image bundle - CRC mismatch: current value [hex], expected value [hex]. Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The file failed the CRC checking process. This failure indicates a corrupt FPD image bundle or package file.

Recommended Action Try to download again the required package from the Cisco Software Center website as the specified one might be corrupted. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-BNDL_NAME_PREFIX_MISMATCH: The [chars] file contains a bundle name prefix ([chars]) that does not match with the expected value of "[chars]" for the image bundle. Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The content of the selected FPD image bundle does not match its filename.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-BNDL_WRONG_HDR_LEN: The [chars] file contains wrong header length for the image bundle: [int] bytes (expected [int] bytes). Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The specified file might not be a valid FPD image bundle or package file for the target card.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-BNDL_WRONG_MAGIC_NUM: The [chars] file contains a wrong magic number for the image bundle: [hex] (expected [hex]). Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The specified file might not be a valid FPD image bundle or package file for the target card or the file could be corrupted.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-BNDL_WRONG_SIZE: The [chars] file contains incorrect image bundle size: [int] bytes (expected [int] bytes). Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The specified file might not be a valid FPD image bundle or package file for the target card.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-BUNDLE_EXTRACT_ERROR: Cannot extract the [chars] bundle from [chars] - [chars]

Explanation There has been a bundle file-extraction error. The cause of the failure is specified in the message. The specified file might not be a valid FPD image package file.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-CLOSE_FAILED: Failed to close [chars] file.

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-DUPLICATE_UPGRADE_RESULT: Upgrade result already received for the FPD image upgrade of FPD ID [int] for [chars] card in [chars].

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-FPD_UPGRADE_FAILED: [chars] (FPD ID=[int]) image upgrade for [chars] card in [chars] has FAILED.

Explanation The FPD image upgrade process has failed for the specified device.

Recommended Action Retry the upgrade operation again. If the affected card remains disabled by the system after attempts to retry the upgrade, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-IMG_CRC_CHECK_FAILED: The FPD image for [chars] (FPD ID [int]) in [chars] file is corrupted - CRC mismatch: current value [hex], expected value [hex]. Please make sure that this is a valid FPD image bundle or package file for card in [chars].

Explanation The image failed the CRC checking process, this indicates a corrupt FPD image bundle or package file.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-IMG_DATA_UNCOMPRESS_ERROR: Could not uncompress [chars] FPD image for [chars] in [chars].

Explanation An error has been detected during the uncompress operation of the compressed FPD image data.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-IMG_VER_NOT_FOUND: FPD image version information is not available for [chars] card in [chars]. All the FPD images will be upgraded to recover from this error.

Explanation The FPD image version information for the specified card is not available because the system was not able to extract this information for all the FPDs in the card. This could be the result of a corrupted FPD image from a power failure.

Recommended Action If the automatic upgrade feature is not enabled, then the affected card will be disabled. If this happens, follow the recommended action described for the FPD_MGMT-5-CARD_DISABLED message.

Error Message %FPD_MGMT-3-INCOMP_BNDL_VER: The selected [chars] file contain an image bundle that has a version number that is incompatible for this IOS release - [chars]. Selected version = [int].[int], minimum compatible version = [int].[int]. Please make sure that this is a valid FPD image [chars] file for card in [chars].

Explanation The version of the selected FPD image bundle does not contain a valid version number that is compatible for the Cisco IOS release. The major version number should be the same and the minor version number should be at least equal to the minimal required version.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-INCOMP_IMG_VER: Incompatible [chars] (FPD ID=[int]) image version detected for [chars] card in [chars]. Detected version = [int].[int], minimum required version = [int].[int]. Current HW version = [int].[int].

Explanation An incompatible FPD image version has been detected. The FPD image must be upgraded either automatically or manually to make the card operational. If the automatic upgrade feature is not enabled, or if the system cannot find the necessary FPD image package file, the card will be disabled.

Recommended Action If the automatic upgrade feature is not enabled, then the affected card will be disabled. If this happens, follow the recommended action described for the FPD_MGMT-5-CARD_DISABLED message.

Error Message %FPD_MGMT-3-INVALID_IMAGE_SIZE: The [chars] FPD image from [chars] file does not have a valid image size: expected size = [dec] bytes, actual size = [dec] bytes.

Explanation The size of the specified FPD image does not have the expected size. The FPD image bundle or package might not be a valid file.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-INVALID_IMG_VER: Invalid [chars] (FPD ID=[int]) image version detected for [chars] card in [chars].

Explanation The specified field programmable device contains an invalid version for the FPD image, because the system was not able to extract this information from the specified card. A failed upgrade attempt might have corrupted the FPD image identification on the device.

Recommended Action If the automatic upgrade feature is not enabled, the affected card will be disabled. If this happens, follow the recommended action described for the FPD_MGMT-5-CARD_DISABLED message.

Error Message %FPD_MGMT-3-INVALID_PKG_FILE: The indicated file ([chars]) is not a valid FPD image package file - [chars]

Explanation The file format does not appear to be a valid FPD image package.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-INVALID_PKG_FILE_SIZE: The indicated file ([chars]) does not have a valid FPD image package file size, minimum size = [dec] bytes.

Explanation The file size of the specified FPD image package does not meet the required minimum size. The file is too small to be a valid FPD image package file.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-INVALID_UPGRADE_RESULT: Invalid upgrade result '[int]' received for the FPD image upgrade of [chars] (FPD ID=[int]) for [chars] card in [chars].

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-IPC_FAILED: Failed to send IPC message to [chars] in [chars] - [chars]

Explanation The system failed to send a message via IPC to the specified card. The cause of the specific IPC failure is specified in the message text.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FPD_MGMT-3-MAJOR_VER_MISMATCH: Major image version mismatch detected with [chars] (FPD ID=[int]) for [chars] card in [chars]. Image will need to be [chars] from version [int].[int] to at least a minimum version of [int].[int]. Current HW version = [int].[int].

Explanation A major image version mismatch has been detected. This incompatibility will need to be resolved by doing an upgrade or downgrade operation, either automatically, or manually, to make the card operational. If the automatic upgrade feature is not enabled, or if the system cannot find the necessary FPD image package file, then the card will be disabled.

Recommended Action If the automatic upgrade feature is not enabled, the affected card will be disabled. If this happens, you can perform the upgrade using the **upgrade hw-module** privileged EXEC command. For more information about these commands, refer to the FPD image upgrade feature documentation in the software configuration guide for the target card.

Error Message %FPD_MGMT-3-MISSING_BUNDLE_ENTRY: Failed to find a matching entry in the programmable device bundle information table.

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-MISSING_DEV_INFO: Could not find [chars] (FPD ID=[int]) information for [chars] card in [chars].

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-MISSING_IMAGE: Could not find the required [chars] image (FPD ID=[int] and FPD version=[int].[int] compatible with HW version=[int].[int]) from the [chars]-fpd.bundle in [chars] file. Please make sure that this is a valid FPD image [chars] file for [chars] card in [chars].

Explanation The specified FPD image bundle or package file might not be the correct one. If this is an FPD image package file, then an incompatible package file might have been renamed with a filename that matched the one that the system is expecting for this Cisco IOS software release. You should never rename an FPD image package file name.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-OPEN_FAILED: Failed to open [chars] ([chars]). Please make sure that the required file is in a valid path.

Explanation The system cannot access the required file from the specified URL.

Recommended Action Ensure that the specified URL is a valid path and the system has access to the file system where the file has been placed.

Error Message %FPD_MGMT-3-OUT_OF_MEMORY: Could not allocate the required [dec] bytes of memory.

Explanation The system does not have enough free main memory to download the bundle file.

Recommended Action Make sure that the system main memory size meets the minimum requirement that is specified in the Cisco IOS software release note. If the system meets the minimum requirement for this Cisco IOS software release, make sure that the amount of free main memory in the system also meets the minimum memory required to use this software feature. Enter the **show memory** command to find out this information and add more main memory if it is necessary. If the system meets all the memory requirements, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FPD_MGMT-3-PKG_VER_MISMATCH_NOTE: The FPD image package being used ([chars]) is not the right version for this IOS version (it appears that a '[chars]' package was renamed to '[chars]'). An attempt to find the required FPD image will still be performed with this package.

Explanation The indicated FPD image package that is being used in FPD automatic upgrade does not contain the correct version information for the Cisco IOS version that is running in the system. This condition can occur if a different version of the FPD image package was renamed to match the filename that the Cisco IOS image is expecting to use. The upgrade operation will still be performed by trying to find the required FPD image from the renamed package file.

Recommended Action If the upgrade operation fails because the required FPD image cannot be found with the renamed FPD image package, replace the wrong package file with a valid one and perform the upgrade operation again.

Error Message %FPD_MGMT-3-PKG_FILE_SEARCH_FAILED: FPD image package ([chars]) cannot be found in system's flash card or disk to do FPD upgrade.

Explanation By default, if the **upgrade fpd path** *fpd-pkg-url* global configuration command is not configured, then the system will try to locate the required FPD image package file from removable flash cards or disks that are accessible by the system for an FPD upgrade. This message indicates that the system could not find the package file.

Recommended Action Make sure that the specified FPD image package file is copied into a flash card or disk that is accessible by the system, then restart the FPD upgrade by reinserting the target card or entering a system command to reload or power-cycle the target card.

Error Message %FPD_MGMT-3-PKG_VER_FILE_EXTRACT_ERROR: Cannot extract the [chars] version file from [chars] - [chars]

Explanation There is a package version file extraction error. The cause of the failure is specified in the message. The specified file might not be a valid FPD image package file.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file** *fpd-pkg-url* commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-READ_BNDL_HDR_ERROR: Failed to read the FPD bundle header from [chars] file.

Explanation The specified file might not be a valid FPD image bundle or package file.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-READ_ERROR: Could not read the [chars] file.

Explanation The system cannot read the required file from the specified URL.

Recommended Action Make sure that the specified URL is a valid path and that the system has access to the file system where the file has been placed.

Error Message %FPD_MGMT-3-SEND_IMG_FAILED: [chars] (FPD ID=[int]) image for [chars] card in [chars] has failed to be sent for upgrade operation - [chars]

Explanation The FPD image was not able to be sent for the upgrade operation. The system might be too busy to handle this operation. The affected card will be disabled by this failure.

Recommended Action Wait until the system load is lower to try again with the manual upgrade procedure by using the **upgrade hw-module** privileged EXEC command. If the symptom persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-SW_ERROR: NULL

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-TOO_MANY_FPD_ENTRIES: Too many FPD entries for the FPD Bundle Info Table. Required number of entries = [int], maximum number of entries allowed = [int].

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-UNKNOWN_BNDL_HDR_FORMAT: Unknown header format version: [hex]

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-UPGRADE_LIST_FULL: Could not add a new entry in the FPD Management Upgrade List. No upgrade will be performed for the [chars] card in [chars].

Explanation There is a problem in the internal software coding. This message should not be seen under normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-WRONG_IMG_DATA_LEN: The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong data length: total data length (with padding) = [int] bytes, data length = [int] bytes. Please make sure that this is a valid FPD image bundle or package file for card in [chars].

Explanation The specified file might not be a valid FPD image bundle or package file for the card.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file fpd-pkg-url** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-WRONG_IMG_HDR_LEN: The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong header length: [int] bytes (expected [int] bytes). Please make sure that this is a valid FPD image bundle or package file for card in [chars].

Explanation The specified file might not be a valid FPD image bundle or package file for the card.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show**

upgrade fpd file *fpd-pkg-url* commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-WRONG_IMG_MAGIC_NUM: The FPD image for [chars] (FPD ID [int]) in [chars] file contains wrong magic number: [hex] (expected [hex]). Please make sure that this is a valid FPD image bundle or package file for card in [chars].

Explanation The specified file might not be a valid FPD image bundle or package file for the card.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file** *fpd-pkg-url* commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FPD_MGMT-3-WRONG_IMG_MAJOR_VER: The selected FPD image for upgrade contains wrong FPD image major version number = '[int]' (expected number = '[int]') for [chars] (FPD ID [int]). Please make sure that the file being used for upgrade is a valid FPD image [chars] for card in [chars].

Explanation The file used for upgrade might not be a valid FPD image bundle or package file for the card.

Recommended Action Ensure that the version of the FPD image package, which is stated in the package filename, matches or is compatible with the Cisco IOS software release that the system is running. If the version is not the correct one, try to obtain the correct one from the Cisco Software Center website. If the problem persists, copy the message exactly as it appears on the console or in the system log. Enter the **show hw-module subslot fpd**, the **show upgrade fpd table**, and the **show upgrade fpd file** *fpd-pkg-url* commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FPD_MGMT-4

Error Message %FPD_MGMT-4-BYPASS_AUTO_UPGRADE: The automatic FPD image upgrade feature is not enabled, bypassing the image upgrade for [chars] card in [chars].

Explanation The automatic FPD image upgrade feature is not enabled. The incompatible image will not be automatically upgraded. The card will be disabled until the image is upgraded to a compatible version.

Recommended Action Enable the automatic FPD image upgrade by entering the **upgrade fpd auto** global configuration command, or enter the **upgrade hw-module** privileged EXEC command for a manual upgrade operation. For more information about these commands, refer to the FPD image upgrade feature document for the target card. (This documentation can be found in the software configuration guide for the target card.)

Error Message %FPD_MGMT-4-CFG_NOT_SYNCED: Failed to sync "[chars]" command to standby: [chars]

Explanation A FPD configuration command failed to get synced to standby RP due to the indicated error condition. Usually this can happen if the standby RP hardware doesn't support the type of filesystem supported on the active one.

Recommended Action Configure again the command with a filesystem that is supported on both standby and active RP. To find out if a specific filesystem is also supported on standby RP, the **dir ?** command can be used to display a list of filesystem supported on both standby and active RP.

Error Message %FPD_MGMT-4-UPGRADE_EXIT: Unexpected exit of FPD image upgrade operation for [chars] card in [chars].

Explanation The FPD image upgrade operation was interrupted by the physical removal of the card from the system or by the use of other commands that have interrupted the normal operation of the target card. The partial upgrade operation might have left the card unusable because of corrupted FPD images.

Recommended Action If the card does not come up after reinserting into the system, perform the recovery upgrade operation by entering the **upgrade hw-module** privileged EXEC command. With this command, the system will attempt to reprogram the image to recover from the previous partial upgrade operation. For more information about performing a recovery upgrade operation, refer to the FPD image upgrade feature document for the target card (this documentation can be found in the software configuration guide for the target card).

Error Message %FPD_MGMT-4-VERSION_CHECK_ABORTED: FPD image version check operation has been aborted for [chars] card in [chars] because manual upgrade has already been started.

Explanation The FPD image version check operation required for the automatic upgrade feature is not being performed for the specified card because the **upgrade hw-module** privileged EXEC command has already being executed. These two operations cannot be performed at the same time.

Recommended Action If an automatic upgrade operation is required, do not enter the **upgrade hw-module** privileged EXEC command for the manual upgrade while the target card is initializing. Enter the **show hw-module subslot fpd** command and ensure that the target card is displayed in the command output before proceeding with the manual upgrade.

FPD_MGMT-5

Error Message %FPD_MGMT-5-CARD_DISABLED: [chars] card in [chars] is being disabled because of an incompatible FPD image version. Note that the [chars] package will be required if you want to perform the upgrade operation.

Explanation The specified card contains an incompatible FPD image version, and is being disabled to avoid operational problems with the existing Cisco IOS software. This can happen if the automatic upgrade feature has not been enabled with the **upgrade fpd auto** global configuration command, if the automatic upgrade operation failed to perform the required upgrade, or because it could not find the necessary FPD image package file. Upgrade the incompatible image so that the system can enable the card.

Recommended Action The FPD image upgrade can be performed automatically by making sure that the automatic upgrade feature is enabled with the **upgrade fpd auto** global configuration command and the necessary FPD image package file is located in the system's default file system (for instance, disk0:) or in a location specified by the **upgrade fpd path directory-url** global configuration command. When the automatic upgrade feature is enabled, the upgrade is triggered by the reinsertion of the card into the system or the use of a system command to reload or power-cycle the target card. nother way to perform the upgrade is through the use of the **upgrade hw-module** privileged EXEC command. For more information about these commands, refer to the FPD image upgrade feature document for the target card (this documentation can be found in the software configuration guide for the target card).

Error Message %FPD_MGMT-5-POST_UPGRADE_REMINDER: [chars] card in [chars] will require a [chars] for the FPD image upgrade to take effect.

Explanation The indicated card will require manual intervention after the FPD image upgrade. The specified operation is required for the upgraded FPD image to take effect.

Error Message No action is required.%FPD_MGMT-5-CARD_POWER_CYCLE: [chars] card in [chars] is being power cycled for the FPD image upgrade to take effect.

Explanation The specified card is being power cycled after the FPD image upgrade. This action allows the target card to be operational with the new upgraded FPD image or images.

Recommended Action This is an informational message only. No action is required.

Error Message %FPD_MGMT-5-UPGRADE_ATTEMPT: Attempting to automatically upgrade the FPD image(s) for [chars] card in [chars]. Use 'show upgrade fpd progress' command to view the upgrade progress ...

Explanation The automatic FPD image upgrade feature is enabled with the **upgrade fpd auto** global configuration command. The system is currently upgrading an incompatible image version automatically.

Recommended Action The upgrade process can take a long time. The FPD_MGMT-6-UPGRADE_TIME message gives an estimate of the total upgrade time. No action is required.

FPD_MGMT-6

Error Message %FPD_MGMT-6-BUNDLE_DOWNLOAD: Downloading FPD image bundle for [chars] card in [chars] ...

Explanation The system is downloading the field programmable device image bundle to the system main memory.

Recommended Action This is an informational message only. No action is required.

Error Message %FPD_MGMT-6-OVERALL_UPGRADE: All the attempts to upgrade the required FPD images have been completed for [chars] card in [chars]. Number of successful/failure upgrade(s): [int]/[int].

Explanation All the FPD image upgrades have completed for the specified card.

Recommended Action This is an informational message only. No action is required.

Error Message %FPD_MGMT-6-PENDING_UPGRADE: [int] more FPD image upgrade operation will be required on [chars] in [chars] after additional power-cycle operation on the target card.

Explanation All upgrade operations have not completed, and additional power-cycle operations are required before the upgraded or new FPD image will be applied to the system configuration. The message text specifies the number of pending upgrade operations that will be performed. More than one power-cycle operation might be required to complete the overall upgrade process.

Recommended Action This is an informational message only. No action is required.

Error Message %FPD_MGMT-6-UPGRADE_PASSED: [chars] (FPD ID=[int]) image in the [chars] card in [chars] has been successfully updated from version [chars] to version [int].[int]. Upgrading time = [time-stamp]

Explanation The FPD image upgrade process has completed successfully for the specified device.

Recommended Action This is an informational message only. No action is required.

Error Message %FPD_MGMT-6-UPGRADE_RETRY: Attempting to recover from the failed upgrades ...

Explanation Because of an image upgrade failure, the system will attempt another upgrade operation for the same FPD image.

Recommended Action This is an informational message only. No action is required.

Error Message %FPD_MGMT-6-UPGRADE_START: [chars] (FPD ID=[int]) image upgrade in progress for [chars] card in [chars]. Updating to version [int].[int]. PLEASE DO NOT INTERRUPT DURING THE UPGRADE PROCESS (estimated upgrade completion time = [time-stamp]) ...

Explanation The FPD image upgrade process has started. Do not interrupt the upgrade operation because any interruption could render the target card unusable. Avoid actions such as removing the target card from the system, powering off the system, or using commands that can power-cycle the target card during the upgrade process.

Recommended Action This is an informational message only. No action is required.

Error Message %FPD_MGMT-6-UPGRADE_TIME: Estimated total FPD image upgrade time for [chars] card in [chars] = [time-stamp].

Explanation The estimated total time for all FPD images to be upgraded is displayed for the specified card.

Recommended Action This is an informational message only. No action is required.

FPOE_DB Messages

This section contains fabric port of exit (FPOE) messages.

FPOE_DB-4

Error Message FPOE_DB-4-ENTRY_USAGE_ABOVE: FPOE DB entry usage is above [dec]%<[dec] of [dec]>

Explanation FPOE database entry usage went above the warning threshold.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FPOE_DB-4-ENTRY_USAGE_BELOW: FPOE DB entry usage is below [dec]%<[dec] of [dec]>

Explanation FPOE database entry usage went below the warning threshold.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FPOE_DB-4-ENTRY_USAGE_FULL: FPOE DB entry usage is full <[dec] of [dec]>

Explanation The FPOE database entry usage is full.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FPOE_DB-4-ENTRY_USAGE_NOT_FULL: FPOE DB entry usage is not full <[dec] of [dec]>

Explanation The FPOE database entry usage is not full.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FR Messages

This section contains Frame Relay (FR) messages.

FR-3

Error Message %FR-3-FR_PVC_STATUS_Q_CREATE_ERROR: FR PVC status event queue error: failed to create queue

Explanation Unable to create FR PVC status event queue

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FR-3-MAP_DELETE_ERROR: [chars]

Explanation An error occurred while deleting a Frame Relay map.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FR-3-MFR_UNEXPECTEDEVENT: MFR Timer process error: event table is NULL for event [dec], state [dec]

Explanation The event was ignored because the state transition table is NULL. Normal processing continues.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FR-3-SVC_SETUP: [chars]: interface [chars]: DLCI [dec]

Explanation An error occurred while attempting to set up a Frame Relay SVC. There may have been an attempt to set up an SVC using a DLCI that is already in use.

Recommended Action Check if the DLCI is already in use. For example, a PVC may be configured to use the same DLCI by entering the **show frame-relay pvc** command. If so, remove the configuration.

FR-5

Error Message %FR-5-CONVERT_ROUTE: Converting route pair to connect

Explanation A pair of Frame Relay routes is being converted to connections.

Recommended Action No action is required.

FR_ADJ Messages

This section contains Frame Relay adjacency messages.

Error Message %FR_ADJ-3-ADD_MEMBER: Unable to add adjacency for vc-bundle [chars] member [dec]

Explanation An error occurred while adding an adjacency for a VC-bundle member.

Recommended Action Delete the VC bundle and reconfigure on the same interface.

Error Message %FR_ADJ-3-ARRAY_FULL: Unable to setup adjacencies for vc-bundle [chars]

Explanation An error occurred while setting up VC-bundle adjacencies.

Recommended Action Try shutting down the subinterface on which the VC bundle is configured. After a minute or so, verify that the adjacencies on the subinterface have been deleted. Reconfigure the VC bundle.

Error Message %FR_ADJ-3-ARRAY_INDEX_ERROR: Adjacency array index is incorrect for vc-bundle [chars] member [dec]

Explanation An error occurred while setting up VC-bundle adjacencies.

Recommended Action Try shutting down the subinterface on which the VC bundle is configured. After a minute or so, verify that the adjacencies on the subinterface have been deleted. Reconfigure the VC bundle.

FR_HA Messages

This section contains frame relay redundancy messages.

FR_HA-3

Error Message %FR_HA-3-ISSU: [chars]: [chars]

Explanation A Frame Relay ISSU error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FR_HA-3-SYNC: [chars]: code [dec]

Explanation An error occurred when synchronizing the Frame Relay state to the standby route processor. This may affect nonstop forwarding capability on Frame Relay interfaces during and after switchover until the state is recovered through normal protocol operation.

Recommended Action Reset the standby processor to attempt the synchronization again. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FRR_OCE Messages

This section contains Fast Reroute OCE messages.

FRR_OCE-3

Error Message %FRR_OCE-3-GENERAL: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FRR_OCE-3-INVALIDPAR: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FRR_OCE-3-NULLPOINTER: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FR_RP Messages

This section contains Frame Relay Route Processor (FR_RP) messages.

FR_RP-3

Error Message FR_RP-3-IPC_STATS_INVALID_DLICI: Error processing IPC msg - msg type [chars]

Explanation An error occurred while an IPC statistics message was being processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FR_RP-3-IPC_STATS_INVALID_INTERFACE: Error processing IPC msg - msg type [chars]

Explanation An error occurred while an IPC statistics message was being processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FR_RP-3-IPC_STATS_INVALID_MSG: Error processing IPC msg - msg type [chars]

Explanation An error occurred while an IPC statistics message was being processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message FR_RP-3-IPC_STATS_MISC: Error processing IPC msg - [chars]

Explanation An error occurred while an IPC statistics message was being processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FR_VCB Messages

This section contains Frame Relay VC bundle messages.

FR_VCB-3

Error Message FR_VCB-3-ADJ_SRC_ERROR: Error sourcing adjacency - vc-bundle [chars] dlci [dec]

Explanation An error occurred while setting up the adjacency for a member PVC.

Recommended Action Reconfigure the VC bundle. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %FR_VCB-3-BUMPING: Bumping error - vcb [chars] - [chars]

Explanation An error occurred while bumping traffic in a VC bundle.

Recommended Action As a workaround, reconfigure the VC bundle to avoid bumping.

Error Message %FR_VCB-3-CONFIG: Configuration error - vcb [chars] - [chars]

Explanation An error occurred while interpreting the VC bundle configuration.

Recommended Action Try reconfiguring the VC bundle.

Error Message %FR_VCB-3-FIBSW_MISSING_TABLE_ENTRY: FIB switching error - vc-bundle [chars]

Explanation An error occurred while FIB switching packet(s) across a VC bundle.

Recommended Action As a workaround, delete the VC bundle and use a PVC to substitute for the VC bundle.

Error Message %FR_VCB-3-PROCESS_SWITCHING: Switching error - vcb [chars] - [chars]

Explanation An error occurred while switching packets across a VC bundle.

Recommended Action As a workaround, delete the VC bundle and employ a PVC to substitute for the VC bundle.

FR_VCB-5

Error Message %FR_VCB-5-UPDOWN: FR VC-Bundle [chars] changed state to [chars]

Explanation The state of a Frame Relay VC bundle changed to up/down.

Recommended Action This is an informational message only. No action is required.

FR_VIP Messages

This section contains Frame Relay VIP messages.

FR_VIP-3

Error Message %FR_VIP-3-INCONSISTENT: Invalid state on VIP: DLCI [dec]: Slot [dec]:
Error code [dec]

Explanation An error occurred while the Frame Relay state of the VIP was being processed.

Recommended Action Enter the **shutdown** and **no shutdown** commands to disable and enable the Frame Relay-encapsulated interface for the specified slot.

Error Message %FR_VIP-3-MISSING_STATE: Missing state on VIP: DLCI [dec]: Slot [dec]

Explanation An error occurred while an IPC statistics unit was being prepared.

Recommended Action Enter the **shutdown** and **no shutdown** commands to disable and enable the Frame Relay-encapsulated interface for the specified slot.

Error Message %FR_VIP-3-SWITCHING: [chars] DLCI [dec]: [chars]

Explanation An error was detected while a packet was being switched on the VIP.

Recommended Action Enter the **shutdown** and **no shutdown** commands to disable and enable the Frame Relay-encapsulated interface for the specified slot, or unconfigure then reconfigure the interface. If this does not solve the problem, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FR_VIP-5

Error Message %FR_VIP-5-FLUSH: Flushing frame relay state

Explanation The Frame Relay state of the VIP card is being cleared.

Recommended Action No action is required.

FS_IPHC Messages

This section contains Fast IP Header Compression messages.

FS_IPHC-2

Error Message %FS_IPHC-2-LC_IPHC_SETUP_FAIL: Failed to initialise or allocate memory for IP Compression database.

Explanation The IP compression main database could not be created because of a lack of memory resources. The line card cannot allocate memory for an IP compression database.

Recommended Action If possible, add more memory to the VIP. Obtain more free memory on the VIP by reducing the features that are used or buffer allocations. Enter the **ip rtp compression-connections** command in interface configuration mode to reduce the number of contexts configured on all interfaces on the affected line card.

FS_IPHC-4

Error Message %FS_IPHC-4-LC_IPCSENDFAIL: LC unable to send IPHC msg to RP ([int])

Explanation The IP compression main database could not be created because of a lack of memory resources. The line card cannot allocate memory for an IP compression database.

Recommended Action If possible, add more memory to the VIP. Obtain more free memory on the VIP by reducing the features that are used or buffer allocations. Enter the **ip rtp compression-connections** command in interface configuration mode to reduce the number of contexts configured on all interfaces on the affected line card.

Error Message %FS_IPHC-4-RP_NOIPCBUFFER: Unable to malloc IPC msg buffer ([int]) on RP

Explanation The line card was unable to send IPHC information to the route processor because of a lack of memory in its private memory pool.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FTTM Messages

This section contains Full Ternary TCAM Manager (FTTM) messages.

FTTM-3

Error Message %FTTM-3-ERROR: [chars]

Explanation An FTTM manager error has occurred. The cause of the error is given in the message itself.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

FX1000 Messages

This section contains FX1000 messages.

FX1000-1

Error Message %FX1000-1-BAD_STRUCT: Could not initialize structure

Explanation The driver failed to initialize a structure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

GBIC Messages

This section contains Gigabit Interface Converter (GBIC) messages.

GBIC-4

Error Message %GBIC-4-CHECK_SUM_FAILED: GBIC EEPROM data check sum failed for GBIC interface [chars]

Explanation The GBIC was identified as a Cisco GBIC, but the system was unable to read vendor-data information to verify its correctness.

Recommended Action Remove and reinsert the GBIC. If it fails again in the same way, the GBIC may be defective.

Error Message %GBIC-4-NOREAD_VSDATA: Unable to read vendor-specific data for GBIC interface [chars]

Explanation The GBIC was identified as a Cisco GBIC, but the system was unable to read identifying vendor-specific information to verify its authenticity.

Recommended Action Remove and reinsert the GBIC. If it fails again in the same way, the GBIC may be defective.

Error Message %GBIC-4-UNRECOGNIZED_EXTTYPE: GBIC interface [chars] has unrecognized extended type

Explanation The GBIC was identified as a Cisco GBIC, but the system does not recognize its reported extended type code.

Recommended Action Check the list of supported GBICs for this version of the system software. An upgrade may be required for newer GBICs. Even if unrecognized, the GBIC may still operate properly, perhaps with limited functionality.

GBIC-6

Error Message %GBIC-6-SERDES_MODULE_UNKNOWN: Unrecognizable GBIC found in [chars] (module mask 0x%02x)

Explanation The GBIC presented data to the system which did not correctly identify the type of the GBIC. It will be handled as a generic GBIC.

Recommended Action If the GBIC fails to become operational, carefully reinsert it in the slot. If it continues to fail after reinsertion, the GBIC may be defective or incompatible with the switch.

GBIC_1000BASET Messages

This section contains Gigabit Interface Converter (GBIC) module messages.

GBIC_1000BASET-6

Error Message %GBIC_1000BASET-6-GBIC_1000BASET_DEFAULT_CONFIG: 1000-BaseT GBIC module is detected in [chars]. Speed and duplex will be autonegotiated

Explanation 1000-BaseT GBIC modules only support autonegotiation on speed/duplex.

Recommended Action No action is required.

Error Message %GBIC_1000BASET-6-GBIC_1000BASET_NO_CONFIG_NEGOTIATE: Configuration ignored. 1000-BaseT GBIC modules only support autonegotiation.

Explanation 1000-BaseT GBIC modules only support autonegotiation.

Recommended Action No action is required.

GBIC_SECURITY Messages

This section contains Gigabit Interface Converter (GBIC) security check messages.

GBIC_SECURITY-4

Error Message %GBIC_SECURITY-4-EEPROM_CRC_ERR: EEPROM checksum error for GBIC in [chars]

Explanation The GBIC in the port specified in the error message contains invalid EEPROM data.

Recommended Action Remove the GBIC from the specified port.

Error Message %GBIC_SECURITY-4-EEPROM_READ_ERR: Error in reading GBIC serial ID in [chars]

Explanation An error occurred while the GBIC type was being read from EEPROM.

Recommended Action Remove the GBIC from the specified port.

Error Message %GBIC_SECURITY-4-EEPROM_SECURITY_ERR: GBIC in [chars] failed security check

Explanation The GBIC in the port specified in the error message contains invalid EEPROM data.

Recommended Action Remove the GBIC from the specified port.

GBIC_SECURITY_CRYPT Messages

This section contains Gigabit Interface Converter (GBIC) security check messages.

GBIC_SECURITY_CRYPT-4

Error Message %GBIC_SECURITY_CRYPT-4-ID_MISMATCH: Identification check failed for GBIC in port [dec]

Explanation The GBIC was identified as a Cisco GBIC, but the system was unable to verify its identity

Recommended Action Check to see if the Cisco IOS software running on the system supports the GBIC. If the GBIC is newer, a system software upgrade might be required. Otherwise, verify that the GBIC was obtained from Cisco or from a supported vendor.

Error Message %GBIC_SECURITY_CRYPT-4-VN_DATA_CRC_ERROR: GBIC in port [dec] has bad crc

Explanation The GBIC was identified as a Cisco GBIC, but it does not have valid CRC in the EEPROM data.

Recommended Action Check to see if the Cisco IOS software running on the system supports the GBIC. If the GBIC is newer, a system software upgrade might be required. Even if the GBIC is unrecognized by the system, the GBIC may still operate properly, but might have limited functionality.

GBIC_SECURITY_UNIQUE Messages

This section contains Gigabit Interface Converter (GBIC) security unique messages.

GBIC_SECURITY_UNIQUE-4

Error Message %GBIC_SECURITY_UNIQUE-4-DUPLICATE_SN: GBIC interface [dec]/[dec] has the same serial number as another GBIC interface

Explanation The GBIC was identified as a Cisco GBIC, but its serial number matches that of another interface on the system.

Recommended Action Cisco GBICs are assigned unique serial numbers. Verify that the GBIC was obtained from Cisco or a supported vendor.

GDOI Messages

This section contains Group Domain of Interpretation (GDOI) messages.

GDOI-1

Error Message %GDOI-1-GDOI_ACE_DENY: A Group Member ACL policy containing deny was attempted. This is not supported.

Explanation A Group Member ACL policy containing deny was attempted. This is not supported.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GDOI-1-GDOI_ACL_NUM: The ACL has too many entries. GDOI will honor only the first 100 ACL entries specified.

Explanation The ACL has too many entries. GDOI will honor only the first 100 ACL entries specified.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GDOI-1-KS_NO_RSA_KEYS: RSA Key - [chars] : Not found, Required for group [chars]

Explanation RSA keys are required for signing and verifying rekey messages, but no RSA keys were found in the key server.

Recommended Action Ask the administrator of the key server to create the required RSA key pair.

Error Message %GDOI-1-UNAUTHORIZED_IDENTITY: Group [chars] received registration from unauthorized identity: [chars]

Explanation The registration request was dropped because the requesting device was not authorized to join the group.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GDOI-1-UNAUTHORIZED_IPADDR: Group [chars] received registration from unauthorized ip address: [chars]

Explanation The registration request was dropped because the requesting device was not authorized to join the group.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GDOI-1-UNREGISTERED_INTERFACE: Group [chars] received registration from unregistered interface.

Explanation Receiving registration from an unregistered interface. Processing has stopped.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

GDOI-4

Error Message %GDOI-4-GM_RE_REGISTER: The IPsec SA created for group [chars] may have been expired or cleared. Re-register to KS.

Explanation The IPsec SA created for one group may have been expired or cleared. You need to reregister to the key server (KS).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

GDOI-5

Error Message %GDOI-5-GM_REGS_COMPL: Registration complete for group [chars] using address [chars]

Explanation Registration was completed for the specified group.

Recommended Action No action is required.

GEFC Messages

This section contains GE-FC line card messages.

GEFC-3

Error Message %GEFC-3-ACCESS_FAIL: LRC access Failed

Explanation An attempt to access the line card redundancy controller (LRC) has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-BDI_E_ALM: End-to-End Backward Defect Indication [chars]

Explanation An attempt to access the line card redundancy controller (LRC) has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-FPGA_NOT_SUPPORT: Jamesport FPGA need upgrade. slot:[dec] port:[dec] [chars] function

Explanation The FPGA on the Jamesport card requires an upgrade so that it can support JP2 functions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-GEFC_INTRPEND: Pending unexpected interrupt [addr [hex] = [hex]]

Explanation One or more pending unexpected interrupts have occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-GEFC_MAGICFAIL: Magic number read failed [[chars]]

Explanation The FPGA has reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-GEFC_PTFAILASSERTED: Unexpected portfail asserted

Explanation One or more unexpected port failures have been asserted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-GEFC_RDWRFAIL: Read/write failed [[chars]]

Explanation A read or write error occurred while the hardware was being accessed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-IDPROM_ACCESS_FAIL: Access to IDPROM Failed

Explanation An attempt to access to the IDPROM has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-INT_LPBK_FAIL: Internal CardLoopback Failed

Explanation An attempt to perform an internal card loopback operation has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-KPA_TIMEOUT_ALM: Keep-alive timeout [chars]

Explanation Either normal packets or CDL idle packets were not received.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-LASER_TX_FAULT_ALM: Optic Laser Transmit Fault [chars]

Explanation A transceiver laser transmittal fault has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-LOSS_OF_LIGHT_ALM: Loss of Light [chars]

Explanation The cable for the transceiver has been cut or removed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-LOSS_OF_LOCK_ALM: Transceiver CDR Loss of Lock [chars]

Explanation The CDR is experiencing problems while attempting to lock onto the signal.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-LOSS_OF_SYNC_ALM: Transceiver Loss of Sync [chars]

Explanation A loss of synchronization error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-MIB_HW_LASER_DOWN_ALM: Laser Disabled [chars] [chars] [chars]

Explanation The client laser has been disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-MIB_KPA_TIMEOUT_ALM: Keep-alive timeout [chars] [chars] [chars]

Explanation Normal packets or CDL idle packets were not received.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-MIB_LASER_TX_FLT_ALM: Laser Transmit Fault [chars] [chars]
[chars]

Explanation A client laser transmittal fault has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-MIB_LOSS_OF_LIGHT_ALM: Transceiver Loss of Light [chars]
[chars] [chars]

Explanation No light is being received from the client side.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-MIB_LOSS_OF_LOCK_ALM: Loss of Lock [chars] [chars] [chars]

Explanation The GEFC has lost its lock on the signal.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-MIB_LOSS_OF_SYNC_ALM: Loss of Sync [chars] [chars] [chars]

Explanation The GEFC has lost its synchronization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-MIB_SFP_VENDOR_UNKNOWN: Unknown Vendor SFP inserted [chars] [chars] [chars]

Explanation The SFP is not qualified to work with Cisco products.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-TX_CRC_ERR_THR_ALM: GEFC TX CRC Error Threshold [chars]

Explanation The maximum threshold for transmission CRC errors has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GEFC-3-UNKNOWN_SFP_INSERTED: Unknown SFP inserted [chars]

Explanation An unknown SFP has been inserted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

GEFC-6

Error Message %GEFC-6-FLOW_CTRL_ACTIVE: Flow control become active at slot:[dec] port:[dec]

Explanation Flow control is now active.

Recommended Action No action is required.

Error Message %GEFC-6-FLOW_CTRL_DEACTIVE: Flow control become inactive at slot:[dec] port:[dec]

Explanation Flow control has been deactivated.

Recommended Action No action is required.

GENERAL Messages

This section contains Zenith route processor messages.

GENERAL-2

Error Message %GENERAL-2-CRITEVENT: [chars]

Explanation A critical error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

GENERAL-3

Error Message %GENERAL-3-EREVENT: [chars]

Explanation This is a general error message to be used for sanity tests.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GENERAL-3-WSHALEVENT: [chars]

Explanation This message provides general error information to be used for sanity testing.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

GENERIC_SUBBLOCK Messages

This section contains generic subblock messages.

GENERIC_SUBBLOCK-2

Error Message %GENERIC_SUBBLOCK-2-BUILDXHR: Failed to build message for GSB: [chars]

Explanation An attempt to build a message so that a generic subblock could be distributed has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GENERIC_SUBBLOCK-2-GSBNOTISSUAWARE: GSB [chars] is not ISSU aware. Cannot distribute it to ISSU-aware slots

Explanation This GSB is expected to be ISSU aware but it is not. It cannot be distributed safely to ISSU-aware slots because it may not be correctly interpreted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GENERIC_SUBBLOCK-2-LATE_REGISTER: Late registration of GSB type [chars], with id [dec]

Explanation An attempt to register a new generic subblock type was received after subblocks with previously registered types had already been allocated from the control structure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %GENERIC_SUBBLOCK-2-UNPACKXDR: Unpacked [dec] bytes and attempted to consume [dec] bytes for GSB: [chars]

Explanation A discrepancy was detected between the expected length of a message and the actual length of the message that was received.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

GK Messages

This section contains GK-H.323 Gatekeeper messages.

GK-3

Error Message %GK-3-SUBNET_NOT_FOUND: Subnet not found under specified IP address [IP_address]/[IP_address].

Explanation Not Available

Recommended Action Not Available

GLBP Messages

This section contains Gateway Load Balancing Protocol messages.

GLBP-4

Error Message %GLBP-4-BADVIP: [chars] Grp [dec] address [IP_address] is in the wrong subnet for this interface

Explanation The Gateway Load Balancing Protocol virtual IP address contained in the hello message cannot be learned because it is not within a subnet configured on the interface.

Recommended Action Check the configuration on all GLBP routers and ensure that the virtual IP address is within a configured subnet.

GPRSFLTMG Messages

This section contains Global Packet Radio Service fault management messages.

GPRSFLTMG-3

Error Message %GPRSFLTMG-0-RESOURCE: GSN: [IP_address], TID: [hex][hex], APN: [chars], Reason: [dec], [chars]

Explanation Available resources exhausted to continue GGSN service because of the following reasons :

1. Number of PDP reaches Limit.
2. Number of Network Initiated PDP reached percentage - Insufficient in GGSN.
3. Number of IP PDP regenerated PPP reaches limit.

Recommended Action Check whether you can increase number of PDP that can be handled by GGSN. If the problem recurs, contact your technical support representative with the error message you got and with the output of the **show gprs gtp status** command.

G_QOS_Classify Messages

This section contains messages.

Error Message %G_QOS_CLASSIFY-3-NOMEM: Memory Allocation Failure - [chars]

Explanation Memory required to service one or more Network Processors could not be allocated.

Recommended Action This error may indicate that more memory must be installed on the affected card or platform in order to service all the features and related entities enabled via the configuration. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %G_QOS_CLASSIFY-3-QOS_CONFIG: error detected: [chars]

Explanation A QoS policymap classification configuration error was detected.

Recommended Action This configuration error is not considered fatal to the operation of the Network Processors. The software is designed to detect and report the error condition. Change the QoS Policymap Filter configuration to correct the problem.

Error Message %G_QOS_CLASSIFY-4-MACACL_CONFIG: [chars]

Explanation Only source mac address in extended named MAC ACL is supported on X40G linecard interfaces.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

GT96100 Messages

This section contains GT96100 DMA controller driver messages.

GT96100-3

Error Message %GT96100-3-ECC: CPU corrected [dec] single bit memory errors

Explanation The system has detected and corrected single-bit errors. The number of errors is displayed in the message text.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HA Messages

This section contains high availability system messages.

HA-3

Error Message %HA-3-TIFKEY: Tifkey [hex] (Card Type [hex], (S)PA Type [hex]) not present in the Standby Tif table (Hash Slot [dec]) - Standby Reloading

Explanation The standby route processor encountered an error while the TIF number (channel ID) for the indicated interface was being received from the active route processor. In most situations, this error is self-correcting and affects the standby route processor only. Upon encountering this error, the standby route processor reloads itself automatically and reestablishes synchronization with the active route processor.

Recommended Action If the standby route processor does not reload itself automatically, reload it from the active route processor console by entering the **how-module standby reload** command. If this command fails, reload the standby route processor by entering the **hw-module standby reset** command. If the standby route processor still does not reload or this error is seen again, collect the output from **show c7300**, **show c7300 ha tif entries**, **show c7300 ha statistics**, **show c7300 ha registers**, **show redundancy**, **show redundancy state**, **show redundancy switchover history**, **show redundancy history**, and **show checkpoint clients**. Also, copy the running configuration and all system messages exactly as they appear on the console or in the system log. Open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered.

Error Message %HA-3-TIFTAKEN: Tif number [dec] (Card Type [hex], (S)PA Type [hex]) already allocated in the Standby (Hash Index [hex]) - Standby Reloading

Explanation An error was encountered in reserving the TIF (Channel ID) number that was meant for a specific physical or logical interface in the standby route processor. This condition occurs if there is a race condition in the synchronization of TIF numbers and the running configuration from the active route processor to the standby route processor. In most situations, this error is self-correcting and affects the standby route processor only. Upon encountering this error, the standby route processor reloads itself automatically and reestablishes synchronization with the active route processor.

Recommended Action If the standby route processor does not reload itself automatically, reload it from the active route processor console by entering the **how-module standby reload** command. If this command fails, reload the standby route processor by entering the **hw-module standby reset** command. If the standby route processor still does not reload or this error is seen again, collect the output from **show c7300**, **show c7300 ha tif entries**, **show c7300 ha statistics**, **show c7300 ha registers**, **show redundancy**, **show redundancy state**, **show redundancy switchover history**, **show redundancy history**, and **show checkpoint clients**. Also, copy the running configuration and all system messages exactly as they appear on the console or in the system log. Open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered.

HA-4

Error Message %HA-4-CHKPT: Platform CF - [chars]

Explanation A failure has occurred during a Cisco 7300 checkpointing activity.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA-4-CHKPTSEND: [chars] (rc [dec], event [chars])

Explanation Cisco 7300 checkpointing data could not be sent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA-4-DECODE: Data decode - [chars] ([dec])

Explanation Failure to decode 7300 checkpointing data descriptors.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA-4-ENCODE: Data Encode - [chars] ([chars])

Explanation The Cisco 7300 checkpointing data descriptors could not be decoded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA-4-INCOMPATIBLE: Incompatible RP ([chars]) in slot [dec] - Peer RP being held in reset state

Explanation The peer route processor (RP) is not compatible with the active RP. The peer RP is being held in reset state.

Recommended Action Remove the peer RP and replace it with an RP that is the same type as the active RP so that the peer RP will successfully boot as the standby RP.

Error Message %HA-4-NOBUF: Failed to allocate buffer for inter-RP IPC message receive

Explanation While IPC messages were being received from the peer route processor (RP), a packet buffer could not be allocated to receive the packet.

Recommended Action Enter the **show buffers** command to confirm that the IPC buffer pool is experiencing missed IPC messages. The IPC retry process will manage intermittent errors. However, if this error message is seen with regularity, the system may require more memory as the IPC buffer pool is automatically sized in direct proportion to the total amount of memory in the system. There is no configuration command available that will resize the IPC buffer pool.

Error Message %HA-4-NOPROCESS: Creation of [chars] process failed

Explanation The creation of a platform high availability process has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA-4-RESET: Reset of [chars] RP triggered [chars]

Explanation The active route processor (RP) was reset by the standby RP in response to an event that caused the standby RP to determine that the active RP was no longer functional.

Recommended Action The RP that was reset will produce a crash information (crashinfo) file and, if configured, a core dump. These files provide information about the events that triggered the RP to reset. Open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA-4-STBYINITFAIL: Initialization of standby Route Processor in slot [dec] failed

Explanation Initialization of the standby route processor (RP) has failed. This condition will result in the high availability features not being operational.

Recommended Action If additional error messages indicate that the type of the standby RP is incompatible with the current active RP, insert a compatible standby RP. If the standby RP is of a type that is compatible with the active RP, attempt to remove and firmly reinsert the standby RP. If the problem persists, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA-4-SYNC: [chars]

Explanation An error was encountered during a data synchronization operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HA-6

Error Message %HA-6-FALLBACK: [chars] - configured mode([chars]), fallback mode([chars])

Explanation The specified route processor redundancy mode has fallen back to the mode specified in the message.

Recommended Action No action is required.

Error Message %HA-6-NOCOEXIST: Line card in slot [dec] ([chars]) cannot co-exist in [chars] redundancy mode

Explanation The specified line card cannot coexist with the rest of the system in the current redundancy mode configuration of the system.

Recommended Action No action is required.

Error Message %HA-6-STANDBY_READY: Standby RP in slot [dec] is operational in [chars]mode

Explanation The standby route processor is operational.

Recommended Action No action is required.

Error Message %HA-6-SWITCHOVER: Route Processor switched from being standby to being active

Explanation This route processor has switched over to become the active route processor.

Recommended Action No action is required.

Error Message %HA-6-TOOBIG: Running config too big, config sync failed

Explanation The running configuration was too large to be synchronized.

Recommended Action No action is required.

HA_CONFIG_SYNC Messages

This section contains high availability configuration synchronization messages.

HA_CONFIG_SYNC-3

Error Message %HA_CONFIG_SYNC-3-BOOTVAR: Cannot communicate boot variable to standby (%s)

Explanation The active supervisor failed to send the specified boot variable to the standby supervisor. As a result, a subsequent reload or a switchover operation will probably result in the standby supervisor booting a wrong image.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_CONFIG_SYNC-3-CONFREG: Cannot communicate config register to standby

Explanation The active supervisor failed to send the configuration register to the standby supervisor. As a result, the active and standby supervisors might not have matching configuration registers.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_CONFIG_SYNC-3-FS_BULK_CFGSYNC: %s [%s]

Explanation A synchronization of the file system bulk configuration has failed. The reason for the failure is provided in the string.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_CONFIG_SYNC-3-ISSU_MTU: CONFIG SYNC Failed to get MTU Size for session[[dec]] msg_type[[dec]], MTU[[dec]], rc[[dec]]

Explanation An ISSU configuration synchronization failed to get the message MTU.

Recommended Action Copy the system's configuration along with any other relevant information. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message HA_CONFIG_SYNC-3-ISSU_REG: CONFIG SYNC [chars] rc([dec])

Explanation An ISSU configuration synchronization registration error has occurred.

Recommended Action Copy the system's configuration along with any other relevant information. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message HA_CONFIG_SYNC-3-ISSU_XFORM: CONFIG SYNC [chars] msg_type[[dec]], rc[[dec]]

Explanation An ISSU configuration synchronization failed to transform a message.

Recommended Action Copy the system's configuration along with any other relevant information. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HA_CONFIG_SYNC-6

Error Message %HA_CONFIG_SYNC-6-BULK_CFGSYNC_SUCCEEDED: Bulk Sync succeeded

Explanation A bulk synchronization has succeeded.

Recommended Action No action is necessary.

Error Message %HA_CONFIG_SYNC-6-LBL_PRC_SUBCODE: CONFIG SYNC : Subcode not matching for command %s Active subcode[0x%x], Standby subcode[0x%x]

Explanation The line-by-line synchronization of a command has succeeded. A command entered on the active system was successfully synchronized with the standby system. However, the subcode of parser return code returned by the active system differed from the subcode returned by the standby system.

Recommended Action Normally, no action is required. If any problems with line-by-line synchronization are found, copy the system's configuration along with any other relevant information. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HA_EM Messages

This section contains Embedded Event Manager (HA_EM) messages.

HA_EM-3

Error Message %HA_EM-3-ACTION_CNS_OPEN_FAIL: [chars]: Unable to open connection to CNS Event Agent: [dec]

Explanation The Cisco Network Services (CNS) action process failed to open a CNS handle to the event agent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMC_CBH_PROCESS_CREATE: [chars]: callback handler process create failed for eid: [dec]

Explanation The process create function reported an error while trying to create the callback handler process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMC_FH_INIT: [chars]: fh_init failed : [dec]

Explanation The fh_init function reported an error while trying to initialize EEM for a callback process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMFD_EMPTY_QUEUE: [chars]: The [chars] event detector I/O queue empty.

Explanation The I/O queue is unexpectedly empty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMFD_QUEUE_INIT: [chars]: Unable to initialize queue;

Explanation The queue initialization function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMFD_TTY_NUM: [chars]: Error occurred while fetching TTY number.

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_ACTION: [chars]: Error occurred while performing action: [chars].

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_ACTION_INFO: [chars]: Error occurred while fetching action information: [dec].

Explanation Failed to obtain Embedded Event Manager action information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_ADJUST_HIST_SIZE: [chars]: Error attempting to adjust event history table size.

Explanation The Embedded Event Manager policy director could not adjust the size of the event history table.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_CHECKSUM_MISMATCH: [chars]: file checksum mismatch

Explanation The checksum value of a an installed policy does not match the value provided by the installation manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_CHKPT_INIT: [chars]: could not register the application with the checkpointing server: [chars]

Explanation Failed to register an application with the checkpointing server.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_CHKPT_TBL_INFO_READ: [chars]: could not read the existing table information: [chars]

Explanation Failed to read the existing table information using the checkpointing API.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_CHKPT_TBL_INIT: [chars]: failed to initialize [chars]: [chars]

Explanation Could not initialize a table with the checkpointing server.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_CHKPT_TBL_RECOVER: [chars]: could not recover the checkpointed [chars]: [chars]

Explanation Failed to recover a checkpointed table.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_CLI_CONNECT: Unable to establish CLI session: [chars]

Explanation Unable to establish a CLI session.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-3-FMPD_CLI_DISCONNECT: Error disconnecting from CLI session: [chars]

Explanation An error occurred while disconnecting from the CLI session.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-3-FMPD_CLI_NOTTY: Error attempting to access an unopened CLI session: [chars]

Explanation An error occurred while the system attempted to access the specified unopened CLI session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_CLI_READ: Unable to read CLI response: [chars]

Explanation Unable to read a CLI response.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-3-FMPD_CLI_WRITE: Unable to send CLI command: [chars]

Explanation Unable to send a CLI command.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-3-FMPD_ERROR: Error executing applet [chars] statement [chars]

Explanation The Embedded Event Manager policy director found an error when processing an applet.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_EVM_ASYNC_ATTACH: [chars]: could not attach handler for Event Manager asynchronous event: [chars]

Explanation An internal error was detected when attaching a handler for an Event Manager asynchronous event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_EVM_CREATE: [chars]: could not create event manager: [chars]

Explanation An internal error was detected when creating Event Manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_EVM_EVENT_BLOCK: [chars]: failed to block waiting for Event Manager events: [chars]

Explanation An internal error was detected when block-waiting for Event Manager events.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_EVM_INIT_EVENT: [chars]: could not initialize Event Manager event: [chars]

Explanation An internal error was detected when initializing an Event Manager event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_EVM_MSG_ATTACH: [chars]: could not attach handler for Event Manager message event: [chars]

Explanation An internal error was detected when attaching a handler for an Event Manager message event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_EXECUTE_CALLBACK: [chars]: failed to execute callback

Explanation Failed to execute a callback routine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_FH_INIT: [chars]: could not initialize Embedded Event Manager service: [chars]

Explanation An internal error was detected when initializing the Embedded Event Manager service.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_GET_PRIO: [chars]: failed to get process priority: [chars]

Explanation There has been an internal error. A call to get a process-scheduling priority failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_IPC_PORT_CREATE: [chars]: failed to create an IPC port:
[chars]

Explanation Embedded Event Manager failed to create an IPC port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_IPC_PORT_OPEN: [chars]: failed to open an IPC port:
[chars]

Explanation Embedded Event Manager failed to open an IPC port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_IPC_PORT_REGISTER: [chars]: failed to register an IPC
port: [chars]

Explanation Embedded Event Manager failed to register an IPC port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_NOEID: %s: No such event id found.

Explanation The Embedded Event Manager (EEM) policy director could not find a record of the event ID.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_NOESID: [chars]: No such event spec id found.

Explanation The Embedded Event Manager policy director could not find the triggered event specification ID.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_NO_PROC: %s: Failed to create process

Explanation The Embedded Event Manager (EEM) policy director could not create a process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_OVL_NOTIF_REG: [chars]: could not register for Version Manager notification: [chars]

Explanation An internal error was detected when registering for Version Manager notification.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_POLICY_UNREG_ERR: [chars]: could not unregister policy [chars]: [chars]

Explanation A registered policy changed or deleted by the last installation update was detected. Because the update used the start option, the old policy was automatically unregistered. This message signaled an unsuccessful unregistration.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_POLICY_UNREGREG_ERR: [chars]: could not replace policy [chars]: [chars]

Explanation A registered policy changed by the last installation update was detected. Because the update used the start option, the old policy was automatically replaced by the new policy. This message signaled an unsuccessful replacement of the policy.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_PROCESS_XML: %s: error processing xml buffer

Explanation An error occurred in processing the event publishing information XML buffer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_PTHRD_CREATE: [chars]: failed to create POSIX thread: [chars]

Explanation An internal error occurred when trying to create a POSIX thread.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_QUEUE_INIT: [chars]: could not initialize queue

Explanation An internal error was detected when initializing the Embedded Event Manager queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_REQINFO: [chars]: Error attempting to fetch event information: [chars].

Explanation The Embedded Event Manager policy director could not obtain event information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_SET_INFO: [chars]: Error occurred while fetching variable information: [dec].

Explanation An error occurred while attempting to obtain Embedded Event Manager variable information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_SMTP_CHK_REPLY: Reply code unexpected from SMTP server: [chars]

Explanation An unexpected reply code was received from the connected SMTP server.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-3-FMPD_SMTP_CONNECT: Unable to connect to SMTP server: [chars]

Explanation Unable to connect to the SMTP server socket.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-3-FMPD_SMTP_DISCONNECT: Unable to disconnect from SMTP server: [chars]

Explanation Unable to disconnect from the connected SMTP server.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-3-FMPD_SMTP_READ: Unable to read from SMTP server: [chars]

Explanation Unable to read from the connected SMTP server.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-3-FMPD_SMTP_WRITE: Unable to write to SMTP server: [chars]

Explanation Unable to write to the connected SMTP server.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-3-FMPD_SVCEVM_CREATE: [chars]: could not initialize RPC server for event manager: [chars]

Explanation Initializing RPC server stub for event manager has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_SVC_REG: [chars]: RPC service registration for Embedded Event Manager Script Director failed

Explanation Embedded Event Manager Script Director failed to register with the RPC facility.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_UNKNOWN_ENV: [chars]: could not find environment variable: [chars]

Explanation The Embedded Event Manager policy director could not find the environment variable specified in the action message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_UNKNOWNTYPE: [chars]: Unknown event type found in applet.

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMPD_WRONGTYPE: [chars]: Published event type does not match event spec

Explanation The Embedded Event Manager policy director event specification does not match the published event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMS_CNS_FAIL: [chars]: Failed to perform CNS action: [chars]

Explanation The Embedded Event Manager failed attempting to send a CNS message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMS_EMPTY_QUEUE: [chars]: The I/O queue empty.

Explanation The I/O queue is empty, but it should not be empty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMS_ENQUEUE_FAIL: [chars]: The Unable to enqueue packet onto queue.

Explanation The queue is not in a state to accept packets.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMS_POLICY_LOOKUP_FAIL: [chars]: Failed to look up in the table the registration specification for policy [chars].

Explanation A table lookup for the registration specification for the policy has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMS_QUEUE_INIT: [chars]: The Unable to initialize queue.

Explanation The queue cannot be initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-3-FMS_SWITCH_NOT_RF_ACTIVE: [chars]: This processor is not in ACTIVE state (state = [dec]). Switchover must be performed on ACTIVE processor.

Explanation Switchovers must occur on the active unit, not the standby unit.

Recommended Action Ensure that the switchover occurs on a unit that is designated as an active unit and not a standby unit.

HA_EM-4

Error Message %HA_EM-4-FMPD_IPC_GET_PAK: [chars]: failed to allocate an IPC buffer

Explanation Embedded Event Manager failed to allocate a buffer from IPC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-4-FMPD_IPC_SEND_MSG: [chars]: failed to send an IPC message: [chars]

Explanation Embedded Event Manager failed to send a message through IPC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-4-FMPD_NO_ACTION: No action configured for applet [chars]

Explanation No action has been configured for the specified applet.

Recommended Action Configure at least one action for this applet.

Error Message %HA_EM-4-FMPD_NO_EVENT: No event configured for applet [chars]

Explanation No event has been configured for the specified applet.

Recommended Action Configure an event for this applet.

Error Message %HA_EM-4-FMPD_NOTAGNAME: %s: No tag %s found corresponding to this event publish.

Explanation The Embedded Event Manager policy director could not associate the tag name with a published event.

Recommended Action In the **action info type event reqinfo** command, use only tag names that correspond to the published event.

Error Message %HA_EM-4-FMPD_NO_TRACK: Use of the "track" keyword in the correlate statement is not supported in this image. All tracked objects will return the "unset" state of 0

Explanation The Embedded Event Manager Track ED is not supported in this image.

Recommended Action If you require Embedded Event Manager Track ED, upgrade to an image that supports the feature.

HA_EM-6

Error Message %HA_EM-6-FMPD_EEM_CONFIG: Embedded Event Manager configuration: %s

Explanation The Embedded Event Manager (EEM) reports an error in the Event Manager (EM) configuration.

Recommended Action Check the applet configuration.

Error Message %HA_EM-6-FMPD_POLICY_CHANGED: [chars]: registered policy [chars] changed by the last installation update

Explanation A registered policy was changed by the last installation update. If the update used the start option, the old policy was automatically unregistered and the new policy registered. Otherwise, the old policy would remain registered and functional until the user unregisters it manually.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-6-FMPD_POLICY_DELETED: [chars]: registered policy [chars] deleted by the last installation update

Explanation A registered policy was deleted by the last installation update. If the update used the start option, the policy was automatically unregistered. Otherwise, the policy would remain registered and functional until the user unregisters it manually.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-6-FMPD_POLICY_UNREGREG_SUCC: [chars]: policy [chars] replaced successfully

Explanation A registered policy changed by the last installation update was detected. Because the update used the start option, the old policy was automatically replaced by the new policy. This message signaled a successful replacement of the policy.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-6-FMPD_POLICY_UNREG_SUCC: [chars]: policy [chars] unregistered successfully

Explanation A registered policy changed or deleted by the last installation update was detected. Because the update used the start option, the old policy was automatically unregistered. This message signaled a successful unregistration.

Recommended Action This is an informational message only. No action is required.

Error Message %HA_EM-6-FMPD_UPDATE_POLICY_COPY: Policy update has copied %d bytes from %s to %s

Explanation As a result of an event manager update command, an Embedded Event Manager (EEM) policy has been copied.

Recommended Action No action is required.

Error Message %HA_EM-6-FMPD_UPDATE_POLICY_REGISTER: Policy update has successfully re-registered policy %s

Explanation As a result of an event manager update command, an EEM policy has been successfully reregistered.

Recommended Action No action is required.

Error Message %HA_EM-6-FMPD_UPDATE_POLICY_REGISTER_FAIL: Policy update has failed to register policy %s %s

Explanation As a result of an event manager update command, an EEM policy could not be registered.

Recommended Action No action is required.

Error Message %HA_EM-6-FMPD_UPDATE_POLICY_UNREGISTER_FAIL: Policy update has failed to unregister policy %s %s

Explanation As a result of an event manager update command, an EEM policy could not be unregistered.

Recommended Action No action is required.

Error Message %HA_EM-6-FMS_SWITCH_HARDWARE: [chars]: Policy has requested a hardware switchover

Explanation An Embedded Event Manager policy requested that a hardware switchover occur.

Recommended Action This is an informational message only. No action is required.

HA_EM-7

Error Message %HA_EM-7-ACTION_ADD_PARSER: [chars]: Unable to add action [chars] command;

Explanation Failed to add the specified action command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-ACTION_CNS_AGENT_UNAVAIL: [chars]: CNS Event Agent not available: [dec]

Explanation The CNS Event Agent is currently not available.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-ACTION_CNS_CLEAR_RESTART: [chars]: Unable to clear restart callback;

Explanation The CNS action process failed to clear restart callback.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-ACTION_CNS_SET_RESTART: [chars]: Unable to set restart callback;

Explanation The CNS action process failed to set restart callback.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-ACTION_ENQUEUE_FAIL: [chars]: Unable to enqueue [chars];

Explanation The enqueueing function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-ACTION_WB_CREATE: [chars]: create_watched_boolean failed: [chars]

Explanation The function for creating a watched boolean reported an error trying to create the watched boolean.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-ACTION_WB_DELETE: [chars]: delete_watched_boolean failed: [chars]

Explanation The function for deleting a watched boolean reported an error trying to delete the watched boolean.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMC_CB_DM_THREADPOOL_CREATE: [chars]: dispatch_manager_threadpool_create failed [chars]

Explanation The dispatch manager reported an error trying to create a thread pool.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMC_CB_DM_THREADPOOL_START: [chars]: dispatch_manager_threadpool_start failed [chars]

Explanation The dispatch manager reported an error trying to start a thread pool.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMC_ENQUEUE_FAIL: [chars]: Unable to enqueue [chars];

Explanation The enqueueing function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMC_INV_REPLY: [chars]: Application client library unable to handle message receive.

Explanation The API received a message reply when it was not in a state to accept such messages.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMC_MALLOC: [chars]: Unable to allocate [chars];

Explanation The malloc function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_ADD_PARSER: [chars]: Unable to add [chars] event detector command;

Explanation The event detector failed to add a command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_COND_WAIT: [chars]: conditional wait error: [chars]

Explanation Internal error. The event detector has failed to perform a conditional wait.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_DM_CREATE: [chars]: could not create dispatch manager: [chars]

Explanation The event detector has failed to create a dispatch manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_ENQUEUE_FAIL: [chars]: Unable to enqueue [chars];

Explanation The enqueueing function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_MALLOC: [chars]: Unable to allocate [chars]; [chars]

Explanation The malloc function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_NO_CLOCK: [chars]: unable to read clock using clock_gettime: [chars]

Explanation The clock reading function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_OID_UNAVAIL: [chars]: The following oid has become unavailable: [chars]

Explanation An internal error has occurred. The registered OID is no longer available in the system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_OPEN_CONF: [chars]: could not open event detector config file: [chars]

Explanation The event detector has failed to open the configuration file for event detector information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_READ_CONF: [chars]: could not read event detector config file: [chars]

Explanation The event detector has failed to read the configuration file for event detector information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMFD_THRD_POOL_CREATE: [chars]: could not create thread pool:
[chars]

Explanation The event detector has failed to create a thread pool.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMMD_NO_CLOCK: [chars]: unable to read clock using
clock_gettime: [chars]

Explanation The clock reading function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_CHKPT_ITERATE_END: [chars]: call to chkpt_iterate_end
returned unexpected failure.

Explanation An attempt to register an application with the checkpointing server has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_CHKPT_NULL_PTR: [chars]: Got a null [chars] but non-null value was expected

Explanation An attempt to do further processing has failed because a null value was received when a non-null value was expected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_CHKPT_TBL_ADD: [chars]: could not save a record into a checkpointing table: [chars]

Explanation An attempt to save a record into the specified checkpointing table has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_CHKPT_TBL_REMOVE: [chars]: could not delete a record from a checkpointing table: [chars]

Explanation An attempt to delete a record from the specified checkpointing table has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_CHKPT_TBL_RESET: [chars]: could not reset a record in a checkpointing table: [chars]

Explanation An attempt to reset a record in the specified checkpointing table has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_COUNTER_SET: [chars]: failed to set a counter: [chars]

Explanation An attempt to set an Embedded Event Manager counter has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_EVENT_CREATE: [chars]: failed to create an event: [chars]

Explanation An attempt to create an Embedded Event Manager event has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_EVENT_REG: [chars]: failed to register an event: [chars]

Explanation An attempt to register an Embedded Event Manager event has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_EVENT_TYPE: [chars]: unknown event type [dec]

Explanation An unknown Embedded Event Manager event type was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_FILE_OPEN: [chars]: failed to open file [chars] : [chars]

Explanation An attempt to open the specified file has failed due to an internal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_FORMAT_TIME: [chars]: error attempting to format time string

Explanation An attempt to format a time string has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_GET_NODE_NAME: [chars]: failed to get the local node name: [chars]

Explanation An attempt to get the local node name has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_LAST_POLICY: [chars]: invalid last policy name replied [chars]

Explanation There has been an internal error. The last policy name that the script director replied to the **show event manager policy registered** command is an invalid policy name.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_LONG_PATHNAME: [chars]: too long path name

Explanation There has been an internal error. A path name could not be formed because it exceeded the maximum length.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_NO_CLOCK: [chars]: unable to read clock using clock_gettime: [chars]

Explanation The clock reading function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_NO_MEM: [chars]: not enough memory: [chars]

Explanation Memory allocation failed due to a low-memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %HA_EM-7-FMPD_OVL_SETUP_ENV: [chars]: could not update environment variables: [chars]

Explanation Updating environment variables of the process according to stored system variables has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMPD_TIMER_ARM: [chars]: failed to arm a timer: [chars]

Explanation An attempt to arm an Embedded Event Manager timer has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMS_ASYNC_ATTACH_CHKPT: [chars]: Failed to attach to handle chkpt asynchronous events; [chars]

Explanation The event pulse attach event function reported an error trying to attach the checkpoint pulse handler.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMS_CHKPT_ITERATE_END: [chars]: call to chkpt_iterate_end returned unexpected failure.

Explanation An attempt to register an application with the checkpointing server has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMS_CHKPT_TBL_UNREG: [chars]: could not unregister the checkpointed table [chars]: [chars]

Explanation Failed to unregister a checkpointed table.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMS_FDC_OPEN: [chars]: Failed to open Event Detector context control block

Explanation The open_fd function reported an error trying to open an Event Detector context control block.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMS_NO_CLOCK: [chars]: unable to read clock using clock_gettime: [chars]

Explanation The clock reading function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMS_POLICY_MAX_ENTRIES: [chars]: Maximum number of script publish entries exceeded; some events have been discarded

Explanation An attempt to publish an event requiring a script failed because there is no more room in the script publish queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMS_REALLOC_FAIL: [chars]: Unable to reallocate [chars]; [chars]

Explanation The reallocation function reported an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMS_SWITCH_FAIL: [chars]: The system is unable to switch to standby processor. Switchover cancelled.

Explanation Switchovers must occur when a standby processor is available and ready.

Recommended Action Ensure that a standby processor is available and ready.

Error Message %HA_EM-7-FMS_WB_CREATE: [chars]: create_watched_boolean failed; [chars]

Explanation The create watched boolean function reported an error trying to create the watched boolean.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-FMS_WQ_CREATE: [chars]: create_watched_queue failed; [chars]

Explanation The create watched queue function reported an error trying to create the watched queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-PTHREAD_MUTEX_LOCK: [chars]: Error locking mutex [chars]; [chars]

Explanation The pthread mutex lock function reported an error while attempting to lock the specified mutex.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_EM-7-PTHREAD_MUTEX_UNLOCK: [chars]: Error unlocking mutex [chars]; [chars]

Explanation The pthread mutex unlock function reported an error while attempting to unlock the specified mutex.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HA_IFINDEX Messages

This section contains high availability system messages.

Error Message %HA_IFINDEX-2-INIT_ERROR: [chars]

Explanation This is a critical error message about a high availability system initialization status or condition. A message of this type indicates that a failure occurred during high availability system initialization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HARDWARE Messages

This section contains hardware resources messages.

HARDWARE-3

Error Message %HARDWARE-3-ASICNUM_ERROR: Port-ASIC number [dec] is invalid

Explanation Each port ASIC is identified by an ID. The port ASIC number that is specified in the message text is invalid. This condition indicates an internal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HARDWARE-3-INDEX_ERROR: Index value [dec] is invalid

Explanation An index was attempted to be placed into the hardware table, but that index is out of the configured range.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HARDWARE-3-INTRNUM_ERROR: Port-ASIC Interrupt number [dec] is invalid

Explanation An interrupt ID that was used for a port ASIC is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HARDWARE-3-PORTNUM_ERROR: port number [dec] is invalid

Explanation Each interface in a given port ASIC is identified by an index value. The port number used is not within the specified range.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HARDWARE-3-STATS_ERROR: Statistics ID [dec] is invalid

Explanation Each statistic that is supported by the port ASIC is identified using an ID. The ID provided by the caller is not within the configured range.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HA_WD Messages

This section contains high availability system messages.

HA_WD-3

Error Message %HA_WD-3-DM_SEND_PULSE: [chars]: could not send priority pulse to receiver: [chars]

Explanation An attempt to send a priority pulse to the receiver has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_WD-3-PROCFS_PASS: [chars]: procfs pass ended in error after five consecutive passes

Explanation A call to the wd_procfs_per_process() function ended in error after five consecutive passes.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_WD-3-PTHRD_SETDETACHSTATE: [chars]: could not set detach state of a POSIX thread: [chars]

Explanation An internal error was detected when trying to set the detach state of a POSIX thread.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_WD-3-PTHRD_SETSCHEDPARAM: [chars]: could not set scheduler param of a POSIX thread: [chars]

Explanation An internal error was detected when trying to set the scheduler parameter of a POSIX thread.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_WD-3-RESTART_WDSYSMON: [chars]: Error returned from sysmgr_restart_self() [chars]

Explanation An error was returned from the sysmgr_restart_self API.

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative

and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HA_WD-6

Error Message %HA_WD-6-BLOCKED_THREAD: A default priority thread CPU starvation condition was detected

Explanation Some higher priority threads are blocking the CPU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_WD-6-CPU: [chars]

Explanation The CPU is blocked by one or more high priority threads.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HA_WD-6-DLK: [chars]

Explanation An unresolved process or Cisco IOS scheduler deadlock was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HA_WD-7

Error Message %HA_WD-7-GUARD_WORD_CORRUPTED: [chars]: [chars] guard word corrupted [hex]

Explanation The named control block guard word was corrupted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HDLC Messages

This section contains high-level data link control (HDLC) messages.

HDLC-1

Error Message %HDLC-1-ISSU_NOMEMORY: Unit [dec], no memory for [chars]

Explanation The requested operation could not be accomplished because of a low-memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

HDLC-4

Error Message %HDLC-4-ISSU_INCOMPATIBLE: hdlc-issu-compat: returned FALSE

Explanation The compatibility checking has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HDLC-4-ISSU_SENDFAILED: HDLC ISSU: send message failed, rc = [dec]

Explanation An attempt to send a message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HDLC-4-ISSU_XFORM: [chars]: failed, rc=[chars]

Explanation The transform has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HLFM Messages

This section contains Forwarding Manager messages.

HLFM-3

Error Message %HLFM-3-MACFREE_ERROR: MAC address [enet], vlad [dec] is still referenced; cannot free

Explanation An attempt was made to free a MAC address before all references to it had been released.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HLFM-3-MAP_ERROR: IP address [IP_address] not in mac tables, mac-address [enet], vlan [dec]

Explanation The IP address and MAC address tables have lost their synchronization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HLFM-3-MOD_SD: Failed to modify Station Descriptor with index [dec], vlan [dec], di [dec], error [dec], mad [dec], ref-count [dec]

Explanation The forwarding manager is attempting to modify a station descriptor that is no longer in use or is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HP100VG Messages

This section contains 1PA-100VG AnyLan Port Adapter error messages.

Error Message %HP100VG-3-NOCAM: [chars] hardware CAM device not found

Explanation Could not find Hardware CAM on the PA module

Recommended Action Repair or replace the 100VG PA interface module.

HSRP Messages

This section contains Hot Standby Router Protocol (HSRP) messages.

HSRP-3

Error Message %HSRP-3-MISCONFIG: Attempt to change [chars] MAC address to [enet] when DECNET already running

Explanation An HSRP group attempted to become active on an interface that can only support a single MAC address and that is running DECnet. If the **standby use-bia** command has not been entered on the interface, HSRP would normally set the interface MAC address to the HSRP virtual MAC address, but this configuration is not allowed if DECnet is running.

Recommended Action Enter the **standby use-bia** command on the interface.

Error Message %HSRP-3-NOSOCKET: Unable to open socket

Explanation The system was unable to initialize an IP connection for the Hot Standby protocol.

Recommended Action Make sure that there is at least one interface configured to run IP.

HSRP-4

Error Message %HSRP-4-BADAUTH: Bad authentication from [IP_address], group [dec], remote state [chars]

Explanation Two routers participating in HSRP disagree on the valid authentication string.

Recommended Action Use the **standby authentication** command to repair the HSRP authentication discrepancy between the local system and the one whose IP address is reported.

Error Message %HSRP-4-BADAUTH2: Bad authentication from [IP_address]

Explanation Two routers participating in HSRP disagree on the valid authentication string.

Recommended Action Use the **standby authentication** command to repair the HSRP authentication discrepancy between the local system and the one whose IP address is reported.

Error Message %HSRP-4-BADVIP: [chars] Grp [dec] address [IP_address] is in the wrong subnet for this interface

Explanation The HSRP virtual IP address contained in the Hello message cannot be learned as it is not within a subnet configured on the interface.

Recommended Action Check the configuration on all HSRP routers and ensure that the virtual IP address is within a configured subnet.

Error Message %HSRP-4-DIFFVIP1: [chars] Grp [dec] active routers virtual IP address [IP_address] is different to the locally configured address [IP_address]

Explanation The HSRP virtual IP address contained in the Hello message from the active router is different from the virtual IP address configured locally.

Recommended Action Check the configuration on all HSRP routers in the group and ensure they are all configured with the same virtual IP address.

Error Message %HSRP-4-DUPADDR: Duplicate address [IP_address] on [chars], sourced by [enet]

Explanation The IP address in an HSRP message received on the specified interface is the same as the IP address of the router. Another router might be configured with the same IP address. The most likely cause is a network loop or a misconfigured switch that is causing the router to see its own HSRP Hello messages.

Recommended Action Check the configurations on all the HSRP routers to ensure that the interface IP addresses are unique. Check that no network loops exist. If port channels are configured, check that the switch is correctly configured for port channels. Enter the **standby use-bia** command so that the error message displays the interface MAC address of the sending router, which can be used to determine if the error message is caused by a misconfigured router or a network loop.

Error Message %HSRP-4-DUPVIP1: [chars] Grp [dec] address [IP_address] is already assigned to [chars] group [dec]

Explanation The HSRP virtual IP address contained in the Hello message cannot be learned as it is already assigned to a different HSRP group.

Recommended Action Check the configuration on all HSRP routers and ensure that the virtual IP address of each HSRP group is unique.

Error Message %HSRP-4-DUPVIP2: [chars] Grp [dec] address [IP_address] is already assigned on this interface

Explanation The HSRP virtual IP address contained in the Hello message cannot be learned as it is already assigned to this interface.

Recommended Action Check the configuration on all HSRP routers and ensure that the virtual IP address of each HSRP group is unique.

Error Message %HSRP-4-DUPVIP3: [chars] Grp [dec] address [IP_address] is already assigned to, or overlaps with, an address on another interface or application

Explanation The HSRP virtual IP address contained in the Hello message cannot be learned as it is already assigned to, or overlaps with, an address on another interface or application.

Recommended Action Check the configuration on all HSRP routers and ensure that the virtual IP address of each HSRP group is unique.

HSRP-5

Error Message %HSRP-5-STATECHANGE: [chars] Grp [dec] state [chars] -> [chars]

Explanation The router has changed state.

Recommended Action No action is required.

HTTP Messages

This section contains Hypertext Transfer Protocol (HTTP) messages.

HTTP-3

Error Message %HTTP-3-INIT_FAIL: HTTP Process Init failed.

Explanation Initialization of the HTTP subsystem has failed.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %HTTP-3-OUTOF_MEM: HTTP out of memory.

Explanation An error occurred during initialization of the HTTP process. The HTTP process could not create crucial internal data structures that are required for operation of the HTTP subsystem. The most likely reason for this condition is an exhaustion of system memory.

Recommended Action Reduce other system activity to ease memory demands. if conditions warrant, upgrade to a larger memory configuration.

Error Message %HTTP-3-PROC_NOCREAT: Unable to create HTTP process.

Explanation An error occurred during initialization of the HTTP process. The HTTP process that processes all HTTP requests and responses could not be created.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %HTTP-3-SERVER_RESTART_FAILED: Server restart failed. Disabling HTTP server.

Explanation TCP process was restarted affecting the HTTP server. Attempts to restart HTTP server failed.

Recommended Action Check status of TCP process. Enable the HTTP server after TCP process has started.

HTTP-6

Error Message %HTTP-6-SERVER_SETUP_FAILED: Server setup failed

Explanation Setup of the HTTP or HTTPS server to listen on the specified port number has failed.

Recommended Action Disable the server, verify that port number is correct and enable the server. Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

HW Messages

This section contains hardware messages.

HW-2

```
Error Message %HW-2-OBSOLETE_HW_VER: Module Version in [chars] is obsolete
*****
IMPORTANT !!! * * The module in [chars] is obsolete and must be returned * * via
RMA to Cisco Manufacturing. If it is a lab unit, * * it must be returned to Proto
Services for upgrade. *
*****
```

Explanation The specified hardware is obsolete and needs to be replaced.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HW_API Messages

This section contains hardware API messages.

HW_API-3

```
Error Message %HW_API-3-BACKWALK_REQUEST: Backwalk request failed, [chars]
```

Explanation A request to walk internal data structures has failed. Depending on the criticality of the data, the accuracy of forwarding may be affected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-BACKWALK_REQUEST_VALUE: Backwalk request failed, [chars] ([hex])

Explanation A request to walk internal data structures has failed. Depending on the criticality of the data, the accuracy of forwarding may be affected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-INVALID_CONTEXT: Invalid context [hex]

Explanation An internal API error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-INVALID_OBJ: Invalid object [hex]

Explanation An internal API error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-INVALID_TYPE: Invalid type [dec]

Explanation An internal API error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-INVALID_WALK_SPEC: Invalid walk spec [hex]

Explanation An internal API error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-NO_OBJ_TYPE_LIST_ENTRY: Invalid sw_obj_type ([dec]) used with obj_type_list

Explanation An internal API error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-NO_OBJ_TYPE_LIST_ENTRY2: Invalid sw_obj_link_type ([dec]) used with obj_type_list

Explanation An internal API error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-RESILIENCE_NO_HANDLER: No handlers in place for [chars] sw object creation failure.

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-VECTOR: Failed to set [chars] vector for [chars], [chars]

Explanation An internal API error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HW_API-3-WALK_MODE_UNSUPPORTED: Walk mode '[chars]' unsupported

Explanation An internal API error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HWIF_QOS Messages

This section contains HWIF QoS messages.

Error Message %HWIF_QOS-6-EOM_FORCE_TRUSTED: EoMPLS on [chars] caused install of 'trust cos' state

Explanation If EoMPLS is configured on the interface or any of its subinterfaces, the no trust state is automatically replaced by trust cos.

Recommended Action Remove all EoMPLS configurations from the interface to restore the no trust state.

Error Message %HWIF_QOS-6-EOM_RESTORE_UNTRUSTED: The 'no trust' state is restored on EoMPLS removal from [chars]

Explanation If EoMPLS is unconfigured on the interface and all its subinterfaces, the configured no trust state is restored.

Recommended Action This is an informational message only. No action is required.

Error Message %HWIF_QOS-6-EOM_TRUST_NOT_INSTALLED: 'no trust' command is not installed on [chars] in presence of EoMPLS

Explanation If EoMPLS is configured on the interface or any of its subinterfaces, the **no trust** command is not installed.

Recommended Action Remove all EoMPLS configurations from the interface.

HYPERION Messages

This section contains Hyperion ASIC (HYPERION) messages.

HYPERION-3

Error Message %HYPERION-3-FAILURE_INTR_CFG: Failure to setup the Hyperion device interrupts.

Explanation The internal ASIC on a line card could not be initialized. The device is not operational and has been disabled. The data path is not operational.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HYPERION-4

Error Message %HYPERION-4-EARL_BUS_SYNC_ERR: Failed to sync Earl bus, Hyperion version [dec]

Explanation The HYPERION ASIC in the line card failed to synchronize with the Earl bus.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HYPERION-4-HYP_RESET: Hyperion Error Interrupt. Resetting ASIC.

Explanation The Hyperion ASIC in the SPA or Enhanced FlexWAN module has received a fatal error. The ASIC is automatically reset, and the SPA or Enhanced FlexWAN module attempts to continue normal operation.

Recommended Action No action is required if traffic recovers. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HYPERION-4-HYP_RESET: Hyperion ASIC reset, interrupt [chars]

Explanation The Hyperion ASIC in the SPA or Enhanced FlexWAN module has received a fatal error. The ASIC is automatically reset, and the SPA or Enhanced FlexWAN module attempts to continue normal operation.

Recommended Action No action is required if traffic recovers. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HYPERION-4-UNEXPECTED_VERSION: Unexpected Hyperion version.

Explanation The line card is unable to recognize the version of the Hyperion ASIC.

Recommended Action No action is required if traffic passes through the line card. If traffic does not pass through the line card, check the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl to determine in which version this problem is fixed and upgrade accordingly. If traffic does not pass after the upgrade, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

HYPERION-5

Error Message %HYPERION-5-BUS_MODE_CHANGE: The System Switching Bus Mode changed to [chars] mode

Explanation The system switching bus interface device mode changed switching bus modes. The mode is specified in the system message.

Recommended Action The supervisor engine instructed the module to change the mode on the switching bus. No action is required.

Error Message %HYPERION-5-BUS_SEQ_ERR: Constellation bus Sequence Error. Resetting Hyperion ASIC.

Explanation The switch processor has detected a sequence error on the backplane bus. A reset sequence from the EARL has been called to recover from this error. System traffic should recover and continue normally.

Recommended Action If traffic recovers, no action is required. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HYPERION-5-HYP_INIT_FAILURE: The Hyperion ASIC initialization failed

Explanation The Hyperion ASIC initialization was not successful. The Hyperion ASIC is not operational and is disabled.

Recommended Action If traffic recovers, no action is required. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HYPERION-5-HYP_INTR_INFO: [chars]

Explanation This message provides more information about the interrupts from the backplane bus ASIC to the line card CPU.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HYPERION-5-HYP_RESET_INFO: [chars]

Explanation This message provides more information about the interrupts leading to the reset of the backplane bus ASIC.

Recommended Action If traffic recovers, no action is required. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %HYPERION-5-NULL_HYP_OBJECT: The Hyperion device object pointer is set to NULL

Explanation The memory location of the Hyperion ASIC device object is invalid. The Hyperion ASIC operation is disabled, and the device interrupt is now masked.

Recommended Action If traffic recovers, no action is required. If traffic does not recover, copy the error message exactly as it appears on the console or in the system log. Enter the **show platform hardware hyperion all** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show platform hardware hyperion all** output, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ICC Messages

This section contains Inter-Card Communication (ICC) messages.

ICC-3

Error Message %ICC-3-MAST_BAD_FREE: ICC multicast memory already freed

Explanation One of the ICC multicast request's memory was found to be free when response arrived

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ICC-4

Error Message %ICC-4-BAD_ACCOUNTING: ICC received a bad class %d

Explanation The intercard communication (ICC) process received an invalid class and therefore cannot account for the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ICC-5

Error Message %ICC-5-REQ_WATERMARK: [dec] pkts for class [chars] request [dec] are waiting to be processed

Explanation The processor has received packets for the class request and the packets are waiting to be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ICC-6

Error Message %ICC-6-INFO: [chars] [hex] [hex] [hex]

Explanation This message provides ICC subsystem generic information or error information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC-6-MCAST_TIMEOUT: ICC multicast request timed out

Explanation One of the ICC multicast request timed out without response.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ICC_ISSU_NEGO Messages

This section contains Inter-Card Communication (ICC) in-service software upgrade (ISSU) negotiation messages.

ICC_ISSU_NEGO-3

Error Message %ICC_ISSU_NEGO-3-CLIENT_EVENT_QUEUE_CREATE: Failed to create ICC nego client queue (client %d, endpoint 0x%x)

Explanation The intercard communication (ICC) ISSU negotiation process failed to create a client watched queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-CLIENT_FREE_EVENTS_ALLOCATION: Failed to allocate ICC Nego free events (client %d, endpoint 0x%x)

Explanation The ICC negotiation process failed to allocate ICC negotiation free events.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-CLIENT_FREE_EVENT_ENQUEUE: Failed to enqueue event to free event queue (type %d, client %d, endpoint 0x%x)

Explanation The ICC negotiation process failed to enqueue an event to the free event queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-CLIENT_FREE_EVENT_QUEUE_CREATE: Failed to create ICC nego client queue (client %d, endpoint 0x%x)

Explanation The ICC negotiation process failed to create a client free events queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-CLIENT_PROCESS_CREATE: Failed to create ICC nego client process (client %d, endpoint 0x%x)

Explanation The ICC negotiation process failed to create a client process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-DROPPING_MSG: Dropping message (client %d)

Explanation The ICC negotiation process dropped a client message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-ICC_INIT_SEND: Failed to send the ICC Nego Init message (endpoint 0x%x)

Explanation The ICC negotiation process failed to send the negotiation initialization message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INCONSISTENT_MEDMAN_DATA: Inconsistent MEDMan data (unique key %d)

Explanation The ICC negotiation process Multiple Endpoint Data Manager (MEDMan) data is inconsistent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INTERNAL_ICC_PAK: Failed to get an ICC pak (internal message %d, size %d)

Explanation The ICC negotiation process failed to get an ICC packet for an internal message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INVALID_CLIENT: Invalid client %d

Explanation The ICC negotiation client is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INVALID_CLIENT_PID_GENERIC: Invalid client process pid, can't be the generic process (client %d, endpoint 0x%x, pid %d)

Explanation An attempt was made to send a client process message to the ICC negotiation generic process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INVALID_DS: Invalid ICC Nego data structure

Explanation The internal ICC negotiation data structure is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INVALID_DS_CLIENT: Invalid ICC Nego data structure (client %d)

Explanation The internal ICC negotiation data structure is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INVALID_MSG: Invalid message (type %d)

Explanation The ICC negotiation message is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INVALID_PCOL_DS: Invalid ICC Nego process collector data structure (client %d, endpoint 0x%x)

Explanation The ICC negotiation process collector data structure is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INVALID_QUEUE: Invalid ICC Nego client queue (client %d)

Explanation The internal ICC negotiation watched queue is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-INVALID_STATUS: Invalid client negotiation status (client %d, status %s)

Explanation The ICC negotiation client negotiation status is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-MEDMAN_DS_CREATION: Failed to create the client data structure in MEDMan (client %d, endpoint 0x%x, error %s)

Explanation The ICC negotiation process could not create the client data structure in the Multiple Endpoint Data Manager (MEDMan).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-MEDMAN_REGISTRATION: Failed to register with MEDMan

Explanation The ICC negotiation process failed to register with the Multiple Endpoint Data Manager (MEDMan).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-MSG_ENQUEUEING: Failed to enqueue msg to the ICC Nego generic process (client %d)

Explanation The ICC negotiation process failed to enqueue a process message to the ICC negotiation generic process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-MSG_ENQUEUEING_CLIENT: Failed to enqueue msg to the ICC Nego generic process (client %d, e_id 0x%x, type %d)

Explanation The ICC negotiation process failed to enqueue a process message to an ICC negotiation client process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NEGO_CANNOT_COMPLETE: Negotiation cannot complete (endpoint 0x%x)

Explanation The ICC negotiation cannot complete.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NOTIFY_CLIENT: Failed to notify client %d (e_id 0x%x)

Explanation The ICC negotiation process failed to notify a client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NO_FREE_EVENT: Couldn't get a free event (type %d, client %d, e_id 0x%x)

Explanation The ICC negotiation process failed to get a free event for a client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NO_INTERNAL_CB: No callback for internal message %d

Explanation No ICC negotiation callback has been defined for this internal message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NO_QUEUE: Couldn't get an event queue (type %d, client %d, e_id 0x%x)

Explanation The ICC negotiation process failed to get an event queue for a client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NO_UK: Couldn't retrieve the unique key

Explanation The ICC negotiation process failed to retrieve the unique key for a client endpoint pair.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NVI_EMPTY_MSG: Received an empty NVI ICC message

Explanation The ICC negotiation process received an empty NVI ICC message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NVI_ICC_SEND: Failed to send the ICC Nego NVI ICC message (endpoint 0x%x)

Explanation The ICC negotiation process failed to send the NVI ICC message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NVI_REQ_PAK: Failed to get an ICC req pak for the ICC Nego NVI message

Explanation The ICC negotiation process failed to get an ICC request packet for the NVI internal message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-NVI_RESP_PAK: Failed to get an ICC resp pak for the ICC Nego NVI message

Explanation The ICC negotiation process failed to get an ICC response packet for the NVI internal message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-OPEN_PORT_RELIABLE: Can't open reliable port (endpoint 0x%x, client %s - %d)

Explanation The ICC negotiation process cannot open a reliable port to the endpoint for the ISSU client. The ISSU client might not be able to negotiate.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-OPEN_PORT_UNRELIABLE: Can't open unreliable port (endpoint 0x%x, client %d)

Explanation The ICC negotiation process cannot open an unreliable port to the endpoint for the ISSU client. The ISSU client might not be able to negotiate.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-OUT_OF_MEMORY: System is running out of memory

Explanation There is not enough available memory in the system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-PCOL_INCONSISTENT_PID: Inconsistent ICC Nego process collector process id (client %d, endpoint 0x%x)

Explanation The ICC negotiation process collector process ID is inconsistent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-PROCESS_CREATE: Failed to create ICC nego process

Explanation The ICC negotiation failed to create a process to handle the messages.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-PROCESS_KILL_INTERNAL: Internal process kill failed (pid %d, process collector pid %d)

Explanation The ICC negotiation process failed to terminate an internal process due to an inconsistent process ID.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-PROC_LEVEL_MSG_GENERIC: Invalid process level message in the generic process (client %d, level %d)

Explanation The level of messages for the ICC negotiation process is invalid in the generic process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-PROC_LEVEL_MSG_INTERRUPT: Invalid process level message in the ICC interrupt (client %d, level %d)

Explanation The level of messages for the ICC negotiation process is invalid in the ICC interrupt.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-SEND_UK: Failed to send unique key to process (client %d, endpoint 0x%x)

Explanation The ICC negotiation process failed to send the unique key to the new client process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-TIMER_NOT_AWAKE: ICC Nego pool timer was not awake when getting a timer event

Explanation The ICC negotiation process collector timer was not awake when receiving a timer event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-TIMER_NOT_RUNNING: ICC Nego pcol timer was not running when getting a timer event

Explanation The ICC negotiation process collector timer was not running when getting a timer event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ICC_ISSU_NEGO-3-WATCHED_QUEUE_CREATION: Failed to create the watched queue

Explanation The ICC negotiation process could not create the watched queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ICC_ISSU_TAGGING Messages

This section contains Inter-Card Communication (ICC) in-service software upgrade (ISSU) tagging messages.

ICC_ISSU_TAGGING-3

Error Message %ICC_ISSU_TAGGING-3-NOT_XFORM: Untransformed message detected (class:%d, request:%d, sender:%x)

Explanation During runtime, the intercard communication (ICC) ISSU tagging process detected an untransformed ICC message. This message must be transformed or suspended to support ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IDBINDEX_SYNC Messages

This section contains Interface Descriptor Block (IDB) index synchronization messages.

IDBINDEX_SYNC-3

Error Message %IDBINDEX_SYNC-3-IDBINDEX_ASSIGN: Failed to assign an index to IDB type %d, for interface

Explanation An interface index cannot be allocated for this interface due to an internal software error. This is an unrecoverable error that results in this interface not being usable for traffic.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-3-IDBINDEX_ENTRY_MISMATCH: An interface index mismatched its active table entry:

Explanation An interface index was found which did not match the active interface descriptor block (IDB) index table entry with the corresponding synchronization key. This condition is due to an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-3-IDBINDEX_LINK: Driver for IDB type '%d' changed the Identity of interface

Explanation The interface index table cannot be updated with the new identity provided for this interface due to an internal software error. The driver might not have deleted the old identity first, or the driver might have accidentally changed the identity.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-3-IDBINDEX_RETRIEVE: Cannot retrieve if-index for this interface:

Explanation The interface index number was not found in the interface index table for the interface specified in the error message. This condition might have been caused by the interface index number not being properly synchronized by the primary processor card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-3-INIT_ERR: %s

Explanation The interface index synchronization ISSU client has an initialization error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-3-IPC_ERR: %s: %s.

Explanation The interface index synchronization interprocess communication (IPC) session has an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-3-ISSU_ERR: %s%s, rc=%d

Explanation The interface index synchronization ISSU client has an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-3-RF_ERR: %s %d.

Explanation An error occurred in the interface index synchronization of the redundancy facility (RF) client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-3-TRANSFORM: Require IF-Index ISSU transformation function %s %s

Explanation The interface index synchronization process has identified a missing ISSU transformation function. This condition may lead to misoperation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-3-VALIDATE: Cannot validate if-index for this interface:

Explanation The identity of this interface could not be validated against the stored identity within the interface descriptor block (IDB) index table. This condition probably occurred due to the identity of the IDB changing without first explicitly unlinking the previous identity.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IDBINDEX_SYNC-4

Error Message %IDBINDEX_SYNC-4-RESERVE: Failed to lookup existing ifindex for an interface on the Standby, allocating a new ifindex from the Active (ifindex=%d, idbtype=%s)

Explanation A lookup failure occurred for an interface on the standby unit. An attempt was made to resolve the issue by reserving a new interface index on the active unit. If this failure was caused by a defect in the key encoding, then traffic may stop on this interface if the system switches over.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBINDEX_SYNC-4-TRUNCATE: Overflow in %s when encoding interface sync key, got %d maximum is %d

Explanation During the creation of a unique synchronization key to represent an interface, one of the attributes making up the key was truncated to fit in the allocated space in the key. This condition might lead to overlapping key allocations, which would cause an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IDBINDEX_SYNC_KEY Messages

This section contains Interface Descriptor Block (IDB) key synchronization messages.

IDBINDEX_SYNC_KEY-3

Error Message %IDBINDEX_SYNC_KEY-3-UNKNOWN_TYPE: Interface type is unknown and cannot be synced:

Explanation An internal software error has occurred related to the interface descriptor block (IDB) key synchronization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IDBMAN Messages

This section contains Interface Descriptor Block Manager (IDBMAN) messages.

IDBMAN-4

Error Message %IDBMAN-4-CONFIG_WRITE_FAIL: FFailed to generate configuration for interface [chars]

Explanation The system failed to generate a configuration for the specified interface because of a problem with the file system. The active and standby supervisor engines will have configurations that do not match.

Recommended Action The standby supervisor engine is reloaded automatically to recover from the problem. If the standby supervisor engine does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IDBMAN-4-IDB_LIMIT: Maximum interface count reached the limit of [dec]([dec]+[dec]). Module is disabled.

Explanation The number of interfaces has reached the maximum limit and the module has been disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IDMGR Messages

This section contains ID manager messages.

Error Message %IDMGR-3-INVALID_ID_TABLE_SIZE: bad new ID table size

Explanation A bad new table request to ID manager has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IF Messages

This section contains interface messages.

IF-2

Error Message %IF-2-IDB_TABLE_INIT: Malloc failed while initializing idb table

Explanation A memory allocation failure occurred while an IDB table was being initialized.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

IF-3

Error Message %IF-3-BADMACADDRTYPE: illegal mac address type, [dec]

Explanation This is an internal error that was recovered gracefully.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IF-4

Error Message %IF-4-BACKWARD_COUNTERS: Corrected for backward [chars] counters ([int] -> [int]) on [chars]

Explanation The interface specified in the message has a packet counter that has decreased in number. This condition can occur if a packet is counted and then dropped. This event was detected and corrected.

Recommended Action If this condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IF-4-NOBGPROCESS: Network background process not running. [chars]

Explanation A process which manages network interface background processing is not yet running, but another system process has tried to send the process a message. An interface on the router may have missed a request to bring itself up.

Recommended Action Reset the interface by entering a **shutdown** command followed by a **no shutdown** command.

IFDAMP Messages

This section contains interface dampening (IFDAMP) messages.

IFDAMP-5

Error Message %IFDAMP-5-ZERODELAY: dampening reuse timer is updated with 0 delay time

Explanation An inconsistency was detected in the dampening reuse timer wheel.

Recommended Action No action is required.

IFMGR Messages

This section contains interface manager messages.

IFMGR-3

Error Message %IFMGR-3-BADIFINDEXTABLE: The file nvram:ifIndex-table is corrupt.

Explanation The file is not in the expected format.

Recommended Action If possible, delete the file. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-3-DUP_IFINDEX: Duplicate ifIndex (%d) found for ifDescr

Explanation Two interfaces have the same interface index in the interface manager assigned list. The second interface registered with the interface manager will be assigned a new index.

Recommended Action If interface index persistence is not required, then no action is required. Otherwise, reload the router with the proper interface index table and image. If the error message only appears from the standby route processor (RP), reload the standby RP.

Error Message %IFMGR-3-IFDB: IF manager interface database [chars] failure- [dec]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-3-IFINDEX_PERSIST_ENTRY_CORRUPT: [chars] seems to be corrupted.
Trying to read [dec] size

Explanation The ifIndex table is corrupted.

Recommended Action Delete the ifindex table.

Error Message %IFMGR-3-INVALID_PERSISTENT_DATA: Invalid persistent data

Explanation An attempt was made to write invalid persistent data.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-3-NOIMACP: IF manager control process failed to start

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-3-NOVECTOR: Interface manager failed to allocate IF vector.
size %d

Explanation The interface vector could not be allocated with the number of elements required, either initially or by a resize operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-3-VECTOREXD: IF manager attempted to use interface [dec] outside vector range.

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-3-VECTORIFSUSPECT: IF manager added interface %d which is unexpectedly large.

Explanation The ifIndex allocation scheme is trying to add an ifIndex value much larger than the former greatest ifIndex value in the DB. It should assign sequential ifIndex values.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-3-VECTORPOSUSED: IF manager attempted to add interface [dec] which was already added.

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IFMGR-4

Error Message %IFMGR-4-NOIFINDEX: All SNMP if indices are exhausted

Explanation All SNMP MIB indexes have been exhausted. Interfaces will not be able to obtain an interface index that they can use to register with the interface MIB.

Recommended Action Attempt a system reload. If the problem persists after the system reload, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-4-NOSYNC: ifIndex not being synced between active and standby

Explanation When the standby module comes up, the tuple of ifIndex and ifDescr is synchronized so that interfaces get the same ifIndex when they come up. This error happens when the interface does not get the ifIndex for the given ifDescr.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-4-STACK_RELATIONSHIP_ADD_ERROR: [chars]: Request for creating invalid stack relationship [dec], [dec]

Explanation The IF MGR received the call to add invalid stack relationship. The higher and lower ifIndex are shown in the message. The module of the IF MGR from which this message is generated is also shown in the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IFMGR-4-VECTORIFSUSPECT: IF manager added interface [dec] which is unexpectedly large.

Explanation The ifIndex allocation scheme gives out sequential ifIndex values. This message comes from the IF-MGR DB when it is trying to add an ifIndex value much larger than the former greatest ifIndex value in the DB.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IFMGR-7

Error Message %IFMGR-7-NO_IFINDEX_FILE: Unable to open [chars] [chars]

Explanation This is an informational message. This means system found no saved ifIndex information, and ifIndex is not persisted across reboots. The ifIndices will be reassigned.

Recommended Action 1. No Action, if 'snmp-server ifIndex persist' is not configured. 2. If 'snmp-server ifindex persist' is configured then copy the error message exactly as it appears, and report it to your technical support representative.

IFS Messages

This section contains Cisco IOS file system messages.

Error Message %IFS-3-FS_STRUCT_ERROR: Data does not match expected internal representation

Explanation A mismatch exists between the representation of data extracted from the file system and the expectation of its formatting. This condition may occur when running in a dual-RP environment, with different Cisco IOS versions running on the two RPs.

Recommended Action Ensure that both RPs are running the same Cisco IOS version, if running in a dual-RP environment. If not, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IGMP Messages

This section contains Internet Group Management Protocol (IGMP) messages.

IGMP-3

Error Message %IGMP-3-NO_DNS_SERVER: No DNS server is configured. DNS-based SSM mapping should be disabled if no DNS server is configured.

Explanation No domain name service (DNS) server is present. Processing of Internet Group Management Protocol (IGMP) packets may be delayed if the DNS lookup is done continuously.

Recommended Action Disable DNS-based source specific multicast (SSM) mapping if no DNS server is present in the network.

Error Message %IGMP-3-QUERY_INT_MISMATCH: Received a non-matching query interval %d, from querier address %i

Explanation An IGMP version mismatch was detected between routers.

Recommended Action Configure both interfaces with the same IGMP version.

IIGMP-6

Error Message %IGMP-6-IGMP_CHANNEL_LIMIT: IGMP limit exceeded for channel (%i, %i) on %s by host %i

Explanation The allowed number of IGMP joiners reached the configured limit. New joiners cannot be allowed unless the configuration is changed.

Recommended Action Enter the global or interface **ip igmp limit** command to adjust the allowed number of IGMP joiners. If the exceeding of current limits was unexpected, find the IP address of the denied host in the system log.

Error Message %IGMP-6-IGMP_GROUP_LIMIT: IGMP limit exceeded for group (*, %i) on %s by host %i

Explanation The allowed number of IGMP joiners has exceeded the configured limit. New joiners cannot be allowed unless the configuration is changed.

Recommended Action Enter the global or interface **ip igmp limit** command to adjust the allowed number of IGMP joiners. If the exceeding of current limits was unexpected, find the IP address of the denied host in the system log.

ILPOWER Messages

This section contains inline power messages.

ILPOWER-3

Error Message %ILPOWER-3-CONTROLLER_ERR: Controller error, Controller number [dec]: [chars]

Explanation An error involving the inline power controller has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ILPOWER-3-CONTROLLER_IF_ERR: Controller interface error, [chars]:
[chars]

Explanation An interface error has been detected between the inline power controller and the system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ILPOWER-3-CONTROLLER_PORT_ERR: Controller port error, Interface
[chars]: [chars]

Explanation A port error has been reported by the inline power controller.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ILPOWER-5

Error Message %ILPOWER-5-AC_DISCONNECT: Interface [chars]: AC disconnect

Explanation The AC power has been disconnected.

Recommended Action No action is required.

Error Message %ILPOWER-5-DC_DISCONNECT: Interface [chars]: DC disconnect

Explanation The DC power has been disconnected.

Recommended Action No action is required.

Error Message %ILPOWER-5-ILPOWER_MISCONFIG: Interface [chars] is denied power as it requires more power than configured maximum wattage([dec]).

Explanation The interface is denied power as it requires more power than the configured maximum wattage.

Recommended Action No action is required.

Error Message %ILPOWER-5-ILPOWER_NOPOWER_AVAIL: Interface [chars] is denied power because either the system ran out of power or module limit reached.

Explanation There is not enough power left in the system to supply to the interface specified in the error message.

Recommended Action No action is required.

Error Message %ILPOWER-5-ILPOWER_POWEROVERDRAWN: Interface [chars] is shutdown as it is consuming more power ([dec]) than the configured maximum value ([dec]).

Explanation The specified interface is shut down because it is consuming more power than the configured maximum value.

Recommended Action No action is required.

Error Message %ILPOWER-5-LINKDOWN_DISCONNECT: Interface [chars]: Link down disconnect

Explanation A link has been disconnected.

Recommended Action No action is required.

Error Message %ILPOWER-5-POWER_GRANTED: Interface [chars]: Power granted

Explanation Power has been granted for the interface specified.

Recommended Action No action is required.

ILPOWER-7

Error Message %ILPOWER-7-DETECT: Interface [chars]: Power Device detected: [chars]

Explanation A power device has been detected.

Recommended Action No action is required.

ILPOWER_RF Messages

This section contains inline power redundancy facility (RF) messages.

ILPOWER_RF-3

Error Message %ILPOWER_RF-3-CREATE_PROCESS: Inline power RF client failed to create %s process

Explanation The inline power redundancy facility (RF) client could not create a process. This condition will cause bulk synchronization to fail.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IMAGEMGR Messages

This section contains image manager messages.

IMAGEMGR-6

Error Message %IMAGEMGR-6-AUTO_ADVISE_SW: [chars]

Explanation A line of output from the auto-advise-software process is being displayed.

Recommended Action No action is required.

Error Message %IMAGEMGR-6-AUTO_ADVISE_SW_INITIATED: Auto-advise-software process initiated for switch number(s) [chars]

Explanation Systems with incompatible software have been detected in the stack. The stack will now determine whether or not software is available to be copied to the incompatible systems, and if so, advise the user how to copy it. Otherwise, the system lets the user know that the software on the stack needs to be updated.

Recommended Action No action is required.

Error Message %IMAGEMGR-6-AUTO_COPY_SW: [chars]

Explanation A line of output from the auto-copy-software process is being displayed.

Recommended Action No action is required.

Error Message %IMAGEMGR-6-AUTO_COPY_SW_INITIATED: Auto-copy-software process initiated for switch number(s) [chars]

Explanation Systems with incompatible software have been detected in the stack. The stack determines whether or not software is available to be copied to the incompatible systems, and whether or not it is appropriate to copy the software automatically.

Recommended Action No action is required.

Error Message %IMAGEMGR-6-AUTO_DOWNLOAD_SW: [chars]

Explanation A line of output from the automatic software download process is being displayed.

Recommended Action No action is required.

Error Message %IMAGEMGR-6-AUTO_DOWNLOAD_SW_INITIATED: Auto-download-software process initiated for switch number(s) [chars]

Explanation Systems with incompatible software have been detected in the stack. The stack attempts to download software from a previously configured location, and install it to make the systems compatible.

Recommended Action No action is required.

IMAGE_SIMFS Messages

This section contains In-Memory System Image File System messages.

Error Message %IMAGE_SIMFS-3-NOPROCESS: Failure spawning Memory Reclaim process

Explanation The creation of an Cisco IOS process to compact memory previously held by in-memory image files has failed, probably due to a software defect.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IMAGE_VFS Messages

This section contains Image Virtual File System messages.

Error Message %IMAGE_VFS-3-CHECKSUM_FAIL: [chars] image checksum mismatch.

Explanation The checksum of the image in memory is different from the expected checksum.

Recommended Action Verify that the image file is complete and uncorrupted.

Error Message %IMAGE_VFS-3-LOAD_FAIL: Failed to locate all the Image files, on bootup

Explanation The relevant image file is missing or it could not be extracted (due to corruption), or the router has insufficient memory to load the entire image

Recommended Action Copy the message exactly as it appears on the console or in the system log. If the TAR file is part of a system image, enter the **show image contents file** *archive-name*, where *archive-name* is the name of the archive. Enter the **show region** and **show version** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IMAGE_VFS-3-LOCATE_FAIL: Failed to open [chars], which was loaded from archive [chars]

Explanation The relevant image file is missing or it could not be extracted (due to corruption), or the archive itself is missing (in the case of flash-based access).

Recommended Action Copy the message exactly as it appears on the console or in the system log. If the file is not in memory, check the archive file. If the file is a TAR archive file and not part of a system software image, enter the **archive tar table** *archive-name* command, where *archive-name* is the name of the TAR archive. If the TAR file is part of a system image, enter the **show image contents file** *archive-name*, where *archive-name* is the name of the archive. Enter the **dir all** and **show version** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IMAGE_VFS-3-NOPROCESS: Failure spawning No Cache process

Explanation The creation of a Cisco IOS process to delete in-memory image files has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IMAGE_VFS-3-VERIFY_FAIL: archive verification failed for file [chars] & archive [chars].

Explanation The archive in the local device is different from the version whose image file has been loaded into memory. This condition can happen if the archive was deleted from the local device or replaced by another file of the same name.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Check whether the archive file is complete and uncorrupted. Also check if the size of the archive and the last modification time (if available) is what you expect it to be. Enter the **dir all** and **show version** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

INBAND Messages

This section contains inband management messages.

Error Message %INBAND-3-BAD_PAK: Possibly un-encapsulated packet passed to Mistral:
int [chars] type [int] stat [hex] flags [hex] size [dec] offset [dec] requeue_token
[int] r1 [int] r2 [int] total detected [int]

Explanation There is a badly encapsulated packet from the process level.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %INBAND-3-INVALID_SEND: Invalid send operation (packet on [chars])

Explanation An internal error caused illegal call to device driver: normal operation continues.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %INBAND-3-NO_BUFFER_POOLS: Initialization of private buffer pools failed

Explanation Private buffer pools were not created for etsec ibc.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %INBAND-3-TOOBIG: An attempt made to send giant packet on [chars] ([dec] bytes from [hex], max allowed [dec])

Explanation An attempt was made to send an oversized packet.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

INTERFACE_API Messages

This section contains binary API for the interface descriptor block messages.

INTERFACE_API-1

Error Message %INTERFACE_API-1-NOMOREHWIDENUMBERS: No more hardware IDB numbers can be issued. The maximum allowed numbers, [dec], has been reached for this platform.

Explanation No more hardware IDB numbers can be issued. The maximum allowed number has been reached for this platform.

Recommended Action In addition to the following, copy the information from the **show idb** command output. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %INTERFACE_API-1-NOMORESWIDENUMBERS: No more software IDB numbers can be issued. The maximum allowed numbers, [dec], has been reached for this platform.

Explanation No more software IDB numbers can be issued. The maximum allowed number has been reached for this platform.

Recommended Action In addition to the following, copy the information from the **show idb** command output. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

INTERFACE_API-3

Error Message %INTERFACE_API-3-CANNOTGETMTU: Error [dec] received while getting MTU: [chars]. Using default [int]

Explanation A software error has occurred while attempting to retrieve the MTU value from the interface.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %INTERFACE_API-3-IFNUMTOIDBERROR: Error occurred while using the ifnum to idb table for interface [chars], if number [dec], during [chars]

Explanation A software error has occurred. An operation on the interface number to the IDB mapping table could not be performed successfully.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %INTERFACE_API-3-INVALIDSUBBLOCKPARAMETERS: Invalid subblock parameters for [chars] were supplied.

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %INTERFACE_API-3-NOADDSUBBLOCK: The [chars] subblock named [chars] was not added to [chars]

Explanation A software error has occurred. IDB subblocks could not be added.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %INTERFACE_API-3-SUBNUMDBERR: subnum [hex] error in [chars]

Explanation A software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

INTERFACE_API-4

Error Message %INTERFACE_API-4-TBLERROR: A error occurred while using the Index Table utility for [chars].

Explanation A software error has occurred. This message is displayed when an index table feature could not be used successfully.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

INTR_MGR Messages

This section contains interrupt manager messages.

Error Message %INTR_MGR-3-BURST: [chars] [chars] [[dec]]

Explanation A burst of hardware interrupts of the specified type has occurred.

Recommended Action The message text on the console or in the system log provides more information on the specific cause of the error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %INTR_MGR-3-INTR: [chars] [chars]

Explanation The specified interrupt event has been detected.

Recommended Action The message text on the console or in the system log provides more information on the specific cause of the error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %INTR_MGR-3-MAXBURST: [chars] [chars] [[dec]]

Explanation The specified hardware interrupt has exceeded the maximum allowed number of bursts.

Recommended Action The message text on the console or in the system log provides more information on the specific cause of the error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IP Messages

This section contains Internet Protocol (IP) messages.

IP-3

Error Message %IP-3-LOOPPAK: Looping packet detected and dropped src=[IP_address], dst=[IP_address], hl=[int], tl=[int], prot=[int], port=[int], dport=[int] in=[chars], nexthop=[IP_address], out=[chars] options=[chars]

Explanation A looping packet was detected. A common cause is a misconfiguration of an IP helper address. The helper address should be the same address as that of the server of the intended service. Putting the address of the router in the helper address causes a routing loop to be created.

Recommended Action To resolve this issue, analyze the source and destination address of the looped packets. Verify that the configuration of IP helper addresses in the switch correctly point to the right device (for example the DHCP server, the DNS server, or WINS server).

Error Message %IP-3-MAXIRDP: Attempt to send IRDP to proxies exceeding configurable limit: [dec], interface: [chars], secondary = [dec], proxy = [dec]

Explanation The sum of configured secondary addresses and configured proxy addresses exceeds the number of total addresses that the IRDP can support in its implementation.

Recommended Action Reduce the number of either the secondary IP addresses or proxy addresses configured for the interface.

Error Message %IP-3-NOOUTINTF: Output interface not available. source address: [IP_address], destination address: [IP_address], routing type: [int]

Explanation The output interface for this packet is not set.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IP-4

Error Message %IP-4-DUPADDR: Duplicate address %i on %s, sourced by %e

Explanation Another system is using your IP address.

Recommended Action Change the IP address of one of the two systems.

IP-5

Error Message %IP-5-TURBOACL: [chars]

Explanation An error occurred while the TurboACL feature was being initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IP-6

Error Message %IP-6-L2MCASTDROP: Layer 2 Multicast packet detected and dropped, src=[IP_address], dst=[IP_address]

Explanation Layer 2 Multicast packet with Layer3 Unicast Destination was dropped.

Recommended Action No action is required.

Error Message %IP-6-PHYBCASTDROP: Physical broadcast packet detected and dropped, src=[IP_address], dst=[IP_address]

Explanation Layer 2 Broadcast packet with Layer3 Unicast Destination was dropped.

Recommended Action No action is required.

IPACCESS Messages

This section contains IP security messages.

IPACCESS-4

Error Message %IPACCESS-4-INVALIDACL: Invalid ACL field: [chars] is [dec]

Explanation An internal software error occurred.
