

Cisco Express Forwarding Commands

This chapter describes the commands used to configure and monitor Cisco Express Forwarding (CEF) on a Cisco 8000 Series Router.

For detailed information about ACL concepts, configuration tasks, and examples, refer to the *IP Addresses and Services Command Reference for Cisco 8000 Series Routers*

- [cef adjacency route override rib, on page 3](#)
- [cef load-balancing, on page 5](#)
- [clear adjacency statistics, on page 8](#)
- [clear cef ipv4 drops, on page 10](#)
- [clear cef ipv4 exceptions, on page 12](#)
- [clear cef ipv6 drops, on page 14](#)
- [clear cef ipv6 exceptions, on page 16](#)
- [hw-module profile cef, on page 18](#)
- [hw-module profile route scale, on page 19](#)
- [show adjacency, on page 21](#)
- [show cef bgp-attribute, on page 24](#)
- [show cef, on page 26](#)
- [show cef exact-route \(user-data\), on page 29](#)
- [show cef ext-client, on page 31](#)
- [show cef ipv4 adjacency, on page 34](#)
- [show cef ipv4 adjacency hardware, on page 37](#)
- [show cef ipv4, on page 40](#)
- [show cef ipv4 drops, on page 42](#)
- [show cef ipv4 exact-route, on page 44](#)
- [show cef ipv4 exceptions, on page 47](#)
- [show cef ipv4 hardware, on page 49](#)

- [show cef summary](#), on page 103
- [show cef vrf](#), on page 105
- [show hw-module profile cef](#), on page 107

cef adjacency route override rib

To enable the CEF prefer Routing Information Base (RIB) prefixes over Adjacency Information Base (AIB) prefixes in the Global configuration mode. To enable the CEF prefer AIB prefixes over RIB prefixes, use the **no** form of this command.

cef adjacency route override rib

no cef adjacency route override rib

Syntax Description	route Enables adjacency route configuration override Sets override options for the adjacency routes. rib Sets options for adjacency routes to override the RIB routes.
---------------------------	---

Command Default	By default, CEF prefers RIB prefixes over AIB prefixes.
------------------------	---

Command Modes	Global configuration
----------------------	----------------------

Command History	Release	Modification
	7.0.12	This command was introduced.

Usage Guidelines	CEF may prefer the L2 adjacency for forwarding over the RIB (routing) entry under the following conditions:
-------------------------	---

- When there is no local ARP entry (yet).
ARP learning may result in the router creating a forwarding entry.
- A forwarding entry of /32 (or /128 for IPv6) RIB routes are overridden when there is a covering connected or attached route.
If an interface has a larger subnet, and you want to redirect a /32 out of that subnet of a different interface via a static route.

To deviate from the behavior of preferring a L2 adjacency for forwarding over a route entry, use the **cef adjacency route override rib** command.

Task ID	Task ID	Operation
cef		read, write

Example

The following example shows how to override the CEF adjacency route:

cef adjacency route override rib

```
Router# configure
Router# cef adjacency route override rib
```

cef load-balancing

To configure load-balancing parameters, use the **cef load-balancing** command in Global configuration mode. To enable the default CEF load-balancing behavior, use the **no** form of this command.

```
cef load-balancing { mode hierarchical { ucmp group-size | ecmp min-path } <range> | recursive oor mode dampening-and-dlb [ dampening resource-threshold <percentage> | dlb resource-threshold <percentage> | max-duration <secs> ] }
```

Syntax Description	
mode	Specifies the mode as hierarchical.
hierarchical	Specifies the configuration for multi-level load balancing in CEF.
ucmp	Specifies the ucmp parameters for CEF load-balancing configuration.
group-size	Enables ucmp group size for hierarchical load balancing (HLB).
ecmp	Specifies the ecmp parameters for CEF load-balancing configuration.
min-path	Specifies the minimum number of paths required for hierarchical ecmp load balancing.
<i>range</i>	Specifies the range of values for configuring the group size for ucmp and minimum paths for ecmp in hierarchical load balancing. The routers supports the values ranging from 1 to 128.
recursive	Enables recursive route configuration.
oor	Enables oor configuration.
dlb	Specifies the dynamic load balancing (DLB) parameter in CEF load balancing.
dampening-and-dlb	Enables dampening and dlb mode for oor handling.
dampening	Configure dampening mode parameters.
resource-threshold	Specifies the resource threshold percentage to enable dynamic load-balancing mode.
<i>percentage</i>	Specifies the threshold percentage for enabling FIB dampening and DLB features.
max-duration	Specifies the maximum duration time configuration for dampening and dynamic load balancing in CEF load balancing.
<i>secs</i>	Specifies the maximum duration time, in seconds, for configuring dampening and dynamic load balancing in CEF load balancing. You can configure the time range from 1 to 600 seconds.
Command Default	None
Command Modes	Global configuration

Command History

Release	Modification
Release 24.2.1	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **cef load-balancing mode hierarchical ecmp min-paths** command is a replacement for the **cef hierarchical-load-balancing ecmp min-paths** command.

If the number of paths exceeds 128, HLB is automatically applied.

The **cef load-balancing mode hierarchical ucmp group-size** command is a replacement for the **cef hierarchical-load-balancing ucmp group-size** command.

Task ID

Task ID	Operation
cef	read, write

Example

The following example shows how to enable FIB dampening and DLB features with default values of dampening threshold percentage and max switchover duration and dlb threhold percentage as (70%, 300 sec, 90%)

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router# cef load-balancing recursive oor mode dampening-and-dlb
```

The following example shows how to enable FIB dampening and DLB features with default values of dampening threshold percetange and max switchover duration and dlb threhold percentage as (70%, 90%).

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router# cef load-balancing recursive oor mode dampening-and-dlb max-duration
600
```

The following example shows how to configure dampening and dynamic load balancing with specified resource-threshold for dampening and dlb each and maximum duration for switchover time.

**Note**

The dampening threshold value should be lower than the DLB threshold.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router# cef load-balancing recursive oor mode dampening-and-dlb dampening
resource-threshold 99 max-duration 600 dlb resource-threshold 99
```

The following example shows how to configure the group size for ucmp in hierarchical load balancing

```
RP/0/RP0/CPU0:router# configure  
RP/0/RP0/CPU0:router# cef load-balancing mode hierarchical ucmp group-size 128
```

The following example shows how to configure the minimum paths for hierarchical ecmp load balancing.

```
RP/0/RP0/CPU0:router# configure  
RP/0/RP0/CPU0:router# cef load-balancing mode hierarchical ecmp min-path 128
```

clear adjacency statistics

clear adjacency statistics

To clear adjacency packet and byte counter statistics, use the **clear adjacency statistics** command in XR EXEC mode.

```
clear adjacency statistics [ipv4 |nexthop ipv4-address] | mpls | ipv6 [interface-type interface-instance | location node-id]
```

Syntax Description	<p>ipv4 (Optional) Clears only IPv4 adjacency packet and byte counter statistics.</p> <p>nexthop <i>ipv4-address</i> (Optional) Clears adjacency statistics that are destined to the specified IPv4 nexthop.</p> <p>mpls (Optional) Clears only MPLS adjacency statistics.</p> <p>ipv6 (Optional) Clears only IPv6 adjacency statistics.</p> <p>interface-type (Optional) Interface type. For more information, use the question mark (?) online help function.</p> <p>interface-instance (Optional) Either a physical interface instance or a virtual interface instance: <ul style="list-style-type: none"> Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash mark between values is required as part of the notation. <ul style="list-style-type: none"> rack: Chassis number of the rack. slot: Physical slot number of the line card. module: Module number. A physical layer interface module (PLIM) is always 0. port: Physical port number of the interface. </p> <p>Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0) and the module is CPU0. Example: interface MgmtEth0/ RP0</p> <ul style="list-style-type: none"> Virtual interface instance. Number range varies depending on interface type. <p>For more information about the syntax for the router, use the question mark (?) online help function.</p>
location <i>node-id</i>	(Optional) Clears detailed adjacency statistics for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
Command Default	No default behavior or values
Command Modes	XR EXEC mode

Command History	Release	Modification
	Release 7.0.12	This command was introduced.
Usage Guidelines	The clear adjacency statistics command is useful for troubleshooting network connection and forwarding problems.	
	If you do not specify any of the optional keywords, all adjacency statistics are cleared for the node on which the command is issued.	
Task ID	Task ID	Operations
	basic-services	read, write
	cef	read, write
Related Commands	Command	Description
	show adjacency, on page 21	Displays the IPv4 CEF adjacency table.

clear cef ipv4 drops

clear cef ipv4 drops

To clear Cisco Express Forwarding (CEF) IPv4 packet drop counters, use the **clear cef ipv4 drops** command in XR EXEC mode.

clear cef ipv4 drops location node-id

Syntax Description	location node-id Clears IPv4 packet drop counters for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.						
Command Default	No default behavior or values						
Command Modes	XR EXEC mode						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.		
Release	Modification						
Release 7.0.12	This command was introduced.						
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, this command will clear IPv4 CEF drop counters only for the node on which the command is issued.						
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>basic-services</td> <td>read, write</td> </tr> <tr> <td>cef</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	basic-services	read, write	cef	read, write
Task ID	Operations						
basic-services	read, write						
cef	read, write						

Examples

The following example displays sample output for the IPv4 Cisco Express Forwarding (CEF) table packet drop counters, and clears IPv4 CEF drop counters for location 0/RP0/CPU0:

```
Router# show cef ipv4 drops

CEF Drop Statistics
Node: 0/RP0/CPU0
  Unresolved drops      packets :          0
  Unsupported drops     packets :          0
  Null0 drops           packets :          0
  No route drops        packets :          0
  No Adjacency drops   packets :          0
  Checksum error drops packets :          0
  RPF drops             packets :          0
  RPF suppressed drops packets :          0
  RP destined drops    packets :          0
  Discard drops         packets :          0
  GRE lookup drops     packets :          0
  GRE processing drops packets :          0
  LISP punt drops       packets :          0
  LISP encap err drops packets :          0
```

```
LISP decap err drops packets : 0
Node: 0/RP1/CPU0
  Unresolved drops      packets : 0
  Unsupported drops     packets : 0
  Null10 drops          packets : 0
  No route drops         packets : 0
  No Adjacency drops    packets : 0
  Checksum error drops  packets : 0
  RPF drops              packets : 0
  RPF suppressed drops   packets : 0
  RP destined drops      packets : 0
  Discard drops          packets : 0
  GRE lookup drops       packets : 0
  GRE processing drops   packets : 0
  LISP punt drops        packets : 0
  LISP encaps err drops  packets : 0
  LISP decap err drops   packets : 0
```

```
Router# clear cef ipv4 drops location 0/RP0/CPU0
```

```
Node: 0/RP0/CPU0
Clearing CEF Drop Statistics
```

clear cef ipv4 exceptions

clear cef ipv4 exceptions

To clear IPv4 Cisco Express Forwarding (CEF) exception packet counters, use the **clear cef ipv4 exceptions** command in XR EXEC mode mode.

clear cef ipv4 exceptions location node-id

Syntax Description	location node-id Clears IPv4 CEF exception packet counters for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.						
Command Default	No default behavior or values						
Command Modes	XR EXEC mode						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.		
Release	Modification						
Release 7.0.12	This command was introduced.						
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, this command will clear IPv4 CEF exception packet counters for all nodes.						
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>basic-services</td> <td>read, write</td> </tr> <tr> <td>cef</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	basic-services	read, write	cef	read, write
Task ID	Operations						
basic-services	read, write						
cef	read, write						

Examples

The following example displays sample output for the IPv4 Cisco Express Forwarding (CEF) exception packet counters, and clear s IPv4 CEF exception packets node 0/RP0/CPU0:

```
Router# show cef ipv4 exceptions

CEF Exception Statistics
Node: 0/RP0/CPU0
    Slow encaps packets :          0
    Unsupported packets :         0
    Redirect packets :            0
    Receive packets :             0
    Broadcast packets :           0
    IP options packets :          0
    TTL expired packets :         0
    Fragmented packets :          0
Node: 0/RP1/CPU0
    Slow encaps packets :          3
    Unsupported packets :          0
    Redirect packets :             0
    Receive packets :              12787
    Broadcast packets :            74814
```

```
IP options packets : 0
TTL expired packets : 0
Fragmented packets : 0
```

```
Router# clear cef ipv4 exceptions location 0/RP0/CPU0
```

```
Node: 0/RP0/CPU0
Clearing CEF Exception Statistics
```

clear cef ipv6 drops

clear cef ipv6 drops

To clear Cisco Express Forwarding (CEF) IPv6 packet drop counters, use the **clear cef ipv6 drop** command in XR EXEC mode.

clear cef ipv6 drops location node-id

Syntax Description	location node-id Clears IPv6 packet drop counters for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.						
Command Default	No default behavior or values						
Command Modes	XR EXEC mode						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.		
Release	Modification						
Release 7.0.12	This command was introduced.						
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, this command clears IPv6 CEF drop counters for all nodes.						
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>basic-services</td> <td>read, write</td> </tr> <tr> <td>cef</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	basic-services	read, write	cef	read, write
Task ID	Operations						
basic-services	read, write						
cef	read, write						

Examples

The following example displays sample output for the IPv6 Cisco Express Forwarding (CEF) table packet drop counters, and clears IPv6 CEF drop counters for location 0/RP0/CPU0:

```
Router# show cef ipv6 drops

CEF Drop Statistics
Node: 0/RP0/CPU0
  Unresolved drops    packets :      0
  Unsupported drops   packets :      0
  Null0 drops         packets :      0
  No route drops     packets :      1
  No Adjacency drops packets :      0
  Checksum error drops packets :      0
  RPF drops           packets :      0
  RPF suppressed drops packets :      0
  RP destined drops   packets :      0
  Discard drops       packets :      0
  GRE lookup drops   packets :      0
  GRE processing drops packets :      0
  LISP punt drops     packets :      0
  LISP encap err drops packets :      0
```

```
LISP decap err drops packets : 0
Node: 0/RP1/CPU0
  Unresolved drops      packets : 0
  Unsupported drops     packets : 0
  Null10 drops          packets : 0
  No route drops         packets : 1
  No Adjacency drops    packets : 0
  Checksum error drops  packets : 0
  RPF drops              packets : 0
  RPF suppressed drops   packets : 0
  RP destined drops      packets : 0
  Discard drops          packets : 0
  GRE lookup drops       packets : 0
  GRE processing drops   packets : 0
  LISP punt drops        packets : 0
  LISP encaps err drops  packets : 0
  LISP decap err drops   packets : 0
```

```
Router# clear cef ipv6 drop
```

```
Node: 0/RP0/CPU0
Clearing CEF Drop Statistics
```

clear cef ipv6 exceptions

clear cef ipv6 exceptions

To clear IPv6 Cisco Express Forwarding (CEF) exception packet counters, use the **clear cef ipv6 exceptions** command in XR EXEC mode .

clear cef ipv6 exceptions location node-id

Syntax Description	location node-id Clears IPv6 CEF exception packet counters for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.						
Command Default	No default behavior or values						
Command Modes	XR EXEC mode						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.		
Release	Modification						
Release 7.0.12	This command was introduced.						
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, this command clears IPv6 CEF exception packet counters for all nodes.						
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>basic-services</td> <td>read, write</td> </tr> <tr> <td>cef</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	basic-services	read, write	cef	read, write
Task ID	Operations						
basic-services	read, write						
cef	read, write						

Examples

The following example displays sample output for the IPv6 Cisco Express Forwarding (CEF) exception packet counters, and clears the IPv6 CEF exception packets for location:

```
Router# show cef ipv6 exceptions

CEF Exception Statistics
Node: 0/RP0/CPU0
Slow encapsulation packets : 0
Unsupported packets : 0
Redirect packets : 0
Receive packets : 1
Broadcast packets : 0
IP options packets : 0
TTL expired packets : 0
Fragmented packets : 0

Node: 0/RP1/CPU0
Slow encapsulation packets : 0
Unsupported packets : 0
Redirect packets : 0
Receive packets : 7
```

```
Broadcast packets : 0
IP options packets : 0
TTL expired packets : 0
Fragmented packets : 0
```

```
Router# clear cef ipv6 exceptions location 0/RP0/CPU0
```

```
Node: 0/RP0/CPU0
Clearing CEF Exception Statistics
```

hw-module profile cef

To configure cef profile on a Global Configuration level, use the hw-module profile cef command in the XR Config mode.

Note Use the **lpts acl** option in the hw-module profile cef command in the Global Configuration mode. To disable the LPTS ACL mode, use the **no** form of this command.

```
hw-module profile cef { [ bgplu enable ] | [ dark-bw enable ] | [ lpts acl ] | [ source-rtbh enable ] }
```

Syntax Description

bgplu	Configures the bgplu feature.
dark-bw	Configures the dark bandwidth.
lpts acl	Configures the lpts acl mode
source-rtbh enable	Configures source-based Remote Triggered Black Hole filtering (RTBH).

Command Default

No default behavior or values

Command Modes

XR Config

Command History

Release	Modification
Release 7.5.2	The lpts acl option was introduced.
Release 7.0.12	This command was introduced.
Release 24.2.1	This command was modified. The source-rtbh enable keyword-pair was introduced.

Task ID

Task ID	Operations
basic-services	read, write
cef	read, write

Usage Guidelines

You must reload the router after executing the **hw-module profile cef** command.

For more information about configuring Dark Bandwidth (dark-bw), see chapter *Implementing MPLS Traffic Engineering* in the *MPLS Configuration Guide for Cisco 8000 Series Routers*.

hw-module profile route scale

To increase the route scale for IPv4 or IPv6 traffic types, use the **hw-module profile stats route-scale** command in XR Config mode.

hw-module profile route scale lpm tcam-banks wide-entries shortened

Syntax Description	lpm tcam-banks lpm wide-entries shortened	Increases the IPv4 route scale from 2 million to 3 million entries and IPv6 route scale from 0.5 million to 1 million entries. Shortens the wide routing prefixes for IPv6 addresses.
---------------------------	--	--

Command Default By default, the route scale for IPv4 traffic is 2 million entries and IPv6 traffic is 0.5 million entries.

Command Mode

XR Config

Command History

Release	Modification
Release 24.1.1	The lpm wide-entries shortened keyword was introduced.
Release 7.9.1	This command was introduced.

Usage Guidelines

- You must reload the router after executing the **hw-module profile route scale** command.
- When you increase the route scale, it will result in restricted resources for packet classification features such as Security ACL, QoS ACL, BGP Flowspec, and LPTS.
- The **hw-module profile route scale lpm wide-entries shortened** command isn't enabled by default, and we recommend using it judiciously to accomodate higher number of wide-entry IPv6 prefixes.

Task ID	Operations
config-services	read, write
root-lr	read, write

Examples

The following example shows you how to configure the **hw-module profile route scale** command:

```
Router# config
Router(config)# hw-module profile route scale lpm tcam-banks
Router(config)# commit
Router# reload location all
```

hw-module profile route scale

The following example shows you how to configure the **hw-module profile route scale lpm wide-entries shortened** command:

```
Router# config  
Router(config)# hw-module profile route scale lpm wide-entries shortened  
Router(config)# commit  
Router# reload location all
```

show adjacency

To display Cisco Express Forwarding (CEF) adjacency table information, use the **show adjacency** command in XR EXEC mode.

```
show adjacency [ipv4 [nexthop ipv4-address] | mpls | ipv6] [interface-type interface-instance]
[remote] [detail] [location node-id]
```

Syntax Description	ipv4 (Optional) Displays only IPv4 adjacencies. nexthop <i>ipv4-address</i> (Optional) Displays adjacencies that are destined to the specified IPv4 nexthop. mpls (Optional) Displays only MPLS adjacencies. ipv6 (Optional) Displays only IPv6 adjacencies. <i>interface-type</i> (Optional) Interface type. For more information, use the question mark (?) online help function. <i>interface-instance</i> Either a physical interface instance or a virtual interface instance: <ul style="list-style-type: none"> Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash mark between values is required as part of the notation. <ul style="list-style-type: none"> <i>rack</i>: Chassis number of the rack. <i>slot</i>: Physical slot number of the line card. <i>module</i>: Module number. A physical layer interface module (PLIM) is always 0. <i>port</i>: Physical port number of the interface. Virtual interface instance. Number range varies depending on interface type. For more information about the syntax for the router, use the question mark (?) online help function.				
remote	(Optional) Displays only remote adjacencies. A remote adjacency is an internal adjacency used to forward packets between line cards.				
detail	(Optional) Displays detailed adjacency information, including Layer 2 information.				
location <i>node-id</i>	(Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				

show adjacency**Usage Guidelines**

This command is used to verify that an adjacency exists for a connected device, that the adjacency is valid, and that the MAC header rewrite string is correct.

If you do not specify a node with the **location** keyword and *node-id* argument, this command displays the CEF adjacency table for the node on which the command is issued.

Task ID	Task ID	Operations
cef	read	

Examples

The following is sample output from **show adjacency** command with the **location** keyword specified:

```
Router# show adjacency location 0/RP1/CPU0
```

Interface	Address	Version	RefCount	Protocol
FH0/0/0/21	(interface)	5	1(0)

This table describes the significant fields shown in the display.

Table 1: show adjacency Command Field Descriptions

Field	Description
Interface	Outgoing interface associated with the adjacency.
Address	Address can represent one of these addresses: <ul style="list-style-type: none"> • Next hop IPv4 or IPv6 address • Point-to-Point address Information in parentheses indicates different types of adjacency.
Version	Version number of the adjacency. Updated whenever the adjacency is updated.
RefCount	Number of references to this adjacency.
Protocol	Protocol for which the adjacency is associated.
0f000800 and 000c86f33d330800453a21c10800	Layer 2 encapsulation string.
mtu	Value of the maximum transmission unit (MTU).
flags	Internal field.
packets	Number of packets going through the adjacency.
bytes	Number of bytes going through the adjacency.

show cef bgp-attribute

show cef bgp-attribute

To display Border Gateway Protocol (BGP) attributes for Cisco Express Forwarding (CEF), use the **show cef bgp-attribute** command in XR EXEC mode.

show cef bgp-attribute [attribute-id index-id] [local-attribute-id index-id] [location node-id]

Syntax Description	attribute-id index-id (Optional) Displays FIB attribute index. local-attribute-id index-id (Optional) Displays FIB local attribute index. location node-id (Optional) Displays BGP information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.				
Command Default	The default location is active RP.				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.0.12</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	This command has no keywords or arguments.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th><th>Operations</th></tr> </thead> <tbody> <tr> <td>cef</td><td>read</td></tr> </tbody> </table>	Task ID	Operations	cef	read
Task ID	Operations				
cef	read				

Examples

The following example shows how to use the **show cef bgp-attribute** command:

```
Router# show cef bgp-attribute

Total number of entries: 75742
BGP Attribute ID: 0x2058a, Local Attribute ID: 0x1
    Origin AS: 195, Next Hop AS: 195
BGP Attribute ID: 0x20583, Local Attribute ID: 0x2
    Origin AS: 22, Next Hop AS: 22
BGP Attribute ID: 0x20582, Local Attribute ID: 0x3
    Origin AS: 21, Next Hop AS: 21
BGP Attribute ID: 0x20585, Local Attribute ID: 0x4
    Origin AS: 28, Next Hop AS: 28
BGP Attribute ID: 0x20584, Local Attribute ID: 0x5
    Origin AS: 27, Next Hop AS: 27
BGP Attribute ID: 0x2057f, Local Attribute ID: 0x6
    Origin AS: 86, Next Hop AS: 86
BGP Attribute ID: 0x2058b, Local Attribute ID: 0x7
    Origin AS: 196, Next Hop AS: 196
BGP Attribute ID: 0x20589, Local Attribute ID: 0x8
    Origin AS: 194, Next Hop AS: 194
```

This table describes the significant fields shown in the display.

Table 2: show cef bgp-attribute Command Field Descriptions

Field	Description
BGP Attribute ID	Displays the id assigned by BGP.
Local Attribute ID	Displays the id assigned by FIB.
Origin AS	Displays the origin AS of the prefix that carries this attribute id.
Next Hop AS	Displays the AS that contains the BGP nexthop for this prefix.

show cef

show cef

To display information about packets forwarded by Cisco Express Forwarding (CEF), use the **show cef** command in XR EXEC mode.

```
show cef tables [prefix [mask]] [ hardware { egress } | detail ] [ location { node-id | all } ]
```

Syntax Description

prefix	(Optional) Longest matching CEF entry for the specified IPv4 destination prefix.
mask	(Optional) Exact CEF entry for the specified IPv4 prefix and mask.
hardware	(Optional) Displays detailed information about hardware.
egress	Displays information from the egress packets.
detail	(Optional) Displays full details.
location node-id	(Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
all	(Optional) Displays all locations.
tables	Displays the list of tables known to Forwarding Information Base (FIB).

Command Default

When the prefix is not explicitly specified, this command displays all the IPv4 prefixes that are present in CEF. When not specified, the location defaults to the active Route Processor (RP) node.

Command Modes

XR EXEC mode

Command History

Release	Modification
24.4.1	This command was modified to include the tables keyword.
7.0.12	This command was introduced.

Usage Guidelines

No specific guidelines impact the use of this command.

show cef exact-route (user-data)

To display the route taken from a source IP to a destination IP , use the **show cef exact-route** command in XR EXEC mode.

```
show cef [ exact-route ipv4-source-address ipv4-destination-address protocol protocol source-port source-port destination-port destination-port { ingress-interface ingress-interface | user-data user-data } ingress-interface ingress-interface [ brief | detail | hardware | internal | location | policy-class | protocol ] }
```

Syntax Description	exact-route	(Optional) Displays the egress interface where traffic corresponding to the other specified parameters will be sent.
	<i>ipv4-source-address</i>	Specifies IPv4 source address in x.x.x.x format.
	<i>ipv4-destination-address</i>	Specifies IPv4 destination address in x.x.x.x format.
	protocol <i>protocol</i>	Specifies protocol number or name for this route. For more information, use the question mark (?) online help function.
	source-port <i>source-port</i>	Specifies the source port number. The range is from 0 to 65535.
	destination-port <i>destination-port</i>	Specifies the destination port number. The range is from 0 to 65535.
	ingress-interface	(Optional) Specifies the ingress interface information.
	user-data <i>user-data</i>	(Optional) Specifies the additional user chosen data bytes used in multi-path computation. In <i>user-data</i> , you can enter 1-4 bytes in hexadecimal.
	ingress-interface <i>ingress-interface</i>	Specifies the ingress interface information.
	brief	(Optional) Displays brief information of CEF table.
	detail	(Optional) Displays full information of CEF table.
	hardware	(Optional) Displays information from hardware.
	location	(Optional) Provides the forwarding information for the designated node. The node-id argument is entered in the <i>rack/slot/module</i> notation.
	policy-class	(Optional) Class for policy-based tunnel selection.
Command Default	None	
Command Modes	XR EXEC mode	
Command History	Release	Modification
	Release 7.5.5	The keyword user-data was introduced.

show cef exact-route (user-data)

Release	Modification
Release 24.2.11	The keyword user-data was introduced.
Release 7.0.12	This command was introduced.

Usage Guidelines

If you do not specify a node with the **location** keyword and *node-id* argument, this command displays the CEF table on the node in which the command is issued. Otherwise, the command is effective on the node specified by the **location** *node-id* keyword and argument.

Related Commands	Command	Description
	show cef, on page 26	Displays information about packets forwarded by Cisco Express Forwarding (CEF).

show cef ipv4 adjacency

show cef ipv4 adjacency

To display Cisco Express Forwarding (CEF) IPv4 adjacency status and configuration information, use the **show cef ipv4 adjacency** command in XR EXEC mode.

```
show cef [vrf vrf-name] ipv4 adjacency [interface-type interface-path-id] [location node-id] [detail]
[discard] [glean] [null] [punt] [remote] [protected]
```

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information. vrf-name (Optional) Name of a VRF. interface-type (Optional) Interface type. For more information, use the question mark (?) online help function. interface-path-id (Optional) Either a physical interface instance or a virtual interface instance: <ul style="list-style-type: none"> Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash mark between values is required as part of the notation. <ul style="list-style-type: none"> <i>rack</i>: Chassis number of the rack. <i>slot</i>: Physical slot number of the line card. <i>module</i>: Module number. A physical layer interface module (PLIM) is always 0. <i>port</i>: Physical port number of the interface. Virtual interface instance. Number range varies depending on interface type. For more information about the syntax for the router, use the question mark (?) online help function.
location node-id	(Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
detail	(Optional) Displays the detailed adjacency information.
discard	(Optional) Filters out and displays only the discarded adjacency information.
glean	(Optional) Filters out and displays only the glean adjacency information.
null	(Optional) Filters out and displays only the adjacency information.
punt	(Optional) Filters out and displays only the punt adjacency information.
remote	(Optional) Filters out and displays only the remote adjacency information.
protected	(Optional) Filters out and displays only the IP-Fast Reroute (FRR) protected adjacency information.

Command Default	No default behavior or values
------------------------	-------------------------------

Command History	Release	Modification
	Release 7.0.12	This command was introduced.
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, the show cef ipv4 adjacency command displays the CEF adjacency table for the node on which the command is issued.

show cef ipv4

show cef ipv4

To display the IPv4 Cisco Express Forwarding (CEF) table, use the **show cef ipv4** command in XR EXEC mode.

```
show cef [vrf vrf-name] ipv4 [prefix [mask] | interface-type interface-instance] [detail] [location node-id]
```

Syntax Description	<p>vrf (Optional) Displays VPN routing and forwarding (VRF) instance information.</p> <p><i>vrf-name</i> (Optional) Name of a VRF.</p> <p><i>prefix</i> (Optional) Longest matching CEF entry for the specified IPv4 destination prefix.</p> <p><i>mask</i> (Optional) Exact CEF entry for the specified IPv4 prefix and mask.</p> <p><i>interface-type</i> (Optional) Interface type. For more information, use the question mark (?) online help function.</p> <p><i>interface-instance</i> Either a physical interface instance or a virtual interface instance: <ul style="list-style-type: none"> Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash mark between values is required as part of the notation. <ul style="list-style-type: none"> <i>rack</i>: Chassis number of the rack. <i>slot</i>: Physical slot number of the line card. <i>module</i>: Module number. A physical layer interface module (PLIM) is always 0. <i>port</i>: Physical port number of the interface. Virtual interface instance. Number range varies depending on interface type. <p>Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0) and the module is CPU0. Example: interface MgmtEth0/RP0 /CPU0/0.</p> <p>For more information about the syntax for the router, use the question mark (?) online help function.</p> </p>
detail	(Optional) Displays full CEF entry information.
location node-id	(Optional) Displays the IPv4 CEF table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
Command Default	If the location is not specified, the command defaults to the active RP node.
Command Modes	XR EXEC mode

Command History	Release	Modification
	Release 7.0.12	This command was introduced.
Usage Guidelines		
Task ID	Task ID	Operations
	cef	read

Examples

The following sample output is from the **show cef ipv4** command:

```
Router# show cef ipv4
Prefix          Next Hop           Interface
-----          -----
0.0.0.0/0       drop              default handler
0.0.0.0/32      broadcast
1.75.55.1/32   1.76.0.1/32      <recursive>
1.76.0.0/16     attached
1.76.0.0/32     broadcast
1.76.0.1/32     1.76.0.1/32      MgmtEth0/RP0/CPU0/0
1.76.0.2/32     1.76.0.2/32      MgmtEth0/RP0/CPU0/0
1.76.0.3/32     1.76.0.3/32      MgmtEth0/RP0/CPU0/0
1.76.11.2/32    1.76.11.2/32    MgmtEth0/RP0/CPU0/0
```

```
Router# show cef ipv4
Prefix          Next Hop           Interface
-----          -----
0.0.0.0/0       drop              default handler
0.0.0.0/32      broadcast
1.75.55.1/32   1.76.0.1/32      <recursive>
1.76.0.0/16     attached
1.76.0.0/32     broadcast
1.76.0.1/32     1.76.0.1/32      MgmtEth0/RP0/CPU0/0
1.76.0.2/32     1.76.0.2/32      MgmtEth0/RP0/CPU0/0
1.76.0.3/32     1.76.0.3/32      MgmtEth0/RP0/CPU0/0
1.76.11.2/32    1.76.11.2/32    MgmtEth0/RP0/CPU0/0
```

This table describes the significant fields shown in the display.

Table 4: show cef ipv4 Command Field Descriptions

Field	Description
Prefix	Prefix in the IPv4 CEF table.
Next Hop	Next hop of the prefix.
Interface	Interface associated with the prefix.

show cef ipv4 drops

show cef ipv4 drops

To display IPv4 Cisco Express Forwarding (CEF) table packet drop counters, use the **show cef ipv4 drops** command in XR EXEC mode.

show cef [vrf *vrf-name*] ipv4 drops [location *node-id*]

Syntax Description	<p>vrf (Optional) Displays VPN routing and forwarding (VRF) instance information.</p> <p>vrf-name (Optional) Name of a VRF.</p> <p>location <i>node-id</i> (Optional) Displays IPv4 CEF table packet drop counters for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.</p>				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	A packet might be dropped from the IPv4 CEF table because of unresolved CEF entries, unsupported features, absence of route information, absence of adjacency information, or an IP checksum error. If you do not specify a node with the location keyword and <i>node-id</i> argument, this command displays IPv4 CEF packet drop counters for all nodes.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>cef</td> <td>read</td> </tr> </tbody> </table>	Task ID	Operations	cef	read
Task ID	Operations				
cef	read				

Examples

The following is sample output from the **show cef ipv4 drops** for location command:

```
Router# show cef ipv4 drops

CEF Drop Statistics
Node: 0/RP0/CPU0
    Unresolved drops      packets :          0
    Unsupported drops     packets :          0
    Null0 drops           packets :          0
    No route drops        packets :          0
    No Adjacency drops   packets :          0
    Checksum error drops packets :          0
    RPF drops             packets :          0
    RPF suppressed drops packets :          0
    RP destined drops    packets :          0
    Discard drops         packets :          0
    GRE lookup drops     packets :          0
    GRE processing drops packets :          0
    LISP punt drops       packets :          0
```

```

LISP encap err drops packets : 0
LISP decap err drops packets : 0

Node: 0/RP1/CPU0
Unresolved drops      packets : 0
Unsupported drops     packets : 0
Null0 drops           packets : 0
No route drops        packets : 0
No Adjacency drops   packets : 0
Checksum error drops packets : 0
RPF drops             packets : 0
RPF suppressed drops packets : 0
RP destined drops    packets : 0
Discard drops         packets : 0
GRE lookup drops     packets : 0
GRE processing drops packets : 0
LISP punt drops       packets : 0
LISP encap err drops packets : 0
LISP decap err drops packets : 0

```

Table 5: show cef ipv4 drop Command Field Descriptions

Field	Description
Unresolved drops	Drops due to unresolved routes.
Unsupported drops	Drops due to an unsupported feature.
Null0 drops	Drops to the Null0 interface.
No route drops	Number of packets dropped because there were no routes to the destination.
No Adjacency drops	Number of packets dropped because there were no adjacencies established.
Checksum error drops	Drops due to IPv4 checksum error.
RPF drops	Drops due to IPv4 unicast RPF ¹ .
RPF suppressed drops	Drops suppressed due to IPv4 unicast RPF.
RP destined drops	Drops destined for the router.
Discard drops	Drops those were discarded.
GRE lookup drops	GRE packets dropped during GRE Lookup.
GRE processing drops	GRE packets dropped during GRE Processing.
LISP punt drops	LISP packets dropped during software processing of the packets.
LISP encap err drops	LISP encap packets dropped due to errors.
LISP decap err drops	LISP Decap packets dropped due to errors.

¹ RPF = Reverse Path Forwarding

show cef ipv4 exact-route

show cef ipv4 exact-route

To display an IPv4 Cisco Express Forwarding (CEF) exact route, use the **show cef ipv4 exact-route** command in XR EXEC mode.

```
show cef [vrf vrf-name]ipv4 exact-route {source-address destination-address} [protocol protocol-name]
[source-port source-port] [destination-port destination-port] [type
interface-path-id] [policy-class-value] [detail | location node-id] { ingress-interface ingress-interface |
user-data user-data ingress-interface ingress-interface [brief | detail | hardware | internal | location
policy-class | protocol] }
```

Syntax Description	
vrf	(Optional) Sets VPN routing and forwarding (VRF) instance information.
vrf-name	(Optional) Name of a VRF.
source-address	The IPv4 source address in x.x.x.x format.
destination-address	The IPv4 destination address in x.x.x.x format.
protocol protocol name	(Optional) Sets the specified protocol for the route.
source-port source-port	(Optional) Sets the TCP and UDP source port. The range is from 0 to 65535.
destination-port destination-port	(Optional) Sets the TCP and UDP destination port. The range is from 0 to 65535.
type	(Optional) Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or virtual interface.
Note Use the show interfaces command to see a list of all interfaces currently configured on the router.	
For more information about the syntax for the router, use the question mark (?) online help function.	
detail	(Optional) Provides full CEF entry information.
location node-id	(Optional) Provides the IPv4 CEF table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
ingress-interface	(Optional) Specifies the ingress interface information.
user-data user-data	(Optional) Specifies the additional user chosen data bytes used in multi-path computation. In <i>user-data</i> , you can enter 1-4 bytes in hexadecimal.
ingress-interface <i>ingress-interface</i>	Specifies the ingress interface information.
brief	(Optional) Displays brief information of CEF table.

detail	(Optional) Displays full information of CEF table.
hardware	(Optional) Displays information from hardware.
location	(Optional) Provides the forwarding information for the designated node. The node-id argument is entered in the <i>rack/slot/module</i> notation.
policy-class	(Optional) Class for policy-based tunnel selection.

Command Default No default behavior or values

Command Modes XR EXEC mode

Command History

Release	Modification
Release 7.5.5	The keyword user-data was introduced.
Release 24.2.11	The keyword user-data was introduced.
Release 7.0.12	This command was introduced.

Usage Guidelines For TCP and UDP protocols, configure the source-port and destination-port mandatorily. For other protocols, configure the source-port and destination-port as zero. Otherwise, the output of the **show cef ipv4 exact-route** command is not correct.

Task ID	Task ID	Operations
cef	read	

Examples The following sample output is from the **show cef ipv4 exact-route** command:

```
Router# show cef ipv4 exact-route 192.0.2.1 198.51.100.1 protocol TCP source-port 25000
destination-port 30000 ingress-interface HundredGigE 0/0/0/24
Wed Apr 15 02:15:16.102 UTC
5.5.5.5/32, version 18, labeled SR, internal 0x1000001 0x8110 (ptr 0x94730608) [1], 0x0
(0x94710b18), 0xa28 (0x9849c0a8)
Updated Apr 14 19:08:57.655 local adjacency 30.0.0.2

```

This table describes the significant fields shown in the display.

Table 6: show cef ipv4 exact-route Command Field Descriptions

Field	Description
Prefix	Prefix in the IPv4 CEF table .
Next Hop	Next hop of the prefix
Interface	Interface associated with the prefix

show cef ipv4 exceptions

To display IPv4 Cisco Express Forwarding (CEF) exception packet counters, use the **show cef ipv4 exceptions** command in .

show cef [vrf vrf-name] ipv4 exceptions [location node-id]

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information. vrf-name (Optional) Name of a VRF. location node-id (Optional) Displays CEF exception packet counters for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.				
Command Default	No default behavior or values				
Command Modes					
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.0.12</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	<p>CEF exception packets are those packets that have been sent from the hardware to the software because they require additional handling. The types of IPv4 CEF exception packets are displayed in the command's output and are defined.</p> <p>If you do not specify a node with the location keyword and <i>node-id</i> argument, this command displays IPv4 CEF exception packet counters on all nodes.</p>				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th><th>Operations</th></tr> </thead> <tbody> <tr> <td>cef</td><td>read</td></tr> </tbody> </table>	Task ID	Operations	cef	read
Task ID	Operations				
cef	read				

Examples

The following is sample output from the **show cef ipv4 exceptions** command:

```
Router# show cef ipv4 exceptions

CEF Exception Statistics
Node: 0/RP0/CPU0
    Slow encaps packets :          0
    Unsupported packets :         0
    Redirect   packets :          0
    Receive    packets :          0
    Broadcast  packets :          0
    IP options  packets :         0
    TTL expired packets :        0
    Fragmented packets :         0
Node: 0/RP1/CPU0
    Slow encaps packets :          3
    Unsupported packets :         0
    Redirect   packets :          0
```

show cef ipv4 exceptions

Receive packets :	12787
Broadcast packets :	74814
IP options packets :	0
TTL expired packets :	0
Fragmented packets :	0

This table describes the significant fields shown in the display.

Table 7: show cef ipv4 exceptions Command Field Descriptions

Field	Description
Slow encaps	Number of packets requiring special processing during encapsulation.
Redirect	Number of ICMP ² redirect messages sent.
Receive	Number of packets destined to the router.
Broadcast	Number of broadcasts received.
IP options	Number of IP option packets.
TTL expired	Number of packets with expired TTLs ³ .
Fragmented	Number of packets that have been fragmented.

² ICMP = internet control message protocol

³ TTL = time to live

show cef ipv4 hardware

To display Cisco Express Forwarding (CEF) IPv4 hardware status and configuration information, use the **show cef ipv4 hardware** command in XR EXEC mode.

```
show cef [vrf vrf-name] ipv4 hardware {egress | [detail | location node-id]}
```

Syntax Description	vrf vrf-name egress detail location node-id	(Optional) Displays VPN routing and forwarding (VRF) instance information. (Optional) Name of a VRF. Displays information from the egress packets. (Optional) Displays full details. (Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.

show cef ipv4 interface

To display IPv4 Cisco Express Forwarding (CEF)-related information for an interface, use the **show cef ipv4 interface** command in XR EXEC mode.

```
show cef[vrf vrf-name] ipv4 interface type interface-path-id [detail] [location node-id]
```

Syntax Description	vrf vrf-name type <i>interface-path-id</i>	(Optional) Displays VPN routing and forwarding (VRF) instance information. (Optional) Name of a VRF. Interface type. For more information, use the question mark (?) online help function. Either a physical interface instance or a virtual interface instance as follows:
		<ul style="list-style-type: none"> Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash between values is required as part of the notation. <ul style="list-style-type: none"> <i>rack</i>: Chassis number of the rack. <i>slot</i>: Physical slot number of the modular services card or line card. <i>module</i>: Module number. A physical layer interface module (PLIM) is always 0. <i>port</i>: Physical port number of the interface.
		<p>Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0) and the module is CPU0. Example: interface HundredGigE 0/RP0 /CPU0/0.</p> <ul style="list-style-type: none"> Virtual interface instance. Number range varies depending on interface type.
		For more information about the syntax for the router, use the question mark (?) online help function.
Command Default	No default behavior or values	
Command History	Release	Modification
	Release 7.0.12	This command was introduced.
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, the show cef ipv4 interface rpf-statistics command displays the CEF-related information for the interface on the route processor.	

show cef ipv4 interface

Task ID	Task Operations ID
cef	read

Examples

The following is sample output from the **show cef ipv4 interface** command:

```
Router# show cef ipv4 interface HundredGigE 0/0/0/24
HundredGigE0/0/0/0 is up if_handle 0x0f000138 if_type IFT_HUNDREDGE(0x49)
    idb info 0x9093e730 flags 0x8001 ext 0x942c8da8 flags 0x50
    Vrf Local Info (0x5106328)
Interface last modified Jan 13, 2020 06:08:29, create
Reference count 1      Next-Hop Count 2
Forwarding is enabled
ICMP redirects are never sent
ICMP unreachables are enabled
Protocol MTU 1500, TableId 0xe0000000(0x90d43400)
Protocol Reference count 2
Primary IPV4 local address 100.0.0.6/32
```

This table describes the significant fields shown in the display.

Table 8: show cef ipv4 interface Command Field Descriptions

Field	Description
HundredGigE0/0/0/24 is down	Status of the interface.
if_handle	Internal interface handle.
Forwarding is enabled	Indicates that Cisco Express Forwarding (CEF) is enabled.
ICMP redirects are always sent or never sent	Indicates whether ICMP ⁴ redirect messages should be sent. By default, ICMP redirect messages are always sent.
IP MTU	Value of the IPv4 MTU ⁵ size set on the interface.
Reference count	Internal reference counter.

⁴ ICMP = internet control message protocol

⁵ MTU = maximum transmission unit

show cef ipv4 non-recursive

To display the IPv4 nonrecursive prefix entries in the IPv4 Cisco Express Forwarding (CEF) table, use the **show cef ipv4 non-recursive** command in XR EXEC mode.

```
show cef [vrf vrf-name] ipv4 non-recursive [detail] [hardware {egress | ingress}] [interface-type interface-instance] [location node-id]
```

Syntax Description	
vrf	(Optional) Displays VPN routing and forwarding (VRF) instance information.
vrf-name	(Optional) Name of a VRF.
detail	(Optional) Displays detailed information about nonrecursive prefix entries in the IPv4 CEF table.
hardware	(Optional) Displays detailed information about hardware.
egress	(Optional) Displays egress NPU.
ingress	(Optional) Displays ingress NPU.
interface-type	(Optional) Interface type. For more information, use the question mark (?) online help function.
<i>interface-instance</i>	(Optional) Either a physical interface instance or a virtual interface instance: <ul style="list-style-type: none"> • Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash mark between values is required as part of the notation. <ul style="list-style-type: none"> • <i>rack</i>: Chassis number of the rack. • <i>slot</i>: Physical slot number of the line card. • <i>module</i>: Module number. A physical layer interface module (PLIM) is always 0. • <i>port</i>: Physical port number of the interface. • Virtual interface instance. Number range varies depending on interface type. For more information about the syntax for the router, use the question mark (?) online help function.
location <i>node-id</i>	(Optional) Displays the IPv4 nonrecursive prefix entries in the IPv4 CEF table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
Command Default	No default behavior or values
Command Modes	XR EXEC mode

show cef ipv4 non-recursive

Command History

Release	Modification
7.0.12	This command was introduced.

Usage Guidelines

If you do not specify a node with the **location** keyword and *node-id* argument, the output displays the IPv4 CEF nonrecursive routes for the node on which the command is issued.

Task ID

Task ID	Operations
cef	read

Examples

The following is sample output from the **show cef ipv4 non-recursive** command:

```
Router# show cef ipv4 non-recursive

show cef ipv4 summary

show cef ipv4 summary

To display a summary of the IPv4 Cisco Express Forwarding (CEF) table, use the **show cef ipv4 summary** command in XR EXEC mode.

show cef [vrf *vrf-name*] ipv4 summary [location *node-id*]

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information.
---------------------------	---

vrf-name	(Optional) Name of a VRF.
-----------------	---------------------------

location <i>node-id</i>	(Optional) Displays a summary of the IPv4 CEF table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
--------------------------------	--

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	XR EXEC mode
----------------------	--------------

Command History	Release Modification
------------------------	------------------------------------

Release 7.0.12	This command was introduced.
-------------------	------------------------------

Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, this command displays a summary of the IPv4 CEF table for the node on which the command is issued.
-------------------------	---

Task ID	Task ID	Operations
----------------	----------------	-------------------

cef	read
-----	------

Examples	The following sample output is from the show cef ipv4 summary command:
-----------------	---

```
Router# show cef ipv4 summary
Router ID is
10
0
.0.0.0

IP CEF with switching (Table Version 0)

Load balancing: L3
Tableid 0xe0000000, Vrfid 0x60000000, Vrid 0x20000000, Flags 0x301
Vrfname default, Refcount 367
193 routes, 0 reresolve, 0 unresolved (0 old, 0 new), 13896 bytes
204 load sharing elements, 51904 bytes, 154 references
17 shared load sharing elements, 5536 bytes
187 exclusive load sharing elements, 46368 bytes
0 CEF route update drops, 175 revisions of existing leaves
Resolution Timer: 15s
0 prefixes modified in place
```

```

0 deleted stale prefixes
16 prefixes with label imposition, 51 prefixes with label information
Adjacency Table has 44 adjacencies
1 incomplete adjacency

```

This table describes the significant fields shown in the display.

Table 10: show cef ipv4 summary Command Field Descriptions

Field	Description
Load balancing	Current load-balancing mode. The default value is L3.
Table Version	Version of the CEF table.
tableid	Table identification number.
vrfid	VPN routing and forwarding (VRF) identification (vrfid) number.
vrfname	VRF name.
vrid	Virtual router identification (vrid) number.
flags	Option value for the table
routes	Total number of routes.
reresolve	Total number of routes being reresolved.
unresolved (x old, x new)	Number of routes not yet resolved.
load sharing elements	Total number of internal load-sharing data structures.
bytes	Total memory used by internal load sharing data structures.
references	Total reference count of all internal load sharing data structures.
CEF resets	Number of CEF table resets.
revisions of existing leaves	Number of updates to existing prefixes.
Exponential (currently xs, peak xs)	Currently not used.
prefixes modified in place	Prefixes modified in place.
Adjacency Table has x adjacencies	Total number of adjacencies.
x incomplete adjacency	Total number of incomplete adjacencies.

show cef ipv4 unresolved

show cef ipv4 unresolved

To display unresolved routes in the IPv4 Cisco Express Forwarding (CEF) table, use the **show cef ipv4 unresolved** command in XR EXEC mode.

show cef [vrf *vrf-name*] ipv4 unresolved [detail] [hardware {egress}] [location *node-id*]

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information. vrf-name (Optional) Name of a VRF. detail (Optional) Displays detailed information unresolved routes listed in the IPv4 CEF table. hardware (Optional) Displays detailed information about hardware. egress (Optional) Displays egress packets. location <i>node-id</i> (Optional) Displays the unresolved routes in the IPv4 CEF table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
---------------------------	--

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	XR EXEC mode
----------------------	--------------

Command History	Release	Modification
	Release 7.0.12	This command was introduced.

Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, the output displays the unresolved routes for the node on which the command is issued.
-------------------------	---

Task ID	Task ID	Operations
	cef	read

Examples	The following is sample output from the show cef ipv4 unresolved command when an unresolved route is detected:
-----------------	---

```
Router# show cef ipv4 unresolved

Prefix          Next Hop          Interface
10.3.3.3       102.2.2.2      ?
```

This table describes the significant fields shown in the display.

Table 11: show cef ipv4 unresolved Command Field Descriptions

Field	Description
Prefix	Prefix of the unresolved CEF.
Next Hop	Next hop of the unresolved CEF.
Interface	Next hop interface. A question mark (?) indicates that the interface has not been resolved.

show cef ipv6 adjacency

show cef ipv6 adjacency

To display Cisco Express Forwarding (CEF) IPv6 adjacency status and configuration information, use the **show cef ipv6 adjacency** command in XR EXEC mode.

```
show cef [vrf vrf-name] ipv6 adjacency [interface-type interface-path-id] [location node-id] [detail]
[discard] [glean] [null] [punt] [remote]
```

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information. vrf-name (Optional) Name of a VRF. interface-type (Optional) Interface type. For more information, use the question mark (?) online help function. interface-path-id (Optional) Either a physical interface instance or a virtual interface instance: <ul style="list-style-type: none"> Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash mark between values is required as part of the notation. <ul style="list-style-type: none"> <i>rack</i>: Chassis number of the rack. <i>slot</i>: Physical slot number of the line card. <i>module</i>: Module number. A physical layer interface module (PLIM) is always 0. <i>port</i>: Physical port number of the interface. Virtual interface instance. Number range varies depending on interface type. For more information about the syntax for the router, use the question mark (?) online help function.
location node-id	(Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
detail	(Optional) Displays the detailed adjacency information.
discard	(Optional) Filters out and displays only the discarded adjacency information.
glean	(Optional) Filters out and displays only the glean adjacency information.
null	(Optional) Filters out and displays only the null adjacency information.
punt	(Optional) Filters out and displays only the punt adjacency information.
remote	(Optional) Filters out and displays only the remote adjacency information.

Command Default	No default behavior or values	
Command Modes	XR EXEC mode	
Command History	Release	Modification
	Release 7.0.12	This command was introduced.
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, this command displays the CEF adjacency table for the node on which the command is issued.	
Task ID	Task ID	Operations
	cef	read

show cef ipv6 adjacency hardware

show cef ipv6 adjacency hardware

To display Cisco Express Forwarding (CEF) IPv6 adjacency hardware status and configuration information, use the **show cef ipv6 adjacency hardware** command in XR EXEC mode.

```
show cef [vrf vrf-name] ipv6 adjacency hardware {egress} [detail | discard | drop | glean | location node-id | null | punt | remote]
```

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information. vrf-name (Optional) Name of a VRF. egress Displays information from the egress packets. detail (Optional) Displays full details. discard (Optional) Displays the discard adjacency information. drop (Optional) Displays the drop adjacency information. glean (Optional) Displays the glean adjacency information. location node-id (Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. null (Optional) Displays the null adjacency information. punt (Optional) Displays the punt adjacency information. remote (Optional) Displays the remote adjacency information.				
Command Default	No default behavior or values

show cef ipv6

show cef ipv6

To display the IPv6 Cisco Express Forwarding (CEF) table, use the **show cef ipv6** command in XR EXEC mode.

show cef [vrf *vrf-name*] ipv6 [*interface-type interface-number / ipv6-prefix/ prefix-length*] [detail] [*locationnode-id*]

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information. vrf-name (Optional) Name of a VRF. interface-type interface-number (Optional) IPv6 prefixes going through the specified next hop interface. ipv6-prefix/prefix-length (Optional) Longest prefix entry in the CEF table matching the specified IPv6 prefix and prefix length. detail (Optional) Displays detailed IPv6 CEF table information. location node-id (Optional) Displays the IPv6 CEF table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
---------------------------	---

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	XR EXEC mode
----------------------	--------------

Command History	Release	Modification
	Release 7.0.12	This command was introduced.

Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, this command displays the IPv6 CEF table for the node on which the command is issued.
-------------------------	--

Task ID	Task ID	Operations
	cef	read

Examples	The following sample output is from the show cef ipv6 command:
-----------------	---

```
Router# show cef ipv6

::/0
drop default handler
fe80::/10
receive
ff02::/16
```

```

receive
ff02::2/128
receive
ff02::1:ff00:0/104
receive
ff05::/16
receive
ff12::/16
receive

```

This table describes the significant fields shown in the display.

Table 12: show cef ipv6 Command Field Descriptions

Field	Description
drop	Indicates that packets sent to the destination prefix are dropped.
loopback	Indicates that the prefix points to a loopback address. Packets sent to loopback addresses are dropped.
receive	Indicates that the prefix is configured on one of the router interfaces. Packets sent to those prefixes are received by the router.
connected	Indicates that the prefix points to a directly connected next-hop interface.
recursive	Indicates that the prefix is not directly connected but is reachable through the next-hop prefix displayed.

The following sample output is from the **show cef ipv6** with the **detail** keyword:

```
Router# show cef ipv6 detail
```

```

This table describes the significant output fields shown in the display.

Table 13: show cef ipv6 detail Command Field Descriptions

Field	Description
flags:	Properties of the indicated prefix.
Loadinfo owner:	Owner of the Loadinfo used by the prefix for forwarding. The Loadinfo owner is the prefix that owns the array of pointers to adjacencies.
fast adj:	Cached adjacency used for forwarding.
path 1:	The following three items are displayed below path 1: <ul style="list-style-type: none"> • flags—Properties of the path. • next hop—Next-hop prefix if the packet is being forwarded. • interface—Next-hop interface if the packet is being forwarded.

show cef ipv6 drops

To display IPv6 Cisco Express Forwarding (CEF) table packet drop counters, use the **show cef ipv6 drops** command in XR EXEC mode.

show cef [vrf vrf-name]ipv6 drops [location node-id]

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information. vrf-name (Optional) Name of a VRF. location node-id (Optional) Displays IPv6 CEF table packet drop counters for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
---------------------------	--

Command Default No default behavior or values

Command Modes XR EXEC mode

Command History **Release** **Modification**

Release 7.0.12 This command was introduced.

Usage Guidelines A packet might be dropped by the IPv6 CEF table because of unresolved CEF entries, unsupported features, absence of route information, absence of adjacency information, or an IP checksum error. If you do not specify a node with the **location** keyword and *node-id* argument, this command displays the packet drops for all nodes.

Note Because no hardware forwarding occurs on the route processor (RP), no packet drop information is displayed for that node.

Task ID	Task ID	Operations
	cef	read

Examples The following is sample output from the **show cef ipv6 drops** command:

```
Router# show cef ipv6 drops location 0/RP0/CPU0
CEF Drop Statistics
Node: 0/RP0/CPU0
  Unresolved drops      packets :          0
  Unsupported drops     packets :          0
  Null0 drops           packets :          0
  No route drops        packets :          1
```

show cef ipv6 drops

```
No Adjacency drops    packets :      0
Checksum error drops packets :      0
RPF drops            packets :      0
RPF suppressed drops packets :      0
RP destined drops   packets :      0
Discard drops        packets :      0
GRE lookup drops    packets :      0
GRE processing drops packets :      0
LISP punt drops     packets :      0
LISP encaps err drops packets :      0
LISP decaps err drops packets :      0
```

Table 14: show cef ipv6 drops Command Field Descriptions

Field	Description
Unresolved drops	Drops due to unresolved routes.
Unsupported drops	Drops due to an unsupported feature.
Null0 drops	Drops to the Null0 interface.
No route drops	Number of packets dropped because there were no routes to the destination.
No Adjacency drops	Number of packets dropped because there were no adjacencies established.
Checksum error drops	Drops due to IPv6 checksum error.
RPF drops	Drops due to IPv6 unicast RPF ⁶ .
RPF suppressed drops	Drops suppressed due to IPv6 unicast RPF.
RP destined drops	Drops destined for the router.
Discard drops	Drops those were discarded
GRE lookup drops	GRE packets dropped during GRE Lookup.
GRE processing drops	GRE packets dropped during GRE Processing.
LISP punt drops	LISP packets dropped during software processing of the packets.
LISP encaps err drops	LISP encaps packets dropped due to errors.
LISP decaps err drops	LISP Decaps packets dropped due to errors.

⁶ RPF = Reverse Path Forwarding

show cef ipv6 exact-route

To display the path an IPv6 flow comprising a source and destination address would take, use the **show cef ipv6 exact-route** command in XR EXEC mode.

```
show cef [ vrf vrf-name ] ipv6 exact-route { source-address destination-address } [ flow-label
flow-label-value ] [ protocol { protocol-number | protocol-value } ] [ source-port
source-port-number ] [ destination-port destination-port-number ] [ ingress-interface interface-type
interface-id ] [ hardware { ingress | egress } ] [ policy-class value ] [ detail | location
node-id ] { ingress-interface ingress-interface | user-data user-data ingress-interface ingress-interface
[ brief | detail | flow-label | hardware | internal | location | policy-class | protocol ] }
```

Syntax Description		
vrf		(Optional) Sets VPN routing and forwarding (VRF) instance information.
vrf-name		(Optional) Name of a VRF.
source-address		The IPv6 source address in x:x::x format.
destination-address		The IPv6 destination address in x:x::x format.
protocol protocol-number protocol-name		Sets the specified protocol for the route.
source-port source-port-number		(Optional) Sets the source port. The range is from 0 to 65535.
destination-port destination-port-number		(Optional) Sets the destination port. The range is from 0 to 65535.
ingress-interface interface-type interface-id		Sets the ingress interface type and ID.
hardware { protocol-value protocol-name }		(Optional) Reads from the ingress or egress packet.
flow-label flow-label-value		Sets the IPv6 flow-label and flow-label-value.
policy-class value		(Optional) Sets the class for the policy-based tunnel selection. The range for the tunnel policy class value is from 1 to 7.
detail		(Optional) Provides full CEF entry information.

show cef ipv6 exact-route

location <i>node-id</i>	(Optional) Provides the IPv6 CEF table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.								
ingress-interface	(Optional) Specifies the ingress interface information.								
user-data <i>user-data</i>	(Optional) Specifies the additional user chosen data bytes used in multi-path computation. In <i>user-data</i> , you can enter 1-4 bytes in hexadecimal.								
ingress-interface <i>ingress-interface</i>	Specifies the ingress interface information.								
brief	(Optional) Displays brief information of CEF table.								
detail	(Optional) Displays full information of CEF table.								
flow-label	(Optional) Specifies the IPv6 flow-label.								
hardware	(Optional) Displays information from hardware.								
location	(Optional) Provides the forwarding information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.								
policy-class	(Optional) Class for policy-based tunnel selection.								
Command Default	No default behavior or values								
Command Modes	XR EXEC mode								
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.5.5</td> <td>The keyword user-data was introduced.</td> </tr> <tr> <td>Release 24.2.11</td> <td>The keyword user-data was introduced.</td> </tr> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.5.5	The keyword user-data was introduced. Release	Modification								
Release 7.5.5	The keyword user-data was introduced.								
Release 24.2.11	The keyword user-data was introduced.								
Release 7.0.12	This command was introduced.								

Usage Guidelines

For TCP and UDP protocols, providing the source-port and destination-port is mandatory. For other protocols, provide the source-port and destination-port as zero. Providing flow-label is also mandatory. Otherwise, the output of the **show cef ipv6 exact-route** command is not correct.

Task ID	Task ID	Operations
cef	read	

Examples

The following sample output is from the **show cef ipv6 exact-route** command:

```
Router# show cef ipv6 exact-route 2001:DB8::1 2001:DB8:0:ABCD::1 flow-label 15000 protocol
  UDP source-port 34000 destination-port 45000 ingress-interface HundredGigE 0/0/0/24

show cef ipv6 exceptions

show cef ipv6 exceptions

To display IPv6 Cisco Express Forwarding (CEF) exception packet counters, use the **show cef ipv6 exceptions** command in XR EXEC mode.

show cef [vrf *vrf-name*] ipv6 exceptions [location *node-id*]

Syntax Description	<p>vrf (Optional) Displays VPN routing and forwarding (VRF) instance information.</p> <p>vrf-name (Optional) Name of a VRF.</p> <p>location node-id (Optional) Displays IPv6 CEF exception packet counters for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.</p>				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.0.12</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	<p>CEF exception packets are those packets that have been sent from the hardware to the software because they require additional handling. The types of IPv6 CEF exception packets are displayed in the output of show cef ipv6 exceptions.</p> <p>If you do not specify a node with location keyword and <i>node-id</i> argument, this command displays IPv6 CEF exception packet counters for all nodes.</p>

Task ID	Operations				
cef	read				

Examples The following is sample output from the **show cef ipv6 exceptions** command:

```
Router# show cef ipv6 exceptions location 0/RP0/CPU0

CEF Exception Statistics
Node: 0/RP0/CPU0
    Slow encaps packets :          0
    Unsupported packets :         0
    Redirect packets :            0
    Receive packets :             1
    Broadcast packets :           0
    IP options packets :          0
    TTL expired packets :         0
    Fragmented packets :          0
```

show cef ipv6 hardware

To display Cisco Express Forwarding (CEF) IPv6 hardware status and configuration information, use the **show cef ipv6 hardware** command in XR EXEC mode.

```
show cef [vrf vrf-name] ipv6 hardware {egress | [detail | location node-id]}
```

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information.	
vrf-name	(Optional) Name of a VRF.	
egress	Displays information from the egress packets.	
detail	(Optional) Displays full details.	
location node-id	(Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.	
Command Default	No default behavior or values	
Command Modes	XR EXEC mode	
Command History	Release	Modification
	Release 7.0.12	This command was introduced.
Usage Guidelines	No specific guidelines impact the use of this command.	
Task ID	Task ID	Operations
	cef	read

Examples

This table describes the significant fields shown in the display.

Table 15: show cef ipv6 non-recursive Command Field Descriptions

Field	Description
drop	Indicates that packets sent to the destination prefix are dropped.
loopback	Indicates that the prefix points to a loopback address. Packets sent to loopback addresses are dropped.
receive	Indicates that the prefix is configured on one of the router interfaces. Packets sent to those prefixes are received by the router.
connected	Indicates that the prefix points to a directly connected next-hop interface.

show cef ipv6 resource

To display the IPv6 nonrecursive prefix entries in the IPv6 Cisco Express Forwarding (CEF) table, use the **show cef ipv6 resource** command in XR EXEC mode.

show cef ipv6 resource [detail] [location node-id]

Syntax Description	detail (Optional) Displays detailed information resources listed in the IPv6 CEF table. location node-id (Optional) Displays the IPv6 resource entries in the IPv6 CEF table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.0.12</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, the output displays the IPv6 CEF nonrecursive routes for the node on which the command is issued.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th><th>Operations</th></tr> </thead> <tbody> <tr> <td>cef</td><td>read</td></tr> </tbody> </table>	Task ID	Operations	cef	read
Task ID	Operations

show cef ipv6 summary

show cef ipv6 summary

To display a summary of the IPv6 Cisco Express Forwarding (CEF) table, use the **show cef ipv6 summary** command in XR EXEC mode.

show cef [vrf *vrf-name*] ipv6 summary [location *node-id*]

Syntax Description	vrf (Optional) Displays VPN routing and forwarding (VRF) instance information.
---------------------------	---

vrf-name	(Optional) Name of a VRF.
-----------------	---------------------------

location <i>node-id</i>	(Optional) Displays a summary of the IPv6 CEF table for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
--------------------------------	--

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	XR EXEC mode
----------------------	--------------

Command History	Release Modification
------------------------	------------------------------------

Release 7.0.12	This command was introduced.
----------------	------------------------------

Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, this command displays a summary of the IPv6 CEF table for the node on which the command is issued.
-------------------------	---

Task ID	Task Operations
	ID

cef	read
-----	------

Examples	The following is sample output from the show cef ipv6 summary command:
-----------------	---

```
Router# show cef ipv6 summary

IP CEF with switching (Table Version 0)

Load balancing: L3
Tableid 0xe0800000, Vrfid 0x60000000, Vrid 0x20000000, Flags 0x301
Vrfname default, Refcount 12
4 routes, 0 reresolve, 0 unresolved (0 old, 0 new), 288 bytes
0 load sharing elements, 0 bytes, 0 references
0 shared load sharing elements, 0 bytes
0 exclusive load sharing elements, 0 bytes
0 CEF route update drops, 0 revisions of existing leaves
Resolution Timer: 15s
0 prefixes modified in place
0 deleted stale prefixes
0 prefixes with label imposition, 0 prefixes with label information
Adjacency Table has 44 adjacencies
1 incomplete adjacency
```

This table describes the significant fields shown in the display.

Table 16: show cef ipv6 summary Command Field Descriptions

Field	Description
Load balancing	Current load-balancing mode. The default value is L3.
Table Version	Version of the CEF table.
routes	Total number of routes.
unresolved (x old, x new)	Number of routes not yet resolved.
load sharing elements	Total number of internal load-sharing data structures.
bytes	Total memory used by internal load sharing data structures.
references	Total reference count of all internal load sharing data structures.
CEF resets	Number of CEF table resets.
revisions of existing leaves	Number of updates to existing prefixes.
Exponential (currently xs , peak xs)	Currently not used.
prefixes modified in place	Prefixes modified in place.
Router ID	Router identification.
Adjacency Table has x adjacencies	Total number of adjacencies.
x incomplete adjacency	Total number of incomplete adjacencies.

show cef ipv6 unresolved

show cef ipv6 unresolved

To display the unresolved routes in the IPv6 Cisco Express Forwarding (CEF) table, use the **show cef ipv6 unresolved** command in XR EXEC mode.

show cef [vrf *vrf-name*] ipv6 unresolved [detail] [hardware {egress}] [location *node-id*]

Syntax Description	<p>vrf (Optional) Displays VPN routing and forwarding (VRF) instance information.</p> <p><i>vrf-name</i> (Optional) Name of a VRF.</p> <p>detail (Optional) Displays full details.</p> <p>hardware (Optional) Displays Cisco Express Forwarding (CEF) IPv6 hardware status and configuration information.</p> <p>egress Displays information from the egress packets.</p> <p>location <i>node-id</i> (Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.</p>				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.0.12</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, this command displays the unresolved routes for the node on which the command is issued.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th><th>Operations</th></tr> </thead> <tbody> <tr> <td>cef</td><td>read</td></tr> </tbody> </table>	Task ID	Operations	cef	read
Task ID	Operations				
cef	read				

Examples This following is sample output from **show cef ipv6 unresolved** command when an unresolved route is detected:

```
Router# show cef ipv6 unresolved
9999::/64
    unresolved
```

This table describes the significant fields shown in the display.

Table 17: show cef ipv6 unresolved Command Field Descriptions

Field	Description
xxxx::/xx	Detected unresolved route.

```
show cef mpls adjacency
```

show cef mpls adjacency

To display the Multiprotocol Label Switching (MPLS) adjacency table, use the **show cef mpls adjacency** command in XR EXEC mode.

```
show cef mpls adjacency [interface-type interface-path-id] [detail | discard | drop | glean | null | punt | remote] [location node-id]
```

Syntax Description	<p><i>interface-type</i> (Optional) Interface type. For more information, use the question mark (?) online help function.</p> <p><i>interface-path-id</i> (Optional) Either a physical interface instance or a virtual interface instance:</p> <ul style="list-style-type: none"> Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash mark between values is required as part of the notation. <ul style="list-style-type: none"> <i>rack</i>: Chassis number of the rack. <i>slot</i>: Physical slot number of the line card. <i>module</i>: Module number. A physical layer interface module (PLIM) is always 0. <i>port</i>: Physical port number of the interface. <p>Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0) and the module is CPU0. Example: interface MgmtEth0/RP0 /CPU0/0.</p> <ul style="list-style-type: none"> Virtual interface instance. Number range varies depending on interface type. <p>For more information about the syntax for the router, use the question mark (?) online help function.</p>
detail	(Optional) Displays full details.
discard	(Optional) Displays the discard adjacency information.
drop	(Optional) Displays the drop adjacency information.
glean	(Optional) Displays the glean adjacency information.
null	(Optional) Displays the null adjacency information.
punt	(Optional) Displays the punt adjacency information.
remote	(Optional) Displays the remote adjacency information.
location <i>node-id</i>	(Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.

Command Default No default behavior or values

Command Modes	XR EXEC mode	
Command History	Release	Modification
	Release 7.0.12 This command was introduced.	
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, the show cef mpls adjacency command displays the MPLS adjacency table for the node in which the command is issued.	
Task ID	Task ID	Operations
	cef	read
Examples	The following is sample output from show cef mpls adjacency command:	
	<pre>Router# sh cef mpls adjacency inter Display protocol is mpls Interface Address Type Refcount BE1906 Prefix: 10.0.86.1/32 local 7 Adjacency: PT:0x8cba28d0 10.0.86.1/32 Interface: BE1906 NHID: 0x0 MAC: e6.48.5c.10.b4.8e.e6.07.2b.8d.34.88.88.47 Interface Type: 0x1c, Base Flags: 0x1 (0x8d10f620) Nhinfo PT: 0x8d10f620, Idb PT: 0x8ca57320, If Handle: 0x8000174 no dependent adj Ancestor If Handle: 0x0 Update time Dec 21 03:56:49.977 BE1904 Prefix: 10.0.85.1/32 local 7 Adjacency: PT:0x8cba3c78 10.0.85.1/32 Interface: BE1904 NHID: 0x0 MAC: e6.48.5c.10.b4.86.e6.07.2b.8d.34.89.88.47 Interface Type: 0x1c, Base Flags: 0x1 (0x8d10f1a0) Nhinfo PT: 0x8d10f1a0, Idb PT: 0x8ca572a0, If Handle: 0x800016c no dependent adj Ancestor If Handle: 0x0 Update time Dec 21 03:57:25.360</pre>	

show cef mpls adjacency hardware

show cef mpls adjacency hardware

To display the Multiprotocol Label Switching (MPLS) adjacency hardware status and configuration information, use the **show cef mpls adjacency hardware** command in XR EXEC mode.

```
show cef mpls adjacency hardware {egress} [detail | discard | drop | glean | location node-id | null | punt | remote]
```

Syntax Description	egress Displays information from the egress packets. detail (Optional) Displays full details. discard (Optional) Displays the discard adjacency information. drop (Optional) Displays the drop adjacency information. glean (Optional) Displays the glean adjacency information. location node-id (Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. null (Optional) Displays the null adjacency information. punt (Optional) Displays the punt adjacency information. remote (Optional) Displays the remote adjacency information.				
Command Default	No default behavior or values

show cef mpls drops

show cef mpls drops

To display Multiprotocol Label Switching (MPLS) drop counters for packets that belong to a segment routing (SR) network, use the **show cef mpls drops** command in XR EXEC mode.

show cef mpls drops [location {node-id | all}]

Syntax Description	location node-id (Optional) Displays detailed Cisco Express Forwarding (CEF) information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.				
	all (Optional) Displays all locations.				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.0.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	<p>Use this command to display the SR MPLS drop counters.</p> <p>The incoming top MPLS label is inspected. If the label belongs to the Segment Routing Local Block (SRLB) or the Segment Routing Global Block (SRGB), an MPLS SR drop counter is incremented for unknown label value or for MPLS time to live (TTL) expiry.</p>				

Note The drop counters will increment for manually allocated adjacency SIDs and prefix SIDs only. They will not increment for dynamically allocated adjacency SIDs.

Task ID	Task ID	Operation
cef	read	

Example

This following is sample output from **show cef mpls drops** command:

```
Router# show cef mpls drops location 0/0/CPU0
Sat Jun  9 03:49:27.100 IST
CEF Drop Statistics
Node: 0/0/CPU0
      SR MPLS unreachable packets :          100
      SR MPLS TTL expired packets :         400
```

show cef mpls interface

To display the Multiprotocol Label Switching (MPLS) Cisco Express Forwarding (CEF)-related information for an interface, use the **show cef mpls interface** command in XR EXEC mode.

show cef mpls interface type interface-path-id [detail] [location node-id]

Syntax Description	<p>type Interface type. For more information, use the question mark (?) online help function.</p> <p>in interface-path-id Either a physical interface instance or a virtual interface instance as follows:</p> <ul style="list-style-type: none"> • Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash between values is required as part of the notation. <ul style="list-style-type: none"> • <i>rack</i>: Chassis number of the rack. • <i>slot</i>: Physical slot number of the modular services card or line card. • <i>module</i>: Module number. A physical layer interface module (PLIM) is always 0. • <i>port</i>: Physical port number of the interface. <p>Note In references to a Management Ethernet interface located on a route processor card, the physical slot number is alphanumeric (RP0) and the module is CPU0. Example: interface MgmtEth0/ RP0</p> <ul style="list-style-type: none"> • Virtual interface instance. Number range varies depending on interface type. <p>For more information about the syntax for the router, use the question mark (?) online help function.</p>				
detail	(Optional) Displays detailed CEF information for all the interfaces on the node in which the command is issued.				
location node-id	(Optional) Displays IPv4 CEF-related information for an interface. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.0.12</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	If you do not specify a node with the location keyword and <i>node-id</i> argument, the show cef mpls interface command displays the CEF-related information for the interface on the route processor.				

show cef mpls interface

Task ID	Task ID	Operations
cef	read	

Examples

The following sample output is from the **show cef mpls interface** command:

```
Router# sh cef mpls interface hundredGigE 0/0/0/24
Wed Apr 22 16:56:48.376 UTC
HundredGigE0/0/0/24 is down if_handle 0x0f0001f8 if_type IFT_HUNDREDGE(0x49)
    idb info 0x912e6ae0 flags 0x8001 ext 0x0
    Vrf Local Info (0x0)
Interface last modified Apr 22, 2020 14:28:51, create
Reference count 1      Next-Hop Count 0
Protocol Reference count 0
Protocol mpls not configured or enabled on this card
```

show cef mpls unresolved

To display the Multiprotocol Label Switching (MPLS) unresolved routes, use the **show cef mpls unresolved** command in XR EXEC mode.

show cef mpls unresolved [detail] [location node-id]

Syntax Description	detail (Optional) Displays detailed adjacency information, including Layer 2 information. location node-id (Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.0.12</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	No specific guidelines impact the use of this command.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th><th>Operations</th></tr> </thead> <tbody> <tr> <td>cef</td><td>read</td></tr> </tbody> </table>	Task ID	Operations	cef	read
Task ID	Operations				
cef	read				

Examples The following sample output is from the **show cef mpls unresolved** command:

```
Router# show cef mpls unresolved

Label/EOS          Next Hop          Interface
20001/0
20001/1
```

This table describes the significant fields shown in the display.

Table 18: show cef mpls unresolved Command Field Descriptions

Field	Description
Label/EOS	MPLS forwarding label/End of Stack (EOS) bit.
Next Hop	Next hop of the prefix.
Interface	Interface associated with the prefix.

show cef recursive-nexthop

show cef recursive-nexthop

To display Cisco Express Forwarding (CEF) recursive next-hop information, use the **show cef recursive-nexthop** command in XR EXEC mode.

show cef recursive-nexthop [hardware] [location node-id]

Syntax Description	hardware (Optional) Displays hardware information related to the recursive next hop.				
	location node-id (Optional) Displays recursive next-hop information for the specified node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.				
Command Default	No default behavior or values				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.0.12</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	No specific guidelines impact the use of this command.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th><th>Operations</th></tr> </thead> <tbody> <tr> <td>cef</td><td>read</td></tr> </tbody> </table>	Task ID	Operations	cef	read
Task ID	Operations				
cef	read				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th><th>Description</th></tr> </thead> <tbody> <tr> <td>show cef, on page 26</td><td>Displays information about packets forwarded by Cisco Express Forwarding (CEF).</td></tr> </tbody> </table>	Command	Description	show cef, on page 26	Displays information about packets forwarded by Cisco Express Forwarding (CEF).
Command	Description				
show cef, on page 26	Displays information about packets forwarded by Cisco Express Forwarding (CEF).				

show cef summary

To display summary information for the Cisco Express Forwarding (CEF) table, use the **show cef summary** command in XR EXEC mode.

show cef summary [location {node-id | all}]

Syntax Description	location <i>node-id</i> (Optional) Displays detailed CEF information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation. all (Optional) Displays all locations.				
Command Default	The show cef summary command assumes the IPv4 CEF table and the active RP node as the location.				
Command Modes	XR EXEC mode				
Command History	<table border="1"> <thead> <tr> <th>Release</th><th>Modification</th></tr> </thead> <tbody> <tr> <td>Release 7.0.12</td><td>This command was introduced.</td></tr> </tbody> </table>	Release	Modification	Release 7.0.12	This command was introduced.
Release	Modification				
Release 7.0.12	This command was introduced.				
Usage Guidelines	No specific guidelines impact the use of this command.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th><th>Operations</th></tr> </thead> <tbody> <tr> <td>cef</td><td>read</td></tr> </tbody> </table>	Task ID	Operations	cef	read
Task ID	Operations				
cef	read				
Examples	<p>The following sample output is from the show cef summary command.</p> <pre>Router# show cef summary location 0/RP0/CPU0 Router ID is 10.1.1.1 IP CEF with switching (Table Version 0) for node0_1_CPU0 Load balancing: L3 Tableid 0xe0000000, Vrfid 0x60000000, Vrid 0x20000000, Flags 0x301 Vrfname default, Refcount 318 170 routes, 0 reresolve, 0 unresolved (0 old, 0 new), 12240 bytes 183 load sharing elements, 57292 bytes, 184 references 19 shared load sharing elements, 7036 bytes 164 exclusive load sharing elements, 50256 bytes 0 CEF route update drops, 10 revisions of existing leaves Resolution Timer: 15s 0 prefixes modified in place 0 deleted stale prefixes 21 prefixes with label imposition, 60 prefixes with label information Adjacency Table has 49 adjacencies 25 incomplete adjacencies</pre>				

show cef summary

This table describes the significant fields shown in the display.

Table 19: show cef summary Command Field Descriptions

Field	Description
Load balancing	Current load-balancing mode. The default value is L3.
Table Version	Version of the CEF table.
tableid	Table identification number.
vrfname	VRF name.
flags	Option value for the table
routes	Total number of routes.
reresolve	Total number of routes being reresolved.
unresolved (x old, x new)	Number of routes not yet resolved.
load sharing elements	Total number of internal load-sharing data structures.
bytes	Total memory used by internal load sharing data structures.
references	Total reference count of all internal load sharing data structures.
CEF resets	Number of CEF table resets.
revisions of existing leaves	Number of updates to existing prefixes.
Exponential (currently xs , peak xs)	Currently not used.
prefixes modified in place	Prefixes modified in place.
Adjacency Table has x adjacencies	Total number of adjacencies.
x incomplete adjacency	Total number of incomplete adjacencies.

show cef vrf

To display the contents of the VPN routing and forwarding (VRF) instance, use the **show cef vrf** command in XR EXEC mode.

show cef vrf [vrf-name]

Syntax Description	vrf-name Name of the VRF instance.
---------------------------	------------------------------------

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	XR EXEC mode
----------------------	--------------

Command History	Release	Modification
	Release 7.0.12	This command was introduced.

Usage Guidelines	To display unresolved routes, you must use the unresolved keyword explicitly.
-------------------------	--

Task ID	Task ID	Operations
	cef	read

Examples	This following is sample output from show cef vrf command when an unresolved route is detected:
-----------------	--

```
Router# show cef vrf test1
Tue Apr 28 04:21:48.588 UTC

Prefix          Next Hop           Interface
-----          -----
0.0.0.0/0       drop              default handler
0.0.0.0/32      broadcast
26.0.0.0/24     attached
26.0.0.0/32     broadcast
26.0.0.1/32     26.0.0.1/32
26.0.0.2/32     receive
26.0.0.255/32   broadcast
27.0.0.0/24     attached
27.0.0.0/32     broadcast
27.0.0.2/32     receive
27.0.0.3/32     27.0.0.3/32
27.0.0.255/32   broadcast
224.0.0.0/4     0.0.0.0/32
224.0.0.0/24    receive
```

This table describes the significant fields shown in the display.

show cef vrf**Table 20: show cef vrf Command Field Descriptions**

Field	Description
Prefix	Prefix in the IPv4 CEF table.
Next Hop	Next hop of the prefix.
Interface	Interface associated with the prefix.

show hw-module profile cef

To display information about the configuration status of CEF hardware-modules, use the **show hw-module profile cef** command in XR EXEC mode.

```
show hw-module profile cef
```

Command Modes	XR EXEC mode
----------------------	--------------

Command History	Release	Modification
	Release 7.3.1	This command was introduced.

Task ID	Task ID	Operations
	cef	read

Examples	This sample output is from the show hw-module profile cef command:
-----------------	---

```
Router# show hw-module profile cef
Tue Oct 6 00:34:47.735 UTC
-----
Knob                               Status     Applied   Action
-----
BGPLU                             Configured  No       Reload
Dark Bandwidth                     Unconfigured Yes      None
MPLS Per Path Stats               Unconfigured Yes      None
Tunnel TTL Decrement              Configured   Yes      None
High-Scale No-LDP-Over-TE         Unconfigured Yes      None
```

```
show hw-module profile cef
```
