Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPC Messages

This section contains InterProcessor Communication (IPC) messages.

IPC-2

Error Message %IPC-2-INVALIDZONE: The IPC Zone is invalid. zone=[hex]

Explanation The zone ID entry is not in the zone table.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPC-3

Error Message %IPC-3-INVALID_PORT_INFO: Invalid port_info in the retry queue message
- SRC_PORT = [hex], DEST_PORT = [hex], MSG_TYPE = [hex]

Explanation The IPC protocol subsystem detected that the port information is inconsistent. The port information is probably already freed by the application.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show tech ipc** command from the master and the slave, to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPC-3-ISSU_API_ERR: [chars] failed with error code [dec]

Explanation An ISSU API could not perform an operation for the IPC layer. The message text includes the error code from ISSU library.

Recommended Action Enter the **show issu client** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPC-3-ISSU_ERROR: [chars] failed with error code [dec] for seat [hex]

Explanation An ISSU API could not perform an operation for the IPC layer. The message text includes the error code from ISSU library.

Recommended Action Enter the **show issu fsm** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPC-4

Error Message %IPC-4-MSGMAXTIMEOUT: Invalid maximum timeout value [dec] seconds; Period - [dec]; Retries - [dec]

Explanation The maximum message timeout for an IPC message exceeds 2 minutes.

Recommended Action Enter the **show version** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPC-4-NOPORT: Port Not Found. [hex] --> [hex], Index:[hex], Seq:[dec], flags: [hex], size: [dec]

Explanation IPC received a message which is destined for a port that cannot be found by IPC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc status**, **show ipc ports**, and **debug ipc errors** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPC-5

Error Message %IPC-5-INVALIDINPUT: [chars]

Explanation An IPC API was called with an invalid argument.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPC-5-NULLBPHANDLER: Passed Null backpressure handler

Explanation IPC cannot register the application's null function in the IPC backpressure handler list.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPC-5-QFULL: Q=[hex] [chars] [dec]

Explanation The IPC queue is full.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPC-5-WATERMARK:[dec] messages pending in [hex] for the port [chars] [hex] . [hex]

Explanation A particular IPC port is overused. An application is not draining packets quickly, which suggests that the CPU might be busy. [dec] is the number of messages pending in the IPC to be processed by the application. [chars] is the IPC port name. The first [hex] is the IPC port number, the second [hex] is the IPC seat number, and the third [hex] is the IPC index.

Recommended Action Reduce the traffic on this port to a minimal level. If the error message recurs, upgrade the system software to a release containing a fix for Cisco bug ID CSCdw74873 (watermark messages appear continuously with no traffic).

IPC-6

Error Message %IPC-6-MAXRPCTIMEOUT: Maximum RPC timeout value [dec] seconds set for port [hex]

Explanation The maximum RPC timeout for an IPC message exceeds the maximum expected value of 10 minutes.

Recommended Action Enter the **show techsupport ipc** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPC-6-STATEFUL: %s

Explanation A stateful interprocess communication (IPC) event occurred.

Recommended Action No action is required.

IP_DEVICE_TRACKING Messages

This section contains switch IP host tracking HA (IP_DEVICE_TRACKING) messages.

IP_DEVICE_TRACKING-4

Error Message %IP_DEVICE_TRACKING-4-TABLE_LOCK_FAILED: Table already locked by process-id [dec] ([chars])

Explanation The IP device tracking table could not be updated because of another process holds a lock on the table.

Recommended Action No action is required.

Error Message %IP_DEVICE_TRACKING_HA-4-ENTRY_OUT_OF_SYNC: Host mac-address [enet] ip-address [IP_address] interface [chars]

Explanation An inconsistency has been detected between the active supervisor engine IP device tracking table and the standby supervisor engine IP device tracking table for this host.

Recommended Action No action is required.

IPFAST Messages

This section contains IP fast-switching (IPFAST) messages.

IPFAST-2

Error Message %IPFAST-2-FAILOPENIPCPORT: Could not open the IPC ports. [chars]

Explanation The IPFAST process could not open the IPC port to communicate to the line card or route processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPFAST-2-FASTPORTCREATEERR: Attempt to create [chars] failed after [dec] retries (last error:[chars])

Explanation The line card attempted to create a port to the route processor but has failed after a few retries. This condition might result in the CEF becoming disabled on the line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPFAST-2-FASTPORTOPEN: Requested to open [chars], id [int] when already open. Attempting to re-open.

Explanation The line card is attempting to open a port to the route processor when one is already open. This behavior could be transient but might result in multiple ports opened for the same purpose.

Recommended Action The router should be able to recover from this situation. If CEF problems develop for this line card, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPFAST-2-FASTPORTOPENERR: Attempt to open [chars] failed after [dec] retries (last error:[chars])

Explanation The line card attempted to open a port to the route processor but has failed after a few retries. This condition might result in the CEF becoming disabled on the line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPFAST-2-FASTPORTREGISTERERR: Attempt to register [chars] failed after [dec] retries (last error:[chars])

Explanation The line card attempted to register a port to the route processor but has failed after a few retries. This condition might result in the CEF becoming disabled on the line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPFAST-2-INVALSIZE: The IP fast path received an IPC message with an invalid size(size/type - [dec]/[dec])

Explanation The IP fast path switching module has received an IPC message with an invalid size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPFAST-2-MSGDROP: IPC queue limit is reached and message is dropped. queue limit = [dec] cumulative drops = [dec]

Explanation The IPC raw queue limit for IP fast path has been reached.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPFAST-4

Error Message %IPFAST-4-FAILATTEMPTOPENIPCPORT: Attempt to open the IPC ports failed. [chars]

Explanation The IPFAST process failed an attempt to open the IPC port to communicate to the line card or route processor.

Recommended Action This is an informational message only. No action is required.

Error Message %IPFAST-4-FASTPORTCREATEWARN: Attempt to create [chars] failed. Will be retried [dec] times (last error:[chars])

Explanation The line card is attempting to create a port to the route processor but has failed. This behavior could be transient. The system will reattempt to create the port.

Recommended Action The system should be able to recover from this condition. If CEF becomes disabled on this line card, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPFAST-4-FASTPORTOPENWARN: Attempt to open [chars] failed. Will be retried [dec] times (last error:[chars])

Explanation The line card is attempting to open a port to the route processor but has failed. This behavior could be transient. The system will reattempt to create the port.

Recommended Action The system should be able to recover from this condition. If CEF becomes disabled on this line card, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPFAST-4-FASTPORTREGISTERWARN: Attempt to register [chars] failed. Will be retried [dec] times (last error:[chars])

Explanation The line card is attempting to register a port to the route processor but has failed. This could be transient behavior so retries will be attempted.

Recommended Action The router should be able to recover from this situation. If CEF gets disabled for this line card, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPFAST-5

Error Message %IPFAST-5-SUCCEEDOPENIPCPORT: Attempt to open the IPC ports succeeded. [chars]

Explanation The IP fast switching has succeeded in an attempt to open the IPC port to communicate with the line card or route processor.

Recommended Action No action is required.

IP_HOST_ISSU Messages

This section contains IP host in-service software upgrade (ISSU) messages.

IP_HOST_ISSU-2

Error Message %IP_HOST_ISSU-2-GET_BUFFER: IP Host ISSU client failed to get buffer for message. Error: %d (%s)

Explanation The IP host ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-2-INIT: IP Host ISSU client initialization failed to %s.
Error: %d (%s)

Explanation The IP host ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed successfully. Otherwise, a software upgrade or downgrade will result in downtime.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-2-SEND_NEGO_FAILED: IP Host ISSU client failed to send negotiation message. Error: %d (%s)

Explanation The IP host ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-2-SESSION_NEGO: IP Host ISSU client encountered unexpected client nego_done. Error: %d (%s)

Explanation The IP host ISSU client encountered a client negotiation done state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-2-SESSION_REGISTRY: IP Host ISSU client failed to register session information. Error: %d (%s)

Explanation The IP host ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

IP_HOST_ISSU-3

Error Message %IP_HOST_ISSU-3-CAP_INVALID_SIZE: IP_HOST ISSU client capability list is empty.

Explanation The IP host ISSU client capability exchange list is empty, which is an invalid condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu capability entries** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-3-CAP_NOT_COMPATIBLE: IP Host ISSU client capability exchange result incompatible.

Explanation Based on the results of the capability exchange, the IP host ISSU client is not compatible with the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-3-INVALID_SESSION: IP Host ISSU client does not have a valid registered session.

Explanation The IP host ISSU client does not have a valid registered session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-3-MSG_NOT_OK: IP Host ISSU client 'Message Type %d' is not compatible

Explanation The IP host ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, **show issu message group**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-3-MSG_SIZE: IP Host ISSU client failed to get the MTU for Message Type %d. Error: %d (%s)

Explanation The IP host ISSU client was unable to calculate the MTU for the specified message. As a result, the client is not able to send the message to the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, **show issu message group**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-3-SESSION_UNREGISTRY: IP Host ISSU client failed to unregister session information. Error: %d (%s)

Explanation The IP host ISSU client failed to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %IP_HOST_ISSU-3-TRANSFORM_FAIL: IP Host ISSU client %s transform failed for 'Message Type %d'. Error: %d (%s)

Explanation The IP host ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the IP host state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

IPMCAST_LIB Messages

This section contains IP multicast library messages.

IPMCAST_LIB-4

Error Message %IPMCAST_LIB-4-RPF_DEPTH_ERR: Depth for rpf lookup greater than [dec] for [chars]

Explanation The number of recursions for resolution of a given route has exceeded the allowed maximum. This is usually due to misconfiguration.

Recommended Action Review and fix the router configuration. If you require further assistance, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPMCAST_LIB-4-RPF_STATIC_ERR: No match for RIB static route [ipv6_addr]/[dec] in static table for root [ipv6_addr]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPMCAST_LIB-6

Error Message %IPMCAST_LIB-6-TIMER_BUSY: Timer drift is accumulating, [dec] msec

Explanation There is large amount of processing load and the timers are accumulating delay.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPNAT Messages

This section contains IP Network Address Translation (IPNAT) messages.

IPNAT-4

Error Message %IPNAT-4-ADDR_ALLOC_FAILURE: Address allocation failed for [IP_address], pool [chars] might be exhausted

Explanation An address could not be allocated from the IP NAT pool. This condition can cause a translation failure and might result in packets being dropped. The counter for missed packets will be incremented.

Recommended Action Determine if the NAT pool has been exhausted. To reuse any existing addresses in the NAT pool for new packet flows, clear the current NAT entries using the **clear ip nat translation** command.

IPNAT-6

Error Message %IPNAT-6-CREATED: [chars]

Explanation A NAT flow entry was created.

Recommended Action No action is required.

Error Message %IPNAT-6-DELETED: [chars]

Explanation A NAT flow entry was deleted.

Recommended Action No action is required.

IPRT Messages

This section contains IP routing (IPRT) messages.

IPRT-4

Error Message %IPRT-4-TRACKOBJECTNONE: Illegal tracking number 0 on static route %i%
%m [%d/0] via %i, table %d, client %d

Explanation The tracking number 0 was assigned to a static route, but 0 is not a legal value.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPSECV6 Messages

This section contains encryption feature messages.

IPSECV6-4

Error Message %IPSECV6-4-PKT_PROTOCOL_MISMATCH: IP protocol in packet mismatched with tunnel mode, packet from [chars] to [chars] dropped by [chars]

Explanation The system tried to send an IPv4 packet into an IPsec IPv6 tunnel, or an IPv6 packet into an IPsec IPv4 tunnel. The tunnel cannot handle this type of packet, and so the packet is dropped.

Recommended Action Modify the tunnel configuration, either by removing the incorrect IP address type from the tunnel interface, or by changing the tunnel mode to match the IP address type.

Error Message %IPSECV6-4-RECV_PKT_NOT_IPSEC: Rec'd packet not an IPSEC packet. (ip) dest_addr=[ipv6_addr], src_addr=[ipv6_addr], prot= [dec]

Explanation A received packet matched the crypto map ACL, but is not IPsec-encapsulated. An IPsec peer is sending unencapsulated packets. There may be a policy setup error on the peer. This activity could be considered a hostile event.

Recommended Action Contact the administrator of the router or host that sent the packet to compare policy settings.

Error Message %IPSECV6-4-RECV_PKT_V6_INV_PROT: decapsulate: packet missing [chars], destadr[ipv6_addr], actual prot=[dec]

Explanation A received IPsec packet is missing an expected AH or ESP header. The peer is sending packets that do not match the negotiated security policy. This activity could be considered a hostile event.

Recommended Action Contact the administrator of the router or host that sent the packet to compare policy settings.

Error Message %IPSECV6-4-RECV_PKT_V6_INV_SPI: decaps: rec'd IPSEC packet has invalid spi for destaddr[ipv6_addr], prot=[dec], spi=[hex]([dec]), srcaddr[ipv6_addr]

Explanation A received IPsec packet specifies SPI that does not exist in SADB. This may be a temporary condition due to slight differences in aging of SAs between the IPsec peers, or it may be because the local SAs have been cleared. It may also be because of invalid packets sent by the IPsec peer. This activity could be considered a hostile event.

Recommended Action If the local SAs have been cleared, the peer may not know this. In this case, if a new connection is established from the local router, the two peers may reestablish successfully. Otherwise, if the problem occurs for more than a brief period, either attempt to establish a new connection or contact the peer's administrator.

Error Message %IPSECV6-4-RECVD_PKT_V6_MSG_LEN_ERR: decapsulate: packet has bad [chars] length destadr[ipv6_addr], prot=[dec], len=[dec]

Explanation A received IPsec packet is malformed, possibly because of an encapsulation error. The peer is sending malformed packets. It may be due to a decryption error. This activity could be considered a hostile event.

Recommended Action Contact the peer's administrator.

IP_SNMP Messages

This section contains IP Simple Network Management Protocol (SNMP) messages.

IP_SNMP-4

Error Message %IP_SNMP-4-NOTRAPIPV6: SNMP trap source %s has no ipv6 address

Explanation The user entered an **snmp-server trap-source** command. The interface requested for use as the source address has no IPv6 address associated with it. The SNMP trap is being sent anyway, but without the source address that the user intended.

Recommended Action Enter a **no snmp-server trap-source** command to disable the request for a specific source IP address, or add an IPv6 address to the interface referenced in the **snmp-server trap-source** configuration command.

IPV6 Messages

This section contains IP version 6 messages.

IPV6-3

Error Message %IPV6-3-(-1): Cannot start the IPv6 process; router will not process IPv6 packets.

Explanation The IPv6 process could not be started. This machine will not be able to process any IPv6 packets.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %IPV6-3-INTERNAL: Internal error, [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPV6-3-INTERNAL_PAK: Internal error ([chars]): [hex] [hex] [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPV6-3-NO_UNIQUE_IDENTIFIER: Cannot determine an unique IPv6 identifier for the system. IPv6 will not be started.

Explanation An unique IPv6 Identifier could not be determined for the system. Therefore the IPv6 process will not be started. This machine will not be able to process any IPv6 packets.

Recommended Action Verify that there is at least one interface in this machine that supports IEEE-style addresses.

Error Message %IPV6-3-RIB: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IPV6-3-UNFRAGMENTABLE: Cannot fragment packet: unfragmentable part length [dec], MTU of [dec]

Explanation An internal software error occurred. A single packet originated by this system could not be fragmented and has been dropped. Normal system operation continues.

Recommended Action This is a transient error. However, this condition indicates other errors in the software that will require further examination by your Cisco technical support representative. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IPV6-4

Error Message %IPV6-4-DUPLICATE_OPTIMISTIC: Duplicate address %P on %s

Explanation You have elected not to run duplicate address detection (DAD), but another system is using your IPv6 address.

Recommended Action Change the IPv6 address of one of the two systems.

Error Message %IPV6-4-LLA_CONFLICT: LLA conflict for static neighbor on [chars] : [chars]

Explanation A neighborhood discovery (ND) message from the specified neighbor carries a link-layer address (LLA) other than the configured address.

Recommended Action Reconfigure the static neighbor with the correct link-layer address.

Error Message %IPV6-4-MAXPDB: Exceeded maximum supported IPv6 Routing Protocol instances

Explanation Configuration of a routing protocol has failed because it would exceed the maximum supported number of routing protocols.

Recommended Action Reduce the number of IPv6 routing protocol instances configured.

IPV6-6

Error Message %IPV6-6-ACCESSLOGSP: list [chars]/[dec] [chars] [chars] [chars]->, [dec] packet[chars]

Explanation A packet matching the log criteria for the given access list was detected.

Recommended Action No action is required.

Error Message %IPV6-4-MULTICAST: Application does not support multicast destination address , packet dropped.

Explanation An internal software error occurred. A multicast destination address was used in an local application which does not yet handle IPv6 multicast.

Recommended Action Use a unicast address in commands on the router. If the problem persists, or you feel the command should support multicast, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IP_VRF Messages

This section contains IP VPN routing/forwarding instance common error (IP_VRF) messages.

IP_VRF-3

Error Message %IP_VRF-3-VRF_CACHE_ADD_ERROR: [chars]

Explanation A cached VRF entry could not be created.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_CACHE_INIT_ERROR: [chars]

Explanation A cached VRF entry could not be initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_CACHE_UPDATE_IF_LIST_FAIL: [chars]

Explanation An update of the cached interface list for VRF failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_CHKPT_TX_FAIL: [chars]

Explanation An attempt to send a VRF table ID checkpoint message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_CMN_INVALID_PARAM: [chars]

Explanation An invalid parameter was used.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_CREATE_FAIL: [chars]

Explanation Creation of an IP VRF has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_ID_INVALID_ERROR: Invalid VRF id [hex] in [chars]

Explanation The VRF ID is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_IPLIST_NOT_EMPTY: VRF [chars] iflist is not empty in [chars]

Explanation The VRF interface list is not empty

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_IVRF_ERROR: [chars]

Explanation A VRF infrastructure failure for platform VRFs occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_MALLOC_FAIL: Memory allocation failure

Explanation Memory could not be allocated for a VRF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_MISSING_NAME_REC: VRF [dec] name record is null [chars]

Explanation VRF name record is null

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_TABLEID_INCONSISTENT: [chars]

Explanation The VRF table ID is inconsistent between two RPs.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IP_VRF-3-VRF_TABLEID_INVALID: [chars]

Explanation The VRF table ID is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IP_VRF-4

Error Message %IP_VRF-4-VRF_DELETE_WAIT: The VRF [chars] is getting deleted after a wait

Explanation There are routes remaining in the deleted VRF routing table. To ensure reusability of the same VRF, the system forcibly clears the routes in the VRF routing table, which causes the VRF to be deleted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ISA Messages

This section contains Integrated Services Adapter (ISA) messages.

Error Message %ISA-1-ALIGN: Alignment failure on packet buffer: [hex]

Explanation A software error has occurred. The ISA driver detected that the buffer is not aligned correctly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISA-1-ERROR: [chars]

Explanation An error occurred in the application using ISA.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISA-6-INFO: [chars]

Explanation This is an informational message from ISA.

Recommended Action This is an informational message only and occurs in normal operation. No action is required.

Error Message %ISA-1-INITDESCRING: Slot [dec]: The ISA driver failed to allocate "descriptor offsets" write_offsets: [hex], read_offsets: [hex], stored_offsets: [hex]

Explanation The ISA driver failed to initialize at the specified point.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISA-1-INITFAIL: Slot [dec]: [chars]

Explanation The ISA driver failed to initialize at the specified point.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISA-1-NOMEMORY: [chars] creation failed for slot [dec]

Explanation The ISA driver, in its initialization phase, could not allocate memory for the specified data structure.

Recommended Action Consider adding more shared memory. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISA-1-OWNER: [chars] packet buffer, pak=[hex]

Explanation A software or hardware error has occurred. The ISA driver detected that the buffer ring is in an inconsistent and unrecoverable state.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISA-6-SHUTDOWN: [chars] shutting down

Explanation The specified ISA is shutting down. It may have been physically removed.

Recommended Action This is an informational message only and occurs in normal operation. No action is required.

Error Message %ISA-1-TOOBIG: [chars] received a packet with size [dec].

Explanation The system has received a packet that is larger than the allowed size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ISSU Messages

This section contains In-Service Software Upgrade (ISSU) messages.

ISSU-3

Error Message %ISSU-3-BAD_PARAMS: %s

Explanation Bad parameters were detected in the ISSU process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-BASE_CLIENT_CHECK_COMPATIBILITY: %s

Explanation An error was found during checking of the ISSU base client compatibility.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-CLIENT_OR_ENTITY_NOT_REG: Client([dec]) or entity([dec]) is not registered [chars].

Explanation The specified client or entity is not registered.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and

utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-CLIENT_REG_DIST: Failed to %s distributed client %d

Explanation A distributed client reservation or unreservation failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-DEBUG_ERROR: [chars]

Explanation An error occurred when turning on ISSU debug.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-DUMMY_ENTRY_NOT_LAST: Dummy cap entry is not last one for cap group([dec]) registration under client([dec]) and entity([dec])

Explanation The dummy cap entry is not the last one for the cap group registration.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-DUMMY_VERSION_OUT_OF_RANGE: Dummy msg version (%d) is out of range for msg(%d) under client %s(%d) and entity(%d).

Explanation The dummy message version is out of range.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu message type | include** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-DUP_DUMMY_VERSION_REG: %s is already registered under client %s(%d), entity(%d), and msgtype(%d)

Explanation The specified item is registered already under that message type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu message type | include** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-DUP_ENTITY_REG: Entity([dec]) is registered already under client([dec])

Explanation The entity is duplicated under the client.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-DUP_ITEM_IN_REG_UNDER_ENTITY: [chars] is duplicated [chars] under client([dec]) and entity([dec])

Explanation Item is duplicated under the client and entity.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-DUP_REG_ENDPOINT: Endpoint is registered already.

Explanation The endpoint is already registered.

Recommended Action Enter the **show issu endpoint** command to check if the ISSU subsystem was initialized twice.

Error Message %ISSU-3-DUP_REG_UNDER_ENDPOINT: [chars]([dec]) is registered already under endpoint.

Explanation The item is already registered under the endpoint.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-DUP_REG_UNDER_ENTITY: [chars]([dec]) is registered already under client([dec]) and entity([dec])

Explanation The item is already registered under the client and entity.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and

utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-EMPTY_DUMMY_VERSION: %s is empty under client %s(%d), entity(%d).

Explanation The dummy version is empty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-EMPTY_UNDER_CLIENT: [chars] is empty under client([dec]).

Explanation The item is empty in the client.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-EMPTY_UNDER_ENDPOINT: [chars] is empty under endpoint.

Explanation The item is empty under the endpoint.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-EMPTY_UNDER_ENTITY: [chars] is empty [chars] under client([dec]) and entity([dec]).

Explanation The item is empty in the client and entity.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-ENDPOINT_NOT_REG: Endpoint is not registered yet.

Explanation The endpoint is not registered yet.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-ERP_AGENT: [chars]

Explanation One of the primary functions for the ERP agent failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-ERP_AGENT_SEND_MSG: [chars]; error code is [chars]

Explanation The send message function call failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-ERP_CLIENT: [chars]

Explanation One of the primary functions for the ERP client failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-ERP_CLIENT_EVENT: Unknown [chars] event - [dec]

Explanation An unknown event was received.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-EXTERNAL_MATRIX_FILE_ERR: Line %u: %s

Explanation An error was found in the external matrix data file.

Recommended Action Open a case with TAC, and attach the output of the **more ivfs:/matrix_cm_file** command, where *matrix_cm_file* is the output of the **dir system:image** command.

Error Message %ISSU-3-FAILED_TO_ALLOC_CHUNK_MEMORY: [chars] type chunk allocation failed.

Explanation A memory allocation has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_DUMMY_VERSION: Can not allocate %s under client %s(%d) and entity(%d)

Explanation The ISSU process could not allocate a dummy version under the client and entity.

Recommended Action Enter the **show proc mem** or **show buffs** command to determine whether the memory or buffer is full, indicating a possible memory leak. To recover, shut down any unused tasks and reset the cards. If these actions do not help, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_ENTITY: Can not allocate entity([dec]) under client([dec])

Explanation Cannot allocate an entity control block under the client.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover a memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_FUNCT_UNDER_ENDPOINT: Can not allocate [chars].

Explanation Cannot allocate the function callback.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover those memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_FUNCT_UNDER_ENTITY: Can not allocate [chars] under client([dec]) and entity([dec])

Explanation Cannot allocate control block under the client and entity.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover a memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_MEMORY: memory allocation for %s failed.

Explanation The ISSU process could not allocate memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_UNDER_ENDPOINT: Can not allocate [chars]([dec]) control block.

Explanation Cannot allocate a control block.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover a memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_UNDER_ENTITY: Can not allocate [chars]([dec]) under client([dec]) and entity([dec])

Explanation Cannot allocate a control block under the client and entity.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover a memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_UNDER_GROUP: Can not allocate [chars]([dec]) for [chars]([dec]) registration under client([dec]) and entity([dec])

Explanation Cannot allocate an item for group registration under the client and entity.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover a memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_UNDER_MSG: Can not allocate [chars] for msg ([dec]) registration under client([dec]) and entity([dec])

Explanation Cannot allocate a control block for message registration.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover a memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_ALLOC_UNDER_MSG_SES: Can not allocate [chars] for msg session([dec]) registration under client([dec]) and entity([dec])

Explanation Cannot allocate a control block for message session registration.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover a memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_CREATE_ID32_SPACE: Failed to create ID32 space.

Explanation Failed to create ID32 space.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover a memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_INIT_ISSU_PROTO: Failed to initialize ISSU proto.

Explanation Failed to initialize the ISSU protocol.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FAILED_TO_UNREG_SES: Failed to unregister [chars] session under client([dec]) and entity([dec])

Explanation Failed to unregister the session.

Recommended Action Enter the **show proc mem** or **show buffs** command to check if memory or buffer is full. Shutting down unused tasks or resetting cards usually can recover a memory leak problem. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FOREIGN_OWNED_FIELDS: %s; err code [%s]

Explanation The transformation of a foreign owned field (FOF) has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FSM_BADMSG: Session [dec] in received message [chars] is wrong.

Explanation Sessions on peers are mismatched or were not found.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FSM_DUP_UID: Duplicate unique_id on session [dec]: my_uid [dec], peer_uid [dec].

Explanation The requirement that each endpoint must have distinctive identifier has been violated.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FSM_INIT: Fail to create process during FSM init.

Explanation Creation of an FSM timer process has failed.

Recommended Action Check what system resources are available during bootup.

Error Message %ISSU-3-FSM_MISMATCH_MTU: ISSU nego failed for client %s(%d) entity_id %d session %d due to mismatch of mtu size %d & %d.

Explanation The ISSU negotiation failed due to a mismatch in the negotiation version MTU size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message types**, and **show issu fsm | include** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FSM_NEGO_SEND_ERR: Client '%s' with ID %d encountered '%s' in session %d.

Explanation The ISSU negotiation message could not be sent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session | include**, and **show issu fsm** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-FSM_RUNTIME_ERR: [chars] occurs during FSM negotiation in session [dec].

Explanation Runtime error occurs during FSM negotiation.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-HANDLE_SIZE: Handle buffer size is %d, should be %d

Explanation A statically defined handle buffer size is incorrect.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-INCOMPATIBLE_BASE_CLIENTS: %s

Explanation This message displays a list of ISSU base clients found to be incompatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-INCOMPATIBLE_PEER_UID: Setting image (%s), version (%s) on peer uid (%d) as incompatible

Explanation The peer client is incompatible.

Recommended Action Synchronize the configurations and reload the standby supervisor.

Error Message %ISSU-3-INCONSISTENT_MSG_TYPE: %s

Explanation A runtime registration error has occurred. Message types passed for foreign owned fields (FOFs) are inconsistent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-IN_USE_UNDER_ENDPOINT: [chars] ([dec]) is in use under endpoint

Explanation Item is in use under the endpoint.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools

and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-IN_USE_UNDER_ENTITY: [chars]([dec]) is in use under client([dec]) and entity([dec])

Explanation Item is in use under the client and entity.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-INVALID_ITEM_UNDER_ENDPOINT: Invalid [chars] under endpoint

Explanation Invalid item under the endpoint.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-INVALID_ITEM_UNDER_ENTITY: Invalid [chars] under client([dec]) and entity([dec])

Explanation Invalid item under the client and entity.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-INVALID_PARAM_UNDER_SESS: Invalid params %s under session(%d)

Explanation Invalid parameters were detected under the session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu session | include** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-INVALID_VERSION_LOWHIGH: Invalid low([dec]) and high([dec]) value for msg([dec]) under client([dec]) and entity([dec]).

Explanation Invalid low and high value for group registration.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-IPC_PORT: Port name '[chars]' failure; reason is '[chars]'.

Explanation Creation or removal of the named port failed for IPC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-ISSU_INIT_NOT_COMPLETE: %s

Explanation ISSU initialization has not been completed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-JID: Failed to get the local process JID with err %d

Explanation The system manager call to collect the job ID has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-MISSING_ITEM_IN_REG: [chars]([dec]) is not available [chars] under client([dec]) and entity([dec])

Explanation Item is not available for registration.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-MSG_NEGO_RESULT_CHUNK: Failed to %s element %x

Explanation The message negotiation result element could not be locked or freed, indicating an invalid element or corrupted memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-MSG_SES_IN_MSG_NOT_FOUND: The intended session %d specified in received %s for client %s(%d) is not found.

Explanation No session could be found with the session ID specified in the received message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu session | include** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NON_ISSU_ID_UNDER_ENDPOINT: Non ISSU [chars]

Explanation Peer endpoint does not support ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NO_PEER_UID: No peer uid found at [chars]

Explanation No peer UID with this value was found registered in the ISSU database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NOT_DUMMY_CAP_TYPE: Cap type([dec]) is not dummy one.

Explanation Cap type is not dummy.

Recommended Action Enter the **show issu cap type | grep cap type** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NOT_FIND_ENTITY: Can not find entity([dec]) under client([dec]).

Explanation Cannot find entity under the client.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NOT_FIND_FUNCT_UNDER_SESSION: Can not find [chars] under [chars] session([dec]).

Explanation Cannot find function under the session.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NOT_FIND_MSG_SES: Can not find message session([dec]) [chars].

Explanation Cannot find message session.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NOT_FIND_UNDER_ENDPOINT: Can not find [chars]([dec]) control block under endpoint.

Explanation Cannot find a control block under the endpoint.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NOT_FIND_UNDER_ENTITY: Can not find [chars]([dec]) control block under client([dec]) and entity([dec]).

Explanation Cannot find a control block under the client and entity.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NOT_FIND_UNDER_SESSION: Can not find [chars]([dec]) under [chars] session([dec]).

Explanation Cannot find item under the session.

Recommended Action Enter the **show issu session | grep session id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NOT_REG_UNDER_ENDPOINT: [chars]([dec]) is not registered under endpoint.

Explanation Item is not registered under the endpoint.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NOT_REG_UNDER_ENTITY: [chars]([dec]) is not registered under client([dec]) and entity([dec])

Explanation Item is not registered under the client and entity.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NO_UID: No uid ([dec]) registered with ISSU at [chars]

Explanation No UID with this value was found registered in the ISSU database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NULL_CALLBACK_UNDER_ENDPOINT: [chars] callback is NULL for registration.

Explanation Callback is NULL for registration.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NULL_CALLBACK_UNDER_ENTITY: [chars] callback is NULL for msg session registration under client([dec]) and entity([dec])

Explanation Callback is NULL for message session registration.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-NULL_CALLBACK_UNDER_SESSION: Can not register null [chars] callback in [chars] session([dec]).

Explanation Cannot register NULL callback in the session.

Recommended Action Enter the **show issu session | grep session id** and **show issu fsm | grep session id** commands. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-PEER_IMAGE_INCOMPATIBLE: Peer image (%s), version (%s) on peer uid (%d) is incompatible

Explanation The peer client is incompatible.

Recommended Action Synchronize the configurations and reload the standby supervisor.

Error Message %ISSU-3-PEER_IMAGE_NOT_IN_INCOMP_LIST: Peer image (%s), version (%s) on peer uid (%d) is not in the incompatible images list

Explanation The peer client is incompatible.

Recommended Action Synchronize the configurations and reload the standby supervisor.

Error Message %ISSU-3-PEER_IMAGE_REM_FROM_INCOMP_LIST: Peer image (%s), version (%s) on peer uid (%d) being removed from the incompatibility list

Explanation The peer client is incompatible.

Recommended Action Synchronize the configurations and reload the standby supervisor.

Error Message %ISSU-3-PEER_INCOMP_SET: Peer incompatibility set for image (%s), version (%s) on peer uid (%d)

Explanation The peer client is incompatible.

Recommended Action Synchronize the configurations and reload the standby supervisor.

Error Message %ISSU-3-PEER_UID_CB_IS_NULL: Peer uid control block is NULL

Explanation The peer client is incompatible.

Recommended Action Synchronize the configurations and reload the standby supervisor.

Error Message %ISSU-3-PROTO_CLIENT_ENTITY_UNREG: Proto Client entity unreg for [chars] has failed

Explanation A protocol client has failed to unregister its entity with ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-PROTO_CLIENT_REG: Proto Client registration for [chars] has failed

Explanation Protocol client has failed to register with ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-REF_TREE: %s reference tree %s failed

Explanation The AVL-based ISSU reference tree operation failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-SESSION_ID_ERROR: Failed to %s session id %d for %s

Explanation A session ID related operation failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-SESSION_RENEGOTIATE: Client Attempting to renegotiate on session [dec]

Explanation A client is attempting to renegotiate a session without unregistering it and doing the negotiation over again. This is not allowed.

Recommended Action Unregister the message session first, and then reregister and attempt the negotiation.

Error Message %ISSU-3-SET_UNKNOWN_UID: Unknown unique_id is set.

Explanation Platform team should provide distinctive identifier for the endpoint.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-TRANSPORT_ERP_UID_CB_IS_NULL: Transport ERP uid control block is NULL

Explanation The peer client is incompatible.

Recommended Action Synchronize the configurations and reload the standby supervisor.

Error Message %ISSU-3-UNKNOWN_ENTITY_ID: Unknown entity id under client([dec])

Explanation There is an unknown entity ID under the specified client.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-UNKNOWN_ID_UNDER_ENDPOINT: Can not use unknown [chars].

Explanation Cannot use the specified unknown ID.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-UNKNOWN_ID_UNDER_ENTITY: Unknown [chars] under client([dec]) and entity([dec])

Explanation Unknown ID under the specified client and entity.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug

Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-VERSION_LOWHIGH_NOT_MATCH_TABLE_SIZE: Version low([dec]) and high([dec]) value for msg([dec]) does not match table size([dec]) under client([dec]) and entity([dec]).

Explanation Version low and high values for the specified message do not match the specified table size.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-VERSION_OUT_OF_ORDER: Msg version([dec],[dec]) is out of order for msg([dec]) under client([dec]) and entity([dec]).

Explanation The specified message version is out of order for the specified group registration.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-3-VERSION_OUT_OF_RANGE: Msg version([dec],[dec]) is out of range for msg([dec]) under client([dec]) and entity([dec]).

Explanation The specified message version is out of range for the specified group registration.

Recommended Action Enter the **show issu client | grep client id** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require

assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ISSU-4

Error Message %ISSU-4-FSM_INCOMP: Version of local ISSU client [dec] in session [dec] is incompatible with remote side.

Explanation The protocol versions of the local and remote clients are incompatible. These clients cannot communicate with each other.

Recommended Action Use the **show version** and **show issu clients** commands to help verify that the software images are incompatible. Upgrade the software images on each unit to versions that are compatible. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-4-MSG_INCOMP: Message([dec]) is incompatible under msg session([dec]).

Explanation The specified message is incompatible under the specified message session.

Recommended Action Enter the **show issu session | grep session id** and **show issu fsm | grep session id** commands. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU-4-NEGO_NOT_FINISHED: Negotiation is not finished for client [dec], msg session([dec]).

Explanation Negotiation is not finished for the specified client and message session.

Recommended Action Enter the **show issu session | grep session id** and **show issu fsm | grep session id** commands. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ISSU_CS Messages

This section contains ISSU configuration synchronization messages.

ISSU_CS-3

Error Message %ISSU_CS-3-BULK_CONFIG_TR: [chars] [chars]

Explanation ISSU bulk configuration synchronization transformation failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_CS-3-DL: [chars] [chars]

Explanation The ISSU configuration synchronization difference list is displayed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_CS-3-DL_STATS: [chars] [dec] [chars]

Explanation ISSU configuration synchronization difference list statistics are displayed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_CS-3-LBL_CONFIG_TR: [chars] [chars]

Explanation ISSU line-by-line configuration synchronization transformation failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_CS-3-SKL: [chars] [chars]

Explanation An ISSU configuration synchronization SKL operation failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ISSU_CS_DL_MESSAGES Messages

This section contains ISSU configuration synchronization difference list messages.

ISSU_CS_DL_MESSAGES-3

Error Message %ISSU_CS_DL_MESSAGES-3-DL_CLI_DUMP: [chars] [dec] [chars] [dec] [chars]

Explanation ISSU configuration synchronization difference list CLI generation statistics are displayed.

Recommended Action No action is required.

ISSU_ERROR Messages

This section contains ISSU error messages.

ISSU_ERROR-2

Error Message %ISSU_ERROR-2-CLIENT_INCOMPATIBLE: %s(%d): ISSU Client not compatible

Explanation The ISSU client is incompatible with the current version.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-2-NEGO_NOT_DONE: %s(%d): ISSU Negotiation not complete

Explanation The ISSU client was unable to complete ISSU negotiation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-2-NTI_EP_TYPE_REG: %s(%d): Failed to register EP type (%d) with NTI: %s (%d)

Explanation The ISSU client could not register the endpoint (EP) type with the Negotiation Trigger Infrastructure (NTI).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-2-NTI_EP_TYPE_UNREG: %s(%d): Failed to unregister EP type (%d) with NTI: %s (%d)

Explanation The ISSU client could not unregister the endpoint type with NTI.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-2-NTI_REG: %s(%d): Failed to register with NTI: %s (%d)

Explanation The ISSU client could not register with NTI.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-2-NTI_UNREG: %s(%d): Failed to unregister with NTI: %s (%d)

Explanation The ISSU client could not be unregistered with NTI.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ISSU_ERROR-3

Error Message %ISSU_ERROR-3-CAPENTRY_REG: %s(%d): failed to register a capability entry (%s)

Explanation The ISSU client failed to register a capability entry.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-CAPGROUP_REG: %s(%d): failed to register a capability group (%s)

Explanation The ISSU client failed to register a capability group.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-CAPTYPE_REG: %s(%d): failed to register capability type (%s)

Explanation The ISSU client failed to register a capability type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-CAP_EXCHANGE: %s(%d): Capability exchange failed with error (%s)

Explanation The capability exchange failed and the ISSU client is unable to process the received capability.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-CAP_REG: %s(%d): failed to register its capabilities (%s)

Explanation The capabilities of the ISSU client could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-CF_SEND: %s(%d): Client failed to send message (%d)

Explanation The ISSU client cannot send a negotiation message to a peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-CLIENT_REG: %s(%d): Client failed to register (%s)

Explanation The ISSU client could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-CLIENT_REG_FAILED: %s(%d): Client is not initialized

Explanation The ISSU client is not initialized. The negotiation for this client is not yet done.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-ENTITY_REG: %s(%d): failed to register the entity (%s)

Explanation The ISSU entity could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-ENTITY_UNREG: %s(%d): failed to unregister the entity (%s)

Explanation The ISSU entity could not be unregistered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-ICC_SEND: %s(%d): Client failed to send message

Explanation The ISSU client cannot send a negotiation message to a peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-MSGGROUP_REG: %s(%d): failed to register a message group (%s)

Explanation The ISSU client cannot register a message group.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-MSGTYPE_REG: %s(%d): failed to register a message type (%s)

Explanation The ISSU client cannot register a message type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-MSG_MTU: %s(%d): Client failed to get mtu for message %d (%s)

Explanation The ISSU client cannot get the MTU for the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-MSG_NOT_OK: %s(%d): ISSU message type (%d) is not compatible

Explanation The ISSU process received a message not compatible with the running version.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show message type** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-MSG_POLICY: %s(%d): Client failed to negotiate version for message type (%d), error (%s)

Explanation The ISSU client cannot negotiate the message type with a peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-MSG_REG: %s(%d): failed to register its messages (%s)

Explanation Messages for the ISSU client could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-MTU_NOT_ENOUGH: %s(%d): Requested buffer size (%d) is greater than the max MTU size (%d)

Explanation The checkpoint buffer size requested is greater than the maximum MTU size supported by the checkpoint feature.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-NEGO_PROCESS: %s(%d): Cannot create process: %s

Explanation The process to negotiate the session for the specified ISSU client cannot be created.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-REG_ARBITRATE_CALLBACK: %s(%d): Failed to register first speaker arbitration callback - %s)

Explanation The ISSU client could not register the first speaker arbitration callback.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-SESSION_REG: %s(%d): session failed to register (%s)

Explanation The client's ISSU session could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-SESSION_UNREG: %s(%d): session (%d) failed to unregister (%s)

Explanation The client's ISSU session could not be unregistered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-START_NEGO_FAILED: %s(%d): failed to start negotiation (%s)

Explanation The ISSU client cannot start its negotiation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-TRANSFORM_FAILED: %s(%d): %s transformation failed (%s)

Explanation The transformation operation for the ISSU message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_ERROR-3-TRANSFORM_FAILED_DETAILED: %s(%d): %s transformation failed for message %d, endpoint %d (%s)

Explanation The transformation operation for the ISSU message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ISSU_PROCESS Messages

This section contains ISSU process messages.

ISSU_PROCESS-3

Error Message %ISSU_PROCESS-3-ABORTVERSION: issu loadversion; %s

Explanation The ISSU **abortversion** command can be run only from the LoadVersion or RunVersion ISSU state.

Recommended Action Reinitialize the ISSU process.

Error Message %ISSU_PROCESS-3-ACCEPTVERSION: issu acceptversion; %s

Explanation The ISSU **acceptversion** command did not execute because one of the following conditions was not met:

- The active supervisor was not in the RunVersion ISSU state.
- The active supervisor's ROMMON does not contain the current version.
- The active supervisor's ROMMON does not contain the primary version.
- The primary and current versions are not the same.
- The standby supervisor's ROMMON does not contain the current version.
- The standby supervisor's current and primary image names are different.
- The active supervisor does not have the secondary version.
- The active's secondary version and the standby's current version are different.

Recommended Action Correct the condition and retry the command.

Error Message %ISSU_PROCESS-3-COMMITVERSION: issu commitversion; %s

Explanation The ISSU **commitversion** command did not execute because one of the following conditions was not met:

- The current ISSU state is not RunVersion.
- The secondary version does not exist on the standby supervisor.
- The standby BOOT variable does not exist.
- The new image is not the first in BOOT on the standby supervisor.
- The active BOOT variable is not set.
- The primary version does not exist on the active supervisor.
- The new image is not the first in the active BOOT.
- The configuration register is not 0x2102.

Recommended Action Correct the error condition and retry the command.

Error Message %ISSU_PROCESS-3-CONFIGREG: ISSU process is in progress; Changing configuration register might disrupt the upgrade process

Explanation The configuration register value should not be changed while the ISSU process is in progress.

Recommended Action The low-order byte of the configuration register should be 0x02 during the upgrade process.

Error Message %ISSU_PROCESS-3-FILESYS: '[chars]' filesystem does not exist

Explanation Verification of the file system failed.

Recommended Action Download the file to the flash disk.

Error Message %ISSU_PROCESS-3-IMAGE: %s is loading the wrong image [%s], expected image [%s]

Explanation The wrong image is being loaded during the ISSU process.

Recommended Action Check the detail state of the ISSU process and make sure that the correct images are loaded on the active and standby supervisors.

Error Message %ISSU_PROCESS-3-IPC_AGENT: [chars] [[chars]]

Explanation The ISSU process IPC agent had an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_PROCESS-3-IPC_MSG: %s

Explanation An error occurred in the setup of the interprocess communication (IPC) message queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_PROCESS-3-LOADVERSION: %s

Explanation The ISSU **loadversion** command did not execute because one of the following conditions was not met:

- The standby device is not yet in the HOT state.
- The active or standby device's unit ID is wrong.
- The ISSU process is not in the INIT state.
- The active or standby image does not exist in flash memory.
- The active and standby image names are not the same.
- The configuration register value is not 0x2102.

Recommended Action Correct the error condition and retry the command.

Error Message %ISSU_PROCESS-3-NVRAM: [chars]

Explanation NVRAM variables are not set properly.

Recommended Action The ISSU commands or the hardware module command did not set the variables properly. Fix the error and retry the command.

Error Message %ISSU_PROCESS-3-PARAMETERS: [chars] ([chars]) parameters are wrong

Explanation The system could not be configured for ISSU.

Recommended Action Fix the error and retry the command.

Error Message %ISSU_PROCESS-3-PEER: %s

Explanation The ISSU process cannot continue with negotiation because it cannot verify the peer's state.

Recommended Action Make sure the peer is present and try again. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show version**, and **show issu state** commands and your pertinent troubleshooting logs.

Error Message %ISSU_PROCESS-3-PRST: %s

Explanation The specified persistent variables are not set properly.

Recommended Action Check the ISSU commands and the **hw-module** command to determine whether the specified variables are set properly.

Error Message %ISSU_PROCESS-3-RF: [chars] [[chars]]

Explanation The ISSU process RF client had an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_PROCESS-3-ROLLBACK_TIMER: [chars]

Explanation The rollback timer could not be configured.

Recommended Action Fix the error and retry the command.

Error Message %ISSU_PROCESS-3-RUNVERSION: issu runversion; %s

Explanation The ISSU **runversion** command did not execute because one of the following conditions was not met:

- The standby device is not in the RF STANDBY HOT state.
- The current ISSU state is not LoadVersion.
- The primary version image does not exist in the active supervisor's ROMMON.
- The configuration register value is not 0x2102.
- The ISSU state could not be set to RunVersion.

Recommended Action Correct the error condition and retry the command.

Error Message %ISSU_PROCESS-3-SYSTEM: [chars]

Explanation The system could not be configured for ISSU.

Recommended Action Correct the error condition and retry the command.

Error Message %ISSU_PROCESS-3-TRANSFORM: [chars] [[chars]]

Explanation The ISSU process transform utility had an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ISSU_PROCESS-3-UAM: %s

Explanation An unexpected return code failure was received from the Upgrade Analysis Module (UAM).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ISSU_PROCESS-7

Error Message %ISSU_PROCESS-7-DEBUG: %s

Explanation This message displays debug commands for the ISSU process. The system is attempting to recover from an unknown error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show logging** commands and your pertinent troubleshooting logs.

ISSU_PROXY Messages

This section contains ISSU proxy messages.

ISSU_PROXY-3

Error Message %ISSU_PROXY-3-ISSU_PROXY_TIMEOUT: ICC Timed Out after waiting for %dsecs.

Explanation The ISSU proxy on the route processor initiated an asynchronous intercard communication (ICC) call to the switch processor to perform an ISSU command. This call did not return within the wait period.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IXP_MAP Messages

This section contains ESF network processor client mapper (IXP_MAP) messages.

IXP_MAP-3

Error Message %IXP_MAP-3-ATOM: [chars] error detected: [chars] [chars] [hex] [hex]

Explanation A software programming error for the ATOM ESF network processor client mapper was detected.

Recommended Action This software programming error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition. If the error persists, reset the affected device. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-DROP_BLOCK: [chars] error detected - [hex] [hex] [dec] [dec]

Explanation An error was detected during the processing of ESF network processor drop block allocations.

Recommended Action This is a software programming error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-EXMEM: [chars] [chars] error detected - [chars] ([dec])

Explanation An error was detected managing the external memory of a network processor.

Recommended Action This is a software programming error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-HQF: [chars] error detected: [chars] [chars] [hex] [hex]

Explanation A software programming error for the HQF ESF network processor client mapper was detected.

Recommended Action This software programming error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition. If the error persists, reset the affected device. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-INITFAIL: Initialization Failed - [chars]: [chars] [chars]

Explanation Memory needed to service one or more network processors could not be initialized.

Recommended Action Try to reload the Cisco IOS image on the affected card or platform. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-INTF: [chars] error detected: [chars] [chars] [hex] [hex]

Explanation A software programming error for the interface ESF network processor client mapper was detected.

Recommended Action This software programming error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition. If the error persists, reset the affected device. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-LOCK_BLOCK: [chars] error detected - [hex] [dec] [dec] [dec]

Explanation An error was detected during the processing of ESF network processor lock bit allocations.

Recommended Action This is a software programming error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-LOCK_LIST: [chars] error detected - [hex] [dec] [dec] [dec]

Explanation An error was detected during the processing of ESF network processor lock bit allocations.

Recommended Action This is a software programming error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-MAXEXCEED: ESF NP Mapper Max Services Exceeded - [chars]: [chars] [dec]

Recommended Action Change the configuration to reduce the number of services configured. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-MPLSOGRE: [chars] error detected: [chars] [chars] [hex]
[hex]

Explanation A software programming error for the MPLSOGRE ESF network processor client mapper was detected.

Recommended Action This software programming error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition. If the error persists, reset the affected device. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-NOMEM: Memory Allocation Failure - [chars] : [chars] ([hex])

Explanation Memory required to service one or more network processors could not be allocated.

Recommended Action This error may indicate that more memory must be installed on the affected card or platform to service all the features and related entities enabled by the configuration. Attempt to reload the Cisco IOS image on the affected card or platform. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-NOMEM_S: Memory Allocation Failure - [chars]: [chars]
[chars]

Explanation Memory required to service one or more network processors could not be allocated.

Recommended Action This error may indicate that more memory must be installed on the affected card or platform to service all the features and related entities enabled by the configuration. Attempt to reload the Cisco IOS image on the affected card or platform. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages,

these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-NOTFOUND: ESF NP Client Mapper - [chars]: [chars] [hex]

Explanation The ESF network processor client mapper could not locate a required software element.

Recommended Action Try to reload the Cisco IOS image on the affected card or platform. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-NPUNKNOWN: Unsupported NP - [chars]: [chars] [chars]

Explanation An unsupported network processor has been detected.

Recommended Action Verify that the correct Cisco IOS image is loaded on the affected card or platform for the configured features. If the error persists,

Recommended Action Verify that the correct Cisco IOS image is loaded on the affected card or platform for the configured features. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-QOS: [chars] error detected: [chars] [chars] [hex] [hex]

Explanation A software programming error for the QOS ESF network processor client mapper was detected.

Recommended Action This software programming error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition. If the error persists, reset the affected device. Copy the message exactly as it appears on the console or in

the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-QOS_CONFIG: [chars] error detected: [chars] [chars] [hex] [hex]

Explanation A configuration error for the QoS ESF network processor client mapper was detected. This configuration error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition.

Recommended Action Change the configuration to correct the QoS ACL configuration problem. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-STATS_BLOCK: [chars] error detected - [hex] [hex] [dec] [dec] [dec]

Explanation An error was detected during the processing of ESF network processor statistics block allocations.

Recommended Action This is a software programming error. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-4-STUCK: Client ID([hex], [hex]) not ready on [chars]

Explanation During reset of the ESF network processor, one or more network processor clients had not completed stop processing.

Recommended Action The system should still operate normally, however, statistics or state collected before the ESF network processor was reset may have been lost. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-TTFIB: [chars] error detected: [chars] [chars] [hex] [hex]

Explanation A software programming error for the VPLS ESF network processor client mapper was detected.

Recommended Action This software programming error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition. If the error persists, reset the affected device. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-VPLS: [chars] error detected: [chars] [chars] [hex] [hex]

Explanation A software programming error for the VPLS ESF network processor client mapper was detected.

Recommended Action This software programming error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition. If the error persists, reset the affected device. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-3-WRED: [chars] error detected: [chars] [chars] [hex] [hex]

Explanation A software programming error for the WRED ESF network processor client mapper was detected.

Recommended Action This software programming error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition. If the error persists, reset the affected device. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

IXP_MAP-4

Error Message %IXP_MAP-4-IPC_FAIL: ESF IPC Command failed - [chars] NP=[chars] (cmd=[dec] me=[dec] rc=[dec])

Explanation An IPC command sent to the ESF network processor has failed.

Recommended Action This error indicates a possible problem with the network processor hardware or microcode. Reload the affected hardware to clear the condition. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %IXP_MAP-4-QUEUE_LIMIT_EXCEED: Warning: Line card default queue-limit exceeds the maximum transmit packet buffers ([dec]). To ensure high priority traffic is not dropped, apply a QoS policy on each interface and adjust the queue-limit so that the total of the queue-limits on this line card is less than the maximum transmit packet buffers.

Explanation An error for the HQF ESF network processor client mapper was detected. The total of the default queue limits exceeds the maximum transmit packet buffers for this line card. Under high-traffic conditions, the line card may run out of packet buffers and drop high-priority traffic.

Recommended Action This configuration error is not considered fatal to the operation of the ESF network processors. The software is designed to detect and report the error condition. Apply the QoS policy configuration in the output direction of each interface. Adjust the queue limit so that the total of the queue limits on this line card is less than the maximum transmit packet buffers. If this message

recurs, copy the message exactly as it appears on the console or in the system log. Enter the **show policy-map interface** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

KEYMAN Messages

This section contains key string encryption (KEYMAN) messages.

KEYMAN-4

Error Message %KEYMAN-4-KEYSTR_BAD_CRYPT0: Bad encrypted keystring for key id [dec].

Explanation The system could not successfully decrypt an encrypted key string. The key string may have been corrupted during system configuration.

Recommended Action Reenter the key string command, and reconfigure the key string.

Error Message %KEYMAN-4-KEYSTR_CRYPT0_TYPE: Type [dec] encryption unknown.
Interpreting keystring as literal

Explanation The system does not recognize the format type. A key string format type value of 0 (unencrypted key string) or 7 (hidden key string), followed by a space, can precede the actual key string to indicate its format. An unknown type value will be accepted, but the system will consider the key string as being unencrypted.

Recommended Action Use the correct format for the value type or remove the space following the value type.

KEYSTORE_SP Messages

This section contains keystore (KEYSTORE) messages.

KEYSTORE_SP-3

Error Message %KEYSTORE_SP-3-HW_BAD_EEPROM_ERR: Bad EEPROM cell reported in hardware keystore.

Explanation A cell in the keystore EEPROM has failed. Write operations are not producing correct results.

Recommended Action Report this error to your Cisco technical support representative and arrange to have the hardware keystore on the supervisor card replaced.

LANMGR Messages

Error Message %LANMGR-4-BADRNGNUM: Ring number mismatch on [chars], shutting down the interface

Explanation The router detected a conflict in assigned ring numbers for the specified Token Ring. The Ring Parameter Server (RPS) function was shut down to prevent potentially incorrect information from being sourced onto the ring.

Recommended Action Check all bridges connected to this Token Ring and ensure that they are using the same assigned ring number.

L2 Messages

This section contains Layer 2 (L2) messages.

L2-3

Error Message L2-3-DUP_REG: L2 Forwarding Engine: [chars] Attempt to program duplicate MAC address

Explanation There was an attempt to program a duplicate MAC address in the match registers. [chars] indicates the source of the attempt.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L2_AGING Messages

This section contains Layer 2 aging (L2_AGING) messages.

L2_AGING-2

Error Message %L2_AGING-2-DEC_EN_FAIL: Failed to initialize Distributed EtherChannel

Explanation One or more resources that are required for the distributed EtherChannel operation are in use.

Recommended Action Remove the monitor session reserved for service modules by entering the **no monitor session service module** command, and then try to reinitialize the operation.

Error Message %L2_AGING-2-MALLOC_FAIL: [chars]: Failed to allocate memory for bitlist

Explanation There was no memory available to create the bit list.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L2_AGING-2-SIG_INST_FAIL: [chars]: Failed to install signal handler

Explanation A signal handler could not be installed for a process that involves Layer 2 aging.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L2_APPL Messages

This section contains Layer 2 application (L2_APPL) messages.

L2_APPL-0

Error Message %L2_APPL-0-TASK_SPAWN_FAIL: Failed to spawn task "[chars]"

Explanation The specified initializing task failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L2_APPL-4

Error Message %L2_APPL-4-MAC_MOVE: Host [enet] is flapping between port [chars] and port [chars]

Explanation A host is going up and down between ports.

Recommended Action Examine the network for possible loops.

Error Message %L2_APPL-4-MAC_USAGE: MAC usage is currently [dec]%

Explanation MAC usage is exceeded for the Layer 2 monitoring feature.

Recommended Action No action is required.

Error Message %L2_APPL-4-UNKMESG: Unknown received message [dec]

Explanation An internal error occurred. There might be a mismatch between image versions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L2_ASIC Messages

This section contains Layer 2 forwarding engine messages.

L2_ASIC-0

Error Message %L2_ASIC-0-FATAL_INTR: L2 Forwarding Engine: fatal interrupt: int status [hex],
int mask [hex]

Explanation Critical interrupts indicate that EARL may no longer be functioning.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L2_ASIC-1

Error Message %L2_ASIC-1-SCP_Q_CREATE_FAIL: Failed to create L2 Forwarding Engine SCP queue

Explanation SCP queue creation has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L2_ASIC-1-TASK_CREATE_FAIL: Failed to create L2 Forwarding Engine fatal interrupt patch task

Explanation A task creation failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L2_ASIC-1-THRO_RES_ALLOC_FAIL: Failed to allocate throttle resource

Explanation Throttle resource allocation has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L2_ASIC-2

Error Message %L2_ASIC-2-L2L3_SEQ_ERR: L2 Seq #[hex], L3 Seq #[hex], L2L3 Mismatch seq #[hex]

Explanation A Layer 2 forwarding engine Layer 2-to-Layer 3 sequence error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L2_ASIC-2-PARITY_ERR: L2 Forwarding Engine: parity intr #[dec]: address [hex], Data: [hex], [hex], [hex], [hex]

Explanation A parity error was detected while accessing the forwarding table.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L2_ASIC-2-RESET_LC: Resetting the linecard [dec]. Error code [dec]

Explanation Failed to receive an SCP response or received a response with a status of not-ok.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L2_ASIC-2-SEQ_ERR: [chars] seq. error: Seq #[hex], Intr. status #[hex], Cntrl1 #[hex], Cntrl2 #[hex]

Explanation A Layer 2 forwarding engine sequence error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L2_ASIC-4

Error Message %L2_ASIC-4-INV_MSG: Received [chars] message from slot [dec]

Explanation A message was received from an invalid line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L2_ASIC-4-INV_REG: L2 Forwarding Engine: Attempt to [chars] invalid register

Explanation An internal error has occurred. An attempt was made to read or write to an invalid Layer 2 forwarding engine register.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L2TP Messages

This section contains Layer 2 Tunneling Protocol (L2TP) messages.

L2TP-3

Error Message %L2TP-3-CRITICAL: %s

Explanation An critical event was processed by the Layer 2 Tunneling Protocol (L2TP) subsystem.

Recommended Action No action is required.

Error Message %L2TP-3-ILLEGAL: %s: %s

Explanation An illegal event was processed by the Layer 2 Tunneling Protocol (L2TP) subsystem.

Recommended Action No action is required.

L2TP-5

Error Message %L2TP-5-IGNOREICMPMTU: Ignoring received ICMP Type 3 Code 4, due to pmtu min or max setting

Explanation An ICMP Type 3 Code 4 packet has been received, indicating that fragmentation is needed, but the 'don't fragment' (DF) bit is set. This packet has specified a next-hop MTU that is smaller or greater than the current minimum or maximum path MTU discovery MTU value. The ICMP packet was ignored and the MTU has not been changed.

Recommended Action To allow the ICMP packet to be accepted and used to decrease or increase the MTU, enter the **vpdn pmtu min** command to decrease the minimum MTU allowed and enter the **vpdn pmtu max** command to increase the maximum MTU that is allowed. The minimum value specified is the minimum MTU that is allowed, and the maximum value specified is the maximum MTU that is allowed.

L2TUN Messages

This section contains Layer 2 Tunneling Protocol (L2TUN) messages.

L2TUN-3

Error Message %L2TUN-3-ILLEGAL: %s

Explanation An illegal event was processed by the Layer 2 Tunneling (L2TUN) subsystem.

Recommended Action No action is required.

L2_MMC Messages

This section contains Layer 2 MAC move counter (L2_MMC) messages.

L2_MMC-3

Error Message %L2_MMC-3-TASK_SPAWN_FAIL: L2 MMC process cannot be created

Explanation The Layer 2 MAC move counters (MMC) process cannot be created.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L2_MMC-4

Error Message %L2_MMC-4-MMC_FIRST: MAC Move(s) are detected

Explanation The feature is enabled and the first MAC move(s) have been detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L2_MMC-4-MMC_MAX: Maximum limit for MAC move counters exceeded for vlan %d

Explanation The maximum limit has been exceeded for MAC move counters (MMC) on the specified VLAN.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L3_ASIC Messages

This section contains Layer 3 CEF engine messages.

L3_ASIC-1

Error Message %L3_ASIC-1-ERR_NF_PARITY: Netflow table parity error can't be fixed by software.

Explanation NetFlow table parity errors are too many to be fixed by software.

Recommended Action Reload the system. If the messages continue for the same module after a reload, contact your Cisco technical support representative and provide the output of the **show module** command to obtain a replacement for that module.

L3_ASIC-4

Error Message %L3_ASIC-4-ERR_INTRPT: Interrupt [chars] occurring in L3 CEF Engine.

Explanation An error interrupt is occurring for the Layer 3 CEF engine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show earl status** command on the consoles of the switch supervisor and any DFC-enabled line cards to gather data that may help identify the cause of the error. Research and attempt to resolve

the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L3_COMMON Messages

This section contains Layer 3 common ISSU messages.

L3_COMMON-3

Error Message %L3_COMMON-3-ERROR: %s

Explanation An error has occurred in the Layer 3 in-service software upgrade (ISSU) process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L3_MGR Messages

This section contains Layer 3 manager messages.

L3_MGR-3

Error Message %L3_MGR-3-ERROR: %s: %s

Explanation An error has occurred in the Layer 3 in-service software upgrade (ISSU) process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L3_MGR_ISSU Messages

This section contains Layer 3 in-service software upgrade (ISSU) manager messages.

L3_MGR_ISSU-3

Error Message %L3_MGR_ISSU-3-ERROR: %s: %s

Explanation An error has occurred in the Layer 3 ISSU manager process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L3MM Messages

This section contains Layer 3 Mobility Manager (L3MM) messages.

L3MM-4

Error Message %L3MM-4-AP_DB_ADD: Failed to add AP to DB { AP: [enet], [IP_address]}

Explanation The L3MM failed to add the entry for the specified access point (AP) into the AP database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L3MM-4-AP_DB_DEL: Failed to delete AP from DB { AP: [enet], [IP_address]}

Explanation The L3MM failed to delete the entry for the specified AP from the AP database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L3MM-4-DUP_AP_IPADDR: AP [enet] is requesting ip [IP_address] which is being used by another AP

Explanation The L3MM detected that an access point requested an IP address that is being used by another access point in the network.

Recommended Action Change the IP address of one of the two access points.

Error Message %L3MM-4-DUP_IPADDR: MN [enet] is requesting ip [IP_address] which is being used by MN [enet]

Explanation The L3MM detected that a mobile node requested an IP address that is being used by another mobile node in the network.

Recommended Action Change the IP address of one of the two mobile nodes.

Error Message %L3MM-4-INIT_FAIL: Initialization failure; reason: [chars]

Explanation The L3MM failed to initialize due to the specified reason.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L3MM-4-MALLOC_FAIL: Memory allocation failure [chars]

Explanation The L3MM failed to allocate memory that was needed to perform an operation or to respond to an event.

Recommended Action Increase the memory on the router processor of the supervisor engine.

Error Message %L3MM-4-MN_IPDB_ADD: Failed to add MN to MN DB { MN: [enet], [IP_address] }

Explanation The L3MM failed to add the entry for the specified mobile node into the mobile node IP database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L3MM-4-MN_IPDB_DEL: Failed to delete MN from IP DB { MN: [enet], [IP_address] }

Explanation The L3MM failed to delete the entry for the specified mobile node from the mobile node IP database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L3MM-4-MN_MACDB_ADD: Failed to add MN to MAC DB { MN: [enet], AP: [IP_address] }

Explanation The L3MM failed to add the entry for the specified mobile node into the mobile node MAC database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %L3MM-4-MN_MACDB_DEL: Failed to delete MN from MAC DB { MN: [enet], [IP_address], AP: [IP_address], WNID: [dec] }

Explanation The L3MM failed to delete the entry for the specified mobile node from the mobile node MAC database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

L3MM-5

Error Message %L3MM-5-WLAN: Wireless LAN Module in slot [dec] is [chars]

Explanation The L3MM detected a change in the state of the wireless LAN module in the specified slot. If the module is now on line, the L3MM starts accepting access-point and mobile-node registrations from the WDS on the module. If the module is now off line, the L3MM purges all access points and mobile nodes received from the module.

Recommended Action No action is required.

Error Message %L3MM-5-WLAN_COMM_ABORT: Communication with Wireless LAN Module in slot [dec] aborted ([chars])

Explanation The L3MM detected a communication failure with the wireless LAN module specified in the error message above. The L3MM will respond by purging its access point and mobile node databases as if the module went offline. However, the module will not be reset by the L3MM.

Recommended Action No action is required.

Error Message %L3MM-5-WLAN_PWR_DN: Wireless LAN Module in slot [dec] will be powered down, another module is already active

Explanation The L3MM detected a wireless LAN module trying to come online, while another module was already functional as the active wireless LAN module. The L3MM does not support more than one wireless LAN module on line in the chassis at a given time, which is why this module will be powered down.

Recommended Action No action is required.

L3TCAM Messages

This section contains Layer 3 TCAM Manager (L3TCAM) messages.

L3TCAM-3

Error Message %L3TCAM-3-SIZE_CONFLICT: [chars] requires enabling extended routing

Explanation The TCAM entry has not been configured to enable extended routing. In order to support this feature, it is required that the TCAM entry be configured to enable extended routing.

Recommended Action Modify the Switch Database Management template so that the switch is enabled to support the 144-bit Layer 3 TCAM. Enter the **sdm prefer extended-match**, **sdm prefer access extended-match**, or **sdm prefer routing extended-match** global configuration command, then reload the switch by entering the **reload** privileged EXEC command.

Error Message %L3TCAM-3-TOO_MANY_VRF: Exceed the maximum number of VRF allowed

Explanation The number of VPNs has exceeded the maximum number of VPNs that are allowed in the VPN routing and forwarding table on this hardware platform.

Recommended Action Reconfigure your switch to limit the number of VRFs. Do not define more than seven VRFs when you are entering the **ip vrf vrf-name** command, with *vrf-name* being the name of the VRF instance, in global configuration mode.

LACP Messages

This section contains Link Aggregation Control Protocol (LACP) messages.

LACP-4

Error Message %LACP-4-MULTIPLE_NEIGHBORS: Multiple neighbors detected on %s

Explanation The Link Aggregation Control Protocol (LACP) detected multiple neighbors on the specified interface.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LAPB Messages

This section contains line card Link Access Procedure, Balanced (LAPB) messages.

Error Message %LAPB-2-NOBUF: Interface [chars], no buffer available to [chars]

Explanation There was insufficient memory for the LAPB protocol engine to send a message.

Recommended Action This message is acceptable if it occurs infrequently, because the LAPB protocol is designed to handle loss of frames. Frequent occurrences can cause disruption of service. The system can be configured to ease memory demands or, if conditions warrant, the system can be upgraded to a larger memory configuration.

LC Messages

This section contains line card (LC) messages.

LC-2

Error Message %LC-2-BADSUBSLOT: Out of range Line Card slot [dec] Sub Module slot [dec]

Explanation The software specified an out-of-range submodule slot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LC-3

Error Message %LC-3-LC_CHUNK: Unable to [chars] for Linecard Slot [dec]

Explanation A memory shortage may exist.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC-3-LC_QUEUE: Unable to [chars] for Linecard Slot [dec]

Explanation A memory shortage may exist.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LC_10G Messages

This section contains Hamptons 10G trunk card-related messages.

LC_10G-3

Error Message %LC_10G-3-ACCESS_FAIL: [chars] Access Fail

Explanation A read or write operation to the line card redundancy controller (LRC) scratch pad register has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-AFOVR_ERR: Autofailover Error [chars]

Explanation The optical switch has encountered an error during an autofailover operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-AFOVR_EVNT: Autofailover event occurred [chars]

Explanation An autofailover event has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-CDL_HEC_ERR_THR: CDL HEC Errors threshold [chars]

Explanation The threshold of allowable converged data link (CDL) header error control (HEC) errors has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-CRC_ERR_THR: CRC Errors threshold [chars]

Explanation The threshold of allowable cyclic redundancy check (CRC) errors has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-ETH_DCC_LPBK_FAIL: EthernetDcc loopback Fail

Explanation A loopback operation through the Ethernet backplane has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-IDPROM_ACCESS_FAIL: Idprom Access Fail

Explanation The IDPROM could not be read or checked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-INTERNAL_CRITICAL: [chars]

Explanation A critical internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-INTERNAL_ERROR: [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-INT_LPBK_FAIL: Internal Card loopback Fail

Explanation A loopback attempt that was internal to the card has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-LASER_AUTO_SHUTDOWN: Auto Laser Shutdown [chars]

Explanation The laser has been automatically shut down.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-LASER_BIAS_ALARM: Optic Laser Bias Alarm [chars]

Explanation An error involving laser bias has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-LASER_TEMP_ALARM: Optic Laser Temperature Alarm [chars]

Explanation An error involving the temperature of the optics laser has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-LASER_TX_FAULT: Optic Laser Transmit Fault [chars]

Explanation An error involving optics laser transmission has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-LOSS_OF_LOCK: Transceiver Loss of Lock [chars]

Explanation The transceiver has lost the lock onto the incoming signal.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-LOSS_OF_SYNC: Transceiver Loss of Sync [chars]

Explanation The transceiver has lost its frame synchronization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-LPBK_THRU_PSC_FAIL: loopback through PSC Fail

Explanation A internal card loopback attempt through the processor and switch card (PSC) has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-MIB_AFOVR_ERR_ALM: Optical Switch Error [chars] [chars]
[chars]

Explanation An optical switch error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-MIB_AFOVR_EVNT_ALM: AutoFailover Event [chars] [chars]
[chars]

Explanation An autofailover event has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-MIB_AUTO_LASER_SHUTDOWN: Auto Laser Shutdown [chars] [chars]
[chars]

Explanation The laser has been shut down.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-MIB_LASER_BIAS_ALM: Laser Bias Alarm [chars] [chars] [chars]

Explanation An error involving trunk laser bias has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-MIB_LASER_TEMP_ALM: Laser Temperature Alarm [chars] [chars] [chars]

Explanation An error involving the temperature of the trunk laser has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-MIB_LASER_TX_FLT_ALM: Laser Transmit Fault [chars] [chars] [chars]

Explanation An error involving trunk laser transmission has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-MIB_LOSS_OF_LOCK_ALM: Loss of Lock [chars] [chars] [chars]

Explanation A loss-of-lock event has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-MIB_LOSS_OF_SYNC_ALM: Loss of Sync [chars] [chars] [chars]

Explanation A loss-of-synchronization event has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_10G-3-SYML_ERR_THR: Symbol Errors threshold [chars]

Explanation The threshold of allowable symbol errors has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LC_2P5G Messages

This section contains Hamptons 2.6G trunk card-related messages.

LC_2P5G-3

Error Message %LC_2P5G-3-ACCESS_FAIL: Access Fail [chars]

Explanation A read or write operation to the LRC scratch pad register has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-AFOVR_ERR: Autofailover Error [chars]

Explanation The optical switch failed to perform an autofailover operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-5-AFOVR_EVNT: Autofailover event occurred [chars]

Explanation An autofailover event has occurred.

Recommended Action No action is required.

Error Message %LC_2P5G-3-CDL_HEC_ERR_THR: CDL HEC Errors threshold [chars]

Explanation The threshold of allowable converged data link (CDL) header error control (HEC) errors has been exceeded.

Recommended Action Check that the cables connected to the Rx transceiver are plugged in, are not bent or twisted, and are in good condition. Check the physical state (transmit laser power level) and configuration of the remote end connected to the port associated. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-CRC_ERR_THR: CRC Errors threshold [chars]

Explanation The threshold of allowable CRC errors has been exceeded.

Recommended Action Check that the cables connected to the Rx transceiver are plugged in, are not bent or twisted, and are in good condition. Check the physical state (transmit laser power level) and configuration of the remote end connected to the port associated. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-ETH_DCC_LPBK_FAIL: EthernetDcc loopback Fail [chars]

Explanation A loopback operation through the Ethernet backplane has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-IDPROM_ACCESS_FAIL: Idprom Access Fail [chars]

Explanation The IDPROM could not be read or checked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-2-INTERNAL_CRITICAL: [chars]

Explanation An internal critical error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-INTERNAL_ERROR: [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-INT_LPBK_FAIL: Internal Card loopback Fail [chars]

Explanation A loopback operation that was internal to the card has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-5-LASER_AUTO_SHUTDOWN: Auto Laser Shutdown [chars]

Explanation The laser has been automatically shut down.

Recommended Action No action is required.

Error Message %LC_2P5G-3-LASER_DEGRADATION_ALARM: Optic Laser Degradation Alarm [chars]

Explanation The transmission power of the optics laser module is degrading.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-LASER_NO_LIGHT_ALARM: Optic Laser Loss of Light Alarm [chars]

Explanation The optics laser has experienced a loss of light.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-LASER_TX_FAULT: Optic Laser Transmit Fault [chars]

Explanation An optics laser transmission fault has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-LASER_WAVE_LN_DEV_ALARM: Optic Laser Wavelength Deviation Alarm [chars]

Explanation The wavelength of the optics laser module has deviated.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-LOSS_OF_LOCK: Transceiver Loss of Lock [chars]

Explanation The receiver has lost the lock on the incoming signal.

Recommended Action Check that the cables connected to the Rx transceiver are plugged in, are not bent or twisted, and are in good condition. Check the physical state (transmit laser power level) and configuration of the remote end connected to the port associated. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-LOSS_OF_SYNC: Transceiver Loss of Sync [chars]

Explanation The decoder has lost its frame synchronization.

Recommended Action Check that the cables connected to the Rx transceiver are plugged in, are not bent or twisted, and are in good condition. Check the physical state (transmit laser power level) and configuration of the remote end connected to the port associated. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-LPBK_THRU_PSC_FAIL: loopback through PSC Fail [chars]

Explanation An internal card loopback operation through the processor and switch card (PSC) has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-MIB_AFOVR_ERR_ALM: Optical Switch Error [chars] [chars]
[chars]

Explanation An autofailover operation for the optical switch has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-5-MIB_AFOVR_EVNT_ALM: AutoFailover Event [chars] [chars]
[chars]

Explanation An autofailover event has occurred.

Recommended Action No action is required.

Error Message %LC_2P5G-5-MIB_AUTO_LASER_SHUTDOWN: Auto Laser Shutdown [chars]
[chars] [chars]

Explanation The laser has been automatically shut down.

Recommended Action No action is required.

Error Message %LC_2P5G-3-MIB_CVRD_ERR_THR: CVRD Error Threshold Exceeded [chars]
[chars] [chars]

Explanation The threshold of allowable symbol errors has been exceeded.

Recommended Action Check that the cables connected to the Rx transceiver are plugged in, are not bent or twisted, and are in good condition. Check the physical state (transmit laser power level) and configuration of the remote end connected to the port associated. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-MIB_LASER_DEG_ALM: Laser Degradation Alarm [chars] [chars]
[chars]

Explanation The transmission power of the optics laser module is degrading.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-MIB_LASER_TX_FLT_ALM: Laser Transmit Fault [chars] [chars] [chars]

Explanation An optics laser transmission fault has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-MIB_LASER_WV_DEV_ALM: Laser Wavelength Deviation Alarm [chars] [chars] [chars]

Explanation The wavelength of the optics laser module has deviated.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-MIB_LOSS_OF_LOCK_ALM: Loss of Lock [chars] [chars] [chars]

Explanation The receiver has lost its lock on the incoming signal.

Recommended Action Check that the cables connected to the Rx transceiver are plugged in, are not bent or twisted, and are in good condition. Check the physical state (transmit laser power level) and configuration of the remote end connected to the port associated. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-MIB_LOSS_OF_SYNC_ALM: Loss of Sync [chars] [chars] [chars]

Explanation The decoder has lost its frame synchronization.

Recommended Action Check that the cables connected to the Rx transceiver are plugged in, are not bent or twisted, and are in good condition. Check the physical state (transmit laser power level) and configuration of the remote end connected to the port associated. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs..

Error Message %LC_2P5G-3-MIB_NO_LIGHT_ALM: Laser Loss of Light Alarm [chars] [chars] [chars]

Explanation An error involving a loss of light for the optics laser has occurred.

Recommended Action Check that the cables connected to the Rx transceiver are plugged in, are not bent or twisted, and are in good condition. Check the physical state (transmit laser power level) and configuration of the remote end connected to the port associated. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LC_2P5G-3-SYML_ERR_THR: Symbol Errors threshold [chars]

Explanation The threshold of allowable symbol errors has been exceeded.

Recommended Action Check that the cables connected to the Rx transceiver are plugged in, are not bent or twisted, and are in good condition. Check the physical state (transmit laser power level) and configuration of the remote end connected to the port associated. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LCMDC Messages

This section contains Cisco Optical Networking Systems (ONS) 15540 Extended Services Platform (ESP) messages.

LCMDC-3

Error Message %LCMDC-3-FPGA_ACCESS_FAIL: Alarm: [chars], [chars], [chars], [chars], [chars]

Explanation An alarm has occurred. The message text provides additional details on the cause of the error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LCMDC-6

Error Message %LCMDC-6-TX_ALARM_SOAK: [chars]

Explanation An alarm has occurred. The message text provides additional details on the cause of the error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LCR Messages

This section contains Line Card Registry (LCR) messages.

LCR-6

Error Message %LCR-6-FAILED_MCAST: Failed to send exported registry request %d to mcast group

Explanation A communication failure occurred while attempting to send an exported registry request to a multicast group.

Recommended Action No action is required.

Error Message %LCR-6-FAILEDRCV: Failed to process registry request [dec]

Explanation A request received on a receiver could not be processed successfully.

Recommended Action No action is required.

Error Message %LCR-6-FAILED_RCV_ON_ACTIVE: Failed to process registry request [dec] - on active supervisor SP

Explanation A request received on the active supervisor engine could not be processed successfully.

Recommended Action No action is required.

LDP Messages

This section contains Label Distribution Protocol (LDP) messages.

LDP-3

Error Message %LDP-3-ISSU_XFORM: ISSU [chars] transformation failed for msg type ([dec]) [chars].

Explanation The LDP could not upgrade or downgrade a checkpointing message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LDP-3-RECONNECT: [chars]

Explanation An error occurred while parsing the incoming LDP initialization message. The FT reconnect timer value received was greater than the locally-configured forwarding state holding timer value.

Recommended Action Reconfigure the forwarding state holding timer value.

LDP-5

Error Message %LDP-5-CLEAR_CHKPT: Clear LDP bindings checkpoint state ([chars]) by [chars]

Explanation The checkpoint state for one or more LDP bindings has been reset.

Recommended Action No action is required.

Error Message %LDP-5-CLEAR_NBRS: Clear LDP neighbors ([chars]) by [chars]

Explanation One or more LDP neighbor sessions has been reset.

Recommended Action No action is required.

Error Message %LDP-5-GR: [chars]

Explanation An informational LDP notice was generated for a graceful restart event.

Recommended Action No action is required.

Error Message %LDP-5-SP: [chars]

Explanation An informational LDP notice was generated for a session protection event.

Recommended Action No action is required.

LFD Messages

This section contains MFI Label Switching Database (LFD) messages.

LFD-2

Error Message %LFD-2-AVL: [chars] [hex]

Explanation An error involving an Adelson-Velskii and Landis (AVL) tree operation has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-2-FPIHANDLER3: [chars] [hex] [hex] [hex]

Explanation An error has been detected in the forwarding path identifier (FPI) handler.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LFD-3

Error Message %LFD-3-BADEXEC: Unexpected Code Execution: [chars] [dec]

Explanation An error involving unexpected execution of code has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-BADFRRTYPE: illegal frr type: [dec]

Explanation An error involving an Fast ReRoute (FRR) request type has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-BADLABELADD: Cannot add label - [chars].

Explanation Unable to create label due to reason given.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-BADSHORTLABELADD: Cannot add short label: path_idx [dec],
moi_type [dec]

Explanation Unable to create MFI feature space in FIB entry, so unable to store short path extension information there.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the gathered information.

Error Message %LFD-3-BROKERINITFAIL: Failed to initialise lte RP broker facility

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-CHUNKMGR: chunk mgr: [chars] [hex]

Explanation An error involving the memory manager has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-CHUNKMGRALLOC: failed chunk alloc: [chars]

Explanation An error involving memory allocation has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-CHUNKMGRDEALLOC: failed chunk dealloc: [chars]

Explanation An error involving the freeing of memory has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-EVTLOGBADSOURCE: Illegal log event source: [dec]

Explanation An illegal event in the log buffer has been detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-FIB_SRC: Lable [[dec]/[dec]] [chars] [chars] [chars]

Explanation The FIB entry could not be sourced for label in question.

Recommended Action Enter the **show mpls forwarding-table internal** and **show ip route [vrf name] prefix commands** and capture the error message traceback. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-FPIHANDLER: LFD SSS Handler: [chars]

Explanation An error has been detected in the FPI handler.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-FPITYPEWRONG: Require fpi type [chars], get fpi type [chars]

Explanation An error involving unmatched FPI types has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INTFDB: intf db: [chars] [hex]

Explanation An interface DB error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INTFDB2: intf db: [chars] [hex] [hex]

Explanation An interface DB error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INVINSTALLER: Wrong installer [dec] for [chars] [dec]/[dec] update (was [dec])

Explanation The rewrite ID is invalid for non-IP label table entry.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INVIPLEBELTYPE: Wrong label type [dec] for IP Label [dec], table [dec] prefix [chars], vrf [chars]

Explanation The label type is invalid for the indicated label table entry.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INVLABELTYPE: Wrong label type [dec] for non-ip LTE [dec]/[dec]

Explanation The label type is invalid for the non-IP label table entry.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INVLABELUPDTYPE: Wrong label type [dec] for label [dec] table [dec] [chars] [chars]

Explanation An invalid label type was encountered during the specified operation.

Recommended Action Enter the **show mpls forwarding-table label label internal** command and capture the error message traceback. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INVPATHLBL: [chars] [chars]

Explanation An invalid outgoing label is attached to the prefix.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INVPLIST: Wrong path list type [dec] for label [dec]/[dec]
[chars]

Explanation The path list type is set incorrectly for the label in question.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INVRWID: Wrong rwid [dec] for non-ip LTE [dec]/[dec]

Explanation The rewrite ID is invalid for non-IP label table entry.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-INVXDRLLEN: Length [int] for [chars] field in LTE msg for [chars]

Explanation An error occurred when encoding the MPLS label information for the FEC in question. This could result in line cards having stale labels for this FEC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-KEY_DB_INSERTFAIL: [chars], entry [hex], existing [hex]

Explanation The element could not be inserted into the LFD's key database.

Recommended Action Enter the **show mpls forwarding-table label *label* internal** command and capture the error message traceback. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-LCXDRCLIENT: LTE distribution client: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-LTABLEMEM: Cannot allocate new mpls table [dec] of size [dec] needed for entry [dec]

Explanation There is not enough contiguous memory for the MPLS forwarding table.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %LFD-3-NONIPINFO: Non-ip info: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-NOOCE: Attempt to get labels from OCE failed - [chars].

Explanation The calling function has provided insufficient information to get labels.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-NORESOURCE: [chars] [dec]

Explanation A resource failure occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-NULLADJACENCY: NULL Adjacency

Explanation A NULL adjacency was encountered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-NULLFIBIDB: NULL FIB IDB: [chars] [dec]

Explanation A NULL FIB IDB was encountered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-ORPHANLTE: Label [dec]/[dec], plist [dec], LDM: [hex]

Explanation The LTE for the label was supposed to be deleted, but is still present.

Recommended Action Collect the running configuration and the output of the **show mpls forwarding-table labels label-num** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-REWMGR: Rewrite Manager: [chars] [hex]

Explanation An error involving the rewrite manager has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-REWMGR2: [chars] [hex] [hex]

Explanation A rewrite lookup attempt has failed because of an inconsistency in the FPI.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-RPXDRCLIENT: Invalid XDR Client: %s

Explanation An internal software error occurred. The XDR client is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-RUNNING_TIMER: [chars] [dec] [chars] [dec]

Explanation The MPLS forwarding entry for the specified label was deleted prior to the expiry of its associated timer.

Recommended Action Enter the **show mpls forwarding-table label *label* internal** command. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-SM: [chars] [dec]

Explanation An error involving the state machine has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-SMBADEVENT: Unexpected event [chars] for state [chars]

Explanation The LFD received an unexpected event for its state. The state of the LFD, and the unexpected event, are specified in the message text.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-UNSUPPORTED_XDR: [chars]

Explanation Decoding of an XDR message revealed data or a format that is unsupported in the current release.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-UPDATEHANDLER2: [chars] [hex] [hex]

Explanation An error involving the update handler has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-UPDATEHANDLER3: [chars] [hex] [hex] [hex]

Explanation An error involving the update handler has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-UPDATEHANDLERFPI: No handler installed: fpi=[dec] handler type=[chars]

Explanation No handler has been installed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-3-XDRBADMAGIC: xdr message for [chars] spilled out of allocated static storage

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LFD-4

Error Message %LFD-4-NOFIBIDB: [chars] - ifnum[dec]

Explanation The FIB IDB is missing on the line card.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-4-OWNCHANGED: Owner changed for [chars] [dec]/[dec] from [dec] to [dec]

Explanation A label was previously installed by a different installer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LFD-4-UNSUPPORTEDRW: Unexpected rewrites seen where MPLS is not supported by platform for this slot

Explanation MPLS is either not needed or not handled by the platform for this card and should not handle rewrites.

Recommended Action No action is required.

LFD-5

Error Message %LFD-5-FRRISSULOG: FRR is not ISSU compatible, notified by %s

Explanation The ISSU negotiation results for Fast Reroute (FRR) are not compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LFD-6

Error Message %LFD-6-RESOURCE: [chars]

Explanation MPLS is not supported by the platform.

Recommended Action No action is required.

LINEPROTO Messages

Error Message %LINEPROTO-SP-5-UPDOWN: Line protocol on Interface %s, changed state to %s

Explanation The data link level line protocol changed state.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LINK Messages

This section contains data link messages.

LINK-3

Error Message %LINK-3-BOGUSENCAP: Interface [chars], bad encapsulation in idb-encype = [hex]

Explanation A serial interface has been configured with an unknown encapsulation.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %LINK-3-FCS_ERROR: [chars] [chars] [chars] [chars]

Explanation The FCS error rate exceeds the configured threshold.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LINK-3-LINK_FAULT: [chars] [chars] [chars] [chars]

Explanation The link state for the port is down.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LINK-3-TOOSMALL: Interface [chars], Output runt packet of [dec] bytes

Explanation An output packet was detected that was smaller than the minimum allowable datagram size. An error in another driver or an error in the system software probably triggered this error message.

Recommended Action This is an informational message only. No action is required.

Error Message %LINK-3-UPDOWN: Interface [chars], changed state to [chars]

Explanation The interface hardware has gone either up or down.

Recommended Action If the state change was unexpected, confirm the configuration settings for the interface.

LINK-6

Error Message %LINK-6-BERTMSGS: [chars]

Explanation This message contains information related to a bit error rate test (BERT).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LINK-SP

Error Message %LINK-SP-3-UPDOWN: Interface %s, changed state to %s

Explanation The interface hardware went either up or down.

Recommended Action If the state change was unexpected, confirm the configuration settings for the interface.

LLDP Messages

This section contains Link Layer Discovery Protocol (LLDP) messages.

LLDP-4

Error Message %LLDP-4-LLDP_NEW_ENTRY: Neighbor record not committed - malloc failure

Explanation An LLDP entry creation failed due to a memory allocation failure.

Recommended Action Run memory diagnostics.

LRE_CPE Messages

This section contains Long Reach Ethernet (LRE) Customer Premises Equipment (CPE) messages.

LRE_CPE-3

Error Message %LRE_CPE-3-INVALIDMODE: CPE on interface [chars] is in invalid mode [chars].

Explanation The CPE is in an inconsistent mode; for example, the model number may imply a MAC mode while the CPE is in a PHY mode.

Recommended Action Enter the **show controllers lre cpe mfg** command to verify that the CPE model number string is correct. Enter the **hw-module slot slot lre upgrade remote** command to ensure that the CPE has the latest supported firmware. If the CPE's model number and firmware are correct, enter the interface configuration **shutdown** command followed by the **no shutdown** command to force the switch to read the CPE information again. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LRE_CPE-3-INVALIDPATCH: CPE on interface [chars] has invalid LRE firmware.

Explanation The LRE firmware header does not have a valid signature, or the header information on the specified firmware is inconsistent with the contents of the firmware

Recommended Action Upgrade the firmware on the CPE to the latest supported one by using the **hw-module slot slot lre upgrade remote** command.

Error Message %LRE_CPE-3-INVALIDPHY: CPE on interface [chars] has an unsupported Ethernet PHY.

Explanation The Ethernet PHY device on the CPE attached to the specified interface is not supported. This error occurs when the switch cannot recognize the PHY identifier of the PHY device(s) on the CPE. The reason could be one of the following: The Cisco IOS version running on the switch is not compatible with this CPE, the CPE is not supported by Cisco, or the switch did not correctly read the PHY identifier from the CPE.

Recommended Action Verify that the CPE is supported by Cisco. Enter the command **show controllers lre cpe mfg** to verify that the CPE model number string is correctly set. If the Cisco IOS version and CPE model number look correct, enter the interface configuration **shutdown** command followed by the **no shutdown** command to force the switch to read the PHY identifier again. As a last resort, power cycle the CPE. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LRE_CPE-3-NOVERCKSUM: Could not fetch CPE firmware version and checksum on interface [chars].

Explanation The system could not obtain the CPE firmware version and checksum. If the CPE has the latest firmware, and the CPE model number is correct, the most likely cause for this error is that the LRE link between the switch and the CPE is of poor quality.

Recommended Action Enter the command **show controllers lre cpe mfg** to verify that the CPE model number string is correctly set for this CPE. Enter the **hw-module slot slot lre upgrade remote** command to ensure that the CPE has the latest supported firmware. Enter the interface configuration **shutdown** command followed by the **no shutdown** command to force the switch to read the CPE firmware version and checksum. As a last resort, power cycle the CPE. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LRE_CPE-3-UNKNOWNMODEL: CPE has unrecognizable model number [chars] on interface [chars]

Explanation The model number string in the CPE does not match a known CPE model number.

Recommended Action Enter the command **show controllers lre cpe mfg** to examine the model number of the CPE. Verify that the model number is supported by Cisco. Enter the interface configuration **shutdown** command followed by the **no shutdown** command to force the switch to read the CPE model number again. If the error message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LRE_CPE-3-WRONGAPPVER: CPE on interface [chars] reported unsupported version of application firmware [chars]. Minimum application firmware version needed [chars]

Explanation Each CPE requires a currently supported application firmware version for it to function correctly. This CPE has a application firmware version that predates the earliest supported version.

Recommended Action Application firmware is not currently used on the CPE. This error message is for future use.

Error Message %LRE_CPE-3-WRONGBOOTVER: CPE on interface [chars] reported unsupported version of bootloader firmware [chars]. Minimum bootloader firmware version needed [chars]

Explanation Each CPE requires a currently supported bootloader firmware version for it to function correctly. This CPE has a bootloader firmware version that predates the earliest supported version.

Recommended Action Enter the **hw-module slot slot lre upgrade remote** command to upgrade the bootloader firmware on the CPE to a recent version that supports the current requirements. If the CPE firmware upgrade does not solve the problem, enter the interface configuration **shutdown** command followed by the **no shutdown** command to force the switch to read the bootloader firmware version again. As a last resort power cycle the CPE. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LRE_CPE-3-WRONGPATCH: CPE on interface [chars] has wrong patch version [hex]. Patch version [hex] or higher is needed for this CPE.

Explanation Each CPE requires a currently supported patch version for it to function. This CPE has a patch version that predates the earliest supported version. This condition might occur because the switch was upgraded with the latest Cisco IOS software image, but the CPE firmware has not been upgraded.

Recommended Action Enter the **hw-module slot slot lre upgrade remote** command to upgrade the patch on the CPE to the latest supported version.

LRE_CPE-5

Error Message %LRE_CPE-5-SSNCHANGED: CPE unit on interface [chars] changed.

Explanation The CPE system serial number has changed. This condition usually means that the CPE unit on this interface was replaced.

Recommended Action No action is required.

LRE_LINK Messages

This section contains Long Reach Ethernet (LRE) link for the Catalyst 2950 LRE switch messages.

LRE_LINK-3

Error Message %LRE_LINK-3-PROFILE_FAILURE: Interface [chars], profile [chars] failure

Explanation The interface specified in the error message did not achieve link with the attached profile.

Recommended Action If the link failure was unexpected, confirm the profile settings for the interface.

Error Message %LRE_LINK-3-UPDOWN: Interface [chars], changed state to [chars]

Explanation The interface hardware has either become active (came up) or become inactive (gone down).

Recommended Action If the state change was unexpected, confirm the configuration settings for the interface.

LRE_LINK-4

Error Message %LRE_LINK-4-HEALTH_MON: Interface [chars], had crossed certain monitored thresholds

Explanation The link status monitor for the specified interface has detected conditions that have crossed the configured thresholds.

Recommended Action Enter the **show controllers lre link monitor** command to obtain more information on this error. If the change in operating conditions was unexpected, confirm the configuration settings for the interface.

LRE_LOG Messages

This section contains Long Reach Ethernet (LRE) log messages.

LRE_LOG-7

Error Message %LRE_LOG-7-LRE_LOGGING: LRE Log:Interface [chars]: State: [chars], Event: [chars], Data: [chars].

Explanation The system has changed its state. The error message text provides more information on the cause of the change.

Recommended Action No action is required.

LRE_UPGRADE Messages

This section contains LRE upgrade for the Catalyst 2950 LRE switch messages.

LRE_UPGRADE-2

Error Message %LRE_UPGRADE-2-LOCAL_LOAD_FAILURE: The system failed to load the firmware for local PHY controller:[dec]

Explanation An internal system error has occurred while loading the firmware for a local PHY controller.

Recommended Action Power cycle the switch. If this message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LRE_UPGRADE-3

Error Message %LRE_UPGRADE-3-INIT_SYSTEM: Upgrade module failed to initialize

Explanation The LRE upgrade module failed to initialize.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LRE_UPGRADE-3-LOCAL_FAILURE: Upgrade of local controller [chars] failed

Explanation The LRE upgrade is unable to download firmware to a local controller.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LRE_UPGRADE-4

Error Message %LRE_UPGRADE-4-INIT_RESOURCE: [chars]

Explanation The LRE upgrade module cannot locate a required resource.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LRE_UPGRADE-4-TERMINATE: Upgrade on [chars] terminated

Explanation The customer equipment was disconnected or changed in the middle of an upgrade.

Recommended Action No action is required.

LSD Messages

This section contains MPLS Forwarding Infrastructure (MFI) Label Switching Database (LSD) messages.

LSD-2

Error Message %LSD-2-APP_NOTSUPP: [chars] interface does not support app [chars]

Explanation The interface does not support the application that is specified in the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-2-AVL: [chars] [hex]

Explanation An error involving an Adelson-Velskii and Landis (AVL) tree operation has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-2-FPIHANDLER: [chars] [hex]

Explanation An error involving the FPI handler has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-2-INVALID_VAR: [chars]

Explanation The function has received invalid parameters.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-2-INVALID_VAR2: [chars] [hex] [hex]

Explanation The function has received invalid parameters.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-2-RESOURCE: [chars]

Explanation A system resource error has occurred.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %LSD-2-TESTAPP2: Test app error: [chars]: [hex] [hex]

Explanation A test application error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LSD-3

Error Message %LSD-3-APPMGR: [chars] [hex]

Explanation An error involving the application manager has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-BADEXEC: Unexpected Code Execution: [chars] [dec]

Explanation An error involving unexpected execution of code has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-CHUNKMGR: chunk mgr: [chars] [hex]

Explanation A memory manager error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-CLIENT_CONN: [chars]

Explanation A client connection error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-CLIENT_CONN2: [chars] [hex] [hex]

Explanation A client connection error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-EVTLOGBADSOURCE: Illegal log event source: [dec]

Explanation An illegal event was found in the log buffer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-INTF_DB: [chars]

Explanation An interface database error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-INTF_DB2: [chars] [hex] [hex]

Explanation An interface database error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-INVALID_PROC_EVT: Unexpected process event [dec] for pid [dec]

Explanation The LSD component received an unexpected process event notification for the process with the specified ID.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-LABEL: [chars] [dec]

Explanation A label operation error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-LABEL2: [chars] [hex] [hex]

Explanation A label operation error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-MULTISERVICEREQ: Multiple outstanding service requests: [dec]
[dec]

Explanation A service request was submitted, but one service request is already outstanding.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-OS_NOTIFY: Process id [dec] [chars], error code [dec]

Explanation The LSD was unable to notify the operating system about (un)registration of the specified process.

Recommended Action Enter the **show version**, **show running-config**, **show mpls infrastructure lsd apps** commands. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-REWMGR: Rewrite Manager: [chars] [hex]

Explanation An error involving the rewrite manager has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-REWMGR2: [chars] [hex] [hex]

Explanation An attempt to look up a rewrite has failed because of an inconsistency in a forwarding path identifier.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-UPDATELISTMGR2: [chars] [dec] [dec]

Explanation A general error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-3-UPDATELISTMGREXEC: Illegal exec: [chars] [hex]

Explanation An error involving illegal execution of code has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LSD-4

Error Message %LSD-4-BADAPI: [chars] from [chars]

Explanation The LSD has received a message with invalid parameters.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-4-LABELFREETO: requested free timeout ([int] ms) by [chars] limited to: [int] ms

Explanation The timeout period for the MPLS application label has exceeded the maximum configured time.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD-4-LABEL_RESOURCE: label range [dec]-[dec] exhausted

Explanation The MPLS application is attempting to allocate more labels than the system configuration will allow.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LSD_CLIENT Messages

This section contains MPLS Forwarding Infrastructure (MFI) Label Switching Database (LSD) client messages.

LSD_CLIENT-2

Error Message %LSD_CLIENT-2-MSGHANDLERERR: Client=[dec] Msg type=[dec]
Error=[chars]

Explanation An error involving the message handler has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %LSD_CLIENT-2-XDREXEC: [chars] [dec]

Explanation Illegal code has been executed in the XDR path.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %LSD_CLIENT-2-XDREXEC2: [chars] [hex] [hex]

Explanation Illegal code has been executed in the XDR path.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at

<http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

LSD_CLIENT-3

Error Message %LSD_CLIENT-3-CLIENTAPI: Client API error: [chars] [dec]

Explanation An unexpected client API error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %LSD_CLIENT-3-INVALID_VAR: [chars]

Explanation A function has received parameters that are invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %LSD_CLIENT-3-ISSU_MSG_CONV: [chars] [dec] [dec]

Explanation Could not convert received message type to a known message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %LSD_CLIENT-3-PCHUNK2: [chars]: [chars] [hex] [hex]

Explanation An error involving memory parameters has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show version**, **show running-config** and **show process memory** commands and your pertinent troubleshooting logs.

Error Message %LSD_CLIENT-3-UTIL2: [chars]: [hex] [hex]

Explanation An error involving utilities has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show version** and **show running-config** commands and your pertinent troubleshooting logs.

LSD_HA Messages

This section contains MFI Label Switching Database (LSD) high availability (HA) messages.

LSD_HA-2

Error Message %LSD_HA-2-CF: [chars] [dec]

Explanation A CF-related error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD_HA-2-RESOURCE: [chars]

Explanation A system resource error has occurred.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %LSD_HA-2-RF: [chars] [dec]

Explanation An RF-related error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LSD_HA-3

Error Message %LSD_HA-3-GENERAL: [chars]

Explanation A function has received invalid parameters.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD_HA-3-INVALID_VAR: [chars]

Explanation A function has received invalid parameters.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD_HA-3-LABEL_RANGE_DB: [chars]

Explanation An error has occurred in the label range database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSD_HA-3-UNSENT_MSG_DB: [chars]

Explanation An error has occurred in the unsent message database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LSPV Messages

This section contains MPLS Label-Switched Path Verification (LSPV) messages.

LSPV-3

Error Message %LSPV-3-COMM: [chars]: [hex] [hex]

Explanation An unexpected RP/LC XDR condition has been encountered in the communications module.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %LSPV-3-COMM_UNKNOWN_RC: Unexpected oce return code

Explanation An unexpected OCE return code was encountered in the communications module.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

LSS Messages

This section contains LS switching (LSS) message definition messages.

LSS-4

Error Message %LSS-4-LSIPC: [chars] [dec]

Explanation LSIPC warning - LSIPC is timing out. uCode on that interface may not be responding.

Recommended Action Possibly E-PAM is not responding.

LTL Messages

This section contains local target logic (LTL) messages.

LTL-2

Error Message %LTL-2-LTL_PARITY_CHECK: LTL parity check request for 0x%x.

Explanation The local target logic (LTL) parity check found a parity error on the index.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MAB Messages

This section contains MAC authentication bypass (MAB) messages.

MAB-5

Error Message %MAB-5-FAIL: Authentication failed for client (%s) on Interface %s

Explanation Authentication was unsuccessful.

Recommended Action No action is required.

Error Message %MAB-5-SUCCESS: Authentication successful for client (%s) on Interface %s

Explanation Authentication was successful.

Recommended Action No action is required.

MAC_LIMIT Messages

This section contains MAC limit feature (MAC_LIMIT) messages.

MAC_LIMIT-4

Error Message %MAC_LIMIT-4-DROP: Vlan [dec] with Configured limit = [dec] has currently [dec] Entries

Explanation The number of entries for a VLAN has gone below or is equal to the allowed number.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MAC_LIMIT-4-ENFORCE: Enforcing limit on Vlan [dec] with Configured limit = [dec]

Explanation The number of entries for a VLAN has exceeded the allowed number. The action that enforces the limit is configured.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MAC_LIMIT-4-EXCEED: Vlan [dec] with Configured limit = [dec] has currently [dec] Entries

Explanation The number of entries for a VLAN has exceeded the allowed number.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MAC_LIMIT-4-PORT_DROP: [chars] with Configured limit [dec] has currently [dec] entries

Explanation The number of entries for the specified port has gone below or is equal to the permitted number.

Recommended Action This message is for reporting purposes only. No action is required.

Error Message %MAC_LIMIT-4-PORT_ENFORCE: Enforcing limit on [chars] with Configured limit [dec]

Explanation The number of entries for the specified port has exceeded the permitted number. The action to enforce the limit is configured.

Recommended Action This message is for reporting purposes only. No action is required.

Error Message %MAC_LIMIT-4-PORT_EXCEED: [chars] with configured limit [dec] has currently [dec] entries

Explanation The number of entries for the specified port has exceeded the permitted number.

Recommended Action This message is for reporting purposes only. No action is required.

Error Message %MAC_LIMIT-4-VLAN_DROP: Vlan [dec] with configured limit [dec] has currently [dec] entries

Explanation The number of entries for the specified VLAN has gone below or is equal to the permitted number.

Recommended Action This message is for reporting purposes only. No action is required.

Error Message %MAC_LIMIT-4-VLAN_ENFORCE: Enforcing limit on Vlan [dec] with configured limit [dec]

Explanation The number of entries for the specified VLAN has exceeded the permitted number. The action to enforce the limit is configured.

Recommended Action This message is for reporting purposes only. No action is required.

Error Message %MAC_LIMIT-4-VLAN_EXCEED: Vlan [dec] with configured limit [dec] has currently [dec] entries

Explanation The number of entries for the specified VLAN has exceeded the permitted number.

Recommended Action This message is for reporting purposes only. No action is required.

MAC_MOVE

This section contains MAC move notification feature (MAC_MOVE) messages.

MAC_MOVE-4

Error Message %MAC_MOVE-4-NOTIF: Host [enet] in vlan [dec] is flapping between port [chars] and port [chars]

Explanation The system found the specified host moving between the specified ports.

Recommended Action Examine the network for possible loops.

MCAST Messages

This section contains Layer 2 Multicast log (MCAST) messages.

MCAST-2

Error Message %MCAST-2-IGMP_ADDRAL:IGMP: Address Aliasing for [chars]

Explanation The network management processor (NMP) detected a multicast data stream being directed to a special multicast address. Several special class D addresses are used exclusively for control purposes by the multicast protocols IGMP, DVMRP, MOSPF, and PIM. The sending of noncontrol packets to these addresses is considered address aliasing.

Recommended Action From the displayed MAC and IP address information, determine which device's IP address is being aliased. Change its IP address to an address outside of the special multicast address group, or do not use it for the multicast data feed.

Error Message %MCAST-2-IGMP_ADDRALDETAILS:IGMP: Multicast address aliasing: From [chars] ([IP_address]) on [dec]/[dec] to [chars]

Explanation The network management processor (NMP) detected a multicast data stream being directed to a special multicast address. Several special class D addresses are used exclusively for control purposes by the multicast protocols IGMP, DVMRP, MOSPF, and PIM. The sending of noncontrol packets to these addresses is considered address aliasing.

Recommended Action From the displayed group, port, and IP address information, determine which device's IP address is being aliased; [dec]/[dec] is the module number/port number. Change its IP address to an address outside of the special multicast address group, or do not use it for the multicast data feed.

Error Message %MCAST-2-IGMP_FALLBACK:IGMP: Running in FALL BACK mode

Explanation The network management processor (NMP) has detected excessive multicast traffic being directed to a special multicast address that should be used exclusively for control purposes. As a result, the NMP has entered fallback mode, in which it stops snooping packets with the specified destination MAC address. After 5 minutes the NMP will attempt to listen to these groups again. If it fails 3 times, the switch will move to fallback mode permanently. In fallback mode, only IGMP-based packets will be directed to the NMP, and router ports will be learned only from IGMP general query messages.

Recommended Action From the group and IP address information displayed by related system messages, determine which device's IP address is being aliased. Change its IP address to an address outside of the special multicast address group, or do not use it for the multicast data feed.

Error Message %MCAST-2-IGMP_SNOOP_DISABLE:

Explanation IGMP snooping is disabled, but the system is receiving multicast traffic. This situation will force multicast packets to be directed to the route processor, possibly flooding it. IGMP snooping may have been disabled automatically due to excessive multicast traffic.

Recommended Action By capturing packets on the management VLAN (using a sniffer or SPAN), determine the source of the excessive multicast traffic and remove it.

MCAST-3

Error Message %MCAST-3-GROUP_IP_INVALID: MCAST: Invalid group_ip in SSO sync msg for LTL type=[dec], index [hex]

Explanation A system error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCAST-3-IGMP_PKT_DROPPED:IGMP: IGMP Queue full (high packet rate/CPU busy), dropped [dec] packet(s) in last 5 minutes

Explanation The IGMP queue dropped one or more packets during the past five minutes either because the queue was full due to a high packet rate or because the CPU was too busy.

Recommended Action If the packet drops are few and infrequent, the drops may be caused by a transient condition, and no action is required. If many packets are being dropped, a multicast server might be flooding the switch, or some other process might be using excessive CPU resources.

Error Message %MCAST-3-PIMV2_PTCAM_LTL_ALL: PIMv2 PT_CAM LTL change to %s failed on all %s

Explanation While the system was executing an MPLS, router-guard, or PIM rate-limiter configuration command, communication with all line cards failed. As a result, the PIMv2 protocol redirection feature might not work properly.

Recommended Action Enter the MPLS, router-guard, or PIM rate-limiter command (**[no] mpls ip** or **[no] router-guard ip multicast switchports** or **[no] mls rate-limit multicast ipv4 pim**) again to cause the PIMv2 redirection local target logic (LTL) to be reprogrammed.

Error Message %MCAST-3-PIMV2_PTCAM_LTL_LC: PIMv2 PT_CAM LTL change to %s failed on linecard %d

Explanation While the system was executing an MPLS, router-guard or PIM rate-limiter configuration command, communication with one of the line cards failed. As a result, the PIMv2 protocol redirection feature might not work properly.

Recommended Action Enter the MPLS, router-guard, or PIM rate-limiter command (**[no] mpls ip** or **[no] router-guard ip multicast switchports** or **[no] mls rate-limit multicast ipv4 pim**) again to cause the PIMv2 redirection local target logic (LTL) to be reprogrammed.

Error Message %MCAST-3-PROT_RED_ALL: %s of %s redirection failed on all %s

Explanation While IGMP or PIMv2 snooping was being globally enabled or disabled, communication with all line cards failed. As a result, the protocol redirection feature might not work properly.

Recommended Action Disable and then enable IGMP or PIMv2 snooping globally, or vice versa, depending on whether the enable or disable form of the **[no] ip [igmp | pim] snooping** command was executed.

Error Message %MCAST-3-PROT_RED_LC: %s of %s redirection failed on linecard %d

Explanation While IGMP or PIMv2 snooping was being globally enabled or disabled, communication with one of the line cards failed. As a result, the protocol redirection feature might not work properly.

Recommended Action Disable and then enable IGMP or PIMv2 snooping globally, or vice versa, %MCASTRED-3-BAD_SYNC_TYPE depending on whether the enable or disable form of the **[no] ip [igmp | pim] snooping** command was executed.

Error Message %MCAST-3-QUERY_INT_MISMATCH: Snooping Querier received a non-matching query interval ([dec] msec), from querier address ([IP_address]) on VLAN([dec]).Configured query-interval ([dec] msec)

Explanation Mismatch of snooping query interval found between routers which can lead to querier flapping issues

Recommended Action Configure the same snooping query interval across all the active and redundant queriers in the VLAN.

MCAST-4

Error Message %MCAST-4-LTL_FULL_VDB_CREATE_FAILED: Multicast Multi-Layer Switching: Failed to create VLAN ([dec]), hardware resource unavailable

Explanation The number of multicast MAC entries has exceeded the hardware limit. As a result, the VLAN will be software switched. This error also occurs when a larger number of VLANs are configured on a virtual switch.

Recommended Action Check the number of multicast MAC entries using the **show mac-address-table multicast count** command. Consider rearranging the network topology to reduce the multicast MAC count. Once multicast MAC entries fall below the hardware limit, unconfigure the VLAN using the **no vlan** command and reconfigure it.

Error Message %MCAST-4-RX_LVRANGE:IGMP: Rcvd Leave in the range [chars]

Explanation The switch received an IGMP leave message from a host for the group address in the specified range. This range is normally used for control packets and should not be used for general multicast data traffic.

Recommended Action No action is required if the frequency of the message is not affecting the operation of the switch. This message may indicate a malfunction of the multicast host device that sent it. To determine the identity of the multicast device, check for related system messages reporting details of the IGMP leave. Using the port information displayed by the related system messages, capture port traffic to determine the source of the IGMP leave message.

MCAST-5

Error Message %MCAST-5-RX_IGMPLV:IGMP: Rcvd IGMP Leave [chars] on [dec]/[dec]

Explanation The switch has received an IGMP leave message for the group number on module number/port number; [chars] is the group number, and [dec]/[dec] is the module number/port number.

Recommended Action No action is required.

Error Message %MCAST-5-RX_IGMPREPORT:IGMP: Rcvd IGMP Report [chars] on [dec]/[dec]

Explanation The switch has received an IGMP report message for the group number on module number/port number; [chars] is the group number, and [dec]/[dec] is the module number/port number.

Recommended Action No action is required.

MCAST-6

Error Message %MCAST-6-CGMP_JOININFO: CGMP: GDA %e USA %e

Explanation The system has received from the router a Cisco Group Management Protocol (CGMP) join message for the group destination address (GDA) for the host whose unicast source address (USA) is shown.

Recommended Action No action is required.

Error Message %MCAST-6-DELGDA: Deleting a GDA %e in vlan %d

Explanation A multicast entry in the specified VLAN is being deleted because an IGMP leave from the last host for this group destination address (GDA) was received.

Recommended Action No action is required.

Error Message %MCAST-6-ETRACK_LIMIT_EXCEEDED: [chars] snooping was trying to allocate more explicit-tracking entries than what allowed ([dec]

Explanation The allocation of explicit-tracking entries is limited to avoid the monopolizing of system resources by IGMP and MLD snooping.

Recommended Action Reduce the number of (s,g) channels or the number of receivers. When the explicit-tracking database has gone beyond its limit, new membership for any channels will not be tracked. This condition might cause high-leave latency when those members leave a channel. Another alternative is to increase the limit from configuration mode by entering the **ip igmp snooping limit track *max-entries*** command. It is important to note that increasing the value of *max-entries* could cause the system to fail because of high use of system resources.

Error Message %MCAST-6-ETRACK_STATS_LIMIT_EXCEEDED: Number of entries in %s snooping explicit-tracking statistics has exceeded the %s (%d)

Explanation The number of explicit-tracking statistics entries is bounded to avoid monopolizing of system resources by IGMP/MLD snooping. The explicit-tracking statistics database maximum size is set to the same as that of explicit-tracking limit. The statistics are split into two banks: permanent and volatile. The statistics entries will be stored permanently (volatile) until the permanent entries threshold is reached, after which the statistics will be stored temporarily up to the database maximum size. When the size of the database exceeds the permanent threshold, a group will be removed on receiving an IGMP/MLD leave. Groups can be removed whether they were installed above or below the permanent threshold. If the number of statistics entries grows beyond the maximum size of the database, then no statistics will be stored for any newly formed groups.

Recommended Action If the number of groups being used in the network exceeds the recommended value of the explicit-tracking database, you can increase the size of the database using the **ip {igmp | mld} snooping limit track {0-128000}** command. If the number of groups being used by hosts exceeds the recommended value of the explicit-tracking database, but the number of groups currently active is less than the database size and you require complete statistics, you can set the explicit-tracking limit to the maximum using the **ip {igmp | mld} snooping limit track {0-128000}** command. If you are interested only in statistics of the groups currently active in the system, you

can clear the IGMP/MLD snooping statistics to free up space in the database. The following command can be used to clear snooping statistics: **clear ip {igmp | mld} snooping statistics [interface [type slot/port | vlan x]].**

Error Message %MCAST-6-GC_LIMIT_EXCEEDED: IGMP snooping was trying to allocate more Layer 2 entries than what allowed ([dec])

Explanation IGMP snooping attempted to allocate more Layer 2 entries than the permitted amount specified in the message.

Recommended Action No action is required.

Error Message %MCAST-6-GLOBAL_CGMP_REDIRECT_NOT_INSTALLED: Global IGMP Snooping CGMP MAC Redirection not Installed, System cannot operate in IGMP_CGMP mode automatically

Explanation The global IGMP Snooping feature was unable to install the CGMP-MAC redirection. As a result, the system cannot automatically function in IGMP_CGMP mode when the CGMP-capable devices are in the network.

Recommended Action Enter the per-VLAN **ip igmp snooping cgmp present** command in all the VLANs that have one or more receivers through a CGMP-capable Layer 2 switch connected to this system.

Error Message %MCAST-6-IGMP_CGMP_MODE: IGMP snooping now is running in IGMP_CGMP mode on vlan [dec]

Explanation The specified VLAN is running in IGMP/CGMP mode.

Recommended Action No action is required.

Error Message %MCAST-6-IGMP_ONLY_MODE: IGMP snooping now is running in IGMP_ONLY mode on vlan [dec]

Explanation The specified VLAN is running in IGMP mode.

Recommended Action No action is required.

Error Message %MCAST-6-IGMP_PKT_DROPPED: IGMP: IGMP Queue full (high packet rate/CPU busy), dropped [dec] packet(s) in last 5 minutes

Explanation The IGMP packet queue is not able to accommodate additional packets. Any additional packets will be dropped without processing.

Recommended Action Reduce the IGMP packet rate to prevent packets from being dropped.

Error Message %MCAST-6-IGMP_RATE_LIMIT_DISABLE: IGMP: enabling Snooping on Vlan([dec]), IGMP messages will not be rate limited

Explanation After throttling the IGMP messages on the VLAN for a certain period, snooping is reenabled after the user manually fixes the rate on the offending VLAN and reduces the CPU load.

Recommended Action No action is required.

Error Message %MCAST-6-IGMP_RATE_LIMIT_ENABLE: IGMP: Incoming IGMP message rate exceeded max threshold([dec] pps), disabling Snooping on Vlan([dec]) with Rate([dec] pps)

Explanation The incoming rate of IGMP messages exceeded the maximum configured threshold. Snooping will be disabled on all high-rate VLANs to lower the aggregate rate below the threshold on all remaining VLANs.

Recommended Action Ease the CPU load by reducing the rate of IGMP messages on all high-rate VLANs.

Error Message %MCAST-6-IGMPV3_BADPKT: IGMPV3: No of bad packets received (%s) = %d

Explanation The switch received the specified number of bad IGMP packets.

Recommended Action No action is required.

Error Message %MCAST-6-IGMPV3_EXCLUDE_RECORD: Received %d IGMP-V3 EXCLUDE Group Records with zero sources. Last received from

Explanation This message indicates the number of IGMPv3 EXCLUDE 0 reports that were received for groups in the source specific multicast (SSM) range.

Recommended Action No action is required.

Error Message %MCAST-3-IGMPV3_V1V2PKT: No of IGMP (%s) messages received in SSM Range = %d

Explanation The specified number of IGMP messages was received for groups in the source specific multicast (SSM) range.

Recommended Action No action is required.

Error Message %MCAST-6-IGMP_BADPKT: IGMP: No of Packets received with %s in last 5 minutes = %d

Explanation The switch received the specified number of IGMP packets with bad checksums during the previous five minutes.

Recommended Action No action is required.

Error Message %MCAST-3-IGMP_VLAN_SNOOP_ALL: %s of protocol redirection for vlan %d failed on all %s

Explanation While enabling or disabling IGMP snooping on the VLAN, communication with all line cards failed. As a result, the protocol redirection feature might not work properly for the VLAN.

Recommended Action Disable and then enable IGMP snooping on the VLAN, or vice versa, depending on whether the enable or disable form of the **[no] ip igmp snooping** command was executed.

Error Message %MCAST-3-IGMP_VLAN_SNOOP_LC: %s of protocol redirection for vlan %d failed on linecard %d

Explanation While enabling or disabling IGMP snooping on the VLAN, communication with one of the line cards failed. As a result, the protocol redirection feature might not work properly for the VLAN.

Recommended Action Disable and then enable IGMP snooping on the VLAN, or vice versa, depending on whether the enable or disable form of the **[no] ip igmp snooping** command was executed.

Error Message %MCAST-6-L2_HASH_BUCKET_COLLISION: Failure installing (G,C)->index: ([enet],[dec])->[hex] Protocol : [dec] Error: [dec]

Explanation A Layer 2 entry could not be installed in the hardware because there is not enough space in the hash bucket. Multicast packets will be flooded on the incoming VLAN because the Layer 2 entry installation failed.

Recommended Action No action is required.

Error Message %MCAST-6-LTL_HIGH_WATER_MARK: Number of free LTL indices in the system has reached above the low threshold ([dec])

Explanation The number of indices available in the system has increased above the low threshold. Snooping on the VLANs will resume.

Recommended Action No action is required.

Error Message %MCAST-6-LTL_LOW_WATER_MARK: Number of free LTL indices in the system has reached below the low threshold ([dec])

Explanation The number of indices available in the system has fallen below the low threshold. As a result, the multicast traffic on the VLANs will be flooded and snooping will be discontinued.

Recommended Action Check whether the system has many source-only entries.

Error Message %MCAST-6-LTL_WATER_MARK: Number of free LTL indices in the system has reached above the low threshold (%d)

Explanation The number of local target logic (LTL) indices available in the system has exceeded the lower threshold, and snooping on the VLANs will resume.

Recommended Action No action is required, but you can enter the **remote command switch show mmls mltl** command to check multicast LTL resource usage.

Error Message %MCAST-6-MCAST_PROT_STATUS: %s Feature is %sabled

Explanation This message displays whether the Layer 2 multicast feature is enabled or disabled.

Recommended Action No action is required.

Error Message %MCAST-6-MCAST_RTRADD_PIM: Adding Router Port %d/%d in vlan %d - PIM message

Explanation The CGMP/IGMP has learned a new router port through a PIM message.

Recommended Action No action is required.

Error Message %MCAST-6-MCAST_RTRADD_PROT: Adding Router Port %d/%d in vlan %d

Explanation The CGMP/IGMP/MLD has learned a new router port.

Recommended Action No action is required.

Error Message %MCAST-6-MCAST_RTRADD_USERCFG: Adding Router Port %d/%d in vlan %d - User Configured

Explanation A user-configured multicast router port was added using the CLI.

Recommended Action No action is required.

Error Message %MCAST-6-MCAST_TOPOCHG: Recvd Topology Change Notification in vlan %d

Explanation The network management processor (NMP) received a topology change notification in a VLAN.

Recommended Action No action is required.

Error Message %MCAST-6-MLD_ADDRESS_ALIASING_FALLBACK: Address Aliasing detected for [enet] on vlan [dec] from possible src-ip[ipv6_addr] dst-ip[ipv6_addr] src-mac [enet]

Explanation Multicast packets with destinations that alias a special Layer 2 entry can indicate a possible denial-of-service attack and overwhelm the CPU.

Recommended Action Remove from the Layer 2 table the entry for which address aliasing was detected.

Error Message %MCAST-6-MLD_ADDRESS_ALIASING_NORMALMODE: Address Aliasing timer expired reinstalling entry for group [enet] on vlan [dec]

Explanation After a certain time (dependent on the group for which address aliasing was detected) the corresponding Layer 2 entry is reinstalled.

Recommended Action Reinstall in the Layer 2 table the entry for which address aliasing was detected

Error Message %MCAST-6-MLD_RATE_LIMIT_DISABLE: MLD: enabling Snooping on Vlan([dec]), MLD messages will not be rate limited

Explanation After throttling the IGMP messages on the VLAN for a certain period, snooping is reenabled after the user manually fixes the rate on the offending VLAN and reduces the CPU load.

Recommended Action No action is required.

Error Message %MCAST-6-MLD_RATE_LIMIT_ENABLE: MLD: Incoming MLD message rate ([dec] pps) exceeded max threshold([dec] pps), disabling Snooping on Vlan([dec]) for [dec] secs

Explanation The incoming rate of MLD messages has exceeded the maximum configured threshold. Snooping will be disabled on all high rate VLANs to reduce the aggregate rate on all remaining VLAN to below the threshold.

Recommended Action Ease the CPU load by reducing the rate of MLD messages on all high-rate VLANs.

Error Message %MCAST-6-RGMP_JOIN: Rcvd RGMP Join Mesg %d/%d vlan %d for Group %i

Explanation The router has joined a multicast group.

Recommended Action No action is required.

Error Message %MCAST-6-RGMP_JOINRANGE: Rcvd RGMP Join Message in the range 01-00-5e-00-00-xx

Explanation The router sent a message for an invalid (reserved) address. The address 01-00-5e-00-00-xx cannot be used by the Router Port Group Management Protocol (RGMP).

Recommended Action No action is required.

Error Message %MCAST-6-RGMP_LEAVE: Rcvd RGMP Leave Mesg %d/%d vlan %d for Group %i

Explanation The router has left a multicast group.

Recommended Action No action is required.

Error Message %MCAST-6-RGMP_LVRANGE: Rcvd RGMP Leave Mesg in the range
01-00-5e-00-00-xx

Explanation The router sent a message for an invalid (reserved) address. The address
01-00-5e-00-00-xx cannot be used by RGMP.

Recommended Action No action is required.

Error Message %MCAST-6-RTRDEL_TIMEOUT: Deleting Router Port %d/%d in vlan %d -
Timeout

Explanation The router port timer has timed out and the router port entry has been removed.

Recommended Action Determine whether a router is connected to the indicated port, and verify that
IGMP is enabled.

Error Message %MCAST-6-RTRRGMP_BYE: Router Port %d/%d in vlan %d has become
nonRGMP-capable

Explanation An RGMP router port has changed to a non-RGMP router port.

Recommended Action No action is required.

Error Message %MCAST-6-RTRRGMP_HELLO: Router Port %d/%d in vlan %d has become
RGMP-capable

Explanation A router port has changed to a RGMP-capable port.

Recommended Action No action is required.

Error Message %MCAST-6-RTRRGMP_TIMEOUT: Router Port %d/%d in vlan %d has become
RGMP-capable

Explanation The RGMP router has timed out and the port is no longer RGMP-capable.

Recommended Action No action is required.

Error Message %MCAST-6-RX_CGMPJN: Rcvd CGMP Join Mesg in vlan %d

Explanation A CGMP join message was received by a VLAN.

Recommended Action No action is required.

Error Message %MCAST-6-RX_CGMPLV: Rcvd CGMP Leave Mesg %d/%d vlan %d

Explanation A CGMP leave message was received on a VLAN port.

Recommended Action No action is required.

Error Message %MCAST-6-RX_IGMPLV: IGMP: Rcvd IGMP Leave %e on %d/%d

Explanation The switch received an IGMP leave message for the group number on module number/port number.

Recommended Action No action is required.

Error Message %MCAST-6-RX_IGMPREPORT: IGMP: Rcvd IGMP Report %e on %d/%d

Explanation The switch received an IGMP report message for the group number on module number/port number.

Recommended Action No action is required.

Error Message %MCAST-6-RX_JNRANGE: IGMP: Rcvd Report in the range of 01-00-5e-00-00-xx

Explanation The switch received an IGMP report from a host for the group address in the range of 01-00-5e-00-00-xx. This range is reserved for control packets and should not be used for general multicast data traffic.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCAST-6-RX_LVRANGE: IGMP: Rcvd Leave in the range of 01-00-5e-00-00-xx

Explanation The switch received an IGMP leave from a host for the group address in the range of 01-00-5e-00-00-xx. This range is reserved for control packets and should not be used for general multicast data traffic.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCAST-6-SOURCE_ONLY_LIMIT_EXCEEDED: [chars] snooping was trying to allocate more source only entries than allowed ([int])

Explanation Attempts by the IGMP snooping module to allocate source-only entries has exceeded the limit. This limit prevents the IGMP snooping module from consuming all of the system resources. Any IP groups sent in excess of the limit will not be learned by IGMP snooping.

Recommended Action Either reduce the number of IP groups sent or increase the limit by entering the **ip igmp snooping source-only-learning limit *max-entries*** command. Increasing the value of *max-entries* could cause a system failure due to the overuse of system resources.

MCAST_MQC Messages

This section contains multicast modular quality of service command-line interface MQC messages.

MCAST_MQC-3

Error Message %MCAST_MQC-3-CMAP_SDB_REGISTER: Error initialising class-map of type multicast-flows.

Explanation The system could not register the component related to the class map of type \n multicast-flows to the string database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MCASTRED Messages

This section contains multicast redundancy (MCASTRED) messages.

MCASTRED-3

Error Message %MCASTRED-3-ACKQMSG: Failed attempt to enqueue sync message type %u in confirmation queue

Explanation An attempt to link a new synchronization message into the synchronization message confirmation queue failed. This failure indicates corruption of the linkage within the queue. It is not possible to track message confirmation or to initiate a recovery action if confirmation is not received.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-ACKUNQMSG: Failed to remove sync request type %u from pending ACK queue

Explanation An attempt failed to unlink a completed synchronization request from the queue for requests awaiting confirmation of receipt from the standby route processor (RP). This failure indicates corruption of the linkage within the pending acknowledgement queue. False timeout error messages and memory leakage are likely. Loss of standby RP synchronization is possible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-ALCSYNCTYP: Attempt to allocate sync request for invalid sync type %u

Explanation A function attempting to perform a synchronization operation has specified an invalid synchronization data type. No synchronization operation can be performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-ALLOCMSG: Sync message buffer allocation failed for sync info type %u

Explanation An attempt to allocate a buffer for synchronization message transmission failed. Loss of synchronization on the standby route processor (RP) is likely.

Recommended Action Attempt standby RP synchronization by reloading the standby RP. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-ALLOC_CAP_TLV: Failed attempt to allocate memory for %s client capability TLV

Explanation The callback function responsible for creating an ISSU capability type length value (TLV) list was unable to allocate memory to hold the TLV list. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-BAD_EVENT_TYPE: Defrfd sync event type [dec] is invalid.

Explanation An invalid value was specified in a call to handle events which deferred sync elements are waiting for. The value is greater than PIM_SYNC_WAIT_FOR_EVENT_MAX.

Recommended Action This is a transient error. However, this condition indicates other errors in the software that will require further examination by your Cisco technical support representative. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-BAD_SYNC_TYPE: PIM sync type %d is invalid or too large.

Explanation In a call to modify an array indexed by the Protocol Independent Multicast (PIM) synchronization type, an out-of-bounds value was specified. The specified value exceeds either PIM_SYNC_TYPE_MAX or the length of the array.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-BLKNBOOL: Failed to create %s watched boolean for bulk sync

Explanation An attempt to create a watched boolean to monitor bulk synchronization of state information to the standby route processor (RP) has failed. It is not possible to verify successful completion of the bulk synchronization operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-BLKNOFUNC: No bulk sync function defined for sync type %u

Explanation No function is defined for bulk synchronization of database information of this type. Some required information might not be synchronized to the standby RP.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-BULKRQTIME: Timeout sending bulk sync requests to standby

Explanation The maximum wait time has expired for transmission of enqueued bulk synchronization messages to the standby RP. Some required synchronization messages might not have been sent successfully.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-BULK_COMPLETE_INCOMPATIBLE: Skipping sending of bulk sync completion message to peer: Incompatible message type.

Explanation The message code designated for peer RP confirmation of bulk synchronization completion was not recognized by the ISSU infrastructure as a compatible PIM HA message type. Although PIM bulk synchronization may have succeeded, bulk synchronization confirmation is not possible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-BULK_COMPLETE_XFORM_FAIL: ISSU xmit transform failed for bulk send complete message.

Explanation An ISSU transformation failed on the message used for peer RP confirmation of bulk synchronization completion. Although PIM bulk synchronization may have succeeded, bulk synchronization confirmation is not possible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-CAP_PROC_NULL_CTX: NULL client context for ISSU capability TLV processing.

Explanation The callback function responsible for processing a capability type length value (TLV) was invoked by the ISSU infrastructure with a NULL client context. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-CAP_PROP_NULL_CTX: NULL client context for ISSU capability TLV setup.

Explanation The callback function responsible for creating a capability type TLV was invoked by the ISSU infrastructure with a NULL client context. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-DDE_REPLAY_FAILSAFE: PIM NSF Data Driven Event failsafe timer expired. First waiting VRF is

Explanation Multicast Forwarding Information Base (MFIB) replay of data driven events and subsequent Multicast Routing Information Base (MRIB) update processing has not completed within the maximum allowed time interval. Protocol Independent Multicast (PIM) is forcing termination of the Data Driven Event (DDE) replay monitoring period but some multicast routing information might not have been restored.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-DDE_REPLAY_NULL_MVRF: NULL MVRF specified for DDE replay.

Explanation An invalid (NULL) value was specified in a call to initiate MFIB data driven event replay following a route processor failover. Some previously existing multicast state might not be preserved through the route processor failover.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-DECODEFUNC: No decode function exists for sync data type %u

Explanation No function is defined for handling synchronization data of the specified type. No synchronization action is possible on the standby RP for the synchronization message that specified this data type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-DECODENULL: No message buffer specified for standby sync of database type %u

Explanation A function was invoked to perform a database synchronization operation on the standby RP, but the caller did not specify the address of the synchronization message containing the information required for performing the synchronization operation. The synchronization operation for this database entity type cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-DEFER_SYNC_FAILURE: Sync failure in standby defer sync operation.

Explanation An element which was scheduled to be synched later has failed to sync either upon arrival of the event it was waiting for or it has waited in the deferred sync queue for more than 1 minute.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %MCASTRED-3-DELNULLREQ: No sync request specified in sync request deletion attempt.

Explanation In a call to delete a synchronization request entry, the caller failed to specify the location of the synchronization request to be deleted. A memory leak is likely.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-DELSYNCTYP: Attempt to delete sync request for invalid sync type %u

Explanation A function attempting to delete a synchronization request has specified an invalid synchronization data type. The synchronization request cannot be deleted. A memory leak is likely.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-EMPTY_CAP_GROUP: Empty capability group for %s ISSU client capability TLV setup.

Explanation The callback function responsible for creating an ISSU capability type length value (TLV) found that the count of capability entries in its client context table was zero. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-EMPTY_CAP_PROPOSE_TABLE: Empty capability table for ISSU capability TLV setup.

Explanation The callback function responsible for creating a capability type TLV was invoked by the ISSU infrastructure with a capability table containing no capability types. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-EOXBADRC: Invalid completion code %u for sync message transmission type %u

Explanation An undefined completion code was specified for end of synchronization message transmission handling. Memory leakage, false timeouts, and other subsequent errors may result.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-EOXNOREQ: End of sync message transmission: no sync request specified

Explanation End of synchronization message transmission handling was invoked with no synchronization request specified. Cleanup for successful transmission cannot proceed. Retry for unsuccessful transmission cannot proceed. Memory leakage is likely and loss of synchronization on the standby RP is possible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-FINDNULLENT: No target specified for sync entity search.

Explanation In a call to invoke a search for a database entity requiring synchronization to the standby RP, the caller failed to specify a descriptor for the entity to be synchronized. The synchronization operation entity cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-FMTFUNC: No sync message format function defined for sync type %u

Explanation No function is defined to create a synchronization message for this type of database information. Loss of synchronization on the standby RP is likely.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-FMTGENNOBF: No message buffer specified for generic sync message info

Explanation A function was invoked to store generic synchronization message information into an outgoing message buffer, but the caller did not specify the outgoing message buffer address. The synchronization operation for this database entity type cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-FMTMSG: Failed to format a sync message for sync type %u

Explanation An attempt to format (create) a synchronization message has failed. The synchronization message cannot be sent. Loss of synchronization on the standby RP is likely.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-FMTNULLPRM: Missing parameters in sync message format request for data type %u

Explanation A function was invoked to store synchronization message information into an outgoing message buffer, but the caller failed to specify either the location of the search key for the database entity to be synchronized or the address of the outgoing message buffer. The synchronization operation for this database entity type cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-HASHNQ: Failed attempt to enqueue sync request type %u in hash table

Explanation An attempt to link a new synchronization request into the synchronization request hash table failed. This failure indicates corruption of the linkage within the hash table. The synchronization operation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-HLD_RLS_NO_MVRF: No MVRF for tableid 0x%x specified for multicast NSF holdoff release.

Explanation A table ID for which no MVRF exists was specified as an input to a function registered for releasing of a multicast NSF holdoff lock. If the calling client has a real holdoff extension request pending for some MVRF, the lock will not be released until the holdoff failsafe timer expires. This condition could delay completion of multicast reconvergence following an RP failover.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-HOLDOFF_FAILSAFE: PIM NSF failsafe timer expired. Holding client mask = 0x%x

Explanation One or more clients requested extension of the PIM NSF holdoff period, but did not release the holdoff within the maximum allowed time interval. PIM is forcing termination of the NSF holdoff period and resumption of normal flow of multicast routing information, but one or more clients may not be ready to resume normal operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-INITNOBOOL: Failed to create %s watched boolean during multicast redundancy initialization

Explanation An attempt to create a watched boolean during multicast (PIM) redundancy process initialization has failed. The PIM redundancy process cannot be initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-INITNOQUEUE: Failed to create %s watched queue during multicast redundancy initialization

Explanation An attempt to create a watched queue during multicast (PIM) redundancy process initialization has failed. The PIM redundancy process cannot be initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-INVALID_CAP_PROPOSE_TABLE: Invalid capability table for %s client ISSU capability TLV setup.

Explanation The callback function responsible for creating a capability type length value (TLV) was invoked by the ISSU infrastructure with a capability table that did not match any of the registered entries for this client. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-INVSYNCTYP: Attempt to initiate sync request for invalid sync type

Explanation The synchronization data type specified by the function attempting to initiate a synchronization operation is not a valid type. No synchronization operation can be performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-INV_CHKPT_MSG: Received invalid CF message. client = %u, entity = %u, type = %u

Explanation An invalid checkpoint facility (CF) message was received by the PIM HA checkpoint client. The message cannot be processed. This condition might cause a loss of database synchronization between the primary and standby RPs.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-INV_PORT_TYPE: Invalid communication port identifier %u specified for ISSU port up/down handling

Explanation An undefined communication port identifier was specified for PIM ISSU transport up or down handling. PIM ISSU communication port up or down handling cannot proceed. PIM ISSU functionality might be impaired or lost.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-ISSU_EMPTY_TLV: Empty TLV list received for ISSU %s client capability processing

Explanation The callback function responsible for processing an ISSU capability type length value (TLV) list received an empty TLV list. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-ISSU_PROC_CAP_TYPE: Invalid capability type found in %s client capability entry.

Explanation The callback function responsible for processing an ISSU capability type TLV list encountered a capability type for which no handling is available. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-ISSU_TLV_INSERT: Failed to insert entry in ISSU capability TLV list for %s client

Explanation The callback function responsible for creating an ISSU capability type TLV list encountered a failure when attempting to insert an entry into a TLV list. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-LOCFUNC: No database entity search function defined for sync type %u

Explanation A function was invoked to store synchronization message information into an outgoing message buffer, but no function exists for locating a database entry of the specified type. The synchronization operation for this database entity type cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-LOCNULLENT: No destination specified in search for sync entity of type %u

Explanation A function was invoked to search for a database entity of the specified type, but the caller failed to specify a destination for storing the search result. The synchronization operation for this database entity type cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-LOCNULLHND: No search handle specified in search for sync entity of type %u

Explanation A function was invoked to search for a database entity of the specified type, but the caller failed to specify a search handle (key) for finding the database entity to be synchronized. The synchronization operation for this database entity type cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-MRIB_UPD_NULL_MVRF: NULL MVRF pointer specified for MRIB update notification.

Explanation A NULL MVRF address was specified in a function call to notify the PIM HA process that all pending updates have been read for a specified MVRF. The process will attempt to continue with RP switchover handling despite this error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-MSGNOREQ: Could not find sync request for completed sync message type %u

Explanation The synchronization request corresponding to a completed synchronization message could not be determined. This condition may result in memory leakage, false timeouts, and other subsequent errors.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-MSGSEQNUM: Out of order sequence number in received sync message for sync data type %u, received epoch/seq %u/%u, expected %u/%u

Explanation The sequence number specified in a synchronization message received by the standby RP is not the expected sequence number for the next received synchronization message. Some synchronization messages may have been lost.

Recommended Action Attempt to synchronize the standby RP by reloading it. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software

issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-MVRF_NAME: MVRF lookup for VRF %s failed.

Explanation An MVRF lookup failed for a VRF name known to be associated with an existing MVRF table, indicating an incorrect setup of search parameters. A PIM data synchronization operation has been aborted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-MVRF_TABLEID: MVRF lookup for tableid %u failed.

Explanation An MVRF lookup failed for a table ID known to be associated with an existing MVRF table, indicating an incorrect setup of search parameters. A PIM data synchronization operation has been aborted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-NEGOMSGINV: Invalid negotiation status for %s client message

Explanation The ISSU infrastructure evaluated a message for this client but failed to identify the message as a negotiation message or a user message. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-NOSYNARG: NULL argument pointer specified for PIM data sync type %u.

Explanation A function was invoked to synchronize PIM information, but the caller did not provide a valid data pointer. The synchronization operation for this database entity type cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-PRM_LOOKUP: PIM RP mapping range lookup for VRF %s group %i mask %i failed.

Explanation A PIM RP mapping range lookup failed for a range that is known to exist, indicating an incorrect setup of search parameters. A PIM data synchronization operation has been aborted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-RCVNODATA: No data pointer returned for received checkpoint message

Explanation On reception of a checkpoint message at the standby RP, an attempt to obtain the location of the data for the message returned a NULL pointer. No message contents are available for this message.

Recommended Action Attempt to synchronize the standby RP by reloading it. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some

messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-RPDF_NO_IDB: No IDB for if_number %u in Bidir RP DF sync attempt for RP address %i.

Explanation In a function call to trigger synchronization of bidirectional RP designated forwarder (DF) information, the interface descriptor block (IDB) if_number specified does not map to any existing IDB. The synchronization operation cannot proceed. The DF information might no longer be correct following an RP failover.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-RPDF_NULL_IDB: NULL IDB pointer in Bidir RP DF sync attempt for RP address %i.

Explanation In a function call to trigger synchronization of bidirectional RP DF information, a NULL IDB address was specified. The DF information might no longer be correct following an RP failover.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-RTRYLIMIT: Retry limit reached for sync type %u

Explanation The maximum allowable number of transmission retries has failed for a database entity of this type. No further retries can be executed. The standby RP might no longer be synchronized with the active RP.

Recommended Action Attempt to synchronize the standby RP by reloading it. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-RTRYNOREQ: Sync retry requested with no sync request specified

Explanation A retry was requested for transmission of a synchronization message, but no synchronization request information was specified. The retry cannot be executed. The standby RP might no longer be synchronized with the active RP.

Recommended Action Attempt to synchronize the standby RP by reloading it. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-SNDMSG: Failed to send a sync message for sync type %u

Explanation An attempt to send a synchronization message has failed. The message transmission will be automatically retried.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-SNDNODATA: No data pointer provided in checkpoint message to be sent.

Explanation After allocation of a checkpoint message buffer in the primary RP, an attempt to obtain the location of the data for the message returned a NULL pointer. The checkpoint message cannot be sent. Loss of standby synchronization is likely.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-SPURIOUS_MGD_TIMER_EXP: Managed timer wakeup received by the PIM HA process with no expired timers.

Explanation The PIM HA process received a wakeup for managed timer expiration, but no expired timer was reported. The timer expiration cannot be handled. The standby RP might no longer be synchronized with the active RP.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-SYNC_REQ_ORPHAN: Orphaned queue links found in sync request hash table search for sync type %u

Explanation An attempt to find a matching entry for a new synchronization request in the synchronization request hash table failed because of corruption of the linkage within the hash table. The synchronization operation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-TABLE_INVALID_CAP_TYPE: Invalid capability type found in %s client capability entry.

Explanation The callback function responsible for creating an ISSU capability type length value (TLV) list encountered a capability type for which no handling is available. Capability negotiation cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-TUNSYNMSG: Received invalid termination message for mvrfr(%u) while waiting for mvrfr(%u) mdt tunnel sync

Explanation Confirmation has failed for standby RP reception of a multicast distribution tree (MDT) tunnel message. As a result, the standby RP might not be able to create the MDT tunnel.

Recommended Action Attempt to synchronize the standby RP by reloading it. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-TUNSYNRCV: %s failure in reception of MDT tunnel sync information for mvrfr %s on the standby RP.

Explanation Confirmation has failed for standby RP reception of a multicast distribution tree (MDT) tunnel message. As a result, the standby RP might not be able to create the MDT tunnel.

Recommended Action Attempt to synchronize the standby RP by reloading it. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-TUNSYNCTIME: Timeout waiting for confirmation of mdt tunnel sync for mvrf(%u) (%s)

Explanation Confirmation has failed for standby RP reception of a multicast distribution tree (MDT) tunnel message. As a result, the standby RP might not be able to create the MDT tunnel.

Recommended Action Attempt to synchronize the standby RP by reloading it. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-TUNSYNXCXMIT: Failed to transmit sync MDT tunnel information for mvrf %s to the standby RP.

Explanation An interprocess communication (IPC) transmission attempt has failed to send an IPC message to the standby RP with multicast distribution tree (MDT) tunnel synchronization information. As a result, the standby RP will not be able to create the MDT tunnel.

Recommended Action Attempt to synchronize the standby RP by reloading it. If the error recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-UCAST_CONV_STBY: Spurious unicast convergence notification received on standby RP for mvrf %s.

Explanation Unicast convergence notification was erroneously signalled on the standby RP for the specified multicast VRF. This convergence notification is being ignored.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCASTRED-3-WAITQ_ORPHAN: Orphaned queue links found in the %x MVRF wait queue.

Explanation An attempt to perform state transition handling for multicast VRFs (MVRFs) in this queue failed. The failure occurred because the queue was corrupted or because one or more queue link entries did not specify the address of the corresponding MVRF. Multicast route convergence following an RP failover may be delayed or impaired.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MCAST_RP Messages

This section contains multicast route processor messages.

MCAST_RP-4

Error Message %MCAST_RP-4-MPLS_PIM_RATE_LIMIT: [chars] when [chars] will reprogram hardware setting for PIM. Please reapply PIM rate-limiter.

Explanation The Router Guard or PIM Snooping features require the switch hardware to be programmed in a manner different from MPLS. These two features are incompatible with MPLS. When either Router Guard or PIM snooping is enabled while MPLS is enabled, the PIM rate limiter will not work properly.

Recommended Action Unconfigure and reconfigure the PIM rate limiter using the **show mls rate-limit multicast ipv4 pim** command. The same solution applies to the situation when both Router Guard and PIM snooping are disabled and MPLS is being enabled.

Error Message %MCAST_RP-4-MPLS_PIM_SNOOPING: The MPLS and PIM Snooping features do not work together. Please disable either one.

Explanation The PIM Snooping feature requires the switch hardware to be programmed in such a way that PIM register messages with MPLS tags might be lost.

Recommended Action Disable either MPLS or PIM Snooping.

Error Message %MCAST_RP-4-MPLS_ROUTER_GUARD: The MPLS and Router Guard features do not work together. Please disable either one.

Explanation The Router Guard feature requires the switch hardware to be programmed in such a way that PIM register messages with MPLS tags might be lost.

Recommended Action Disable either MPLS or Router Guard.

Error Message %MCAST_RP-4-RGUARD_PIM_RATE_LIMIT: **Router Guard** feature if enabled or disabled while PIM rate-limiter is ON will not work properly. Please reapply the PIM rate-limiter.

Explanation The PIM rate limiter floods the rate-limited PIM control packets to all the ports in the VLAN. Because of this, the Router Guard feature will not work properly if enabled while the PIM rate limiter is enabled.

Recommended Action Unconfigure and reconfigure the PIM rate limiter using the **show mls rate-limit multicast ipv4 pim** command.

MCM Messages

This section contains minimum disruption restart (MDR) card manager messages.

MCM-3

Error Message %MCM-3-DEQUEUE_FAIL: Unable to get a free event (%s) from the free event queue (slot: %d, mode %d)

Explanation During runtime, the minimal disruption routing (MDR) card manager is unable to retrieve a free event to communicate between its different processes. MDR operation will probably result in the resetting of all line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCM-3-GET_MTU_FAIL: Unable to get the MTU for message %d to seat %s (%d) (valid:%d)

Explanation During runtime, the MDR card manager is unable to get the MTU of a message to be sent between its different processes.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCM-3-NEGO_INCOMPATIBLE: MDR Card manager ISSU negotiation with standby is incompatible

Explanation An error occurred during MDR card manager initialization. As a result, the MDR card manager is unable to synchronize its data between the active and standby supervisors. An MDR operation will probably result in the resetting of all line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MCT1E1 Messages

This section contains CT1/CE1 shared port adapter messages.

MCT1E1-2

Error Message %MCT1E1-2-CMD_DROP: [chars], cmd: [dec], arg0: [dec], arg1: [dec] arg2: [dec], arg3: [dec], vc: [dec] reason: [chars]

Explanation The SPA driver dropped a configuration command. One or more interfaces or controllers associated with the SPA might not be configured correctly.

Recommended Action Check the configuration of the interfaces and controllers and correct the configuration if necessary. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-2-EV_DROP: [chars], cmd: [dec], arg0: [dec], arg1: [dec] arg2: [dec] reason [chars]

Explanation The SPA driver dropped an event notification command. Counters or line protocols for one or more interfaces or controllers may be incorrect.

Recommended Action Restart any interfaces or controllers that are down. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MCT1E1-3

Error Message %MCT1E1-3-AUTODNR: %s failed for slot %d bay %d err %d

Explanation The Auto-Do-Not-Resequene (AUTODNR)/USNDNR process has failed. The SPA and line card are out of synchronization. This condition indicates a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-BAD_SIZE_ERR: SPA [dec]/[dec]: [dec] [chars] events on HDLC Controller were encountered. The SPA is being Restarted.

Explanation The SPA driver detected an error event on the HDLC controller.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-BATCH_CMD_INVALID_TAG: SPA [dec]/[dec]: Invalid tag value [dec] at index [dec].

Explanation The SPA driver detected an invalid tag value in a batch command from the RP.

Recommended Action If the ports on the SPA are not operating as expected, power down and reseal the specified SPA card. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-CMD_FAILED: SPA [dec]/[dec]: f/w send command failed err [dec] reason [chars]

Explanation The SPA driver could not successfully send a command to the firmware.

Recommended Action If the ports on the SPA are not operating as expected, power down and reseat the specified SPA card. If this message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-COR_MEM_ERR: SPA [dec]/[dec]: [dec] correctable [chars] memory error(s) encountered.
The error has been corrected and normal processing should continue.
The memory address of most the recent error is: [hex]

Explanation The SPA driver detected a correctable memory error on the SPA card. The error has been corrected and normal processing should continue. The hexadecimal memory address of the most recent error is specified in the message text on the console or in the system log.

Recommended Action If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-FPGA_CNTR_ERR: [chars]: [dec] [chars] error(s) encountered.

Explanation The SPA driver detected an FPGA error condition on the SPA card. Interface packet error counter corruption may result.

Recommended Action The SPA should continue to function normally. If the error condition recurs, reset the SPA by doing a physical online insertion and removal (OIR). If the condition persists, copy the error message exactly as it appears. Research and attempt to resolve the issue using the SPA hardware troubleshooting documentation and the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-FRMR_CLKFAIL: SPA [dec]/[dec]: Framer input clock failure detected, CTCLK = [chars]CTIVE, LREFCLK = [chars]CTIVE, SREFCLK = [chars]CTIVE, ctclk count [int] lrefclk count [int] srefclk count [int]

Explanation The SPA driver detected failure of one or more input clocks to the framer chip. The T1/E1 ports may not operate as expected.

Recommended Action If the ports on the SPA are not operating as expected, power down and reseal the specified SPA card. If this message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-HDLC_CTRL_ERR: SPA [dec]/[dec]: [dec] [chars] events on HDLC Controller were encountered.

Explanation The SPA driver detected an error event on the HDLC controller.

Recommended Action If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-INITFAIL: MCT1E1 (bay [dec]), Init Failed at [chars] - line [dec] arg [hex]

Explanation The SPA failed to complete hardware initialization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-PERIODIC_PROCESS: SPA [dec]/[dec]: periodic process error [chars].

Explanation The SPA driver detected an error with the periodic processing routine.

Recommended Action If the ports on the SPA are not operating as expected, power down and reseat the specified SPA card. If this message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-QUEUE_HALT_FAIL: [chars]: Could not suspend message ([dec]) or command ([dec]) queue

Explanation The message or command queue could not be stopped prior to the OIR removal of the SPA.

Recommended Action If the ports on the SPA are not operating as expected, power down and reseat the specified SPA card. If this message persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-SPI4_HW_ERR: SPA [dec]/[dec]: [chars] Hardware error was encountered.

Explanation The SPA driver detected a hardware error condition on the SPA card's SPI4 bus. This condition might result in improper operation.

Recommended Action Power down and reseat the specified SPA card. If the condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-TIMEOUT: %s: %s failed: %d, state: %d, ml_id: %d progress: %d

Explanation Linkrec is stuck at non-ready. This condition indicates a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-UNCOR_MEM_ERR: SPA [dec]/[dec]: [dec] uncorrectable [chars] memory error(s) encountered. The memory address of the most recent error is: [hex] The SPA is being restarted.

Explanation The SPA driver detected an uncorrectable memory error condition on the SPA card. Packet corruption may result. The hexadecimal memory address of the most recent error is specified in the message text on the console or in the system log.

Recommended Action Power down and reseal the specified SPA card. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MCT1E1-3-UNCOR_PARITY_ERR: SPA [dec]/[dec]: [dec] [chars] parity error(s) encountered.

Explanation The SPA driver detected an uncorrectable parity error condition on the SPA card. Packet corruption may result.

Recommended Action Power down and reseal the specified SPA card. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MCX Messages

This section contains Voice port adapter messages.

MCX-3

Error Message %MCX-3-FREEDMFATAL: Bay [dec]: freedm reset, command-status register [hex]

Explanation CHOPIN experienced fatal freedm related problem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MDEBUB Messages

This section contains memory debugging messages.

MDEBUB-2

Error Message %MDEBUB-2-ACCESSBEYONDSIZE: [hex] access beyond allocated size; ptr = [hex]; size = [dec]; actual size = [dec]; allocator_pc = [hex]; Traceback - [chars]

Explanation The software attempted to access memory beyond the allocated size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message M%DEBUG-2-ACCESSFREED: [hex] access freed memory; ptr = [hex]; size = [dec]; actual size = [dec]; allocator_pc = [hex]; free_pc = [hex]; Traceback - [chars]

Explanation The software attempted to access freed memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MDR_SM Messages

This section contains minimum disruption restart (MDR) state machine (SM) messages.

MDR_SM-3

Error Message %MDR_SM-3-INIT_FAIL: Initialisation error '%s'

Explanation An error occurred during initialization of the minimum disruption restart (MDR) state machine (SM). As a result, the MDR SM is inoperable. An MDR operation will probably result in the resetting of all line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_CLIENT_ID_ERROR: Can not find the data associated to client ID (%d) for slot (%d)

Explanation The MDR state machine cannot find the data registered for the client ID. The client ID is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_CONTINUE_INVALID: Client (%d) returned an invalid status code on slot %d

Explanation The MDR state machine client returned a status code that is invalid when returned on the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_EVENT_TIMEOUT: MDR slot state machine %d did not receive the SLOT_UP event from the linecard

Explanation The MDR slot state machine (SM) did not receive an expected event from the line card. As a result, the state machine is inoperable for this slot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_ID_MISMATCH: Client ID mismatch for slot %d during progression %s on client: %d, expecting %d

Explanation The MDR state machine client returned a client ID that does not match the current client ID. As a result, the MDR state machine will abort.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_INVALID_ARG: Process is unable to get his slot number

Explanation The MDR state machine process is unable to get the slot number of a slot supporting MDR.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_INVALID_EVENT: Slot (%d) received an unexpected event (%s) in state (%s)

Explanation The MDR state machine received an unexpected event for the current state.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_NOTIFY_STANDBY_FAILED: Failed to notify Standby for MDR slot state machine (%d) Client %s (%d) in state %s

Explanation The MDR state machine failed to notify the standby device. As a result, the MDR state machine will abort.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_NOTIFY_TIMEOUT: Notification timeout on MDR slot state machine %d for the local client %s (%d) in state %s

Explanation The MDR state machine (SM) did not receive a response from the MDR SM client. As a result, the state machine is inoperable. An MDR operation will probably result in the resetting of all line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_NO_FREE_EVENT_IN_QUEUE: The event queue is full for MDR Slot SM %d, MDR Slot SM %d will abort

Explanation The MDR state machine (SM) was unable to get a free event from the event queue. As a result, the state machine is inoperable. An MDR operation will probably result in the resetting of all the line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SLOT_STATUS_INVALID: Client %s (%d) on slot %d returned an unexpected status code (%d)

Explanation The MDR state machine client returned an unexpected status code. An MDR operation will probably result in the reset of all line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SYS_CLIENT_ID_ERROR: Can not find the data associated to client ID (%d)

Explanation The MDR state machine cannot find the data registered for the client ID. The client ID is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SYS_CONTINUE_INVALID: Client (%d) returned an invalid status code

Explanation The MDR state machine client returned a status code that is invalid when returned on the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SYS_ID_MISMATCH: Client ID mismatch during progression %s on client: %d, expecting %d

Explanation The MDR state machine client returned a client ID that does not match the current client ID. As a result, the MDR state machine will abort.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SYS_INVALID_EVENT: Received an unexpected event (%s) in state (%s)

Explanation The MDR state machine received an unexpected event for the current state.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SYS_NOTIFY_STANDBY_FAILED: Failed to notify Standby for MDR system state machine Client %s (%d) in state %s

Explanation The MDR state machine failed to notify the standby device. As a result, the MDR state machine will abort.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SYS_NOTIFY_TIMEOUT: Notification timeout on MDR system state machine for the local client %s (%d) in state %s

Explanation The MDR state machine (SM) did not receive a response from the MDR SM client. As a result, the state machine is inoperable. An MDR operation will probably result in the resetting of all line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SYS_NO_FREE_EVENT_IN_QUEUE: The event queue is full for MDR System SM, MDR SM will abort

Explanation The MDR state machine (SM) was unable to get a free event from the event queue. As a result, the MDR SM is inoperable. An MDR operation will probably result in the resetting of all the line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-3-SYS_STATUS_INVALID: Client %s (%d) returned an unexpected status code (%d)

Explanation The MDR state machine client returned an unexpected status code. An MDR operation will probably result in the reset of all line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

MDR_SM-4

Error Message %MDR_SM-4-QUIESCE_FAIL: Quiesce watchdog timer expired, continuing with MDR

Explanation At the start of a switchover, the minimum disruption restart state machine (MDR SM) on the old active RP enters the quiesce state. Because this state blocks the reload of the old active, the switchover is blocked during this state. To prevent a loss of service due to a bug in the MDR SM or one of its clients, a watchdog timer limits the duration of this state.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-4-SLOT_CALLBACK_TOO_MUCH_TIME: MDR SM Slot %d client %s (%d) spent too much time (%d msec) in state (%s)

Explanation The MDR state machine has detected that one of its clients spent too much time in its callback function. This is a warning message; the MDR state machine will continue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-4-SYS_CALLBACK_TOO_MUCH_TIME: MDR SM SYS client %s (%d) spent too much time (%d msec) in state (%s)

Explanation The MDR state machine detected that one of its clients spent too much time in its callback function. This is a warning message; the MDR state machine will continue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM-4-UNBLOCK_RF: MDR SM aborted, continuing RF Progression (%d)

Explanation The MDR state machine (SM) aborted due to an error in the MDR state machine or one of its clients. The redundancy facility (RF) progression was blocked, but it will be unblocked to allow the standby device to boot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

MDR_SM_LC Messages

This section contains minimum disruption restart (MDR) state machine (SM) line card (LC) messages.

MDR_SM_LC-3

Error Message %MDR_SM_LC-3-ABORT: MDR state machine is aborted due to '%s'

Explanation The minimum disruption restart (MDR) state machine (SM) aborted due to an unrecoverable error. Any MDR operation will probably result in the resetting of this line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM_LC-3-ID_MISMATCH: Client ID mismatch during progression on client: %d, expecting %d

Explanation The MDR state machine client returned a client ID that does not match the current client ID. As a result, the MDR state machine will abort.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM_LC-3-INIT_FAIL: Initialisation error '%s'

Explanation During the MDR state machine (SM) initialization, an error occurred that has caused the MDR SM to be inoperable. Any MDR operation will probably result in the resetting of this line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM_LC-3-INVALID_EVENT: MDR SM LC received an unexpected event (%s) in state (%s)

Explanation The MDR state machine (SM) received an unexpected event for the current state.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM_LC-3-NOTIFY_TIMEOUT: Notification timeout for client %s(%d) in state %s

Explanation During an MDR state machine (SM) state transition, the notification timer expired for the client. Any MDR operation will probably result in the resetting of this line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM_LC-3-NO_FREE_EVENT_IN_QUEUE: The event queue is full for MDR SM, MDR SM will abort

Explanation The MDR state machine (SM) was unable to get a free event from the event queue. This error has rendered the MDR SM inoperable. An MDR operation will probably result in the resetting of all the line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM_LC-3-SEMWAIT: MDR state machine waiting for semaphore(%s) acquired by pid(%d)

Explanation The MDR state machine encountered a problem in acquiring a semaphore. Any MDR operation will probably result in the resetting of this line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM_LC-3-STATUS_INVALID: Client %s (%d) returned an unexpected status code (%d)

Explanation The MDR state machine client returned an unexpected status code. An MDR operation will probably result in the reset of all line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

MDR_SM_LC-4

Error Message %MDR_SM_LC-4-CALLBACK_TOO_MUCH_TIME: MDR SM LC client %s (%d) spent too much time (%d msecs) in state (%s)

Explanation The minimum disruption restart (MDR) state machine (SM) has detected that one of its clients spent too much time in its callback function. This is a warning message; the MDR state machine will continue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

MDR_SM_PROXY Messages

This section contains minimum disruption restart (MDR) state machine (SM) proxy messages.

MDR_SM_PROXY-3

Error Message %MDR_SM_PROXY-3-NOTIFY_TIMEOUT: Notification timeout on MDR %s state machine for the remote client '%s'

Explanation The minimum disruption restart (MDR) state machine (SM) proxy master did not receive any response to the notification on its slave, and is now unable to communicate with the slave. As a result, the MDR SM is inoperable. An MDR operation will likely result in the resetting of all line cards.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MDR_SM_PROXY-4

Error Message %MDR_SM_PROXY-4-SLOT_CALLBACK_TOO_MUCH_TIME: MDR SM Slot %d client (%d) spent too much time (%d msecs) in state (%s)

Explanation The MDR state machine has detected that one of its clients spent too much time in its callback function. This is a warning message; the MDR state machine will continue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

Error Message %MDR_SM_PROXY-4-SYS_CALLBACK_TOO_MUCH_TIME: MDR SM SYS client (%d) spent too much time (%d msec) in state (%s)

Explanation The MDR state machine has detected that one of its clients spent too much time in its callback function. This is a warning message; the MDR state machine will continue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show monitor event-trace mdr_sm all** commands and your pertinent troubleshooting logs.

MDS Messages

This section contains multicast distributed switching messages.

MDS-2

Error Message %MDS-2-LC_INVALID_HWIDB_INDEX: Invalid if_index for HWIDB [chars]

Explanation The if_index parameter for the hardware IDB was invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MDS-2-LC_INVALID_HWIDBQ_SIZE: Invalid Q count value

Explanation The Q count parameter was invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MDS-2-LC_INVALID_SWIDB_IFNUM: Invalid if_num for SWIDB [chars]

Explanation The if_index parameter for the software IDB was invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MDS-2-LC_INVALID_SWIDBQ_SIZE: Invalid Q count value

Explanation The Q count parameter was invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MDS-2-LC_SWIDB_UPDATE_NULL_MVRF: LC received swidb update for if_number [hex] ([chars]) tableid [hex].mvrfl pointer for this tableid is NULL.

Explanation The line card received a software IDB update from the route processor specifying a multicast VRF table ID for which no multicast VRF exists in the linecard.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MDS-4

Error Message %MDS-4-ROUTELIMIT_ATTEMPT: Attempt to exceed multicast route-limit of [dec]

Explanation The number of multicast routes equals the configured maximum allowed. New routes cannot be added unless the configuration is changed.

Recommended Action If multicast traffic is of any priority among the traffic carried by this router, then use the **ip multicast route-limit** command to increase the number of multicast routes. Otherwise, no action is required.

MDT Messages

This section contains Multicast Distribution Tree (MDT) messages.

MDT-4

Error Message %MDT-4-LBSRC: MDT %s uses source address %i from a non-loopback interface

Explanation The local peering interface used to set up an MDT tunnel is not a loopback interface. This may cause black holes if the interface is in the outgoing list of the MDT group.

Recommended Action Change the configuration of the **bgp update-source** command and use a loopback interface as the local peering interface.

Error Message %MDT-4-NO_GROUP_LINK: MDT entry [chars]:([IP_address],[IP_address]) linked by source but not linked by group

Explanation The entry for the affected MDT group was not properly linked into the MDT database. The inconsistency has been repaired. [chars] is the MDT entry and the [IP_address],[IP_address] are the linked IP addresses.

Recommended Action No action is required.

Error Message %MDT-4-RD_CONFLICT: MDT entry [chars]:([IP_address],[IP_address]) received an update for RD [chars]

Explanation A previously existing MDT entry should have been withdrawn by BGP before sending this conflicting update. [chars] is the MDT entry, the [IP_address],[IP_address] are the linked IP addresses, and the second [chars] is the redirect name.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MDT-4-UPDATED_RD_CONFLICT: MDT entry %s:(%i,%i) received an update for RD %s

Explanation The previously existing entry should have been withdrawn by BGP before sending this conflicting update.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MDT-4-VRFSRC: The source interface of the MDT tunnels, %s, is not in the global table

Explanation The local peering interface must not be an interface in a VRF.

Recommended Action Change the configuration of the **bgp update-source** command and use a loopback interface in the global table.

MDT-5

Error Message %MDT-5-DATA_MDT_REUSED: Data MDT %i is reused

Explanation If all pre-defined data MDT groups are used, a data MDT group can be reused by a particular host that sources user traffic in an VPN.

Recommended Action No action is required.

MDX Messages

This section contains MDX messages.

MDX-1

Error Message %MDX-1-DAEMSGSNDFAILED: FAILED to send IPC message of TYPE [chars] to slot [dec] on the DAE, FAIL REASON = [chars]

Explanation An IPC message could not be sent. Retries to send the message were attempted and failed. This condition does not affect system operation.

Recommended Action No action is required.

Error Message %MDX-1-DAENODPENTRY: MDX framework could not find an entry for the DP with dp_id = [dec] on slot = [dec], on DAE

Explanation IPC messages that were sent to the line card have been lost as the line card buffers were being reassigned. As a result of this condition, the MDX DP failed to register. This condition does not affect system operation.

Recommended Action Disable the SNMP query of the MIBs depending on the value of dp_id as follows:

If the dp_id is 1, disable the CISCO-ENHANCED-MEMPOOL-MIB SNMP query.

If the dp_id is 2, disable the CISCO-PROCESS-MIB SNMP query.

If the dp_id is 3, disable the CISCO-OPTICAL-MONITORING-MIB SNMP query.

If the dp_id is 4, disable the CISCO-FABRIC-C12K-MIB SNMP query.

You can replace the SNMP query with the CLI to obtain the same results. Enter one or more of the following CLI commands to obtain the required information: **show processes memory**, **show processes cpu**, **show controller optics**, **show controller fia**, **show controller xbar** or **show controller sca**.

Error Message %MDX-1-DAEPORTCREATEFAIL: Could not create IPC port for MDX framework on DAE, FAIL REASON = [chars]

Explanation The IPC port for MDX framework on the Data Aggregator End (DAE) failed for the reason specified in the message text. This condition does not affect system operation, except that the MDX framework will not be able to obtain the requested data from the MIBs.

Recommended Action Enter one or more of the following CLI commands to obtain the required information: **show processes memory**, **show processes cpu**, **show controller optics**, **show controller fia**, **show controller xbar** or **show controller sca**.

Error Message %MDX-1-DAEPORTOPENFAIL: UNABLE to open port to primary RP FAIL REASON = [chars]

Explanation The MDX Data Aggregator End (DAE) IPC port could not be opened, even after three retry attempts. This condition does not affect system operation, except that the MDX framework will not be able to obtain the requested data from the MIBs.

Recommended Action Enter one or more of the following CLI commands to obtain the required information: **show processes memory**, **show processes cpu**, **show controller optics**, **show controller fia**, **show controller xbar** or **show controller sca**.

Error Message %MDX-1-DAEPORTOPENFAILRETRY: UNABLE to open port to primary RP try number = [dec], FAIL REASON = [chars], Will retry again

Explanation The MDX Data Aggregator End (DAE) IPC port could not be opened. The system will attempt to retry the operation a maximum of three times. This condition does not affect system operation.

Recommended Action No action is required.

Error Message %MDX-1-DPENTRYEXISTS: An entry already exists for the DP with dp_id [dec] on the DPE, could not create a new entry

Explanation The DP entry that is attempting to be added already exists on the DPE. The new entry could not be created.

Recommended Action No action is required.

Error Message %MDX-1-DPEPORTOPENFAIL: UNABLE to open port to MDX framework on slot = [dec] from DAE, FAIL REASON = [chars]

Explanation The MDX DPE (Data Provider End) IPC port could not be opened because of the reason specified in the message text. This condition does not affect system operation.

Recommended Action No action is required.

Error Message %MDX-1-DPREGFAILED: DP Registration with MDX framework failed on DPE

Explanation The DP could not be registered with the MDX framework on the Data Provider End (DPE). This condition does not affect system operation, except that the MDX framework will not be able to obtain the requested data from the MIBs.

Recommended Action Enter one or more of the following CLI commands to obtain the required information: **show processes memory**, **show processes cpu**, **show controller optics**, **show controller fia**, **show controller xbar** or **show controller sca**.

Error Message %MDX-1-IPCMSGSNDFAILED: FAILED to send IPC message of TYPE [chars] to DAE, FAIL REASON = [chars]

Explanation The MDX component could not send the IPC message because of the reason specified in the message text. This condition does not affect system operation.

Recommended Action No action is required.

Error Message %MDX-1-IPCMSGUNAVAIL: Request for IPC buffer failed for size = [int]

Explanation An IPC buffer request returned a null value. The IPC has exhausted its buffer space. This condition does not affect system operation.

Recommended Action Enter the **ipc cache size** command to increase the IPC buffer size.

Error Message %MDX-1-MSG: [chars]

Explanation An internal error regarding the MDX facility has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MDX-1-NODPENTRY: MDX framework could not find an entry for the DP with dp_id = [dec]

Explanation The entry for the DP does not exist in the MDX framework. A possible reason for this error is that the DP has not registered with the framework. This condition does not affect system operation, except that the MDX framework will not be able to obtain the requested data from the MIBs.

Recommended Action Enter one or more of the following CLI commands to obtain the required information: **show processes memory**, **show processes cpu**, **show controller optics**, **show controller fia**, **show controller xbar** or **show controller sca**.

Error Message %MDX-1-NOMGDTIMERCNTXT: The expired timer does not have a timer context

Explanation MDX framework found a managed timer that does not have a context. This condition does not affect system operation.

Recommended Action No action is required.

Error Message %MDX-1-PORTCREATEFAIL: Could not create IPC port for MDX Framework, FAIL REASON = [chars]

Explanation An IPC port could not be opened for the MDX framework even after three retry attempts. This condition does not affect system operation.

Recommended Action No action is required.

Error Message %MDX-1-PORTCREATEFAILRETRY: Could not create IPC port for MDX framework try number = [dec], FAIL REASON = [chars], Will retry again

Explanation An IPC port could not be created. The system will attempt to retry the operation a maximum of three times.

Recommended Action This condition has no effect on system operation. No action is required.

Error Message %MDX-1-PORTREGFAIL: Could not Register IPC port for MDX framework FAIL REASON = [chars]

Explanation The IPC port could not be registered with the IPC master, even after three retry attempts. This condition does not affect system operation.

Recommended Action No action is required.

Error Message %MDX-1-PORTREGFAILRETRY: Could not Register IPC port for MDX framework try number = [dec], on slot = [dec], FAIL REASON = [chars], Will retry again

Explanation The IPC port could not be registered with the IPC master. The system will attempt to retry the operation a maximum of three times.

Recommended Action This condition has no effect on system operation. No action is required.

Error Message %MDX-1-SIZEMISMATCH: Recieved an IPC message with inconsistent size compared to the MDX TU in its data region

Explanation The size of the IPC message that was received by the MDX framework is not consistent when it is compared to the MDX TU. This condition does not affect system operation.

Recommended Action No action is required.

Error Message %MDX-1-UNKNOWNMSGTYPE: The rcvd msg-type is not supported, msg-type [chars]

Explanation The message type that was received is not supported by the MDX framework. This condition does not affect system operation.

Recommended Action No action is required.

MEM_ECC Messages

This section contains messages about single and multiple bit and CPU write parity errors that have been detected by ECC control.

MEM_ECC-2

Error Message %MEM_ECC-2-MALLOC: Attempt to malloc [dec] bytes for the ECC error log failed. ECC errors will only be reported and not recorded.

Explanation Memory could not be allocated for the ECC error log. If the system has only 32 MB of memory, an upgrade is recommended.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-2-MBE: Multiple bit error detected at [hex]

Explanation A multi-bit error that could not be corrected was detected on a CPU that was read from DRAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-2-MBE_RMW: Multiple bit error detected at [hex] on a read-modify-write cycle

Explanation A multi-bit error that could not be corrected was detected during a read-modify-write cycle on a CPU that was read from DRAM for a non-8-byte access.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-2-PARITY: Parity error on CPU write to address: [hex]

Explanation A data parity error was detected by the ECC Ctrl facility during a CPU write operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-2-PARITY_INFO: Parity error was detected on the following byte(s) of a double word: [chars] [chars] [chars]

Explanation This message specifies the bytes of a 64-bit word that contained invalid parity, and caused the ECC Ctrl facility to generate an interrupt operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MEM_ECC-3

Error Message %MEM_ECC-3-BADADDR_MBE: Invalid MBE dram address: [hex] latched by ECC Ctrl

Explanation The address that was found by the ECC control register while an MBE was being detected is not a valid DRAM address. This condition probably indicates a malfunctioning ECC control register that requires replacement.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-BADADDR_MBE_RMW: Invalid MBE dram address: [hex] latched by ECC Ctrl during a RMW cycle

Explanation The address that was found by the ECC control register while an MBE was being detected during a read-modify-write cycle is not a valid DRAM address. This condition probably indicates a malfunctioning ECC control register that requires replacement.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-BADADDR_SBE: Invalid SBE dram address: [hex] latched by ECC Ctrl

Explanation The address that was found by the ECC control register while an SBE was being detected is not a valid DRAM address. This condition probably indicates a malfunctioning ECC control register that requires replacement.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-BADADDR_SBE_RMW: Invalid SBE dram address: [hex] latched by ECC Ctrl during a RMW cycle

Explanation The address that was found by the ECC control register while an SBE was being detected during a read-modify-write cycle is not a valid DRAM address. This condition probably indicates a malfunctioning ECC control register that requires replacement.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-SBE: Single bit error detected and corrected at [hex]

Explanation A single-bit correctable error was detected on a read from DRAM.

Recommended Action Enter the **show ecc command** to display the single-bit errors that have been logged. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-SBE_HARD: Single bit *hard* error detected at [hex]

Explanation A single-bit error that could not be corrected (a hard error) was detected on a CPU that was read from DRAM.

Recommended Action Enter the **show ecc** command to display the single-bit errors that have been logged and display the hard error address locations. Monitor the system by periodically entering the **show ecc** command and replace the DRAM if too many errors are encountered.

Error Message %MEM_ECC-3-SBE_LIMIT: Single bit error detected and corrected at [hex]

Explanation A single-bit correctable error was detected on a CPU that was read from DRAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-SBE_RMW: Single bit error detected and corrected at [hex] on a read-modify-write cycle

Explanation A single-bit correctable error was detected on during a read-modify-write cycle on a CPU read from DRAM for a non-8-byte access.

Recommended Action Enter the **show ecc command** to display the single-bit errors that have been logged. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-SBE_RMW_HARD: Single bit *hard* error detected at [hex] on a read-modify-write cycle

Explanation A single-bit uncorrectable hard error was detected during a read-modify-write cycle on a CPU read from DRAM for a non-8-byte access. The **show ecc** command can be used to dump single-bit errors currently logged.

Recommended Action Enter the **show ecc** command to display the single-bit errors that have been logged and display the hard error address locations. Monitor the system by periodically entering the **show ecc** command and replace the DRAM if too many errors are encountered.

Error Message %MEM_ECC-3-SBE_RMW_LIMIT: Single bit error detected and corrected at [hex] on a read-modify-write cycle

Explanation A single-bit correctable error was detected on during a read-modify-write cycle on a CPU read from DRAM for a non eight-byte access.

Recommended Action Enter the **show ecc command** to display the single-bit errors that have been logged. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-SYNDROME_MBE: 8-bit Syndrome for the detected Multi-bit error: [hex]

Explanation A multi-bit error has been detected for the 8-bit syndrome. This value does not indicate the exact positions of the bits in error, but can be used to approximate their positions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-SYNDROME_SBE: 8-bit Syndrome for the detected Single-bit error: [hex]

Explanation A single-bit error has been detected for the 8-bit syndrome. This value does not indicate the exact positions of the bits in error, but can be used to approximate their positions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_ECC-3-SYNDROME_SBE_LIMIT: 8-bit Syndrome for the detected Single-bit error: [hex]

Explanation A single-bit error has been detected for the 8-bit syndrome. This value does not indicate the exact positions of the bits in error, but can be used to approximate their positions.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MEM_MGR Messages

This section contains memory manager (MEM_MGR) messages.

MEM_MGR-3

Error Message %MEM_MGR-3-MEM_MGR_EXCEED_MAX: memory pool exceeds maximum (%d bytes) allowed.

Explanation An attempt was made to allocate a buffer from a memory pool that has reached its maximum limit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_MGR-3-MEM_MGR_INVALID: The Memory Management code encounters an invalid parameter.

Explanation The memory manager has received an invalid parameter from its caller.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MEM_MGR-3-MEM_MGR_NOMEM: Out of memory

Explanation The memory manager is out of memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MEMPOOL Messages

This section contains Enhanced Memory pool MIB messages.

Error Message %MEMPOOL-3-IPC: [chars] [chars]

Explanation An IPC error has occurred on polling the Enhanced Mempool MIB.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

METOPT Messages

This section contains Cisco Optical Networking Systems (ONS) 15540 Extended Services Platform (ESP) messages.

METOPT-2

Error Message %METOPT-2-NOPAKBUFFER: No packet buffer available for [chars] interface to send this packet to higher layer

Explanation An attempt to allocate a packet buffer failed.

Recommended Action Perform one or more of the following actions to remedy the problem:

- Reload the system.
- Perform a CPU switchover if you have a redundant CPU system.

METOPT-6

Error Message %METOPT-6-DI_ASSERTED: CDL Defect Indication: [chars] Asserted on interface [chars]

Explanation Some CDL Defect Indication bits were asserted on this interface.

Recommended Action Closely monitor CDL Defect Indication Status if Defect Indication was asserted.

Error Message %METOPT-6-DI_CLEARED: CDL Defect Indication: [chars] cleared on interface [chars]

Explanation CDL Defect Indication Status changed.

Recommended Action No action is required.

METOPT_DRV Messages

This section contains Cisco Optical Networking Systems (ONS) 15540 Extended Services Platform (ESP) driver messages.

METOPT_DRV-3

Error Message %METOPT_DRV-3-REPROGRAM_ERROR: [chars]

Explanation The Metro Optical Reprogram driver encountered an error. The error message contains text useful to identify the cause of the problem.

Recommended Action Retry the reprogramming of the card. If the reprogramming fails again, remove the card and reinsert it. If the card does not come up, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MFI Messages

This section contains MPLS Forwarding Infrastructure (MFI) messages.

MFI-3

Error Message %MFI-3-BADREADUPDATE SIZE: Read update reply message from RP has bad size: [dec]

Explanation A read update message does not match the parsed result of the read message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-EVTLOGCAPTURE: Event Logger Capture Error [dec] [dec]

Explanation A failure occurred during an event logger capture operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-EVTLOGCLIENT: Invalid client [dec]

Explanation An invalid client has accessed the event logger.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-EVTLOGCONTROL: [chars]: [dec]

Explanation A general event logger controller error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-EVTLOGREGISTER: Event Logger Registration Error [dec] [dec]
[dec]

Explanation A failure occurred during an event logger client registration operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-LCPULSE: LC pulse failed: [chars] [dec]

Explanation A line card pulse request operation has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-MFICOMM: [chars]

Explanation An error involving the communications module has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-MFICOMM2: [chars]: [hex] [hex]

Explanation An error involving the communications module has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-MFICOMM3: [chars]: [hex] [hex] [hex]

Explanation An error involving the communications module has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-MPLS_MTU_SET: [chars] [dec] [chars] [chars] [chars]
[dec] [chars]

Explanation Most drivers will be able to support baby giants and will gracefully drop packets that are too large. Certain drivers will have packet forwarding problems including data corruption.

Recommended Action Increase the interface MTU on all routers connected to this interface to the needed MTU size by entering the **mtu bytes** command.

Error Message %MFI-3-NOCLIENTREQ: [chars] [chars]: [dec] [dec] [dec]

Explanation The client reply component could not find an outstanding request.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-PNDMSGMGR: [chars] [chars] [dec] [dec] [dec]

Explanation Only one outstanding request is allowed from a process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-REDISTMGR: Redistribution Manager: [chars] [hex]

Explanation An error involving the redistribution manager has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-REDISTMGR2: Redistribution Manager: [chars] [hex] [hex]

Explanation An error involving the redistribution manager has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-REDISTMGR3: Redistribution Manager: [chars] [hex]

Explanation An error involving the redistribution manager has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFI-3-REPLYMSGSIZE: Reply message is too large: [chars]: [dec]

Explanation A read update message is too large to fit into the XDR buffer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MFI-4

Error Message %MFI-4-MFICOMM4: [chars]: [hex] [hex]

Explanation An error involving the communications module has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MFIB Messages

This section contains Multicast Forwarding Information Base (MFIB) messages.

MFIB-3

Error Message %MFIB-3-NETWORK_GET_FAIL: MFIB can not get network offset: datagram [hex]; network [hex]

Explanation The MFIB failed to find a suitable packet network offset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFIB-3-NETWORK_SET_FAIL: MFIB can not set network offset: datagram [hex]; length [dec]; offset [dec]

Explanation The MFIB failed to set the offset within a packet.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFIB-3-NO_SBCTRLFUNC: A[chars] function is required for the MFIB sub-block, but none was provided

Explanation The MFIB could not distribute interface information to a line card due to an internal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFIB-3-SWITCHOVER_FAIL: Error creating [chars]. MFIB will not work with switchover

Explanation Sufficient memory is not available to create structures needed to enable switchover for IPv6 multicast.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

MFIB_CONST_LC Messages

This section contains MFIB Constellation platform messages.

Error Message %MFIB_CONST_LC-6-ADJ_V6MCAST_ALLOC_FAILURE: Failed to allocate Adjacency for IPv6 multicast entry (S[ipv6_addr], G[ipv6_addr])

Explanation The system was unable to allocate an adjacency for this particular flow. The affected flow will be retried and will be software switched until it is successfully installed in the hardware.

Recommended Action The adjacency table utilization could be very high and need to be brought down. Removing some hardware switched flows would help solve the problem

Error Message %MFIB_CONST_LC-6-FIB_V6MCAST_INSTALL_FAILURE: Failed to install FIB IPv6 multicast entry (S[ipv6_addr], G[ipv6_addr])

Explanation The FIB entry limit has been exceeded so FIB entries cannot be allocated by the MFIB_CONST_LC.

Recommended Action The FIB table utilization is too high and needs to be reduced. The total number of multicast shortcuts is too large to fit in the FIB table. As a result, subsequent shortcuts will be software switched. Reducing the FIB utilization by other protocols would help solve the problem.

Error Message %MFIB_CONST_LC-6-MET_V6MCAST_ALLOC_FAILURE: Failed to allocate MET entries for IPv6 multicast entry (S[ipv6_addr], G[ipv6_addr])

Explanation The system is unable to allocate MET entries for this particular flow. The affected flow will be retried and will be software switched until it is successfully installed in the hardware.

Recommended Action The MET utilization could be very high and must be reduced. Removing some hardware switched flows would help solve the problem

Error Message %MFIB_CONST_LC-6-NF_V6MCAST_INSTALL_FAILURE: Failed to install Netflow IPv6 multicast entry (S[ipv6_addr], G[ipv6_addr])

Explanation A multicast entry could not be installed due to a NetFlow full condition or a Hash collision.

Recommended Action The NetFlow table utilization is too high and needs to be reduced. The total number of multicast shortcuts are too large to fit in the NetFlow table. As a result, these shortcuts will be software switched. Removing dynamically created NetFlow IPv6 entries or disabling dynamic NetFlow entry creation would help solve the problem.

Error Message %MFIB_CONST_LC-6-SW_V6MCAST_INSTALL_FAILURE: Failed to install IPv6 multicast entry, due to [chars] (S[ipv6_addr], G[ipv6_addr], C:[dec])

Explanation The system is unable to install an IPv6 multicast entry due to unrecoverable software failures.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MFIB_CONST_RP Messages

This section contains MFIB Constellation information messages.

Error Message %MFIB_CONST_RP-6-REPLICATION_MODE_CHANGE: Replication Mode Change Detected. Current system replication mode is [chars]

Explanation When automatic detection of the replication mode is enabled, the system will transition to ingress mode when an egress-incapable line card is inserted. The system will transition back to egress mode when the last egress-incapable line card is removed. The transition between ingress and egress modes will cause temporary loss of traffic.

Recommended Action To prevent traffic loss, enter the **ipv6 mfib hardware-switching replication-mode ingress** command.

MFIB_STATS Messages

This section contains MFIB statistics messages.

Error Message %MFIB_STATS-2-MFIB_STATS_LC_FAILED_GET_COUNTERS: Linecard failed in getting counters due to null table. af = [int], v6 def tbl [hex], v4 def tbl [hex]

Explanation The line card has failed to get entry counters due to a null table.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFIB_STATS-2-MFIB_STATS_LC_FAILED_GET_IPC_MSG: Linecard failed allocating ipc message buffer

Explanation The line card failed to allocate a buffer for sending statistics.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFIB_STATS-2-MFIB_STATS_LC_FAILED_SEND_MSG: Linecard failed in sending msg to the Route Processor error = [chars]

Explanation The line card has failed to send a statistics message to the route processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFIB_STATS-2-MFIB_STATS_LC_MSG_TOO_BIG: Linecard failed to return counters, message buffer too small.

Explanation The line card has failed to return counters because the minimum message size exceeds the maximum IPC buffer size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFIB_STATS-2-MFIB_STATS_RP_FAILED_GET_IPC_MSG: RP failed allocating ipc message buffer for linecard, slot = [dec]

Explanation The route processor failed to allocate a buffer for getting line card statistics.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFIB_STATS-2-MFIB_STATS_RP_FAILED_REPLY_MSG: RP received reply with error status from linecard, slot = [dec]

Explanation The route processor has received a reply with error in statistics message from a line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MFIB_STATS-2-MFIB_STATS_RP_SEQ_ERROR: The RP ignored out of sequence per-interface statistics returned by the linecard in slot [dec].

Explanation A line card returned per-interface statistics in the wrong order and the RP has ignored them.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MISA Messages

This section contains Multiple Crypto Engine subsystem messages.

Error Message %MISA-1-ERROR: [chars]

Explanation An error occurred in the application using ISA.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MISA-6-INFO: [chars]

Explanation This is an informational message from ISA.

Recommended Action This is an informational message only and occurs in normal operation. No action is required.

MISTRAL Messages

This section contains Mistral ASIC (MISTRAL) messages.

MISTRAL-3

Error Message %MISTRAL-3-BAD_PAK: Possibly un-encapsulated packet passed to Mistral:
int [chars] type [int] stat [hex] flags [hex] size [dec] encsize [dec] offset [dec]
requeue_token [int] r1 [int] r2 [int] total detected [int]

Explanation A badly encapsulated packet from the process level was passed to the Mistral ASIC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MISTRAL-3-NOEOBCBUF: No EOBC buffer available. Dropping the packet.

Explanation The Ethernet out-of-band channel pool of receive buffers for the Mistral ASIC has been exhausted. No additional input packets can be handled until some buffers are returned to the pool.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MLD_PROT Messages

This section contains Multicast Listener Discovery (MLD) protocol messages.

Error Message %MLD_PROT-6-IDB_ENABLE: Interface [chars] does not support multicast, not enabled

Explanation IGMP/MLD is not enabled on the specified interface that does not support multicast.

Recommended Action This is an informational message only. No action is required.

MLI Messages

This section contains Memory Layout Information (MLI) messages.

MLI-3

Error Message %MLI-3-NOT_ENOUGH_SPACE: There is not enough space in Memory Layout Information area to store the tuple

Explanation Insufficient memory is reserved in the Memory Layout Information (MLI) area to store the given MLI tuple data.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show mli** commands and your pertinent troubleshooting logs.

MLS_ACL_COMMON Messages

This section contains Multilayer Switching ACL (MLS_ACL_COMMON) messages.

MLS_ACL_COMMON-3

Error Message %MLS_ACL_COMMON-3-MLS_ACL_CONSIST_FIX: ACL TCAM inconsistency seen at index [dec] and could not be fixed

Explanation The ACL TCAM inconsistency checker found an inconsistency between software and hardware TCAM entries and could not fix it. [dec] is the index where the inconsistency was found.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MLS_ACL_COMMON-4

Error Message %MLS_ACL_COMMON-4-LOG_UPDATE_NO_RL: ACL TCAM update ([chars] direction) occurred on interface [chars]; [chars] action taken [chars] msec

Explanation An update of the ACL TCAM occurred on the specified interface. When the ACL TCAM is updated, the specified security action is taken for the specified time interval.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MLS_ACL_COMMON-4-LOG_UPDATE_RL: ACL TCAM update ([chars] direction) occurred on interface [chars]; [chars] action taken [chars] msec

Explanation An update of the ACL TCAM occurred on the specified interface. When the ACL TCAM is updated, the specified security action is taken for the specified time interval.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MLS_ACL_COMMON-4-MLS_ACL_CONSIST: ACL TCAM inconsistency seen at index [dec]

Explanation The ACL TCAM inconsistency checker found an inconsistency between software and hardware TCAM entries and has fixed it. [dec] is the index where the inconsistency was found.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MLSCEF Messages

This section contains Multilayer Switching Cisco Express Forwarding (MLSCEF) messages.

MLSCEF-2

Error Message %MLSCEF-2-EXCESSIVE_FIB_CORR_SSRAM_ERRORS: Too many fib correctable ecc error interrupts.

Explanation The number of correctable error interrupts has exceeded the threshold of 1000 correctable ECC errors in 30 minutes. All errors were corrected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show mls cef hardware**, **show mls cef log**, and **show ver** commands and your pertinent troubleshooting logs.

Error Message %MLSCEF-2-EXCESSIVE_FIB_SSRAM_ERRORS: Too many fib ecc error interrupts.

Explanation The number of error interruptions exceeded the threshold. As a result of this condition, the system will fail.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MLSCEF-2-FIB_SSRAM_WRITE_INCONSISTENCY: FIB SSRAM Mismatch for Index: [dec] Expected: [hex], Hardware: [hex]

Explanation A problem occurred when the system attempted to write the FIB SSRAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MLSCEF-2-FIB_TCAM_WRITE_INCONSISTENCY: FIB TCAM Mismatch for [chars]: Index: [dec] Expected:Entry: [hex]-[hex]-[hex] Hardware: Entry: [hex]-[hex]-[hex]

Explanation A problem occurred when the system attempted to write the FIB TCAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MLSCEF-2-RELOAD: maximum routes config mismatch. Reloading with correct config

Explanation The system detected a mismatch between the user configuration route allocation and the current route allocation. A system reload is required to correct this condition.

Recommended Action If the message does not appear continuously and the **mls cef maximum-routes** command has been entered, no action is required. If this message appears continuously on the same module and the **mls cef maximum-routes** command has not been entered, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MLSCEF-2-SANITY_FAIL: Sanity Check of MLS FIB s/w structures failed

Explanation The verification process encountered inconsistent MLS FIB data structures.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MLSCEF-2-UNCORRECTABLE_SSRAM_ERROR: Bank [dec] Index: [dec], Expected: [hex], Hardware: [hex]. Affected TCAM [hex]-[hex]-[hex]

Explanation A faulty FIB SSRAM location was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MLSCEF-4

Error Message %MLSCEF-4-FIB_EXCEPTION_THRESHOLD: Hardware CEF entry usage is at 95% capacity for [chars] protocol.

Explanation The number of route entries that are installed is about to reach the hardware FIB capacity, or the maximum routes limit set for the specified protocol. If the limit is reached, some prefixes will be software switched.

Recommended Action Enter the **mls cef maximum-routes [protocol]** global configuration command to increase the maximum number of routes for the protocol. Refer to the configuration manuals for the differing capacity limitations of XL versus non-XL systems, as well as for impacts to other protocols when changing maximum routes of one protocol. Enter the **show mls cef summary** command to see the current usage summary.

Error Message %MLSCEF-4-INCORRECT_CONFIG: A max-routes configuration mismatch or an invalid max-routes configuration has been detected. Reverting to default configuration.

Explanation The system has detected a configuration mismatch or an invalid configuration for the **mls cef maximum-routes** command, and is reverting to the system default configuration.

Recommended Action Reconfigure your maximum routes using the **mls cef maximum-routes** command. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MLSCEF-7

Error Message %MLSCEF-7-FIB_MASK_MISMATCH: Attempt to delete an entry not matching block mask - class = [dec], [dec]/[dec], mask [dec]/[dec]

Explanation The passed mask does not match the stored block mask.

Recommended Action This is a debug message only. No action is required.

MLS_CEF_ISSU Messages

This section contains Multilayer Switching Cisco Express Forwarding (MLSCEF) in-service software upgrade (ISSU) messages.

MLS_CEF_ISSU-2

Error Message %MLS_CEF_ISSU-2-MLS_CEF_RETRY_FAIL: Unable to get maximum routes config from Active RP.

Explanation The ISSU process was unable to get the maximum route configuration from the active RP. The system will configure to default values.

Recommended Action Reload the system. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MLSM Messages

This section contains Multicast Distributed Shortcut Switching (MDSS)/multilayer switching for multicast (MLSM) messages.

MLSM-4

Error Message %MLSM-4-CC_ERROR: (Type of CC: [chars]): [chars]
([IP_address],[IP_address]), Auto-repair is [chars]

Explanation Either the RP-SP or MROUTE-MLSM consistency checker has detected an error.

Recommended Action If enabled, the autorepair feature will automatically correct the error.

Error Message %MLSM-4-MLSM_LTL_FULL_VDB_CREATE_FAILED: Multi-Layer Switching for Multicast: Disabling Multicast Hardware Switching for VLAN ([dec]), VLAN not found on Switch Processor

Explanation The switch processor is unable to create VLANs due to a Layer 2 hardware limitation. Because no VLAN information is available, the switch processor is unable to install shortcuts. Multicast hardware switching for this VLAN interface will be disabled to avoid installation of shortcuts. All flows using this VLAN as the outgoing interface will be affected.

Recommended Action Modify the network configuration to increase the hardware resources for creating VLANs on the switch processor.

MLSM-6

Error Message %MLSM-6-BIDIR_SC_INSTALL_FAILURE: Bi-dir multicast flows will not be installed in hardware in the presence of tunnel interfaces for RP [IP_address]

Explanation Bidirectional multicast flows will not be installed in hardware in the presence of tunnel interfaces. The bidirectional flows will be software-switched until the tunnel interfaces are unconfigured.

Recommended Action Unconfiguring the tunnel interfaces will allow the bidirectional flows to be hardware-switched.

Error Message %MLSM-6-MLSM_PMS: MMLS: MLSM is suspending the caller process [chars]

Explanation MLSM is suspending the caller process. This message appears when the MLSM routines are called from the PIM/Mwheel context and MLSM routines suspend a process. When MLSM suspends the caller process, data corruption might occur for the data that is handled by the caller process.

Recommended Action This message is informational. No action is required.

Error Message %MLSM-6-MMLS_EGRESS_INFO: MMLS: Please make sure no multicast traffic is going through egress incapable line cards when system is operating in egress mode

Explanation There should be no multicast traffic going through egress-incapable line cards while the system is operating in egress replication mode.

Recommended Action Determine if there are any egress-incapable line cards in the system. If there are egress-incapable line cards, verify that there is no multicast traffic going through them.

Error Message %MLSM-6-MMLS_LEGACY_INSERTED: MMLS: Legacy Linecard Inserted, Egress Replication Mode will be disabled

Explanation Egress replication is not supported with legacy modules. The system will transition to ingress mode and will cause a temporary loss of traffic.

Recommended Action If the system is required to operate in egress replication mode, remove the legacy module.

Error Message %MLSM-6-MMLS_MDT_TUNNEL_UP: MMLS: MDT tunnel is up, Egress Replication Mode will be disabled

Explanation Egress replication is not supported when MDT is configured and an MDT tunnel is up. The system will transition to ingress mode if required, and the transition will cause a temporary loss of traffic.

Recommended Action This message is informational. No action is required.

Error Message %MLSM-6-MMLS_MODE_CHANGE: MMLS: Replication Mode Change Detected

Explanation When automatic detection of the replication mode is enabled, the system will transition to ingress mode when an egress-incapable module is inserted. The system will transition back to egress mode when the last egress-incapable module is removed.

Recommended Action Transitioning between ingress and egress mode causes a temporary loss of traffic. To prevent this temporary loss of traffic, enter the **mls ip replication-mode ingress** command.

Error Message %MLSM-6-MMLS_NO_EGRESS_LOCAL_IN_INGRESS: MMLS: Egress Local feature is NOT applicable in Ingress mode

Explanation When the system transitions from egress replication mode to ingress mode, the egress local feature will not be applied, even if the egress local feature is enabled.

Recommended Action If the egress local feature is required, restore the system replication mode to egress.

MLS_RATE Messages

This section contains Multilayer Switching Rate Limit (MLS_RATE) messages.

MLS_RATE-4

Error Message %MLS_RATE-4-CPP_DISABLED_IN_HW: Control Plane Policing NOT performed in hardware, due to the presence of egress QoS.

Explanation CPP cannot be performed in the hardware when the system is running in PFC3A mode and egress QoS is configured on any other interface. Under these circumstances, CPP is performed only in the software until egress QoS is removed from the running configuration.

Recommended Action Remove any egress QoS from the running configuration, or upgrade to a PFC3B or PFC3-BXL. We strongly recommend the upgrade.

Error Message %MLS_RATE-4-CPP_RE_ENABLED_IN_HW: Control Plane Policing will now be performed in hardware.

Explanation CPP cannot be performed in the hardware when the system is running in PFC3A mode and egress QoS is configured on any other interface. Egress QoS has been removed from the running configuration.

Recommended Action Because egress QoS has been removed, no action is required. To prevent this condition from occurring again, we strongly recommend that you upgrade to a PFC3B or PFC3BXL.

Error Message %MLS_RATE-4-DISABLING: The Layer2 Rate Limiters have been disabled.

Explanation The Layer 2 rate limiters are turned off with the current hardware configuration because they are not supported with this combination of modules.

Recommended Action Refer to the feature usage guidelines for more details.

Error Message %MLS_RATE-4-LIMITING_DOWN: MLS HARDWARE RATE-LIMITING functionality is not active

Explanation Memory resources are insufficient to support the rate-limiting functionality.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MLS_RATE-4-NO_DHCP_RESOURCE: DHCP Snooping requires 2 Rate Limiters

Explanation There are not enough hardware rate limiters to enable DHCP snooping.

Recommended Action DHCP snooping requires two hardware rate limiters. All may be used. To display the features that use these hardware rate limiters, enter the **show mls rate-limit usage** command. Unconfigure enough rate limiters to configure DHCP snooping.

Error Message %MLS_RATE-4-NO_RESOURCE: The hardware Rate Limiters are fully used

Explanation There are no more hardware rate limiters available.

Recommended Action EARL supports a limited number of hardware rate limiters. All may be used. To display the features that use these hardware rate limiters, enter the **show mls rate-limit usage** command. To program a rate limiter for the new feature, unconfigure one of the configured rate limiters.

Error Message %MLS_RATE-4-NOT_SUPPORTED: This functionality is not configurable.

Explanation The rate limit functionality is not active with the current hardware configuration.

Recommended Action Refer to the feature usage guidelines for more details.

Error Message %MLS_RATE-4-OVERWRITING_PORTSEC_DEFAULT: Port security rate limiter was set to non-default value.

Explanation Overwriting the default port security rate value.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %MLS_RATE-4-OVERWRITING_VALUE: Overwriting the rate value for: [chars] case

Explanation Some rate limiters share the same hardware register. This message appears if programming a new rate limiter causes a previously configured one to be overwritten.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MLS_STAT Messages

This section contains Multilayer Switching Statistics (MLS_STAT) messages.

MLS_STAT-4

Error Message %MLS_STAT-4-IP_CSUM_ERR: IP checksum errors

Explanation Packets with IP checksum errors have been received.

Recommended Action No action is necessary. This message is for informational purposes only.

Error Message %MLS_STAT-4-IP_LEN_ERR: MAC/IP length inconsistencies

Explanation Packets with an IP length that does not match their physical length have been received.

Recommended Action No action is necessary. This message is for informational purposes only.

Error Message %MLS_STAT-4-IP_TOO_SHRT: Too short IP packets received

Explanation Packets with IP minimum length check errors have been received.

Recommended Action No action is necessary. This message is for informational purposes only.

Error Message %MLS_STAT-4-IPX_LEN_ERR: MAC/IPX length inconsistencies

Explanation Packets with an IPX length that does not match their physical length have been received.

Recommended Action No action is necessary. This message is for informational purposes only.

Error Message %MLS_STAT-4-IPX_TOO_SHRT: Too short IPX packets received

Explanation Packets with IPX minimum length check errors have been received.

Recommended Action No action is necessary. This message is for informational purposes only.

MMLS Messages

This section contains Multicast Multilayer Switching (MMLS) messages.

MMLS-3

Error Message %MMLS-3-ICROIF_BLOCK_ALLOC_FAILED: Allocation of %s block of indices for egress distribution over fabric failed

Explanation The allocation of the block of indices used for egress distribution over the fabric has failed. As a result, the system will not be able to work in egress replication mode. This condition could be caused by a shortage of hardware resources during boot up or at the time when the first block of indices is completely consumed. A shortage of hardware resources might be caused by having too many VLANs configured.

Recommended Action Reduce the number of VLANs in the system by entering the **no vlan {vlan_id}** command and reloading the system, or configure ingress replication mode by entering the **mls ip multicast replication-mode ingress** command. Ingress replication mode does not use egress distribution indices.

MMLS-4

Error Message %MMLS-4-ICROIF_INDICES_EXHAUSTED: Unable to allocate index for egress distribution over fabric

Explanation The indices used for egress distribution over the fabric are exhausted and the system is currently unable to allocate an index. An index is allocated for each unique combination of flow over the fabric and is not freed upon removal of all shortcuts using it. An index-freeing mechanism operates when a threshold for freeing up unused indices is reached. If the number of used indices stays above the threshold after collection of unused indices, another block (up to a maximum of two blocks) of 256 indices is allocated.

Recommended Action You may not be required to take any action, as the index-freeing mechanism should take care of freeing up unused indices. If the problem remains, try reducing the number of unique combination of flows over the fabric created by the presence of multicast sources and receivers on different line cards.

Error Message %MMLS-4-VLAN_2K_SR_TR_INSTALL_FAILED: Multicast Multi-Layer Switching: Failed to install service reflect translation, hardware resource unavailable

Explanation The Multicast Service Reflect translation cannot be installed in hardware as a required hardware resource is unavailable.

Recommended Action Removing tunnel interfaces or reducing the number of service reflect translations would help solve the problem.

MMLS-6

Error Message %MMLS-6-ADJ_ALLOC_FAILURE: Failed to allocate Adjacency for the multicast flow ([IP_address], [IP_address])

Explanation The system is unable to allocate an adjacency for this particular flow. The affected flow will be retried and will be software switched until it is successfully installed in the hardware.

Recommended Action The adjacency table utilization could be very high and needs to be reduced. Removing some hardware switched flows would help solve the problem.

Error Message %MMLS-6-BIDIR_ADJ_LIMIT_EXCEEDED: Failed to allocate Adjacency for Bidir Multicast shortcuts, exceeded limit of ([dec]), subsequent flows will be software switched.

Explanation The system limit of maximum adjacencies for bidirectional shortcuts has been exceeded. As a result, any new multicast flows will be switched by the software.

Recommended Action The number of bidirectional multicast flows is too large to fit in the hardware. There is no workaround.

Error Message %MMLS-6-FIB_LIMIT_EXCEEDED: Failed to allocate FIB entry, exceeded system limit of ([dec]) entries.

Explanation The maximum FIB entry limit has been exceeded, so FIB entries cannot be allocated by the MMLS.

Recommended Action The total number of multicast shortcuts is too large to fit in the FIB table and as a result subsequent shortcuts will be software switched. There is no workaround.

Error Message %MMLS-6-MCAST_L3FLOW: %s from the Route Processor for Source %i Group %i vlan %d

Explanation A multicast flow has been installed or deleted.

Recommended Action No action is required.

Error Message %MMLS-6-MCAST_STATUS: IP Multicast Multilayer Switching is %sabled

Explanation This message indicates whether the multicast Layer 3 multicast feature is enabled or disabled.

Recommended Action No action is required.

Error Message %MMLS-6-MET_LIMIT_EXCEEDED: Failed to allocate MET entry, exceeded system limit of ([dec]) entries. Number of times MET limit is exceeded in the last 1 min : [dec]

Explanation The maximum MET entry limit has been exceeded, so MET entries cannot be allocated by the MMLS.

Recommended Action The total number of OIFs is too large to fit in the MET table. Subsequent shortcuts or OIFs will be switched by the software. There is no workaround.

Error Message %MMLS-6-MMLS_EGRESS_INCAPABLE_LC_INSERTED: MMLS: Egress incapable line card ([dec]) inserted in forced egress replication mode

Explanation An egress-incapable line card is inserted while the system is operating in forced egress replication mode. The user must not source any multicast traffic on this egress-incapable line card.

Recommended Action Verify that there is no multicast traffic going through this egress-incapable line card.

Error Message %MMLS-6-MMLS_EGRESS_INCAPABLE_LC_PRESENT: MMLS: Egress incapable line card present while forcing replication mode to egress

Explanation There is at least one line card that is egress incapable in the system, but forced egress replication mode is configured on the system. Multicast traffic must not be sourced on the egress-incapable line card.

Recommended Action Verify that there is no multicast traffic going through this egress-incapable line card.

Error Message %MMLS-6-MMLS_FSTATS_MAX_PENDING_MSGS: Flow stats enqueued messages count([dec]) has reached the maximum and would be reset to [dec]

Explanation This message indicates that flow stats pending messages count has reached the maximum. To avoid further flow stats messages from being dropped, the counter would be reset to match the current pending messages count of the ICCQ.

Recommended Action This message is provided for information only.

Error Message %MMLS-6-MMLS_HALF_MET: MMLS: IPv6 multicast enabled on supervisor uplinks. Available MET space on supervisors is halved

Explanation The MET space is being halved to enable IPv6 on supervisor engine uplinks.

Recommended Action No action is required.

Error Message %MMLS-6-MMLS_LEGACY_LC_PRESENT: MMLS: Legacy line card present, system cannot operate in egress replication mode

Explanation There is at least one legacy line card in the system. Therefore, the system cannot operate in egress replication mode when the system is configured for forced egress replication mode.

Recommended Action Remove the legacy line card(s) if you want the system to operate in forced egress replication mode.

Error Message %MMLS-6-RPF_ADJ_LIMIT_EXCEEDED: Failed to allocate Adjacency for multicast shortcuts with RPF-vlan: ([dec]), exceeded limit of ([dec]), subsequent flows will be software switched

Explanation The system limit of maximum adjacencies for multicast shortcuts with the same RPF has been exceeded. As a result, any new multicast flows will be software switched.

Recommended Action The number of multicast flows with the same RPF interface are too large to fit in the hardware. There is no workaround.

Error Message %MMLS-6-RP_LIMIT_EXCEEDED: Failed to allocate DF index for Bidir-RP, exceeded limit of ([dec]) RPs for VPN: ([dec]). Shortcuts for RP: ([IP_address]) will be software switched.

Explanation The system limit of four RPs per VPN has been exceeded. As a result, the multicast flows for the groups served by this RP will be software-switched.

Recommended Action The configured RPs are too large to fit in the DF table for one VPN. Attempt to configure the groups among existing RPs in hardware, or configure the RP in another VPN.

Error Message %MMLS-6-VLAN_ADD_FAILURE_ON_MET_FULL: Error adding vlan [dec] to the MET table of some shortcuts

Explanation The MET table is full and the system is unable to add the VLAN to some shortcuts. The affected shortcuts will not switch traffic for that VLAN.

Recommended Action The MET utilization is very high and must be reduced. Removing some VLANs or switching to ingress replication mode will solve the problem.

MMLS_RATE Messages

This section contains Multicast Multilayer Switching Rate Limiting (MMLS_RATE) messages.

MMLS_RATE-3

Error Message %MMLS_RATE-3-MMLS_PARTIAL_SC_ERROR: Error installing Multicast Partial-sc rate-limiter.Operation failed.

Explanation The multicast partial SC rate limiter could not be configured because of an error that was returned from the switch processor.

Recommended Action The LTL index for the partial SC rate limiter might not have initialized yet. Wait several minutes, and try to configure the rate limiter again.

MPLS_ADJ_SB Messages

The following are MPLS Adjacency Subblock messages.

MPLS_ADJ_SB-4

Error Message %MPLS_ADJ_SB-4-NO_BACKUP_INTF: [chars] - ifnum [dec]

Explanation Backup interface cannot be programmed.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

MPLS_IPRM Messages

This section contains MPLS IP rewrite manager (IPRM) messages.

MPLS_IPRM-3

Error Message %MPLS_IPRM-3-DB: [chars]

Explanation There is an inconsistency in the information required to request labels from or to process labels received from an IP label distribution module.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_IPRM-3-DB_PATH: [chars]

Explanation There is an inconsistency in the information about a prefix path required to request labels from or to process labels received from an IP label distribution module.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_IPRM-3-DB_PNDG_DISC: [chars]

Explanation There is an inconsistency in the information about a temporarily deferred action required to populate MPLS forwarding data structures for a prefix.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_IPRM-3-DB_TABLE: [chars]

Explanation There is an inconsistency in the information about a (VRF) table ID required to request labels from or to process labels received from an IP label distribution module.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_IPRM-3-DB_TRANS: [chars]

Explanation There is an inconsistency in the information about an ongoing transaction required to populate MPLS forwarding data structures for a prefix.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_IPRM-3-INTERNAL: [chars]

Explanation An operation required for proper operation of the IP rewrite manager has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_IPRM-3-PATH_LABEL_DEL: [chars]

Explanation An attempt to delete MPLS forwarding information for the specified prefix has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_IPRM-3-PATH_LABEL_GET: [chars]

Explanation An attempt to access MPLS forwarding information for the specified prefix has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_IPRM-3-PATH_LABEL_UPD: [chars]

Explanation An attempt to update MPLS forwarding information for the specified prefix has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_IPRM-3-WALK: [chars]

Explanation A request by an IP label distribution module (for example, LDP, BGP) to walk a CEF table cannot be handled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MPLSMFISTATIC Messages

This section contains MPLS Forwarding Infrastructure (MFI) static application messages.

MPLSMFISTATIC-3

Error Message MPLSMFISTATIC-3-CHUNKMGR: [chars] [hex]

Explanation An MPLS MFI static application chunk manager error has occurred.

Recommended Action This problem may be due to a low memory condition on the device. Check system memory and minimum memory requirements for this release and configuration, and add memory if required. If memory appears to be sufficient and problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show process memory**, **show version** and **show running-config** commands and your pertinent troubleshooting logs.

Error Message MPLSMFISTATIC-3-FCALLFAILED: [chars]

Explanation A static application function call has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show version** and **show running-config** commands and your pertinent troubleshooting logs.

Error Message MPLSMFISTATIC-3-INVALIDPRAMS: [chars] [dec]

Explanation Unexpected parameters have been detected in a static application.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show version** and **show running-config** commands and your pertinent troubleshooting logs.

Error Message MPLSMFISTATIC-3-WRONGCODEPATH: [chars]

Explanation An error involving an unexpected static application code path has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show version** and **show running-config** commands and your pertinent troubleshooting logs.

MPLSOAM Messages

This section contains Multiprotocol Label Switching (MPLS) Operations, Administration, and Maintenance (OAM) messages.

MPLSOAM-3

Error Message %MPLSOAM-3-XDR_COMM: %s:0x%x 0x%x

Explanation The XDR communication module reports an unexpected RP/LC XDR condition encountered in the MPLS OAM software. This condition may result in MPLS OAM FIB subblocks becoming out of synchronization between the RP and the line card. This condition should not affect overall system operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MPLS_PACKET Messages

This section contains MPLS packet messages.

MPLS_PACKET-3

Error Message %MPLS_PACKET-3-FWDDISABLE: MPLS [chars] forwarding path disabled

Explanation The MPLS forwarding plane has been disabled.

Recommended Action This log entry is informational only. No action is required.

Error Message %MPLS_PACKET-3-FWDREENABLE: MPLS [chars] forwarding path reenabled

Explanation The MPLS forwarding plane has been reenabled.

Recommended Action This log entry is informational only. No action is required.

Error Message %MPLS_PACKET-3-LABELCACHE: [chars] [dec]/[dec]

Explanation An MPLS label cache error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MPLS_PACKET-4

Error Message %MPLS_PACKET-4-NOLFDSB: MPLS packet received on non MPLS enabled interface [chars] L3 type [hex] label {[dec] [dec] [dec] [dec]}

Explanation MPLS packets received on an interface are being dropped as the interface is not setup to handle MPLS. This message may appear when an MPLS application is disabled on a interface, and should disappear when the upstream neighbor has reprogrammed its CEF and MPLS entries.

Recommended Action If an MPLS application has just been disabled and traffic is flowing, this message is expected and should be ignored. If the message recurs in steady state, the operator should monitor the network for attacks and report the occurrence to Cisco.

MPLS_TE Messages

This section contains MPLS Label Switch Path (LSP) Tunnel messages.

MPLS_TE-2

Error Message %MPLS_TE-2-ADJ_WALK_ERR: [chars]

Explanation An error occurred during a bundle adjacency walk.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_TE-2-BUNDLE_INSERT: [chars] [chars]

Explanation A request for inserting a traffic engineering tunnel bundle failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_TE-2-UNSUPPORTED_LINK_TYPE: [chars]

Explanation An unsupported link type was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MPLS_TE-3

Error Message %MPLS_TE-3-LSDError: [chars]: [chars] [chars]

Explanation A traffic engineering request to the label switching database encountered an unexpected condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MPLS_TE_AUTOMESH Messages

This section contains MPLS Traffic Engineering (TE) Auto-Tunnel Primary and Backup log and error messages.

MPLS_TE_AUTOMESH-5

Error Message %MPLS_TE_AUTOMESH-5-AUTOTEMPLATE_HWIDB_DELETE: Failed to delete hwidb for Auto-Template %d index %d

Explanation The deletion of a hardware interface descriptor block (HWIDB) for an auto-template interface failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MPLS_TE_LM Messages

This section contains MPLS TE Link Management messages.

MPLS_TE_LM-3

Error Message %MPLS_TE_LM-3-LSP_BAD_ENCODING_TYPE: LSP [chars] requesting Encoding Type [[chars]] that is unsupported on interface [chars].

Explanation The indicated TE LSP, routed on the indicated interface, requested an encoding type that is unsupported on the interface. The requested value appears in the Generalized Label Request.

Recommended Action Verify that the head end originating the TE LSP has a Generalized Label Request that is specifying an encoding type acceptable to the interface in question. If not, alter the head end configuration to request an LSP with an appropriate value, or cause the LSP to be routed on a different interface. If this problem still persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. Also provide a topology diagram showing the hops in the LSP, marking each hop with the vendor and software, and identify which hop is the Cisco IOS device issuing the error message.

Error Message %MPLS_TE_LM-3-LSP_BAD_GPID: LSP [chars] requesting G-PID [[chars]] that is unsupported on interface [chars][chars].

Explanation The indicated TE LSP, routed on the indicated interface, requested a (Generalized) Payload Identifier unsupported on the interface. The requested value appears in the Label Request and Generalized Label Request.

Recommended Action Verify that the head end originating the TE LSP has a Label Request that is specifying a PID acceptable to the interface in question. If not, one possibility is to alter the head end configuration to request an LSP with an appropriate value. Alternatively, if this error is generated at the penultimate hop of an LSP where the endpoint is advertising an implicit-null label (penultimate hop popping is in use), alter the endpoint to advertise an explicit-null label. If this problem still persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. Also provide a topology diagram showing the hops in the LSP, marking each hop with the vendor and software, and identify which hop is the Cisco IOS device issuing the error message.

Error Message %MPLS_TE_LM-3-LSP_BAD_SWITCHING_TYPE: LSP [chars] requesting Switching Type [[chars]] that is unsupported on interface [chars].

Explanation The indicated TE LSP, routed on the indicated interface, requested a Switching Type that is unsupported on the interface. The requested value appears in the Generalized Label Request.

Recommended Action Verify that the head end originating the TE LSP has a Generalized Label Request that is specifying a Switching Type acceptable to the interface in question. If not, alter the head end configuration to request an LSP with an appropriate value, or cause the LSP to be routed on a different interface. If this problem still persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs. Also provide a topology diagram showing the hops in the LSP, marking each hop with the vendor and software, and identify which hop is the Cisco IOS device issuing the error message.

MPLS_VPN_HA Messages

This section contains MPLS HA messages for checkpointing label bindings.

MPLS_VPN_HA-3

Error Message %MPLS_VPN_HA-3-CF_GEN_ERROR: [chars]

Explanation A general error occurred related to the MPLS VPN HA client CF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_VPN_HA-3-CLIENTREG: [chars]

Explanation The MPLS VPN HA failed to register to CF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_VPN_HA-3-DBOPERATION: [chars] RD [chars], [IP_address]/[dec], label [dec]

Explanation An error occurred related to an MPLS VPN HA checkpoint database operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_VPN_HA-3-SIZEMISMATCH: Label table size ([dec]) mismatch, get label tableid failed.

Explanation A mismatch has been detected in the table size of the MPLS VPN HA facility.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MPLS_VPN_HA-7

Error Message %MPLS_VPN_HA-7-LABELFREE: [chars] [dec]

Explanation The MPLS VPN label manager failed to free a label.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_VPN_HA-7-MALLOCFAIL: [chars]

Explanation The MPLS VPN HA facility failed to allocate memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_VPN_HA-7-XMITFAIL: [chars], message seq no [dec], current seq no [dec]

Explanation The MPLS VPN label manager has failed to deliver a message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MPLS_VPN_ISSU Messages

This section contains MPLS VPN ISSU client messages.

MPLS_VPN_ISSU-3

Error Message %MPLS_VPN_ISSU-3-CF_ERR: [chars] [hex]

Explanation An error occurred related to the MPLS VPN ISSU client CF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_VPN_ISSU-3-GENERR: [chars]

Explanation An error occurred related to the MPLS VPN ISSU client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MPLS_VPN_ISSU-3-ISSU_RC_ERR: [chars] [chars]

Explanation An error occurred related to the MPLS VPN ISSU client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MRIB_PROXY Messages

This section contains Multicast Routing Information Base proxy (MRIB_PROXY) messages.

MRIB_PROXY-2

Error Message %MRIB_PROXY-2-MRIB_LC_CREPRC_FAILED: LC in slot [dec] failed to create a required process.

Explanation The line card could not create a process to perform delayed IPC initialization. The MFIB will not be started on this line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_LC_FAILED_GET_IPC: LC failed allocating IPC buffer which may lead to data loss or inconsistent MFIB states, slot = [dec]

Explanation The line card has failed in allocating an interprocessor communication buffer.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %MRIB_PROXY-2-MRIB_LC_FAILED_IDB_MAP: LC failed in mapping interface number [dec]

Explanation The line card failed in mapping an interface from the global representation to the local one.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_LC_FAILED_IPC_ACK: RP failed in getting Ack for IPC message of type = [dec], status = [dec], error = [chars]

Explanation The route processor has failed to get IPC acknowledgement.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_LC_FAILED_IPC_OPEN: LC in slot [dec] failed to open IPC port to RP, error = [chars]

Explanation The line card has failed to open an IPC port towards the route processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_LC_FAILED_SEND_LC_READY: LC in slot [dec] failed to send LC ready to RP, error = [chars]

Explanation The line card has failed to send a ready message to the route processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_LC_FETCH_FAIL: LC in slot [dec] failed to send an RPC fetch request to the RP: [chars]

Explanation The line card attempted to read mroute updates from the route processor but the RPC request failed. The line card MFIB state may now be inconsistent or frozen.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_LC_READY_NOIPC: LC failed allocating IPC buffer to send LC ready, slot = [dec]

Explanation The line card has failed to allocate an interprocessor communication buffer to send the ready message.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %MRIB_PROXY-2-MRIB_LC_UPDATE_IGNORED: LC in slot [dec] ignored one or more mroute updates

Explanation The line card ignored one or more mroute updates because the buffer containing them failed a sanity check. The line card MFIB state may now be inconsistent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_RP_FAILED_GET_IPC: RP failed allocating IPC buffer which may lead to data loss or inconsistent MFIB states

Explanation The route processor has failed to allocate an interprocessor communication buffer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_RP_FAILED_IDB_MAP: RP failed in mapping interface

Explanation The route processor failed to map an interface from the global representation to the local one, or vice versa.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_RP_FAILED_IPC_ACK: LC failed in getting Ack for IPC message of type = [dec], status = [dec], error = [chars]

Explanation The line card has failed to get an IPC acknowledgement.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_RP_FAILED_IPC_CREATE: RP failed in creating IPC port, error = [chars]

Explanation The route processor failed to create an MFIB interprocess communications port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_RP_FAILED_LC_DIST_MODE_INIT_PROC: RP failed in creating distribute mode init process for a linecard, slot = [dec]

Explanation The route processor failed to create a distribute mode initialization process for a line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_RP_FAILED_LC_PORT_INFO: RP failed in creating linecard port info for distributed mode, slot = [dec]

Explanation The route processor failed to create line card port information for distributed mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_RP_FAILED_LC_PORT_OPEN: RP failed in opening linecard port info for distributed mode, slot = [dec]

Explanation The route processor failed to open line card port information for distributed mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MRIB_PROXY-2-MRIB_RP_FAILED_RPC_REPLY: RP failed in sending [chars] reply to a linecard in slot = [dec], IPC error = [chars]. This is normal after linecard removal or reset. At other times, data loss or mroute state inconsistency may result.

Explanation The route processor has failed in sending a remote procedure call reply to a line card. This is normal after line card removal or reset. At other times, data loss or mroute state inconsistency may result.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MROUTE Messages

This section contains MROUTE messages.

MROUTE-2

Error Message %MROUTE-2-RADIXINIT: Error initializing IP multicast radix for %i

Explanation Insufficient memory is available to initialize the IP multicast routing table.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MROUTE-3

Error Message %MROUTE-3-IGMP_NOT_FOUND: IGMP group [IP address] to delete from interface [chars] not found in VRF [chars]

Explanation An inconsistency in maintaining the IGMP cache occurred. The group to be deleted from the interface could not be found in the IGMP cache for the VRF. [IP address] is the IP address in the IGMP group, the first [chars] is the interface, and the second [chars] is the VRF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-IGMP_TWHEEL_INIT_ERR: Error trying to initialize the IGMP timer wheel

Explanation An error occurred during the initialization of a timer wheel.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-IGMP_WAVL_ERROR: IGMP wavl [chars] failed for group [IP_address] in interface [chars]

Explanation The addition/deletion of igmp group in wavl tree failed.

Recommended Action Collect **show tech ipmulticast** command output. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %MROUTE-3-MIDB_QUEUE_ERR: Interface %s not in (%i, %i)

Explanation The MIDB has the highest expiration timer but was not in the MDB->MIDB.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-NO_PIM_NBR: There is no PIM neighbor on this IDB: [chars]

Explanation There is no PIM neighbor on the specified IDB. The most probable cause of this error is that PIM is not configured correctly on this interface or on interfaces of the next-hop routers.

Recommended Action Check PIM configurations on local and neighbor routers. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-RECUR_ROUTE_DEPTH_ERR: Recursive route lookup has reached its max depth for: [IP_address]

Explanation The recursive route lookup has reached its predefined maximum depth limit.

Recommended Action If possible, reduce the number of rounds of next-hop lookup needed for the network address in question. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-ROUTECOUNT_ZERO: Multicast route count reached zero

Explanation The running count of multicast routes reached zero when it should be non-zero.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-TWHEEL_DELAY_ERR: Exceeded maximum delay (%d ms) requested:
%d

Explanation An attempt was made to schedule a function with a higher delay than the maximum allowed. The function will be scheduled using the maximum delay possible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-TWHEEL_ERR: Timer wheel internal error

Explanation A timer wheel internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-TWHEEL_INIT_ERR: Trying to re-initialize an already initialized timer wheel

Explanation An error occurred while initializing a timer wheel.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-TWHEEL_INSERT_ERR: An error occurred after inserting or executing a timer wheel event

Explanation An error occurred after inserting or executing a timer wheel event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-TWHEEL_INT_ERR: Timer wheel error at interrupt level %d

Explanation A timer wheel internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-TWHEEL_SLOT_ERR: Timer wheel event:%x slot:%d func:%x unequal to exec slot: %d

Explanation The timer wheel event has an inconsistent slot number.

Recommended Action Enter the **clear ip mroute** command to delete entries from the IP multicast routing table. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-3-WAVLINIT: Could not initialize WAVL tree for (%i,%i)

Explanation The WAVL tree could not be initialized, so the system cannot search for Multicast Interface Data Blocks (MIDBs).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MROUTE-4

Error Message %MROUTE-4-INCONSISTENT_IDB_TABLEID: PIM detected inconsistency in table-id information on [chars].

Explanation The PIM has detected that the interface table ID value is not the same as the value maintained by the multicast code.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-4-MROUTELIMIT: Exceeded multicast limit for group %i, source %i on interface %s

Explanation The allowed number of multicast routes having the incoming or outgoing interface reached the limit specified by a configured access list. New routes cannot be added unless the interface configuration is changed.

Recommended Action If multicast traffic over the interface is of any priority among the traffic carried by this router, then enter the **ip multicast limit** interface command to increase the number of multicast routes. Otherwise, no action is required. Enter the **debug ip mroute limit** command or the **show ip multicast limit** command to learn which multicast interface limit was exceeded.

Error Message %MROUTE-4-MTU_MISMATCH: WARNING: With IP multicast enabled, interfaces which transmit traffic from larger to smaller MTU interfaces may not be hardware switched due to fragmentation. A degradation in performance may occur.

Explanation With IP multicast enabled, interfaces that transmit traffic from larger to smaller MTU interfaces may not be hardware switched due to fragmentation. A degradation in performance may occur.

Recommended Action Set the MTU values on all interfaces to be identical.

Error Message %MROUTE-4-RADIXDELETE: Error trying to delete multicast route entry %i/%d for %i (expected %#x, got %#x)

Explanation A route could not be deleted from the routing table.

Recommended Action Enter the **clear ip mroute** command to delete entries from the IP multicast routing table. Determine whether the router is low on memory. If the problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-4-RADIXINSERT: Error trying to add multicast route entry %i/%d for %i (expected %#x, got %#x)

Explanation A route could not be inserted into the routing table.

Recommended Action Enter the **clear ip mroute** command to delete entries from the IP multicast routing table. Determine whether the router is low on memory. If the problem recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MROUTE-4-REGISTER_SOURCE_CONFIG: Removing pim register source configuration for [chars]

Explanation The register source interface was deleted, or its IP address was removed, or its VRF forwarding was changed.

Recommended Action Check the **ip pim register-source** configuration.

Error Message %MROUTE-4-ROUTEELIMIT: Current count of %u exceeds multicast route-limit of %d

Explanation The number of multicast routes equals the configured maximum allowed. New routes cannot be added unless the configuration is changed.

Recommended Action If multicast traffic is of any priority among the traffic carried by this router, then use the **ip multicast route-limit** command to increase the number of multicast routes. Otherwise, no action is required.

Error Message %MROUTE-4-ROUTEELIMIT_ATTEMPT: Attempt to exceed multicast route-limit of [dec]

Explanation The number of multicast routes equals the configured maximum allowed. New routes cannot be added unless the configuration is changed.

Recommended Action If multicast traffic is of any priority among the traffic carried by this router, then enter the **ip multicast route-limit** command to increase the number of multicast routes. Otherwise, no action is required.

Error Message %MROUTE-4-ROUTEELIMITWARNING: multicast route-limit warning (curr %u threshold %u)

Explanation The number of multicast routes reached the configured percentage of the multicast route-limit.

Recommended Action Increase the multicast route-limit.

Error Message %MROUTE-4-RPF_LOOKUP_LOOP: RPF route lookup loop for %i, route %i/%d

Explanation A routing loop exists, possibly caused by routers reverse path forwarding to different tables .

Recommended Action Check the routing tables used for reverse path forwarding (RPF).

MROUTE-6

Error Message %MROUTE-6-LARGE_TWHEEL_DELAY: Exceeded maximum delay (%d ms) requested: %d

Explanation An attempt was made to schedule a function with a higher delay than the maximum allowed. The function will be scheduled using the maximum delay possible minus a small delay offset.

Recommended Action Check whether a large IGMP query-interval is set. Some timers may refresh periodically to allow for the large delay.

MSC100_SPA_CC Messages

This section contains Cisco 7304 SPA carrier card messages.

MSC100_SPA_CC-0

Error Message %MSC100_SPA_CC-0-FPGA_BAY_ERROR_EXCEED_LIMIT: [chars] detected [chars] exceed limit ([dec]) (hardware-status = [hex])

Explanation A critical FPGA error was detected on the SPA or carrier card for the specified subslot. The SPA in this subslot has been disabled.

Recommended Action Try to reactivate the card using the **hw-module subslot slot-number/subslot-number start** command. If the error persists, enter the **show diag slot-number** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show diag slot-number** output, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MSC100_SPA_CC-0-FPGA_ERROR: [chars] Slot [dec]: Hardware error detected [[chars]]

Explanation A critical FPGA error was detected on the carrier card. The carrier card is deactivated and then an automatic recovery is initiated. If a similar error occurs more than five times within an hour, the carrier card is deactivated.

Recommended Action If the line card is no longer automatically reactivating, copy the error message exactly as it appears on the console or in the system log. Enter the **show diag slot-number** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show diag slot-number** output, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MSC100_SPA_CC-0-FPGA_ERROR_EXCEED_LIMIT: [chars] Slot [dec] detected [chars] exceed limit ([dec]) (hardware-status = [hex])

Explanation A critical FPGA error was detected on the carrier card. The carrier card is deactivated and then an automatic recovery is initiated. If a similar error occurs more than five times within an hour, the carrier card is deactivated.

Recommended Action If the line card is no longer automatically reactivating, copy the error message exactly as it appears on the console or in the system log. Enter the **show diag slot-number** command to gather data that may help identify the cause of the error. If you cannot determine the cause of the error from the error message text or from the **show diag slot-number** output, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MSC100_SPA_CC-0-MISSING_RP_FPGA_SUPPORT: The 7304-MSC-100 in slot [int] has been deactivated because the RP FPGA requires an upgrade.

Explanation The MSC-100 SPA carrier card in the specified slot requires a particular version of the RP FPGA. The MSC-100 will be deactivated until this FPGA incompatibility is addressed.

Recommended Action Enter the **upgrade fpga all** command to upgrade the RP FPGA. After upgrading the RP FPGA, reactivate the MSC-100 by removing and reinserting the MSC-100.

MSDP Messages

This section contains Multicast Source Discovery Protocol (MSDP) messages.

MSDP-3

Error Message %MSDP-3-DNS_ERROR: DNS lookup time out. DNS lookup for ssm mapping will be disabled for 60 sec

Explanation DNS source lookup timeout. DNS server not respond to the DNS query, this may be due to DNS server is down. DNS lookup will be stopped for next 60 sec.

Recommended Action Disbale DNS ssm mapping till the DNS server come up. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %MSDP-3-NO_RPF_NODE: SA message could not be sent to peer [IP_address]. Expecting RPF node with host address [IP_address] but found node with host [IP_address] in the rpf tree.

Explanation The reverse path forwarding (RPF) node could not be found while sending a Source-Active (SA) message to the peer. The SA will not be sent in this period.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MSDP-4

Error Message %MSDP-4-PKT_TOO_BIG: Message size violation on %u-byte packet from %i, discarded

Explanation A message larger than the maximum MSDP message size was received. This message could also indicate an internal error.

Recommended Action Obtain the manufacturer and the version information of the router that sent the oversize packet. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show version** commands and your pertinent troubleshooting logs.

Error Message %MSDP-4-SA_LIMIT: SA from peer %i, RP %i for (%i, %i) exceeded sa-limit of %d

Explanation The number of MSDP SAs exceeds the configured maximum number. SA cache entries cannot be added unless the configuration is changed.

Recommended Action If the MSDP SAs come from legitimate sources or RPs, then enter the **ip msdp sa-limit** command to increase the number of SA entries allowed from the subject peer. Otherwise, no action is required.

MSDP-5

Error Message %MSDP-5-PEER_IS_SELF: Peering with self (%i)

Explanation Multicast Source Discovery Protocol (MSDP) on this device is peering with itself.

Recommended Action Check the address of the intended MSDP peer.

Error Message %MSDP-5-PEER_UPDOWN: Session to peer %i going %s

Explanation A session to an MSDP peer going up or down.

Recommended Action Determine whether the router is low on memory.

Error Message %MSDP-5-PEER_IS_SELF: Peering with self ([IP_address])

Explanation MSDP peering with ourselves

Recommended Action Check the address of the MSDP peer

MSFC2 Messages

This section contains Multilayer Switch Feature Card 2 (MSFC2) messages.

MSFC2-3

Error Message %MSFC2-3-IDB_INCORRECT_UNTHROTTLE_VECTOR: attempting to throttle idb [hex] ([chars]) with enable vector [hex]

Explanation An invalid interface enable vector was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MSFC2-3-TOOBIG: Attempt to send giant packet on [chars] ([dec] bytes from [hex], max allowed [dec])

Explanation An attempt was made to send an oversized packet. This message typically appears when the Layer 3 switch is not fragmenting packets with a message size larger than 1500 bytes.

Recommended Action Increase the interface MTU size.

MTRIE Messages

This section contains MTRIE messages.

MTRIE-4

Error Message %MTRIE-4-MTRIECORRUPTLEAF: [IP_address]/[dec] - [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MTRIE-4-MTRIELEAFOPFAIL: [IP_address]/[dec] - [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MTRIE-4-PLACEALLOC: Failed to allocate place holder

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MUESLIX Messages

This section contains Mx serial ASIC messages.

MUESLIX-3

Error Message %MUESLIX-3-ERROR: [chars]

Explanation A general error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

MVRP Messages

This section contains Multicast VLAN Registration Protocol (MVRP) messages.

MVRP-3

Error Message %MVRP-3-ADD_REGISTRY_FAILED: MVRP subsystem fails to add callback function %s

Explanation Another subsystem has mistakenly added its own callback functions. This message is for debugging purposes.

Recommended Action No action is required.

Error Message %MVRP-3-ENABLE_FAILED: MVRP can't be enabled because %s

Explanation Multicast VLAN Registration Protocol (MVRP) cannot be enabled for the specified reason.

Recommended Action Take action according to the specified reason. For example, if the failure is due to insufficient memory, add more memory to the system.

Error Message %MVRP-3-HA_INIT_FAILED: MVRP High Availability subsystem fails to be initialized and hence MVRP won't support HA stateful switchover.

Explanation The MVRP CF client or the MVRP RF client failed to initialize.

Recommended Action Enter the **show redundancy clients** command and the **show checkpoint clients** command to learn which client was not initialized.

Error Message %MVRP-3-SUBSYS_INIT_FAILED: MVRP subsystem failed in initialization(%s) and MVRP won't function properly.

Explanation MVRP could not initialize, probably due to insufficient memory. Other accompanying system messages may provide further information about the failure.

Recommended Action Enter the **show memory summary** command to check the memory usage. Contact the TAC with the output of the **show memory summary**, **show version**, and **show run** commands and the associated syslog messages from the time of the problem.

MVRP-6

Error Message %MVRP-6-MODECHANGE: The operating mode is changed to %s mode on interface %s.

Explanation As a result of protocol negotiation, the operating mode changed to the specified mode on the specified interface.

Recommended Action No action is required.

MVRP_CONST Messages

This section contains MVRP messages on Constellation platforms.

MVRP_CONST-3

Error Message %MVRP_CONST-3-MAC_MATCH_REG_FAILED: Unable to reserve needed MAC match register - cannot run MVRP on interfaces of slot %d

Explanation Multicast VLAN Registration Protocol (MVRP) attempted to reserve a MAC match register for the slot indicated, but there is no dedicated register or programmable register available. MVRP cannot be activated on interfaces of this card.

Recommended Action Disable conflicting protocols that use the MAC match register or use a different card type that supports MVRP.

MVRP_CONST-6

Error Message %MVRP_CONST-6-FEATURE_CONFLICT: Failed to enable MVRP on %s because conflicting feature %s is enabled on the interface

Explanation MVRP could not be enabled on the given interface because of conflicting features. For example, unknown unicast flood blocking(UUFB) and MVRP cannot be enabled on the same interface.

Recommended Action If MVRP is required on the interface, enter the **show running-config interface** command to investigate whether incompatible features are enabled on the interface.

Error Message %MVRP_CONST-6-MAC_LEARNING: MAC learning on VLAN %s is %s

Explanation If only two MVRP ports are forwarding and not pruned in a VLAN, MVRP will disable MAC learning on that VLAN in order to save room in the MAC table, which is a limited system-wide resource.

Recommended Action No action is required.

Error Message %MVRP_CONST-6-MAC_LRN_SETTING_FAILED: Failed to %s MAC learning on VLAN %s

Explanation MVRP failed to enable or disable MAC learning on the given VLAN, probably because MAC learning was already configured on the VLAN by the administrator.

Recommended Action To determine the status of MAC learning on the VLAN, enter the **show mac-address-table learning** command.

MVRP_ISSU Messages

This section contains MVRP in-service software upgrade messages.

MVRP_ISSU-2

Error Message %MVRP_ISSU-2-GET_BUFFER: MVRP ISSU client failed to get buffer for message. Error: %d (%s)

Explanation The Multicast VLAN Registration Protocol (MVRP) ISSU client was unable to reserve buffer space for building a negotiation message. As a result, the negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %MVRP_ISSU-2-INIT: MVRP ISSU client initialization failed to %s. Error: %d (%s)

Explanation The MVRP ISSU client could not be initialized. This initialization failure must be addressed before an in-service software upgrade or downgrade can be performed. Otherwise, a software upgrade or downgrade will result in downtime.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MVRP_ISSU-2-SEND_NEGO_FAILED: MVRP ISSU client failed to send negotiation message. Error: %d (%s)

Explanation The MVRP ISSU client was unable to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %MVRP_ISSU-2-SESSION_NEGO: MVRP ISSU client encountered unexpected client nego_done. Error: %d (%s)

Explanation The MVRP ISSU client encountered a client negotiation done state that was unexpected. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %MVRP_ISSU-2-SESSION_REGISTRY: MVRP ISSU client failed to register session information. Error: %d (%s)

Explanation The MVRP ISSU client was unable to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

MVRP_ISSU-3

Error Message %MVRP_ISSU-3-INVALID_SESSION: MVRP ISSU client does not have a valid registered session.

Explanation The Multicast VLAN Registration Protocol (MVRP) ISSU client does not have a valid registered session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %MVRP_ISSU-3-MSG_NOT_OK: MVRP ISSU client 'Message Type %d' is not compatible

Explanation The MVRP ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %MVRP_ISSU-3-MSG_SIZE: MVRP ISSU client failed to get the MTU for Message Type %d. Error: %d (%s)

Explanation The MVRP ISSU client was unable to calculate the MTU for the specified message. As a result, the MVRP ISSU client is not able to send the message to the standby device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %MVRP_ISSU-3-SESSION_UNREGISTRY: MVRP ISSU client failed to unregister session information. Error: %d (%s)

Explanation The MVRP ISSU client was unable to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %MVRP_ISSU-3-TRANSFORM_FAIL: MVRP ISSU client %s transform failed for 'Message Type %d'. Error: %d (%s)

Explanation The MVRP ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In either case, the MVRP state between the active device and the standby device is not identical.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

MVRP_SWITCH Messages

This section contains MVRP messages on switch platforms.

MVRP_SWITCH-6

Error Message %MVRP_SWITCH-6-IGNORE_USER_CONFIG: The user configured list of pruned VLANs on interface %s is ignored as MVRP will prune VLANs dynamically.

Explanation The **switchport trunk pruning vlan** command is used by VTP pruning to prune VLANs numbered from 1 to 1001 only. This configuration command does not apply to MVRP, which prunes all 4096 VLANs. The command will be ignored.

Recommended Action No action is required.

Error Message %MVRP_SWITCH-6-VLAN_CREATED: MVRP created VLANs %s on this device

Explanation MVRP has created the specified VLANs. MVRP can create VLANs dynamically if the feature is enabled with the **mvrp vlan create** command.

Recommended Action No action is required.

MVR_RP Messages

This section contains Multicast VLAN Registration (MVR) route processor messages.

MVR_RP-3

Error Message %MVR_RP-3-OPER_PORT_SET_FAILED: MVR port operational type setting failed. Reason: [dec]

Explanation A failure occurred while setting the MVR source or receiver port operational type on the switch port. The cause was either a failure on the switch port or an ICC failure.

Recommended Action Unconfigure the MVR type from this switch port and reconfigure it.

MVR_RP-6

Error Message %MVR_RP-6-RCVR_ACCESS_PORTMODECHNG: [chars] MVR type receiver on [chars], this access port [chars] MVR vlan

Explanation An MVR type receiver should not be configured on a MVR VLAN port. Because this port is configured as dynamic auto/desirable, and due to a mode change in the neighboring switch, the operational switchport mode on this switch has become access and the corresponding VLAN is an MVR VLAN.

Recommended Action Either unconfigure MVR type receiver from this switch port or change the access VLAN to a non-MVR VLAN.

Error Message %MVR_RP-6-RCVR_TRUNK_PORTMODECHNG: [chars] MVR type receiver on [chars], MVR type receiver should not be configured on trunk ports

Explanation An MVR type receiver should not be configured on a trunk port. Because this port is configured as dynamic auto/desirable, and due to a mode change in the neighboring switch, the operational switch port mode on this switch has become trunk. MVR type receiver should be disabled.

Recommended Action Either unconfigure MVR type receiver from this switch port or change the mode to access and change the VLAN to a non-MVR VLAN.

Error Message %MVR_RP-6-SRC_ACCESS_PORTMODECHNG: [chars] MVR type source on [chars], this access port [chars] MVR vlan

Explanation MVR type source should not be configured on a non-MVR VLAN port. Because this port is configured as dynamic auto/desirable, and due to mode change in the neighboring switch, the operational switch port mode on this switch has become access and the corresponding VLAN is non-MVR.

Recommended Action Either unconfigure MVR type source from this switch port or change the access VLAN to an MVR VLAN.

Error Message %MVR_RP-6-SRC_TRUNK_PORTMODECHNG: [chars] MVR type source on [chars], this trunk port allowed vlans [chars] MVR vlan

Explanation MVR type source should not be configured on a non-MVR VLAN port. Because this port is configured as dynamic auto/desirable, and due to mode change in the neighboring switch, the operational switch port mode on this switch has become trunk and the corresponding VLAN range does not contain the MVR VLAN.

Recommended Action Either unconfigure MVR type source from this switch port or change the trunk allowed VLAN range to include the MVR VLAN.

MWAM Messages

This section contains Multiprocessor WAN Application Module (MWAM) messages.

Error Message %MWAM-4-FAILED_FILE_SYNC: Failure creating or synchronizing MWAM configuration file to standby: [chars], [chars]

Explanation The active supervisor engine has failed to copy an MWAM configuration file from bootflash: to slavebootflash:. The standby supervisor engine will not be up to date with the MWAM configuration files if a switchover occurs.

Recommended Action Verify that there is space available on the bootflash: and slavebootflash: devices. It may be necessary to compress either or both devices to recover space used by deleted or overwritten files. After taking these actions, a new attempt to synchronize files can be started either by resetting the standby supervisor engine or by configuring **no mwam bootflash access** followed immediately by **mwam bootflash access**. If these actions do not resolve the issue, obtain the output from the following commands:

- **dir bootflash:**
- **dir slavebootflash:**
- **show bootflash:**
- **show slavebootflash:**

If possible, set **debug mwam all** on the active supervisor engine, and then reset the standby supervisor engine with the **hw-module module slot reset** command, capturing the debug information that appears on the active supervisor engine console. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %MWAM-4-FAILED_TASK_INIT: Failed to start a required task: [chars], [chars]

Explanation A necessary process failed to be created.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

NATMIB_HELPER Messages

This section contains Network Address Translator (NAT) MIB helper messages.

NATMIB_HELPER-3

Error Message %NATMIB_HELPER-3-NOCREAT: NATMIB Helper Process not created - NAT MIB will not work properly

Explanation An attempt to start the NATMIB helper process failed when the NATMIB subsystem was initialized. The NATMIB helper process could not be created. This condition might be caused by a lack of memory.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. Reload the system after reconfiguring it.

NBAR Messages

This section contains network-based application recognition (NBAR) messages.

Error Message %NBAR-1-NODESIZEMISMATCH: Nodes size mismatch between parsing and sending: [chars]

Explanation There was a failure during the distribution of NBAR graph nodes from the route processor to the line cards. The failure is related to node size changes between the parsing and sending phase.

Recommended Action Disable the NBAR protocols.

NETCONF Messages

This section contains network configuration protocol (NETCONF) messages.

NETCONF-3

Error Message %NETCONF-3-MEMORY: %s

Explanation The network configuration protocol (NETCONF) subsystem was unable to reserve the required memory to complete this operation.

Recommended Action Check the system memory for memory allocation errors. Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

NETFLOW_AGGREGATION Messages

This section contains NetFlow Aggregation (NETFLOW_AGGREGATION) messages.

NETFLOW_AGGREGATION-3

Error Message %NETFLOW_AGGREGATION-3-FLOWMASK_CONFLICT: Netflow [chars] cannot set the required flowmask

Explanation The NetFlow aggregation flow mask conflicts with other features.

Recommended Action If NetFlow Data Export is configured, increase the size of the NDE flow mask to VLAN full flow by entering the **mls flow ip interface-full** command, and then reconfigure the NetFlow aggregation scheme. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

NETFLOW_AGGREGATION-4

Error Message %NETFLOW_AGGREGATION-4-NO_TOS_AGGR: Disable hardware switching to enable [chars]

Explanation NetFlow does not currently support ToS-based aggregation schemes for hardware-switched flows.

Recommended Action If ToS-based aggregation is required, disable hardware switching.

Error Message %NETFLOW_AGGREGATION-4-OER_AGG_EXPORT_ERROR: OER Error [chars]

Explanation An error occurred in receiving an Optimized Edge Routing (OER) aggregation export packet.

Recommended Action Disable OER monitor prefix aggregation.

NETFLOW_AGGREGATION-6

Error Message %NETFLOW_AGGREGATION-6-OER_MLS_LONG_AGING: MLS long aging time modified by OER to [dec]

Explanation OER modified the long aging time to a value that may be different from the configured value.

Recommended Action No action is required.

NETWORK_PORT_SATELLITE Messages

This section contains network port satellite messages.

NETWORK_PORT_SATELLITE-3

Error Message %NETWORK_PORT_SATELLITE-3-PHY_LOCKUP: Repeated phy lockup seen on [chars]. Interface will be shut down.

Explanation The physical interface has locked up an excessive number of times. To avoid the interface becoming active, and then quickly becoming inactive numerous times (link flapping), the interface has been shut down.

Recommended Action To reenble the interface, enter the **shutdown** command, followed by the **no shutdown** command in interface configuration mode, to shut down and restart the interface.

NETWORK_RF_API Messages

This section contains network redundancy feature API (NETWORK_RF_API) messages.

NETWORK_RF_API-3

Error Message %NETWORK_RF_API-3-CLIENT_REGISTER_FAIL: Failed to register with [chars], rc =[dec]

Explanation A redundancy client could not be registered. An internal failure associated with client registration occurred in the run-time module specified in the message output. The return code that is specified in the message output identifies the type of failure that was detected. The failure most likely occurred because of a software error. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-FAILDECODEDATADESC: Cannot decode data descriptor for [chars], descriptor type=[dec]

Explanation An internal data descriptor could not be decoded for synchronization for the interface or controller in the run-time module specified in the message output. The failure most likely occurred because of a software error. The descriptor type specified in the message output, if it is a nonzero value, identifies the type of failure. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-FAILDECODEDATADESCINSTDBY: Cannot decode data descriptor in Standby for [chars], descriptor type=[dec]

Explanation An internal data descriptor could not be decoded in the standby unit. The message identifies the interface or controller that caused the decoding failure in the standby unit. This interface was encoded in the active unit but could not be decoded in the standby unit. The failure is probably caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-FAILENCODEDATADESC: Cannot encode data descriptor for [chars], descriptor type=[dec]

Explanation An internal data descriptor could not be encoded for synchronization for the interface or controller in the run-time module specified in the message output. The failure most likely occurred because of a software error. The descriptor type specified in the message output identifies the type of failure. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-FAILSENDMSGTOACTIVE: Failed to send [chars] message to active for [chars], [chars]

Explanation The specified synchronization message, which is an internal IPC message, could not be sent to the active unit in the specified run-time module. The failure most likely occurred because of a software error. Additional details on the cause of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-FAILSENDMSGTOSTDBY: Failed to send [chars] message to standby for [chars], rc=[dec]

Explanation The specified synchronization message, which is an internal IPC message, could not be sent to the standby unit in the specified run-time module. The failure most likely occurred because of a software error. The numeric error code in the message output identifies the type of failure. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-INVALID_CHKPT_STATUS_CODE: Invalid checkpointing status code received, rc=[dec]

Explanation An invalid checkpoint status code has been detected. An internal status code that is associated with checkpointing was found to be invalid. The return code that is specified in the message output identifies the invalid code that was detected. The failure most likely occurred because of a software error. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-INVALID_MSG_RECEIVED: Invalid [chars] message received

Explanation A message that is used for state synchronization was not received correctly. An internal data structure for a message could not be retrieved. The failure most likely occurred because of a software error. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-IPC: [chars] [chars]

Explanation An interprocess communication (IPC) error has occurred. Additional details on the cause of the error are specified in the message text on the console or in the system log.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show tech-support ipc** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-ISSU_MSG_MTU_INVALID: The ISSU message MTU is invalid: [chars]

Explanation A message buffer size that is used for state synchronization was found to be invalid. An internal data structure for a message could not be retrieved. The failure most likely occurred because of a software error. Additional details on the cause of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-ISSU_MSG_TYPE_INCOMPAT: The active and standby ISSU message types are incompatible

Explanation An incompatible message was used for state synchronization. An internal data structure for a message could not be retrieved. The failure most likely occurred because of a software error. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-ISSU_REG_SES_INFO: Failed to register ISSU session information: [chars]

Explanation The system failed to register the ISSU session information required to complete version exchange between the active and standby units. The failure most likely occurred because of a software error. Additional details on the cause of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-ISSU_START_NEGO_SES: Failed to start ISSU session: [chars]

Explanation The system failed to start the ISSU negotiation session required to complete version exchange between the active and standby units. The failure most likely occurred because of a software error. Additional details on the cause of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-ISSU_TRANSFORM_FAIL: The ISSU message [chars] transformation failed: [chars]

Explanation A message that is used for state synchronization could not be transformed correctly. An internal data structure for a message could not be retrieved. The failure most likely occurred because of a software error. Additional details on the cause of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-ISSU_UNREG_SES_INFO: Failed to register ISSU session information: [chars]

Explanation The system failed to unregister the ISSU session information required to complete version exchange between the active and standby units. The failure most likely occurred because of a software error. Additional details on the cause of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-NO_CHKPT_BUFFER: No checkpointing buffer for [chars], rc=[dec]

Explanation A message data buffer that is used for state synchronization could not be obtained. An internal data structure could not be allocated for synchronization in the run-time module specified in the message output. The return code that is specified in the message output identifies the type of failure. The failure most likely occurred because of a software error or a lack of system memory. The system state between the active and standby units might not be properly synchronized.

Recommended Action If you determine that this condition was caused by a lack of system memory, reduce system activity to ease memory demands, or if conditions warrant, upgrade to a larger memory configuration. Otherwise, copy the message exactly as it appears on the console or in the

system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-NO_MSG_BUFFER: No message buffer for [chars]

Explanation A message data buffer that is used for state synchronization could not be obtained. An internal data structure could not be allocated for synchronization in the run-time module specified in the message output. The failure most likely occurred because of a software error or a lack of system memory. The system state between the active and standby units might not be properly synchronized.

Recommended Action If you determine that this condition was caused by a lack of system memory, reduce system activity to ease memory demands, or if conditions warrant, upgrade to a larger memory configuration. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NETWORK_RF_API-3-NO_RESOURCES: [chars]

Explanation A run-time module could not obtain the resources that are required to complete a task. The failure most likely occurred because of a software error or a lack of system memory. Additional details on the cause of the error are specified in the message text on the console or in the system log. The system state between the active and standby units might not be properly synchronized.

Recommended Action If you determine that this condition was caused by a lack of system memory, reduce system activity to ease memory demands, or if conditions warrant, upgrade to a larger memory configuration. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

NETWORK_RF_API-6

Error Message %NETWORK_RF_API-6-IDB_TRANSITIONS_PENDING: Switchover terminated with [dec] transitions pending after there was no transition activity for [dec] seconds

Explanation The system terminated the switchover IDB transitioning phase with a number of IDB transitions still pending because no switchover-related IDB transitions were logged during the specified time interval. Some connected routes may experience a temporary loss of traffic.

Recommended Action No action is required.

NHRP Messages

This section contains Next Hop Resolution Protocol (NHRP) messages.

Error Message %NHRP-3-TIMERLOOP: Timer process looping ([dec]/[dec]/[dec]/[dec]/[dec]/[dec]).

Explanation The process that handles timer events is looping, possibly on a malfunctioning timer event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

NP Messages

This section contains Network Processor messages.

NP-2

Error Message %NP-2-BADREAD: Read failed for [chars] on NP [dec].

Explanation There was a read error on the file during the microcode image load.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the

Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP-2-HDRCORRUPT: Microcode header has been corrupted, expected [hex], got [hex].

Explanation Network Processor microcode appears to be corrupted. This could be due to an already corrupted image or, less likely, a software problem.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP-2-INVALID: Corrupted microcode retrieved from the image bundle for NP [dec].

Explanation The retrieved microcode appears to be corrupted.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP-2-NONEXIST: Could not open or file does not exist [chars] for NP [dec].

Explanation There is a possibility that the Network Processor microcode may not be bundled into the image correctly or a software error occurred that prevented locating the microcode.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP-2-RESTARTED: NP [dec] restarted.

Explanation Network Processor has been restarted, either manually or by a microcode reload, or as a result of an exception.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP-2-WRONGHARD: The microcode type does not match, expected [hex], got [hex].

Explanation There is a possibility the images has been corrupted or, less likely, an incorrect microcode set is bundled into the image.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP-2-WRONGMAGIC: Microcode section contains invalid magic for NP [dec].

Explanation Network Processor microcode appears to mismatch the ucode hdr type. This could be due to an already corrupted image or a read error on the file during the downloading on the NP.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

NP-5

Error Message %NP-5-RESTARTEDALL: All NPs have been restarted.

Explanation All Network Processors have been restarted, either manually or by a microcode reload, or as a result of an exception.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

NP_CLIENT Messages

This section contains NextPort (NP) client messages.

Error Message %NP_CLIENT-3-ALLEXISTS: NP Client Previously Defined Software Element - [chars]: [chars] [chars]

Explanation The NP client has detected a previously defined software element.

Recommended Action Attempt to reload the Cisco IOS image on the affected card or platform. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NP_CLIENT-2-FATAL: NP Client [chars] : [chars] ([dec], [dec])

Explanation The NP client software detected a critical programming error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NP_CLIENT-3-INITFAIL: NP Client Initialization Failed - [chars]:
[chars] [chars]

Explanation The NP client could not initialize memory needed to service one or more network processors. This error may indicate that an incompatibility exists between the NP firmware and the associated Cisco IOS image.

Recommended Action Attempt to reload the Cisco IOS image on the affected card or platform. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NP_CLIENT-3-INTF: [chars] ([chars]) on [chars] - [chars]
if_number=[dec]

Explanation The interface NP client detected an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NP_CLIENT-3-MAXEXCEED: NP Client Max Services Exceeded - [chars]:
[chars] [chars]

Explanation The maximum number of NP client services has been exceeded.

Recommended Action Change the configuration to reduce the number of services configured. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NP_CLIENT-3-METADATA: [chars] failed: [chars] [[chars]] [chars]

Explanation Processing of the metadata for the specified network processor has failed. The specified network processor will fail to operate.

Recommended Action Attempt to reload the network processor microcode. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NP_CLIENT-3-NOMEM: Memory Allocation Failure - [chars]: [chars]
[chars]

Explanation The NP client could not allocate the required memory needed to service one or more network processors.

Recommended Action This error may indicate that more memory must be installed on the affected card or platform in order to service all the features and related entities enabled by the configuration. Try to reload the Cisco IOS image on the affected card or platform. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NP_CLIENT-3-NOTFOUND: NP Client Software Element Not Found - [chars]:
[chars] [chars]

Explanation The NP client could not locate a required software element.

Recommended Action Attempt to reload the Cisco IOS image on the affected card or platform. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NP_CLIENT-3-NOTSUP: NP Client Feature Not Supported - [chars]: [chars] [chars]

Explanation The NP client does not support the specified feature.

Recommended Action Verify that the correct Cisco IOS image is loaded on the affected card or platform for the configured features. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NP_CLIENT-3-NPUNKNOWN: NP Client Unsupported NP - [chars]: [chars] [chars]

Explanation The NP client detected an unsupported NP.

Recommended Action Verify that the correct Cisco IOS image is loaded on the affected card or platform for the configured features. If the error persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

NP-CRASHINFO Messages

This section contains Network Processor messages.

Error Message %NP_CRASHINFO-2-OPEN_FAILED: Could not open crashinfo file [[chars]]

Explanation The file for writing crashinfo could not be opened. This is usually caused by the file system problem.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP_CRASHINFO-2-WRITE_FAILED: Could not write crashinfo file [[chars]]

Explanation Could not write crashinfo to the file. This is usually caused by the file system problem.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP_CRASHINFO-2-WRITING: Writing crashinfo file [[chars]]

Explanation NP detected a watchdog timeout. The crashinfo is collected from problematic NP and stored in the location.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

NP-DEV Messages

This section contains Network Processor messages.

NP_DEV-2

Error Message %NP_DEV-2-INVREGINTR: Illegal Write on NP RMA Register: [hex], Data: [hex]

Explanation This is an illegal Write to an NP RMA Register. This is to debug NP Parity Error issue. Examine traceback and forward it to development team.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP_DEV-2-WATCHDOG: Watchdog detected on NP [dec]

Explanation A software exception occurred on an NP device.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

NP_DEV-3

Error Message %NP_DEV-3-ECC_DOUBLE: Double-bit ECC error detected on NP [dec], Mem [dec], SubMem [hex], SingleErr [dec], DoubleErr [dec] Count [dec] Total [dec]

Explanation A double-bit ECC error was detected for a Network Processor device component.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP_DEV-3-ERRINTR: Error caused by: [chars] on NP [dec]

Explanation An error in Network Processor device operation was detected.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP_DEV-3-PERR: Non-recoverable Parity error detected on NP [dec], cause [dec] count [int] uqParityMask [hex], uqSRAMLine [hex], bRecov [dec], bRwrr [dec] Total [dec]

Explanation A non-recoverable parity error was detected for a Network Processor device component.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

NP_DEV-5

Error Message %NP_DEV-5-INTRTHR: Interrupt: cause [dec] for NP([int]) throttled

Explanation Too many interrupts are being generated from Network Processor device.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

NP_DEV-6

Error Message %NP_DEV-6-PERR_RECOVERED: Recovered from a Parity error on NP [dec], cause [dec], count [int] uqParityMask [hex], uqSRAMLine [hex], bRecov [dec], bRewr [dec] Total [dec]

Explanation Recovered from a Parity error detected for a Network Processor device component.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %NP_DEV-6-ECC_SINGLE: Recovered from a single-bit ECC error detected on NP [dec], Mem [dec], SubMem [hex], SingleErr [dec], DoubleErr [dec] Count [dec] Total [dec]

Explanation Recovered from a single-bit ECC error detected for a Network Processor device component.

Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

NSE100 Messages

This section contains network services engine messages.

NSE100-3

Error Message %NSE100-3-IOBUSTIMEOUT: IO access to the address [hex] timed out (Target: [chars])

Explanation The system controller flagged an I/O access timeout, indicating either a transient/fatal system component issue or an underlying software initialization issue. The source of the problem can be determined more accurately by decoding the address being accessed. If the I/O address is

valid in the system memory map and if the system has been up and operational for a while, the problem is probably hardware related. If this problem is seen repeatedly, the corresponding component might need to be replaced.

Recommended Action If the message is seen repeatedly, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: description of the user activity just before the occurrence of this incident, prevailing system operational conditions like traffic pattern, amount of traffic, system neighbors, system console messages and the output of the following commands: **show running-config**, **show c7300 pxf accounting**, **show c7300 pxf interfaces all**, **show diag** and **show c7300**.

Error Message %NSE100-3-PINNACLE_PORT: [chars] - [chars]

Explanation A failure occurred while one of the Gigabit Ethernet (GE) ports on the NSE-100 was being initialized. This condition is probably caused by either a software error or a transient condition before the GE port becomes successfully initialized.

Recommended Action If the GE ports either do not initialize or fail to forward traffic as a result of this condition, enter the **shutdown** command, followed by the **no shutdown** command, in interface configuration mode to shut down and restart the affected GE ports to restore the forwarding. If the message is seen repeatedly, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format:

- The user activity immediately preceding the receipt of this message.
- The prevailing system operational conditions such as the traffic patterns, amount of traffic, and system neighbors.
- Any additional system console messages.
- The output of the following commands: **show version**, **show running-config**, **show controller gigabitEthernet**, **show interface gigabitEthernet**, **show pxf accounting**, **show c7300**, **show logging** and **show tech-support**.

Error Message %NSE100-3-UNEXPECTED_TIMEREVENT: The NSE-100 GE port driver couldn't determine the port associated with the expired internal managed timer. The expired managed timer is pointing to [chars]

Explanation The expired managed timer returned a null context. This condition indicates a software failure in the management of the timer.

Recommended Action If the message is seen repeatedly, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format:

- The user activity immediately preceding the receipt of this message.
- The prevailing system operational conditions such as the traffic patterns, amount of traffic, and system neighbors.
- Any additional system console messages.
- The output of the following commands: **show version**, **show running-config**, **show platform**, **show controller gigabitEthernet**, **show interface gigabitEthernet**, **show pxf accounting**, **show c7300**, **show logging** and **show tech-support**.

Error Message %NSE100-3-VA_ERROR: Vanallen ASIC detected an error condition: [chars]

Explanation The Van Allen ASIC has detected an error condition. Either a hardware error or an error in the packet was detected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

NSE100-5

Error Message %NSE100-5-AUTONEG_ENABLE: Auto negotiation is enabled for interface GigabitEthernet[dec]/[dec] due to [chars]

Explanation The auto-negotiation feature has been enabled for the Gigabit Ethernet interface in the slot and port specified in the message text. The reason why the feature was enabled is specified in the message text. The auto-negotiation feature is required for the interface to work properly.

Recommended Action No action is required.

NP_UCODE Messages

This section contains NextPort (NP) microcode messages.

Error Message %NP_UCODE-3-INVALID_FILE: NP microcode [chars] for device [chars] is invalid ([chars])

Explanation The file containing the microcode for an NP is not specified or not accessible. This could be due to an invalid configuration or because the microcode is missing in this image.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

NTI Messages

This section contains Negotiation Trigger Infrastructure (NTI) messages.

NTI-3

Error Message %NTI-3-AGENT_ERR: %s Notifying platform about AGENT ERROR %s, AGENT EP ID 0x%x for EP ID 0x%x, EP type %s, EP group %s

Explanation A Negotiation Trigger Infrastructure (NTI) AGENT error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-CLIENT_NOT_REGSTRD_FOR_EPTYPE: %s Client (#%d - %s) has NOT registered for platform EP type %s

Explanation A client has not registered for a platform endpoint (EP) type.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_AGENT_LIST_ALLOC: Failed to allocate agent bitlist for endpoint 0x%x

Explanation The NTI ISSU process was unable to allocate the agent bitlist for an endpoint. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_DUMMY_MSG_FAILED: Failed to send a dummy nego msg to endpoint 0x%x

Explanation The NTI ISSU process was unable to send a dummy negotiation message to trigger negotiation on the peer. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_EXISTING_SESSION: Session already exists for ep 0x%x

Explanation The NTI ISSU session already exists for this endpoint. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_INVALID_MEDMAN: Invalid MEDMan data

Explanation The Multiple Endpoint Data Manager (MEDMan) data is invalid. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_INVALID_MSG_TRANS: NTI ISSU transformation function got an invalid message in argument

Explanation The NTI ISSU process transformation function received an invalid message. The message cannot be transformed and will not be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_INVALID_RC: Invalid ISSU rc argument for endpoint 0x%x

Explanation The NTI ISSU process received an invalid ISSU return code argument. ISSU negotiation will fail and the endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_INVALID_RCVD_MSG: NTI ISSU received an invalid message for transformation from endpoint 0x%x

Explanation The NTI ISSU process received an invalid message for transformation. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_INVALID_SESSION: Invalid session for ep 0x%x

Explanation The NTI ISSU session is invalid for the endpoint. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_MEDMAN_CREATE: Failed to create MEDMan data for endpoint 0x%x

Explanation The NTI ISSU process was unable to create the Multiple Endpoint Data Manager (MEDMan) data for an endpoint. Negotiation cannot be done, and the endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_MEDMAN_GET: Failed to get MEDMan data for endpoint 0x%x (%s)

Explanation The NTI ISSU process was unable to retrieve MEDMan data for an endpoint. ISSU negotiation will fail for this endpoint, and the endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_MTU_FAILED: NTI ISSU failed to get MTU for message type %d (%s)

Explanation The NTI ISSU process was unable to get the message MTU for transformation. The message cannot be sent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_NEGO_ALREADY_STARTED: NTI ISSU negotiation already started, endpoint 0x%x

Explanation An attempt was made to start the NTI ISSU negotiation, but it has already been started. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_NEGO_ASYNC_ERROR: Async error during nego with 0x%x (%s)

Explanation The NTI ISSU process received an asynchronous error during negotiation with an endpoint. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_NEGO_INCOMPATIBLE: Negotiation incompatible for endpoint 0x%x

Explanation The NTI ISSU negotiation is not compatible for this endpoint. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_NOT_INIT: NTI ISSU is not initialized, endpoint 0x%x.

Explanation The NTI ISSU process is not initialized. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_PLATFORM_TRANSPORT_NEGO_GET_REQ_PAK: NTI ISSU failed to get an platform transport nego message

Explanation The NTI ISSU process was unable to receive a platform transport negotiation message. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_PLATFORM_TRANSPORT_NEGO_SEND: NTI ISSU failed to send an platform transport nego message to 0x%x

Explanation The NTI ISSU process was unable to send a negotiation message using the platform transport. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_RCVD_NEGO_NOT_DONE: NTI ISSU negotiation not done when received a message from 0x%x

Explanation The NTI ISSU process received a message before negotiation was done. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_RCVD_TRANS_FAILED: NTI ISSU failed to transform received message from 0x%x

Explanation The NTI ISSU process was unable to transform a received message. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_RCVD_UNKNOWN_MSG: NTI ISSU received an unknown message type %d from 0x%x

Explanation The NTI ISSU process received a message whose type is unknown. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_RCV_FAILED: NTI ISSU failed to transform message type %d for receive from 0x%x (%s)

Explanation The NTI ISSU process was unable to transform the message for receive. The message cannot be processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_REG_ADD: NTI ISSU failed to hook to the registry %s

Explanation The NTI ISSU process was unable to hook to a registry. This endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_REG_RECEIVE_NEGO_MSG: NTI ISSU failed call the platform receive nego message registry

Explanation The NTI ISSU process was unable to call the platform receive negotiation message registry. The endpoint will probably be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_TRIG_NEGO_NOT_DONE: NTI ISSU negotiation not done when getting a trigger from 0x%x

Explanation The NTI ISSU process received a trigger from this endpoint before the negotiation was done. The trigger will be ignored.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_UNKNOWN_MSG_TYPE: NTI ISSU got an unknown message type: %d

Explanation The NTI ISSU process received an unknown message type while trying to get the message MTU. The message cannot be sent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-ISSU_XMIT_FAILED: NTI ISSU failed to transform message type %d for transmit to 0x%x (%s)

Explanation The NTI ISSU process was unable to transform the message for transmit. The message cannot be sent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-TRIG_ABORT_ALL_CLIENTS: %s Aborting trigger processing for all clients as requested by the platform, EP ID 0x%x trigger type %s trigger group %s

Explanation Trigger processing has been aborted for all clients due to a platform request.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-TRIG_CLIENT_NOTINLIST: %s Cannot trigger NTI client (%d) for this EP: could not find client in list, EP ID 0x%x

Explanation An NTI client could not be triggered for an endpoint because the client could not be found in the list.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-TRIG_INIT_ALREADY_IN_PROGRESS: %s Cannot initiate NTI trigger for EP ID 0x%x at this time: trigger processing of trigger type %s, trigger group %s already in progress

Explanation An NTI trigger could not be initiated because a trigger is already in progress.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %NTI-3-TRIG_PROCESSING: %s Trigger processing ERROR for client (%d - %s), EP ID 0x%x trigger type %s trigger group %s : %s

Explanation An NTP trigger processing error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

NTP Messages

This section contains network time protocol (NTP) messages.

NTP-4

Error Message %NTP-4-PEERUNREACH: Peer [IP_address] is unreachable

Explanation The NTP peer is unreachable.

Recommended Action Check the network connection to the peer and ensure that NTP is running on the peer.

Error Message %NTP-4-UNSYNC: NTP sync is lost

Explanation NTP synchronization to its peer is lost.

Recommended Action Perform the following actions:

- Check the network connection to the peer.
- Check to ensure that NTP is running on the peer.
- Check that the peer is synchronized to a stable time source.
- Check to see if the NTP packets from the peer have passed the validity tests specified in RFC1305.

NTP-5

Error Message %NTP-5-PEERSYNC: NTP synced to peer [IP_address]

Explanation NTP has synchronized the local clock to a new peer.

Recommended Action No action is required.

NTP-6

Error Message %NTP-6-PEERREACH: Peer [IP_address] is reachable

Explanation The NTP peer is reachable.

Recommended Action No action is required.

Error Message %NTP-6-RESTART: NTP process starts

Explanation The NTP process has just started or restarted.

Recommended Action No action is required.

Error Message %NTP-6-STOP: NTP process stops

Explanation NTP is disabled.

Recommended Action Check to see if NTP has been manually disabled by the administrator.

OBFL Messages

This section contains Onboard Failure Logging (OBFL) messages.

OBFL-5

Error Message %OBFL-5-DISABLED: Onboard Failure Logging disabled

Explanation Onboard Failure Logging has been disabled.

Recommended Action No action is required.

OBFL_ERRMSG Messages

This section contains Onboard Failure Logging (OBFL) error messages.

OBFL_ERRMSG-5

Error Message %OBFL_ERRMSG-5-FILECREATEFAIL: OBFL [chars] App failed to open/create file [chars] . Errno = [dec]

Explanation The file open or creation operation failed.

Recommended Action No action is required.

Error Message %OBFL_ERRMSG-5-FILEFSTATFAIL: OBFL [chars] App failed to fstat file [chars] . Errno = [dec]

Explanation The file fstat operation failed.

Recommended Action No action is required.

Error Message %OBFL_ERRMSG-5-FILELSEEKFAIL: OBFL [chars] App failed to Lseek file [chars] . Errno = [dec]

Explanation The file lseek operation failed.

Recommended Action No action is required.

Error Message %OBFL_ERRMSG-5-FILEMINFREEFAIL: OBFL [chars] App failed to set coalesce min free

Explanation Failed to set the coalesce minimum free value.

Recommended Action No action is required.

Error Message %OBFL_ERRMSG-5-FILEOPENFAIL: OBFL [chars] App failed to open file [chars] . Errno = [dec]

Explanation The file open operation failed.

Recommended Action No action is required.

Error Message %OBFL_ERRMSG-5-FILEREADFAIL: OBFL [chars] App read failure on file [chars] . Errno = [dec]

Explanation The file read operation failed.

Recommended Action No action is required.

Error Message %OBFL_ERRMSG-5-HISTFILES SMALL: OBFL [chars] App: history file is exceedingly small

Explanation The history file for this application has been detected to be very small.

Recommended Action No action is required.

OCE Messages

This section contains output chain elements (OCE) infrastructure messages.

OCE-3

Error Message %OCE-3-MISSING_HANDLER_FOR_SW_OBJ: Missing handler for '[chars]' function

Explanation An internal API request has been ignored because it was unexpected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OCE-3-MISSING_HANDLER_FOR_SW_OBJ_TYPE: Missing handler for '[chars]' function for type [chars]

Explanation An internal API request has been ignored because it was unexpected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OCE-3-OCE_CHANGED_BY_APPLY_FUNCTION: Target OCE[hex_addr] changed to[hex_addr] by apply function[hex_addr]

Explanation An internal API request has been ignored because it was unexpected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OCE-3-OCEDEPDUMP: [chars]

Explanation An error condition triggered display of OCE dependents.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OCE-3-OCE_FWD_STATE_HANDLE: Limit of oce forward state handle allocation reached; maximum allowable number is [int]

Explanation Did not store the reinject forwarding state handle, as the maximum number of handles are already in use.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OCE-3-OCE_FWD_STATE_HANDLE_INIT: Failed to initialize a stack of reusable forward state handles; at element [int], initial stack size is [int] elements

Explanation Could not allocate enough forwarding state handles for initial handle reuse.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OCE-3-QUEUE_UNLOCK: Failed to [chars] unlock[chars] for [chars] oce [hex]

Explanation Failed to enqueue a unlock for an OCE. This condition may lead to a memory leak.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OCE-3-UNEXPECTED_DISP_TYPE: Unexpected disposition type is encountered; expecting disposition types are [chars], found [chars]

Explanation An internal disposition counter measure request has been ignored because it was unexpected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OCE-3-UNEXPECTED_SW_OBJ_TYPE: SW_OBJ handle/type mismatch; expecting oce type [chars], found [dec]

Explanation An internal API request has been ignored because it was unexpected.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OCE-3-UNINITIALIZED_VECTOR: Improperly initialized [chars] vector in [chars] OCE bundle [hex], packet dropped

Explanation An OCE bundle vector was improperly initialized.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ODM Messages

This section contains online diagnostics manager (ODM) subsystem messages.

ODM-3

Error Message %ODM-3-PEER_INCOMPATIBLE: Online Diags Peer Version is different

Explanation The version of the peer online diagnostics manager is different from the expected version.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ODM-3-SC_TEST_FAIL: Slot [dec], Subcard [dec],[chars] [chars] Failed

Explanation The online diagnostic test for the subcard specified in the error message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

OER_TT_FLOW Messages

This section contains Optimized Edge Routing (OER) top talkers flow border router messages.

OER_TT_FLOW-2

Error Message %OER_TT_FLOW-2-OER_TT_FLOW_BR_CACHEINIT: Error initializing OER TT Flow BR cache

Explanation The NetFlow top talker cache could not be initialized on the border router because of a low-memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %OER_TT_FLOW-2-OER_TT_FLOW_BR_EXPORTINIT: Error initializing OER TT Flow BR Export queue

Explanation The OER NetFlow top talker export queue could not be initialized on the border router because of a low-memory condition.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

OER_TT_FLOW-4

Error Message %OER_TT_FLOW-4-OER_TT_FLOW_BR_FLOWEXPORT: Error exporting [chars]

Explanation An error involving a flow to the route processor has occurred.

Recommended Action This is a debug message only. No action is required.

OIR Messages

This section contains online insertion and removal (OIR) messages.

OIR-3

Error Message %OIR-3-HARD_RESET: Module [dec] is being hard reset as a part of switchover error recovery

Explanation The specified module is being hard reset as a recovery for failure to respond to a switchover message.

Recommended Action No action is required.

Error Message %OIR-3-ISSU_RESET: Module %d is being hard reset as a part of ISSU upgrade

Explanation The specified module is being hard reset as part of a planned ISSU upgrade.

Recommended Action No action is required.

Error Message %OIR-3-PSM_SUBCARDDETECT: Slot [dec] [chars] [dec]: subcard [dec] inserted

Explanation A protection switch module (PSM) subcard has been detected in the slot specified in the message text.

Recommended Action No action is required.

Error Message %OIR-3-PSM_SUBCARDREMOVE: Slot [dec] [chars] [dec]: subcard [dec] removed

Explanation A protection switch module (PSM) subcard has been removed from the specified slot.

Recommended Action No action is required.

Error Message %OIR-3-SOFT_RESET: Module [dec] is being soft reset as a part of switchover error recovery

Explanation The specified module is being soft reset as a part of switchover error recovery.

Recommended Action No action is required.

Error Message %OIR-3-SOFT_RESET_SSO: Module %d is being soft reset as a part of switchover error recovery

Explanation The specified module is being soft reset as a part of a switchover error recovery.

Recommended Action No action is required.

Error Message %OIR-3-STDBY_PWRCYCLE: Standby was notified, Card in module [dec] is being power-cycled [chars]

Explanation The OIR facility on the redundant supervisor engine was notified that a module on the active supervisor engine is unresponsive. The module is being power-cycled.

Recommended Action No action is required.

Error Message %OIR-3-STDBY_UNKNOWN: Standby was notified, Unknown card in slot [dec]

Explanation The OIR facility on the redundant supervisor engine was notified that an undetermined module was detected on the active supervisor engine.

Recommended Action Reseat the module in the specified slot.

Error Message %OIR-3-UCODE_INTERNAL: The image download to card in slot [dec] failed due to internal error: [chars], [chars]

Explanation An internal error has occurred in the line card image download code.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **remote command switch dir system:image/** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

OIR-4

Error Message %OIR-4-DISABLE: Unsupported service module [chars] in slot [dec] disabled

Explanation This service module is not supported in this release of software.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OIR-4-INSERTION: Possible half inserted module detected in slot [dec] or a slow insertion

Explanation This module is either inserted improperly or is not making a full contact to the backplane or it is being insert very slowly. The user should follow the cisco recommendation on module insertion procedures.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <http://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %OIR-4-WARN: [chars]

Explanation The OIR facility detected the specified condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

OIR-6

Error Message %OIR-6-CWANVSSISSU: CWAN card present in slot [dec] in the slave chassis is powered down because ISSU is in progress

Explanation CWAN card already present in the slave chassis of a virtual switch should not be powered up during ISSU. It will be powered up on switchover or upon completion of ISSU.

Recommended Action No action is required.

Error Message %OIR-6-DIAG_OFFLINE: Card inserted in slot [dec], is now ready for offline diagnostics

Explanation The OIR facility detected a newly inserted line card. The line card is configured for the offline diagnostic state by the user. This state can be entered only after the module is in the online diagnostic state.

Recommended Action This is an informational message only. No action is required.

Error Message %OIR-6-DIAG_ONLINE: Card inserted in slot [dec], is now ready for online diagnostics

Explanation The OIR facility detected a newly inserted line card. The line card is configured for the online diagnostic state by the user or if diagnostic failure is detected during bootup.

Recommended Action This is an informational message only. No action is required.

Error Message %OIR-6-DOWNGRADE: Fabric capable module [dec] not at an appropriate hardware revision level, and can only run in flowthrough mode

Explanation This fabric capable module is not at an appropriate hardware revision level, and can run only in flowthrough (bus) mode.

Recommended Action Upgrade the line card hardware.

Error Message %OIR-6-DOWNGRADE_EARL: Module [dec] [chars] installed is not identical to system PFC and will perform at current system operating mode.

Explanation The PFC/DFC module is at a higher hardware revision than the level of the system PFC. The PFC/DFC module will operate at the same level as that of the system PFC.

Recommended Action This is an informational message only. No action is required.

Error Message %OIR-6-INSFAN: Fan [dec] inserted

Explanation The OIR facility detected a newly inserted fan tray.

Recommended Action This is an informational message only. No action is required.

Error Message %OIR-6-NOPWRISSU: Card inserted in slot %d powered down because ISSU is in progress

Explanation The online insertion and removal (OIR) facility detected a newly inserted line card during an ISSU upgrade process. The new card will be powered down until completion of the ISSU.

Recommended Action No action is required.

Error Message %OIR-6-PWRFAILURE: Module [dec] is being disabled due to power convertor failure [hex]

Explanation The DC-DC power converter failed on this module and must be replaced.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OIR-6-REMFAN: Fan [dec] removed

Explanation The OIR facility detected the removal of a fan tray [n].

Recommended Action This is an informational message only. No action is required.

Error Message %OIR-6-SEQ_MISMATCH: SCP seq mismatch for card in slot [dec] : [chars]

Explanation The OIR facility detected an SCP sequence mismatch for the card in the specified slot.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OIR-6-SOFT_RESET_ISSU: Module [dec] is being soft reset as a part of ISSU cycle

Explanation The module specified in error message is being soft reset as a part of ISSU cycle.

Recommended Action No action is required.

Error Message %OIR-6-STDBY_INSCARD: Standby was notified, card online in slot [dec]

Explanation The OIR facility on the standby supervisor engine was notified by the active supervisor engine that a processor was inserted in slot [n] and that all the interfaces are now usable.

Recommended Action No action is required.

Error Message %OIR-6-STDBY_REMCARD: Standby was notified, card removed from slot [dec]

Explanation The OIR facility on the standby supervisor engine was notified by the active supervisor engine that a processor from the specified slot has been removed.

Recommended Action No action is required.

OIR_ISSU Messages

This section contains online insertion and removal (OIR) in-service software upgrade (ISSU) messages.

OIR_ISSU-3

Error Message %OIR_ISSU-3-BUFFER: Cat6K OIR ISSU client failed to a buffer for message, error %d

Explanation The online insertion and removal (OIR) ISSU client failed to get a buffer for building a negotiation message. As a result, the client cannot send a negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %OIR_ISSU-3-CAPABILITY: Cat6K OIR ISSU client %s

Explanation During capability negotiation, the OIR ISSU client detected an error that results in a mismatch between the client capability of the active and standby units.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %OIR_ISSU-3-INIT: Cat6K OIR ISSU client initialization failed at %s, error %s

Explanation The OIR ISSU client could not be initialized. This condition will cause a catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OIR_ISSU-3-MSG_NOT_OK: Cat6K OIR ISSU client message %d is not compatible

Explanation The OIR ISSU client received an incompatible message from the peer unit. The message cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %OIR_ISSU-3-MSG_SIZE: Cat6K OIR ISSU client failed to get the message size for message %d

Explanation The OIR ISSU client was unable to calculate the message size for the message specified. The client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %OIR_ISSU-3-POLICY: Cat6K OIR ISSU client message type %d is %s

Explanation The OIR ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %OIR_ISSU-3-SEND_FAILED: Cat6K OIR ISSU client failed to send a negotiation message, error %d

Explanation The OIR ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %OIR_ISSU-3-SESSION: Cat6K OIR ISSU client %s

Explanation The OIR ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %OIR_ISSU-3-TRANSFORM: Cat6K OIR ISSU client %s transform failed, error %s

Explanation The OIR ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the OIR state of the bay will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

OIR-SP

Error Message %OIR-SP-6-CONSOLE: Changing console ownership to %s processor

Explanation The OIR facility has switched the console to the specified processor.

Recommended Action No action is required.

Error Message %OIR-SP-6-DOWNGRADE_EARL: Module %d %s installed is not identical to system PFC and will perform at current system operating mode.

Explanation The PFC/DFC module is at a higher hardware revision than the level of the system PFC. The PFC/DFC module will operate at the same level as that of the system PFC.

Recommended Action No action is required.

Error Message %OIR-SP-6-INSCARD: Card inserted in slot [dec], interfaces are now online

Explanation The OIR facility detects a newly inserted module. The interfaces associated with that module are operational, but are shut down until they are configured by the user. If any interfaces of that type were previously configured, they are restored to their previous state.

Recommended Action No action is required.

Error Message %OIR-SP-6-INSPS: Power supply inserted in slot [dec]

Explanation The OIR facility has detected the insertion of a power supply in the specified slot. The total power adjusts after the power supply is turned on,

Recommended Action No action is required.

OLM Messages

This section contains Optical Link Management (OLM) and Link Management Protocol (LMP) messages.

OLM-3

Error Message %OLM-3-LMPSPDMISMATCH: Service Discovery: Attribute [chars] incompatible with neighbor [chars]

Explanation The specified service attribute does not match that on the neighbor. The neighbor or the local node is not properly configured.

Recommended Action Enter the **show mpls uni lmp neighbor** command on the local as well as the neighbor node (where applicable), to determine the service attributes. Modify the configuration, if possible, to ensure that the attributes match.

Error Message %OLM-3-LMPSPDPORTFAILED: Service Discovery: Attributes for port [chars] incompatible with nbr [chars]

Explanation The port-level service attribute does not match with that of the neighbor. The neighbor or the local node is not properly configured.

Recommended Action Enter the **show mpls uni lmp neighbor** command on the local as well as the neighbor node (where applicable), to determine the service attributes. Modify the configuration, if possible, to ensure that the port-level service attributes match.

ONLINE Messages

This section contains SCP (Switch-module Configuration Protocol) download processor messages.

ONLINE-2

Error Message %ONLINE-2-LCP_BOOT_MISMATCH: The system detected LCP boot version mismatch for module in slot [dec], and will upgrade with new LCP boot image bundled into the system image, and power cycle the module.

Explanation The system detected LCP boot version mismatch for module. This condition would normally occur if the LCP boot version on the legacy modules is old for the modules, which require rapid boot support. The LCP boot version is upgraded automatically and the module will be power-cycled.

Recommended Action No action is required.

ONLINE-3

Error Message %ONLINE-3-UNKNOWN_CARD_TYPE: Unknown card type is encountered: card_type = [int]

Explanation The card type is unknown or not supported.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ONLINE-6

Error Message %ONLINE-6-BOOT_TIMER: Module %d, Proc. %d. Failed to bring online because of boot timer event

Explanation The system was unable to download the runtime image to the module and processor because the boot did not complete in the allocated time.

Recommended Action No action is required.

Error Message %ONLINE-6-DNLD_TIMER: Downloading image to Module [dec], Proc. [dec]. has failed, due to download timer expiry

Explanation The system was unable to download the runtime image to the module and processor because the download did not complete in the allocated time.

Recommended Action No action is required.

Error Message %ONLINE-6-DOWNLOAD_TIMER: Module %d, Proc. %d. Failed to bring online because of download timer event

Explanation The system was unable to download the runtime image to the module and processor because the download did not complete in the allocated time.

Recommended Action No action is required.

Error Message %ONLINE-6-FIND_MASTER_FAIL: Module %d, Proc. %d. SCP_DNLD failed to find master

Explanation The system was unable to find the master to download an image to the module and processor within the allocated time.

Recommended Action No action is required.

Error Message %ONLINE-6-GET_IMAGE_FAIL: Module %d, Proc. %d. SCP_DNLD failed to get image

Explanation The system was unable to get the image from the master for downloading to the module and processor.

Recommended Action No action is required.

Error Message %ONLINE-6-INVALID_DNLD_REQ: Received an unexpected image download request from Linecard Module [dec], Proc [dec]. Linecard image download request reason was [chars]

Explanation The system received an image download request from the module and processor complex specified in the message text, but that complex has already downloaded the image and should be initialized and operating normally.

Recommended Action No action is required.

Error Message %ONLINE-6-LCC_CONFIG_FAIL: Module %d. LCC Client %s failed to configure at %08x

Explanation During a Secure Copy (SCP) download, the Linecard Configuration Coordinator (LCC) client failed to finish configuration of the module.

Recommended Action No action is required.

Error Message %ONLINE-6-LCP_DNLD: Error while downloading image to Module [dec], Proc. [dec].: [chars]

Explanation An error was encountered while downloading an image to a switching module. The first [dec] is the module number, the second [dec] is the process number, and [chars] is the message explanation.

Recommended Action No action is required.

Error Message %ONLINE-6-ONLINE_TIMER: Module %d, Proc. %d. Failed to bring online because of online timer event

Explanation The system was unable to download the runtime image to the module and processor because the online event did not happen in the allocated time.

Recommended Action No action is required.

Error Message %ONLINE-6-READY_TIMER: Module %d, Proc. %d. Failed to bring online because of ready timer event

Explanation The system was unable to download the runtime image to the module and processor because the ASIC initialization did not complete in the allocated time.

Recommended Action No action is required.

Error Message %ONLINE-6-REGN_TIMER: Module %d, Proc. %d. Failed to bring online because of registration timer event

Explanation The system was unable to download the runtime image to the module and processor because the registration did not complete in the allocated time.

Recommended Action No action is required.

Error Message %ONLINE-6-RUNNING_TIMER: Module %d, Proc. %d. Failed to bring online because of running timer event

Explanation The system was unable to download the runtime image to the module and processor because the running event did not happen in the allocated time.

Recommended Action No action is required.

ONLINEDIAG Messages

Error Message %ONLINEDIAG-2-CPU_SWITCH_LB_TST_PKT_THRESH_ERROR: CPU Switch Interface : [dec]/[dec] of online diagnostic packets in error.

Explanation The packet loss can be due to congestion.

Recommended Action Issue the command **show diag online cpu sw** to get more details about the failure. If this error occurs frequently, contact your technical representative for assistance with the output of the command **show techsupport**.

ONS15530 Messages

This section contains Cisco ONS 15530 trunk card messages.

ONS15530-1

Error Message %ONS15530-1-DISCOVER_ENET: Failed to init Ethernet device [dec]

Explanation The software could not be initialized.

Recommended Action Power down the system, reseal the interface card, and reboot the system. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

ONS15530-2

Error Message %ONS15530-2-NOMEMORY: No memory available for [chars]

Explanation An attempted memory allocation failed.

Recommended Action Try these actions to remedy the problem:

- Add memory.
- Disable some features.
- Apply filtering to decrease the size of system data structures - the routing table, for example.
- Reduce other system activities to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

ONS15530-3

Error Message %ONS15530-3-CHASSIS: Unknown chassis model.

Explanation Data stored in midplane is bad or incomplete.

Recommended Action Contact your Cisco technical support representative to update your system.

Error Message %ONS15530-3-IONOT0: IO card discover in non-zero slot [dec]/[dec]

Explanation *Unavailable.*

Recommended Action *Unavailable.*

Error Message %ONS15530-3-IPCOPENFAILED: Couldn't open IPC portfor port id [hex] slot [int]/[int]: [chars]

Explanation *Unavailable.*

Recommended Action *Unavailable.*

Error Message %ONS15530-3-NOMAC: Can't allocate MAC address for interface [int]/[int]

Explanation *Unavailable.*

Recommended Action *Unavailable.*

Error Message %ONS15530-3-NOMEM: OUT of Memory: [chars]

Explanation *Unavailable.*

Recommended Action *Unavailable.*

Error Message %ONS15530-3-NOPORTINFO: Port info invalid for port [dec] slot [int]/[int]: [chars]

Explanation *Unavailable.*

Recommended Action *Unavailable.*

Error Message %ONS15530-3-NOPORTINFO_ID: Port info invalid for port id [hex] slot [int]/[int]: [chars]

Explanation *Unavailable.*

Recommended Action *Unavailable.*

ONS15530-4

Error Message %ONS15530-4-COOKIE: Corrupt or missing MAC address cookie using random base [enet]

Explanation The MAC address cookie is corrupt or missing.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %ONS15530-4-MACBLKSIZE: Unknown MAC address block size.

Explanation Data stored in midplane is bad or incomplete.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

OPTICAL_MONITOR Messages

This section contains optical monitoring messages.

OPTICAL_MONITOR-4

Error Message %OPTICAL_MONITOR-4-FAILED: [chars] [chars]

Explanation The current hardware version cannot support monitoring for the rate that was specified.

Recommended Action Specify a different rate for monitoring, if possible. If you require further assistance, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

OSM_MULTILINK Messages

This section contains Optical Services Module distributed multilink (OSM_MULTILINK) messages.

OSM_MULTILINK-3

Error Message %OSM_MULTILINK-3-PROCESS_FAIL: Process creation failed for [chars]

Explanation The system failed to create a process. The probable cause of this condition is that the system has low memory.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

OSM_MULTILINK-4

Error Message %OSM_MULTILINK-4-BUNDLEERROR: Bundle([chars]) is not distributed

Explanation The bundle specified in the message is not associated with the OSM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSM_MULTILINK-4-BUNDLENUL: Unexpected bundle missing in [chars] searching for [chars]

Explanation A software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSM_MULTILINK-4-BUNDLEVC: [chars] for vc [dec] and if_index [dec]

Explanation A software error has occurred while a bundle was being provisioned.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSM_MULTILINK-4-IDBNULL: Unexpected hwidb missing in [chars]

Explanation A software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSM_MULTILINK-4-IPCNOTREADY: Bundle process on the line card is not ready to handle message of type [dec]

Explanation Bundle is being deleted on the line card due to an **ip cef disable** command and is not ready to process other messages. The most likely cause of this condition is that CEF was disabled and enabled in very quick succession.

Recommended Action Reset the line card.

Error Message %OSM_MULTILINK-4-MLPSBNULL: Unexpected subblock missing for [chars]

Explanation A software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSM_MULTILINK-4-NUMLINKS: The bundle had an unexpected number of links([dec]) in [chars]

Explanation A software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSM_MULTILINK-4-QUEUE_BUNDLE: Not able to queue the bundle ([chars]), Num. of bundles [dec]

Explanation A software error has occurred while a bundle was being inserted in the queue.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

OSM_MULTILINK-5

Error Message %OSM_MULTILINK-5-BUNDLEEXCEEDED: Bundle([chars]) cannot be associated with link([chars]), max [dec]

Explanation The number of bundles has exceeded the limit for the group belonging to the link. The bundle specified in the error message will not work in distributed mode. If the module is CT3 (OSM-CT3 module), then ports 1–12 belong to one group. If the module is a CHOC-3 module (OSM-CHOC-DS0 module), then ports 1–4 belong to one group. If the module is a CHOC-12 module (OSM-CHOC-DS0 module), then port 1 belongs to one group, and port 2 belongs to the second group. Only 168 bundles can be supported per group. The new bundle created will cause an extra load on the RP CPU.

Recommended Action Remove the multilink interface that is causing this condition.

Error Message %OSM_MULTILINK-5-CFGERROR: Cannot set up this bundle link-- [chars] to bundle [chars] reason:[chars]

Explanation The bundle link could not be set up. A configuration or resource limit has been reached. The bundle may be forced to become inactive (go down). If the line card is a CT3 (OSM-CT3 line card), then ports 1–12 belong to one group. If the line card is a CHOC-3 (OSM-CHOC-DS0 line card), then ports 1–4 belong to one group. If the line card is a CHOC-12 (OSM-CHOC-DS0 line card), then port 1 belongs to one group and port 2 belongs to the second group. Only 168 bundles can be supported per group and each bundle can have a maximum of 12 links.

Recommended Action Ensure that all links belong to the same group and slot. Check the number of links in the bundle and number of bundles in the group. After the configuration has been corrected, enter the **shutdown** and **no shutdown** commands on the multilink interface to shut down and restart the interface.

OSPF Messages

This section contains Open Shortest Path First (OSPF) messages.

OSPF-3

Error Message %OSPF-3-CFG_NBR_ALLOC_FAILED: Could not allocate or find neighbor [IP_address]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPF-3-CFG_NBR_FAILED: Neighbor [IP_address] not configured

Explanation The configured neighbor options are not valid.

Recommended Action Check the configuration options for the neighbor command and correct the options or the network type for the neighbor's interface.

Error Message %OSPF-3-INT_ATTACHED_MULTI_AREAS: Interface [chars] is attached to more than one area

Explanation The interface is attached on the interface list to an area other than the one that the interface links to.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPF-3-INT_INIT_FAILED: Init failed for interface [chars], [chars].

Explanation The interface initialization failed. The following are possible reasons:

- The area to which the interface is being attached is being deleted.
- It was not possible to create a neighbor datablock for the local router.

Recommended Action Remove the configuration command that covers the interface and try again. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPF-3-LSA_LEN: Area [chars] router-LSA of length [dec] bytes plus update overhead [dec] bytes is too large to flood.

Explanation The router tried to build a router-LSA that is larger than the huge system buffer size or the OSPF protocol imposed maximum.

Recommended Action If the reported total length (LSA size plus overhead) is larger than the huge system buffer size but less than 65535 bytes (the OSPF protocol imposed maximum), you may increase the huge system buffer size. If the reported total length is greater than 65535, you must decrease the number of OSPF interfaces in the reported area.

OSPF-4

Error Message %OSPF-4-AREA_ALLOC_FAIL: Can not allocate memory for area structure

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPF-4-ASBR_WITHOUT_VALID_AREA: Router is currently an ASBR while having only one area which is a stub area

Explanation An ASBR must be attached to an area which can carry AS external or NSSA LSAs.

Recommended Action Make the area to which the router is attached into an NSSA or regular area.

Error Message %OSPF-4-CFG_NBR_INVALID_NBMA_OPT: Can not use configured neighbor: cost and database-filter options are allowed only for a point-to-multipoint network

Explanation The configured neighbor was found on an NBMA network and either the cost or database-filter option was configured. These options are only allowed on point-to-multipoint type networks.

Recommended Action Check the configuration options for the neighbor command and correct the options or the network type for the neighbor's interface.

Error Message %OSPF-4-CFG_NBR_INVALID_NET_TYPE: Can not use configured neighbor: neighbor command is allowed only on NBMA and point-to-multipoint networks

Explanation The configured neighbor was found on a network for which the network type was neither NBMA or point-to-multipoint.

Recommended Action No action is required.

Error Message %OSPF-4-CFG_NBR_INVALID_P2MP_OPT: Can not use configured neighbor: poll and priority options are allowed only for a NBMA network

Explanation The configured neighbor was found on a point-to-multipoint network and either the poll or priority option was configured. These options are only allowed on NBMA type networks.

Recommended Action Check the configuration options for the neighbor command and correct the options or the network type for the neighbor's interface.

Error Message %OSPF-4-CFG_NBR_P2MP_NEEDS_COST: Can not use configured neighbor: cost or database-filter option is required for point-to-multipoint broadcast network

Explanation The configured neighbor was found on a point-to-multipoint broadcast network. Either the cost or database-filter option needs to be configured.

Recommended Action Check the configuration options for the neighbor command and correct the options or the network type for the neighbor's interface.

Error Message %OSPF-4-INVALID_METRIC: OSPF-%d Area %s: Router %i originating invalid type %d LSA, ID %i, Metric %d on Link ID %i Link Type %d

Explanation The router indicated in this message has originated a Link-State Advertisement (LSA) with an invalid metric. If this is a router LSA and the link metric is zero, routing loops and traffic loss could occur in the network.

Recommended Action On the router that originated the reported LSA, configure a valid metric for the given LSA type and link type.

Error Message %OSPF-4-INV_LSA_BLD_FLG: Invalid build flag [hex] for LSA [IP_address], type [dec]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPF-4-NO_IPADDRESS_ON_INT: No IP address for interface [chars]

Explanation The interface is not point-to-point and is unnumbered.

Recommended Action Either change the interface type to point-to-point or give the interface an IP address.

Error Message %OSPF-4-NO_OUTPUTQ: Packet not written to the output queue

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPF-4-NORTRID: OSPF process [dec] failed to allocate unique router-id and cannot start

Explanation OSPF failed while attempting to allocate a unique router ID from the IP addresses of its interfaces.

Recommended Action Ensure that at least one interface is active (up) and has a valid IP address. If multiple OSPF processes are running on the router, each requires a unique router ID. Configure a unique router ID manually by entering the **router-id** *a.b.c.d* command, or configure an interface in the same VRF table by entering the **ip vrf forwarding** *word* command to which the OSPF process belongs. Configure on that interface an IP address that is not used as a router ID by any other OSPF process.

Error Message %OSPF-4-NULL_LINKAGE: Doubly linked list linkage is NULL

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPF-4-NULL_PREV_LINKAGE: Doubly linked list prev linkage is NULL [hex]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPF-4-OSPF_MAX_LSA: Maximum number of non self-generated LSA has been exceeded "[chars]" - [dec] LSAs

Explanation The maximum number of non-self-generated LSAs has been exceeded.

Recommended Action Check if some router in the network is generating a large number of LSAs as a result of misconfiguration.

Error Message %OSPF-4-OSPF_MAX_LSA_THR: Threshold for maximum number of non self-generated LSA has been reached "[chars]" - [dec] LSAs

Explanation The threshold for the maximum number of non-self-generated LSA has been reached.

Recommended Action Check if some router in the network is generating a large number of LSAs as a result of misconfiguration.

Error Message %OSPF-4-RTRID_IN_USE: Router-ID [IP_address] is in use by ospf process [dec]

Explanation An attempt was made to assign a router ID that is in use by another process.

Recommended Action Configure another router ID for one of the processes.

Error Message %OSPF-4-UNREC_TIMER: Unrecognized timer [dec] in OSPF [chars]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

OSPF-6

Error Message %OSPF-6-BAD_LSA_COUNT: OSPF-%d Area %s: LSA ID %i, Type %d, Adv-rtr %i, LSA counter %s

Explanation An internal error was found and automatically corrected in an OSPF Link-State Advertisement (LSA). This error does not affect operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show tech-support ospf** commands and your pertinent troubleshooting logs.

Error Message %OSPF-6-PROC_REM_FROM_INT: OSPF process [dec] removed from interface [chars]

Explanation The OSPF process was removed from the interface due to IP VRF removal.

Recommended Action No action is required.

Error Message %OSPF-6-UNREC_VIRT_INT_TYPE: Unrecognized virtual interface [chars]. Treat it as loopback stub route

Explanation Because the virtual interface type was not recognized by OSPF, it will be treated as a loopback interface stub route.

Recommended Action No action is required.

OSPFv3 Messages

This section contains Open Shortest Path First (OSPF) version 3 messages.

OSPFv3-3

Error Message %OSPFv3-3-CFG_NBR_ALLOC_FAILED: Could not allocate or find the neighbor

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPFv3-3-INT_ATTACHED_MULTI_AREAS: Interface [chars] is attached to more than one area

Explanation The interface is attached on the interface list to an area other than the one that the interface links to.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPFv3-3-INT_INIT_FAILED: Init failed for interface [chars], [chars].

Explanation The interface initialization failed. Possible reasons include:

- The area to which the interface is being attached is being deleted.
- It was not possible to create the link scope database.
- It was not possible to create a neighbor datablock for the local router.

Recommended Action Remove the configuration command that covers the interface and then try it again. If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the gathered information.

OSPFv3-4

Error Message %OSPFv3-4-AREA_MISMATCH: Received packet with incorrect area from [ipv6_addr], [chars], area [IP_address], packet area [IP_address]

Explanation An OSPF packet was received with an area ID in its header that does not match the area of this interface.

Recommended Action Check the OSPF configuration of the receiver and the sender for inconsistency.

Error Message %OSPFv3-4-ASBR_WITHOUT_VALID_AREA: Router is currently an ASBR while having only one area which is a stub area

Explanation An ASBR must be attached to an area which can carry AS external or NSSA LSAs.

Recommended Action Make the area to which the router is attached into an NSSA or regular area.

Error Message %OSPFv3-4-CFG_NBR_INVALID_NBMA_OPT: Can not use configured neighbor: cost and database-filter options are allowed only for a point-to-multipoint network

Explanation The configured neighbor was found on an NBMA network and either the cost or database-filter option was configured. These options are only allowed on point-to-multipoint type networks.

Recommended Action Check the configuration options for the neighbor command and correct the options or the network type for the neighbor's interface.

Error Message %OSPFv3-4-CFG_NBR_INVALID_NET_TYPE: Can not use configured neighbor: neighbor command is allowed only on NBMA and point-to-multipoint networks

Explanation The configured neighbor was found on a network for which the network type was neither NBMA or point-to-multipoint.

Recommended Action No action is required.

Error Message %OSPFv3-4-CFG_NBR_INVALID_P2MP_OPT: Can not use configured neighbor: poll and priority options are allowed only for a NBMA network

Explanation The configured neighbor was found on a point-to-multipoint network and either the poll or priority option was configured. These options are only allowed on NBMA type networks.

Recommended Action Check the configuration options for the neighbor command and correct the options or the network type for the neighbor's interface.

Error Message %OSPFv3-4-CFG_NBR_NOT_NBMA_NET: Neighbor command allowed only on NBMA networks

Explanation Neighbor command allowed only on NBMA networks.

Recommended Action Check the configuration options for the neighbor command and correct the options or the network type for the neighbor's interface.

Error Message %OSPFv3-4-CFG_NBR_P2MP_NEEDS_COST: Can not use configured neighbor: cost or database-filter option is required for point-to-multipoint broadcast network

Explanation The configured neighbor was found on a point-to-multipoint broadcast network. Either the cost or database-filter option needs to be configured.

Recommended Action Check the configuration options for the neighbor command and correct the options or the network type for the neighbor's interface.

Error Message %OSPFv3-4-DBD_ALLOC_FAIL: Could not allocate DBD packet

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPFv3-4-DB_NOT_FOUND: Can't find LSA database type [hex], area [hex], interface [hex]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPFv3-4-INVALID_METRIC: OSPFv3-%d Area %s: Router %i originating invalid type 0x%x LSA, ID %u, Metric %d on Link ID %d Link Type %d

Explanation The specified router has originated a Link-State Advertisement (LSA) with an invalid metric. If this is a router LSA and the link metric is zero, routing loops and traffic loss could occur in the network.

Recommended Action On the router that originated the reported LSA, configure a valid metric for the given LSA type and link type.

Error Message %OSPFv3-4-INV_LSA_BLD_FLG: Invalid build flag [hex] for LSA [IP_address], type [hex]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPFv3-4-NO_GLOBAL_ADDR: Could not select a global IPv6 address. Virtual links require at least one global IPv6 address.

Explanation A virtual link was configured. For the virtual link to function, a global IPv6 address must be available. However, no global IPv6 address could be found on the router.

Recommended Action Configure a global IPv6 address on an interface on this router.

Error Message %OSPFv3-4-NO_OUTPUTQ: Packet not written to the output queue

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPFv3-4-NULL_LINKAGE: Doubly linked list linkage is NULL

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPFv3-4-NULL_PREV_LINKAGE: Doubly linked list prev linkage is NULL [hex]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPFv3-4-RTRID_IN_USE: Router-ID [IP_address] is in use by ospf process [dec]

Explanation An attempt was made to assign a router ID that is in use by another process.

Recommended Action Configure another router ID for one of the processes.

Error Message %OSPFv3-4-TIMER_ERROR: Error for timer [dec] in OSPF process [chars]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %OSPFv3-4-TWO_INT_ON_LINK: Multiple interfaces ([chars]/[chars]) on a single link detected. This is not supported

Explanation OSPFv3 enabled on multiple interfaces that are on the same link is not supported.

Recommended Action OSPFv3 should be disabled or made passive on all but one of the interfaces.

Error Message %OSPFv3-4-UNREC_TIMER: Unrecognized timer [dec] in OSPF [chars]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

OSPFv3-6

Error Message %OSPFv3-6-UNREC_VIRT_INT_TYPE: Unrecognized virtual interface [chars]. Treat it as loopback stub route

Explanation Because the virtual interface type was not recognized by OSPFv3, it will be treated as a loopback interface stub route.

Recommended Action No action is required.

OTNMGR Messages

Error Message %OTNMGR-3-OTN_STATS_CREATE_IF_FAIL: stats for interface index [dec] could not be created with status [dec]

Explanation N/A

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PACC Messages

This section contains Cisco 7300 port adapter carrier card (PACC) messages.

PACC-3

Error Message %PACC-3-RXPAKLEN: PA-CC FPGA detected an ingress packet length error on slot [dec]

Explanation The PA carrier card has detected a packet length error during reception of an ingress packet. This condition could be caused by one of the following:

- Faulty hardware (either the Cisco 7300 or the PA carrier card)
- A corrupted FPGA image
- A software problem (least likely).

Recommended Action If this message occurs frequently, remove and reinsert the PA carrier card. If reseating the card does not fix the problem, a later Cisco IOS image may have an updated FPGA bundle that could solve the problem. If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACC-3-TXPAKLEN: PA-CC FPGA detected an egress packet length error on slot [dec]

Explanation The PA carrier card has detected a packet length error during transmission of an egress packet. This condition could be caused by one of the following:

- Faulty hardware (either the Cisco 7300 or the PA carrier card)
- A corrupted FPGA image
- A software problem (least likely).

Recommended Action If this message occurs frequently, remove and reinsert the PA carrier card. If reseating the card does not fix the problem, a later Cisco IOS image may have an updated FPGA bundle that could solve the problem. If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PACKET Messages

This section contains packet messages.

Error Message %PACKET-3-BLKDUMP: [chars]

Explanation This message is for reporting general messages in the memory management code.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACKET-3-CLNTDISCONN: Handling disconnect for client [dec] ([chars])

Explanation The client ID was not found in the previous client list.

Recommended Action Remove the client's information from the list of all connected clients. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using

the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACKET-3-CORRUPTPAKHDR: Corruption in packet header [hex], pid [dec], magic [hex], buffer [hex] caller_pc [hex]

Explanation The packet header has become corrupted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACKET-3-CORRUPTPAKPOOL: [chars] Pool [hex] corrupted, magic [hex]

Explanation The packet pool has become corrupted and has failed a consistency check.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACKET-3-ERRORPUNT: Intransit flag not set in [dec]

Explanation A packet that is being redirected across processes does not have the Intransit flag set.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACKET-3-ERRPAKHDR: Not able to fix corruption in packet header [hex], pid = [dec]

Explanation There has been a corruption in the packet header memory and it cannot be fixed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACKET-3-PACKETHDRDUMP: [chars]

Explanation This message is used to report general packet header messages.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACKET-3-PARTICLEPAKDUPFAIL: Particle packet duplication attempted on non-particle packet

Explanation Duplication of packet with particles routine is called without the packet containing particles.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACKET-3-RECOVERBLK: BLOCK [hex] IS SUCESSFULLY RECOVERED AFTER CORRUPTION

Explanation Corruption was detected in a memory block, and it was possible to recover the block successfully.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PACKET-3-REINITSHMEM: Restarting [chars] to reinitialize shared memory because of memory corruption

Explanation There has been a memory corruption.

Recommended Action Restart the client to reinitialize shared memory. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PAGP_DUAL_ACTIVE Messages

This section contains Port Aggregation Protocol (PAgP) messages.

PAGP_DUAL_ACTIVE-1

Error Message %PAGP_DUAL_ACTIVE-1-RECOVERY: PAgP running on [chars] triggered dual-active recovery: active id [enet] received, expected [enet]

Explanation PAgP detected that the virtual switches were in a dual-active mode on the specified interface. PAgP caused a switch to go into recovery mode.

Recommended Action No action is required.

PAGP_DUAL_ACTIVE-3

Error Message %PAGP_DUAL_ACTIVE-3-ADD_TLV_FAIL: Too few bytes for [chars] TLV in PAgP (reqd. [dec], got [dec]) on port [chars]

Explanation The dual-active type-length-value (TLV) could not be added to the PAgP packet due to too few bytes in the packet. PAgP dual-active detection may be disabled as a result.

Recommended Action Enter these commands:

```
show switch virtual dual-active summary
show switch virtual dual-active pagp
```

Retrieve the PAgP packet contents by entering these commands:

```
debug condition interface intfc
debug pagp packet
```

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PAGP_DUAL_ACTIVE-3-OBJECT_CREATE_FAILED: Unable to create "[chars]"

Explanation The specified managed object could not be created.

Recommended Action No action is required.

Error Message %PAGP_DUAL_ACTIVE-3-PROC_CREATE_FAILED: Unable to create process "[chars]"

Explanation The specified process could not be created.

Recommended Action No action is required.

Error Message %PAGP_DUAL_ACTIVE-3-RECOVERY_TRIGGER: PAgP running on [chars] informing virtual switches of dual-active: new active id [enet], old id [enet]

Explanation PAgP received a new active ID on the specified interface, indicating that the virtual switches are in a dual-active mode. When PAgP notifies the virtual switches, one switch will enter recovery mode.

Recommended Action No action is required.

Error Message %PAGP_DUAL_ACTIVE-3-REGISTRY_ADD_ERR: Failure in adding to [chars] registry

Explanation A function could not be added to the registry.

Recommended Action No action is required.

PAGP_DUAL_ACTIVE-4

Error Message %PAGP_DUAL_ACTIVE-4-NO_CHNL_GROUP: Port [chars] channel group not present while [chars]

Explanation Although the channel group was expected to be present in a link, it could not be extracted. This error may affect functionality, depending on where it occurred. This message indicates a software bug, and should not be seen under normal operation

Recommended Action Enter these commands:

```
show switch virtual dual-active summary
show switch virtual dual-active pagp
```

Retrieve the PAGP packet contents by entering these commands:

```
debug condition interface intfc
debug pagp packet
```

Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PAGP_SWITCH_ISSU Messages

This section contains Port Aggregation Protocol (PAgP) switch in-service software upgrade (ISSU) messages.

PAGP_SWITCH_ISSU-3

Error Message %PAGP_SWITCH_ISSU-3-BUFFER: PAGP SWITCH ISSU client failed to get buffer for message, error %d

Explanation The port aggregation protocol (PAgP) switch ISSU client was unable to get buffer space for building a negotiation message. As a result, it cannot send the negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %PAGP_SWITCH_ISSU-3-CAPABILITY: PAGP SWITCH ISSU client %s

Explanation During capability negotiation, the PAGP switch ISSU client detected an error that will result in a mismatch in the client capability between the active and standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %PAGP_SWITCH_ISSU-3-INIT: PAGP SWITCH ISSU client initialization failed at %s, error %s

Explanation The PAGP switch ISSU client could not be initialized. This condition will cause catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PAGP_SWITCH_ISSU-3-MSG_NOT_OK: PAGP SWITCH ISSU client message %d is not compatible

Explanation The PAGP switch ISSU client received an incompatible message from the peer unit. The message cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %PAGP_SWITCH_ISSU-3-MSG_SIZE: PAGP SWITCH ISSU client failed to get the message size for message %d

Explanation The PAGP switch ISSU client was unable to calculate the message size for the message specified. The client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %PAGP_SWITCH_ISSU-3-POLICY: PAGP SWITCH ISSU client message type %d is %s

Explanation The PAGP switch ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %PAGP_SWITCH_ISSU-3-SEND_FAILED: PAGP SWITCH ISSU client failed to send a negotiation message, error %d

Explanation The PAGP switch ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %PAGP_SWITCH_ISSU-3-SESSION: PAGP_SWITCH ISSU client %s

Explanation The PAGP switch ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %PAGP_SWITCH_ISSU-3-SESSION_UNREGISTRY: PAGP SWITCH ISSU client failed to unregister session information. Error: %d (%s)

Explanation The PAGP switch ISSU client was unable to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %PAGP_SWITCH_ISSU-3-TRANSFORM: PAGP SWITCH ISSU client %s transform failed, error %s

Explanation The PAGP switch ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the PAGP_SWITCH state will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

PARSER Messages

This section contains parser messages.

PARSER-3

Error Message %PARSER-3-BADUNLOCKREQ: Unlock requested by process '[dec]'. You are not the lock owner

Explanation A configuration unlock has been requested by an alien.

Recommended Action Check the code flow for an unwanted configuration unlock request.

Error Message %PARSER-3-CFGLOG_CLI_INITFAILED: Initialization of the Config Log CLI failed.

Explanation Initialization of the configuration log CLI failed. Configuration logging CLI commands may not be accessible. The configuration logger may not be accessible by using Cisco IOS software CLI commands.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSER-3-CFGLOG_EMPTYCMD: User:[chars]

Explanation The user specified entered an empty command for which a log attempt was made. Normally, empty commands will not be logged.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSER-3-CFGLOG_INCONSISTENT: User:[chars] command:[chars]

Explanation When logging a command entered by CLI, the configuration logger detected an inconsistency in the log. This inconsistency may result in a failure to log the command.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSER-3-CFGLOG_INITFAILED: Initialization of the Config Log subsystem failed.

Explanation During initialization of the configuration logger subsystem, one or more queues or data structures that are essential to the configuration logger could not be set up. As a result, the configuration logger will not be available for use.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Execute a **show version** command. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSER-3-CFGLOG_NOMEM: User:[chars] [chars]

Explanation The command that was entered could not be logged because of a lack of memory. The configuration logger will free old entries one by one until the system logger (syslog) has enough memory to log the command so that an NMS can receive notification of it.

Recommended Action Attempt to free up memory on the router by stopping nonessential processes or unused features that may be running. Once sufficient memory is available, this message no longer appears.

Error Message %PARSER-3-CFGLOG_NOUSER: Command:[chars]

Explanation The user could not be determined while this command was being logged. The command could not be saved in the configuration log.

Recommended Action Copy the error message exactly as it appears. Enter the **show version** command, and copy the displayed information. Determine (if possible) which users are currently logged in to the router, and who was copying configuration files or executing commands in global configuration mode (or via SNMP or HTTP). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSER-3-CFGLOG_PERSIST_APPLY_CMD_FAILED: Configuration logger persistency: Applying config command '[chars]' failed. result '[dec]'.

Explanation When applying the command to the running configuration, the parser returned an error.

Recommended Action Verify that no other process locks the configuration mode during this time. The parser could be locked by the HA or SNMP or by some other process.

Error Message %PARSER-3-CFGLOG_PERSIST_DB_OPEN_FAILED: Configuration logger persistency: opening persist db failed. File '[chars]'.

Explanation The file open for writing or reading persisted commands has failed.

Recommended Action Check for the file system availability. The file system might have been corrupted. Try formatting the file system.

Error Message %PARSER-3-CFGLOG_PERSIST_FILESYS_FULL: Configuration logger persistency: Add command to persistent db failed. File system '[chars]' full.

Explanation When logging a CLI command to the configuration logger persistent database, the configuration logger persistency detected zero bytes free in the file system.

Recommended Action Check the space available in the file system. Enter the **dir filesystemname:** command to display the free bytes. Clear some space for the configuration logger persistency feature to continue to store the config commands logged in the persistent database.

Error Message %PARSER-3-CFGLOG_PURGEFAILED: Purge config log failed.

Explanation An attempt to purge some of the configuration log entries failed.

Recommended Action Copy the error message exactly as it appears. Execute a show version command, and copy the displayed information. Contact your technical support representative with this information.

Error Message %PARSER-3-CFGLOG_RESIZE_FAILED: Could not resize the config logger to new size:[dec]

Explanation Due to an internal error, a request to resize the configuration log was not carried out. Besides a failure to resize, there should be no change in the behavior of the configuration logger.

Recommended Action Copy the error message exactly as it appears. Enter the **show version** command, and copy the displayed information. Determine (if possible) which users are currently logged in to the router, and who was copying configuration files or executing commands in global configuration mode (or via SNMP or HTTP). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSER-3-CFGLOG_SESSIONERR: Could not delete config log session: [dec] for user: [chars].

Explanation When a user logged out, the configuration logger was unable to clean up information about the user's login session. The result might be a memory leak or an inability to add new commands to the configuration log.

Recommended Action Copy the error message exactly as it appears. Enter the **show version** command, and copy the displayed information. Determine (if possible) which users are currently logged in to the router, and who was copying configuration files or executing commands in global configuration mode (or via SNMP or HTTP). If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSER-3-CONFIGNOTLOCKED: Unlock requested by process '[dec]'. Configuration not locked.

Explanation A configuration unlock was requested on a free lock.

Recommended Action Check the code flow for an excess configuration unlock request.

PARSER-4

Error Message %PARSER-4-INVLDSTYNTAX: Syntax clean up called while not syntax checking. FuncPtr / Context [chars]

Explanation Functions were mistakenly called. There may be more than those listed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PARSER-5

Error Message %PARSER-5-CFGLOG_LOGGEDCMD: User:[chars] logged command:[chars]

Explanation The configuration logger, which logs every CLI command, has an option to log messages to system logging (syslog). If this option is enabled, this message will be displayed every time a CLI command is processed. This message does not denote any error condition and is a part of the normal operation of the parser and configuration logger.

Recommended Action If you prefer not to see this syslog message, enter the **no cfglog send to syslog** command.

Error Message %PARSER-5-CFGLOG_PERSIST_APPLY_ON_RELOAD: Apply persisted config cmds on reload switched off

Explanation The switch that controls the persisted commands applied during reload is set to off.

Recommended Action From the ROMMON prompt, verify the value of the ROMMON **logpersistreload** variable. This variable might have been intentionally set to off.

PARSER-6

Error Message %PARSER-6-CONFIGLOCKCLEARED: Configuration lock cleared by user '[chars]' process '[dec]' from terminal '[dec]'

Explanation The configuration lock was cleared using the **clear configuration lock** command.

Recommended Action This is a notification message only. No action is required.

Error Message %PARSER-6-CONFIGLOCKNOTSUPPORTED: Configuration lock not supported for this transport '[chars]'

Explanation The configuration lock was enabled from a transport other than Telnet or SSH.

Recommended Action This is a notification message only. No action is required.

Error Message %PARSER-6-EXPOSEDLOCKACQUIRED: Exclusive configuration lock acquired by user '[chars]' from terminal '[dec]'

Explanation An exclusive configuration lock was acquired by the user.

Recommended Action This is a notification message only. No action is required.

Error Message %PARSER-6-EXPOSEDLOCKRELEASED: Exclusive configuration lock released from terminal '[dec]'

Explanation An exclusive configuration lock was released by the user.

Recommended Action This is a notification message only. No action is required.

Error Message %PARSER-6-LI_VIEW_INIT: LI-View initialised.

Explanation A lawful intercept (LI) view was successfully initialized.

Recommended Action No action is required.

Error Message %PARSER-6-SUPER_VIEW_CREATED: super view '%s' successfully created.

Explanation A super view was successfully created and the system has entered the view configuration mode.

Recommended Action No action is required.

Error Message %PARSER-6-SUPER_VIEW_DELETED: super view '%s' successfully deleted.

Explanation A super view was successfully deleted.

Recommended Action No action is required.

Error Message %PARSER-6-SUPER_VIEW_EDIT_ADD: view %s added to superview %s.

Explanation A view was successfully added to the super view. All view related configuration can now be accessed from the super view.

Recommended Action No action is required.

Error Message %PARSER-6-SUPER_VIEW_EDIT_REMOVE: view %s removed from superview %s.

Explanation A view was successfully removed from the super view.

Recommended Action No action is required.

Error Message %PARSER-6-VIEW_CREATED: view '%s' successfully created.

Explanation A view was successfully created and the system has entered the view configuration mode.

Recommended Action No action is required.

Error Message %PARSER-6-VIEW_DELETED: view '%s' successfully deleted.

Explanation The required view was successfully deleted.

Recommended Action No action is required.

Error Message %PARSER-6-VIEW_SWITCH: successfully set to view '%s'.

Explanation The view was successfully selected.

Recommended Action No action is required.

PARSE_RC Messages

This section contains PARSE_RC-related error messages.

PARSE_RC-3

Error Message %PARSE_RC-3-PRC_INTERRUPT: [chars]

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSE_RC-3-PRC_INVALID_BLOCK_PTR:

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSE_RC-3-PRC_INVALID_CSB:

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSE_RC-3-PRC_OUT_OF_RANGE_ENUM: [chars] had value [int]

Explanation An out-of-range parameter was passed to an internal API.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PARSE_RC-3-PRC_UNRECOGNIZED_ERROR: error value '[dec]' is not currently mapped

Explanation An unrecognized error was caught and remapped.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PARSE_RC-4

Error Message %PARSE_RC-4-PRC_NON_COMPLIANCE: `[chars]`

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PARSE_RC-6

Error Message %PARSE_RC-6-PRC_DISABLE: Parser PRC Feature Disabled

Explanation The parser return code (PRC) feature is disabled.

Recommended Action No action is required.

Error Message %PARSE_RC-6-PRC_ENABLE: Parser PRC Feature Enabled. PRC logs are displayed for configuration commands alone

Explanation The parser return code (PRC) feature is enabled. PRC logs are displayed for configuration commands alone.

Recommended Action No action is required.

PBI_OPEN Messages

This section contains programmable binary file data processing (PBI_OPEN) messages.

PBI_OPEN-4

Error Message %PBI_OPEN-4-ERROR_ALLOC: %Error: Can't allocate [dec] bytes for pbi data

Explanation The system is unable to allocate required memory to access the file.

Recommended Action Check the memory usage of the system and retry the operation.

Error Message %PBI_OPEN-4-ERROR_OPEN: %Error: Can't open [chars]

Explanation The system is unable to open the file specified.

Recommended Action Ensure that the filename is correct. Enter the **dir** command to verify the file name.

Error Message %PBI_OPEN-4-ERROR_READ: %Error: pbi file [chars] read failed

Explanation An unknown error has occurred while the system was copying the PBI program file to a local buffer.

Recommended Action The file name is specified in the message by [chars]. Enter the **del filename** command to remove the file. Use the **copy** command to recopy the file from a known good source to its desired destination *filename*. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PBI_OPEN-4-ERROR_SIZE: %Error: Bad file size [chars]

Explanation The file is too small or too large for a PBI program file.

Recommended Action Enter the **dir** command and verify the size of the file. Retry the operation.

PBR Messages

This section contains Policy-Based Routing (PBR) messages.

PBR-2

Error Message %PBR-2-NO_RMAP: Cannot create PBR data structures for route-map [chars]

Explanation The PBR manager could not allocate the data structures needed to describe a route map being used for policy routing. This condition is probably caused by lack of available memory.

Recommended Action Use a less complicated configuration that requires less memory.

PBR-3

Error Message %PBR-3-INSTALL_FAIL: Policy route-map [chars] not installed in hardware

Explanation The PBR manager was unable to install the complete route map in the hardware, so it will have to be applied in software. This requires the packets to be forwarded by the CPU.

Recommended Action Reconfigure the route map to use a simpler configuration. Use the same route map on multiple interfaces, if possible.

Error Message %PBR-3-MERGE_FAIL: [chars] ACL merge error [dec] on route-map [chars]

Explanation The PBR manager could not complete the merge of the configured route map into a form suitable for loading into the hardware. The most likely cause is specifying an ACL that is too large or too complex for the system to handle.

Recommended Action Try specifying a smaller and less complicated configuration.

Error Message %PBR-3-NO_LABEL: Cannot allocate label for route-map [chars]

Explanation The PBR manager could not allocate a label for this route map. This means that the hardware cannot be programmed to implement policy routing. There is a limit of 247 labels for policy routing

Recommended Action Use a less complicated configuration that allows label sharing. Use the same route maps on multiple interfaces, if possible.

Error Message %PBR-3-UNSUPPORTED_RMAP: Route-map [chars] not supported for Policy-Based Routing

Explanation The route map attached to an interface for policy routing contains an action that is not supported on this platform. This is a hardware limitation.

Recommended Action Reconfigure the route map. Use only **permit** entries and **set ip next-hop** actions in the route map.

PBR-4

Error Message %PBR-4-CPU_SUPPORTED_ACTION: Set action in sequence [dec] of route-map [chars] supported by forwarding to CPU

Explanation The route map attached to an interface for policy routing contains an action that is not supported in hardware, such as a **set interface**, **set ip default next-hop**, **set default interface**, or **set ip df** action. Because the action is not supported in hardware, the packets must be forwarded by the CPU.

Recommended Action Reconfigure the route map. Use only **set ip next-hop** in the route map, if possible.

Error Message %PBR-4-RETRY_INSTALL: Route-map [chars] installed in hardware upon retry

Explanation The PBR manager was able to fit the complete configuration into the hardware. One or more route maps had previously not been loaded because of lack of space.

Recommended Action No action is required.

PCIELIB Messages

This section contains The PCI library messages.

PCIELIB-1

Error Message %PCIELIB-1-NULL_RC: The pointer to root complex [[dec]] is NULL.

Explanation The pointer to the specified root complex is NULL.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

PCIELIB-2

Error Message %PCIELIB-2-INSERT_FAILURE: Failed to insert [hex] into [chars] list.

Explanation Failed to insert item into the specified list.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PCIELIB-2-MMAP_FAILURE: Failed to perform mmap for [chars], errno = [chars].

Explanation Failed to perform mmap for the specified memory

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PCIELIB-2-NO_JID: Could not get my job id. pid [dec]

Explanation Could not get my job id

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PCIELIB-2-PCIELIB_INIT: Could not initialize PCIE library for process [dec]

Explanation Could not initialize PCIE library.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support**

command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PCIELIB-2-REMOVE_FAILURE: Failed to remove [hex] from [chars] list.

Explanation Failed to remove item from the specified list

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PCIELIB-3-REUSE_LAWBAR: LAWBAR #[dec] is used. orig value = [hex].

Explanation The specified LAWBAR register was used for other purpose.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

PCIELIB-3

Error Message %PCIELIB-3-SHM_OPEN_FAIL: Failed to open shm [chars] errno = [chars].

Explanation Failed to open the specified shared memory.

Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

PCMCIAFS Messages

This section contains PCMCIA disk messages.

PCMCIAFS-3

Error Message %PCMCIAFS-3-RESETEERR: PCMCIA disk [dec] [chars]

Explanation A PCMCIA disk could not be reset while the system was being initialized or reloaded. This condition will cause a transient disk error or disk timeout error when the ROMMON initialization code tries to read the DIB. This is a transient error and the system will be able to access the disk and continue normal operation.

Recommended Action This is an informational message only. No action is required.

PCMCIAFS-4

Error Message %PCMCIAFS-4-DFS_FSCK_ERR: Error while running fsck on the file [chars].

Explanation The fsck process was running in a loop while walking through the cluster chain of a file and has aborted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PCMCIAFS-5

Error Message %PCMCIAFS-5-DFS_CLOSE_ERR: Error during close of the file [chars]. [chars]

Explanation An error occurred during a file close operation.

Recommended Action Enter the **fsck filesystem prefix:** command to check and attempt to repair the disk. If this does not fix the problem, format the disk.

PF_ASIC Messages

This section contains protocol filtering messages.

PF_ASIC-3

Error Message %PF_ASIC-3-ASIC_DUMP: [[dec]:[hex]] [chars] = [hex]

Explanation This message includes relevant ASIC counters that might help to diagnose the problem with the switching bus.

Recommended Action Copy this message and the SWITCHING_BUS_IDLE message exactly as they appear on the console or in the system log. Contact your Cisco technical support representative with the output. Include this output along with SWITCHING_BUS_IDLE error message.

PF-ETHERCHANNEL Messages

This section contains Policy Feature Card Etherchannel messages.

Error Message %PF_ETHERCHANNEL-3-MLACP_EXTENDED_MISMATCH: An inconsistency was detected between the operational and the configured mlacp-extended mode. Reloading. ([chars])

Explanation This error message is printed if there is an inconsistency between the persistent storage stored mode and the configuration mode. It will be display on the SP on boot-up.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PF_ETHERCHANNEL-3-MLACP_EXTENDED_MISMATCH: An inconsistency was detected between the operational and the configured mlacp-extended mode. Reloading. ([chars])

Explanation Use of Module [dec] prevents this system from being able to operate at full NEBS compliance levels.

Recommended Action For further information, please refer to Cisco.com technical documentation for this module.

PFINIT Messages

This section contains platform initialization (PFINIT) messages.

PFINIT-1

Error Message %PFINIT-1-CONFIG_SYNC_FAIL: Sync'ing the [chars] configuration to the standby Router FAILED, the file may be already locked by a command like: show config.

Explanation The active router could not synchronize its configuration with the redundant router. This condition might be a transient one that was caused by the configuration file being temporarily used by another process.

Recommended Action Retry the synchronization operation.

Error Message %PFINIT-1-CONFIG_SYNC_FAIL_RETRY: Sync'ing the [chars] configuration to the standby Router FAILED, the file may be already locked by a command like: show config. Will attempt to sync [dec] more time[chars]

Explanation The active router could not synchronize its configuration with the redundant router. This condition might be a transient one that was caused by the configuration file being temporarily used by another process.

Recommended Action The synchronization operation will be retried the specified number of times.

Error Message %PFINIT-1-CONFIG_SYNC_FAIL_SECONDARY_SYNC_RETRY: Sync'ing the [chars] configuration to the standby Router FAILED with error: [chars] ([dec]).Will attempt to sync [dec] more time[chars]

Explanation The active router could not synchronize its configuration with the redundant router. This condition might be a transient one that was caused by the configuration file being temporarily used by another process.

Recommended Action Retry the synchronization operation.

Error Message %PFINIT-1-CONFIG_SYNC_SIZE_NULL: Active config file is empty. No sync of the [chars] configuration file required.

Explanation The configuration of the active switch was not synchronized with the standby switch because the configuration file of the active switch is empty. This condition might have been the result of the user entering a **write erase** command on the active router prior to synchronization between the active and standby switches.

Recommended Action If the empty configuration file was the result of user-entered CLI, no action is required. If this was an unexpected condition, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PFINIT-2

Error Message %PFINIT-2-IPCSEAT: Unable to add/remove IPC seats for %s

Explanation The platform initialization subsystem could not add or remove interprocess communication (IPC) elements (seats).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PFINIT- 4

Error Message %PFINIT-4-IPC_ICC_INIT_FAIL: Failed to [chars]

Explanation The PF subsystem failed to initialize some IPC/ICC information.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

PFINIT-5

Error Message %PFINIT-5-CONFIG_SYNC_NOT_SUPPORTED: Sync'ing the [chars] configuration to the standby Router is not supported.

Explanation The configuration has not been successfully synchronized with the standby router. [chars] is the configuration name.

Recommended Action No action is required.

PFINIT-6

Error Message %PFINIT-6-ACTIVE_NON_VS: Active supervisor is in standalone mode, but SWITCH_NUMBER rommon variable set on the standby or standby having vsl config. Setting SWITCH_NUMBER variable in rommon to 0 and resetting the standby.

Explanation The active supervisor is up in standalone mode while standby's rommon has SWITCH_NUMBER set. Clearing SWITCH_NUMBER rommon variable and resetting the standby.

Recommended Action This is an informational message. No action is required.

PF_ISSU Messages

This section contains high availability platform in-service software upgrade (ISSU) infrastructure messages.

PF_ISSU-3

Error Message %PF_ISSU-3-ISSU_NEGO_LC_RESET: ISSU negotiation failed between endpoint %d and line card %d, for ISSU client %d

Explanation ISSU negotiation failed between an endpoint and a line card. The line card must be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu sessions** commands and your pertinent troubleshooting logs.

PF_OBFL Messages

This section contains platform on-board failure logging (OBFL) messages.

PF_OBFL-5

Error Message %PF_OBFL-5-FEATURE: Platform OBFL [chars] feature initialization fails in slot [dec].

Explanation The PF subsystem could not initialize the on-board failure logging (OBFL) feature specified by [chars].

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PF_OBFL-5-STORAGE: Platform OBFL storage ([chars]) initialization fails in slot [dec].

Explanation The PF subsystem could not initialize on-board failure logging (OBFL) storage flash.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PF_PRST_VBL Messages

This section contains platform persistent variable messages.

PF_PRST_VBL-3

Error Message %PF_PRST_VBL-3-MEDIA: PF persistent variable media error: %s

Explanation A media error was detected with the persistent variable PF interface.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PFREDUN Messages

This section contains Policy Feature Card Redundancy (PFREDUN) messages.

PFREDUN-1

Error Message %PFREDUN-1-VTP_CONFIG_DISLOCATE: VTP config file must be in default location for standby supervisor to come online

Explanation The redundant supervisor engine failed to come online because the VTP configuration file is not in the default location.

Recommended Action Reset the redundant supervisor engine, and then configure the VTP configuration file so that it is in the default location.

PFREDUN-3

Error Message %PFREDUN-3-ACTIVE_FORCED_TO_RELOAD: Active not able to operate properly. Standby is ready to take over and forced active to reload.

Explanation The active supervisor engine is not operating properly. It is failing to respond. The standby supervisor engine is ready to take over and forces the active supervisor engine to reload.

Recommended Action If the active does not reload successfully, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PFREDUN-3-CCMODE_MISMATCH: Standby Supervisor cannot support Configured Card Mode [chars] ([hex]) due to [chars] (enf mask [hex], cap mask [hex], msg ver [hex])!

Explanation The active supervisor engine is in user-configured mode (for example, DFC-only mode). The active supervisor engine attempts to bring the standby supervisor engine on line, but incompatible software on the standby cannot support this mode. The active keeps the standby in ROMMON mode.

Recommended Action Remove the user-configured mode on the active supervisor engine so that the active can bring the standby on line.

Error Message %PFREDUN-3-STANDBY_OUT_OF_SYNC: Active and Standby are out of sync.

Explanation The active supervisor engine and standby supervisor engine are out of synchronization. This condition may be due to communication failure, configuration synchronization failure, or another cause.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PFREDUN-3-SUP: [chars]

Explanation The supervisor engine failed to boot because it detected that the system might contain an invalid combination of supervisor engines.

Recommended Action Examine all modules in the system, and look for an invalid combination of supervisor engines.

PFREDUN-4

Error Message %PFREDUN-4-AUTOBOOT: [chars]

Explanation The RP experienced a hardware failure or another type of failure. When the redundant system initializes, the redundant supervisor will wait for the RP to initialize. Because the RP cannot initialize due to the failure, the redundant supervisor engine might never initialize. The default wait time for the RP to initialize (three minutes) has now expired, and the autoboot feature for the supervisor engine has been disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PFREDUN-4-BOOTSTRING_INVALID: The bootfile [chars] is not present in standby

Explanation The bootfile that is configured is not present on the redundant supervisor engine. If the redundant supervisor engine resets, it will not come up because it will not find the image specified in the bootstring.

Recommended Action No action is required.

Error Message %PFREDUN-4-EARL_MISMATCH_4SUP: In-Chassis Standby being disabled ([chars])

Explanation This message indicates that there is an Earl mode mismatch between the In-Chassis Active and the In-Chassis Standby and hence In-Chassis Standby is being disabled.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PFREDUN-4-INCOMPATIBLE: Defaulting to RPR mode (%s)

Explanation A runtime incompatibility exists between image versions running on the active and standby supervisors. The redundancy mode will default to route processor redundancy (RPR).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PFREDUN-4-PFC_MISMATCH: My PFC [chars] and Other's PCF [chars] mismatch

Explanation The active supervisor engine and the redundant supervisor engine have different versions of the PFC daughter card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PFREDUN-4-PFC_MISMATCH_4SUP: In-Chassis Active PFC is [chars] In-Chassis Standby PFC is [chars]

Explanation This message indicates that the In-Chassis Active and the In-Chassis Standby have different versions of the PFC.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PFREDUN-4-PHYSMEM_MISMATCH: Asymmetrical redundant configuration: Active [chars] has ([int]/[int]K) memory, Standby has ([int]/[int]K).

Explanation To support the high availability feature, we recommend that your redundant supervisor engines have symmetrical memory configurations.

Recommended Action Upgrade the memory on the supervisor engine with less memory to match the amount of memory on the other supervisor engine.

Error Message %PFREDUN-4-SUP_FORCE_TO_ROMMON: Supervisor forced to rommon with reason: [chars]

Explanation An application forced the supervisor engine to stay in ROMMON mode with the reason given.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PFREDUN-4-SUP_OS: The peer supervisor is running a different operating system.

Explanation The active supervisor engine is in user-configured mode (for example, DFC-only mode). The active supervisor engine attempts to bring the standby supervisor engine on line, but incompatible software on the standby supervisor engine cannot support this mode. The active supervisor engine keeps the standby supervisor engine in ROMMON mode.

Recommended Action Remove the user-configured mode on the active supervisor engine so that the active supervisor engine can bring the standby supervisor engine on line, or insert a supervisor engine that runs the same operating system as that of the peer supervisor engine.

Error Message %PFREDUN-4-VERSION_MISMATCH: Defaulting to RPR mode ([chars])

Explanation There is a mismatch of image versions running on the active supervisor engine and on the redundant supervisor engine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PFREDUN-6

Error Message %PFREDUN-6-Z_COOKIE: [chars]

Explanation Informational messages regarding the presence of z-switchover cookie

Recommended Action No action is required.

PFREDUN-7

Error Message %PFREDUN-7-KPA_WARN: RF KPA messages have not been heard for [dec] seconds

Explanation The RF KPA messages have not been sent from the peer for the specified numbers of seconds. This message is printed after every third KPA timer expiry.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PFREDUN_SP Messages

This section contains Policy Feature Card Redundancy (PFREDUN) switch processor (SP) messages.

PFREDUN_SP-3

Error Message %PFREDUN_SP-3-DIVC_MODE_CHANGE: Redundancy mode changed to RPR

Explanation The redundancy mode has changed from stateful switchover (SSO) to route processor redundancy (RPR) because one or more base ISSU clients have failed to successfully negotiate an ISSU session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PFREDUN_SP-3-DIVC_MODE_CHANGE_RESET: Redundancy mode changed to RPR, standby supervisor being reset

Explanation The redundancy mode has changed from SSO to RPR because one or more base ISSU clients have failed to successfully negotiate an ISSU session. The standby supervisor is being reset and will come up in RPR mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PFREDUN_SP-3-STANDBY_NEGO_FAILED: Session not negotiated, resetting the standby sup

Explanation Both the active and standby supervisors are ISSU capable but the standby failed to negotiate its platform redundancy ISSU session. The standby supervisor must be reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PHY Messages

This section contains physical layer messages.

PHY-4

Error Message %PHY-4-CHECK_SUM_FAILED: SFP EEPROM data check sum failed for SFP interface [chars]

Explanation The SFP was identified as a Cisco SFP, but the system was unable to read vendor data information to verify its correctness.

Recommended Action Remove and reinsert the SFP. If it fails again in the same way, the SFP may be defective.

Error Message %PHY-4-EXCESSIVE_ERRORS: Excessive FCS, data, or idle word errors found on interface [chars]

Explanation The system has detected excessive FCS, data word, or idle word errors on the specified interface.

Recommended Action Enter the **show interface** command on the specified interface and check for CRC and other input errors. If errors are excessive, enter the **shut** command followed by the **no shut** command to reset the interface.

PIM Messages

This section contains Protocol Independent Multicast (PIM) messages.

PIM-1

Error Message %PIM-1-INVALID_RP_REG: Received Register from router %i for group %i, %i not willing to be RP

Explanation A PIM router received a register message from another PIM router that thinks it is the rendezvous point. If the router is not configured for another rendezvous point, it will not accept the register message.

Recommended Action Configure all leaf routers (first-hop routers to multicast sources) with the IP address of the valid rendezvous point.

Error Message %PIM-1-SR_INTERVAL_SETTING_ERR: Incompatible SR interval from %i on %s (%d != %d)

Explanation A state-refresh capable PIM neighbor on this interface has a different setting for the state-refresh origination interval.

Recommended Action Configure all PIM routers connected to this LAN to use the same state-refresh origination interval for their interfaces on the LAN.

PIM-3

Error Message %PIM-3-MVRF_NULL_PRM: Null parameter specified for MVRF lookup.

Explanation A function to perform a Multicast Virtual Route Forwarding (MVRF) lookup by name detected a NULL input parameter. The intended action cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PIM-3-RPDF_NULL_PRM: Null parameter specified for Bidir RP DF creation.

Explanation A function to create a bidirectional route processor (RP) designated forwarder (DF) entry detected a NULL input parameter. The RP DF entry cannot be created.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PIM-3-UPD_RPR_NULL_PRM: Null parameter specified for Bidir RP route update.

Explanation A function to perform an update of the bidirectional RP route information detected a NULL input parameter. The update cannot proceed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PIM-4

Error Message %PIM-4-DEPRECATED_HELLO_TLV: Deprecated PIM Hello Option TLV %d (%s) from %i (%s)

Explanation A PIM neighbor is running old software that uses deprecated Hello Option TLVs. Unless the router is upgraded, DR priority and bidirectional groups may not function properly.

Recommended Action Upgrade the routers.

Error Message %PIM-4-INVALID_SRC_REG: Received Register from %i for (%i, %i), not willing to be RP

Explanation A PIM router configured as a rendezvous point received a register message from another PIM router, but the source of the multicast data is disallowed in this RP.

Recommended Action No action is required.

PIM-5

Error Message %PIM-5-DRCHG: DR change from neighbor [IP_address] to [IP_address] on interface [chars] (vrf [chars])

Explanation A PIM neighbor is the new DR on an interface.

Recommended Action This is an informational message only. No action is required.

Error Message %PIM-5-NBRCHG: neighbor [IP_address] [chars] on interface [chars] (vrf [chars]) [chars]

Explanation A PIM neighbor has gone up or down on the specified interface.

Recommended Action This is an informational message only. No action is required.

Error Message %PIM-5-PROXY: Deny proxy for ([IP_address], [IP_address]) from neighbor [IP_address]

Explanation A PIM proxy from the specified neighbor was denied.

Recommended Action No action is required.

PIM-6

Error Message %PIM-6-INVALID_RP_JOIN: Received (*, %i) Join from %i for invalid RP %i

Explanation A downstream PIM router sent a join message for the shared tree, which this router does not want to accept. This behavior indicates that this router will allow only downstream routers join to a specific rendezvous point.

Recommended Action Configure all downstream leaf routers to join to the RP that is allowed by upstream routers toward the validated rendezvous point.

Error Message %PIM-6-REG_ENCAP_INVALID: Bad register from %i for (%i, %i);
additional info = %x %x %x %x %x %x %x %x

Explanation A PIM router configured as a rendezvous point or with network address translation (NAT) received a PIM register packet from another PIM router. The data encapsulated in this packet is invalid.

Recommended Action No action is required.

Error Message %PIM-6-SA_ENCAP_INVALID: Bad SA from RP %i for (%i, %i); additional
info = %x %x %x %x %x %x %x %x

Explanation A PIM router configured as an MSDP peer received an SA with encapsulated data. The data encapsulated in this packet is invalid.

Recommended Action No action is required.

PIM_PROT Messages

This section contains Protocol Independent Multicast (PIM) protocol messages.

PIM_PROT-3

Error Message %PIM_PROT-3-MSG_SEND_ERR: [chars]

Explanation An internal error occurred while trying to send a message. Events scheduled to happen on reception of the message, such as deletion of the PIM tunnel IDB, may not take place.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PIM_PROT-4

Error Message %PIM_PROT-4-PROTOCOL_WARNING: [chars] - [chars] [chars] : [chars]

Explanation Internal protocol inconsistency warning

Recommended Action No action is required.

PIM_PROT-6

Error Message %PIM_PROT-6-IDB_ENABLE: Interface [chars] does not support multicast, not enabled

Explanation PIM is not enabled on an interface that does not support multicast.

Recommended Action This is an informational message only. No action is required.

PIM_PROT-7

Error Message %PIM_PROT-7-INTERNAL_ERR: [chars]

Explanation An internal error has occurred.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PIMSN Messages

This section contains Protocol Independent Multicast (PIM) Snooping (PIMSN) messages.

PIMSN-6

Error Message %PIMSN-6-IGMPSN_GLOBAL: PIM Snooping global runtime mode [chars] due to IGMP Snooping [chars]

Explanation PIM snooping requires that IGMP snooping be enabled. When IGMP snooping is disabled, PIM snooping also becomes disabled. PIM snooping is reenabled when IGMP snooping is reenabled.

Recommended Action No action is required. The system is working properly. We recommend that you leave IGMP snooping enabled.

Error Message %PIMSN-6-IGMPSN_VLAN: PIM Snooping runtime mode on vlan [dec] [chars] due to IGMP Snooping [chars]

Explanation PIM snooping requires that IGMP snooping be enabled. When IGMP snooping is disabled, PIM snooping also becomes disabled. PIM snooping is reenabled when IGMP snooping is reenabled.

Recommended Action No action is required. The system is working properly. We recommend that you leave IGMP snooping enabled.

PKI Messages

This section contains public key infrastructure (PKI) feature messages.

PKI-3

Error Message %PKI-3-CERTIFICATE_INVALID: Certificate chain validation has failed.

Explanation The certificate is not valid.

Recommended Action Verify that the system clock is set correctly.

Error Message %PKI-3-CERTIFICATE_INVALID_EXPIRED: Certificate chain validation has failed. The certificate (SN: [chars]) has expired. Validity period ended on [chars]

Explanation The certificate validity period indicates that this certificate has expired.

Recommended Action Verify that the system clock is set correctly.

Error Message %PKI-3-CERTIFICATE_INVALID_NOT_YET_VALID: Certificate chain validation has failed. The certificate (SN: [chars]) is not yet valid Validity period starts on [chars]

Explanation The certificate validity period indicates that this certificate is not yet valid

Recommended Action Verify that the system clock is set correctly.

Error Message %PKI-3-CERTIFICATE_INVALID_UNAUTHORIZED: Certificate chain validation has failed. Unauthorized

Explanation The certificate is valid but not authorized

Recommended Action Verify that the system clock is set correctly.

Error Message %PKI-3-CERTIFICATE_REVOKED: Certificate chain validation has failed. The certificate (SN: [chars]) is revoked

Explanation The certificate has been revoked by the CA administrator.

Recommended Action Contact the CA administrator to check the status of the certificate.

Error Message %PKI-3-CERTRETFAIL: Certificate enrollment failed.

Explanation A certificate enrollment transaction failed due to internal error.

Recommended Action Contact the CE or copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PKI-3-CS_CRIT_STORAGE: Critical certificate storage, [chars], is inaccessible, server disabled.

Explanation The critical certificate storage location is inaccessible, so the server is disabled.

Recommended Action Make the storage location accessible or reconfigure the storage location.

Error Message %PKI-3-GETCARACERT: Failed to receive RA/CA certificates.

Explanation A failure was encountered while CA or RA certificates were being parsed or processed.

Recommended Action Check the status of the certificate or contact the CA administrator.

Error Message %PKI-3-INVALIDCACERT: Failed to process CA certificate.

Explanation The CA certificate that was received from the CA server could not be processed.

Recommended Action Enter the **parser** command.

Error Message %PKI-3-INVALID_INPUT: The input to the parser command is not correct

Explanation The arguments supplied to the **parser** command are not correct.

Recommended Action Reenter the command.

Error Message %PKI-3-POLLCACERT: Polling CA certificate

Explanation The CA certificate is being polled.

Recommended Action Check to see if the CA server or the LDAP server is on line.

Error Message %PKI-3-POLLRACERT: Polling RA certificate

Explanation The RA certificate is being polled.

Recommended Action Check to see if the CA server or the LDAP server is on line.

Error Message %PKI-3-POLLROUTERCERT: Polling Router certificate

Explanation The router certificate is being polled.

Recommended Action Check to see if the CA server or the LDAP server is on line.

Error Message %PKI-3-QUERYCACERT: Failed to query CA certificate.

Explanation A CA certificate from the CA server could not be queried.

Explanation Enter the **parser** command.

Error Message %PKI-3-QUERY_KEY: Querying key pair failed.

Explanation A public key or private key query attempt using the subject name has failed.

Explanation Resubmit the enrollment request. Check the subject name.

Error Message %PKI-3-SOCKETSELECT: Failed to select the socket.

Explanation The socket could not be selected.

Explanation Check for a TCP or socket debugging message to attempt to investigate the problem.

Error Message %PKI-3-SOCKETSEND: Failed to send out message to CA server.

Explanation A message could not be sent to the CA server. This failure is caused by a problem with the HTTP transaction.

Explanation Check the HTTP connection to the CA server.

PKI-4

Error Message %PKI-4-CRL_LDAP_QUERY: The CRL could not be retrieved from the specified LDAP server

Explanation The certificate revocation list (CRL) is located on an LDAP server but the LDAP query failed.

Recommended Action Check that the LDAP server is reachable and online. Verify that the CRL is at the specified location.

Error Message %PKI-4-CS_PUBLISH_STORAGE: Publish certificate storage, [chars], is inaccessible.

Explanation The publish certificate storage location is inaccessible.

Recommended Action Make the storage location accessible or reconfigure the storage location.

Error Message %PKI-4-NOAUTOSAVE: Configuration was modified. Issue "write memory" to save new certificate

Explanation Auto-enroll has obtained a new router key pair and certificate. However, the running configuration was previously modified.

Recommended Action Enter the **write memory** command to save the new certificate(s) and key(s).

Error Message %PKI-4-NOCONFIGAUTOSAVE: Configuration was modified. Issue a "write memory" to save new IOS PKI configuration

Explanation The PKI process has generated a new PKI configuration, but the running configuration was previously modified.

Recommended Action Enter a **write memory** command to save the new PKI configuration.

Error Message %PKI-4-NOSHADOWAUTOSAVE: Configuration was modified. Issue "write memory" to save new IOS CA certificate

Explanation Cisco IOS CA Rollover has generated a shadow CA key pair and certificate. However, the running configuration was previously modified.

Recommended Action Enter the **write memory** command to save the new certificates and keys.

PKI-6

Error Message %PKI-6-AUTOENROLL_KEY_LOCKED: Auto-enroll failed - RSA keypair is locked

Explanation Auto-enroll could not generate a new RSA key pair because the existing RSA key pair is locked.

Recommended Action Auto-enroll will retry the enrollment request. Make sure that the existing RSA key pair is unlocked before the next retry.

Error Message %PKI-6-AUTOSAVE: Running configuration saved to NVRAM

Explanation Auto-enroll has obtained a new router key pair and certificate, and has done an automatic write to memory to save them.

Recommended Action This is an informational message only. No action is required.

Error Message %PKI-6-CERTFAIL: Certificate enrollment failed.

Explanation A fatal error was encountered during a certificate enrollment operation.

Recommended Action Contact the CA administrator.

Error Message %PKI-6-CERT_FATAL_ERR: [chars]

Explanation A fatal error was encountered during a certificate enrollment operation. The operation has been terminated.

Recommended Action Contact the CA administrator.

Error Message %PKI-6-CERTIFSRECV: Could not receive router's Certificate from file system.

Explanation The certificate for the router could not be received from the file system.

Recommended Action Verify the enrollment URL and that the router is able to read from the file system.

Error Message %PKI-6-CERTIFSEND: Could not send Certificate enrollment request to file system.

Explanation The certificate enrollment request could not be sent to the file system.

Recommended Action Verify the enrollment URL and that the router is able to write to the file system.

Error Message %PKI-6-CERTPENDING: Enter manual authentication ...

Explanation The CA server is attempting to manually authenticate the router.

Recommended Action Follow the manual authentication procedure.

Error Message %PKI-6-CERTREJECT: Certificate enrollment request was rejected by Certificate Authority

Explanation A previous certificate enrollment request was received by the Certificate Authority. The CA has rejected the enrollment request.

Recommended Action Contact the Certificate Authority administrator.

Error Message %PKI-6-CERTRET: Certificate received from Certificate Authority

Explanation A previous certificate enrollment request was received by the Certificate Authority. The CA has issued the certificate and sent back a copy

Recommended Action No action is required.

Error Message %PKI-6-CONFIGAUTOSAVE: Running configuration saved to NVRAM

Explanation The PKI process has generated and saved to memory a new PKI configuration.

Recommended Action No action is required.

Error Message %PKI-6-CS_DELETE: Certificate Server is deleted.

Explanation The certificate server is deleted.

Recommended Action No action is required. This is an informational message.

Error Message %PKI-6-CS_DELETE_TP_KEY: Trustpoint and key deleted.

Explanation The trustpoint and key used by the certificate server are deleted.

Recommended Action No action is required. This is an informational message.

Error Message %PKI-6-CS_GRANT_AUTO: All enrollment requests will be automatically granted.

Explanation All enrollment requests will be automatically granted.

Recommended Action No action is required. This is an informational message.

Error Message %PKI-6-CS_GRANT_AUTO_CACERT: All rollover subordinate CA cert requests will be automatically granted.

Explanation All rollover subordinate CA certificate requests will be automatically granted.

Recommended Action No action is required. This is an informational message.

Error Message %PKI-6-CS_GRANT_AUTO_RA: Enrollment requests coming from known RAs will be automatically granted.

Explanation Enrollment requests coming from known RAs will be automatically granted.

Recommended Action No action is required. This is an informational message.

Error Message %PKI-6-CS_GRANT_AUTO_RACERT: All rollover RA cert requests will be automatically granted.

Explanation All rollover RA certificate requests will be automatically granted.

Recommended Action No action is required. This is an informational message.

Error Message %PKI-6-CS_REJECT_AUTO: All enrollment requests will be automatically rejected.

Explanation All enrollment requests will be automatically rejected.

Recommended Action No action is required. This is an informational message.

Error Message %PKI-6-PKCS12EXPORT_FAIL: PKCS #12 Export Failed.

Explanation An attempt to generate and export information conforming to the PKCS #12 format has failed.

Recommended Action This is an informational message only. No action is required.

Error Message %PKI-6-PKCS12EXPORT_SUCCESS: PKCS #12 Successfully Exported.

Explanation Information conforming to the PKCS #12 format has been generated and successfully exported.

Recommended Action This is an informational message only. No action is required.

Error Message %PKI-6-PKCS12IMPORT_FAIL: PKCS #12 Import Failed.

Explanation An attempt to import information conforming to the PKCS #12 format has failed.

Recommended Action This is an informational message only. No action is required.

Error Message %PKI-6-PKCS12IMPORT_SUCCESS: PKCS #12 Successfully Imported.

Explanation Information conforming to the PKCS #12 format has been successfully imported.

Recommended Action This is an informational message only. No action is required.

Error Message %PKI-6-SHADOWAUTOSAVE: Running configuration saved to NVRAM

Explanation Cisco IOS CA Rollover has generated a shadow CA key pair and certificate, and has executed an automatic **write memory** command to save them.

Recommended Action No action is required. This is an informational message.

PLATFORM Messages

This section contains platform-specific messages.

PLATFORM-1

Error Message %PLATFORM-1-CRASHED: [chars]

Explanation The system is attempting to display the crash message from the previous crash.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PLATFORM-3

Error Message %PLATFORM-3-FATALCINNAMON: The FPGA controller has received a fatal interrupt, reg=[hex], mask=[hex], config=[hex] - [chars]

Explanation The FPGA controller has received a fatal interrupt. This may be a hardware or a software problem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PLATFORM-3-NO_HARDWARE_RESOURCES: Not enough hardware resources. Shutting down [chars]

Explanation There are too many VLANs and routed ports on the system.

Recommended Action Reduce the total number of VLANs and routed ports to be fewer than 1023. If you require this configuration and connectivity to be maintained across system reboots, save the configuration to NVRAM.

Error Message %PLATFORM-3-PW_REC_HRPC_BAD_LENGTH: Received incompatible length (= [dec]) in set-password-recovery HRPC message from box [dec].

Explanation The system has received an incompatible length parameter in a set-password-recovery HRPC message. This condition could be caused by a stack that is operating with incompatible software versions on different stack members.

Recommended Action Ensure that all stack members are running compatible software images. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PLATFORM-3-PW_REC_HRPC_NOT_ON_MASTER: Set-password-recovery HRPC msg from box [dec] received on master.

Explanation The active stack has received a set-password-recovery HRPC message. These types of messages should only be received on standby systems.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PLATFORM-3-PW_REC_HRPC_ONLY_ON_MASTER: Get-password-recovery HRPC msg from box [dec] received on slave.

Explanation A standby switch has received a get-password-recovery HRPC message. These types of messages should only be received by the active stack.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PLATFORM-4

Error Message %PLATFORM-4-FPGA_MISMATCH: FPGA image in slot [dec] (name = [chars], hardware version = [dec].[dec], current fpga version = [chars]) does not match the FPGA image in Cisco IOS software (version [dec].[dec]). Approximate time to update the FPGA image is [dec] minutes.

Explanation The version of the FPGA image on the specified card differs from the Cisco IOS software bundled FPGA image version.

Recommended Action Update the FPGA image by entering the **upgrade fpga all** command.

Error Message %PLATFORM-4-FPGAUPD_RELOAD_SKIP: After the FPGA update, the card in slot [dec] was not reloaded. The card should be reloaded for the new FPGA image to take effect.

Explanation The FPGA image on the specified card is updated. The new FPGA image will not be operational until the card is reloaded. The FPGA image upgrade will take effect after the next reload of the card. The card was not reloaded due to negative user response to the reload prompt.

Recommended Action Reload the card in the specified slot. If the card is a processor, reload the router.

Error Message %PLATFORM-4-FPGA_VER_INVALID: FPGA version information for the hardware in slot [dec] (fpga [dec]) has not been cached.

Explanation An attempt to read the current FPGA version from the cache was unsuccessful. Normally, the FPGA version on the RP and line cards is read from the flash memory device and is cached during the initialization of the card. However, the FPGA image version information for the card in the specified slot has not been cached. This problem is caused by a software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PM Messages

This section contains port manager (PM) messages.

PM-1

Error Message %PM-1-INCONSISTENT_PORT_STATE: Inconsistent HW/SW port state for [chars]. Please shut/no shut the interface

Explanation The hardware and software port state has become inconsistent. [chars] is the interface.

Recommended Action No action is necessary. This message is informational only.

PM-3

Error Message %PM-3-ERR_INCOMP_PORT: <mod/port> is set to inactive because <mod/port> is a trunk port

Explanation An isolated or community VLAN port or private host port cannot be configured on the same COIL application-specific integrated circuit (ASIC) when another port is either a trunk, a SPAN destination, or a promiscuous PVLAN port, or if a port is configured as dynamic desirable mode (the default mode on some switches).

Recommended Action To reactivate the ports, remove the isolated or community VLAN port configuration and enter the **shutdown** command followed by the **no shutdown** command. Configure the incompatible port on a different ASIC on the module or on a different module. Refer to the module documentation to determine which ports share an ASIC. If ports are configured (manually or by default) as dynamic desirable mode, configure the ports as access mode using the **switchport mode access** command.

PM-4

Error Message %PM-4-LIMITS: The number of vlan-port instances on [chars] exceeded the recommended limit of [dec].

Explanation The total number of individual VLAN ports on the module or switch, has exceeded the recommended limit. VLANs can be counted more than once; if VLAN 1 is carried on ten interfaces, it will count as ten VLAN ports. On some platforms, bundling is also ignored for purposes of this count; if eight interfaces on the same module are in one bundle, and the port channel is carrying VLAN 1, it will count as eight VLAN ports. [chars] is the module name (for example, switch or the module number), and [dec] is the recommended limit. In some releases, such as Cisco IOS Release 12.2(33)SXI, the actual limit may be greater than the limit reported in this message. See the Cisco IOS release notes for the latest recommended limits.

Recommended Action Reduce the number of trunks and VLANs configured in the module or switch as recommended in [dec]. Enter the **show interfaces trunk** privileged EXEC command to see the total number of trunks and VLANs.

Error Message %PM-4-MPLS_MTU_EC_CFG: MPLS MTU size [dec] is not supported by one or more ports in channel [chars].

Explanation The MPLS MTU size that was configured on the Ethernet channel is larger than the maximum MTU size that can be supported by one or more ports in this channel. Large packets might be dropped.

Recommended Action Reduce the MPLS MTU size, or remove these ports from the channel before increasing the MPLS MTU size.

Error Message %PM-4-MPLS_MTU_PORT_CFG: MPLS MTU size [dec] is not supported by port [chars].

Explanation The MPLS MTU size that was configured on the port is larger than the maximum MTU size that can be supported by this port. Large packets might be dropped.

Recommended Action Reduce the MPLS MTU size.

Error Message %PM-4-NOSB: No PM subblock found for interface [chars]

Explanation This syslog, along with T/B, is logged for all type of interfaces where PM subblock is absent. The interface types include WAN, loopback and tunnel, which do not have associated PM subblock as per the design. This message helps the PM group to identify the offending application. This message indicates that PM module encounters unusual conditions for diagnose purpose.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PM-4-NOSB: No PM subblock found for interface [WAN|loopback|tunnel]: ios-base : (PID= [number], TID=[number]):[traceback]

Explanation This message indicates that the port manager module encountered unusual conditions. It is logged for interfaces where the port manager subblock is absent. Interface types include WAN, loopback and tunnel which do not have associated port manager subblock by design. The traceback helps the Cisco port manager development group to trace the problematic code path.

Recommended Action No action is required.

Error Message %PM-4-PORT_BOUNCED: Port [chars] was bounced by [chars].

Explanation The PM needed to perform a reactivation of a port in the link-down state during a switchover. A port is only reactivated when the port data structures lack consistency between the active and redundant supervisor engines. Active ports in the link-down state were returned to the link-up state by the reactivation event.

Recommended Action No action is required.

Error Message %PM-4-PVLAN_TYPE_CFG_ERR: Failed to set VLAN [dec] to a [chars] VLAN

Explanation The platform failed to set the type for the private VLAN.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM-4-SVI_ADD_CORRESPONDING_L2_VLAN: Vlan [dec] must be added to L2 database in order to be used, do <vlan [dec]> from config mode.

Explanation When a switch virtual interface (SVI) is created, the corresponding Layer 2 VLAN is not automatically created in the Layer 2 database.

Recommended Action Create a Layer 2 VLAN before the switch virtual interface (SVI) is created.

Error Message %PM-4-TUNNEL_INT_VLAN_NOTAVAIL: Internal VLAN allocation failed for tunnel interface [chars].

Explanation Because the maximum internal VLAN usage has been reached, VLAN allocation for the tunnel interface has failed. The tunnel interface could not be created.

Recommended Action Delete some extended range VLANs created by users or remove some features that require internal VLAN allocation (for example, routed ports).

PM-6

Error Message %PM-6-ACTIVE: Interface [chars] is now active because [chars]

Explanation The port manager has detected an interface that was down as up for the VLAN, causing the port to be in the active state.

Recommended Action No action is required.

PMB Messages

This section contains power management bus (PMB) messages.

PMB-4

Error Message %PMB-4-CANTPWROFF: Attempts to power down slot [dec] failed, card will be disabled.

Explanation The system could not power down the module in slot [dec], possibly due to a hardware failure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PM_ISSU Messages

This section contains port manager (PM) in-service software upgrade (ISSU) messages.

PM_ISSU-3

Error Message %PM_ISSU-3-BUFFER: Port Manager ISSU client failed to get buffer for message, error %d

Explanation The port manager ISSU client was unable to get buffer space for building a negotiation message. As a result, the client cannot send the negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %PM_ISSU-3-CAPABILITY: Port Manager ISSU client %s

Explanation The port manager ISSU client detected an error during capability negotiation. As a result, there is a mismatch in the client capability between the active and standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %PM_ISSU-3-INIT: Port Manager ISSU client initialization failed at %s, error %s

Explanation The port manager ISSU client could not be initialized. This condition will cause a catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_ISSU-3-MSG_NOT_OK: Port Manager ISSU client message %d is not compatible

Explanation The port manager ISSU client received an incompatible message from the peer unit. The message cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %PM_ISSU-3-MSG_SIZE: Port Manager ISSU client failed to get the message size for message %d

Explanation The port manager ISSU client was unable to calculate the message size for the message specified. The PM ISSU client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %PM_ISSU-3-POLICY: Port Manager ISSU client message type %d is %s

Explanation The port manager ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %PM_ISSU-3-SEND_FAILED: Port Manager ISSU client failed to send a negotiation message, error %d

Explanation The port manager ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %PM_ISSU-3-SESSION: Port Manager ISSU client %s

Explanation The port manager ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %PM_ISSU-3-SESSION_UNREGISTRY: Port Manager ISSU client failed to unregister session information. Error: %d (%s)

Explanation The port manager ISSU client was unable to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %PM_ISSU-3-TRANSFORM: Port Manager ISSU client %s transform failed, error %s

Explanation The port manager ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the port manager state will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

PM_PVLAN_ISSU Messages

This section contains port manager (PM) private VLAN (PVLAN) in-service software upgrade (ISSU) messages.

PM_PVLAN_ISSU-3

Error Message %PM_PVLAN_ISSU-3-BUFFER: Private Vlan ISSU client failed to get buffer for message, error %d

Explanation The private VLAN ISSU client was unable to get a buffer for building a negotiation message. As a result, it cannot send the negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %PM_PVLAN_ISSU-3-CAPABILITY: Private Vlan ISSU client %s

Explanation The private VLAN ISSU client detected an error during capability negotiation. As a result, there is a mismatch in the client capability between the active and standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %PM_PVLAN_ISSU-3-INIT: pm_pvlan Client Name ISSU client initialization failed at %s, error %s

Explanation The private VLAN ISSU client could not be initialized. This condition will cause a catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_PVLAN_ISSU-3-MSG_NOT_OK: Private Vlan ISSU client message %d is not compatible

Explanation The private VLAN ISSU client received an incompatible message from the peer unit. The message cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %PM_PVLAN_ISSU-3-MSG_SIZE: Private Vlan ISSU client failed to get the message size for message %d

Explanation The private VLAN ISSU client was unable to calculate the message size for the message specified. The client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %PM_PVLAN_ISSU-3-POLICY: Private Vlan ISSU client message type %d is %s

Explanation The private VLAN ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %PM_PVLAN_ISSU-3-SEND_FAILED: Private Vlan ISSU client failed to send a negotiation message, error %d

Explanation The private VLAN ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %PM_PVLAN_ISSU-3-SESSION: Private Vlan ISSU client %s

Explanation The private VLAN ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %PM_PVLAN_ISSU-3-TRANSFORM: Private Vlan ISSU client %s transform failed, error %s

Explanation The private VLAN ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the private VLAN ISSU state will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

PM_SCP Messages

This section contains port manager Switch-Module Configuration Protocol (PM_SCP) messages.

PM_SCP-1

Error Message %PM_SCP-1-LCP_FW_ERR_POWERDOWN: Module [dec] will be powered down due to firmware error: [chars]

Explanation A nonrecoverable error was detected by the switching module firmware and the switching module will be powered down to keep the system functioning. [dec] is the module number and [chars] explains that the system will be powered down.

Recommended Action No action is required.

PM_SCP-2

Error Message %PM_SCP-2-LCP_FW_ERR_INFORM: Module [dec] is experiencing the following error: [chars]

Explanation The linecard is reporting an error condition, where [dec] is the module number, and [chars] is the error. This condition is usually caused by an improperly seated linecard or a hardware failure. If the error message is seen on all of the linecards, the cause is an improperly seated module.

Recommended Action Reseat and reset the linecard or the module. If the error message persists after the module is reset, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-2-SPURIOUS_INTERRUPT: Module [dec] detects [dec] spurious interrupts from asic [chars].

Explanation An error condition was detected by the active supervisor engine firmware. If **error-detection crash-action** is configured, the active supervisor engine will switch over to the standby supervisor engine in a redundant setup.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-2-RESET: Module [dec] is resetting - Due to Packet Buffer Error.

Explanation An error condition was detected by the line card firmware and the supervisor engine has initiated a reset procedure for the line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-2-SHUTDOWN: Module [dec] is shutting down - Due to Packet Buffer Error.

Explanation An error condition was detected by the line card firmware and the supervisor engine has initiated a shutdown procedure for the line card.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-2-STDBY_NOT_SWTCH_OVER: Standby is not ready for switchover for Packet Buffer Error. Active-Sup (Module [dec]) is going down...

Explanation An error condition was detected by the active supervisor engine firmware and the standby supervisor engine is not ready for switchover, so the active supervisor engine is going down.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-2-STDBY_RELOAD: Standby (Module [dec]) is reloading due to Packet Buffer Error...

Explanation An error condition was detected by the supervisor engine firmware and the standby supervisor engine is reloading now.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-2-STDBY_SWTCH_OVER: Supervisor (Module [dec]) is preparing for switch-over - Due to Packet Buffer Error.

Explanation An error condition was detected by the supervisor engine firmware and has initiated the switchover action.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-2-TRANSCEIVER_BAD_HW: Module [dec] will be power disabled for safety reasons because a defective transceiver is inserted at [chars].

Explanation An inappropriate transceiver is inserted at the specified interface. This transceiver should not be used in this system.

Recommended Action Remove the specified transceiver and enable power to the module. If this transceiver was purchased from Cisco, contact Cisco TAC to get the transceiver replaced.

Error Message %PM_SCP-2-TRANSCEIVER_INCOMPATIBLE: Transceiver inserted in [chars] port [dec]/[dec] is not compatible with its interface (transceiver speed is [chars], interface speed is [chars])

Explanation An incompatible transceiver was inserted in the specified module. This transceiver should not be used with this module.

Recommended Action Replace the specified transceiver with another transceiver that is compatible with this module.

PM_SCP-3

Error Message %PM_SCP-3-LCP_FW_ABL: Late collision message from module [dec], port:0[dec]

Explanation The line card firmware has detected abnormal collisions in port traffic.

Recommended Action This is usually a temporary condition. Check for any mismatch in the Duplex or Speed setting with the remote device. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-3-TRANSCEIVER_BAD_EEPROM: Integrity check on transceiver in [chars] port [dec]/[dec] failed: bad key

Explanation The transceiver has an incorrectly programmed EEPROM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-3-TRANSCEIVER_DUPLICATE: Transceiver in [chars] port [dec]/[dec] and in [chars] port [dec]/[dec] have duplicate serial numbers

Explanation The transceiver was identified as a Cisco transceiver, but its vendor ID and serial number match that of another transceiver on the system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-2-TRANSCEIVER_INCOMPATIBLE: Transceiver inserted in [chars] port [dec]/[dec] is not compatible with its interface (transceiver speed is [chars], interface speed is [chars])

Explanation An incompatible transceiver is inserted in the specified module. This transceiver should not be used with this module.

Recommended Action Replace the specified transceiver with another transceiver that is compatible with this module.

PM_SCP-4

Error Message %PM_SCP-4-FPOE_INFO: An unsupported distributed fabric card has been detected

Explanation Fabric-capable modules are not supported in this system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PM_SCP-4-LCP_FW_ABLC: Late collision message from module [dec], port:0[dec]

Explanation The line card firmware has detected abnormal collisions in port traffic. This message is typically an indication of a speed or duplex mismatch, possibly caused by a misconfiguration.

Recommended Action This is usually a temporary situation. Check the speed and duplex for the port and make sure that it is correct. For correct operation, both sides of a link should be auto-negotiated or both sides should be manually configured for speed and duplex. Do not configure auto-negotiation on one side and manual setting on the other, because the auto-negotiating side might lock at the wrong duplex setting.

Error Message %PM_SCP-4-TRANSCEIVER_UNSUPP_MODULE: Interface [chars] does not support receive-only transceivers

Explanation A receive-only transceiver has been inserted into a module that does not support it.

Recommended Action Use the receive-only transceiver with a supported module. Refer to the documentation for modules that support receive-only transceivers.

Error Message %PM_SCP-4-UNSUPPORTED: Interface [chars] does not support receive-only transceivers

Explanation A receive-only transceiver has been inserted into a slot that does not support it.

Recommended Action Use the receive-only transceiver with a supported module.

PM_SCP-6

Error Message %PM_SCP-6-LCP_FW_ERR_INFORM: Module [dec] is experiencing the following error: [chars]

Explanation The module is reporting an error condition, where [dec] is the module number, and [chars] is the error. This condition is usually caused by an improperly seated linecard or a hardware failure. If the error message is seen on all of the linecards, the cause is an improperly seated module.

Recommended Action Reseat and reset the linecard or the module. If the error message persists after the module is reset, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

POLARIS Messages

This section contains Layer 3 CEF engine (POLARIS) messages.

POLARIS-4

Error Message %POLARIS-4-ERR_INTRPT: Interrupt [chars] occurring in Polaris Layer 3 ASIC

Explanation An error occurred in the Layer 3 forwarding ASIC. The error description is shown by [chars].

Recommended Action These errors are transient conditions caused by traffic passing through the ASIC, and may appear occasionally under normal conditions. If this message recurs, enter the **show earl status** command on the consoles of the switch supervisor engine and any DFC-enabled modules. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

POLICY_API Messages

This section contains policy API messages.

POLICY_API-4

Error Message %POLICY_API-4-POLICYDYNCLR: Dynamic policy on intf:[chars] cleared. Static policy in use.

Explanation A dynamic policy was attempting to override the static policy. The dynamic policy has been cleared, the static policy is now in effect.

Recommended Action No action is required.

Error Message %POLICY_API-4-POLICYOVERRIDE: Dynamic policy overriding static on intf:[chars]

Explanation Both a static policy and a dynamic policy are configured on the interface. The dynamic policy will override the static policy.

Recommended Action If preferred, remove the static policy configuration.

Error Message %POLICY_API-4-POLICYSTATICCLR: Static policy on intf:[chars] cleared. Dynamic policy in use.

Explanation A dynamic policy has overridden the static policy. The static policy has been cleared.

Recommended Action No action is required.

POLICY_MANAGER Messages

This section contains Policy Manager messages.

POLICY_MANAGER-2

Error Message %POLICY_MANAGER-2-INIT_FAILURE: Init failure: [chars]

Explanation A problem occurred during the initialization of the policy manager during system initialization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POLICY_MANAGER-2-NO_FREE_EVENT_BUFFERS: Event pool depleted: [chars]

Explanation The event pool has been depleted. There are no free buffers to process the event.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

POLICY_MANAGER-3

Error Message %POLICY_MANAGER-3-INVALID_ACTION: Invalid action

Explanation An invalid action was performed by the policy manager.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POLICY_MANAGER-3-INVALID_PARAMETERS: A call to Policy Manager is made with invalid parameters

Explanation A call to the policy manager was made with one or more invalid parameters.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POLICY_MANAGER-3-INVALID_SEVERITY: Invalid event severity [hex]

Explanation The event that was received by the policy manager contained an invalid severity and was not processed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POLICY_MANAGER-3-NO_FREE_POLICY_IDS: No more Policy IDs available

Explanation There are no more policy IDs that can be allocated. Policy manager policies can no longer be created.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POLICY_MANAGER-3-NULL_ACTION_ROUTINE: NULL action routine invoked

Explanation The policy manager attempted to invoke an action that was of a null value.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POLICY_MANAGER-3-PRE_INIT_CALL: Policy Manager routine called prior to initialization

Explanation The policy manager component was called prior to its initialization. This action could result in vital information being lost.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PORT_SECURITY Messages

This section contains port security messages.

PORT_SECURITY-2

Error Message %PORT_SECURITY-2-INELIGIBLE: Port security configuration on [chars] is being made inactive since the port is now not eligible for port security as [chars].

Explanation A port had port security configuration on it, but the port now has a configuration not supported with port security. Because the port is now not eligible for port security, the port security configuration on it is being made inactive.

Recommended Action Check the port's configuration and remove the offending configuration that is not compatible with port security.

Error Message %PORT_SECURITY-2-PSECURE_VIOLATION: Security violation occurred, caused by MAC address [enet] on port [chars].

Explanation An unauthorized device attempted to connect on a secure port. The MAC address of the unauthorized device and the secure port are specified in the message.

Recommended Action Determine the device that attempted to connect on the secure port. Notify your network system administrator of this condition.

PORT_SECURITY-6

Error Message %PORT_SECURITY-6-ADDR_EXCEEDS_LIMIT: Address <[int]:[enet]> can not be allowed on port [chars] because of max address limits. It has been removed

Explanation A routed port has changed to a switched port. The addresses stored in the previous switched-port configuration are now causing the total secure address count to exceed the allowed limit and they have been deleted

Recommended Action This is an informational message only. No action is required.

Error Message %PORT_SECURITY-6-ADDR_REMOVED: Address <[int]:[enet]> exists on port [chars]. It has been removed from port [chars].

Explanation A routed port has changed to a switched port. An address stored in the previous switched-port configuration is now in conflict and has been deleted.

Recommended Action This is an informational message only. No action is required.

Error Message %PORT_SECURITY-6-INVALID_SESSION: Invalid Port-Security ISSU Session ID

Explanation The ISSU session ID is not valid because it has not been negotiated.

Recommended Action No action is required.

Error Message %PORT_SECURITY-6-VLAN_REMOVED: VLAN(S) [chars] is/are no longer allowed on port [chars]. Their port security configuration has been removed.

Explanation A configured VLAN has been excluded on a trunk port and so is being removed from the configuration.

Recommended Action This is an informational message only. No action is required.

POSLC Messages

This section contains Packet over SONET line card (POSLC) messages.

POSLC-3

Error Message %POSLC-3-HWERROR: [chars]

Explanation The Optical Services Module has encountered a hardware error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POSLC-3-PROCESS_CREATEFAIL: [chars]

Explanation The PoS line card could not create a process required for its operation. This condition might be caused by a resource being unavailable.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POSLC-3-PROCESS_TIMEREVENT: [chars]

Explanation An unexpected process timer event occurred in the Optical Services Module.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POSLC-3-UNEXPECTED_PROCESSEVENT: [chars]

Explanation An unexpected process event occurred in the Optical Services Module.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

POT1E1 Messages

This section contains Versatile Interface Processor (VIP) Packet over T1 and E1 (POT1E1) port adapter messages.

POT1E1-2

Error Message %POT1E1-2-NOACCPTR: VC=[dec] [chars]

Explanation The POT1E1 port adapter could not increment the pointer count.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Enter the **show tech-support** and **show controllers vip slot-number tech-support** commands, with *slot-number* being the slot number where the POT1E1 port adapter resides. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support** and **show controllers vip slot-number tech-support** commands, with *slot-number* being the slot number where the POT1E1 port adapter resides, and your pertinent troubleshooting logs.

Error Message %POT1E1-2-NOINC: [chars]

Explanation The POT1E1 port adapter encountered a null access pointer while it was incrementing the pointer count.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Enter the **show tech-support** and **show controllers vip slot-number tech-support** commands, with *slot-number* being the slot number where the POT1E1 port adapter resides. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support** and **show controllers vip slot-number tech-support** commands, with *slot-number* being the slot number where the POT1E1 port adapter resides, and your pertinent troubleshooting logs.

Error Message %POT1E1-2-QTAIL: Qhead=[hex] particle_count=[dec] size=[dec]

Explanation The POT1E1 port adapter encountered a null queue heading.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Enter the **show tech-support** and **show controllers vip slot-number tech-support** commands, with *slot-number* being the slot number where the POT1E1 port adapter resides. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support** and **show controllers vip slot-number tech-support** commands, with *slot-number* being the slot number where the POT1E1 port adapter resides, and your pertinent troubleshooting logs.

Error Message %POT1E1-2-TXBADVC: [chars], vc [dec]

Explanation The POT1E1 port adapter encountered a null queue heading.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Enter the **show tech-support** and **show controllers vip slot-number tech-support** commands, with *slot-number* being the slot number where the POT1E1 port adapter resides. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support** and **show controllers vip slot-number tech-support** commands, with *slot-number* being the slot number where the POT1E1 port adapter resides, and your pertinent troubleshooting logs.

POT1E1-3

Error Message %POT1E1-3-FREEDMFATAL: Bay [dec]: freedm reset, command-status register [hex]

Explanation The POT1E1 port adapter has experienced a fatal problem related to the Frame Engine and Data Link Manager (FREEDM) ASIC.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %POT1E1-3-MBOXSEND: Bay [dec]: fail sending mbox msg [dec]

Explanation POT1E1 mailbox failed send

Recommended Action Copy the error message exactly as it appears, and report it to your technical support representative.

PPP Messages

This section contains Point-to-Point Protocol (PPP) messages.

PPP-3

Error Message %PPP-3-ISSU_ERR: [chars]

Explanation An error occurred during an ISSU versioning operation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PQ3 Messages

This section contains Ethernet Phy messages.

PQ3_FE

Error Message %PQ3_FE-1-INITFAILP: PQ3/FE([dec]/[dec]), Init failed at [chars]

Explanation The FE could not allocate an I/O buffer pool.

Recommended Action Clear the interface. If the message recurs, call your technical support representative for assistance.

Error Message %PQ3_FE-1-MACADDRFAIL: PQ3/FE([dec]/[dec]), Unable to set the Mac-address for the interface

Explanation The FEC could not set the mac address of the interface.

Recommended Action Clear the interface. If the message recurs, call your technical support representative for assistance.

Error Message %PQ3_FE-1-SHOWFAIL: PQ3/FE([dec]/[dec]), Memory error at [chars]

Explanation The FEC could not allocate memory to display controller.

Recommended Action Clear the interface. If the message recurs, call your technical support representative for assistance.

Error Message %PQ3_FE-2-NOISL: Interface [chars] does not support ISL

Explanation The interface cannot be configured as an ISL trunk.

Recommended Action Check the configuration.

Error Message %PQ3_FE-3-OVERFLO: PQ3/FE([dec]/[dec]), Receive overflow

Explanation While receiving a frame, the controller chip's local buffer transmitted insufficient data because data could not be transferred to DRAM fast enough to keep pace with its input rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

Recommended Action The system should recover. No action is required.

Error Message %PQ3_FE-3-UNDERFLO: PQ3/FE([dec]/[dec]), Transmit underflow

Explanation While transmitting a frame, the controller chip's local buffer received insufficient data because data could not be transferred to the chip fast enough to keep pace with its output rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

Recommended Action The system should recover. No action is required.

Error Message %PQ3_FE-4-BABBLE: PQ3/FE([dec]/[dec]), Babble error, CSR[dec]=[hex]

Explanation The transmitter has been on the channel longer than the time taken to transmit the largest frame.

Recommended Action The system should recover. No action is required.

Error Message %PQ3_FE-5-EXECOLL: PQ3/FE([dec]/[dec]), Excessive collision

Explanation Excessive collisions occurred on the Fast Ethernet interface.

Recommended Action No action is required.

Recommended Action

Error Message %PQ3_FE-5-LATECOLL: PQ3/FE([dec]/[dec]), Late collision

Explanation Late collisions occurred on the Fast Ethernet interface.

Recommended Action If the interface is Fast Ethernet, verify that both peers are in the same duplex mode. No action is required.

Error Message %PQ3_FE-5-LOSTCARR: PQ3/FE([dec]/[dec]), Lost carrier. Transceiver problem?

Explanation The cable and/or transceiver is not connected.

Recommended Action Connect the cable and/or transceiver.

PQ3_TSEC

Error Message %PQ3_TSEC-1-INITFAIL: PQ3/FE([dec]), Init failed, CSR[dec]=[hex]

Explanation The software failed to initialize/restart an Ethernet/Fast Ethernet interface.

Recommended Action Clear the interface. If the message recurs, call your technical support representative for assistance.

Error Message %PQ3_TSEC-1-INITFAILP: PQ3/FE([dec]), Init failed at [chars]

Explanation The FEC could not allocate a I/O buffer pool.

Recommended Action Clear the interface. If the message recurs, call your technical support representative for assistance.

Error Message %PQ3_TSEC-1-MEMERR: PQ3/FE([dec]), Memory error, CSR[dec]=[hex]

Explanation The interface could not access system resources for a long time. This problem may occur under very heavy loads.

Recommended Action The system should recover. No action is required. If the message recurs, call your technical support representative for assistance.

Error Message %PQ3_TSEC-1-SHOWFAIL: PQ3/FE([dec]), Memory error at [chars]

Explanation The FEC could not allocate memory to display controller.

Recommended Action Clear the interface. If the message recurs, call your technical support representative for assistance.

Error Message %PQ3_TSEC-2-NOISL: Interface [chars] does not support ISL

Explanation The interface cannot be configured as an ISL trunk.

Recommended Action Check the configuration.

Error Message %PQ3_TSEC-3-OVERFLO: PQ3/FE([dec]), Receive overflow

Explanation While receiving a frame, the controller chip's local buffer transmitted insufficient data because data could not be transferred to DRAM fast enough to keep pace with its input rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

Recommended Action The system should recover. No action is required.

Error Message %PQ3_TSEC-3-OWNERR: PQ3/FE([dec]), Buffer ownership error, pak=[hex]

Explanation The software detected an error in descriptor ownership.

Recommended Action Try a later version of the software. If the message recurs, call your technical support representative for assistance.

Error Message %PQ3_TSEC-3-UNDERFLO: PQ3/FE([dec]), Transmit underflow

Explanation While transmitting a frame, the controller chip's local buffer received insufficient data because data could not be transferred to the chip fast enough to keep pace with its output rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

Recommended Action The system should recover. No action is required.

Error Message %PQ3_TSEC-4-BABBLE: PQ3/FE([dec]), Babble error, CSR[dec]=[hex]

Explanation The transmitter has been on the channel longer than the time taken to transmit the largest frame.

Recommended Action The system should recover. No action is required.

Error Message %PQ3_TSEC-5-COLL: PQ3/FE([dec]), Excessive collisions, TDR=[dec], TRC=[dec].

Explanation Ethernet/Fast Ethernet is seeing multiple collisions. This may occur under heavy loads.

Recommended Action The system should recover. No action is required.

Error Message %PQ3_TSEC-5-EXCESSCOLL: PQ3/FE([dec]), Excessive collision

Explanation Ethernet/Fast Ethernet is seeing multiple collisions. This may occur under heavy loads.

Recommended Action The system should recover. No action is required.

Error Message %PQ3_TSEC-5-LATECOLL: PQ3/FE([dec]), Late collision

Explanation Late collisions occurred on the Ethernet/Fast Ethernet interface.

Recommended Action If the interface is Fast Ethernet, verify that both peers are in the same duplex mode. For regular Ethernet, the system should recover. No action is required.

Error Message %PQ3_TSEC-5-LOSTCARR: PQ3/FE([dec]), Lost carrier. Transceiver problem?

Explanation The cable is not connected to the port.

Recommended Action Connect the cable to the port.

PQUICC3 Messages

PQUICC3-1

Error Message %PQUICC3-1-BADHDXFSM: PQUICC3([dec]/[dec]), Unexpected HDX state [dec], event [dec]

Explanation A bad event was detected in the state machine for half duplex transmission/reception.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PQUICC3-1-CTSLOST: PQUICC3([dec]/[dec]), Clear to Send Lost

Explanation The Clear To Send (CTS) input signal on a data terminal equipment (DTE) serial interface became inactive while transmitting a frame. This problem is a result of a communication line failure or cable disconnection.

Recommended Action Check the serial interface cable and/or communication equipment, such as the channel service unit/data service unit (CSU/DSU).

Error Message %PQUICC3-1-INITFAIL: PQUICC3([dec]/[dec]), SCC[dec] init failed

Explanation The software failed to initialize/restart a 1T serial card.

Recommended Action Clear the serial interface. If the message recurs, call your technical support representative for assistance.

Error Message %PQUICC3-1-LINEFLAP: PQUICC3([dec]/[dec]), Excessive modem control changes

Explanation The system received too many modem control signal interrupts. Modem control signals are hardware handshake signals between data terminal equipment (DTE) and data communications equipment (DCE). The signals include either a data carrier detect (DCD) or a data set ready (DSR), or both DCD and DSR.

Recommended Action Check the serial interface cable. The error can occur if the cable is disconnected or has come loose and is picking up noise. If the cable appears to be connected correctly, check the equipment connected to the cable.

Error Message %PQUICC3-1-NOMEMORY: Unit [dec], no memory for [chars]

Explanation The MPC8500/PowerQUICC CPU was unable to access the memory it needs to carry out its functions. Here are some possible causes.

- The network is large, requiring a lot of memory for routing tables, etc.
- The router configuration has many features enabled, each of which requires memory.
- A software error (memory leak) exists.

Recommended Action Reduce system activity to ease the memory demand, or upgrade to a larger memory configuration.

Error Message %PQUICC3-1-QMC_GLOBAL_ERROR: PQUICC3([dec]/[dec]), Global error [hex] in QMC

Explanation One or more of the channels served by the QMC instance encountered transmitter underflow or receiver overflow or the QMC interrupt table overflowed. Normally, such a problem is temporary, depending on transient peak loads within the system.

Recommended Action The system should recover. No action is required.

Error Message %PQUICC3-1-TOOBIG: PQUICC3([dec]/[dec]), packet too big, packet size was [dec] bytes

Explanation A packet greater than the assigned MTU of this serial interface was queued up for transmission.

Recommended Action The system should recover. No action is required. If the message recurs, it may indicate an error related to data traffic patterns. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PQUICC3-1-TOOSMALL: PQUICC3([dec]/[dec]), packet was less than 2 bytes, packet size was [dec] bytes

Explanation A small packet (less than 2 bytes) was queued up for transmission. The interface cannot handle such small packets for transmission.

Recommended Action The system should recover. No action is required. If the message recurs, it may indicate a hardware error related to data traffic patterns. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still

require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PQUICC3-1-UNDERFLO: PQUICC3([dec]/[dec]), Transmit underflow

Explanation While transmitting a frame, the serial controller chip's local buffer received insufficient data because data could not be transferred to the chip fast enough to keep pace with its output rate. Normally, such a problem is temporary, depending on transient peak loads within the system.

Recommended Action The system should recover. No action is required.

Error Message %PQUICC3-1-UNEXPECTED_INTERRUPT: PQUICC3([dec]), Unexpected modem-signal interrupt

Explanation The software did not expect to see a modem control signal change on this interface.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PQUICC3-1-WRONG_SLOT: PQUICC3([dec]), BRI card in wrong slot(1)

Explanation The BRI card is not supported in WIC slot 0.

Recommended Action Power down, move the BRI card to the other WIC slot on the port module and reboot.

PQUICC3-3

Error Message %PQUICC3-3-OWNERR: Unit [dec], buffer ownership error, pak = [hex]

Explanation An internal software error occurred.

Recommended Action Call your technical support representative to obtain a software upgrade.

Error Message %PQUICC3-3-SPURIOUS_INTERRUPT: Interface card in slot [dec] generated a spurious interrupt

Explanation Interface card on the router which is not supported by this image generated a spurious interrupt that can not be handled.

Recommended Action No action is required. To avoid seeing this message in the future, remove the unsupported card or use an image that supports it.

Error Message %PQUICC3-3-UNKNOWN_SCCS: PQUICC3, Incorrect SCC number

Explanation An internal software error occurred.

Recommended Action Call your technical support representative to obtain a software upgrade.

Error Message %PQUICC3-3-UNKNOWN_SCC_TX_VECTOR: PQUICC3, Unknown TX vector on port [dec]

Explanation An internal software error occurred.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %PQUICC3-1-UNKNOWN_WIC: PQUICC3([dec]), WIC card has an unknown ID of [hex]

Explanation The software does not recognize the type of WIC card plugged into the port module.

Recommended Action Check the part number on the WIC card to verify that it is supported in the IOS release operational on the router or contact your technical support representative.

Error Message %PQUICC3-1-UNSUPPORTED_CONFIG: Slot [dec] has an unsupported combination of ISDN WAN interface cards

Explanation It is not possible to support this type of BRI card in slot 1 along with another BRI card in slot 0.

Recommended Action Remove one of the BRI cards from either slot.

PRBS Messages

This section contains Manhattan Pseudo-Random Bit Sequence (PRBS) related messages.

PRBS-5

Error Message %PRBS-5-DECERR: Slot:[dec],Subcard:[dec],Port:[dec] Decoding error [dec] at time [dec] sec.

Explanation A software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PRBS-5-GETARGERR: process_get_arg_num error.

Explanation A software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PRBS-5-LOSSLOCK: Slot:[dec],Subcard:[dec],Port:[dec] Loss of Lock at time [dec] sec.

Explanation A software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PRBS-5-PASSED: Slot:[dec],Subcard:[dec],Port:[dec] [dec] sec PRBS test passed.

Explanation A PBRs test was successful.

Recommended Action No action is required.

Error Message %PRBS-5-STATUSERR: Slot:[dec],Subcard:[dec],Port:[dec] at [dec] sec status error [dec], quit.

Explanation A software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PRBS-5-STOP: Slot:[dec],Subcard:[dec],Port:[dec] PRBS test stop at [dec] sec.

Explanation A PBRs test stopped.

Recommended Action No action is required.

PROCYON Messages

This section contains messages for the CPU daughter card for the Supervisor Engine 720 (PROCYON).

PROCYON-3

Error Message %PROCYON-3-CREATE_IBC_FAILED: Creation of procyon ibc idb failed

Explanation The creation of an inband control interface description block for the CPU daughter card has failed. The software or the hardware is faulty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PROCYON-3-INIT_IBC_FAILED: Initialization of procyon ibc failed

Explanation Inband control initialization has failed. The software or the hardware is faulty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PROCYON-3-INIT_ICDM_FAILED: Initialization of icdm driver failed

Explanation The ICDM driver initialization failed for the CPU daughter card inband control. The software or the hardware is faulty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PROCYON-3-INIT_MAC_DRIVER_FAILED: Initialization of ethernet mac driver failed

Explanation The Ethernet MAC driver initialization failed for the CPU daughter card inband control. The software or the hardware is faulty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PROCYON-3-MASKED_RCV_INTR: procyon_ibc_rcv_interrupt called while masked: [int]

Explanation The CPU received an inband interrupt, although the inband interrupt was masked. The software or the hardware is faulty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PROCYON-3-NO_BUFFER_POOLS: Initialization of private buffer pools failed

Explanation Private buffer pools were not created for the CPU daughter card inband control. This condition can occur during periods of extreme traffic.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PROCYON-3-NO_PARTICLE: no particle available to populate the ethernet dma ring

Explanation No particle was available to populate the direct memory access of the Ethernet ring. This condition can occur during periods of extreme traffic.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PROCYON-3-RX_ADD_BUFFER_FAILED: particle not added to the ethernet dma ring

Explanation A particle was not added to the direct memory access of the Ethernet ring. The software or the hardware is faulty.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PROCYON_ION_INTR Messages

This section contains messages for the CPU daughter card for the Supervisor Engine 720 (PROCYON).

PROCYON_ION_INTR-3

Error Message %PROCYON_ION_INTR-3-ENABLE_INTR_REGISTER_ACCESS_FAILED: Access to interrupt registers failed

Explanation A failure occurred in accessing interrupt registers.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PROCYON_ION_INTR-3-ENABLE_KERNEL_MODE_FAILED: Access to kernel mode failed

Explanation A failure occurred in accessing kernel mode.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PROCYON_ION_INTR-3-INTERRUPT_UNMASK_FAILED: Interrupt unmask failed: interrupt_source [dec]

Explanation A failure occurred in unmasking interrupts.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PRST_IFS Messages

This section contains persistent media IOS file system (IFS) messages.

PRST_IFS-3

Error Message %PRST_IFS-3-FILE: persistent media IFS file error: %s

Explanation An error occurred in a persistent media module (IOS file system) file.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PRST_IFS-3-FILEMEM: No memory to update %s. Please free some space

Explanation There is no file system memory for the system to write an updated version of the persistent variable file.

Recommended Action Free space on the file system shown in the error message as soon as possible. You must delete existing files or squeeze the file system if the file system requires it (bootflash, for example, may require it).

Error Message %PRST_IFS-3-GENERAL: persistent media IFS general error: %s

Explanation An error occurred in the persistent media module (IOS file system).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PRST_VBL Messages

This section contains persistent variable messages.

PRST_VBL-3

Error Message %PRST_VBL-3-GENERAL: Persistent general error: %s

Explanation A general error related to a persistent variable occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PRST_VBL-3-MEDIA: Persistent media error: %s

Explanation A media error related to a persistent variable occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PT Messages

This section contains Protocol Translation messages.

Error Message %PT-3-PT_HW_UNAVAIL: Protocol Tunneling hardware resource not available. [chars]

Explanation Protocol tunneling could not be enabled because no redirect registers are available. Protocol tunneling requires redirect registers.

Recommended Action Disable any applications that use redirect registers and configure the protocol tunneling again.

Error Message %PT-3-PT_NO_SWSB: Protocol Tunneling software subblock not found. [chars]

Explanation The software subblock that is used for protocol tunneling could not be found for the port specified in the message text. Protocol tunneling has been disabled on this port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXF Messages

This section contains Parallel eXpress Forwarding (PXF) messages.

Error Message %PXF-2-DOWNLOADCOLROW: Could not download the microcode into PXF processor @ column [dec] row [dec].

Explanation A problem occurred that prevented the microcode from being downloaded to PXF. This could be either a software or hardware abnormality.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXF_ACL Messages

This section contains Parallel eXpress Forwarding (PXF) ACL-specific messages.

PXF_ACL-3

Error Message %PXF_ACL-3-WS_ACL_CONTEXT_EVENT: [chars] [chars]

Explanation An invalid turbo ACL context has been used to call a block initialization. This condition is possibly caused by a process-level watchdog that has timed out.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_ACL-3-WS_ACL_EVENT: [chars]

Explanation PXF turbo ACL errors have occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_ACL-3-WS_ACL_PXF_CONTEXT_EVENT: [chars] [chars]

Explanation An invalid PXF turbo ACL context has been used to call a block initialization. This condition is possibly caused by a process-level watchdog that has timed out.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXFAPI Messages

This section contains Parallel eXpress Forwarding (PXF) API-related messages.

PXFAPI-3

Error Message %PXFAPI-3-TIFBAD: TIF [int] is not available or invalid.

Explanation The PXF interface instance that was requested is not available or is invalid.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXFAPI-3-TIFINUSE: Request for in-use reserved TIF [int]

Explanation A PXF interface instance was requested but is currently reserved as it is still in use.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXFAPI-3-TIFNODETACH: TIF [int] could not be detached.

Explanation The PXF interface instance could not be detached.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXF_FIB Messages

This section contains Parallel eXpress Forwarding (PXF) Forwarding Information Base (FIB) messages.

PXF_FIB-3

Error Message %PXF_FIB-3-WS_FIB_RW_EVENT: [chars] [dec] [chars]

Explanation The Layer 2 information for this interface is not consistent in PXF. The router may resume normal operation after this message.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_FIB-3-WS_FIB_TIF_EVENT: [chars] [chars]

Explanation The interface does not have a valid PXF handle attached to it. The router may resume normal operation after this message.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXF_FLOW Messages

This section contains Parallel eXpress Forwarding (PXF) NetFlow messages.

PXF_FLOW-4

Error Message %PXF_FLOW-4-INVLDAGG_SINGLE: The netflow aggregation scheme is not supported in PXF. This interface will be marked as unsupported by the PXF, all incoming traffic to this interface will be processed in the RP.

Explanation The only NetFlow aggregation schemes supported in the PXF are AS aggregation, protocol aggregation, source prefix aggregation, and destination aggregation.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_FLOW-4-NO_INVLDAGG: All previously configured unsupported netflow aggregations have been disabled or removed. Netflow enabled interfaces may however still be marked unsupported due to other unsupported features configured.

Explanation Only PXF-supported NetFlow aggregation schemes are configured, or possibly no NetFlow aggregation schemes are configured.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXF_GRE Messages

This section contains Parallel eXpress Forwarding (PXF) GRE tunnel-related messages.

PXF_GRE-3

Error Message %PXF_GRE-3-PXF_MEM_ERR_CLR_TSTATS: PXF MEM ERROR when clearing PXF tunnel stats (Addr=[hex])

Explanation An error occurred when clearing the tunnel statistics from PXF memory. The tunnel statistics could not be properly cleared.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_GRE-3-PXF_MEM_ERR_HINFO: PXF MEM ERROR when downloading tunnel hash info to PXF (Addr=[hex])

Explanation An error occurred when writing into PXF memory. Tunnel hash information could not be properly downloaded to PXF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_GRE-3-PXF_MEM_ERR_HTIFS: PXF MEM ERROR when downloading tunnel hashed tifs to PXF (Addr=[hex])

Explanation An error occurred when writing into PXF memory. Hashed tunnel TIFs could not be properly downloaded to PXF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_GRE-3-PXF_MEM_ERR_READ_TSTATS: PXF MEM ERROR when reading PXF tunnel stats (Addr=[hex])

Explanation An error occurred when reading the tunnel statistics from PXF memory. The tunnel statistics could not be properly read.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_GRE-3-PXF_MEM_ERR_TID: PXF MEM ERROR when downloading tunnel id to PXF (Addr=[hex])

Explanation An error occurred when writing into PXF memory. The tunnel ID could not be properly downloaded to PXF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_GRE-3-PXF_MEM_ERR_TVRF: PXF MEM ERROR when downloading tunnel vrf to PXF (Addr=[hex])

Explanation An error occurred when writing into PXF memory. The tunnel VRF could not be properly downloaded to PXF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXF_GRE-4

Error Message %PXF_GRE-4-PXF_MEM_ERR: Memory allocation error while [chars]

Explanation An error has occurred while allocating memory. PXF could not process tunneled packets properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXF_MPLS_TE Messages

This section contains Parallel eXpress Forwarding (PXF) MPLS traffic engineering (TE) messages.

PXF_MPLS_TE-3

Error Message %PXF_MPLS_TE-3-PXF_MEM_ERR_CLR_TSTATS: PXF MEM ERROR when clearing PXF tunnel stats (Addr=[hex])

Explanation An error occurred when tunnel statistics were being cleared from PXF memory. The tunnel statistics could not be properly cleared.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_MPLS_TE-3-PXF_MEM_ERR_LKUP_TABLE: PXF MEM ERROR when downloading TE tunnel look-up table to PXF (Addr=[hex])

Explanation An error occurred while information was being written into PXF memory. The lookup table could not be properly downloaded to PXF.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_MPLS_TE-3-PXF_MEM_ERR_READ_TSTATS: PXF MEM ERROR when reading PXF tunnel stats (Addr=[hex])

Explanation An error occurred while tunnel statistics were being read from PXF memory. The tunnel statistics could not be properly read.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXF_MPLS_TE-4

Error Message %PXF_MPLS_TE-4-PXF_MEM_ERR: Memory allocation error while [chars]

Explanation An error has occurred while allocating memory. PXF could not process a tunneled packet properly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

PXF_QoS Messages

This section contains Parallel eXpress Forwarding (PXF) Quality of Service (QoS) messages.

PXF_QoS-3

Error Message %PXF_QoS-3-QoS_STAT_GENERATION_FAIL: Cannot [chars] actual QoS statistics generation in PXF

Explanation An error occurred while QoS statistics generation was being enabled or disabled.

Recommended Action Enable QoS debugging to obtain more information in case the condition recurs. Disable and reenble the PXF QoS statistics. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %PXF_QOS-3-SUB_INTF_SRPOL_FAIL: Error attaching [chars] service-policy PXF data to [chars]: [chars]

Explanation The PXF portion of the service policy data could not be assigned to a subinterface. The configuration will show that the service policy is attached to the subinterface; however, the download of the necessary PXF data has not occurred. Because of this condition, the service policy will not be effective on the subinterface.

Recommended Action Detach and reattach the service policy to the subinterface. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

QM Messages

This section contains Quality of Service Management (QM) messages.

QM-2

Error Message %QM-2-CONFORM_ACTION_NE: Different aggregate and microflow conform-action in class [chars][policy [chars]]

Explanation Conform actions in the **police** and **police flow** commands must be the same for the same class in a service-policy applied to MLS interfaces.

Recommended Action Change the conform-action in the **police** or **police flow** command to make both actions the same, or remove one of the two commands.

Error Message %QM-2-MERGE_ERROR: ACL merge error for Interface [chars] in [chars] direction status [dec]

Explanation The ACL merge failed before programming ACLs into the TCAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %QM-2-PLC_ATTACH_REJECT_2_PLCRS: Command rejected: (policy [chars] interface [chars] dir [chars]) police and police aggregate commands present in same traffic class

Explanation One of two conditions has occurred: either a policy map that contains a traffic class with both **police** and **police aggregate** commands is attached to an unsupported interface or a policy attached to an interface is being modified in an unsupported manner.

Recommended Action Remove the unsupported command combination from the same traffic class. In the case of a modification to a policy that is already attached to unsupported interfaces, no action is required because the command is automatically rejected.

Error Message %QM-2-PLC_ATTACH_REJECT_ARP_UFLOW: Command rejected: (policy-map [chars] class [chars] interface [chars] dir [chars]) flow policer is not supported for traffic classes matching ARP ACL.

Explanation In a policy map, flow policer is not supported if the traffic class is matching ARP ACL.

Recommended Action Remove the flow policer from traffic class matching ARP ACL and reattach the policy or change the traffic class to match non-ARP ACL and configure flow policer.

Error Message %QM-2-PLC_ATTACH_REJECT_IPX_PROTO: Command rejected: (policy-map %s class %s) IPX access-list is not supported in EARL7.

Explanation In a class map, an IPX access list is not supported in the match criteria.

Recommended Action Remove the IPX access list from the traffic class match criteria and reattach the policy, or change the traffic class to match a non-IPX ACL.

Error Message %QM-2-PLC_ATTACH_REJECT_SET: Command rejected: (policy [chars] interface [chars] dir [chars]) police/trust and set commands present in same traffic class

Explanation One of two conditions has occurred: either a policy map that contains a traffic class with both **set** and **police/trust** commands is attached to an unsupported interface or a policy attached to an interface is being modified in an unsupported manner.

Recommended Action Remove the unsupported command combination from the same traffic class. In the case of a modification to a policy that is already attached to unsupported interfaces, no action is required because the command is automatically rejected.

Error Message %QM-2-SET_IP_AND_MPLS: Hardware does not support 'set mpls exp' and 'set precedence | dscp' together

Explanation The hardware does not support the **set mpls exp** and **set precedence | dscp** commands together.

Recommended Action Use either the **set mpls exp** or the **set precedence | dscp** command.

Error Message %QM-2-TCAM_ENTRIES_EXCEEDED: ACL merge failed, ACEs exceed TCAM capacity or 0 ACEs, [dec] ACEs for interface [chars] in [chars] direction

Explanation The ACL merge was halted. The results of the ACL merge have caused the number of ACEs to exceed the TCAM capacity, or zero ACEs were present.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

QM-4

Error Message %QM-4-AGG_POL_EXCEEDED: QoS Hardware Resources Exceeded : Out of Aggregate policers

Explanation The supported number of aggregate policers has been exceeded. On EARL 7-based switches, this limit is 1023.

Recommended Action Attempt to aggregate policers if possible.

Error Message %QM-4-FRAG_INFO: QoS TINY_FRAG : enable 'mls qos vlan based' on accessports of L3 VLANs for fo1 policing to take effect

Explanation Policing of fragment offset == 1 (FO1) packets through switch ports will be supported only if the port is in VLAN-based mode, because FO1 policing is a Layer 3 feature.

Recommended Action Enter the **mls qos vlan based** command on the switch port.

Error Message %QM-4-MFLOW_POL_EXCEEDED: QoS Hardware Resources Exceeded : Out of Micro flow policers

Explanation The supported number of microflow policers has been exceeded. On EARL7-based switches, this limit is 63.

Recommended Action No action is required.

Error Message %QM-4-TCAM_MASK: Hardware TCAM mask entry capacity exceeded

Explanation The hardware TCAM does not have the mask capacity to handle all of the configured ACLs.

Recommended Action Because the configured ACLs are too large to all fit in the hardware TCAM, try to share the same ACLs across multiple interfaces in order to reduce TCAM resource contention.

Error Message %QM-4-UNEXPECTED_INTERNAL_QOS_CONDITION: Unexpected internal QoS condition.

Explanation An unexpected internal QoS condition has occurred. QoS debug may be enabled to obtain more information in case the condition recurs.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

QM-6

Error Message %QM-6-EOM_FORCE_TRUSTED: EoMPLS on [chars] caused install of 'trust cos' state

Explanation If EoMPLS is configured on the interface or any of its subinterfaces, the no trust state is automatically replaced by the trust CoS state.

Recommended Action Remove all EoMPLS configurations from the interface to restore the no trust state.

Error Message %QM-6-EOM_RESTORE_UNTRUSTED: The 'no trust' state is restored on EoMPLS removal from [chars]

Explanation If EoMPLS is unconfigured on the interface and all its subinterfaces, the no trust state is restored.

Recommended Action No action is required.

Error Message %QM-6-EOM_TRUST_NOT_INSTALLED: 'no trust' command is not installed on [chars] in presence of EoMPLS

Explanation If EoMPLS is configured on the interface or any of its subinterfaces, the **no trust** command is not installed.

Recommended Action Remove all EoMPLS configurations from the interface.

Error Message %QM-6-IOS_AND_PS_FEATURE: [chars] action cannot be present in classmap [chars] of policymap [chars] because this service-policy cannot be executed in Cat6K HW due to the presence of filters which require packets to be processed in IOS SW

Explanation NBAR is required for the match protocol commands used. NBAR exists only in software. Hardware-specific actions cannot be supported.

Recommended Action Remove either the hardware-specific command(s) or the match protocol criteria in class map.

Error Message %QM-6-NBAR_DISABLED: Packets will not be software switched.

Explanation NBAR is disabled so traffic will not be redirected to the RP.

Recommended Action No action is required.

Error Message %QM-6-NBAR_ENABLED: Packets will be software switched.

Explanation NBAR is enabled so all the traffic will be redirected to the RP.

Recommended Action No action is required.

Error Message %QM-6-SET_AND_POLICE: 'set' and 'police' commands cannot co-exist in classmap [chars] of policymap [chars]

Explanation The **set** and **police** commands cannot coexist in a class map for a QoS manager (QM) supported interface.

Recommended Action Choose one of the commands or use the **set-dscp-transmit** | **set-precedence-transmit** | **set-exp** option for the conform action of the **police** command.

Error Message %QM-6-SET_AND_TRUST: 'set' and 'trust' commands cannot co-exist in classmap [chars] of policymap [chars]

Explanation The **set** and **trust** commands cannot coexist in a class map for a QoS manager (QM) supported interface.

Recommended Action Choose one of the commands.

Error Message %QM-6-SHAREDAG_AND_POLICE: 'police aggregate' and regular 'police' commands cannot co-exist in classmap [chars] of policymap [chars]

Explanation The **set** and **police** commands cannot coexist in a class map for a QoS manager (QM) supported interface.

Recommended Action Choose one of the commands or use the **set-dscp-transmit** | **set-precedence-transmit** | **set-exp** option for the conform action of the **police** command.

Error Message %QM-6-TRUST_AND_POLICE: 'trust' and 'police/police aggregate with a set' cannot co-exist in classmap %s of policymap %s

Explanation The **trust** command and the **police** (or **police aggregate**) command with **set** statements cannot coexist in a class map for a QoS manager (QM) supported interface.

Recommended Action Remove the **set** statements in the **police** or **police aggregate** command.

Error Message %QM-6-UNDEF_SHR_AG: shared aggregate policer [chars] used in classmap [chars] of policymap [chars] is not defined

Explanation Shared aggregate policers have to be created first by entering the **mls qos aggregate** command before being used in a policy map.

Recommended Action Either define the shared aggregate policer or do not use it in the policy map.

QnQ Messages

This section contains Q-in-Q (QnQ) messages.

Error Message %QNQ-6-NATIVE_VLAN_TAGGING: Please enable the native VLAN tagging feature for proper functioning of the Q-in-Q service.

Explanation QnQ may not function properly for packets in the native VLAN if native VLAN tagging is not enabled.

Recommended Action Enable native VLAN tagging by entering the **vlan dot1q tag native** command.

QoS Messages

This section contains Quality of Service (QoS) messages.

QoS-3

Error Message %QOS-3-HA_BULK_SYNC: %s Failure in completing bulk sync

Explanation The QoS configuration cannot be synchronized to the standby.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %QOS-3-HA_BULK_SYNC_BEFORE_TIMEOUT: %s Failure in completing bulk sync before timeout

Explanation The QoS configuration cannot be synchronized to the standby.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %QOS-3-HA_GET_ARG_NUM: %s Failure in getting event identification

Explanation The QoS configuration cannot be synchronized to the standby.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %QOS-3-HQFPOOLERR: interface [chars]: failed to allocate hqf particle

Explanation The HQF particle pool is empty. It cannot process a router generated packet.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show buffer** and **show policy interface** commands to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %QOS-3-NOCAPID: Failed to allocate QoS capability ID.

Explanation No more QoS capability IDs are available.

Recommended Action Change the Cisco IOS software image so that it can support more QoS capability IDs. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

QOS-6

Error Message %QOS-6-EXTENDED_BURST_CHANGED_WARN: Illegal extended burst size; it is increased to [int]

Explanation Configured extended burst size is less than the Rate. It is considered to be illegal and has been reset based on the Rate.

Recommended Action This is an informational message only. No action is required.

Error Message %QOS-6-NORMAL_BURST_CHANGED_WARN: Illegal normal burst size; it is increased to [int]

Explanation Configured normal burst size is less than the Rate.It is considered to be illegal and has been reset basedon the Rate.

Recommended Action This is an informational message only. No action is required.

QOSMGR Messages

This section contains Quality of Service (QoS) manager messages.

QOSMGR-3

Error Message %QOSMGR-3-FEATURE_NOT_FOUND: Cannot find feature for [chars]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-FILTERTYPE_INVALID: Internal Error Invalid Policy filtertype [dec]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-MERGE_RES_COUNT: Internal Error Invalid count

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-NO_POLICER_QOSLABEL: Creating port Class Label Failed

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-NO_VMR_QOSLABEL: qm_generate_vmrs have no qos label

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-NULL_POLICER: Internal Error Invalid Policer

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-POLICER_RES_COUNT: Internal Error Invalid Policer count

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-POLICYMAP_NOT_FOUND: Cannot find policymap for [chars]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-QUEUE_PTR_ERROR: queue pointers out of order [hex] [hex]
[hex] [hex]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-RESERVE_COUNT_ERROR: Reserved Count Exceeding total [dec]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-RESOURCE_INTERNAL: Internal Error in resource allocation

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-3-VMRSEQ_INVALID: Internal Error Invalid VMR sequence

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show running-config** command to gather data that may help identify the nature of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show running-config** commands and your pertinent troubleshooting logs.

QOSMGR-4

Error Message %QOSMGR-4-ACTION_NOT_SUPPORTED: Action is not supported in policymap [chars]

Explanation An action that cannot be configured by the **set**, **trust**, and **police** commands in policy map configuration mode was configured in a policy map. This condition indicates a hardware limitation.

Recommended Action Configure only the supported actions that can be configured by the **set**, **trust**, and **police** commands in policy map configuration mode.

Error Message %QOSMGR-4-CLASS_NOT_SUPPORTED: Classification is not supported in classmap [chars]

Explanation An unsupported **match class-map** command was entered in class-map configuration mode in a policy map and attached to an egress interface, or more than one **match** command was configured. This condition indicates a hardware limitation.

Recommended Action Reconfigure the class map or the policy map. Use only the **match dscp** command in class-map configuration mode in a policy map that is attached to an egress interface. Only one match per class map is supported.

Error Message %QOSMGR-4-COMMAND_FAILURE: Execution of [chars] command failed on [chars]

Explanation The command to configure a QoS setting failed. This condition possibly indicates a lack of hardware resources.

Recommended Action Check to see if any other messages along with this message indicate a resource failure. If other messages indicate that the hardware resources have been exceeded, retry the command with a smaller configuration. If you require more information, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the

tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %QOSMGR-4-HARDWARE_NOT_SUPPORTED: Hardware limitation has reached for policymap [chars]

Explanation The hardware cannot support the current policy map configuration. More QoS ACL entries have been configured than the number that is specified in the Switch Database Management template.

Recommended Action Reconfigure the class map or the policy map and reduce the number of QoS ACLs.

Error Message %QOSMGR-4-MATCH_NOT_SUPPORTED: Match type is not supported in classmap [chars]

Explanation An unsupported match type was specified. The only match types that are supported are **match access-group**, **match dscp**, and **match precedence**.

Recommended Action Reconfigure the class map. Ensure that only the **match access-group**, **match dscp**, and **match precedence** commands in class-map configuration mode are used within the class map.

Error Message %QOSMGR-4-NOT_SUPPORTED: Action '[chars]' is not supported for a policymap attached to output side.

Explanation A **set** or **trust** command was configured in policy-map class configuration mode in a policy map and attached to an egress interface. The requested action will not be applied to the configuration.

Recommended Action Do not configure a **set** or **trust** command in policy-map class configuration mode in a policy map and attach it to an egress interface. These policy map actions are supported only on ingress interfaces.

Error Message %QOSMGR-4-POLICER_PLATFORM_NOT_SUPPORTED: Policer configuration has exceeded hardware limitation for policymap [chars]

Explanation The policy map configuration has exceeded the limitation of the hardware. More policers have been configured in all policy maps by using the **police** or **police aggregate** command in policy-map class configuration mode than can be supported by the hardware.

Recommended Action Reconfigure the class map or the policy map or delete the policy from some interfaces.

Error Message %QOSMGR-4-POLICER_POLICY_NOT_SUPPORTED: Number of policers has exceeded per policy hardware limitation for policymap [chars]

Explanation The policy map configuration has exceeded the limitation of the hardware. More policers have been configured in a policy map by using the **police** or **police aggregate** command in policy-map class configuration mode than can be supported by the hardware.

Recommended Action Reconfigure the class map or the policy map, and reduce the number of policers.

R4K_MP Messages

This section contains central processing unit (R4K_MP) messages.

R4K_MP-3

Error Message %R4K_MP-3-CRASHED: CPU [dec] has now crashed a total of [dec] times.

Explanation The specified CPU failed the specified number of times and has been restarted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

R4K_MP-5

Error Message %R4K_MP-5-DELEGATE_GETBUF: Delegated call to [hex] failed, out of buffers

Explanation A remote procedure call (RPC) to the specified function failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RADIUS Messages

This section contains RADIUS messages.

RADIUS-3

Error Message %RADIUS-3-AIDDEFINEFAILED: a_id definition ignored.

Explanation An attempt to store a corrupted authority ID (a_id) failed or memory allocation failed during authority ID definition. Any existing authority ID will be preserved.

Recommended Action Configure a proper authority ID.

Error Message %RADIUS-3-CANNOT_OPEN_SOCKET: Cannot open UDP socket for service %s

Explanation The router is unable to open a socket for UDP communications by the indicated service.

Recommended Action Check your configuration to make sure that no other services are using the same port.

Error Message %RADIUS-3-CORRUPTCONTEXT: Bad Magic pattern in [chars]:[hex], magic:[hex]!

Explanation The magic pattern imprinted on the internal hash table data structures in the RADIUS subsystem is missing, which indicates memory corruption.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RADIUS-3-INVALIDFORMAT: Invalid Nas Port Format: [chars] [char]

Explanation The user is attempting to configure an incorrect format string.

Recommended Action Enter a 32-character string using supported characters only.

Error Message %RADIUS-3-NOACCOUNTINGRESPONSE: Accounting message [chars] for session [chars] failed to receive Accounting Response.

Explanation There was no response from the RADIUS server, and the maximum number of retransmissions has been exceeded. The network or the RADIUS server may be down.

Recommended Action Check the network connectivity to the RADIUS servers and check that the servers are running.

Error Message %RADIUS-3-NOATTRLIST: No attribute-list passed through parser.

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RADIUS-3-SERVERTYPEMISMATCH: Servers [IP_address] and [IP_address] in server group '[chars]' are of different types.

Explanation All the servers in a server group should be of either type: standard or nonstandard.

Recommended Action Check the running configuration and verify that all the radius servers in the specified server group are of the same type: either standard or nonstandard.

Error Message %RADIUS-3-SOURCEPORTALLOCERROR: Warning: Unable to allocate port [dec]

Explanation The system was unable to allocate the port specified in the message. The system will not have the full range of source ports.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RADIUS-3-UNKNOWNAPI: Unknown API type %d

Explanation The RADIUS process has been invoked using an unknown application program interface (API) type. This condition is the result of a fault in the RADIUS subsystem.

Recommended Action Collect traceback and contact your technical support representative.

Error Message %RADIUS-3-ZEROATTRLEN: Radius attr [dec] len 0

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RADIUS-4

Error Message %RADIUS-4-BADATTRLIST: Unable to process attribute list.

Explanation The attribute list is syntactically incorrect.

Recommended Action Specify the attribute list as a comma-delimited string of integers between 1 and 255.

Error Message %RADIUS-4-NOATTRLISTDEF: Warning: Attribute list [chars] is not defined.

Explanation The given attribute list is not defined.

Recommended Action Define the attribute list as soon as possible.

Error Message %RADIUS-4-NOPUBLICSERV: Warning: No servers were found in the public server list.

Explanation No servers are in the global public servers list.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RADIUS-4-RADIUS_ALIVE: RADIUS server [IP_address]:[int],[int] has returned.

Explanation A RADIUS server that previously was not responding has responded to a new request.

Recommended Action No action is required.

Error Message %RADIUS-4-RADIUS_DEAD: RADIUS server [IP_address]:[int],[int] is not responding.

Explanation A RADIUS server has not responded to repeated requests.

Recommended Action Check to see if the RADIUS server is still active.

RADIUS-6

Error Message %RADIUS-6-RESETDEADSERVER: Group [chars]: Marked alive as Radius server [IP_address]:[dec],[dec] configured.

Explanation The RADIUS server is configured in the server group that was previously marked dead.

Recommended Action This is an informational message only. No action is required.

RANDOM Messages

This section contains utility messages.

RANDOM-6

Error Message %RANDOM-6-RANDOM: A pseudo-random number was generated twice in succession

Explanation A pseudo-random number generator produced the same number twice in succession.

Recommended Action Under normal circumstances, a pseudo-random number generator will occasionally produce the same number twice in succession, which is not a problem. However, if this message occurs frequently, the system should be manually reloaded. If the message is persistent across reloads, copy the error message exactly as it appears, and report it to your Cisco technical support representative.

RASP16 Messages

This section contains interface multiplexer ASIC messages.

Error Message %RASP16-5-NULL_RASP16_OBJECT: The Interface Multiplexer device object pointer is set to NULL.

Explanation The memory location of the interface multiplexer device object is invalid. The interface multiplexer ASIC operation is disabled and the device interrupt is now masked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RASP16-5-RASP_INIT_FAILURE: The Interface Multiplexer ASIC initialization failed.

Explanation The interface multiplexer ASIC could not be initialized. As a result, this device is not operational and has been disabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RBM Messages

This section contains Role-based Access Control Manager (RBM) messages.

RBM-0

Error Message %RBM-0-RBM_EMERG: %s

Explanation An error occurred in the Role-based Access Control Manager (RBM).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RBM-1

Error Message %RBM-1-RBM_ALERT: %s

Explanation An error occurred in the Role-Based Manager (RBM).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RBM-2

Error Message %RBM-2-RBM_CRIT: %s

Explanation An error occurred in the Role-based Access Control Manager (RBM).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RBM-3

Error Message %RBM-3-RBM_ERR: %s

Explanation An error occurred in the Role-based Access Control Manager (RBM).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RBM-3-RBM_PARSE_ACE: Could not parse command for adding ACE '[chars]' to [chars] Role-Based Access List '[chars]'

Explanation An error occurred while attempting to add an ACE to a Role-Based Access List. The ACE syntax is most likely incompatible with the type of RBACL.

Recommended Action Verify the syntax of the ACEs of the RBACL in ACS and the IP protocol versions the RBACL applies to. RBACL ACE syntax could be verified by manually configuring IP/IPv6 RBACL on the system within (config-rb-acl)/(config-ipv6rb-acl) configuration mode respectively.

Error Message %RBM-3-RBM_PARSE_RBACL: Could not parse command for creating [chars] Role-Based Access List '[chars]' '[chars]'

Explanation An error occurred while attempting to create Role-Based Access List.

Recommended Action This error could occur when TrustSec attempts to install RBACL it has acquired from ACS while configuration mode is locked exclusively. TrustSec will retry this operation and should eventually succeed once configuration mode is no longer locked. If the error occurs when the configuration mode is not locked or if the RBACL does not get installed after the configuration mode lock is released.

RBM-4

Error Message %RBM-4-RBM_WARNING: %s

Explanation An error occurred in the Role-based Access Control Manager (RBM).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RBM-5

Error Message %RBM-5-RBM_NOTICE: %s

Explanation This is a notice message from the Role-based Access Control Manager (RBM).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RBM-6

Error Message %RBM-6-RBM_INFO: %s

Explanation This is an informational message from the Role-based Access Control Manager (RBM).

Recommended Action No action is required.

RBM-7

Error Message %RBM-7-RBM_ASSERT: Assertion Failure (%s @%s:%d) : %s

Explanation An error occurred in the Role-based Access Control Manager (RBM).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RED_MODE Messages

This section contains high availability redundancy mode messages.

RED_MODE-3

Error Message %RED_MODE-3-CAPENTRY_REG: Red Mode Cap Entry ([dec]) for Entity ([dec]) Registration failed ([chars])

Explanation A capability entry could not be registered for the redundancy mode ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu capability entries** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-CAPGROUP_REG: Red Mode Cap Group ([dec]) for Entity ([dec]) Registration failed ([chars])

Explanation A capability group could not be registered for the redundancy mode ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show capability groups** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-CAP_REG: Red Mode cap reg failed: reason [dec]

Explanation The capabilities of the redundancy mode ISSU could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu capability arguments** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-CAPTYPE_REG: Red Mode Cap Type for Entity ([dec]) Registration failed ([chars])

Explanation A capability type could not be registered for the redundancy mode ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu capability types** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-CLIENT_REG: Red Mode Client ([dec]) Registration failed ([chars])

Explanation The redundancy mode ISSU client could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu clients** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-CLIENT_REG_FAILED: Red Mode ISSU client ([dec]) Client registration failed. [chars]

Explanation The redundancy mode ISSU client could not be registered during system initialization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu clients** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-DELAYED_REGISTER: Delayed registration could not be completed succesfully, Operand = [dec]

Explanation The delayed registration operation for the RF-proxy clients could not complete successfully.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-ENTITY_REG: Red Mode Entity ([dec]) Registration failed ([chars])

Explanation The redundancy mode ISSU entity could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu entities** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-GET_BUFFER: Red Mode ISSU session ([dec]) failed to get buffer

Explanation The redundancy mode ISSU session was unable to get a buffer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-IPC_AGENT: [chars] [[chars]]

Explanation There has been a failure in the redundancy mode IPC agent.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-ISSU_BASE_CLIENT_INCOMP: One or more ISSU base clients are incompatible, fallback to RPR

Explanation An incompatible ISSU base client caused the redundancy mode to revert to route processor redundancy (RPR) mode.

Recommended Action Check the console log for the name and ID of the incompatible ISSU base clients.

Error Message %RED_MODE-3-ISSU_NEGOTIATION: [chars] [[chars]]

Explanation There has been a failure in the redundancy mode client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-ISSU_RESET_PEER_IMAGE_COMP: Failed to reset peer image to be compatible

Explanation The redundancy process was unable to reset the peer image to be compatible after the standby device came back up in RPR mode. This message is usually seen in conjunction with an ISSU module error message.

Recommended Action Examine the associated ISSU message for the cause of the failure and the recommended action.

Error Message %RED_MODE-3-ISSU_SET_BASE_CLIENT_INCOMP: Failed to set base client incompatibility

Explanation The redundancy process was unable to set the base client incompatibility.

Recommended Action Check the console log for the name and ID of the incompatible ISSU base clients.

Error Message %RED_MODE-3-MSG_DATAPTR: Red Mode Client ([dec]) get msg dataptr failed. Error = [dec]

Explanation The redundancy mode ISSU client could not obtain a message data pointer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-MSGGROUP_REG: Red Mode Msg Group ([dec]) for Entity ([dec]) Registration failed ([chars])

Explanation The message group for the redundancy mode ISSU entity could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu message groups** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-MSG_MTU: Red Mode Client ([dec]) get msg mtu failed. Error = [dec]

Explanation The redundancy mode ISSU client could not obtain the message size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-MSG_REG: Red Mode msg reg failed: reason [dec]

Explanation Messages for the redundancy mode ISSU could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu message** *arguments* command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-MSG_SEND: Red Mode ISSU client for session ([dec]) failed to send message. Error Code = [chars]

Explanation The redundancy mode ISSU client could not send a negotiation message to a peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-MSGTYPE_REG: Red Mode Msg Type for Entity ([dec]) Registration failed ([chars])

Explanation The message type for the redundancy mode ISSU entity could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu message types** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-NO_DEREGISTER: Could not deregister plugin for redundancy mode [chars]

Explanation At system initialization the plugin that describes the capabilities of this redundancy mode could not be deregistered with the redundancy mode client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-RED_MODE_MSG_NOT_OK: Red Mode ISSU msg type ([dec]) is not ok

Explanation The redundancy mode ISSU message type has not negotiated correctly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu message types clientID** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-RED_MODE_START_NEGO_FAILED: Red Mode ISSU start nego session failed ([chars])

Explanation The redundancy mode ISSU could not start its negotiation process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-RED_MODE_XFROM_FAIL: Red Mode ISSU [chars] transformation failed ([chars])

Explanation The transformation operation for the redundancy mode ISSU message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** and **show issue sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-SELECT_MODE: The mode change to [dec] was unsuccessful rc = [dec], force = [dec], caller = [dec]

Explanation The specified mode change operation did not complete successfully.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the gathered information.

Error Message %RED_MODE-3-SESSION_REG: Red Mode session for Entity ([dec]) Registration failed ([chars])

Explanation The redundancy mode ISSU session could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RED_MODE-3-SESSION_UNREG: Red Mode session ([dec]) Un-Registration failed ([chars])

Explanation The redundancy mode ISSU session could not be unregistered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

REDUNDANCY Messages

This section contains high availability redundancy messages.

REDUNDANCY-3

Error Message %REDUNDANCY-3-EHSAISSU: %s failed with error code [%s]

Explanation An ISSU-related error occurred in the redundancy process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %REDUNDANCY-3-EHSAPARSER: parser failure - [chars]: tty=[dec] orig_parse_cli_type=[dec] parse_cli_type=[dec]

Explanation An EHSA parser error occurred. The details about the failure will beprinted.

Recommended Action Copy the error message exactly as it appears. Copy down the system's configuration along with any other relevant information. Contact your technical support representative for assistance.

Error Message %REDUNDANCY-3-MEMORY_DIFF: WARNING, nonsymmetrical configuration:
Active has [dec]K Standby has [dec]K

Explanation The redundant route processors (RPs) have different memory configurations. The configuration is allowed but is discouraged.

Recommended Action Attempt to avoid configuring a system with redundant RPs that have different memory configurations.

REDUNDANCY-4

Error Message %REDUNDANCY-4-PEER_DID_NOT_RESPOND: Resetting peer [chars] because it did not respond to verification of HA role.

Explanation The platform uses high availability (HA) hardware lines to perform HA role negotiation during the system boot time. The standby controller card verifies its role as the standby with the active controller card through the MBUS. If the active controller card does not respond, it is reset as it is either nonresponsive (hung) or is running an earlier version of Cisco IOS software.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %REDUNDANCY-4-RELOADING_STANDBY: Reloading the Standby [chars]

Explanation The active system has sent a reload IPC request to the standby peer. If the reload is not successful, the standby peer will be power cycled rather than reloaded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

REDUNDANCY-6

Error Message %REDUNDANCY-6-STANDBY_HAS_RELOADED: The Standby [chars] has reloaded; reason: [chars]

Explanation The standby peer reloaded itself to correct a configuration mismatch between the active system and the standby peer. The standby peer detected that it is missing the configuration for a line card. This situation probably occurred because the standby peer was reloaded before the new card was inserted.

Recommended Action No action is required.

Error Message %REDUNDANCY-6-SWITCHOVERTIME: Time taken to switchover = [dec] milliseconds

Explanation This message displays the time elapsed for the standby peer to become active following a failure of the existing active system.

Recommended Action No action is required.

REDUNDANCY_UTILS Messages

This section contains high availability redundancy utilities messages.

Error Message %REDUNDANCY_UTILS-3-INVALID_UNIT_DESIGNATION: An invalid redundancy designation ([chars]) has been detected.

Explanation The redundancy utility assigns each system a unit designation of either active unit, standby unit, or other unit. This designation was found to be invalid in the run-time module associated with the system traceback message. This condition most likely occurred because of a software error. The message text provides more information on the specific cause of the error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

REGISTRY Messages

This section contains registry-related (REGISTRY) messages.

REGISTRY-2

Error Message %REGISTRY-2-REG_FLAG_DEADLOCK: Registry call to [chars] timed out due to deadlock

Explanation When a remote registry is not serviced within 25 seconds, the remote process (and presumably the entire system) is deadlocked. This message is printed when the deadlock is broken by a timeout.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %REGISTRY-2-REG_PARSE_ERROR: [chars]: Could not parse notification [chars] : error/no. of items = [dec]

Explanation The registry library is unable to parse a notification that was received from a name server. This condition could exist for several reasons:

- There is a bug in the sscanf function.
- The notification block is corrupted.
- The pathname published to the name server is invalid.

This issue is serious and affects interprocess communications.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

REGISTRY-3

Error Message %REGISTRY-3-FASTCASE_OUT_OF_BOUNDS: Attempt made in [chars] to register with out of bounds key.

Explanation In FASTCASE registry, the key must be smaller than the size specified when the registry was created. An attempt was made to register with a key that is out of bounds.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %REGISTRY-3-REG_FLAG_ERR: Invalid combination of registry flag and scheduler control : [chars]

Explanation Process blocking has been disabled using either the `raise_interrupt_level` or the `assign_blocking_disabled` process. As a result of this action, a remote registry that contains the `reg_flag_data_safe` or `reg_flag_peer` flag has been invoked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %REGISTRY-3-REG_SUSPEND: Registry of type SUSPEND called when suspends are not allowed.

Explanation Process blocking has been disabled using either the `raise_interrupt_level` or the `assign_blocking_disabled` process. As a result of this action, a remote registry of the suspend type has been invoked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %REGISTRY-3-REG_XDR: [chars]

Explanation An error occurred while processing a parameter to a remote (interprocess) registry call.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %REGISTRY-3-SEQ_LIST_OVERWRITE: Attempt made to overwrite a set sequence function (%s)

Explanation A single function can be set as a callback for a specified sequence number for a sequenced list registry. An attempt to set a new callback failed because a callback function has already been set for this sequence number.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

REMOTE_OIR_ISSU Messages

This sections contains remote online insertion and removal (OIR) in-service software upgrade (ISSU) messages.

REMOTE_OIR_ISSU-3

Error Message %REMOTE_OIR_ISSU-3-BUFFER: Cat6K Remote OIR ISSU client failed to a buffer for message, error %d

Explanation The remote OIR ISSU client failed to get a buffer for building a negotiation message. As a result, the client cannot send a negotiation message and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %REMOTE_OIR_ISSU-3-CAPABILITY: Cat6K Remote OIR ISSU client %s

Explanation The remote OIR ISSU client detected an error during capability negotiation. As a result, there is a mismatch in the client capability between the active and standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %REMOTE_OIR_ISSU-3-INIT: Cat6K Remote OIR ISSU client initialization failed at %s, error %s

Explanation The remote OIR ISSU client could not be initialized. This condition will cause a catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %REMOTE_OIR_ISSU-3-MSG_NOT_OK: Cat6K Remote OIR ISSU client message %d is not compatible

Explanation The remote OIR ISSU client received an incompatible message from the peer unit. The message cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %REMOTE_OIR_ISSU-3-MSG_SIZE: Cat6K Remote OIR ISSU client failed to get the message size for message %d

Explanation The remote OIR ISSU client was unable to calculate the message size for the message specified. The client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %REMOTE_OIR_ISSU-3-POLICY: Cat6K Remote OIR ISSU client message type %d is %s

Explanation The remote OIR ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %REMOTE_OIR_ISSU-3-SEND_FAILED: Cat6K Remote OIR ISSU client failed to send a negotiation message, error %d

Explanation The remote OIR ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %REMOTE_OIR_ISSU-3-SESSION: Cat6K Remote OIR ISSU client %s

Explanation The remote OIR ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %REMOTE_OIR_ISSU-3-TRANSFORM: Cat6K Remote OIR ISSU client %s transform failed, error %s

Explanation The remote OIR ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the OIR state of the bay will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

REP Messages

This sections contains Resilient Ethernet Protocol (REP) messages.

REP-4

Error Message %REP-4-LINKSTATUS: %s (segment %d) is %s

Explanation The Resilient Ethernet Protocol (REP) link status has changed. If the status changed to nonoperational, a reason is displayed.

Recommended Action No action is required.

REP-5

Error Message %REP-5-PREEMPTIONFAIL: can not perform preemption on segment %d due to %s

Explanation A Resilient Ethernet Protocol (REP) preempt operation failed. The failure could be caused by specifying an invalid port ID or neighbor number with the **rep preempt block port** command or by configuring the **rep preempt block port preferred** command while no REP port is configured with a **preferred** flag.

Recommended Action Correct the configuration and run REP manual preemption on the primary edge port by entering the **rep preempt segment** command.

REP_ISSU Messages

This sections contains Resilient Ethernet Protocol (REP) in-service software upgrade (ISSU) messages.

REP_ISSU-3

Error Message %REP_ISSU-3-BUFFER: REP ISSU client failed to get buffer for message, error %d

Explanation The Resilient Ethernet Protocol (REP) ISSU client was unable to get buffer space for building a negotiation message. As a result, it cannot send the negotiation message to the standby unit and the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %REP_ISSU-3-CAPABILITY: REP ISSU client %s

Explanation The REP ISSU client detected an error during capability negotiation. As a result, there is a mismatch in the client capability between the active and standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %REP_ISSU-3-INIT: REP ISSU client initialization failed at %s, error %s

Explanation The REP ISSU client could not be initialized. This condition will cause a catastrophic failure when an ISSU upgrade or downgrade is performed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %REP_ISSU-3-MSG_NOT_OK: REP ISSU client message %d is not compatible

Explanation The REP ISSU client received an incompatible message from the peer unit. The message cannot be processed by this unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %REP_ISSU-3-MSG_SIZE: REP ISSU client failed to get the message size for message %d

Explanation The REP ISSU client was unable to calculate the message size for the message specified. The REP ISSU client will be unable to send the message to the standby unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu message group**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

Error Message %REP_ISSU-3-POLICY: REP ISSU client message type %d is %s

Explanation The REP ISSU client received a message type that it does not support. A policy is applied to make the session compatible.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, and **show issu session** commands and your pertinent troubleshooting logs.

Error Message %REP_ISSU-3-SEND_FAILED: REP ISSU client failed to send a negotiation message, error %d

Explanation The REP ISSU client could not send a session negotiation message to the peer. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show checkpoint client** commands and your pertinent troubleshooting logs.

Error Message %REP_ISSU-3-SESSION: REP ISSU client %s

Explanation The REP ISSU client detected an error during a session negotiation with the peer unit. As a result, the standby unit cannot be brought up.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %REP_ISSU-3-SESSION_UNREGISTRY: REP ISSU client failed to unregister session information. Error: %d (%s)

Explanation The REP ISSU client was unable to unregister session information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %REP_ISSU-3-TRANSFORM: REP ISSU client %s transform failed, error %s

Explanation The REP ISSU client could not transform the message. If the transmit transformation failed, the checkpoint message cannot be sent to the standby unit. If the receive transformation failed, the checkpoint message cannot be applied on the standby unit. In either case, the port manager state will not be identical with the active unit.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu session**, and **show issu negotiated version** commands and your pertinent troubleshooting logs.

RESETMGR Messages

This section contains reset manager messages.

RESETMGR-3

Error Message %RESETMGR-3-NOMEM: Failed to allocate memory to add ID (%d) to table

Explanation The reset manager was unable to allocate memory to add the unique ID and process name to its table. If this process is restarted on the active system, the standby system might not be reset due to this error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RESETMGR-3-RESET: Reset Manager has reset the system due to '%s' process restart

Explanation The standby system is being forced to reset by the reset manager. The reset manager stores a set of IDs, each of which uniquely identifies a process on the system. If one of these monitored processes is restarted, the standby unit will be reset so that the versioning infrastructure can renegotiate. This is not a software fault.

Recommended Action No action is required.

Error Message %RESETMGR-3-RESET_UNKNOWN: A restarted process could not be identified by its Job ID, the Reset Manager has reset the Standby system.

Explanation The reset manager stores a set of IDs, each of which uniquely identifies a process on the system. A process was restarted but it could not be uniquely identified by its job ID. Because it cannot be determined whether the restarted process was being monitored by the reset manager, the standby system is being reset. This is probably due to a software fault on the system.

Recommended Action No action is required.

Error Message %RESETMGR-3-SYSMGR_JOBID_LOOKUP: Failed to get the job ID of the Reset Manger (IOS blob) from SysMgr

Explanation The reset manager was unable to get its job ID from the system manager. The reset manager cannot function without this information and will suspend any further initialization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RESETMGR-4

Error Message %RESETMGR-4-SYSMGR_PROCNAME_LOOKUP: Failed to lookup process name from SysMgr, job ID = %d

Explanation The reset manager was unable to get the name of the process with the specified job ID from the system manager. Although this is a system manager error, the system can continue to operate normally because the process name is used only for reference purposes.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RF Messages

This sections contains redundancy facility (RF) messages.

RF-3

Error Message %RF-3-CANNOT_SWITCH: Cannot switchover; the peer Route Processor (RP) is not available

Explanation Cannot initiate switchover. The peer RP is not available.

Recommended Action This is an informational message only. No action is required.

Error Message %RF-3-CANT_GET_VERSION: Cannot get version info from peer Route Processor (RP); the RP software is incompatible.

Explanation The standby RP cannot get version information from the peer RP. The likely cause is incompatible software.

Recommended Action Ensure that the same software image is running on both RPs.

Error Message %RF-3-FAILED_SET_RED_MODE: ACTIVE failed to set redundancy mode. STANDBY has selected mode but unable to get confirmation from ACTIVE.

Explanation Under normal conditions, the standby RP selects the redundancy mode and sends its decision to the active RP. The active RP uses it to determine the system mode and returns the final decision on the mode to the standby RP. This system message indicates that the exchange has failed, and the standby RP does not have the right redundancy mode to proceed.

Recommended Action Allow the standby RP to reset once. If the problem persists, verify that all modules are working properly.

Error Message %RF-3-NEGOTIATED_ROLE_MISMATCH: Negotiated Role mismatch; The Route Processor (RP) believes it should be ACTIVE while the System Processor (SP) believes the RP should be STANDBY... or vice versa.

Explanation The RP negotiates its role (active or standby) at boot time. If the other RP is running an image that does not contain role negotiation code, then the role that is negotiated may not be valid. When this occurs, the RP detecting a mismatch between the role specified by the SP and the role negotiated will be rebooted.

Recommended Action Ensure that the same software image is running on both RPs. Make sure that neither RP is running the bootloader image.

Error Message %RF-3-NON_HA_SWITCHOVER: The SP switchover was NOT stateful. To support SSO on the RP, the SP must be configured with HA enabled.

Explanation The switch processor switchover that occurred was not stateful. Stateful switchover (SSO) mode on the route processor requires the switch processor to run with high availability enabled to ensure that appropriate state is synchronized between the switch processors and that there is sufficient state information on the new active switch processor to support the switchover of the route processor while in stateful switchover mode. Because there is insufficient state to support a route processor switchover in stateful switchover mode, the recovery is to reset the route processor and reboot it.

Recommended Action Configure the SP to enable HA. If HA is enabled, it is possible that resource exhaustion (such as memory) might have caused this non-HA switchover. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF-3-NOTIF_TID: Notification timer extended for the wrong client, cur-client=%d, req-client=%d

Explanation The current redundancy facility (RF) client attempted to extend the RF notification timer using a client ID other than its own. This is an internal software error. The message text on the console or in the system log contains error details such as the current client ID number and the requested client ID number.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show redundancy history** commands and your pertinent troubleshooting logs.

Error Message %RF-3-PEER_RP_RELOAD: The peer Route Processor (RP) is being reset because [chars]

Explanation This message provides the reason that the peer RP reset. The peer RP resets in an attempt to recover from an indeterminate state.

Recommended Action If the condition persists after the reset, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will

supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF-3-VERSION_MISMATCH: Version Info mismatch; Not running same version of software on each Route Processor (RP). Cannot run in SSO mode; will go to RPR mode instead.

Explanation Each RP must be running the same version of software. The version check indicates that there is a version mismatch. As a result, the RPs cannot run in SSO (hot-standby) mode and operation will regress to RPR mode.

Recommended Action Ensure that both RPs are running the same software image.

Error Message %RF-3-WAKEUP_STANDBY_NOT_SEEN: Active-Standby RP Handshake Error. The Standby RP did not receive a WAKEUP_STANDBY message from the Active RP during the early initialization phase on the Standby RP.

Explanation As part of the early initialization phase, the standby RP requests that the active RP notify it when the active RP is ready to support the standby RP. The active RP has failed to wake the standby RP. The active RP may have failed during the standby RP's early initialization phase or some other error has prevented the active RP from completing this handshake.

Recommended Action The standby RP will be restarted. If the problem persists, restart the system.

RF-4

Error Message %RF-4-MEMORY_SIZE_MISMATCH: Memory Size mismatch: The redundant Route Processors have different memory configurations. To support the High Availability feature, it is recommended that both RPs have the same memory configurations.

Explanation To support the high availability feature, it is recommended that both redundant route processors have the same memory configuration.

Recommended Action Install the same amount of memory on both RPs.

RF-5

Error Message %RF-5-RF_RELOAD: %s. Reason: %s

Explanation The current redundancy facility (RF) has invoked a reload.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show redundancy history reload** commands and your pertinent troubleshooting logs.

Error Message %RF-5-RF_TERMINAL_STATE: Terminal state reached for (%s)

Explanation The current redundancy facility (RF) has reached a terminal state for the operating mode.

Recommended Action This is a notification message only. No action is required.

Error Message %RF-5-SEND_FAIL: RF client progression send failure for reason (%s)

Explanation The current redundancy facility (RF) failed to send a client progression to the standby client.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show redundancy history** commands and your pertinent troubleshooting logs.

RF-6

Error Message %RF-6-CONS_MSG: Console Message from [chars] RP: [chars]

Explanation This message is a console message from the peer RP.

Recommended Action This is an informational message only. No action is required.

Error Message %RF-6-NEGOTIATED_RED_MODE: Negotiated Redundancy MODE is [chars]

Explanation The negotiated redundancy mode may be either SSO or RPR.

Recommended Action This is an informational message only. No action is required.

Error Message %RF-6-STANDBY_READY: The Standby RP has reached HOT-STANDBY state and is now ready for stateful switchover.

Explanation The standby RP has reached the hot-standby state and is now ready to take over operation in the event that the active RP should fail.

Recommended Action No action is required.

RF-7

Error Message %RF-7-KPA_WARN: RF KPA messages have not been heard for [dec] seconds

Explanation RF keepalive messages have not been sent from the peer. This message is posted after every third KPA timer expiry.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RF_ISSU Messages

This sections contains redundancy facility (RF) in-service software upgrade (ISSU) messages.

RF_ISSU-3

Error Message %RF_ISSU-3-CAPENTRY_REG: RF Cap Entry ([dec]) for Entity ([dec])
Registration failed

Explanation A capability entry could not be registered for the RF ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu capability entries** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-CAPGROUP_REG: RF Cap Group ([dec]) for Entity ([dec])
Registration failed

Explanation A capability group could not be registered for the RF ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show capability groups** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-CAP_REG: RF cap reg failed: reason [dec]

Explanation The capabilities of the RF ISSU could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu capability arguments** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-CAPTTYPE_REG: RF Cap Type for Entity ([dec]) Registration failed

Explanation A capability type could not be registered for the RF ISSU.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu capability types** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-CLIENT_REG: RF Client ([dec]) Registration failed

Explanation The RF ISSU client could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu clients** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-CLIENT_REG_FAILED: RF ISSU client ([dec]) Client registration failed. [chars]

Explanation The RF ISSU client could not be registered during system initialization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu clients** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-ENTITY_REG: RF Entity ([dec]) Registration failed

Explanation The RF ISSU entity could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu entities** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-GET_BUFFER: RF ISSU session ([dec]) failed to get buffer

Explanation The RF ISSU failed to get a buffer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-MSG_DATAPTR: RF Client ([dec]) get msg dataptr failed.
Error = [dec]

Explanation The RF ISSU client could not obtain a message data pointer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-MSGGROUP_REG: RF Msg Group ([dec]) for Entity ([dec])
Registration failed

Explanation The message group for the RF ISSU could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu message groups** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-MSG_MTU: RF Client ([dec]) get msg mtu failed. Error = [dec]

Explanation The RF ISSU client could not obtain message size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-MSG_REG: RF msg reg failed: reason [dec]

Explanation Messages for the RF ISSU could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu message arguments** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-MSG_SEND: RF ISSU client for session ([dec]) failed to send message

Explanation The RF ISSU client could not send a negotiation message to a peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-MSGTYPE_REG: RF Msg Type for Entity ([dec]) Registration failed

Explanation The message type for the RF ISSU could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu message types** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-RF_MSG_NOT_OK: RF ISSU msg type ([dec]) is not ok

Explanation RF ISSU message type has not negotiated correctly.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show message types Client_ID** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-SESSION_REG: RF session for Entity ([dec]) Registration failed

Explanation The RF ISSU session could not be registered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-SESSION_UNREG: RF session ([dec]) Un-Registration failed

Explanation The RF ISSU session could not be unregistered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RFS Messages

This section contains remote file system messages.

RFS-3

Error Message %RFS-3-CAPENTRY_REG: RFS Cap Entry ([dec]) for Entity ([dec])
Registration failed

Explanation RFS ISSU cap entry registration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu capability entries** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-CAPGROUP_REG: RFS Cap Group ([dec]) for Entity ([dec])
Registration failed

Explanation RFS ISSU cap group registration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu capability groups** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-CAPTYPE_REG: RFS Cap Type for Entity ([dec]) Registration
failed

Explanation RFS ISSU cap type registration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu capability types** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-CLIENT_REG: RFS Client ([dec]) Registration failed

Explanation RFS ISSU client registration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu clients** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-CLIENT_SESSION_REG: RFS ISSU client shared msg session for entity ([dec]) registration failed

Explanation RFS ISSU client shared message session registration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-CLIENT_SESSION_UNREG: RFS session ([dec]) Un-Registration failed

Explanation RFS ISSU client session unregistration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-CREATE_ACTIVE_PORT: RFS create active port ([chars]) failed

Explanation RFS ISSU active port creation has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc port** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-CREATE_CLIENT_PORT: RFS create client port (%s) failed

Explanation The remote file system (RFS) ISSU client was unable to create a client port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show ipc port** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-CREATE_SERVER_PORT: RFS create server port (%s) failed

Explanation The RFS ISSU client was unable to create a server port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show ipc port** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-CREATE_STANDBY_PORT: RFS create standby port ([chars]) failed

Explanation RFS ISSU standby port creation has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc port** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-ENTITY_REG: RFS Entity ([dec]) Registration failed

Explanation RFS ISSU entity registration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu entities** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-IPC_GET_BUFFER: RFS issu ipc get buffer failed

Explanation RFS ISSU IPC get buffer has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-LOCATE_PORT: RFS locates port ([chars]) failed

Explanation RFS ISSU port location has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc port** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-MSGGROUP_REG: RFS Msg Group ([dec]) for Entity ([dec])
Registration failed

Explanation RFS ISSU message group registration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu message groups** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-MSG_MTU: RFS Client ([dec]) get msg mtu failed. Error = [dec]

Explanation RFS ISSU client get message MTU has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu fsm** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-MSG_RCV: RFS Client ([dec]) receive msg failed. Error = [dec]

Explanation RFS ISSU client receive message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-MSGTYPE_REG: RFS Msg Type for Entity ([dec]) Registration failed

Explanation RFS ISSU message type registration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu message types** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-MSG_XMIT: RFS Client ([dec]) send msg failed. Error = [dec]

Explanation RFS ISSU client send message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-NEGO_COMP: RFS nego is not compatible ([dec])

Explanation RFS ISSU start shared negotiation session has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-NEGO_SESSION_REG: RFS nego session for Entity ([dec])
Registration failed

Explanation RFS ISSU shared negotiation session registration has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-NEGO_SESSION_UNREG: RFS session ([dec]) Un-Registration failed

Explanation RFS ISSU shared negotiation session unregistration failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-OPEN_ACTIVE_PORT: RFS open active port ([chars]) failed

Explanation The RFS ISSU client was unable to open an active port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc port** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-OPEN_CLIENT_PORT: RFS open client port (%s) failed

Explanation The RFS ISSU client was unable to open a client port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show ipc port** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-OPEN_SERVER_PORT: RFS open server port (%s) failed

Explanation The RFS ISSU client was unable to open a server port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show ipc port** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-OPEN_STANDBY_PORT: RFS open standby port ([chars]) failed

Explanation The RFS ISSU client was unable to open a standby port.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-RECEIVE_NEGO_FAILED: RFS receive nego message ([dec]) failed

Explanation RFS ISSU receive negotiation message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-RECEIVE_NEGO_NOT_DONE: RFS receive nego message is not done ([dec])

Explanation RFS ISSU receive negotiation message is not done.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-REG_PORT: RFS reg port ([dec]) failed

Explanation RFS ISSU register port has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show ipc port** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-RFS_BOOL_CREATE_ERR: %s.

Explanation The RFS redundancy facility (RF) client detected an error when creating a watched boolean.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-RFS_ISSU_NEGO_PROCESS: RFS create rfs_issu_start_port watch boolean failed

Explanation RFS ISSU create negotiation process has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-RFS_ISSU_START_PORT: RFS create rfs_issu_start_port watch boolean failed

Explanation The RFS ISSU client was unable to create anrfs_issu_start_port watched boolean.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-RFS_ISSU_START_SESSION: RFS create rfs_issu_start_session watch boolean failed

Explanation The RFS ISSU client was unable to create anrfs_issu_start_session watched boolean.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-RFS_RF_PROG_ERR: %s %d.

Explanation The RFS RF client detected an error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-RFS_RF_PROG_NOT_SENT_ERR: %s.

Explanation The RFS RF client detected an error when sending a client progression.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-SEND_NEGO_MESSAGE: RFS send nego message ([dec]) failed

Explanation RFS ISSU send negotiation message has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-START_NEGO_SESSION: RFS start shared nego session ([dec]) failed: [dec]

Explanation RFS ISSU start shared negotiation session has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu sessions** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RFS-3-UNREG_ENTITY: RFS ISSU Client unreg entity failed.

Explanation The RFS ISSU client unregister entity has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Enter the **show issu** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RFS_ISSU Messages

This section contains remote file system in-service software upgrade (ISSU) messages.

RFS_ISSU-3

Error Message %RF_ISSU-3-INVALID_SESSION: RF ISSU client does not have a valid registered session.

Explanation The redundancy facility (RF) ISSU client does not have a valid registered session.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, **show issu capability entries**, **show issu session**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-RF_CAP_INVALID_SIZE: RF ISSU client capability list is empty.

Explanation The RF ISSU capability list is empty, which is an invalid condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu capability entries** commands and your pertinent troubleshooting logs.

Error Message %RF_ISSU-3-RF_CAP_RESULT_INCOMP: RF ISSU client capability exchange result incompatible.

Explanation Based on the results of the capability exchange, the RF ISSU client is not compatible with the peer.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging**, **show tech-support**, **show logging**, and **show issu negotiated capability** commands and your pertinent troubleshooting logs.

RITE Messages

This sections contains IP traffic export messages.

RITE-5

Error Message %RITE-5-ACTIVATE: Activated IP traffic export on interface [chars]

Explanation IP traffic export has been enabled on the specified interface.

Recommended Action No action is required.

Error Message %RITE-5-DEACTIVATE: Deactivated IP traffic export on interface [chars]

Explanation IP traffic export has been disabled on the specified interface.

Recommended Action No action is required.

Error Message %RITE-5-MODIFIED: Changed IP traffic export outbound interface from [chars] to [chars]

Explanation The outbound interface for IP traffic export has been changed.

Recommended Action No action is required.

RMON Messages

This section contains Remote Monitoring (RMON) messages.

RMON-5

Error Message %RMON-5-HCFALLINGTRAP: Falling trap is generated because the value of %s has fallen below the falling-threshold hc value %llu

Explanation A falling trap was generated. The value of the specified MIB object fell below the falling threshold value as configured by the **rmon hc-alarms** command for the specified object.

Recommended Action Take the appropriate action on the specified MIB object.

Error Message %RMON-5-HCRISINGTRAP: Rising trap is generated because the value of %s exceeded the rising-threshold hc value %llu

Explanation A rising trap was generated. The value of the specified MIB object exceeded the rising threshold value as configured by the **rmon hc-alarms** command for the specified object.

Recommended Action Take the appropriate action on the specified MIB object.

ROIIBACK-ISSU Messages

ROLLBACK-ISSU-2

Error Message %ROLLBACK_ISSU-2-GET_BUFFER: Rollback ISSU client failed to get buffer for message. Error: [dec] ([chars])

Explanation The Rollback ISSU client failed to get buffer space for building a negotiation message. A negotiation message cannot be sent to the standby device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Issue the **show logging and show checkpoint client** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance,

open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ROLLBACK_ISSU-2-INIT: Rollback ISSU client initialization failed to [chars]. Error: [dec] ([chars])

Explanation The Rollback ISSU client could not be initialized. This initialization failure must be addressed before in-service software upgrade or downgrade can be performed successfully. If you do not address this failure, there will be downtime during software upgrade or downgrade.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ROLLBACK_ISSU-2-SEND_NEGO_FAILED: Rollback ISSU client failed to send negotiation message. Error: [dec] ([chars])

Explanation The Rollback ISSU client failed to send a session negotiation message to the peer device. If a problem occurs with the ISSU session negotiation, the standby device cannot be brought up properly.

Recommended Action Issue the **show logging and show checkpoint client** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ROLLBACK_ISSU-2-SESSION_NEGO_FAIL_START: Failed to start Rollback ISSU session negotiation. Error: [dec] ([chars])

Explanation The Rollback ISSU client failed to start session negotiation. If a problem occurs with the ISSU session start, the standby device cannot be brought up properly.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ROLLBACK_ISSU-2-SESSION_REGISTRY: Rollback ISSU client failed to register session information. Error: [dec] ([chars])

Explanation The Rollback ISSU client failed to register session information. If a problem occurs with the ISSU session registration, the standby device cannot be brought up properly.

Recommended Action Issue the **show issu capability entries and show issu session and show issu negotiated capability** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

ROLLBACK-ISSU-3

Error Message %ROLLBACK_ISSU-3-INVALID_SESSION: Rollback ISSU client does not have a valid registered session.

Explanation The Rollback ISSU client does not have a valid registered session.

Recommended Action Issue the **show issu capability entries and show issu session and show issu negotiated capability** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ROLLBACK_ISSU-3-MSG_NOT_OK: Rollback ISSU client 'Message Type [dec]' is not compatible

Explanation The Rollback ISSU client received an incompatible message from the peer device. The message cannot be processed.

Recommended Action Issue the **show issu message group and show issu session and show issu negotiated version** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ROLLBACK_ISSU-3-MSG_SIZE: Rollback ISSU client failed to get the MTU for Message Type [dec].Error: [dec] ([chars])

Explanation The Rollback ISSU client failed to calculate the MTU for the specified message. The Rollback ISSU client is not able to send the message to the standby device.

Recommended Action Issue the **show issu message group** and **show issu session** and **show issu negotiated version** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ROLLBACK_ISSU-3-SESSION_UNREGISTRY: Rollback ISSU client failed to unregister session information. Error: [dec] ([chars])

Explanation The Rollback ISSU client failed to unregister session information.

Recommended Action Issue the **show issu capability entries** and **show issu session** and **show issu negotiated capability** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %ROLLBACK_ISSU-3-TRANSFORM_FAIL: Rollback ISSU client [chars] transform failed for 'Message Type [dec]'. Error: [dec] ([chars])

Explanation The Rollback ISSU client could not transform the specified message type. If the transmit transformation failed, the checkpoint message was not sent to the standby device. If the receive transformation failed, the checkpoint message was not applied on the standby device. In both cases, the Rollback state between the active device and the standby device is not identical.

Recommended Action Issue the **show issu session** and **show issu negotiated version** command to gather data that may help identify the nature of the error. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

ROUTEMAP Messages

This section contains route map messages.

ROUTEMAP-4

Error Message %ROUTEMAP-4-BADTRACKOBJECTTYPE: can't track this type of object

Explanation Route maps only support STATE type track objects. This object is not a STATE object.

Recommended Action Reconfigure the track object to make it a STATE object.

RPC Messages

This section contains Remote Procedure Call (RPC) messages.

RPC-2

Error Message %RPC-2-6: Recovered from RPC send failure for request [chars]. Resending request.

Explanation A communication error occurred during an RPC request. RPC will retry.

Recommended Action This is an informational message only. No action is required.

Error Message %RPC-2-CORE_SAT_RPC_FAIL: RPC between Core and Remote Switch - [chars] failed (non-fatal)Expected when VSL goes down

Explanation A nonfatal communication error occurred during an RPC request between the core and a remote switch or vice versa. This error message is not considered a failure when the virtual switch link (VSL) goes down.

Recommended Action No action is required.

Error Message %RPC-2-FAILED: Failed to send RPC request [chars] (fatal)

Explanation A fatal communication error occurred during an RPC request.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RPC-2-FAILED_RETRY: Failed to send RPC request [chars] (will try again)

Explanation A communication error occurred during an RPC request. The system will attempt the RPC request again.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RPC-2-FAILED_USERHANDLE: Failed to send RPC request [chars]

Explanation A communication error occurred during an RPC request.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RPC-2-RETRY: Recovered from RPC send failure for request [chars]. Resending request.

Explanation A communication error occurred during an RPC request.

Recommended Action The RPC will retry the request. If the message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RPF Messages

This section contains multicast Reverse Path Forwarding (RPF) messages.

RPF-3

Error Message %RPF-3-RTAVLDELETE: Error deleting an rpf entry from the multicast rpf tree

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RPF-3-RTAVLINSERT: Error inserting a new rpf entry into the multicast rpf tree

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RPF-4

Error Message %RPF-4-AVLDELETE: Error deleting an rpf entry from the multicast rpf tree

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RPF-4-AVLINSERT: Error inserting a new rpf entry into the multicast rpf tree

Explanation An internal software error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RPF-4-SNMP_RADIX_ERR: Failed to [chars] snmp node [chars] snmp radix tree for multicast group (*, [IP_address]).

Explanation An error occurred while adding or deleting snmp node in snmp radix tree when mroute is created or deleted.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

RP_MLP Messages

This section contains route processor Multilink Point-to-Point Protocol (RP_MLP) messages.

RP_MLP-3

Error Message %RP_MLP-3-ADJ_FAIL: Adjacency walk for [chars] failed

Explanation An adjacency update for the specified multilink interface failed.

Recommended Action Reset the multilink interface by entering the **shutdown** command followed by the **no shutdown** command on the interface. If traffic does not resume, collect the output of the **show adjacency internal** and **show cef interface internal** commands. Copy the message exactly as it

appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RP_MLP-3-INCOMPATIBLELINK: The current config cannot be supported as link([chars]) [chars] for bundle ([chars])

Explanation When using multilink, the following restrictions must be met:

- All the links should be from the same port.
- Non-channelized T3 interfaces are not supported on multilink.
- Any added link should be compatible with the existing links in the bundle.
- All the links should be distributed.

Recommended Action Modify the configuration so that the restrictions are not violated.

Error Message %RP_MLP-3-UNSUPPORTEDCONFIG: The current config cannot be supported as [chars] for [chars]

Explanation When using multilink on hardware-assisted SPAs, the maximum number of links in the bundle and number of bundles should not exceed the maximum permissible by device. Refer to the product documentation for restrictions.

Recommended Action Modify the configuration so that it does not violate the restrictions.

RP_MLP-4

Error Message %RP_MLP-4-DLFIONELINKSUPPORT: Only ONE link should be configured for dLFI bundle!!

Explanation The system attempted to configure more than one link for the Distributed Link Fragmentation and Interleaving (dLFI) bundle interface. The dLFIoFR and the dLFIoATM do not support configuring more than one link.

Recommended Action No action is required.

RP_MLP-5

Error Message %RP_MLP-5-SPAWARNING: Feature support switching to LC based software for [chars] as [chars]

Explanation A link was added to the bundle, but it is not on the same bay as other member links of the bundle. The specified link that is not on the same bay has become active, and the bundle has been switched to line card-based software support instead of the hardware mode that is supported on FREEDM.

Recommended Action When a link is added to a bundle, ensure that it is on the same bay as the other member links of the bundle, in order to have the MLP bundle in hardware mode supported on FREEDM.

RSP Messages

This section contains Route Switch Processor (RSP) messages.

RSP-3

Error Message %RSP-3-NORELOAD: reload command not allowed on standby RSP

Explanation The **reload** command in privileged EXEC mode is not allowed on the standby RSP.

Recommended Action Enter the **slave reload** command in privileged EXEC mode to reload the standby RSP.

Error Message %RSP-3-PA_INIT: Malloc to [chars] failed for slot [dec] bay [dec]

Explanation The information structure for the port adapter could not be created. The interfaces on the specified port adapter might no longer be functional. A possible reason for this is a memory allocation failure involving the port adapter. This can occur as a result of insufficient hardware memory or a memory leak.

Recommended Action Confirm that the recommended amount of memory is installed for the platform. If memory is adequate, obtain the output of the **show process memory** command over time to determine the process using increased memory. As an immediate possible solution, attempt to reseal the line card. If this condition persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RSP-4

Error Message %RSP-4-CRASHINFO: Error saving crashinfo for slot [dec]. Reason: [chars]

Explanation A VIP crash information file has not been saved due to the indicated reason.

Recommended Action If the reason indicates Out of space, the bootflash may not have sufficient memory to save the crashinfo file. Otherwise, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RSP-6

Error Message %RSP-6-TXSTUCK: Txacc of Interface [chars] is at [dec]% of its txlimit

Explanation The specified interface has a low TXACC value. This might be a transient condition and might be harmless if it occurs during periods of high packet traffic. If this condition is detected more than once during periods of relatively moderate traffic, it could indicate a problem. Distributed packet switching might be disrupted as a result of this condition.

Recommended Action If the message recurs during periods of relatively moderate traffic, this might indicate a disruption in distributed packet switching. If such a disruption occurs, enter the **microcode reload** command to recover. Open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

RSVP Messages

This section contains RSVP protocol messages.

RSVP-1

Error Message %RSVP-1-RSVP_AUTH_NO_KEYS_LEFT: No valid keys left for [IP_address]

Explanation The router attempted to use a key in an RSVP key chain but discovered that all the keys in the chain have expired and no other per-neighbor or per-interface keys are available for the specified neighbor. The router will continue to use the last key in the chain rather than revert to an unauthenticated condition. However, the specified neighbor router may start discarding RSVP messages as a result, and reservations with that neighbor may eventually time out.

Recommended Action Update the key chain by updating the text and expiration times for the expired keys.

RSVP-2

Error Message %RSVP-2-RSVP_AUTH_KEY_CHAIN_EXPIRED: All the keys in chain [chars] have expired - please update the key chain now

Explanation The router attempted to use a key in an RSVP key chain but discovered that all the keys in the chain have expired. The router will attempt to find another suitable key. If no other suitable per-neighbor key can be found, the router will attempt to use key (chain) configured for the interface over which the authenticated RSVP message is being sent or received.

Recommended Action Update the key chain by updating the text and expiration time(s) for the expired key(s).

RSVP-3

Error Message %RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_COOKIE: [chars] message from [IP_address] discarded - challenge failed for key ID [chars]

Explanation The router sent an RSVP message to challenge the untrusted source to compute a secure hash on a random piece of data and return the hash with the same data, but the source did not return the expected data. RSVP discarded the response because the untrusted source may be (unsuccessfully) attempting an RSVP challenge response replay attack.

Recommended Action If you can verify that the source is trusted, it is possible that the source has malfunctioned; in this case, copy the error message exactly as it appears on the console or in the system log, enter the **show tech-support rsvp** command to gather data that may help identify the cause of the error, and send this information to your Cisco technical support representative. Otherwise, try to find and disable the untrusted source.

Error Message RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_DIGEST: [chars] message from [IP_address] discarded - incorrect message digest

Explanation The router received an RSVP message that contained a different secure hash from the one computed by the router. RSVP discarded the message because the message may have come from an untrusted source.

Recommended Action Check the configuration on the router and the sending system to make sure that they are using the correct security key and secure hash algorithm.

Error Message %RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_DUP: [chars] message from [IP_address] discarded - authentication seq #[int] is a duplicate

Explanation The router received an RSVP message with an authentication sequence number that has already been seen. RSVP discarded the message because an untrusted source may be (unsuccessfully) attempting an RSVP message replay attack.

Recommended Action If you can verify that the source is trusted, it is possible that the source has rebooted and its clock has gone backward in time; in this case, the source should be configured to synchronize its clock with an NTP server. Otherwise, the sender might be an untrusted source (unsuccessfully) attempting an RSVP message replay attack. Try to locate and disable the untrusted source.

Error Message %RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_NO_SA: [chars] message from [IP_address] discarded: no security association for [IP_address] - no RSVP security key configured or no memory left.

Explanation The router received an RSVP message that contained a secure hash but dropped the message because the router was not able to create a security association for the sending system.

Recommended Action Check the configuration on the router to make sure that RSVP has access to a security key for the sending system. If such a key is configured, then check to see if the router has run out of memory.

Error Message %RSVP-3-BAD_RSVP_MSG_RCVD_AUTH_WIN: [chars] message from [IP_address] discarded - seq #[int] outside authentication window

Explanation The router received an RSVP message whose authentication sequence number is less than the lower limit of the out-of-order window. RSVP discarded the message because an untrusted source may be (unsuccessfully) attempting an RSVP message replay attack.

Recommended Action It is possible that a trusted source is sending a burst of reordered RSVP messages that is too large for the authentication window size. If you can verify that the source is trusted and its messages are being sent in large reordered bursts, use the **ip rsvp authentication window-size** command to increase the window size on the receiving router. It is also possible that a trusted source has rebooted and its clock has gone backward in time; in this case, the source should be configured to synchronize its clock with an NTP server. Otherwise, the sender could be an untrusted source (unsuccessfully) attempting an RSVP message replay attack; try to find and disable the untrusted source.

Error Message %RSVP-3-RSVP_MFI_RECOVERY: RSVP calculated Recovery Time is longer than TE Rewrite Hold-Time registered with LSD. Some LSPs may not be recovered.

Explanation Traffic engineering (TE) registered a maximum cutover time with the label switching database (LSD) that is less than the time it may actually take to recover all LSPs. As a result, more than usual traffic loss may occur on some LSPs during recovery.

Recommended Action Make note of the number of checkpointed LSPs in the RSVP HA database by entering the **show ip rsvp high-availability database internal** command. This number likely exceeds the hard-defined limit of the number of recoverable LSPs. Provide this information to your Cisco technical support representative.

Error Message %RSVP-3-RSVP_MSG_AUTH_CHALLENGE_TIMEOUT: No response to challenge issued to [IP_address] for key ID [chars]

Explanation The router sent an RSVP message to challenge the untrusted source to compute a secure hash on a random piece of data and return the hash with the same data, but the source did not reply. The source may have crashed or lost its network connection. However, it is also possible that the source was (unsuccessfully) attempting to replay an RSVP message before the challenge and gave up when it saw the challenge from the router.

Recommended Action If you can verify that the source is trusted, try to determine if it has crashed or lost its network connection, and then restore network connectivity to it. If the source repeatedly crashes when challenged, a temporary workaround might be to disable challenges on the router by entering the **no ip rsvp authentication challenge** command until the problem on the source is resolved. Otherwise, assume the source is untrusted. Try to locate and disable it.

Error Message %RSVP-3-RSVP_MSG_AUTH_TYPE_MISMATCH: [chars] message from [IP_address] discarded - authentication algorithm mismatch

Explanation The router received an RSVP message from a source that required authentication but the received message was using the wrong authentication algorithm.

Recommended Action Enter the **show ip rsvp authentication detail source** command on the router to display the expected algorithm type. Locate the source and change its configuration to match.

RSVP-4

Error Message %RSVP-4-RSVP_AUTH_DUPLICATE_KEY_ID: Key chains [chars] and [chars] contain duplicate key ID [int]

Explanation An attempt is being made to add a new key identifier to a key chain in the router configuration but RSVP detected that this identifier is found in another key chain already assigned to RSVP. Because key identifiers must be unique across all the key chains used by RSVP, RSVP will not use the keys with this identifier in all such key chains. This could cause RSVP authentication to fail in some cases.

Recommended Action Update the listed key chain(s) so they use different key identifiers.

RSVP-5

Error Message %RSVP-5-RSVP_AUTH_KEY_ACL_CHANGE: Key chain [chars] [chars] for [IP_address] because ACL "[chars]" [chars]

Explanation The ACL specified in the message text associates the key chain specified in the message text with a set of RSVP neighbors. RSVP uses the specified key chain to authenticate each RSVP message exchanged with that set of RSVP neighbors after the association is configured. Subsequently, the specified ACL has been reconfigured such that the key chain association is no longer valid for one or more RSVP neighbors in the set. This causes RSVP to search the configuration for another suitable key chain to use with those neighbors. If no such key chain is found, RSVP will no longer be able to provide authentication for messages exchanged with those RSVP neighbors. This causes RSVP to discard RSVP messages from that set of neighbors. Because this may ultimately lead to loss of RSVP functionality with those neighbors, RSVP generates this system message. This system message may also be generated if the ACL is subsequently changed so that it reassociates RSVP neighbors with the specified key chain. If RSVP is not using another key chain for the set of RSVP neighbors specified by the ACL, RSVP will begin using the specified key chain to exchange authenticated RSVP messages with that set of RSVP neighbors, potentially restoring RSVP functionality with those neighbors.

Recommended Action If the ACL change unexpectedly caused authentication to be disabled or enabled for one or more RSVP neighbors, undo the ACL change so that RSVP authentication is not impacted.

Error Message %RSVP-5-RSVP_AUTH_ONE_KEY_EXPIRED: Key (ID) [int] in chain [chars] has expired

Explanation The router has detected that one key in a RSVP key chain has expired and that RSVP has switched to the next unexpired key in that chain.

Recommended Action Update the key chain by changing the text and expiration time(s) for the expired key.

RSVP_HA Messages

This section contains RSVP high availability (HA) protocol messages.

RSVP_HA-3

Error Message %RSVP_HA-3-CF_REGISTER_FAILED: Failed to register with CF

Explanation The system may be low on memory.

Recommended Action Verify system memory availability. Deconfigure graceful restart full mode and configure it again. This will attempt to restart the RSVP HA process and reregister with compact flash (CF).

Error Message %RSVP_HA-3-CLI_ADD_FAILED: Failed to add RSVP HA to CLI

Explanation The system may be low on memory.

Recommended Action Verify system memory availability. Deconfigure graceful restart full mode and configure it again. This will attempt to restart the RSVP HA process and reregister with compact flash (CF).

Error Message %RSVP_HA-3-DB_INIT_FAILED: Database init failed

Explanation The system may be low on memory.

Recommended Action Verify system memory availability. Deconfigure graceful restart full mode and configure it again. This will attempt to restart the RSVP HA process and reregister with compact flash (CF).

Error Message %RSVP_HA-3-ENTRY_MOVE_FAILED: Failed to move a database entry to [chars] tree

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RSVP_HA-3-ISSU_INIT_FAILED: In Service Software Upgrade (ISSU) Init failed

Explanation The system may be low on memory.

Recommended Action Verify system memory availability. Deconfigure graceful restart full mode and configure it again. This will attempt to restart the RSVP HA process and reregister with compact flash (CF).

Error Message %RSVP_HA-3-ITEM_SIZE_TOO_BIG: Item size ([int]) bigger than default CF buffer ([int])

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance,

open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RSVP_HA-3-MAIN_INIT_FAILED: Main init failed

Explanation The system may be low on memory.

Recommended Action Verify system memory availability. Deconfigure graceful restart full mode and configure it again. This will attempt to restart the RSVP HA process and reregister with compact flash (CF).

Error Message %RSVP_HA-3-MSG_MGR_INIT_FAILED: Message Manager init failed

Explanation The system may be low on memory.

Recommended Action Verify system memory availability. Deconfigure graceful restart full mode and configure it again. This will attempt to restart the RSVP HA process and reregister with compact flash (CF).

Error Message %RSVP_HA-3-PROCESS_CREATE_FAILED: Failed to create RSVP HA process

Explanation The system may be low on memory.

Recommended Action Verify system memory availability. Deconfigure graceful restart full mode and configure it again. This will attempt to restart the RSVP HA process.

Error Message %RSVP_HA-3-PROCESS_KILL: Killing RSVP HA process

Explanation The RSVP HA process is terminating.

Recommended Action No action is required.

Error Message %RSVP_HA-3-RF_REGISTER_FAILED: Failed to register with RF

Explanation The system may be low on memory.

Recommended Action Verify system memory availability. Deconfigure graceful restart full mode and configure it again. This will attempt to restart the RSVP HA process and reregister with compact flash (CF).

Error Message %RSVP_HA-3-RF_UNREGISTER_FAILED: Failed to unregister with RF

Explanation The RSVP HA client may not have registered with RF.

Recommended Action No action is required.

RTT Messages

This section contains round-trip time monitor messages.

RTT-3

Error Message %RTT-3-PathSetupFailed: %RTR Probe [int]: Error in setting current Path. Probe will be stopped

Explanation An internal software error has occurred.

Recommended Action Reschedule the probe operation that was stopped. Copy the message exactly as it appears on the console or in the system log. Enter the **show rtr configuration** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RTT-3-SAAMPLS: IP SLA Monitor([dec]): SAA MPLS [chars] Probe [chars] [chars] for destination-address [IP_address] lsp-selector [IP_address]

Explanation This informational message logs violations in the Service Assurance Agent probes. This message appears after the **rtr logging trap** command has been entered.

Recommended Action If this message is not necessary, enter the **no rtr logging trap** command to disable logging. Otherwise, no action is required.

Error Message %RTT-3-SANEGATIVEVALUE: IP SLA Monitor([dec]): Negative Value for [chars]

Explanation The IP SLA monitor statistics generated an error message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RTT-3-SAANOPROCESS: IP SLA Monitor: Cannot create a new process

Explanation The IP SLA monitor is unable to start a new process, and may not be running.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration.

Error Message %RTT-3-SAAPROBENOTFOUND: IP SLA Monitor: Error deleting the probe

Explanation A deletion attempt was performed on a probe that does not exist.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RTT-3-SAARESPWINITFAIL: IP SLAs responder initialization failed

Explanation The IP Service Level Agreement (IP SLA) responder initialization process was unable to initialize the timer wheel. As a result, the IP SLA probes on other routers for which this router acts as responder will not work.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RTT-3-SAATWINITFAIL: IP SLAs: Generic Timer wheel timer functionality failed to initialize

Explanation IP SLAs could not initialize the timer wheel.

Recommended Action Search for resolved software issues using the Bug Toolkit at Active

Explanation This message is generated only when SGBP errors or events debugging is enabled. This indicates that a link to another SGBP member has completed the interactions to set it up and is now entering the active state.

Recommended Action No action is required.

RTT-4

Error Message %RTT-4-DuplicateEvent: IP SLA Monitor [dec]: Duplicate event received.
Event number [dec]

Explanation The IP SLA monitor process has received a duplicate event.

Recommended Action This is only a warning message. If this message recurs, copy the message exactly as it appears on the console or in the system log. Enter the **show rtr configuration** command to gather data that may help identify the cause of the error. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered along with information about the application that is configuring and polling the Service Assurance Agent probes. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %RTT-4-OPER_CLOSE: condition %s, entry number = %d

Explanation This message displays connection loss conditions in the IP Service Level Agreement (IP SLA) operations. This message is enabled when the **ip sla monitor logging trap** command is entered.

Recommended Action Ensure that the destination for the IP SLA operation is reachable and that the IP SLA responder operation is configured on the destination. To disable these messages for IP SLA operations, enter the **no ip sla monitor logging trap** command.

Error Message %RTT-4-OPER_TIMEOUT: condition %s, entry number = %d

Explanation The timeout condition is displayed for the IP SLA operations. This message is enabled when the **ip sla monitor logging trap** command is entered.

Recommended Action Ensure that the destination for the IP SLA operation is reachable. To disable these messages for IP SLA operations, enter the **no ip sla monitor logging trap** command.

Error Message %RTT-4-SAACLOCKNOTSET: IP SLA Monitor Probe(s) could not be scheduled because clock is not set.

Explanation One or more IP SLA monitor probes could not be scheduled because the system clock is not set.

Recommended Action Ensure that the system clock is functional by using Network Time Protocol or another mechanism.

Error Message %RTT-4-SAAGRPSCHEDCONFIGFAIL: Group Schedule Entry [dec]: [chars]

Explanation The probes could not be group scheduled. Either the configured starting time has already occurred, or the starting time is invalid.

Recommended Action Reschedule the group scheduling entry with a valid start time.

Error Message %RTT-4-SAASCHEDCONFIGFAIL: IP SLA Monitor Probe [dec]: [chars]

Explanation The IP SLA Monitor probe could not be scheduled. Either the configured starting time has already occurred, or the starting time is invalid.

Recommended Action Reschedule the failed probe with a valid start time.

RTT-6

Error Message %RTT-6-SAATHRESHOLD: IP SLA Monitor([dec]): Threshold [chars] for [chars]

Explanation This informational message logs threshold violations in the Service Assurance Agent probes. This messages appears after the **rtr logging trap** command has been entered.

Recommended Action If this message is not necessary, enter the **no rtr logging trap** command to disable logging. Otherwise, no action is required.

RUNCFGSYNC Messages

This section contains Auto-Running Configuration Synchronization (RUNCFGSYNC) messages.

RUNCFGSYNC-6

Error Message RUNCFGSYNC-6-HASRMSTATE: [chars]

Explanation HA single router mode has changed state. Additional details are provided in the error message text.

Recommended Action No action is required.

SASL Messages

This section contains Simple Authentication and Security Layer (SASL) messages.

SASL-2

Error Message %SASL-2-FORKFAIL: Cannot fork process [chars]

Explanation An attempt to fork a process has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SASL-2-INITFAIL: Initialization failed - [chars]

Explanation SASL component initialization failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SATVS_DNLD Messages

This section contains satellite switch virtual switch (VS) download messages.

SATVS_DNLD-3

Error Message %SATVS_DNLD-3-RS_BOOT_RDY_MEM_FAIL: Unable to allocate space for BOOT_READY msg

Explanation The remote switch failed to allocate memory for a BOOT READY message to the virtual switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying

information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-RS_BOOT_RDY_SEND_FAIL: Unable to send BOOT_READY message

Explanation The Remote Switch failed in sending a BOOT READY message to the Virtual Switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-RS_DNLD_BAD_EVENT: Got invalid event [hex]:[hex]

Explanation An invalid event was received.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-RS_DNLD_BAD_QUEUE_EVENT: Event on bad queue [hex]

Explanation An unknown message queue event was received.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-RS_DNLD_BAD_TIMER_EVENT: Invalid timer [hex]

Explanation An invalid event was received or the message queue was unknown.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-RS_DNLD_CREATE_PROC_FAIL: Failed to create image download process

Explanation Failed to create a message queue on the remote switch for downloading related messages from the virtual switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-RS_DNLD_CREATE_QUEUE_FAIL: Failed to created watched queue for download messages

Explanation Failed to create a message queue on the remote switch for downloading related messages from the virtual switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-RS_DNLD_FAILED: Failed to start download from the Virtual Switch ([chars])

Explanation The remote switch was unable to initiate a download from the virtual switch. This could be because of problems in the RSL.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-RS_DNLD_PROC_FAIL: Download rocess killed. So dropping dnld data

Explanation The download process is not running on the remote switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-RS_MSG_ENQUEUE_FAIL: Unable to enqueue message

Explanation Failed to enqueue a message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_BOOT_MSG_INVALID_SWITCH: Invalid switch_id (Internal) [dec] (switch number [dec])! Dropping BOOT_READY msg

Explanation An invalid BOOT RDY message was received at the virtual switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_BOOT_RDY_RESP_MEM_FAIL: Unable to allocate memory for BOOT_READY response for [chars] [dec]

Explanation The virtual switch failed to allocate memory to send a BOOT READY response message to the remote switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_BOOT_RDY_RESP_SEND_FAIL: Unable to send BOOT_READY response to [chars] [dec]

Explanation The virtual switch was unable to send a BOOT READY response message to the remote switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_BOOT_RDY_SCP_RESP_FAIL: scp_send_pak() returned 0 for BOOT_READY resp for [chars] [dec]

Explanation The virtual switch was unable to send a valid BOOT READY response message to the remote switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_CREATE_DNLD_INSTANCE_FAIL: Failed to create a download instance for [chars] [dec]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_CREATE_DNLD_PROC_FAIL: Failed to create a download process for [chars] [dec]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_DNLD_IMAGE_INFO_FAIL: Unable to get image info for [chars] [dec]

Explanation Failed to get image information for the remote switch from the bundled image.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_DNLD_IMAGE_VER_INFO_FAIL: Unable to get version for [chars] [dec]

Explanation Failed to get image version information for the remote switch from the bundled image.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_DNLD_UNKNOWN_RS: Unknown RS type [dec] for [chars] sup [dec]

Explanation An unknown type of hardware was detected on the remote switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_GET_DNLD_IMAGE_FAIL: Unable to get image for [chars]
[dec]

Explanation Failed to get image information to be downloaded to the remote switch from the internal database.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_GET_DNLD_INSTANCE_FAIL: Failed to get the download process instance for Remote Switch

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_GET_PSLOT_FAIL: Unable to get the physical slot for the Remote Switch in virtual slot [dec]

Explanation Failed to get physical slot for the remote switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_IMAGE_DNLD_FAIL: Image download of size ([dec]) failed for [chars] [dec]

Explanation The virtual switch failed to download the image to the remote switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_INVALID_BOOT_MSG: BOOT_READY message in ONLINE state for [chars] [dec]. NAKing

Explanation The virtual switch received an invalid BOOT RDY message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_RS_REGISTRY_ADD_FAIL: [chars] registry addition failed.

Explanation Failed to create registries during initialization.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_SET_DNLD_INSTANCE_FAIL: Failed to set the download process instance for [chars] [dec]

Explanation An internal error occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_DNLD-3-VS_VLSOT_ALLOC_FAIL: Unable to allocate vslot for [chars] [dec] slot [dec]

Explanation Failed to allocate a virtual slot to the remote switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SATVS_IBC Messages

This section contains satellite switch virtual switch (VS) interboard communications messages.

SATVS_IBC-3

Error Message %SATVS_IBC-3-VS_IBC_PVTPOOL_PAKALLOC_FAIL: Unable to allocate Pak from VS Inband Private buffer Pool: [chars] Allocating from Public Buffer Pool

Explanation Inband packet allocation could not be done from the virtual switch link (VSL) inband private buffer pool due to the reason stated.

Recommended Action No action is required.

Error Message %SATVS_IBC-3-VSL_DOWN_IP_DROP: VSL inactive - dropping cached IP-over-EoBC packet: (SA/DA:[hex]/[hex], eSA/eDA:[enet]/[enet])

Explanation The VSL is no longer active. The other virtual switch to which the VSL was attached had one or more IP-over-EoBC packets remaining in the cache after the VSL became inactive (down). The cached IP-over-EoBC packets are being dropped. This condition indicates normal system operation.

Recommended Action No action is required.

Error Message %SATVS_IBC-3-VSL_DOWN_SCP_DROP: VSL inactive - dropping cached SCP packet: (SA/DA:[hex]/[hex], SSAP/DSAP:[hex]/[hex], OP/SEQ:[hex]/[hex], SIG/INFO:[hex]/[hex], eSA:[enet])

Explanation The VSL is no longer active. The other virtual switch to which the VSL was attached had one or more SCP packets remaining in the cache after the VSL became inactive (down). The cached SCP packets are being dropped.

Recommended Action No action is required.

SATVS_IBC-5

Error Message %SATVS_IBC-5-VSL_DOWN_IPC_DROP: VSL inactive - dropping cached IPC packet: (SA/DA:[hex]/[hex], SEQ:[hex], Pak_pointer: [hex])

Explanation The VSL is no longer active. The other virtual switch to which the VSL was attached had one or more IPC packets remaining in the cache after the VSL became inactive (down). The cached IPC packets are being dropped.

Recommended Action This condition does not affect normal system processing. No action is required.

Error Message %SATVS_IBC-5-VSL_DOWN_SCP_DROP: VSL inactive - dropping cached SCP packet: (SA/DA:[hex]/[hex], SSAP/DSAP:[hex]/[hex], OP/SEQ:[hex]/[hex], SIG/INFO:[hex]/[hex], eSA:[enet])

Explanation The VSL is no longer active. The other virtual switch to which the VSL was attached had one or more SCP packets remaining in the cache after the VSL became inactive (down). The cached SCP packets are being dropped.

Recommended Action This condition does not affect normal system processing. No action is required.

SATVS_UL_MGMT Messages

This section contains satellite switch virtual switch (VS) messages.

SATVS_UL_MGMT-3

Error Message %SATVS_UL_MGMT-3-RS_DNLD_ABORT: Image download aborted because RSL went down

Explanation An ongoing remote switch image download was aborted because the remote switch link (RSL) went down. This condition can be caused by any of the following:

- The port channel forming the RSL was shutdown.
- All members of the port channel have been shutdown.
- The cables hooking to all members have been removed.
- The remote switch was deconfigured.
- The remote switch detected another virtual switch with a better priority value.

Recommended Action Check for the above conditions and resolve them. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-RS_HW_PROG_TIMEOUT: H/w programming timed out.

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-RS_INVALID_BNDL_EVENT: Bundle event on already bundled port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-RS_INVALID_BOOL_EVENT: Invalid boolean event [hex]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-RS_INVALID_EVENT: [chars]: Invalid event [hex]:[hex]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-RS_INVALID_UNBNDL_EVENT: Unbundle event on already unbundled port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-RS_INV_FAILED: Failed to send inventory data to Virtual Switch. Will keep trying

Explanation The remote switch failed to send inventory data to the virtual switch even though the RSL is up. It will keep trying forever.

Recommended Action Wait 10 minutes for the system to recover from this condition. If the system does not recover, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-RS_NO_PORT_BNDL_NUMBER: No bundle port number in RSL
-- SI set to BIT BUCKET

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-RS_NO_UPLINK: No uplink to master core -- SI set to BIT BUCKET

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_DEALLOC_VSLOT_MSG_FAIL: [chars] for VS UL dealloc vslot msg [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_DROP_INV_MSG: Dropping Inventory message from unknown Remote Switch number [dec] switch-id(Internal) [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_DUP_INV_MSG: NAKing duplicate inventory from Remote Switch number [dec] switch-id(Internal) [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_GET_PSLLOT_FAIL: Unable to get the physical slot of supervisor for [chars] [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_GET_SWITCH_NUMBER_FAIL: Unable to get switch number for switch-id(internal) [dec]

Explanation Failed to get switch number from internal switch ID. An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_ICC_REQ_FAIL: Unable to alloc memory for status update message for [chars] [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_ICC_RESP_FAIL: icc_get_resp_pak failed

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_ICC_RESP_UPLINK_STATUS_FAIL: icc_req_resp_pak to SP failed for [chars] [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_INVALID_BNDL_EVENT: Bundle event on already bundled port [chars] for switch number [dec] switch-id(Internal) [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_INVALID_UNBNDL_EVENT: Unbundle event on already unbundled port [chars] for switch number [dec] switch-id(Internal) [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_INV_FAILED: Failed to process inventory data for Remote Switch [dec]. Will remain OFFLINE

Explanation The virtual switch is unable to process the inventory data received from the remote switch even though the RSL is up. This switch will be held offline.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_INV_VER_MISMATCH: Versin of INVENTORY message mismatch. Forcing download to switch number [dec] switch-id(internal) [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_NO_INFO_EM_RECOVERY: No PM info on EM recovery for port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_NON_INV_MSG: Dropping non-INVENTORY message.

Explanation A non-inventory message was received from the remote switch.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_NON_RSL_EM_AGE: EM aging event on non-RSL port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_NO_SWIDB_EM_AGE: No swidb for EM aging event (gpId = [dec])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_NO_SWIDB_EM_RECOVERY: No swidb for EM recovery event (gpId = [dec])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_ADD_PORT_AGPORT_FAIL: Unable to add port [chars] to RSL.

Explanation A failure occurred while attempting to add the port to the RSL.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_ADD_TLV_FAIL: Too few bytes for [chars] TLV in PAgP (reqd. [dec], got [dec]) on port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_BAD_SUB_OPCODE: Dropping bad sub opcode ([hex]) from [chars] [dec]

Explanation An invalid message was received from the remote switch. The message could be corrupted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_BAD_VER_STR: Bad version string - inventory failed

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CF_CLIENT_ADD_FAIL: CF: Failed to create client (err_code = [hex])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CF_INVALID_SYNC: CF: TLV sync for unconfigured port ([chars])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CHKPT_INVALID_SYNC: CF: Received invalid sync type [hex]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CHKPT_MSG_FAIL: CF: Send FAIL status

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CHKPT_MSG_MEM_FAIL: CF: Unable to get chkpt buffer for sync type [hex] (retval [hex])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CHKPT_MSG_SEND_FAIL: CF: Unable to sync type [hex] to standby (retval [hex])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CLEAR_LTL_INDEX: Unable to clear LTL index [hex] (retval [hex])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CREATE_BOOL_FAIL: Failed to create watched boolean to monitor uplink comm up

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CREATE_PROC_FAIL: Failed to create the [chars] process

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_CREATE_QUEUE_FAIL: Failed to create watched queue for [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_ENQUEUE_FAIL: Unable to enqueue unsolicited message

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_GET_LTL_PORT_INDEX: Unable to get LTL index for port [chars] (retval [hex])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_GET_OID_FAIL: Failed to get OID - inventory failed

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_GET_UPLINK_INFO_FAIL: Failed to get uplink info for port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_ICC_REQ_FAIL: RP-SP sync: Unable to get memory for RP-SP sync type [hex]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_IGNORE_ICS_TLV: Ignore ICS TLV on non-uplink port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_IMAGE_NOT_FOUND: The system failed to find an image to download to Remote Switch [dec]. Will remain OFFLINE

Explanation The virtual switch failed to find an image for the remote switch. The remote switch will remain offline.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_IMAGE_NOT_FOUND_INV_RESP: Remote Switch image NOT found in Virtual Switch

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_ARGS: Both [chars] [dec] and idb for port ([chars]) specified

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_BOOL_EVENT: Invalid [chars] boolean event [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_EVENT: Invalid [chars] event [dec] : [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_ICS_TLV: Invalid ICS TLVs from port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_QUEUE_EVENT: Event on invalid [chars] queue [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_SW_ID: Invalid switch-id(Internal) [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_SWITCH_INFO: switch number [dec] has no switch_info

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_TIMER_ID: Invalid [chars] timer [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_TLV: Received [chars] TLV on non-uplink port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_TLV_RS: Received Remote Switch side UL mgmt TLV on Remote Switch on port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVALID_TLV_VS: Received Virtual Switch side UL mgmt TLV on Virtual Switch on port [chars] for [chars] [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INVENTORY_FAIL: Out of memory - inventory failed

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INV_RESP_FAIL: Failed sending INVENTORY response [chars]to [chars] [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INV_RESP_MEM_FAIL: Alloc failure for INVENTORY response to switch number [dec] switch-id(Internal) [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_INV_SEND_FAIL: Inventory:scp send failed - session [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RSL_BOUNCE: Remote switch [dec] OFFLINE since RSL bounced

Explanation The remote switch is now offline because the remote switch link (RSL) was bounced. This condition can be caused by any of the following:

- An SSO switchover resulted in failures on the RSL line cards that required the RSL to be bounced.
- The remote switch failed to respond to a sanity check request after an SSO switchover.

Recommended Action Check for the above conditions. Note that the first condition can occur when the switchover happens during a critical operation on the RSL line card. If this is not the case, or if the second condition occurred, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_LTL_ALLOC_FAIL: Dynamic allocation also failed for Remote Switch private indices (retval [hex])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_MAX_INV_OID_SIZE: OID too long ([dec]) - inventory failed

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_NAK_INV_RESP: Virtual Switch NAKed Inventory.

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_NON_RSL_CONN_INFO_REQ: Dropping non-RSL connect info request message

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_NON_UPLINK_PORT_RM: Attempt to remove port [chars] that is not an uplink of [chars] [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_NO_RS_INFO_INV_SYNC: CF: No Remote Switch info for inventory sync for [chars] [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_NO_RS_INFO_STATE_SYNC: CF: No Remote Switch info for state sync for [chars] [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_NOT_ENOUGH_PRIVATE_INDICES: Not enough private indices (reqd [dec], got [dec])

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_NULL_RP_SP_SYNC_MSG: RP-SP sync: Received NULL sync msg

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_NULL_SWIDB: Unable to get swidb for port [dec]: [dec].

Explanation The specified port has a null software interface descriptor block.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_PO_AGG_RS_OFFLINE: Port [chars] aggregated but switch-id(Internal) [dec] OFFLINE

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_PORT_ADD_REMOVE_ERR: Port ([chars]) add/remove from unconfigured [chars] [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_REGISTRY_ADD_FAIL: [chars] registry addition failed

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_SSO_EVENT: SSO switchover event in oir_online (slot [dec])-- not supported in Remote Switch

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_TLV_INVALID_METRIC: ICS TLV on [dec] with invalid metric on port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_RS_VSLOT_ALLOC_FAIL: Unable to alloc vslot for switch number [dec] switch-id(Internali) [dec] slot [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-3-VS_UNKNOWN_MSG: Unknown message type [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SATVS_UL_MGMT-4

Error Message %SATVS_UL_MGMT-4-RS_RS_MISMATCH: Virtual switch indicates software mismatch. Requesting download

Explanation Because the software running on the remote switch does not match that in the virtual switch, the proper image will be downloaded.

Recommended Action The image download is automatic. If it fails to complete, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-4-RS_RS_OFFLINE: Remote switch OFFLINE since RSL went down

Explanation The remote switch is now offline because the remote switch link (RSL) went down. This condition can be caused by any of the following:

- The port channel forming the RSL was shutdown.
- All members of the port channel have been shutdown.
- The cables hooking to all members have been removed.
- The remote switch was deconfigured.
- The remote switch detected another virtual switch with a better priority value.

Recommended Action Check for the above conditions and resolve them. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require

assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-4-VS_GET_PM_COOKIE_FAIL: RF: Unable to get cookie for port [chars]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-4-VS_RS_MAX_UPLINKS_CONF: Attempt to add port [chars] to [chars] [dec] that already has [dec] uplinks to it

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-4-VS_RS_MISMATCH: Remote switch [dec] software version mismatch. Forcing download

Explanation Because the software that is running on the remote switch does not match the software that is running on the virtual switch, matching software will be downloaded to the remote switch.

Recommended Action The image download is automatic. If it fails to complete, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-4-VS_RS_OFFLINE: Remote switch [dec] OFFLINE since RSL went down

Explanation The remote switch is now offline because the remote switch link (RSL) went down. This condition can be caused by any of the following:

- The port channel forming the RSL was shutdown.
- All members of the port channel have been shutdown.
- The cables hooking to all members have been removed.
- The remote switch was deconfigured.
- The remote switch detected another virtual switch with a better priority value.
- The remote switch was powered off.
- The remote switch rebooted.

Recommended Action Check for the above conditions and resolve them. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-4-VS_RS_REG_READ_FAIL: Unable to read register [hex] of port [chars]

Explanation The virtual switch failed to read the port adapter registers to verify that RSH is enabled on them.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-4-VS_RS_RS_CONF: Attempt to [chars]-configure [chars] [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-4-VS_RS_VLAN_BLOCK: Unable to [chars] VLANs [hex] - [hex] for [chars]

Explanation The system could not block or unblock a range of VLANs.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SATVS_UL_MGMT-5

Error Message %SATVS_UL_MGMT-5-RS_ICS_SWITCHOVER: ICS swtichover due to priority change on RSL member [chars] from Virtual Switch [enet]

Explanation The remote switch has detected a priority change at the virtual switches and will do an ICS swtichover to a new virtual switch. All RSL members, except the one from which the priority change was detected, will be bounced to allow faster detection of this situation at the virtual switches.

Recommended Action This is an informational message. No action is required.

Error Message %SATVS_UL_MGMT-5-RS_RSL_DOWN: RSL is DOWN

Explanation The remote switch link is down.

Recommended Action This is an informational message. No action is required.

Error Message %SATVS_UL_MGMT-5-RS_RSL_UP: RSL is UP

Explanation The remote switch link is up.

Recommended Action This is an informational message. No action is required.

Error Message %SATVS_UL_MGMT-5-RS_RSL_UP_INV: RSL is UP. Sending inventory data

Explanation The remote switch link is up. The remote switch is sending inventory data to the virtual switch.

Recommended Action This is an informational message. No action is required.

Error Message %SATVS_UL_MGMT-5-RS_RS_ONLINE: Remote switch is ONLINE. Exporting line card data to Virtual Switch

Explanation The remote switch is now online. The virtual switch will now look for line cards on the remote switch and try to bring them online.

Recommended Action This is an informational message. No action is required.

Error Message %SATVS_UL_MGMT-5-VS_RSL_UP: RSL to Remote Switch [dec] is UP. Waiting for inventory data

Explanation The remote switch link is up and waiting for inventory from the remote switch.

Recommended Action This is an informational message. No action is required.

Error Message %SATVS_UL_MGMT-5-VS_RS_ONLINE: Remote switch [dec] ONLINE. Looking for line cards on it

Explanation The remote switch is now online. The virtual switch will now look for line cards on the remote switch and try to bring them online.

Recommended Action This is an informational message. No action is required.

SATVS_UL_MGMT-6

Error Message %SATVS_UL_MGMT-6-RS_RSL_MEMBER_BOUNCE: RSL member [chars] bounced due to unbundle action

Explanation The RSL member was bounced after it became unbundled.

Recommended Action This is an informational message. No action is required.

Error Message %SATVS_UL_MGMT-6-RS_VS_RSL_BOUNCE: RSL members to the active Virtual Switch bounced as RSL went down

Explanation Because the remote switch link (RSL) is down, all members to the same virtual switch are bounced to allow the virtual switch to recognize the RSL down condition.

Recommended Action This is an informational message. No action is required.

Error Message %SATVS_UL_MGMT-6-VS_RS_INVALID_RP_SP_SYNC_TYPE: RP-SP sync: Received invalid sync type [hex]

Explanation An internal RP-SP synchronization error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_UL_MGMT-6-VS_RSL_MEMBER_BOUNCE: RSL member [chars] bounced due to unbundle action

Explanation The remote switch link (RSL) member was bounced after it became unbundled.

Recommended Action This is an informational message. No action is required.

SATVS_WARM_UPGRADE Messages

This section contains satellite switch virtual switch (VS) warm upgrade messages.

SATVS_WARM_UPGRADE-3

Error Message %SATVS_WARM_UPGRADE-3-VS_RS_BAD_SUB_OPCODE: (WUG) Dropping bad sub opcode ([hex]) from [chars] [dec]

Explanation Received an invalid message from the remote switch. The message could be corrupted.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_WARM_UPGRADE-3-VS_RS_INVALID_EVENT: Invalid [chars] event [dec]: [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_WARM_UPGRADE-3-VS_RS_INVALID_QUEUE_EVENT: Event on invalid [chars] queue [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_WARM_UPGRADE-3-VS_RS_WUG_RESP_FAIL: Failed sending WARM_UPGRADE response [chars]to [chars] [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_WARM_UPGRADE-3-VS_RS_WUG_RESP_MEM_FAIL: Alloc failure for WARM_UPGRADE_RESP to switch-id(Internal) [dec]

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_WARM_UPGRADE-3-VS_RS_WUG_SEND_FAIL: WUG start:scp send failed

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SATVS_WARM_UPGRADE-3-VS_RS_WUG_TEST: Test msg_satvs_warm_upgrade

Explanation An internal error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SBFIFO Messages

This section contains packet first-in, first-out (FIFO) MAC controller messages.

SBFIFO-1

Error Message %SBFIFO-1-BAD_IDB: Invalid Interface Descriptor Block

Explanation The driver failed to get the interface descriptor block (IDB).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %%SBFIFO-1-BAD_PARTICLE: Problem getting particle size

Explanation The driver was unable to obtain the particle size for this interface.

Recommended Action This is a software bug. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SBFIFO-1-BAD_POOL: Could not init buffer pools

Explanation The driver failed to obtain a pool of buffers from the Cisco IOS software.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SBFIFO-1-BAD_SB_NOMEM: [chars] - Cannot create IDB subblock due to insufficient memory

Explanation There was insufficient system memory to create the subblock.

Recommended Action The router requires more main memory. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SBFIFO-1-BAD_STRUCT: Could not initialize structure

Explanation The driver failed to initialize a structure.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SBFIFO-1-BAD_SUBBLOCK: [chars] - Could not install or use IDB subblock

Explanation An internal Cisco IOS error prevented the IDB subblock from being installed or used.

Recommended Action This is a software bug. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SBFIFO-1-IDBTYPE_UNK: Unknown IDBTYPE while starting driver

Explanation The IDBTYPE in the interface's instance structure is undefined for this driver.

Recommended Action This is a software bug. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SBFIFO-1-INITFAIL_NOMEM: [chars], initialization failed, no buffer memory

Explanation The Ethernet port initialization failed due to insufficient memory. The router requires more packet memory.

Recommended Action Consider a system upgrade. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SBFIFO-1-MODE_INVALID: Unknown or invalid chip mode (MII/TBI)

Explanation The driver subblock contains an invalid or undefined chip operating mode (MII or TBI mode).

Recommended Action This is a software bug. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SBFIFO-1-RESET: MAC-FIFO Still in Reset

Explanation An attempt was made to access the MAC-FIFO while it was in reset.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SBFIFO-3

Error Message %SBFIFO-3-ERRINT: [chars], error interrupt, mac_status = [hex]

Explanation The MAC-FIFO controller signalled an error condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SBFIFO-3-TOOBIG: [chars], packet too big ([dec]), from [enet]

Explanation The interface detects a packet larger than the value that is defined by MTU.

Recommended Action Determine the MTU setting of the other station. No action is required.

SCHED Messages

This section contains scheduler messages.

Error Message %SCHED-3-SEMLOCKED: [chars] attempted to lock a semaphore, already locked by itself

Explanation Some sections of code use semaphores to protect critical sections of software. An attempt was made to lock a semaphore that was already locked.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SCP Messages

This section contains Switch Module Configuration Protocol (SCP) messages.

SCP-1

Error Message %SCP-1-TASK_CREATE_FAIL: Failed to create SCP Generic Unsolicited message handler task

Explanation The system could not spawn a process that handles certain types of incoming SCP packets. This could be due to low memory on the switch, in which case other related errors may appear.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SCP-3

Error Message %SCP-3-ETHERTYPE_FAIL: EtherType configuration on module [dec], port [dec], failed with return code [hex]

Explanation The EtherType configuration failed on the specified port. This usually means that the module hardware does not support the EtherType configuration. The return error code provides more information.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SCP-3-SCP_HA_FAIL: SCP HA Seq Set - Module: [dec] failed [dec] times

Explanation The system did not receive the SCP HA sequence set acknowledgment.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SCP-4

Error Message %SCP-4-UNK_OPCODE: Received unknown unsolicited message from src_addr [hex], dest_addr [hex], length [dec], dsap [dec], ssap [dec], opcode [hex]

Explanation An unsupported SCP message was sent to this processor.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SCP-5

Error Message %SCP-5-ASYNC_WATERMARK: [dec] messages pending in [chars]

Explanation The specified number of SCP messages are waiting in the specified local queue. This condition might indicate that the SP is generating many messages, that the SP is too busy to send them, or that the module cannot process them at a faster pace. In most cases, this condition occurs when there is heavy control plane activity, such as the formation of Layer 2 trunks, the addition of new VLANs, or the toggling of links.

Recommended Action Determine if the SP is busy or if there is interface link toggling. If this condition persists for more than five minutes, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SCP-5-ENABLE: Module enabled [chars]

Explanation The supervisor engine sent a message to the router to indicate that a module has been enabled.

Recommended Action No action is required.

SDLC Messages

This section contains Synchronous Data Link Control (SDLC) protocol messages.

Error Message %SDLC-4-NOUA: [chars], addr [hex] received command [hex] in response to SNRM, expected UA

Explanation The router received a frame other than a UA in response to a SNRM.

Recommended Action Check the end station to see if the SNA stack is up and running.

SDM Messages

This section contains Security Device Manager (SDM) template messages.

SDM-6

Error Message %SDM-6-MISMATCH_ADVISE: [chars]

Explanation This message provides information regarding an SDM mismatch.

Recommended Action No action is required.

SEC_LOGIN Messages

This section contains Secure Login messages.

SEC_LOGIN-1

Error Message %SEC_LOGIN-1-QUIET_MODE_ON: Still timeleft for watching failures is [int] secs, [user: [chars]] [Source: [IP_address]] [localport: [int]] [Reason: [chars]] [ACL: [chars]] at [chars]

Explanation Quiet mode is now on. No request for connections are now accepted other than those allowed by the ACL, if the ACL is configured for the blocking period. An implicit deny all of any logins will be in effect.

Recommended Action Because all requests from other sources are blocked, check the ACL and add any source addresses as necessary.

SEC_LOGIN-3

Error Message %SEC_LOGIN-3-INIT_FAILED: Secure Login Initialization failed. [chars]

Explanation Initialization of the secure login subsystem has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SEC_LOGIN-4

Error Message %SEC_LOGIN-4-25: Login failed [user: [chars]] [Source: [IP_address]] [localport: [int]] [Reason: [chars]] at [chars]

Explanation A user name or password is invalid.

Recommended Action Specify a valid user name or password.

SEC_LOGIN-5

Error Message %SEC_LOGIN-5-LOGIN_SUCCESS: Login Success [user: [chars]] [Source: [IP_address]] [localport: [int]] at [chars]

Explanation Login has succeeded.

Recommended Action No action is required.

Error Message %SEC_LOGIN-5-QUIET_MODE_OFF: Quiet Mode is OFF, because [chars] at [chars]

Explanation Quiet mode is now off. The router is now operating in normal connection processing mode. The reason for the change is specified in the message text.

Recommended Action No action is required.

SFF8472 Messages

This section contains floating-point subsystem (SFF8472) messages.

SFF8472-2

Error Message %SFF8472-2-NOMEM: Not enough memory available for [chars]

Explanation The SFF8472 subsystem could not obtain the memory it needed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SFF8472-3

Error Message %SFF8472-3-INTERNAL_ERROR: [chars]

Explanation The SFF8472 subsystem encountered an internal software error. The error message contains text that can be used to help identify the nature of the problem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %%SFF8472-3-READ_ERROR: [chars]

Explanation There was an error reading digital optical monitoring information from the transceiver at the specified interface.

Recommended Action Try removing and reinserting the transceiver. If the error remains, replace the transceiver.

Error Message %SFF8472-3-THRESHOLD_VIOLATION: [chars]: [chars]; Operating value: [chars], Threshold value: [chars].

Explanation There has been a threshold violation as specified in the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SFF8472-3-UNEXPECTEDEVENT: Process received unknown event (maj [hex], min [hex]).

Explanation A process can register to be notified when various events occur in the router. This message indicates that a process received an event it did not know how to handle.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SFP Messages

This section contains Small Form-Factor Pluggable (SFP) module messages.

SFP-3

Error Message %SFP-3-EEPROM_DUP_ERR: SFP on ports [chars] and [chars] have duplicate serial numbers

Explanation The GBIC or SFP was identified as a Cisco GBIC, but its vendor ID and serial number match those of another GBIC on the system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SFP-4

Error Message %SFP-4-EEPROM_CRC_ERR: EEPROM checksum error for SFP in [chars]

Explanation The SFP in the port specified in the message text contains invalid EEPROM data.

Recommended Action Remove the SFP from the specified port.

Error Message %SFP-4-EEPROM_READ_ERR: Error in reading SFP serial ID in [chars]

Explanation An error occurred while the SFP type was being read from the EEPROM.

Recommended Action Remove the SFP from the port that reported the error.

Error Message %SFP-4-EEPROM_SECURITY_ERR: SFP in [chars] failed security check

Explanation The SFP in the port specified in the message text contains invalid EEPROM data.

Recommended Action Remove the SFP from the port that reported the error.

SFP_SECURITY Messages

This section contains Small Form-Factor Pluggable (SFP) module security check messages.

SFP_SECURITY-4

Error Message %SFP_SECURITY-4-DUPLICATE_SN: SFP interface [chars] has the same serial number as another SFP interface

Explanation The SFP was identified as a Cisco SFP, but its serial number matches that of another interface on the system. Cisco SFPs are assigned unique serial numbers.

Recommended Action Verify that the SFP was obtained from Cisco or from a supported vendor.

Error Message %SFP_SECURITY-4-ID_MISMATCH: Identification check failed for SFP interface [chars]

Explanation The SFP was identified as a Cisco SFP, but the system was unable to verify its identity.

Recommended Action Check the list of supported SFPs for this version of the system software. An upgrade may be required for newer SFPs. If this does not fix the problem, verify that the SFP was obtained from Cisco or from a supported vendor.

Error Message %SFP_SECURITY-4-SFP_INTERR: Internal error occurred in setup for SFP interface [chars]

Explanation The system was unable to allocate resources or encountered some other problem while attempting to set up the specified SFP interface.

Recommended Action Reload the system. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SFP_SECURITY-4-UNRECOGNIZED_VENDOR: SFP interface [chars] manufactured by an unrecognized vendor

Explanation The SFP was identified as a Cisco SFP, but the system was unable to match its manufacturer with one on the known list of Cisco SFP vendors.

Recommended Action Check the list of supported SFPs for this version of the system software. A software upgrade may be required for newer SFPs.

Error Message %SFP_SECURITY-4-VN_DATA_CRC_ERROR: SFP interface [chars] has bad crc

Explanation The SFP was identified as a Cisco SFP, but it does not have a valid CRC in the EEPROM data.

Recommended Action Check the list of supported SFPs for this version of the system software. A software upgrade may be required for newer SFPs. Even if the system could not recognize the SFP, it may still operate properly, but might perform with limited functionality.

SGBP Messages

This section contains Stack Group Bidding Protocol (SGBP) messages.

SGBP-1

Error Message %SGBP-1-AUTHFAILED: Member [chars] failed authentication

Explanation This message is generated only when SGBP hellos or errors debugging is enabled. This indicates that an attempted peer connection ended in authentication failure. A peer may be misconfigured, or this could indicate an attempted security breach.

Recommended Action Check if the peer is correctly configured. If there is a chance your network is under attack, obtain knowledgeable assistance. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %SGBP-1-DIFFERENT: Rcv [chars]'s addr [IP_address] is different from the hello's addr [IP_address]

Explanation The internally-configured address for an SGBP member does not match the address of the host that tried to authenticate as that member. The configuration is incorrect on either this system or the other member - they must agree.

Recommended Action Determine which configuration is in error and fix it.

Error Message %SGBP-1-DUPLICATE: Rcv Duplicate bundle [chars] is found on member [chars]

Explanation This message is generated only when SGBP hellos or errors debugging is enabled. This indicates that a duplicate bundle was received from the same peer more than once. The duplicate was discarded.

Recommended Action If this message recurs, copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support

Error Message %SGBP-1-MISSCONF: Possible misconfigured member [chars] using [IP_address]

Explanation This message is generated only when SGBP hellos or error debugging is enabled. This indicates a configuration error. Either this router has an incorrect IP address listed for the peer or the peer is using an incorrect IP address.

Recommended Action Find and correct the configuraton error.

Error Message %SGBP-1-UNKNOWNHELLO: Rcv Hello message from non-group member using [IP_address]

Explanation This message is generated only when SGBP hellos or error debugging is enabled. An SGBP Hello message was received from a host that is not a member of the SGBP group, and discarded.

Recommended Action This is a configuration error. Either that host should be listed in this router's configuration as a member (if that is actually true) or the other host is misconfigured to attempt to join this group.

SGBP-3

Error Message %SGBP-3-INVALID: MQ message with [chars]

Explanation This message is generated only when SGBP error debugging is enabled. An invalid message was received and discarded.

Recommended Action This probably indicates an error in network media or a peer which is generating erroneous packets.

Error Message %SGBP-3-INVALIDADDR: Stack group [chars] IP address [IP_address]

Explanation The current configuration does not allow a local IP address to be configured using **sgbp member** . Any local address is automatically removed from the SGBP group.

Recommended Action Do not configure **sgbp member** using a local IP address.

Error Message %SGBP-3-INVALIDDB: [chars] for bundle '[chars]' -- [chars]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SGBP-3-INVFIELD: [chars] field type [hex] has [chars] [dec] (expected [dec])

Explanation This message indicates that an SGBP request from a peer contained invalid or corrupt data.

Recommended Action Check the peer equipment or network media for any problems.

Error Message %SGBP-3-PEERERROR: Peer [IP_address] [chars] during 'PB [chars]' state for bundle [chars]

Explanation An internal software error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SGBP-3-TIMEOUT: Peer [IP_address] bidding; state 'PB [chars]' deleted

Explanation This message is generated only when SGBP event debugging is enabled. It indicates that a peer timed out while closing a query. The connection has been dropped.

Recommended Action Check the peer equipment and network media for problems.

Error Message %SGBP-3-UNEXP: MQ [chars] from [IP_address] for query [dec]:[dec], bundle [chars], bid [dec], state [chars]

Explanation This message is generated only when SGBP error debugging is enabled. The SGBP connection has entered an unexpected state, possibly due to a software error.

Recommended Action Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Issue the **show tech-support** command to gather data that may help identify the nature of the error. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %SGBP-3-UNKNOWN: [IP_address] not known

Explanation This message is generated only when SGBP error debugging is enabled. An SGBP connection was attempted by a host which was not recognized as a peer. The connection was not accepted.

Recommended Action Depending on the network topology and firewalling, SGBP connection attempts from a non-peer host could indicate probing and attempts to breach security. If there is a chance your network is under attack, obtain knowledgeable assistance. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

Error Message %SGBP-3-UNKNOWNEVENT: Event [hex] from peer at [IP_address]

Explanation This message is generated only when SGBP error debugging is enabled. An invalid event occurred, which probably indicates an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SGBP-3-UNKNOWNPEER: Event [hex] from peer at [IP_address]

Explanation This message is generated only when SGBP error debugging is enabled. An SGBP event came from a network host which was not recognizable as an SGBP peer. The event was discarded.

Recommended Action Check if a network media error could have corrupted the address, or if peer equipment is malfunctioning to generate corrupted packets. Depending on the network topology and firewalling, SGBP packets from a non-peer host could indicate probing and attempts to breach security. If there is a chance your network is under attack, obtain knowledgeable assistance. Copy the error message exactly as it appears on the console or in the system log. Research and attempt to resolve the error using the Output Interpreter <https://www.cisco.com/cgi-bin/Support/OutputInterpreter/home.pl>. Also perform a search of the Bug Toolkit <http://www.cisco.com/cgi-bin/Support/Bugtool/home.pl>. If you still require assistance, open a case with the Technical Assistance Center via the Internet <http://tools.cisco.com/ServiceRequestTool/create/launch.do>, or contact your Cisco technical support.

SGBP-5

Error Message %SGBP-5-ARRIVING: New peer event for member [chars]

Explanation This message is generated only when SGBP event debugging is enabled. An SGBP peer joined the group.

Recommended Action No action is required.

Error Message %SGBP-5-LEAVING: Member [chars] leaving group [chars]

Explanation This message is generated only when SGBP event debugging is enabled. An SGBP peer has left the group.

Recommended Action No action is required.

Error Message %SGBP-5-SHUTDOWN: [chars]

Explanation This message is generated only when SGBP event debugging is enabled. A process involved in SGBP was terminated upon completion of its work.

Recommended Action No action is required.

Error Message %SGBP-5-STARTUP: [chars]

Explanation This message is generated only when SGBP event debugging is enabled. An process involved in SGBP was started.

Recommended Action No action is required.

SGBP-6

SGBP-7

Error Message %SGBP-7-ACTIVE: Member [chars] State - Active

Explanation This message is generated only when SGBP errors or events debugging is enabled. This indicates that a link to another SGBP member has completed the interactions to set it up and is now entering the active state.

Recommended Action No action is required.

Error Message %SGBP-7-AUTHOK: Member [chars] State - AuthOK

Explanation This message is generated only when SGBP errors or events debugging is enabled. A message was received from another SGBP member indicating that an authentication attempt to that member succeeded.

Recommended Action No action is required.

Error Message %SGBP-7-CANCEL: Local query #[dec]:[dec] for bundle [chars]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action No action is required.

Error Message %SGBP-7-CHALLENGE: Send Hello Challenge to [chars] group [chars]

Explanation This message is generated only when SGBP hellos debugging is enabled. This indicates that an authentication challenge was sent to a peer.

Recommended Action No action is required.

Error Message %SGBP-7-CHALLENGED: Rcv Hello Challenge message from member [chars] using [IP_address]

Explanation This message is generated only when SGBP hellos debugging is enabled. This indicates that an authentication challenge was received from a peer.

Recommended Action No action is required.

Error Message %SGBP-7-CLOSE: Closing pipe for member [chars]

Explanation This message is generated only when SGBP event debugging is enabled. An interprocess communication link was closed.

Recommended Action No action is required.

Error Message %SGBP-7-DONE: Query #[dec] for bundle [chars], count [dec], master is [chars]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action No action is required.

Error Message %SGBP-7-DUPL: Duplicate local query #[dec] for [chars], count [dec], ourbid [dec]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action No action is required.

Error Message %SGBP-7-EQUAL: [dec] equal highest bids, randomly select bid# [dec]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action No action is required.

Error Message %SGBP-7-HANGUP: I am a forward-only member, can't forward bundle [chars], hangup

Explanation This message is generated only when SGBP query, event and/or error debugging is enabled. This indicates a routine change of role for the router in its SGBP interactions with its peers.

Recommended Action No action is required.

Error Message %SGBP-7-KEEPALIVE: Sending Keepalive to [chars], retry=[dec]

Explanation This message is generated only when SGBP hellos debugging is enabled. It indicates that a keepalive message was sent to an SGBP member.

Recommended Action No action is required.

Error Message %SGBP-7-KEEPALIVE_TIMEOUT: Keepalive timeout on [chars]

Explanation This message is generated only when SGBP hellos debugging is enabled. It indicates that keepalive messages were not answered so the pipe to an SGBP member has been closed.

Recommended Action No action is required.

Error Message %SGBP-7-MQ: [chars] ([hex]) for query [dec]:[dec], bundle [chars], bid [dec], len [dec]

Explanation This message is generated only when SGBP error debugging is enabled. This message indicates that an SGBP query has been received.

Recommended Action No action is required.

Error Message %SGBP-7-MQB: Bundle: [chars]State: [chars]OurBid: [dec]

Explanation This message is part of a list of debug states displayed at the request of the operator.

Recommended Action No action is required.

Error Message %SGBP-7-NEWL: Local query #[dec] for [chars], count [dec], ourbid [dec]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action No action is required.

Error Message %SGBP-7-NEWP: Peer query #[dec] for [chars], count [dec], peerbid [dec], ourbid [dec]

Explanation This message is generated only when SGBP query debugging is enabled. It provides information about queries in progress.

Recommended Action No action is required.

Error Message %SGBP-7-NORESP: Failed to respond to [chars] group [chars], may not have password

Explanation An authentication challenge was received but there was no information available to respond to it. This probably indicates a configuration error, a missing password.

Recommended Action Refer to the documentation to configure a username with the same name as the SGBP group.

Error Message %SGBP-7-PB: [IP_address]State: [chars]Bid: [dec] Retry: [dec]

Explanation This message is part of a list of debug states displayed at the request of the operator.

Recommended Action No action is required.

Error Message %SGBP-7-RCVD: MQ [chars] from [IP_address] for query [dec]:[dec], bundle [chars], bid [dec], prot[chars]

Explanation This message is generated only when SGBP message debugging is enabled. It indicates that an SGBP packet was received.

Recommended Action No action is required.

Error Message %SGBP-7-RCVINFO: Received Info Addr = [IP_address] Reference = [hex]

Explanation This message is generated only when SGBP hellos debugging is enabled. It indicates that data was received by a listener process.

Recommended Action No action is required.

Error Message %SGBP-7-RESPONSE: Send Hello Response to [chars] group [chars]

Explanation This message is generated only when SGBP hellos debugging is enabled. This indicates that a response to an authentication challenge was sent to a peer.

Recommended Action No action is required.

Error Message %SGBP-7-RESPONDED: Rcv Hello Response message from member [chars] using [IP_address]

Explanation This message is generated only when SGBP hellos debugging is enabled. This indicates that a response to an authentication challenge was received from a peer.

Recommended Action No action is required.

Error Message %SGBP-7-SENDAUTHOK: Send Hello Authentication OK to member [chars] using [IP_address]

Explanation This message is generated only when SGBP hellos debugging is enabled. A message was sent or re-sent to another SGBP member indicating that an authentication attempt from that member succeeded.

Recommended Action No action is required.

Error Message %SGBP-7-SENDINFO: Send Info Addr to [chars]

Explanation This message is generated only when SGBP hellos debugging is enabled. It indicates that data was sent by the listener process in response to received data.

Recommended Action No action is required.

Error Message %SGBP-7-SENT: MQ [chars] to [IP_address] for query [dec]:[dec], bundle [chars], bid [dec], prot[chars], len [dec]

Explanation This message is generated only when SGBP message debugging is enabled. It indicates that an SGBP packet was sent.

Recommended Action No action is required.

SGPM Messages

This section contains SG Policy Manager messages.

SGPM-3

Error Message %SGPM-3-POLICY_CTX_POISONED: Policy context %X has bad magic, %X.

Explanation The magic number in the policy context is wrong.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SGPM-3-POLICY_INCOMPLETE_RULE: Subscriber policy rule (%s), event (%s) is missing a mandatory action for service (%s); automatically adding.

Explanation The subscriber policy rule was missing a mandatory action. The missing action will be automatically added.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SHMWIN Messages

This section contains shared memory messages.

SHMWIN-6

Error Message %SHMWIN-6-ALLOC_FAILURE: Insufficient memory

Explanation There was a failure while returning physical memory to the system.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-CORE_NOT_ENABLED: In function [chars] The core has not been enabled to get more physical memory

Explanation The core has not been enabled.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-EXCEEDED_MAX_SIZE: In function [chars] The requested memory size exceeded the window size

Explanation The memory requested in this window exceeded the window size.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-EXCEEDED_MAX_USERS: In function [chars] The maximum number of users for a shared window has been exceeded

Explanation The maximum number of users for a shared window has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-3-FREE_FAILURE: Failure while freeing memory in function [chars]

Explanation An attempt was made to free memory that has already been freed or is not within the address space of the current process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-INCONSISTENCY: Inconsistent state in window

Explanation Inconsistent state in window.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-INVALID_ARGS: One or more invalid arguments have been passed to the function [chars]

Explanation One or more invalid arguments have been passed to the shared memory APIs.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-INVALID_PARAM: An invalid parameter has been passed to the function [chars]

Explanation One or more invalid parameters have been passed to the shared memory APIs.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-MAX_WINDOWS_EXCEEDED: In function [chars] process has exceeded the maximum number of windows that can be opened by it

Explanation The process has exceeded the maximum number of windows that can be opened by a process.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-MEM_COLLISION: In function [chars] the requested memory space collides with the memory space of other windows

Explanation There is a memory space collision.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-MUTEX_ERROR: An internal mutex error has occurred in the function [chars]

Explanation An error has been encountered in the locking or unlocking of the shared memory mutual exclusivity lock (mutex).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-MUTEX_MONITOR_FAILURE: Registration failed with mutex monitor in [chars]

Explanation An error occurred while trying to monitor a shared memory mutual exclusivity lock (mutex).

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-NOT_SUPPORTED: The option passed to function [chars] is not supported

Explanation This option is not supported.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-7-PHYS_MAP_FAILURE: In function [chars] Failed to map physical memory

Explanation Failed to map physical memory in the specified function.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-PTHREAD_MUTEX_LOCK_FAILED: An internal mutex error has been encountered in function [chars]

Explanation A process that has obtained the access mutex has not released it.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-PTHREAD_MUTEX_UNLOCK_FAILED: An internal mutex error has been encountered in function [chars]

Explanation An internal mutex error has been encountered.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-SHMEM_FAILURE: The function [chars] Could not access shared memory

Explanation Could not access shared memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-SYS_LOCK_CREATE_FAILED: The lock creation for the shared memory failed in function [chars]

Explanation Lock creation for the shared memory has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message SHMWIN-6-SYS_LOCK_CREATE_SUCCEEDED: The lock creation for the shared memory succeeded in function [chars]

Explanation Lock creation for the shared memory succeeded.

Recommended Action No action is required.

Error Message %SHMWIN-6-SYS_LOCK_FAILED: In function [chars] The process was unable to lock the shared memory against other processes

Explanation The process was unable to lock the shared memory against other users.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-SYS_LOCK_MMAP_FAILED: The mmap for the shared memory lock creation failed in function [chars]

Explanation Lock creation for the shared memory has failed.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-SYS_UNLOCK_FAILED: In function [chars] The process was unable to unlock the shared memory

Explanation The shared memory could not be unlocked due to an internal error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-7-UNLINK_ERROR: An internal error occurred while unlinking in function [chars]

Explanation An internal error occurred while unlinking.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-VIRT_MAP_FAILURE: In function [chars] Could not reserve virtual memory

Explanation Could not reserve virtual memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SHMWIN-6-WINDOW_EXCEEDED_MAX_POOLS: The maximum number of pools has been exceeded in function [chars]

Explanation The maximum number of pools has been exceeded.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIBYTE Messages

This section contains SiByte processor complex messages.

SIBYTE-0

Error Message %SIBYTE-0-ADDRESS_TRAP: Address trap: [dec] occurred on physical address: [hex] at EPC: [hex], ERR_EPC: [hex]

Explanation A previously defined address trap has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIBYTE-0-MISDIRECTED_INTERRUPT: A misdirected interrupt occurred with int_mask: [hex]

Explanation A misdirected interrupt has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIBYTE-0-UNCORRECTABLE_ECC_ERR: An uncorrectable ECC error has occurred, A_BUS_L2_ERRORS: [hex], A_BUS_MEMIO_ERRORS: [hex], A_SCD_BUS_ERR_STATUS: [hex]

Explanation An uncorrectable ECC error has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIBYTE-3

Error Message %SIBYTE-3-CORRECTABLE_ECC_ERR: A correctable ECC error has occurred, A_BUS_L2_ERRORS: [hex], A_BUS_MEMIO_ERRORS: [hex], A_SCD_BUS_ERR_STATUS: [hex]

Explanation The card detected and corrected a single-bit parity error using the error correction code (ECC) functionality. There was no interruption of service. Transient parity errors are typically caused by RF radiation.

Recommended Action No action is necessary if the message occurs infrequently. If errors become frequent, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIBYTE-6

Error Message %SIBYTE-6-SB_RMON_OVRFL: RMON register [dec] overflow on mac [dec]

Explanation The indicated RMON register has overflowed (wrapped around), meaning that the counter reached its maximum value and restarted from zero. The affected register is in the RMON statistical information associated with the specified MAC interface of the Sibyte ethernet controller located on the linecard.

Recommended Action This message is informational, and is normal when the service internal command is enabled. The service internal command should be enabled only for troubleshooting. To disable service internal messages, enter the global configuration command no service internal.

SIBYTE_ION

This section contains Sibyte Ion messages.

SIBYTE_ION-3

Error Message %SIBYTE_ION-3-SB_THREAD_CTL_ERR: Call to ThreadCTL() failed: function = [chars], line number = [dec], return_code = [dec], errno = [dec]

Explanation A QNX call to ThreadCTL() failed. [chars] is the function, the first [dec] is the line number, the second [dec] is the return code, and the third [dec] is the error number.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP10G_QM Messages

This section contains 10Gigabit Ethernet SPA Interface Processor (SIP10G) QoS manager (QM) messages.

SIP10G_QM-2

Error Message %SIP10G_QM-2-ACL_MERGE_NO_MEM: Memory low: ACL merge failed for interface %s in %s direction

Explanation An ACL merge failed due to insufficient system memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP10G_QM-2-BAD_TLV: Error in internal messaging - bad tlv %d

Explanation A software error occurred during the programming of ACLs into the TCAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP10G_QM-2-CONFORM_ACTION_NE: Different aggregate and microflow conform-action in class %s[policy %s]

Explanation The conform actions must be identical in both the **police** and **police flow** commands for the same class in a service policy applied to MLS interfaces.

Recommended Action Change the conform action in the **police** or the **police flow** command to make both actions the same, or remove one of two commands.

Error Message %SIP10G_QM-2-DSCP_NE: Different aggregate and microflow DSCP in class %s[policy %s]

Explanation The conform actions must be identical in both the **police** and **police flow** commands for the same class in a service policy applied to MLS interfaces.

Recommended Action Change the conform action in the **police** or the **police flow** command to make both actions the same, or remove one of two commands.

Error Message %SIP10G_QM-2-MERGE_ERROR: ACL merge error for Interface %s in %s direction status %d

Explanation An ACL merge failed before programming the ACLs into the TCAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP10G_QM-2-NO_AGGREG_PLC: Hardware aggregate policer resources exceeded

Explanation The hardware cannot support the number of aggregate policers required by configuration.

Recommended Action Reduce the total number of aggregate policers required by all service policies installed in the device. For example, use shared aggregate policers, as defined by the **mls qos aggregate-policer** command, instead of default per-interface policers.

Error Message %SIP10G_QM-2-NO_FLOW_PLC: Hardware microflow policer resources exceeded

Explanation The hardware cannot support the microflow policers required by the policy map.

Recommended Action Adjust the microflow policing rate and burst parameters to reduce the total number of different rate and burst combinations in the device.

Error Message %SIP10G_QM-2-P10G_PLC_ATTACH_REJECT_ARP_UFLOW: Command rejected: (policy-map %s class %s interface %s dir %s) flow policer is not supported for traffic classes matching ARP ACL.

Explanation In a policy map, a flow policer is not supported if the traffic class matches an ARP ACL.

Recommended Action Remove the flow policer from the traffic class matching the ARP ACL and reattach the policy, or change the traffic class to match a non-ARP ACL and configure the flow policer.

Error Message %SIP10G_QM-2-TCAM_BAD_LOU: Bad TCAM LOU operation in ACL

Explanation A software error caused a failure in programming ACLs into the TCAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP10G_QM-2-TCAM_ENTRIES_EXCEEDED: ACL merge failed, ACES exceed TCAM capacity or 0 ACES, %d ACES for interface %s in %s direction

Explanation An ACL merge was aborted because the number of ACES exceeded the TCAM capacity or because the number of ACES was zero.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP10G_QM-2-TCAM_ERROR: TCAM programming error %d

Explanation A software error caused a failure in programming ACLs into the TCAM.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at

<http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP10G_QM-2-TCAM_MEMORY: NMP processor memory low

Explanation The programming of ACLs into the TCAM failed due to insufficient memory.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP10G_QM-4

Error Message %SIP10G_QM-4-TCAM_CAPMAP: Interface %s hardware TCAM LOU usage capability exceeded

Explanation The hardware TCAM cannot support the number of logical operations used with the configured ACLs on this specific interface. The hardware TCAM can support a maximum of 9 logical operations per interface and a maximum total of 64 logical operations.

Recommended Action Reduce the use of logical operations in the ACLs.

Error Message %SIP10G_QM-4-TCAM_ENTRY: Hardware TCAM entry capacity exceeded

Explanation The configured ACLs exceed the capacity of the hardware TCAM.

Recommended Action To reduce TCAM resource contention, try to share the same ACLs across multiple interfaces.

Error Message %SIP10G_QM-4-TCAM_LABEL: Hardware TCAM label capacity exceeded

Explanation The hardware TCAM cannot support the number of interfaces configured with ACLs. The hardware TCAM supports 500 interfaces configured with ACLs.

Recommended Action Unconfigure ACLs from some of the interfaces.

Error Message %SIP10G_QM-4-TCAM_LOU: Hardware TCAM LOU capacity exceeded

Explanation The hardware TCAM cannot support the number of logical operations used with the configured ACLs. The hardware TCAM can support a maximum of 9 logical operations per interface and a maximum total of 64 logical operations.

Recommended Action Reduce the use of logical operations in the ACLs.

Error Message %SIP10G_QM-4-TCAM_MASK: Hardware TCAM mask entry capacity exceeded

Explanation The hardware TCAM does not have the mask capacity to handle the number of configured ACLs.

Recommended Action To reduce TCAM resource contention, try to share the same ACLs across multiple interfaces.

SIP10G_QM-6

Error Message %SIP10G_QM-6-IOS_AND_PS_FEATURE: %s action cannot be present in classmap %s of policymap %s because this service-policy cannot be executed in Cat6K HW due to the presence of filters which require packets to be processed in IOS SW

Explanation Network-Based Application Recognition (NBAR) is required for the match protocol commands used. Because NBAR exists only in software, hardware-specific actions are not supported.

Recommended Action Remove the hardware-specific commands or remove the match protocol criteria in the class map.

Error Message %SIP10G_QM-6-SET_AND_POLICE: 'set' and 'police' commands cannot co-exist in classmap %s of policymap %s

Explanation The **set** and **police** commands cannot coexist in a class map for a QoS manager (QM) supported interface.

Recommended Action Remove one of the commands or use the **set-dscp-transmit | set-precedence-transmit | set-exp** option for the conform action of the **police** command.

Error Message %SIP10G_QM-6-SET_AND_TRUST: 'set' and 'trust' commands cannot co-exist in classmap %s of policymap %s

Explanation The **set** and **trust** commands cannot coexist in a class map for a QM supported interface.

Recommended Action Remove one of the commands.

Error Message %SIP10G_QM-6-SHAREDAG_AND_POLICE: 'police aggregate' and regular 'police' commands cannot co-exist in classmap %s of policymap %s

Explanation The **police aggregate** and **police** commands cannot coexist in a class map for a QM supported interface.

Recommended Action Remove one of the commands or use the **set-dscp-transmit** | **set-precedence-transmit** | **set-exp** option for the conform action of the **police** command.

SIP200 Messages

This section contains SPA Interface Processor 200 (SIP200) messages.

SIP200-3

Error Message %SIP200-3-BADIFCTRL: Corrupted sip-200 information for interface [chars] [[hex]]

Explanation The interface SIP-200 information is not valid. This is an internal software error.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Collect the output of the **show memory** command on the line card. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP200-4

Error Message %SIP200-4-MEM_MODULE_MISMATCH: Memory modules are not identical

Explanation The memory modules do not have identical parameters. This may impact the performance.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Collect the output of the **show memory** command on the line card. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP200_MP Messages

This section contains SPA Interface Processor 200 (SIP200) multiprocessing messages.

SIP200_MP-1

Error Message %SIP200_MP-1-UNSAFE: Multiprocessor error on [chars]

Explanation The line card CPU contains two CPU cores, one of which is the master CPU. The CPU specified in the error message attempted to perform an operation that is illegal for multiprocessor operation between the two CPU cores.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP200_MP-3

Error Message %SIP200_MP-3-INIT_FAILURE: Second CPU initialization failed

Explanation The line card CPU unit contains two CPU cores. The second CPU core has not initialized successfully. The line card is operating with one CPU core only. You may also see a SYS-2-MALLOCFAIL warning message.

Recommended Action If this message appears when a line card boots up, reload the line card by entering the **hw-module module slot reset** command. Also, check how much memory the line card has by entering the **show controller cwan** command.

SIP200_MP-4

Error Message %SIP200_MP-4-PAUSE: Non-master CPU is suspended for too long, from [hex]([int]) to [hex] for [int] CPU cycles. [chars]

Explanation The line card CPU contains two CPU cores, one of which is the master CPU. The master CPU caused the second, nonmaster CPU to be suspended for too long a time. This condition could cause packet drops on the nonmaster CPU. This warning indicates a transient software problem. The line card should continue to operate normally.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP200_MP-4-TIMEOUT: Master CPU request timed out [chars]

Explanation The line card CPU contains two CPU cores, one of which is the master CPU. The nonmaster CPU is not responding in time to a request from the master CPU. This warning indicates a transient software problem. The line card should continue to operate normally.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP200_SPIRX Messages

This section contains SPA Interface Processor 200 (SIP200) SPI4.2 bus ingress interface messages.

SIP200_SPIRX-3

Error Message %SIP200_SPIRX-3-INITFAIL: Failed to configure the ingress SPI4.2 device. Error = [hex]

Explanation The system was unable to program or configure the ingress SPI4.2 device on the line card. This indicates an internal hardware error.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPIRX-3-SPA_INTERRUPT: SPA [int] - [chars], SPA Int status = [hex]

Explanation A SPA interrupt occurred from the ingress SPI4.2 device.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPIRX-3-SRAM_ERROR_DATA:
SRAM[dec] Address = [hex][hex] Data =
[hex][hex][hex]_[hex][hex][hex]_[hex][hex][hex]_[hex][hex][hex]

Explanation An SRAM address and data dump is displayed.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPIRX-3-SRAM_INTERRUPT: [chars], Sram Int status = [hex]

Explanation An SRAM interrupt occurred from the ingress SPI4.2 device.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPIRX-3-STATUS_INTERRUPT: [chars], Global Int status = [hex]

Explanation A status interrupt occurred from the ingress SPI4.2 device.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

SIP200_SPITX Messages

This section contains SPA Interface Processor 200 (SIP200) SPI4.2 bus egress interface messages.

SIP200_SPITX-3

Error Message %SIP200_SPITX-3-BADDESC: descriptor [hex], tag [hex], global channel [int]

Explanation The egress SPI4.2 device on the line card returns a descriptor entry that is corrupted.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-BADPAK: corrupted packet to [chars]

Explanation The egress SPI4.2 device on the line card is handling a packet that is corrupted. This indicates an internal software error. The corrupted packet is dropped.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-CHANNEL_ENABLE_FAIL: SPI4 Channel [int] for Bay [int], [chars] Failed

Explanation The system was unable to enable or disable a given SPI4 channel.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-DESCR_ERR_SPA0: SPAsatus=[hex], syndrome=[hex], RdRspOvf=[int], RdRspTo=[int], OvfVal=[int], OvfCh=[int], OvfDescHi=[hex], OvfDescLo=[hex], DisChk=[int], SeqErrVal=[int], SeqErrCh=[int]

Explanation The egress SPI4.2 device on the line card detected a sequence or FIFO overflow error while processing a transmit descriptor. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-DESCR_ERR_SPA1: SPAsatus=[hex], syndrome=[hex], RdRspOvf=[int], RdRspTo=[int], OvfVal=[int], OvfCh=[int], OvfDescHi=[hex], OvfDescLo=[hex], DisChk=[int], SeqErrVal=[int], SeqErrCh=[int]

Explanation The egress SPI4.2 device on the line card detected a sequence or FIFO overflow error while processing a transmit descriptor. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-EFC_ERR_SPA3: SPAstatus=[hex] [chars]

Explanation The egress data path device on the line card detected an error condition with the extended flow control bus interface. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-EFCEVNT_ERR: [chars]

Explanation The egress data path device on the line card detected an error while processing internal extended flow-control events. This condition could cause a reduced packet rate.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-EFC_QUEUE_STUCK: [chars]

Explanation The egress data path device on the line card detected an error condition with the extended flow control bus interface. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the

following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-EFCSTAT_FAIL_SPA0: [chars]

Explanation The egress SPI4.2 device on the line card detected an EFC status clock or synchronization failure. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. Error Message %SIP200_SPITX-3-INT_PERR_SPA2: IntMemPerr=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an internal memory parity error. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-INT_PERR_SPA3: IntMemPerr=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an internal memory parity error. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-MISMATCH: Descriptor ring mismatch: expects [int] got [int]

Explanation The egress SPI4.2 device on the line card returns a descriptor entry that does not match what the line card CPU expects. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-OVERRUN_DROP: SPI4 overrun drops packet for SPA [int], queue [int], count [int]

Explanation While the egress SPI4.2 device on the line card sends a packet on the extended flow controlled channel, it overruns the SPI4 channel but cannot queue it to the internal hold queue. This indicates an internal software error.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-SPI4_ERR_SPA0: SPAstatus=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an error condition with the SPI4.2 bus interface. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-SPI4_ERR_SPA1: SPAstatus=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an error condition with the SPI4.2 bus interface. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message SIP200_SPITX-3-SPI4_ERR_SPA2: SPAstatus=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an error condition with the SPI4.2 bus interface. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-SPI4_ERR_SPA3: SPAstatus=[hex] [chars]

Explanation The egress SPI4.2 device on the line card detected an error condition with the SPI4.2 bus interface. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

Error Message %SIP200_SPITX-3-SRAM_ECCERR: EccSynd=[hex], Err1bit=[int], ErrMbit=[int], SecHalf=[int], SPA=[int], Ch=[int], Addr=[hex], DataHi=[hex], DataLo=[hex], DataEcc=[hex]

Explanation The egress SPI4.2 device on the line card detected a parity error in the egress packet memory. This condition could cause packet drops.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show tech-support** command for the line card and the **show platform hardware spi4 spa-id efc channel [channel-id]** command for the SPA.

SIP400 Messages

This section contains SPA Interface Processor 400 (SIP400) messages.

SIP400-2

Error Message %SIP400-2-IOBUS_ERROR: IO bus error occurred: [chars] last addr [hex] data [hex] tran [hex]

Explanation There was a communication problem with a device on the I/O bus.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP400-2-PCI_BUS_ERROR: A PCI Bus Error occurred while trying to access a device (status reg = [hex], addstatus reg = [hex])

Explanation There was a problem with a PCI read access to a device that caused a bus error on the host processor.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP400-2-PCI_ERROR_INT: A PCI Error interrupt occurred while trying to access a device (status reg = [hex], addstatus reg = [hex])

Explanation There was a problem with a PCI write access to a device that caused a PCI error interrupt.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at

http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP600 Messages

This section contains SPA Interface Processor 600 (SIP600) messages.

SIP600-2

Error Message %SIP600-2-DEVMGR_ASIC_INIT_FAILED: SIP-600 ASIC Initialization failed at stage-asic_init[dec]

Explanation The SIP-600 received an error during initialization when attempting to initialize the ASICs that make up the forwarding hardware. A hardware problem has prevented the SIP-600 from fully initializing on the target line card. This will result in packets not being forwarded.

Recommended Action Attempt to reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-2-DEVMGR_PROC_CREATE_FAILED: SIP-600 Initialization failed to create a required IOS process[dec]

Explanation The SIP-600 received an error during initialization when attempting to create the ASIC stage2 initialization process. A potential memory or other software resource problem has prevented the SIP-600 from fully initializing on the target line card. This will result in packets not being forwarded.

Recommended Action Attempt to reload the line card. If the problem persists, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-2-INITFAIL: SIP-600 Initialization Failed - [chars]: [chars]
[dec] [dec]

Explanation The SIP-600 could not initialize the memory that is needed for the feature specified in the message.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-2-NULL_OBJECT: Missing device object ([chars]) for pending interrupt

Explanation A hardware device asserted an interrupt to report an event, but there is no device object for this device.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-2-NULL_SPA_BAY_OBJECT: SPA Bay [dec] is missing

Explanation A SPA bay object is missing.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-2-PE_BUS_UNRECOVERABLE_INT: Packet Engine Unrecoverable Bus Interrupt: [chars] = [hex]

Explanation A packet engine unrecoverable bus interrupt has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-2-QUPDATE: SIP-600 Update Queue Hardware Failed - [chars]: [chars] [dec] Cause: [hex]

Explanation The SIP-600 received an error on the specified hardware queue when attempting the specified action. A hardware problem has prevented system queues from being updated on the target line card. This could result in packets not being forwarded.

Recommended Action Reload the line card. Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-2-UNRECOVERABLE_FAILURE: SIP-600 Unrecoverable Failure

Explanation An unexpected fatal condition has occurred on the SIP-600. The message that was previously received on the console or in the system log should provide more information on the specific nature of the problem. This message indicates a hardware failure or malfunction. The system will reload to attempt to fix the problem.

Recommended Action If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP600-3

Error Message %SIP600-3-IO_BUS_ERR_INT: IO Bus Error Interrupt: [hex] - Deadman Timer = [hex] Trans Status = [hex] Last Address = [hex] Last Data = [hex]

Explanation An I/O bus error interrupt has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-NMI: NMI Reset Status = [hex]

Explanation A nonmaskable interrupt has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-NOMEM: [chars]

Explanation The SIP-600 card could not obtain statistics due to insufficient memory.

Recommended Action Reduce other system activity to ease memory demands. If conditions warrant, upgrade to a larger memory configuration. If this message recurs, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-NO_STATID: PXF([dec]): no stat_id is available for statistics collection

Explanation The SIP-600 line card has used up all statistics collection resources. No more resources are available for further statistics collection.

Recommended Action Reduce number of features configured on this PXF. If conditions warrant, copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-NO_STAT_PROCESS: Failed to create statistics process

Explanation The SIP-600 card failed to create a statistics process. All statistics counters will be zero.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-PE_BUS_ERR_INT: Packet Engine Bus Error Interrupt: [chars]

Explanation A packet engine bus error interrupt has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-PE_SPA_BUS_ERR_INT: SPA Bus Error Interrupt: SPA Bus Error Status ([hex]) = [hex], SPA Bus Trans Status ([hex]) = [hex], SPA Bus Last Data ([hex]) = [hex]

Explanation A SPA bus error interrupt has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-PE_UNEXPECTED_INT: Unexpected Packet Engine Interrupt: [chars]

Explanation An unexpected packet engine interrupt has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-SIP10G_GEN_DEV_ERR: [chars] unexpected error: [chars]

Explanation The software driver for the specified SIP-600 device has detected the specified unexpected condition.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-STATID_INCONSISTENCY: PXF([dec]):Inconsistent stats id([hex]) [int] packets dropped.

Explanation A WAN line card has received inconsistent statistics from PXF. PXF reported that one or more packets have been dropped, but no corresponding packet count has been reported.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-UNEXPECTED_GLOBAL_INT: Unexpected Global Interrupt: [chars]

Explanation An unexpected global interrupt has occurred.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-3-UNSUPPORTED_LABEL_RANGE: The maximum label range configured for this system exceeds the [int] limit supported by the OSM module.

Explanation The MPLS label range that was configured for this system is not supported. The maximum label range limit is specified in the message.

Recommended Action Change the maximum MPLS label range by entering the **mpls label range** command.

SIP600-4

Error Message %SIP600-4-INVALID_STATID: PXF:Invalid-Statid ([dec]) for vc [int] under interface [int]

Explanation The SIP-600 line card has encountered an internal error while setting up the statistics report subsystem.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information that you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-4-MR_CFG_ALL_PORTS: CFM configuration is global to sip-600 and applies to all ports

Explanation An SCP message to configure match register functionality on the specified port will apply to all ports on the MSC-600 card as match register configurations are done on the parsing engine.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

Error Message %SIP600-4-SIP10G_PXF_IRAM_PARITY_ERROR: Correcting a PXF instruction error.

Explanation This is a Parallel Express Forwarding (PXF) error message that indicates a detection and correction of a typically rare event. If the error is persistent, it may indicate faulty hardware.

Recommended Action Copy the message exactly as it appears on the console or in the system log. Research and attempt to resolve the issue using the tools and utilities provided at <http://www.cisco.com/tac>. With some messages, these tools and utilities will supply clarifying information. Search for resolved software issues using the Bug Toolkit at http://www.cisco.com/cgi-bin/Support/Bugtool/launch_bugtool.pl. If you still require assistance, open a case with the Technical Assistance Center via the Internet at <http://tools.cisco.com/ServiceRequestTool/create>, or contact your Cisco technical support

representative and provide the representative with the information you have gathered. Attach the following information to your case in nonzipped, plain-text (.txt) format: the output of the **show logging** and **show tech-support** commands and your pertinent troubleshooting logs.

SIP600-6
