CONTENTS

List of Commands

This guide describes the commands supported in NCS 1020.

apc

To enable or disable APC at the link level, use the **apc** command on an OLT node.

apc { **disable | enable** }

Syntax Description

disable	Disable APC
enable	Enable APC

Command Default

(config-olc-ots)

Command Modes

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Use this command on an OLT node. APC can be disabled and enabled at a link level only from the APC Manager for the link.

Example

The following is a sample configuration that disables APC.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#apc disable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

The following is a sample configuration that enables APC.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#apc enable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

apc-local

Use the **apc-local disable** command to disable APC on an agent node.

apc-local { **RX | TX** } **disable**

Syntax Description

RX	Disable APC agent in RX direction
TX	Disable APC agent in TX direction
disable	Disable APC on APC agent.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following is a sample configuration that disables APC locally.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#apc-local RX disable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

apc-pause

Use the **apc-pause** command to pause APC.

apc-pause

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

If you run the apc-pause command when APC is in idle state, APC remains in the idle state until APC detects changes in the network that requires power correction. APC changes the status to paused after it detects changes, but does not perform power correction.

Running the apc-pause command, does not pause channel startup.

Example

The following is a sample configuration that pauses APC.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#apc-pause
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

automatic-link-bringup

To enable automatic link bring up, use the **automatic-link-bringup** command. To disable automatic link bring up, use the no form of the command.

automatic-link-bringup

no automatic-link-bringup

Command Modes

(config-olc)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following sample configuration enables automatic link bring up.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#automatic-link-bringup
RP/0/RP0/CPU0:ios(config-olc)#commit
RP/0/RP0/CPU0:ios(config-olc)#end
```

The following sample configuration disables automatic link bring up.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#no automatic-link-bringup
RP/0/RP0/CPU0:ios(config-olc)#commit
RP/0/RP0/CPU0:ios(config-olc)#end
```

bfr-pause

Use the **bfr-pause** command to pause Band Failure Recovery(BFR). When BFR is paused, the recovery and failure procedures are not initiated in case of band failure. To resume BFR, use the **no** form of this command.

bfr-pause

no bfr-pause

Syntax Description

This command has no keywords or arguments.

Command Modes

Controller configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example 1

The following is a sample output to pause BFR on the controller 0/0/0/0.

```
 RP/0/RP0/CPU0:#configure
RP/0/RP0/CPU0: (config)#optical-line-control
RP/0/RP0/CPU0: (config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0: (config-olc-ots)#bfr-pause
RP/0/RP0/CPU0: (config-olc-ots)#commit
```

Example 2

The following is a sample output to resume BFR on the controller 0/0/0/0.

```
 RP/0/RP0/CPU0:#configure
RP/0/RP0/CPU0: (config)#optical-line-control
RP/0/RP0/CPU0: (config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0: (config-olc-ots)#no bfr-pause
RP/0/RP0/CPU0: (config-olc-ots)#commit
```

bridge-port routed-interface

Use the **bridge-port routed-interface** command to bridge traffic between two interfaces. For example, when connecting multiple NCS 1010 device in a Daisy Chain topology, use this command to bridge traffic between a NCS 1010 management interface and a TOR switch interface.

bridge-port routed-interface *type interface-path-id*

Syntax Description

type	Specify the Management Ethernet interface.
interface-path-id	Specify the physical or virtual interface.

Command Default

None

Command Modes

Interface Configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Task ID

Task ID	Operation
Ethernet-services	read, write

Example

The following example shows how to bridge traffic between a NCS 1010 management port and TOR switch port:

```
RP/0/RP0/CPU0:Box(config)#interface mgmtEth0/RP0/CPU0/1
RP/0/RP0/CPU0:Box(config-if)# no ipv4 address
RP/0/RP0/CPU0:Box(config-if)# no ipv6 address
RP/0/RP0/CPU0:Box(config-if)# bridge-port routed-interface mgmtEth 0/RP0/CPU0/0
```

cdp

To enable Cisco Discovery Protocol (CDP) globally or on an interface, use the **cdp** command in global configuration mode or in interface configuration mode. To disable CDP, use the **no** form of this command.

cdp

no cdp

Syntax Description

This command has no arguments or keywords.

Command Default

This command is enabled both at the global configuration level and at the interface configuration level.

Command Modes

Global configuration (config) and Interface configuration (config-if)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example enables CDP globally.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#cdp
RP/0/RP0/CPU0:ios(config)#commit
```

The following example enables CDP on the management interface.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#interface mgmtEth 0/RP0/CPU0/1
RP/0/RP0/CPU0:ios(config-if)#cdp
RP/0/RP0/CPU0:ios(config-if)#commit
```

cdp advertise

To enable CDP Version 1 advertising functionality on a device, use the **cdp advertise** command in global configuration mode. To disable CDP Version 1 functionality, use the **no** form of this command.

cdp advertise v1

no cdp advertise v1

Syntax Description

This command has no arguments or keywords.

Command Default

Enabled

Command Modes

Global configuration (config)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

When CDP is enabled, the device sends CDPv2 packets by default. CDP sends and receives CDPv1 packets if the device with which CDP is interacting does not process CDPv2 packets.

Example

The following example configures CDP to use CDP Version 1 in communicating with neighboring devices.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#cdp advertise v1
RP/0/RP0/CPU0:ios(config)#commit
```

cdp holdtime

To specify the amount of time the receiving device must hold a CDP packet sent from another device before discarding it, use the **cdp holdtime** command in global configuration mode. To revert to the default setting, use the **no** form of this command.

cdp holdtime *seconds*

no cdp holdtime

Syntax Description

seconds	Specifies the hold time to be sent in the CDP update packets. The default is 180 seconds. The range is 10 to 255 seconds.

Command Default

180 seconds

Command Modes

Global configuration (config)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

CDP packets are sent with a time to live, or hold time, value. The receiving device will discard the CDP information in the CDP packet after the hold time has elapsed.

You can set the hold time lower than the default setting of 180 seconds if you want the receiving devices to update their CDP information more rapidly.

The CDP hold time must be set to a higher number of seconds than the time between CDP transmissions, which is set using the **cdp timer** command.

Example

The following example configures CDP holdtime to 120 seconds.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#cdp holdtime 120
RP/0/RP0/CPU0:ios(config)#commit
```

cdp timer

To specify the frequency at which CDP update packets are sent., use the **cdp timer** command in global configuration mode. To revert to the default setting, use the **no** form of this command.

cdp timer *seconds*

no cdp timer

Syntax Description

seconds	Specifies the frequency at which CDP update packets are sent. The default is 60 seconds. The range is 5 to 254 seconds.

Command Default

60 seconds

Command Modes

Global configuration (config)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

A lower timer setting causes CDP update packets to be sent more frequently.

Example

The following example configures CDP timer to 65 seconds.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#cdp timer 65
RP/0/RP0/CPU0:ios(config)#commit
```

commit

To commit the target configuration to the active (running) configuration, use the **commit** command in any configuration mode.

commit [**replace**]

Syntax Description

replace	Replaces the entire running configuration with the contents of the target configuration.

Command Default

None

Command Modes

Cisco IOS XR Configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

To remove the entire running configuration on the NCS 1010 node, use the following command:

```
Fri Apr 29 06:48:46.236 UTC
RP/0/RP0/CPU0:P2B_DT_02(config)#commit replace
Fri Apr 29 06:48:53.199 UTC
This commit will replace or remove the entire running configuration. This
operation can be service affecting.
Do you wish to proceed? [no]: yes
RP/0/RP0/CPU0:ios(config)#
RP/0/RP0/CPU0:ios(config)#end
```

connector-loss

To configure connector loss, use the **connector-loss** command.

connector-loss { **rx** | **tx** } *value*

Syntax Description

rx	Connector loss at receive point
tx	Connector loss at transmit point
value	Connector loss in range 0–20. Unit: 1 dB

Command Default

The default connector loss is:

- 0.25 dB for ports without Raman module
- 0.3 dB for ports with Raman module

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example is a sample configuration that configures rx and tx connector losses to 0.1 dB.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#connector-loss rx 1
RP/0/RP0/CPU0:ios(config-olc-ots)#connector-loss tx 1
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

controller dfb

To configure the DFB controller, use the **controller dfb** command in the controller configuration mode.

controller dfb *R/S/I/P* [**tx-voa-attenuation** *value* | **tx-low-threshold** *value* | **sec-admin-state {normal | maintenance}** | **transmit-shutdown** | **shutdown**]

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the DFB controller.
tx-voa-attenuation*value*	Configures the DFB TX VoA attenuation set point.
tx-low-threshold*value*	Configures the low transmit power threshold.
sec-admin-state	Configures the administrative state of the controller. The values are maintenance or normal.
transmit-shutdown	Shuts down the DFB laser.
shutdown	Disables the configuration of the controller.

Command Default

None

Command Modes

controller configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

In the following sample, the tx-voa-attenuation is set to 2 dB.

```
RP/0/RP0/CPU0:ios#config
Thu Apr 21 17:00:57.654 UTC
RP/0/RP0/CPU0:ios(config)#
RP/0/RP0/CPU0:ios(config)#controller dfb 0/0/0/0 tx-voa-attenuation 20
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
```

To view the configured value, use the following command:

```
RP/0/RP0/CPU0:ios#sh controller dfb 0/0/0/0
Thu Apr 21 17:02:06.316 UTC
Controller State: Up
Transport Admin State: In Service
Laser State: On
Alarm Status:
-------------
Detected Alarms: None
Alarm Statistics:
-----------------
```

```
RX-LOS-P = 0
TX-POWER-FAIL-LOW = 0
Parameter Statistics:
---------------------
Total TX Power = 20.00 dBm
Total RX Power = 10.00 dBm
TX Voa Attenuation = 2.0 dB
Configured Parameters:
-------------
TX Voa Attenuation = 2.0 dB
```

The DFB laser attenuates based on the updated value and the TX power changes accordingly.

In the following sample, the sec-admin-state is set to maintenance.

```
RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#controller dfb 0/0/0/0 sec-admin-state maintenance
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
RP/0/RP0/CPU0:ios#sh controllers dfb 0/0/0/0
Thu Apr 21 17:05:41.311 UTC
Controller State: Up
Transport Admin State: Maintenance
Laser State: On
Alarm Status:
-------------
Detected Alarms: None
Alarm Statistics:
-----------------
RX-LOS-P = 0
TX-POWER-FAIL-LOW = 0
Parameter Statistics:
---------------------
Total TX Power = 20.00 dBm
Total RX Power = 10.00 dBm
TX Voa Attenuation = 2.0 dB
Configured Parameters:
-------------
TX Voa Attenuation = 2.0 dB
```

In the following sample, the DFB controller is shut down.

```
RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#controller dfb 0/0/0/0 shutdown
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
RP/0/RP0/CPU0:ios#sh controllers dfb 0/0/0/0
Thu Apr 21 17:08:40.211 UTC
Controller State: Administratively Down
Transport Admin State: Out Of Service
Laser State: Off
Alarm Status:
-------------
Detected Alarms: None
Alarm Statistics:
-----------------
RX-LOS-P = 0
TX-POWER-FAIL-LOW = 0
Parameter Statistics:
---------------------
Total TX Power = -50.00 dBm
Total RX Power = 10.00 dBm
TX Voa Attenuation = 2.0 dB
Configured Parameters:
```

```
-------------
TX Voa Attenuation = 2.0 dB
```

controller-oms

To configure the OMS controller, use the **controller oms** command in the controller OTS configuration mode.

Use the following parameters to configure different configurations for an OMS controller on breakout or multiplexer/demultiplexer module.

controller oms *R/S/I/P* [**tone-rate**] [**tone-pattern-expected**] [**tone-detect-oob**]

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OMS controller.
tone-rate*value*	Configures the tone rate for tone generation.
tone-pattern-expected*value*	Checks for the transmitted tone pattern from the OTS controller or terminal device.
tone-detect-oob*value*	Detects the out-of-band (OOB) frequency transmitted from the OTS controller or the terminal device.

Command Default

None

Command Modes

controller configuration mode

Command History

Release	Modification
Release 24.2.1	Introduced this command.

Example

The following output is a sample of configuring various tone generation parameters using the **controller oms 0/0/0/0** command.

```
RP/0/RP0/CPU0:(config)#controller oms 0/2/0/0
RP/0/RP0/CPU0:(config-Oms)#tone-rate 25
RP/0/RP0/CPU0:(config-Oms)#tone-pattern-expected abcd1234
RP/0/RP0/CPU0:(config-Oms)#tone-detect-oob
RP/0/RP0/CPU0:(config-Oms)#commit
```

controller osc

To configure the OSC controller, use the **controller osc** command in the controller configuration mode.

controller osc *R/S/I/P* [**transmit-power** *value* | **sec-admin-state {normal | maintenance}** | **tx-low-threshold** *value* | **shutdown**]

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.
transmit-power *value*	Configures the transmit power.
sec-admin-state	Configures the administrative state of the controller. The values are maintenance or normal.
tx-low-threshold *value*	Configures low transmit power threshold
shutdown	Disables the configuration of the controller.

Command Default

None

Command Modes

Controller configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

In the following sample, the transmit-power is set to 2 dBm. The transmit power can be changed only after the OSC laser probing loop is closed and the OSC transmit power is stable. The OSC transmit power depends on the span length. If the span loss is high, the OSC Tx power is low and vice versa.

```
RP/0/RP0/CPU0:ios(config)#controller osc 0/0/0/0 transmit-power 20
Fri May 13 11:26:53.445 UTC
WARNING! Changing TX power can impact traffic
RP/0/RP0/CPU0:ios(config)#commit
Fri May 13 11:26:55.127 UTC
RP/0/RP0/CPU0:ios(config)#end
RP/0/RP0/CPU0:ios#sh controllers osc 0/0/0/0
Fri May 13 11:26:59.542 UTC
Controller State: Up
Transport Admin State: In Service
Laser State: On
Alarm Status:
-------------
Detected Alarms: None
Alarm Statistics:
-----------------
RX-LOS-P = 0
```

```
TX-POWER-FAIL-LOW = 0
Parameter Statistics:
---------------------
Total TX Power = 1.89 dBm
Total RX Power = -17.30 dBm

Configured Parameters:
-------------
```

In the following sample, the sec-admin-state is set to maintenance.

```
RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#controller osc 0/0/0/0 sec-admin-state maintenance
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
RP/0/RP0/CPU0:ios#sh controllers osc 0/0/0/0
Fri Apr 22 15:55:36.324 UTC
Controller State: Up
Transport Admin State: Maintenance
Laser State: On
Alarm Status:
-------------
Detected Alarms: None
Alarm Statistics:
-----------------
RX-LOS-P = 0
TX-POWER-FAIL-LOW = 0
Parameter Statistics:
---------------------
Total TX Power = -10.00 dBm
Total RX Power = -30.00 dBm
Configured Parameters:
-------------
```

In the following sample, the OSC controller is shut down.

```
RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#controller osc 0/0/0/0 shutdown
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
RP/0/RP0/CPU0:ios#sh controllers os 0/0/0/0
Tue Apr 12 17:33:12.998 UTC
Controller State: Administratively Down
Transport Admin State: Out Of Service
Laser State: Off
Alarm Status:
-------------
Detected Alarms: None
Alarm Statistics:
-----------------
RX-LOS-P = 0
TX-POWER-FAIL-LOW = 0
Parameter Statistics:
---------------------
Total TX Power = -50.00 dBm
Total RX Power = -30.00 dBm
Configured Parameters:
-------------
```

controller ots

To configure the OTS controller, use the **controller ots** command in the controller OTS configuration mode.

Use the following parameters to configure different configurations for an OTS controller on an NCS 1020 node.

controller ots *R/S/I/P* [**tx-voa-attenuation** *value*] [**egress-ampli-gain-range {normal | extended}**] [**egress-ampli-gain** *value*] [**egress-ampli-tilt** *value*] [**egress-ampli-osri {on | off}**] [**egress-ampli-safety-control-mode {auto | disabled}**] [**egress-ampli-force-apr {on | off}**] [**ingress-ampli-gain-range {normal | extended}**] [**ingress-ampli-gain** *value*] [**raman-tx-power** *Raman-transmit-pump-instance*] [**power** *power-value*] [**raman-tx-power-disable** *Raman-transmit-pump-instance*] [**raman-force-apr {on | off}**] [**raman-osri {on | off}**] [ ] [**otdr scan-mode expert**] [**otdr rx auto reflectance-threshold** *value*] [**otdr rx auto splice-loss-threshold** *value*] [**otdr rx expert pulse-width** *value*] [**otdr tx auto reflectance-threshold** *value*] [**otdr tx auto splice-loss-threshold** *value*] [**raman-tx-power <1-N> value** *value*] [**otdr rx auto raman-setpoint** *value*] [**otdr tx auto raman-setpoint** *value*] [**otdr rx auto excess-reflection-threshold** *value*] [**otdr tx auto excess-reflection-threshold** *value*] [**otdr rx back-scattering** *value*] [**otdr tx back-scattering** *value*] [**otdr rx refractive-index** *value*] [**otdr tx refractive-index** *value*] [**otdr rx expert pulse-width** *value*] [**otdr tx expert pulse-width** *value*] [**otdr rx expert capture-end** *value*] [**otdr tx expert capture-end** *value*] [**otdr rx expert capture-start** *value*] [**otdr tx expert capture-start** *value*] [**otdr rx expert scan duration** *value*] [**otdr tx expert scan duration** *value*] [**otdr rx auto excess-orl-threshold** *value*] [**otdr tx auto excess-orl-threshold** *value*] [**otdr rx auto excess-attenuation-threshold** *value*] [**otdr tx auto excess-attenuation-threshold** *value*]

controller ots *R/S/I/P* [**tone-rate**] [**tone-pattern-expected**] [**tone-frequency**]

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OTS controller.
tx-voa-attenuation*value*	Configures the TX VoA attenuation set point.
egress-ampli-gain-range {normal | extended}	Configures egress amplification gain range to normal or extended.
egress-ampli-gain *value*	Configures egress amplification gain.
egress-ampli-tilt *value*	Configures egress amplifier tilt.
egress-ampli-osri {on | off}	Enables or disables egress optical safety remote interlock (OSRI).
egress-ampli-safety-control-mode {auto | disabled}	Configure egress amplification safety control mode to auto or disables it.
egress-ampli-force-apr {on | off}	Enables or disables egress amplification force automatic power reduction.
raman-tx-power *Raman-transmit-pump-instance* **power** *power-value*	Configures Raman transmit power parameters.

raman-tx-power-disable *Raman-transmit-pump-instance*	Disables Raman transmit power.
raman-force-apr {on | off}	Enables or disables Raman force APR.
raman-osri {on | off}	Enables or disables Raman optical safety remote interlock (OSRI).
ingress-ampli-gain-range {normal | extended}	Configure ingress amplification safety control mode to auto or disables it.
ingress-ampli-gain *value*	Configures ingress amplification gain.
otdr rx auto reflectance-threshold *value*	Configures OTDR reflectance threshold in RX direction in auto mode.
otdr rx auto splice-loss-threshold *value*	Configures OTDR splice loss threshold in RX direction in auto mode.
otdr rx expert pulse-width *value*	Configures OTDR pulse width threshold in RX direction in expert mode.
otdr tx auto reflectance-threshold *value*	Configures OTDR reflectance threshold in TX direction in auto mode.
otdr tx auto splice-loss-threshold *value*	Configures OTDR splice loss threshold in TX direction in auto mode.
otdr scan-mode expert	Configures OTDR scan in expert.
raman-tx-power <1-N> value *value*	Configures the target Raman transmit power value for multiple instances.
otdr rx auto raman-setpoint *value*	Configures OTDR Raman in RX direction in auto mode.
otdr tx auto raman-setpoint *value*	Configures OTDR Raman in TX direction in auto mode.
otdr rx auto excess-reflection-threshold *value*	Configures OTDR excess reflection threshold in RX direction in auto mode.
otdr tx auto excess-reflection-threshold *value*	Configures OTDR excess reflection threshold in TX direction in auto mode.
otdr rx back- scattering *value*	Configures OTDR back scattering in RX direction.
otdr tx back- scattering *value*	Configures OTDR back scattering in TX direction.
otdr rx refractive-index *value*	Configures OTDR refractive index in RX direction in auto mode.
otdr tx refractive-index *value*	Configures OTDR refractive index in TX direction in auto mode.
otdr rx expert pulse-width *value*	Configures OTDR pulse width in RX direction in expert mode.

otdr tx expert pulse-width *value*	Configures OTDR pulse width in TX direction in expert mode.
otdr rx expert capture-end *value*	Configures OTDR capture end time in RX direction in expert mode.
otdr tx expert capture-end *value*	Configures OTDR capture end time in TX direction in expert mode.
otdr rx expert capture-start *value*	Configures OTDR capture start time in RX direction in expert mode.
otdr tx expert capture-start *value*	Configures OTDR capture start time in TX direction in expert mode.
otdr rx expert scan duration *value*	Configures OTDR scan duration in RX direction in expert mode.
otdr tx expert scan duration *value*	Configures OTDR scan duration in TX direction in expert mode.
otdr rx auto excess-orl-threshold *value*	Configures OTDR excess Optical Return Loss (ORL) threshold in RX direction in auto mode.
otdr tx auto excess-orl-threshold *value*	Configures OTDR excess ORL threshold in TX direction in auto mode.
otdr rx auto excess-attenuation-threshold *value*	Configures OTDR excess attenuation threshold in RX direction in auto mode.
otdr tx auto excess-attenuation-threshold *value*	Configures OTDR excess attenuation threshold in TX direction in auto mode.
tone-rate *value*	Configures the tone rate for tone generation.
tone-pattern *value*	Configures the tone pattern for tone generation.
tone-frequency *value*	Configures the tone frequency for tone generation.

Command Default

None

Command Modes

controller configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following output is a sample of configuring various otdr parameters using the **controller ots 0/0/0/0** command.

```
RP/0/RP0/CPU0:ios#RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-Ots)#otdr scan-mode expert
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto reflectance-threshold -50
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto splice-loss-threshold 200
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx expert pulse-width 6000
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto excess-orl-threshold 600
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto excess-reflection-threshold -35
RP/0/RP0/CPU0:ios(config-Ots)#otdr rx auto excess-attenuation-threshold 5
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto reflectance-threshold -50
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto splice-loss-threshold 200
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto excess-orl-threshold 600
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto excess-reflection-threshold -50
RP/0/RP0/CPU0:ios(config-Ots)#otdr tx auto excess-attenuation-threshold 5
RP/0/RP0/CPU0:ios(config-Ots)#commit
```

The following output is a sample of configuring various tone generation parameters using the **controller ots 0/0/0/4** command.

```
RP/0/RP0/CPU0:(config)#controller ots 0/0/0/4
RP/0/RP0/CPU0:(config-Ots)#tone-rate 25
RP/0/RP0/CPU0:(config-Ots)#tone-frequency 191.175 ( OOB frequency )
RP/0/RP0/CPU0:(config-Ots)#tone-pattern abcd1234
RP/0/RP0/CPU0:(config-Ots)#commit
```

controller ots-och

To configure the OTS-OCH controller on the add-drop port to which the cross-connection is made on the COM side, use the **controller ots-och** command in the controller configuration mode.

controller ots-och *R/S/I/P/channel-id* **add-drop-channel ots-och** *R/S/I/P/channel-id*

Syntax Description

R/S/I/P/channel-id	Rack/Slot/Instance/Port/Channel-id of the OTS-OCH controller.
add-drop-channel	Creates the add/drop channel on the COM side.

Command Default

None

Command Modes

Controller configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

To configure the optical cross-connect, use the following commands:

```
Mon Apr 4 14:54:32.834 UTC
RP/0/RP0/CPU0:ios(config)#controller ots-och 0/0/0/0/1 add-drop-channel ots-och 0/0/0/33/1
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)
```

To view the OTS-OCH controllers, use the following command:

```
RP/0/RP0/CPU0:ios#sh controller ots-och ?
0/0/0/0/1 Ots-Och Interface Instance
0/0/0/33/1 Ots-Och Interface Instance
R/S/I/P/B or R/S/I/P Forward interface in Rack/Slot/Instance/Port/Breakout format or
R/S/I/P format
```

To view the parameters of the OTS-OCH controller (LINE side), use the following command:

```
RP/0/RP0/CPU0:ios#sh controllers ots-och 0/0/0/0/1
Tue Apr  5 06:32:29.696 UTC

 Controller State: Up

 Transport Admin State: In Service

        Alarm Status:
        -------------
        Detected Alarms: None

        Alarm Statistics:
        -----------------
        RX-LOS-P = 0
```

```
        TX-POWER-FAIL-LOW = 0

        Parameter Statistics:
        ---------------------
        Total RX Power = -10.50 dBm
        Total TX Power = -10.50 dBm

        Cross Connect Info:
        ---------------------
        Add-Drop Channel  = Ots-Och0/0/0/33/1

        Configured Parameters:
        -------------
RP/0/RP0/CPU0:ios#
```

Note The Add/Drop channel that is cross connected to the line port, 0/0/0/0/1 is displayed in the output.

drop-psd

Use the **drop-psd** command to set the target PSD for drop ports.

drop-psd *value*

Syntax Description

value	PSD in range -30.0 dBm per 12.5 GHz to 23.0 dBm per 12.5 GHz in increments of 0.1 dBm per 12.5 GHz.

Command Default

The default target PSD for drop ports is –9.4 dB.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

The NCS 1010 applies drop PSD configuration for channels with cross connect configurations.

Example

The following is a sample configuration that sets the target PSD at drop ports to –25 dB.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#drop-psd -250
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
Tue Apr 26 09:50:12.055 UTC
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

dual-band-psd

Use the **dual-band-psd** command to set the target dual-band PSDs when using C+L band configuration.

dual-band-psd *index* *value*

Syntax Description

index	PSD index 1–33.
value	PSD in range -50.0 dBm per 12.5 GHz to -32.0 dBm per 12.5 GHz in increments of 0.1 dBm per 12.5 GHz.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example shows how to set the dual band psd values -50 and -49 on setpoints 1 and 2 respectively, on the 0/0/0/0 controller .

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#dual-band-psd 1 -50
RP/0/RP0/CPU0:ios(config-olc-ots)#dual-band-psd 2 -49
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

environment chassis-door-alarm

Use the **environment chassis-door-alarm** command to report the door alarm when closing and opening the door.

Enable Chassis Door Alarm Command
Enable Chassis Door Alarm Command
environment chassis-door-alarm enable

Disable Chassis Door Alarm Command
Disable Chassis Door Alarm Command
no environment chassis-door-alarm enable

Syntax Description

environment chassis-door-alarm enable	Enables chassis door alarm.
no environment chassis-door-alarm enable	Disables chassis door alarm.

Command Default

The chassis door alarm is disabled.

Command Modes

Global configuration (config)

Command History

Release	Modification
Cisco IOS XR Release 24.3.1	This command was introduced.

Usage Guidelines

Use this command to enable or disable the chassis door alarm.

Example

The following example shows how to enable the chassis door alarm:

```
RP/0/RP0/CPU0:ios(config)#environment chassis-door-alarm enable
RP/0/RP0/CPU0:ios(config)#commit
Fri May 24 11:26:14.715 UTC
```

The following example shows how to disable the chassis door alarm:

```
RP/0/RP0/CPU0:ios(config)#no environment chassis-door-alarm enable
RP/0/RP0/CPU0:ios(config)#commit
Fri May 24 11:26:14.715 UTC
RP/0/RP0/CPU0:May 24 11:26:14.880 UTC: envmon[190]: %PKT_INFRA-FM-4-FAULT_MINOR : ALARM_MINOR
 :Chassis Door alarm :CLEAR :0:
```

fiber-type

To configure fiber type, use **fiber-type** command.

fiber-type *type*

Syntax Description

type Fiber type. Possible fiber types are:

- E-LEAF
- FREE-LIGHT
- METRO-CORE
- SMF
- SMF-28E
- TERA-LIGHT
- TW-RS
- TW-Reach
- TW-minus
- TW-plus
- ULL-SMF28

Command Default

SMF is the default fiber-type.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example is a sample configuration that configures fiber-type to SMF.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#fiber-type SMF
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

fpd auto-upgrade

To enable or disable automatic FPD upgrade, use the **fpd auto-upgrade** command in Cisco IOS XR Configuration mode.

fpd auto-upgrade { **enable | disable** }

Syntax Description

enable | disable	Enables or disables automatic FPD upgrade

Command Default

Automatic FPD upgrade is enabled.

Command Modes

Cisco IOS XR Configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example shows how to disable automatic FPD upgrade.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#fpd auto-upgrade disable
RP/0/RP0/CPU0:ios(config)#commit
RP/0/RP0/CPU0:ios(config)#end
```

gain-estimator

To enable or disable Gain Estimator, use the **gain-estimator** command.

gain-estimator { **disable | enable** }

Syntax Description

disable	Disable Gain Estimator
enable	Enable Gain Estimator

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following output is a sample configuration that disables Gain Estimator.

```
RP/0/RP0/CPU0:ios#configure terminal
Mon Jun 13 05:35:20.510 UTC
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#gain-estimator disable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
```

The following output is a sample configuration that enables Gain Estimator.

```
RP/0/RP0/CPU0:ios#configure terminal
Mon Jun 13 05:35:27.511 UTC
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#gain-estimator enable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
```

http client connection

To configure the connection for http client, use the **http client connection** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client connection { **retry** *count* | **timeout** *seconds* }

Syntax Description

retry *count*	Specifies how many times HTTP Client resends a connection request. Range is from 1 to 5. The default value is 0.
timeout *seconds*	The time interval (in seconds) that HTTP client waits for a server connection to establish before giving up. Range is from 1 to 60 seconds. The default value is 10 seconds.

Command Default

The connection retry is not configured by default. The default connection timeout is set to 10 seconds.

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Command Modes

HTTP configuration

Usage Guidelines

Use this command to set the connection timeout or connection retry count.

Task ID

Task ID	Operations
config-services	read, write

The following example shows how to configure the connection request retry to two times:

```
RP/0/RP0/CPU0:router(config)#http client connection retry 2
```

The following example shows how to configure the connection request timeout to 20 seconds:

```
RP/0/RP0/CPU0:router(config)#http client connection timeout 20
```

http client response

To configure the time interval (in seconds) for HTTP Client to wait for a response from the server before giving up, use the **http client response** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client response { **timeout** *seconds* }

Syntax Description

timeout *seconds*	The time interval (in seconds) that HTTP client waits for a response from the server before giving up. Range is from 1 to 300 seconds. The default value is 30 seconds.

Command Default

The response timeout is 30 seconds by default.

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Command Modes

HTTP configuration

Usage Guidelines

Use this command to configure the response timeout.

Task ID

Task ID	Operations
config-services	read, write

The following example shows how to configure the response timeout to 40 seconds:

```
RP/0/RP0/CPU0:router(config)#http client response timeout 40
```

http client secure-verify-host

To enable verifying host in peer's certificate, use the **http client secure-verify-host** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client secure-verify-host

Syntax Description

secure-verify-host	Verifies the host in peer's certificate. This is enabled by default. To disable, use the command **http client secure-verify-host** *disable*

Command Default

Host verification is enabled by default.

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Command Modes

HTTP configuration

Usage Guidelines

Use the **http client secure-verify-host** command to disable the host verification.

Task ID

Task ID	Operations
config-services	read, write

The following example shows how to disable host verification :

```
RP/0/RP0/CPU0:router(config)#http client secure-verify-host disable
```

http client secure-verify-peer

To enable verifying authenticity of the peer certificate, use the **http client secure-verify-peer** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client secure-verify-peer

Syntax Description

secure-verify-peer	Verifies authenticity of the peer certificate. This is enabled by default. To disable, use the command **http client secure-verify-peer** *disable*

Command Default

Peer verification is enabled by default.

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Command Modes

HTTP configuration

Usage Guidelines

Use the **http client secure-verify-peer** command to disable the peer verification.

Task ID

Task ID	Operations
config-services	read, write

The following example shows how to disable peer verification :

```
RP/0/RP0/CPU0:router(config)#http client secure-verify-peer disable
```

http client source interface

To specify the interface for source address for Hypertext Transfer Protocol (HTTP) connections, use the **http client source-interface** command in XR Config mode. To remove the **http client source-interface**command from the configuration file and restore the system to its default condition, use the **no** form of this command.

http client source-interface { **ipv4** | **ipv6** }

Syntax Description

ipv4 *ip-address*	Enter ipv4 address from interface.
ipv6 *ip-address*	Enter ipv6 address from interface.

Command Default

No default behavior or values.

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Command Modes

HTTP configuration

Usage Guidelines

Use the **http client source-interface** command to configure ipv4 and ipv6 source interfaces. If both the source interfaces are configured, then the source interface is selected depending on the host DNS resolution.

Task ID

Task ID	Operations
config-services	read, write

The following example shows how to configure ipv4 source interface for HTTP connection:

```
RP/0/RP0/CPU0:router(config)#http client source-interface ipv4 gigabitEthernet 0/0/0/0
```

The following example shows how to configure ipv6 source interface for HTTP connection:

```
RP/0/RP0/CPU0:router(config)#http client source-interface ipv6 gigabitEthernet 0/0/0/0
```

http client ssl

To configure Secure Socket Layer (SSL) version to be used for HTTPS requests, use the **http client ssl** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client ssl *version*

Syntax Description

ssl *version*	Specify the SSL version to be used for HTTPS requests. Select one of the following versions: • **tls1.0** - Forces TLSv1.0 to be used for HTTPS requests. • **tls1.1** - Forces TLSv1.1 to be used for HTTPS requests. • **tls1.2** - Forces TLSv1.2 to be used for HTTPS requests. By default libcurl does not force the TLS version.

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Command Default

By default, the SSL version is not configured.

Command Modes

HTTP configuration

Usage Guidelines

Use this command to configure the ssl version to be used in HTTPS requests.

Task ID

Task ID	Operations
config-servicess	read, write

The following example shows how to configure the SSL version to tls1.1:

```
RP/0/RP0/CPU0:router(config)#http client ssl tls1.1
```

http client tcp-window-scale

To configure the TCP window scale factor for high latency links, use the **http client tcp-window-scale** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client tcp-window-scale *scale*

Syntax Description

scale	Specify the TCP window scale for HTTP requests. Range is 1 to 14.

Command Default

By default, TCP window scale is disabled.

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Command Modes

HTTP configuration

Usage Guidelines

Use this command to configure the TCP window scale for HTTP requests.

Note Currently, this is enabled for copying of files using HTTP.

Task ID

Task ID	Operations
config-services	read, write

The following example shows how to set the TCP window scale to 10:

```
RP/0/RP0/CPU0:router(config)#http client tcp-window-scale 10
```

http client version

To configure the HTTP version to be used for HTTP requests, use the **http client version** command in XR Config mode. To restore the default value, use the **no** form of this command.

http client version *version*

Syntax Description

version*version*	Specify the HTTP version to be used for HTTP requests. Select one of the following versions: • **1.0** - Forces HTTP1.0 to be used for all HTTP requests. • **1.1** - Forces HTTP1.1 to be used for all HTTP requests. • **default** - libcurl picks up HTTP version automatically.

Command Default

By default, libcurl does not force the HTTP version.

Note HTTP Client uses libcurl version 7.30

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Command Modes

HTTP configuration

Usage Guidelines

Use this command to configure the HTTP version to be used in HTTP requests.

Task ID

Task ID	Operations
config-services	read, write

The following example shows how to configure the HTTP version to 1.1:

```
Router(config)#http client version 1.1
```

http client vrf

To configure a new VRF to be used by the HTTP client, use the **http client vrf** command. To remove the specified vrf, use the **no** form of this command.

http client vrf *vrf-name*

Syntax Description

vrf-name	Specifies the name of the VRF to be used by the HTTP client.

Command Default

If not configured, the default VRF "default-vrf" will be used.

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Command Modes

HTTP configuration

Usage Guidelines

A HTTP client can have only one VRF. If a specific VRF is not configured for the HTTP client, the default VRF is assumed.

Task ID

Task ID	Operations
config-services	read, write

The following example shows the HTTP client being configured to start with the specified VRF:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# http client vrf green
```

hw-module

To create the OTS-OCH controller, use the **hw-module location** command in IOS XR configuration mode.

hw-module location *location* **terminal-ampli | inline-ampli** **grid-mode** *mode* **channel-id** *channel-id* **centre-freq** *frequency* **width** *channel width*

Syntax Description

location	Specifies the location of the hardware module. The location is 0/0/NXR0.
terminal-ampli | inline-ampli	terminal-ampli is used for OLT nodes and inline-ampli is used for ILA nodes.
grid-mode *value*	Specifies the optical spectrum on the interfaces.
centre-freq *frequency*	Defines the central frequency of the channel.
width *channel-width*	Defines the width of the channel.

Command Default

None

Command Modes

Cisco IOS XR Configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

To create the OTS-OCH controller on the LINE side of an ILA-C node, use the following commands:

```
RP/0/RP0/CPU0:ios#config
Thu Apr 7 13:14:49.841 UTC
RP/0/RP0/CPU0:ios(config)#
RP/0/RP0/CPU0:ios(config)#hw-module location 0/0/NXR0 inline-ampli grid-mode flex
RP/0/RP0/CPU0:ios(config-hwmod-ila-flexi)#channel-id 1 centre-freq 196.1 width 75
RP/0/RP0/CPU0:ios(config-hwmod-ila-flexi)# commit
```

To create the OTS-OCH controller on the LINE side of an OLT-R-C node, use the following commands:

```
RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#hw-module location 0/0/nxr0 terminal-ampli grid-mode flex
RP/0/RP0/CPU0:ios(config-hwmod-olt-flexi)#channel-id 1 centre-freq 196.1 width 75
RP/0/RP0/CPU0:ios(config-hwmod-olt-flexi)#commit
```

interface

Use the **interface** command in the config mode to enter the configuration mode of a management interface. To delete the configuration, use the **no** form of this command.

interface *type* *interface-path-id*
no **interface** *type* *interface-path-id*

Syntax Description

type	Interface type.
interface-path-id	Physical interface or virtual interface.

Command Default

None

Command Modes

Configuration Mode

Command History

Release	Modification
Release 24.2.1	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task ID's. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
otn	write

Examples

This example shows how to enter the configuration mode of *mgmtEth* interface:

```
RP/0/RP0/CPU0:Box(config)#interface mgmtEth0/RP0/CPU0/1
```

ipv4-access-group

To control access to an interface, use the **ipv4 access-group** command in interface configuration mode. To remove the specified access group, use the **no** form of this command.

ipv4 access-group *access-list-name* { **ingress** | **egress** } [**compress level** *compression-level*]

Syntax Description

access-list-name	Name of an IPv4 access list as specified by an **ipv4 access-list** command.
ingress	Filters on inbound packets.
egress	Filters on outbound packets.
compress level *compression-level*	Configures compression level for interface ACLs. Compression level values range from zero and two.

Command Default

The interface does not have an IPv4 access list applied to it.

Command Modes

Interface configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Use the **ipv4 access-group** command to control access to an interface. To remove the specified access group, use the **no** form of the command. Use the *access-list-name* argument to specify a particular IPv4 access list.

If the access list permits the addresses, the software continues to process the packet. If the access list denies the address, the software discards the packet and returns an Internet Control Message Protocol (ICMP) host unreachable message.

If the specified access list does not exist, all packets are passed.

Task ID

Task ID	Operations
acl	read, write

Examples

The following example shows how to apply the access list named IPV4-ACL to the management interface:

```
RP/0/RP0/CPU0:ios(config)# interface mgmtEth 0/RP0/CPU0/0
RP/0/RP0/CPU0:ios(config-if)# ipv4 access-group IPV4-ACL ingress
RP/0/RP0/CPU0:ios(config-if)# commit
```

ipv6-access-group

To control access to an interface, use the **ipv6 access-group** command in interface configuration mode. To remove the specified access group, use the **no** form of this command.

ipv6 access-group *access-list-name* { **ingress** | **egress** } [**compress level** *compression-level*]

Syntax Description

access-list-name	Name of an IPv6 access list as specified by an **ipv6 access-list** command.
ingress	Filters on inbound packets.
egress	Filters on outbound packets.
compress level *compression-level*	Configures compression level for interface ACLs. Compression level values range from zero and two.

Command Default

The interface does not have an IPv6 access list applied to it.

Command Modes

Interface configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Use compression level two to create Hybrid ACLs with an ACE that uses IPv6 extension headers to filter ingress and egress IPv6 packets.

Task ID

Task ID	Operations
acl	read, write

Examples

The following example shows how to apply the access list named IPV6-ACL to the management interface:

```
RP/0/RP0/CPU0:ios(config)# interface mgmtEth 0/RP0/CPU0/0
RP/0/RP0/CPU0:ios(config-if)# ipv6 access-group IPV6-ACL ingress
RP/0/RP0/CPU0:ios(config-if)# commit
```

ipv4-access-list

To define an IPv4 access list by name, use the **ipv4 access-list** command in IOS XR Config mode. To remove all entries in an IPv4 access list, use the **no** form of this command.

ipv4 access-list *name*
no ipv4 access-list *name*

Syntax Description

name	Name of the access list. Names cannot contain a space or quotation marks.

Command Default

No IPv4 access list is defined.

Command Modes

IOS XR Config mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Use the **ipv4 access-list** command to configure an IPv4 access list. This command places the system in access list configuration mode, in which the denied or permitted access conditions must be defined with the **deny** or **permit** command.

Use the **ipv4 access-group** command to apply the access list to an interface.

Task ID

Task ID	Operations
acl	read, write

Examples

This example shows how to define a standard access list named ACL:

```
RP/0/RP0/CPU0:ios(config)# ipv4 access-list ACL
RP/0/RP0/CPU0:ios(config-ipv4-acl)# 10 permit tcp 192.0.2.2 255.255.255.0 any
RP/0/RP0/CPU0:ios(config-ipv4-acl)# 20 deny udp any any
RP/0/RP0/CPU0:ios(config-ipv4-acl)# 30 permit ipv4 192.0.2.64 255.255.255.0 any
RP/0/RP0/CPU0:ios(config-ipv4-acl)# commit
```

ipv6-access-list

To define an IPv6 access list by name, use the **ipv6 access-list** command in IOS XR Config mode. To remove all entries in an IPv6 access list, use the **no** form of this command.

ipv6 access-list *name*
no ipv6 access-list *name*

Syntax Description

name	Name of the access list. Names cannot contain a space or quotation mark, or begin with a numeric.

Command Default

No IPv6 access list is defined.

Command Modes

IOS XR Config mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

The IPv6 access lists are used for traffic filtering based on source and destination addresses, IPv6 option headers, and optional, upper-layer protocol type information for finer granularity of control. IPv6 access lists are defined by using the **ipv6 access-list** command in XR Config mode mode and their permit and deny conditions are set by using the **deny** and **permit** commands in IPv6 access list configuration mode. From IPv6 access list configuration mode, permit and deny conditions can be set for the defined IPv6 access list.

The **ipv6 access-list** command is similar to the **ipv4 access-list** command, except that it is IPv6-specific.

Use the **ipv6 access-group** command to apply the access list to an interface.

Every IPv6 access list has an implicit **deny ipv6 any any** statement as its last match condition. An IPv6 access list must contain at least one entry for the implicit **deny ipv6 any any** statement to take effect.

Task ID

Task ID	Operations
acl	read, write

Examples

This example shows how to define a standard access list named ACL:

```
RP/0/RP0/CPU0:ios(config)# ipv6 access-list ACL
RP/0/RP0/CPU0:ios(config-ipv6-acl)# 10 permit ipv6 any any
RP/0/RP0/CPU0:ios(config-ipv6-acl)# 20 deny udp any any
RP/0/RP0/CPU0:ios(config-ipv6-acl)# commit
```

ipv4 address

Use the **ipv4 address** command in the interface configuration mode to configure IPv4 address for an interface. To remove the IPv4 address from an interface, use the **no** form of this command.

ipv4 address
no ipv4 address

Command Default

None

Command Modes

Interface Configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operation
otn	write

Example

This example shows how to configure IPv4 address on an interface.

```
RP/0/RP0/CPU0:Box(config-if)# ipv4 address 192.0.2.6/24
```

Example

This example shows how to remove IPv4 address from an interface.

```
RP/0/RP0/CPU0:Box(config-if)# no ipv4 address
```

ipv6 address

Use the **ipv6 address** command in the interface configuration mode to configure IPv6 address for an interface. To remove the IPv6 address from an interface, use the **no** form of this command.

ipv6 address
no ipv6 address

Command Default

None

Command Modes

Interface Configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operation
otn	write

Example

This example shows how to configure IPv6 address on an interface.

```
RP/0/RP0/CPU0:Box(config-if)# ipv6 address 0:0:0:7272::72/64
```

Example

This example shows how to remove IPv6 address from an interface.

```
RP/0/RP0/CPU0:Box(config-if)# no ipv6 address
```

link-tuner

To enable and disable link tuner and to configure the spectrum density, use the **link-tuner** command.

link-tuner { **enable** | **disable** | **spectrum-density** *value* }

Syntax Description

enable	Enable Link-Tuner
disable	Disable Link-Tuner
spectrum-density	Configure spectrum density
value	Spectrum density in range 1–100 in increments of 1

Command Default

The default spectrum density is 81.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following is a sample configuration that enables link tuner.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#link-tuner enable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

The following is a sample configuration that disables link tuner.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#link-tuner disable
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

The following example is a sample configuration that configures the spectrum density to 80%.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#link-tuner spectrum-density 80
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

license smart deregister

To cancel the registration of your device, use the **license smart deregister** command.

license smart deregister

Command Default

None

Command Modes

None

Command History

Release	Modification
R7.7.1	This command was introduced.

Usage Guidelines

When your device is taken off the inventory, shipped elsewhere for redeployment or returned to Cisco for replacement using the return merchandise authorization (RMA) process, you can use this command to cancel the registration on your device. All smart licensing entitlements and certificates on the platform are removed.

The following example deregisters NCS 1010.

```
RP/0/RP0/CPU0:ios#license smart deregister
```

license smart register

To register the device instance with Cisco licensing cloud, use the **license smart register idtoken** *token-id* **force** command.

license smart register idtoken *token-id* [**force**]

Syntax Description

token_id	Specifies the token generated in smart manager.
force	If the registration fails due to communication failure between the device and the portal, the system waits for 24 hours before attempting to register the device again. Use this option to force the registration.

Command Default

None

Command Modes

None

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Use this command to register the device instance with Cisco licensing cloud.

The following example registers and sets the token ID required for registration of NCS 1004.

```
RP/0/RP0/CPU0:ios#license smart register
YzY2ZjYyNjktY2NlOS00NTc4LWIxNTAtMjZkNmNiNzMxMTY1LTE2NjAzNjQ3
%0ANzY4Njl8ZVJSckxKN2pFV2tIeHVoMUkxbGxTazFDVm9kc1B5MGlHQmlFWUJi%0Ac3VNRT0%3D%0A
```

license smart renew

To manually renew the ID certification or authorization, use the **license smart renew** command.

license smart renew { **ID | auth** }

Syntax Description

ID	ID certificates are renewed automatically after six months. In case, the renewal fails, the product instance goes into unidentified state. You can manually renew the ID certificate using this option.
auth	Authorization periods are renewed by the Smart Licensing system every 30 days. As long as the license is in an 'Authorized' or 'Out-of-compliance' (OOC), the authorization period is renewed. Use this command to make an on-demand manual update of your registration. Thus, instead of waiting 30 days for the next registration renewal cycle, you can use this option to instantly find out the status of your license. After 90 days, the authorization period expires and the status of the associated licenses display "AUTH EXPIRED". Use this option to retry the authorization period renewal. If the retry is successful, a new authorization period begins.

Command Default

None

Command Modes

None

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

The following example manually renews the ID certificate for the NCS 1010:

```
RP/0/RP0:ios#license smart renew id
```

The following example manually renews the authorization for the NCS 1010:

```
RP/0/RP0:ios#license smart renew auth
```

license smart reservation install file

To register the device using the authorization code that is copied as a file, and to activate smart licensing reservation for your device, use the **license smart reservation install file** command.

license smart reservation install file *file name*

Syntax Description

file name	Name of the file where the authorization code is saved.

Command Default

None

Command Modes

None

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

The following example registers and activates the registration and license for NCS 1010:

```
RP/0/RP0/CPU0:ios#license smart reservation install file /disk0:/smart1
Tue Jul 19 13:46:22.877 UTC
RP/0/RP0/CPU0:Jul 19 13:46:22.946 UTC: plat_sl_client[368]:
%LICENSE-PLAT_CLIENT-6-STATE_CHANGE :
Licensing platform state changing from UNREGISTERED to REGISTERED
RP/0/RP0/CPU0:Jul 19 13:46:22.946 UTC: smartlicserver[247]:
%LICENSE-SMART_LIC-6-AGENT_REG_SUCCESS
: Smart Agent for Licensing Registration successful. udi PID:NCS1010-SA,SN:FCB2546B08T
Reservation install file successful
Last Confirmation code 8572aa81
```

license smart transport

To configure the smart transport as an alternative option to Call Home,use the **license smart transport** command.

license smart transport smart

Command Default None

Command Modes None

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines None

The following example configures the smart transport option to connect to the CSSM.

```
RP/0/RP0/CPU0:ios#license smart transport smart
       Thu Jul 19 13:34:47.251 UTC
       RP/0/RP0/CPU0:ios#commit
```

ntp

To enter Network Time Protocol (NTP) configuration mode and run NTP configuration commands, use the **ntp** command in global configuration mode.

ntp

Syntax Description

This command has no keywords or arguments.

Command Default

No default behavior or values.

Command Modes

Global configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Task ID

Task ID	Operations
ip-services	read, write

The following example shows how to enter NTP configuration mode:

```
RP/0/RP0/CPU0:ios(config)#ntp
RP/0/RP0/CPU0:ios(config-ntp)#
```

olc bfr-initialize

Use the **olc bfr-initialize** command to initialize the Band Failure Recovery(BFR) feature.

olc bfr-initialize controller ots *R/S/I/P*

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OTS controller.
controller Ots	Use this parameter to choose a particular controller.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following is a sample output of the **olc bfr-initialize** command that initializes BFR.

```
RP/0/RP0/CPU0:ios#olc bfr-initialize controller ots 0/0/0/0
```

olc bfr-pause

Use the **olc bfr-pause** command to enable or disable Band Failure Recovery(BFR) pause. In case of band failure, when BFR pause is enabled, the recovery procedure is not initiated and the surviving band is not switched to single-band PSD profile.

olc bfr-pause controller ots *Rack/Slot/Instance/Port* { **enable | disable** }

Syntax Description

controller Ots	Use this parameter to choose a particular controller.
R/S/I/P	Rack/Slot/Instance/Port of the OTS controller.
enable	Use this keyword to temporarily pause BFR.
disable	Use this keyword to disable BFR pause.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

The following is a sample output of the **olc bfr-pause** command that enables the BFR pause feature and temporarily pauses BFR.

```
RP/0/RP0/CPU0:ios#olc bfr-pause controller ots 0/0/0/0 enable
```

The following is a sample output of the **olc bfr-pause** command that disables the BFR pause feature.

```
RP/0/RP0/CPU0:ios#olc bfr-pause controller ots 0/0/0/0 disable
```

olc start-gain-estimation

Use the **olc start-gain-estimation** command to trigger the gain estimation operation.

olc start-gain-estimation controller ots *R/S/I/P*

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.
controller Ots	Use this parameter to choose a particular controller.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following output is a sample of the **olc start-gain-estimation controller ots 0/0/0/0** command.

```
RP/0/RP0/CPU0:ios#olc start-gain-estimation controller ots 0/0/0/0
```

olc start-raman-tuning

Use the **olc start-raman-tuning** command to trigger Raman tuning.

olc start-raman-tuning controller ots *R/S/I/P*

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.
controller Ots	Use this parameter to choose a particular controller.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

optical-line-control

To use the optical applications configuration mode, use the **optical-line-control** command.

optical-line-control

Command Modes

Global configuration mode (config)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

otdr auto-scan

Use the **otdr auto-scan** command to enable or disable the auto otdr scan

otdr auto-scan [**enable | disable**]

Syntax Description

enable	Enables OTDR auto scan.
disable	Disables OTDR auto scan.

Command Modes

Controller configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following are sample configurations that enable and disable automatic OTDR scan.

```
RP/0/RP0/CPU0:ios#configure
Mon Sep 18 13:11:53.812 UTC
RP/0/RP0/CPU0:IOS(config)#optical-line-control controller Ots 0/0/0/0
RP/0/RP0/CPU0:IOS(config-olc-ots)#otdr auto-scan enable
RP/0/RP0/CPU0:IOS(config-olc-ots)#commit
```

```
RP/0/RP0/CPU0:ios#configure
Mon Sep 3 13:28:34.631 UTC
RP/0/RP0/CPU0:IOS(config)#optical-line-control controller Ots 0/0/0/0
RP/0/RP0/CPU0:IOS(config-olc-ots)#otdr auto-scan disable
RP/0/RP0/CPU0:IOS(config-olc-ots)#commit
```

otdr start

Use the **otdr-start controller ots** command to start the otdr operation.

otdr-start controller ots *R/S/I/P direction*

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OTS controller.
otdr-start controller ots	Use this parameter to start the otdr operation in a particular direction.
direction	Scan direction (RX or TX)

Command Modes

Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following output is a sample of enabling and disabling automatic OTDR scan.

otdr stop

Use the **otdr-stop controller ots** command to stop the otdr operation.

otdr-stop controller ots *R/S/I/P direction*

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OTS controller.
otdr-stop controller ots	Use this parameter to stop the otdr operation in a particular direction.
direction	Scan direction (RX or TX)

Command Modes

Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

```
RP/0/RP0/CPU0:ios#otdr-stop controller ots 0/0/0/0 tx
OTS OTDR Scan Stopped at TX
```

partner-band-port

Use the **partner-band-port** command to establish a connection between C and L-band nodes by configuring the L-band peer IP on C-band node and C-band peer IP on L-band node.

partner-band-port **ipv4** *address* **controller ots** *Rack/Slot/Instance/Port*

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OTS controller.
ipv4 *address*	Specify the IP address of the peer node.
controller Ots	Use this parameter to choose a particular controller.
R/S/I/P	Rack/Slot/Instance/Port of the OTS controller.

Command Modes

Privileged EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example 1

The following is a sample output of the **partner-band-port** command that configures the peer node IP address 192.0.2.1 on the C-band node.

```
RP/0/RP0/CPU0:ios# optical-line-control controller Ots0/0/0/0
RP/0/RP0/CPU0:ios# partner-band-port ipv4 address 192.0.2.1 controller Ots0/0/0/0
```

pm

To configure the performance monitoring parameters of the OTS, OTS-OCH, OSC, and DFB controllers, use the **pm** command in the controller configuration mode.

For more information about PM threshold values for the controllers, see the section, Monitor performance.

pm [**flex-bin | 15-min | 30-sec | 24-hour**] [**ots | ots-och | osc | dfb**] [**report | threshold**] [**eagn** | **eatl** | **iagn** | **iatl** | **slr-cl** | **slt-cl** | **opbr** | **opr** | **opr-cl** | **opt** | **opt-s** | **raman-1** | **raman-2** | **raman-3** | **raman-4** | **raman-5** | **raman-tot**] [**max-tca** | **min-tca**] [**enable** | *value*]

Syntax Description

flex-bin| 15-min | 30-sec | 24-hour	Configures performance monitoring parameters for 10 seconds, 15 minutes, 30 seconds, or 24-hour intervals.
ots | ots-och | osc | dfb	Specifies whether to configure performance monitoring parameters for the OTS, OTS-OCH, OSC, or DFB controllers.
history	Displays the historical values of the **pm** command.
report	Configures the TCA reporting status for optics (OTS-OCH, OSC, or DFB) or OTS parameters.
threshold	Configures thresholds on optics (OTS-OCH, OSC, or DFB) or OTS parameters.
iagn | eagn	Configures thresholds for ingress or egress amplifier gain.
iatl |eatl	Configures the thresholds for ingress or egress amplifier tilt.
slr-cl | slt-cl	Configures the thresholds for span loss in Rx or Tx direction.
opr | opr-cl |opr-s	Configures thresholds for total Rx power, total Rx power for C and L band, or total C band signal power.
opbr	Configures thresholds for back reflection power.
opt |opt-s	Configures thresholds for total Tx power or total C band signal power.
raman-1 | raman-2 | raman-3 | raman-4 | raman-5 | raman-tot	Configures thresholds for Raman power (1, 2, 3, 4, or 5) or total Raman pump power.
max-tca | **min-tca enable**	Enable the maximum or minimum TCA reporting status.
value	Value of the thresholds.

Command Default

None

Command Modes

Controller configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Examples

The following examples shows how to view the configured maximum and minimum threshold values and the current span loss values for both Tx and Rx direction.

```
RP/0/RP0/CPU0:ios#show controllers ots 0/0/0/0 pm current 15-min optics 1

Last clearing of "show controllers OPTICS" counters never
```

To view the historical PM parameters on an OMS controller for a 24-hour interval, use the following command:

```
RP/0/RP0/CPU0:ios#show controllers oms 0/3/0/8 pm history 24-hour optics 1

Mon Jul 25 07:18:13.532 UTC

Optics in interval 1 [00:00:00 - 24:00:00 Sun Jul 24 2022]

Optics history bucket type : Valid
              MIN       AVG       MAX
OPT[dBm]    : -50.00    -50.00    -50.00
OPR[dBm]    : -50.00    -50.00    -50.00

Last clearing of "show controllers OPTICS" counters never
```

process restart

To restart the license registration process, use the **license smart reservation** command.

process restart smartlicserver location *location*

Syntax Description

location	Specifies the node-id.

Command Default

None

Command Modes

None

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

The following example restarts the smart licensing process:

```
 RP/0/RP0/CPU0:ios#RP/0/RP0/CPU0:ios(config)#process restart smartlicserver location
0/RP0/CPU0
```

psd

Use the **psd** command to set the target PSDs.

psd *index* *value*

Syntax Description

index	PSD index 1–33.
value	PSD in range -30.0 dBm per 12.5 GHz to 23.0 dBm per 12.5 GHz in increments of 0.1 dBm per 12.5 GHz.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

You can configure the target power spectral densities for 33 points across the band. The 33 PSD values divide the entire spectrum into 150-GHz steps. APC uses the corresponding PSD value if the channel frequency corresponds to a configured point. If the central frequency is not on a configured position, APC computes the target PSD for a channel by extrapolating from the two adjacent steps.

Example

The following is a sample configuration that sets the psd to 15 dB for the setpoints 1 and 2.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#psd 1 150
RP/0/RP0/CPU0:ios(config-olc-ots)#psd 2 150
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

psd-min

Use the **psd-min** command to set the desired minimum PSD.

psd-min *value*

Syntax Description

value	PSD in range -40.0 dBm per 12.5 GHz to 23.0 dBm per 12.5 GHz in increments of 0.1 dBm per 12.5 GHz.

Command Default

The default minimum PSD is –24 dB.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following is a sample configuration that sets the minimum PSD to –25 dB.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#psd-min -250
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
Tue Apr 26 09:50:12.055 UTC
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

reload

To perform the reload operation on the NCS 1010 unit and its modules, use the **reload** command.

reload location *location*

Syntax Description

location | *location*	(Optional) Enter the location for the unit or module which you want to reload.

Command Default

All slots are reloaded.

Command Modes

Cisco IOS XR

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

To reboot the Cisco NCS 1010 system, use the following command.

```
RP/0/RP0/CPU0:ios#reload
Fri Apr 29 06:50:12.312 UTC
Proceed with reload? [confirm]
RP/0/RP0/CPU0:ios#
Preparing system for backup. This may take a few minutes especially for large configurations.
Status report: node0_RP0_CPU0: BACKUP INPROGRESS
Status report: node0_RP0_CPU0: BACKUP HAS COMPLETED SUCCESSFULLY
[Done]
```

To reboot the entire Cisco NCS 1010 system along with its modules, use the following command.

```
RP/0/RP0/CPU0:ios#reload location all noprompt
Fri Jul 15 14:53:25.775 UTC
RP/0/RP0/CPU0:ios#yes

server

To allow the system clock to be synchronized by a NTP time server, use the **server** command in one of the NTP configuration modes. To remove the **server** command from the configuration file and restore the system to its default condition with respect to this command, use the **no** form of this command.

server
[**ipv4** | **ipv6**] *ip-address* [**version** *number*] [**key** *key-id*] [**minpoll** *interval*] [**maxpoll** *interval*] [**source** *type* *interface-path-id*] [**prefer**] [**burst**] [**iburst**]
no server
[**ipv4** | **ipv6**] *ip-address*

Syntax Description

ipv4	(Optional) Specifies an IPv4 IP address.
ipv6	(Optional) Specifies an IPv6 IP address.
ip-address	IPv4 or IPv6 address of the time server providing the clock synchronization.
version *number*	(Optional) Defines the Network Time Protocol (NTP) version number, where the *number* argument is a value from 1 to 4. The default is 4.
key *key-id*	(Optional) Defines the authentication key, where the *key-id* argument is the authentication key to use when packets are sent to this peer. By default, no authentication key is used.
minpoll *interval*	(Optional) Defines the shortest polling interval, where the *interval* argument is specified in powers of two seconds. Range is from 4 to 17. The default value is 6.
maxpoll *interval*	(Optional) Defines the longest polling interval, where the *interval* argument is specified in powers of two seconds. Range is from 4 to 17. The default value is 10.
source	(Optional) Specifies the IP source address. The default is the outgoing interface.
type	(Optional) Interface type. For more information, use the question mark (**?**) online help function.
interface-path-id	(Optional) Physical interface or virtual interface. **Note** Use the **show interfaces** command to see a list of all interfaces currently configured on the device.
prefer	(Optional) Makes this peer the preferred server that provides synchronization.
burst	(Optional) Sends a series of packets instead of a single packet within each synchronization interval to achieve faster synchronization.
iburst	(Optional) Sends a series of packets instead of a single packet within the initial synchronization interval to achieve faster initial synchronization.

Command Default

No servers are configured by default.

Command Modes

NTP configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

The value for the **minpoll** keyword must be less than or equal to the value for the **maxpoll** keyword. If this is not the case, the system issues an error message.

Using the **prefer** keyword reduces switching back and forth among servers.

Task ID

Task ID	Operations
ip-services	read, write

The following example shows how to configure the device to allow its system clock to be synchronized with the clock of the peer at IP address 203.0.113.51 using NTP.

```
RP/0/RP0/CPU0:ios(config)#ntp
RP/0/RP0/CPU0:ios(config-ntp)#server 203.0.113.51 minpoll 8 maxpoll 12 prefer iburst
```

show access-lists-ipv4

To display the contents of current IPv4 access lists, use the **show access-lists ipv4** command in IOS XR EXEC mode.

show access-lists ipv4 [*access-list-name* **hardware** { **ingress | egress** } [**interface** *type interface-path-id*] { **sequence** *number* | **location** *node-id* | [**usage pfilter** { **location** *node-id* }] }]

Syntax Description

access-list-name	(Optional) Name of a particular IPv4 access list. The name cannot contain spaces or quotation marks, but can include numbers.
hardware	(Optional) Identifies the access list as an access list for an interface.
ingress	(Optional) Specifies an inbound interface.
interface	(Optional) Displays interface statistics.
type	(Optional) Interface type.
interface-path-id	Physical interface or virtual interface. **Note** Use the **show interfaces** command to see a list of all interfaces currently configured on the router.
sequence *number*	(Optional) Sequence number of a particular IPv4 access list. Range is 1 to 2147483644.
location *node-id*	(Optional) Location of a particular IPv4 access list. The *node-id* argument is entered in the *rack/slot/module* notation.
summary	(Optional) Displays a summary of all current IPv4 access lists.
sequence-number	(Optional) Sequence number of a particular IPv4 access list. Range is 1 to 2147483644.
usage	(Optional) Displays the usage of the access list on a given line card.

pfilter	(Optional) Displays the packet filtering usage for the specified line card.

Command Default

The default displays all IPv4 access lists.

Command Modes

IOS XR EXEC

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Use the **show access-lists ipv4** command to display the contents of all IPv4 access lists. To display the contents of a specific IPv4 access list, use the *name* argument. Use the *sequence-number* argument to specify the sequence number of the access list.

Use the **hardware , ingress** and **location** keywords to display the access list hardware contents and counters for all interfaces that use the specified access list in a given direction. To display the contents of a specific access list entry, use the **sequence** *number* keyword and argument. The access group for an interface must be configured using the **ipv4 access-group** command for access list hardware counters to be enabled.

Use the **show access-lists ipv4 summary** command to display a summary of all current IPv4 access lists. To display a summary of a specific IPv4 access list, use the *name* argument.

Use the **show access-list ipv4 usage** command to display a summary of all interfaces and access lists programmed on the specified line card.

Task ID

Task ID	Operations
acl	read

Examples

In the following example, the contents of all IPv4 access lists are displayed:

```
RP/0/RP0/CPU0:ios# show access-lists ipv4 acl_1
Fri Oct 20 06:22:17.223 UTC
ipv4 access-list acl_1
10 permit ipv4 172.16.0.0 0.0.255.255 any
20 deny ipv4 192.168.34.0 0.0.0.255 any
```

show access-lists ipv6

To display the contents of current IPv6 access lists, use the **show access-lists ipv6** command in IOS XR EXEC mode.

show access-lists ipv6 [*access-list-name* **hardware** { **ingress** | **egress** } [**interface** *type interface-path-id*] { **sequence** *number* | **location** *node-id* | [**usage pfilter** { **location** *node-id* }] }]

Syntax Description

access-list-name	(Optional) Name of a particular IPv6 access list. The name cannot contain a spaces or quotation marks, but can include numbers.
hardware	(Optional) Identifies the access list as an access list for an interface.
ingress	(Optional) Specifies an inbound interface.
interface	(Optional) Displays interface statistics.
type	(Optional) Interface type.

interface-path-id	(Optional) Either a physical interface instance or a virtual interface instance as follows:
	• Physical interface instance. Naming notation is *rack/slot/instance/port* and a slash between values is required as part of the notation.
	  • *rack*: Chassis number of the rack.
	  • *slot*: Physical slot number of the modular services card or line card.
	  • *instance*: Module number.
	  • *port*: Physical port number of the interface.
	• Virtual interface instance. Number range varies depending on interface type.

sequence *number*	(Optional) Sequence number of a particular IPv6 access list. Range is 1 to 2147483644.
location *node-id*	(Optional) Location of a particular IPv6 access list. The *node-id* argument is entered in the *rack/slot/instance* notation.
summary	(Optional) Displays a summary of all current IPv6 access lists.
sequence-number	(Optional) Sequence number of a particular IPv6 access list. Range is 1 to 2147483644.
usage	(Optional) Displays the usage of the access list on a given line card.
pfilter	(Optional) Displays the packet filtering usage for the specified line card.
all	(Optional) Displays the location of all the line cards.

Command Default

Displays all IPv6 access lists.

Command Modes

IOS XR EXEC

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

The **show access-lists ipv6** command is similar to the **show access-lists ipv4** command, except that it is IPv6 specific.

Use the **show access-lists ipv6** command to display the contents of all IPv6 access lists. To display the contents of a specific IPv6 access list, use the *name* argument. Use the *sequence-number* argument to specify the sequence number of the access list.

Use the **hardware , ingress** and **location** keywords to display the access list hardware contents and counters for all interfaces that use the specified access list in a given direction. To display the contents of a specific access list entry, use the **sequence** *number* keyword and argument. The access group for an interface must be configured using the **ipv6 access-group** command for access list hardware counters to be enabled.

Use the **show access-lists ipv6 summary** command to display a summary of all current IPv6 access lists. To display a summary of a specific IPv6 access list, use the *name* argument.

Use the **show access-list ipv6 usage** command to display a summary of all interfaces and access lists programmed on the specified line card.

Task ID

Task ID	Operations
acl	read

Examples

In the following example, the contents of all IPv6 access lists are displayed:

```
RP/0/RP0/CPU0:ios# show access-lists ipv6
Fri Oct 20 05:29:01.125 UTC
ipv6 access-list V6-INGRESS-ACL
10 permit ipv6 any any
20 deny udp any any
```

show alarms

To view alarm information, use the **show alarms** command in XR EXEC mode or Administration EXEC mode.

show alarms [**brief**] [**system**] [**active**]

Syntax Description

brief	Displays alarms in brief.
system	Displays system scope alarms related data.
active	Displays active alarms.

Command Default

None

Command Modes

XR EXEC

Administration EXEC

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

This command displays the alarm information. The command displays only the administration alarms in admin EXEC mode and all the alarms in XR EXEC mode.

Example

The following example shows the output of the **show alarms brief system active** command.

```
RP/0/RPO/CPUO:P1AL 05#show alarms brief system active
Thu Feb 9 11:33:03.137 UTC
------------------------------------------------------------------------------------------------

```

show cdp

To display global CDP information (including timer and hold-time information, information about neighboring devices, interfaces on which CDP is enabled, traffic between devices), use the **show cdp** command in EXEC mode.

show cdp { **traffic** | **neighbors** [*type number* | **detail**] | **interface** [*type number*] | **entry** { * | *device-name* **[*]** } [**version**] [**protocol**] }

Syntax Description

type	(Optional) Interface type that is connected to the neighbors about which you want information.
number	(Optional) Number of the interface connected to the neighbors about which you want information.
detail	(Optional) Displays detailed information about a neighbor (or neighbors) including network address, enabled protocols, hold time, and software version.
*	Dispalys all CDP neighbors.
device-name *	Name of the neighbor about which you want information. You can enter an optional asterisk (*) at the end of a *device-name* as a wildcard. For example, entering **show cdp entry dev*** will match all device names that begin with **dev**.
version	(Optional) Limits the display to information about the software version running on the device.
protocol	(Optional) Limits the display to information about the protocols enabled on the device.

Command Default

No default behavior or values.

Command Modes

EXEC

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

Use the **show cdp** command to display global CDP information.

```
RP/0/RP0/CPU0:ios#show cdp
Tue Feb 14 16:59:38.255 UTC
Global CDP information:
        Sending CDP packets every 60 seconds
        Sending a holdtime value of 180 seconds
        Sending CDPv2 advertisements is enabled
```

Use the **show cdp neighbors** command to display detailed information about neighboring devices discovered using CDP.

```
RP/0/RP0/CPU0:R2#show cdp neighbors mgmtEth 0/RP0/CPU0/1
```

```

  IPv6 address: 2000:110::1
Platform: cisco NCS1010,  Capabilities: Router
Interface: MgmtEth0/RP0/CPU0/1
Port ID (outgoing port): MgmtEth0/RP0/CPU0/1
Holdtime : 143 sec

Version :
7.10.1.19I

advertisement version: 2
Duplex: full
```

Use the **show cdp interface** [*interface-name*] command to display information about the interfaces on which CDP is enabled.

```
RP/0/RP0/CPU0:R2#show cdp interface Mg0/RP0/CPU0/1
Mon Apr 10 12:24:27.253 UTC
MgmtEth0/RP0/CPU0/1 is Up
  Encapsulation ether
  Sending CDP packets every 60 seconds
  Holdtime is 180 seconds
```

Use the **show cdp traffic** command to display information about the traffic gathered between devices using CDP.

```
RP/0/RP0/CPU0:ios#show cdp traffic
Mon Apr 10 12:32:09.247 UTC

CDP counters :
        Packets output: 11, Input: 5
        Hdr syntax: 0, Chksum error: 0, Encaps failed: 0
        No memory: 0, Invalid packet: 0, Truncated: 0
        CDP version 1 advertisements output: 0, Input: 0
        CDP version 2 advertisements output: 11, Input: 5
        Unrecognize Hdr version: 0, File open failed: 0
```

show configuration commit changes

To display the changes made to the running configuration by previous configuration commits, a configuration commit, or for a range of configuration commits, use the **show configuration commit changes** command in EXEC, administration EXEC, administration configuration, or global configuration mode.

show configuration commit changes { *commit-id* | **since** *commit-id* | **last** *number-of-commits* | **original** *last-modified* | **all** } [**diff**]

Syntax Description

since	Displays all changes committed to the running configuration since (and including) a specific configuration commit.
commit-id	Displays configuration changes for a specific configuration commit.
last *number-of-commits*	Displays the changes made to the running configuration during the last number of configuration commits specified for the *number-of-commits* argument.
original *last-modified*	Displays the original content of the actual commit operation before policy modifications by commit scripts.
all	Displays commit ID and configurations completed for last 100 commits.
diff	(Optional) Displays added lines, changed lines, and deleted lines.

Command Default

None

Command Modes

EXEC

Administration EXEC

Administration configuration

Global configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Each time a configuration is committed with the **commit** command, the configuration commit operation is assigned a commit ID. The **show configuration commit changes** command displays the configuration changes made since the specified commit.

To display a list of the available commit IDs, enter the **show configuration commit list** command. You can also display the commit IDs by entering the **show configuration commit changes** command with the online help function (**?**).

You cannot view commit IDs from a different release if the syntax or semantics of the configuration changed in the current release.

Note Syntax of a configuration refers to its structure and format, while the semantics of a configuration refers to its backend interpretation.

The following example shows sample output from the **show configuration commit changes** command with the *commit-id* argument. In this example, the output displays the changes made in the configuration commit assigned commit ID 1000000006.

```
RP/0/RP0/CPU0:ios#show configuration commit changes 1000000006
Building configuration...

controller Ots0/0/0/0
 raman-osri off
 raman-force-apr off
 raman-tx-power 1 value 22300
 raman-tx-power 2 value 26800
 raman-tx-power 3 value 6400
 raman-tx-power 4 value 12900
 raman-tx-power 5 value 19000
 raman-safety-control-mode auto
!
end
```

The following example shows sample output from the **show configuration commit changes** command with the **since** *commit-id* keyword and argument. In this example, the output displays the configuration changes made since the configuration commit assigned commit ID 1000000006 was committed.

```
RP/0/RP0/CPU0:ios#show configuration commit changes since 1000000006

show controllers

To display status and configuration information about the interfaces on a specific node, use the **show controllers** command in XR EXEC mode.

Show controllers [**description**] [*Controller-type R/S/I/P*] [**spectrum-info**] [**otdr-info** *direction*] [**tone-info**] [**channel-slice-attenuation-info**]

Syntax Description

description	Displays the controller status.
Controller-type R/S/I/P	Rack/Slot/Instance/Port of the controller.
spectrum-info	Displays the Optical Channel Monitoring (OCM) raw data at slice level, such as Tx-power and Rx-power.
otdr-info	Displays the OTDR scan status and location of the SOR file, and the OTDR events.
direction	Scan direction (RX or TX)
channel-slice-attenuation-info	Displays the attenuation data for each channel slice
tone-info	Displays the Tone Generation parameters that are set for connection verification and the status of the connection verification operation.

Command Default

None

Command Modes

XR EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

To view the OTS controller status on the ILA cards, use the sh controller description command.

```
RP/0/RP0/CPU0:ios#sh controller description
Fri Mar 25 09:24:53.386 UTC
Interface Status Description
--------------------------------------------------------------------------------
Osc0/0/0/0 up
Osc0/0/0/2 up
Ots0/0/0/0 up
Ots0/0/0/1 up
Ots0/0/0/2 up
Ots0/0/0/3 up
RP/0/RP0/CPU0:ios#
```

To view the parameters of the LINE 0 OTS controller, use the following command:

```
RP/0/RP0/CPU0:ios#sh controllers ots 0/0/0/0
Wed Mar 23 06:00:37.097 UTC
Controller State: Up

To view the parameter values set for Tone Generation and the status of connection verification on port 4 OTS controller, use the following command:

```
RP/0/RP0/CPU0:ios#show controllers ots 0/0/0/4 tone-info
Fri Sep 15 14:53:22.579 UTC
Tone Info:
Tone Frequency : 191.3750000 THz
Tone Rate : 2 bits/second
Tone Pattern(Hex value) : abcd1234
Tone Pattern Expected(Hex value) : abcd1234
Tone Pattern Received(Hex value) : 00000000
Tone Detected OOB :  Enabled
 Detection State: Inprogress
```

To view the parameter values set for Tone Generation and the status of connection verification on the OMS controller, use the following command:

```
RP/0/RP0/CPU0:#show controllers oms 0/2/0/0 tone-info
Tue May 10 11:41:18.847 UTC
Tone Info:
Tone Rate : 25 bits/second
Tone Pattern Expected(Hex value) : abcd1234
Tone Pattern Received(Hex value) : abcd1234
```

```
Tone Detected OOB : Enabled
Detection State: Success
```

show controllers raman-info

To view the individual Raman pump information and other parameters, use the **show controllers ots r/s/i/p raman-info** command.

show controllers ots *R/S/I/P* **raman-info**

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.

Command Modes

User EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following sample shows the output of the **show controllers ots r/s/i/p raman-info** command.

```
RP/0/RP0/CPU0:ios#show controllers ots 0/0/0/0 raman-info
Fri Apr  1 06:40:33.849 UTC

         Alarm Status:
         -------------
         Detected Alarms: None

         Alarm Statistics:
         -----------------
         RAMAN-AUTO-POW-RED = 0
         RAMAN-1-LOW-POW = 0
         RAMAN-2-LOW-POW = 0
         RAMAN-3-LOW-POW = 0
         RAMAN-4-LOW-POW = 0
         RAMAN-5-LOW-POW = 0
         RAMAN-1-HIGH-POW = 1
         RAMAN-2-HIGH-POW = 0
         RAMAN-3-HIGH-POW = 0
         RAMAN-4-HIGH-POW = 0
         RAMAN-5-HIGH-POW = 0

         Parameter Statistics:
         ---------------------
         Raman Safety Control mode = auto
         Raman Osri = OFF
         Raman Force Apr = OFF
         Composite Raman Power = 886.60 mW

         RAMAN Pump Info:
         ---------------------
         Instance        Wavelength(nm)  Power(mW)
          1               1424.00                 257.60
          2               1438.00                 255.10
          3               1457.00                 71.60
          4               1470.00                 127.50
```

```
 5               1495.00                 170.10

Configured Parameters:
-------------
Raman Safety Control mode = auto
Raman Osri = OFF
Raman Force Apr = OFF

RAMAN Pump Info:
--------------------
Instance        Power(mW)
 1               45.00
 2               40.00
 3               40.00
 4               40.00
 5               35.00
```

show environment

To display environmental monitor parameters for the system, use the **show environment** command.

show environment [**alarm-contact** | **all** | **altitude** | **current** | **fan** | **humidity** | **power** | **voltages** [**location** | *location*] | **temperature** [**location** | *location*]]

Syntax Description

alarm-contact	(Optional) Displays information about the alarm ports.
all	(Optional) Displays information for all the environmental monitor parameters.
altitude	(Optional) Displays information about the altitude.
current	(Optional) Displays current sensor information.
fan	(Optional) Displays information about the fans.
humidity	(Optional) Displays information about the humidity.
power	(Optional) Displays power supply voltage and current information.
temperature	(Optional) Displays system temperature information.
voltages	(Optional) Displays system voltage information.
location | *location*	(Optional) Enter the location for which the environmental information needs to be displayed.

Command Default

All environmental monitor parameters are displayed.

Command Modes

Cisco IOS XR

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

The **show environment** command displays information about the hardware that is installed in the system, including fans, power supply voltage, current information, and temperatures.

Example

The following example shows sample output from the **show environment** command with the **fan** keyword.

sysadmin-vm:0_RP0# **show environment fan**

```
Thu May 26 04:15:37.765 UTC
================================================================================
                                                Fan speed (rpm)
Location      FRU Type                          FAN_0    FAN_1   FAN_2
--------------------------------------------------------------------------------
```

==============================================================================
```

show fpd package

To determine the FPDs that are supported with the current software release and the minimum hardware requirements for each FPD, use the **show fpd package** command in Cisco IOS XR mode.

show fpd package [**detail**]

Syntax Description

detail	(Optional) Displays detailed information about FPD upgrade.

Command Default

Firmware information of all the hardware components is displayed.

Command Modes

Cisco IOS XR EXEC

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example shows sample output from the **show fpd package** command.

```
RP/0/RP0/CPU0:ios#show fpd package
Wed Jun 29 08:50:21.057 UTC

show hw-module fpd

To display the firmware information of various hardware components of NCS 1010, use the **show hw-module fpd** command in Cisco IOS XR mode.

show hw-module fpd [*fpd-name*]

Syntax Description

fpd-name	(Optional) Name of the FPD.

Command Default

Firmware information of all the hardware components is displayed.

Command Modes

Cisco IOS XR EXEC

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example shows sample output from the **show hw-module fpd** command.

```
RP/0/RP0/CPU0:ios# show hw-module fpd

show inventory

To retrieve and display the physical inventory information of the system, use the **show inventory** command in Cisco IOS XR mode.

show inventory [**WORD** | **all** | **chassis** | **details** | **fan** | **location** | **power**] [**raw** | **vendor-type**]

Syntax Description

WORD	(Optional) Displays partially qualified location specification.
all	(Optional)Displays inventory information for all the physical entities.
chassis	(Optional) Displays inventory information for the entire chassis.
details	(Optional) Displays detailed entity information.
fan	(Optional) Displays inventory information for the fans.
location | *location*	(Optional) Displays inventory information for a specific node, or for all nodes in the chassis.
power	(Optional) Displays inventory information for the power supply.
raw	(Optional) Displays raw information about the chassis for diagnostic purposes.
vendor-type	(Optional) Displays vendor-type information.

Command Default

All hardware inventory information is displayed.

Command Modes

Cisco IOS XR EXEC

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Enter the **show inventory** command with the **raw** keyword to display every RFC 2737 entity installed in NCS 1020, including those without a PID, unique device identifier (UDI), or other physical identification. The **raw** keyword is primarily intended for troubleshooting problems with the **show inventory** command itself.

Example

The following examples show sample output from the show inventory command in both EXEC and Administration EXEC modes.

sysadmin-vm:0_RP0# **show inventory**

```
RP/0/RP0/CPU0:ios#show inventory

show ntp associations

To display the status of Network Time Protocol (NTP) associations, use the **show ntp associations** command in privileged EXEC mode.

show ntp associations [**detail**] [**location** *node-id*]

Syntax Description

detail	(Optional) Displays detailed information about each NTP association.
location *node-id*	(Optional) Displays the status of NTP associations from the designated node. The *node-id* argument is entered in the *rack/slot* notation.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Output for the **show ntp associations** command is displayed only if NTP is configured.

Task ID

Task ID	Operations
ip-services	read

This example shows sample output from the **show ntp associations** command:

```
RP/0/RP0/CPU0:ios#show ntp associations
Sun Nov 5 15:14:44.128 UTC

address ref clock st when poll reach delay offset disp
*~203.0.113.51 10.64.58.50 2 81 128 377 1.84 7.802 2.129
* sys_peer, # selected, + candidate, - outlayer, x falseticker, ~ configured
```

Table 1: show ntp associations Field Descriptions

Field	Description
*	Peer has been declared the system peer and lends its variables to the system variables.

Field	Description
#	A pound sign (#) displayed next to a configured peer indicates that the router does not synchronize with the peer even though NTP request and response packets are exchanged. In this case, check the output of the **show ntp associations detail** command or the NTP debugs to see why the clocks are not synchronized. Use the **show ntp associations detail** and **show ntp status** commands to obtain additional information about the state of NTP. One possible reason for the # sign is that the NTP client clock differs by more than 4000 seconds from the NTP server clock. On Cisco routers, a time difference of greater than 4000 seconds is considered out of range and prevents the router from synchronization to the server. This does not apply when you first configure an NTP peer on a Cisco router or on reload. In this case, the NTP client clock is changed to match the NTP server clock. Verify the time zone of the client clock; local time is displayed, but time values in NTP messages are in UTC (GMT) time zone. You can manually change the client clock to within a few minutes of the NTP server clock.
+	Peer is a survivor and a candidate for the combining algorithm.
-	Peer is discarded by the clustering algorithm as an outlier.
x	Peer is discarded by the intersection algorithm as a falseticker.
~	Indicates peer is statically configured.
address	IPv4 or IPv6 address of the peer. If a nondefault VRF is configured for the peer, the VRF follows the address.
ref clock	Reference clock type or address for the peer.
st	Stratum setting for the peer.
when	Time since last NTP packet was received from peer, in milliseconds.
poll	Polling interval between NTP poll packets, in seconds. As the NTP server and client are better synced (and there are no dropped packets), this number increases to a maximum of 1024.
reach	Peer reachability (bit string, in octal). The reach field is a circular bit buffer. It gives you the status of the last eight NTP messages (eight bits in octal is 377, so you want to see a reach field value of 377). If an NTP response packet is lost, the lost packet is tracked over the next eight NTP update intervals in the reach field.
delay	Round-trip delay to peer, in milliseconds.

Field	Description
offset	Relative time difference between the client time and server time, in milliseconds. The client slows down or speeds up its clock to match the server time value. The offset decreases toward zero over time. It likely never reaches zero since the packet delay between the client and server is never exactly the same. Therefore, the client NTP cannot ever exactly match its clock with the server. If there is an asterisk (*) next to a configured peer, then you are syncronized to this peer and use them as the primary clock.
disp	Dispersion.

This example shows sample output from the **show ntp associations** command with the **detail** keyword:

```
RP/0/RP0/CPU0:ios#show ntp associations detail

sync dist	Peer synchronization distance.
delay	Round-trip delay to peer.
offset	Offset of peer clock relative to this clock.
dispersion	Dispersion of peer clock.
precision	Precision of peer clock in (Hertz) Hz.
version	NTP version number that peer is using.
org time	Originate time stamp.
rcv time	Receive time stamp.
xmt time	Transmit time stamp.
filtdelay	Round-trip delay of each sample, in milliseconds.
filtoffset	Clock offset of each sample, in milliseconds.
filterror	Approximate error of each sample.

show ntp status

To display the status of Network Time Protocol (NTP), use the **show ntp status** command in XR EXEC mode.

show ntp status [**location** *node-id*]

Syntax Description

location *node-id*	(Optional) Displays the status of NTP from the designated node. The *node-id* argument is entered in the *rack/slot* notation.

Command Default

None

Command Modes

XR EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Task ID

Task ID	Operations
ip-services	read

This example shows sample output from the **show ntp status** command:

```
RP/0/RP0/CPU0:ios#show ntp status
Sun Nov 5 15:14:36.949 UTC

Clock is synchronized, stratum 3, reference is 203.0.113..51
nominal freq is 1000000000.0000 Hz, actual freq is 44881851.3383 Hz, precision is 2**24
reference time is E8F22D7A.AB020D97 (15:04:26.668 UTC Sun Nov 5 2023)
clock offset is 9.690 msec, root delay is 2.553 msec
root dispersion is 24.15 msec, peer dispersion is 2.13 msec
loopfilter state is 'CTRL' (Normal Controlled Loop), drift is 0.0000212807 s/s
system poll interval is 128, last update was 610 sec ago
authenticate is disabled, panic handling is disabled,
hostname resolution retry interval is 1440 minutes.
```

Table 3: show ntp status Field Descriptions

Field	Description
synchronized	Synchronized system to an NTP peer.
stratum	NTP stratum of this system.
reference	IPv4 address or first 32 bits of the MD5 hash of the IPv6 address of the peer to which clock is synchronized.

Field	Description
nominal freq	Nominal frequency in Hertz (Hz) of the system hardware clock.
actual freq	Measured frequency in Hz of the system hardware clock.
precision	Precision of the clock of this system in Hz.
reference time	Reference time stamp.
clock offset	Offset of clock to synchronized peer, in milliseconds.
root delay	Total delay along path to root clock, in milliseconds.
root dispersion	Dispersion of root path.
peer dispersion	Dispersion of synchronized peer.
loopfilter state	The state of the clock state machine transition function.
drift	Drift of the hardware clock.
system poll interval	Poll interval of the peer.
last update	Time the router last updated its NTP information.

show olc apc

Use the **show olc apc** command to view APC status.

show olc apc { **controller Ots** *R/S/I/P* }

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.
controller Ots	Use this parameter to view the information for a particular controller.

Command Modes

User EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following sample is an output of **show olc apc** command.

```
RP/0/RP0/CPU0:OLT1#show olc apc

Controller      : Ots0/0/0/0
APC Status      : WORKING

Node RID        : 10.1.1.1
Internal State  : IDLE

Node RID        : 10.99.1.2
Internal State  : IDLE

Node RID        : 10.99.2.2
Internal State  : IDLE

Node RID        : 10.99.4.1
Internal State  : IDLE

Node RID        : 10.1.1.5
Internal State  : DISCREPANCY
```

show olc apc-local

To view the local status of APC on each node, use the **show olc apc-local** command.

show olc apc-local { **regulation-info** { **controller Ots** *R/S/I/P* | { **tx | rx** } } | **target-psd-profile** } { **controller Ots** *R/S/I/P* }

Syntax Description

regulation-info	Displays APC regulation information.
target-psd-profile	Displays target PSD profile information
R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.
controller Ots	Use this parameter to view the information for a particular controller.

Command Modes

User EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following sample is an output of **show olc apc-local** command.

```
RP/0/RP0/CPU0:ios#show olc apc-local
Mon Apr 11 06:59:14.679 UTC

Controller : Ots0/0/0/0

TX Status : ENABLED
RX Status : ENABLED
```

The following sample is an output of **show olc apc-local target-psd-profile** command.

```
RP/0/RP0/CPU0:ios#show olc apc-local target-psd-profile
Tue Apr 26 10:19:24.910 UTC
Controller          : Ots0/0/0/0
Target PSD source   : Configuration
-------------------------------------------------------------------------------
Setpoint                Frequency                       Target PSD
                          (THz)                       (dBm/12.5 GHz)

OCh - Optical Channel

show olc band-status

Use the **show olc band-status**command to display the status of all the nodes in the controller.

show olc band-status

Table 4: Syntax Description

This command has no keywords or arguments.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example shows how to view the status of BFR on each node.

```
RP/0/RP0/CPU0#sh olc band-status
Tue Dec 13 10:45:30.594 UTC

Controller              : Ots0/0/0/0
Self-Band               : C-Band
BFR status              : Running

Node RID                : 10.1.1.1
Self IP Address         : 192.0.2.1
Self Controller         : Ots0/0/0/0
Partner IP address      : 192.0.2.2
Partner Controller      : Ots0/0/0/0
Partner link status     : UP
C-Band status           : ACTIVE
C-Band PSD              : Dual Band
L-Band status           : ACTIVE
L-Band PSD              : Dual Band

Node RID                : 10.1.1.2
Self IP Address         : 192.0.2.6
Self Controller         : Ots0/0/0/0
Partner IP address      : 192.0.2.7
Partner Controller      : Ots0/0/0/2
Partner link status     : UP
C-Band status           : ACTIVE
C-Band PSD              : Dual Band
L-Band status           : ACTIVE
L-Band PSD              : Dual Band

Node RID                : 10.1.1.3
Self IP Address         : 198.51.100.1
Self Controller         : Ots0/0/0/0
Partner IP address      : 198.51.100.2
Partner Controller      : Ots0/0/0/2
Partner link status     : UP
```

```
C-Band status           : ACTIVE
C-Band PSD              : Dual Band
L-Band status           : ACTIVE
L-Band PSD              : Dual Band

Node RID                : 10.1.1.4
Self IP Address         : 203.0.113.1
Self Controller         : Ots0/0/0/0
Partner IP address      : 203.0.113.2
Partner Controller      : Ots0/0/0/0
Partner link status     : UP
C-Band status           : ACTIVE
C-Band PSD              : Dual Band
L-Band status           : ACTIVE
L-Band PSD              : Dual Band

Node RID                : 10.1.1.5
Self IP Address         : 203.0.113.45
Self Controller         : Ots0/0/0/0
Partner IP address      : 203.0.113.46
Partner Controller      : Ots0/0/0/0
Partner link status     : UP
C-Band status           : ACTIVE

L-Band status           : ACTIVE
L-Band PSD              : Dual Band
```

The following table describes the different fields that are displayed in the output of the *show olc band-status* command.

Status	Description
Controller	Name of the controller.
Self-Band	Name of the band. Values: • C-Band • L-Band • None
BFR status	Status of BFR. Values: • Running • Paused • NA
Node RID	Node router ID.
Self IP Address	IP address of the current node on which the command is running. **Note** This field displays *NA* if BFR is paused.

Status	Description
Self Controller	Controller details of the current node on which the command is running. **Note** This field displays *NA* if BFR is paused.
Partner IP address	IP address of the partner node that is connected to the self node in the *Node RID*. This IP address is used to communicate between the L-band and C-band device. **Note** This field displays *NA* if BFR is paused.
Partner Controller	Controller details of the partner node. **Note** This field displays *NA* if BFR is paused.
Partner link status	Connection status of the C and L band nodes. Values: • UP • DOWN **Note** This field displays *NA* if BFR is paused.
C-Band status	C band node status. Valid values: • ACTIVE • FAILED • RECOVERING • NA **Note** This field displays *NA* if BFR is paused.
C-Band PSD	The active PSD profile on the C-Band node. Valid values: • Dual Band • Single Band **Note** This field displays *NA* if BFR is paused.

Status	Description
L-Band status	L band node status. Valid values: • ACTIVE • FAILED • RECOVERING • NA **Note** This field displays *NA* if BFR is paused.
L-Band PSD	The active PSD profile on the L-Band node. Valid values: • Dual Band • Single Band **Note** This field displays *NA* if BFR is paused.

show olc gain-estimator

Use the **show olc gain-estimator** command to view the gain estimation details.

show olc gain-estimator { **controller Ots** *R/S/I/P* }

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.
controller Ots	Use this parameter to view the information for a particular controller.

Command Modes

User EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following output is a sample of the **show olc gain-estimator** command.

```
RP/0/RP0/CPU0:ios#show olc gain-estimator
Thu May 12 09:30:39.987 UTC
Controller                          : Ots0/0/0/0
Egress  Gain Estimator Status       : IDLE
Egress  Estimated Gain              : 25.9 dB
Egress  Estimated Gain Mode         : Extended
Egress  Gain Estimation Timestamp   : 2022-05-07 09:16:53

Controller                          : Ots0/0/0/2
Egress  Gain Estimator Status       : IDLE
Egress  Estimated Gain              : 11.7 dB
Egress  Estimated Gain Mode         : Normal
Egress  Gain Estimation Timestamp   : 2022-05-07 10:13:53
```

The following output is a sample of the **show olc gain-estimator controller ots R/S/I/P** command.

```
RP/0/RP0/CPU0:ios#show olc gain-estimator controller Ots 0/0/0/0
Fri Jun 10 05:47:21.119 UTC
Controller                          : Ots0/0/0/0
Ingress Gain Estimator Status       : IDLE
Ingress Estimated Gain              : 21.7 dB
Ingress Estimated Gain Mode         : Normal
Ingress Gain Estimation Timestamp   : 2022-06-10 05:46:48
```

show olc link-tuner

To view link tuner status and PSD computation information, use **show olc link-tuner** command.

show olc link-tuner { **detail** } { { **controller Ots** *R/S/I/P* } }

Syntax Description

detail	Displays link tuner status, PSD computation information, and computed total noise.
R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.
controller Ots	Use this parameter to view the information for a particular controller.

Command Modes

User EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following sample is an output of **show olc link-tuner** command.

```
RP/0/RP0/CPU0:ios#show olc link-tuner
Controller          : Ots0/0/0/0
Link Tuner Status   : OPERATIONAL
Last PSD computation: 2022-05-06 10:59:51
------------------------------------------------------------------------
Setpoint            : Computed PSD
                       (dBm/12.5 GHz)
--------------------------s--------------------------------------------
01                      -5.7
02                      -5.6
03                      -5.6
04                      -5.5
05                      -5.5
06                      -5.4
07                      -5.4
08                      -5.3
09                      -5.3
10                      -5.2
11                      -5.2
12                      -5.1
13                      -5.1

32                     -4.1
33                     -4.0
```

show olc otdr-status

Use the **show olc otdr-status** command to display the status of OTDR scan.

show olc otdr-status [**details**]

Syntax Description

details	Displays detailed OTDR scan status information.

Command Modes

Controller configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following samples display the various status of OTDR automatic scan during span fault:

```
RP/0/RP0/CPU0:ios#show olc otdr-status details
Mon Sep 18 13:16:16.461 UTC
Controller                                    : Ots0/0/0/0
Auto-scan Start Time                          : NA
OTDR Auto-scan Status                         : RUNNING
Status Detail                                 : Starting on Span Down
Optical Span Status                           : Down
Trigger Event                                 : Span Fault
Last Trigger Event                            : Span Restore

RP/0/RP0/CPU0:ios#show olc otdr-status details
Mon Sep 18 13:16:33.304 UTC
Controller                                    : Ots0/0/0/0
Auto-scan Start Time                          : 2023-09-18 13:16:27
OTDR Auto-scan Status                         : RUNNING
Status Detail                                 : Waiting Scan Completion on Span Down
Optical Span Status                           : Down
Trigger Event                                 : Span Fault
Last Trigger Event                            : Span Restore

RP/0/RP0/CPU0:ios#show olc otdr-status details
Mon Sep 18 13:18:54.154 UTC
Controller                                    : Ots0/0/0/0
Auto-scan Start Time                          : 2023-09-18 13:16:27
OTDR Auto-scan Status                         : COMPLETED
Status Detail                                 : Completed on Span Down
Optical Span Status                           : Down
Trigger Event                                 : Span Fault
Last Trigger Event                            : Span Fault
```

show olc raman-tuning

To view the Raman tuning status using **show olc raman-tuning** command.

show olc raman-tuning { **controller Ots** *R/S/I/P* }

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.
controller Ots	Use this parameter to view the information for a particular controller.

Command Modes

User EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following sample is an output of the **show olc raman-tuning** command.

```
RP/0/RP0/CPU0:ios#sh olc raman-tuning
Fri Apr  1 06:38:34.330 UTC

Controller                       : Ots0/0/0/0
Raman-Tuning Status              : TUNED
Tuning Complete Timestamp        : 2022-04-01 05:49:30.407029
Estimated Max Possible Gain      : 21.7 dB
Raman Gain Target                : 14.7 dB
Gain Achieved on Tuning Complete : 14.6 dB
```

The following sample is an output of the **show olc raman-tuning controller ots r/s/i/p** command.

```
RP/0/RP0/CPU0:ios#sh olc raman-tuning controller ots 0/0/0/0
Fri Apr  1 06:42:49.538 UTC

Controller                       : Ots0/0/0/0
Raman-Tuning Status              : TUNED
Tuning Complete Timestamp        : 2022-04-01 05:50:19.934044
Estimated Max Possible Gain      : 21.1 dB
Raman Gain Target                : 18.0 dB
Gain Achieved on Tuning Complete : 18.1 dB
```

show olc span-loss

Use the **show olc span-loss** command to view the Tx span loss and Rx span loss.

show olc span-loss { **controller Ots** *R/S/I/P* }

Syntax Description

R/S/I/P	Rack/Slot/Instance/Port of the OSC controller.
controller Ots	Use this parameter to view the span loss for a particular controller.

Command Modes

User EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following sample shows the output of the **show olc span-loss** command on a Raman span with Raman tuning enabled.

```
RP/0/RP0/CPU0:ios#show olc span-loss
Mon Apr 11 09:33:00.398 UTC

Controller name                          : Ots0/0/0/0
Neighbour RID                            : 10.1.1.2
Apparent Rx Span Loss                    : 7.7 dB
Rx Span Loss (with pumps off)            : 23.2 dB
Rx Span Loss (with pumps off) measured at : 2022-04-11 07:42:26
Estimated Rx Span Loss                   : 23.5 dB
Apparent Tx Span Loss                    : 17.5 dB
Tx Span Loss (with pumps off)            : 33.3 dB
Tx Span Loss (with pumps off) measured at : 2022-04-11 07:42:56
Estimated Tx Span Loss                   : 33.5 dB
```

show platform

To display information and status for each node in the network, use the **show platform** command in the XR EXEC mode.

Node Status and Information Command
Node Status and Information Command
Show platform

Chassis Door Status Command
Chassis Door Status Command

show platform chassis-door

Syntax Description

show platform	Displays the status of the node
show platform chassis-door	Displays the status of the chassis front door.

Command Default

None

Command Modes

XR EXEC mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.
Cisco IOS XR Release 24.3.1	This **show platform chassis-door** command was introduced.

Usage Guidelines

None

Example

To view the information of the node, use the following command:

```
RP/0/RP0/CPU0:ios#show platform

Mon May  6 16:38:13.609 IST

Node              Type                      State                 Config state
--------------------------------------------------------------------------------

```

To view the status of the chassis door, use the following command:

```
RP/0/RP0/CPU0:ios#show platform chassis-door
Mon Jul  1 05:54:59.600 UTC
Chassis door present: Yes
```

Note When there is no door installed on the chassis, the `Chassis door present` status shows **No**.

show version

To display the software version and details such as system uptime, use the **show version** command.

show version

Syntax Description

This command has no keywords or arguments.

Command Default

The software version and details such as system uptime are displayed for all the nodes in the system.

Command Modes

Cisco IOS XR

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

Enter the **show version** command to display the software version, build information and system uptime.

Example

The following example shows a sample output from the **show version** command.

sysadmin-vm:0_RP0# **show version**

```
RP/0/RP0/CPU0:ios#show version

Mon May  6 16:38:47.424 IST

Cisco IOS XR Software, Version 24.2.1.32I LNT

Copyright (c) 2013-2024 by Cisco Systems, Inc.

Build Information:

Built By     : cisco

Built On     : Thu Apr 11 02:06:44 UTC 2024

Build Host   : iox-ucs-033

Workspace    : /auto/iox-ucs-033-san1/prod/24.2.1.32I.SIT_IMAGE/ncs1010/ws/

Version      : 24.2.1.32I

Label        : 24.2.1.32I-MSFT_PILOT

cisco NCS1010 (C3758R @ 2.40GHz)

cisco NCS1020-SA (C3758R @ 2.40GHz) processor with 32GB of memory

NCS1020_P1B_DT_10 uptime is 4 days, 5 hours, 9 minutes
```

```
NCS 1020 Chassis
```

span-length

To configure span length, use the **span-length** command.

span-length *length*

Syntax Description

length	Span length in 0.1 km. Range: 1-2000

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example is a sample configuration that configures span-length to 10 km.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#span-length 100
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

span-loss

To configure the span loss thresholds, use the **span-loss** command.

span-loss **min | max** *threshold*

Syntax Description

max	Maximum threshold
min	Minimum threshold
threshold	Threshold in range 0.0 to 42.0 dB in increments of 0.1 dB.

Command Modes

(config-olc-ots)

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following configuration example sets the span loss minimum threshold to 14 dB and maximum threshold to 35 dB.

```
RP/0/RP0/CPU0:ios#conf
RP/0/RP0/CPU0:ios(config)#optical-line-control
RP/0/RP0/CPU0:ios(config-olc)#controller ots 0/0/0/0
RP/0/RP0/CPU0:ios(config-olc-ots)#span-loss max 350
RP/0/RP0/CPU0:ios(config-olc-ots)#span-loss min 140
RP/0/RP0/CPU0:ios(config-olc-ots)#commit
RP/0/RP0/CPU0:ios(config-olc-ots)#end
```

tone-pattern controller

Use the **tone-pattern controller** command to start or stop initiating the tone pattern from the OTS controller.

tone-pattern controller ots *R/S/I/P* [**start** | **stop**]

Syntax Description

tone-pattern controller ots	Use this parameter to stop or start the tone pattern operation in the OTS controller.
R/S/I/P	Rack/Slot/Instance/Port of the OTS controller.
start	Use this parameter to start the tone-pattern operation in the OTS controller.
stop	Use this parameter to stop the tone-pattern operation in the OTS controller.

Command Default

None

Command Modes

controller configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

The following is a sample configuration of the **tone-pattern controller ots** command that starts the tone pattern on port 2 OTS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern controller ots 0/0/0/4 start
Wed May 25 12:00:03.271 UTC
Tone pattern started
```

The following is a sample configuration of the **tone-pattern controller ots** command that stops the tone pattern on port 2 OTS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern controller ots 0/0/0/4 stop
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

tone-pattern-detect controller

Use the **tone-pattern-detect controller** command to start or stop detecting the tone pattern that is initiated from the OTS controller.

tone-pattern-detect controller *controllertype R/S/I/P* [**start** | **stop**]

Syntax Description

tone-pattern-detect controller	Use this parameter to stop or start the tone-pattern detect operation in a particular controller.
controllertype R/S/I/P	Rack/Slot/Instance/Port of the controller.
start	Use this parameter to start the tone-pattern detect operation in a particular controller.
stop	Use this parameter to stop the tone-pattern detect operation in a particular controller.

Command Default

None

Command Modes

controller configuration mode

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

The following is a sample configuration of the **tone-pattern-detect controller** command that starts the tone pattern detection on the OTS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller ots 0/0/0/4 start
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

The following is a sample configuration of the **tone-pattern-detect controller** command that starts the tone pattern detection on the OMS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller oms 0/2/0/0 start
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

The following is a sample configuration of the **tone-pattern-detect controller** command that stops the tone pattern detection on the OTS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller ots 0/0/0/4 stop
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

The following is a sample configuration of the **tone-pattern-detect controller** command that stops the tone pattern detection on the OMS controller.

```
RP/0/RP0/CPU0:ios#tone-pattern-detect controller oms 0/2/0/0 stop
Wed May 25 12:00:03.271 UTC
Tone pattern detect started
```

upgrade hw-module

To upgrade a specific FPD, all the FPDs, or the FPDs belonging to a specific location, use the **upgrade-hw-module** command in Cisco IOS XR mode.

upgrade hw-module [location [*location-id* **| all]] [fpd [** *fpd-name* **] | all]**

Syntax Description

location [*location-id* **| all]**	Upgrades the FPDs belonging to a specific location.
fpd [*fpd-name* **| all]**	Upgrades a specific FPD or all the FPDs.

Command Default

None

Command Modes

Cisco IOS XR

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Example

The following example shows how to upgrade IoFpga FPD.

```
RP/0/RP0/CPU0:ios# upgrade hw-module location 0/Rack fpd IoFpga
```

ztp clean

To remove all Zero Touch Provisioning (ZTP) logs and settings that are saved on the node, use the ztp clean command in EXEC mode.

ztp clean

Syntax Description

This command has no keywords or arguments.

Command Default

None

Command Modes

Cisco IOS XR Configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

To remove all the ZTP logs and saved settings use the following command.

```
RP/0/RP0/CPU0:ios#ztp clean
Fri Apr 29 06:49:29.760 UTC
This would remove all ZTP temporary files.
Would you like to proceed? [no]: yes
All ZTP operation files have been removed.
ZTP logs are present in /var/log/ztp*.log for logrotate.
Please remove manually if needed.
If you now wish ZTP to run again from boot, do 'conf t/commit replace' followed by reload.
```

ztp initiate

To remove all Zero Touch Provisioning (ZTP) logs and settings that are saved on the node, use the ztp clean command in EXEC mode.

ztp clean

Syntax Description

This command has no keywords or arguments.

Command Default

None

Command Modes

Cisco IOS XR Configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

To initiate the ZTP use the following command.

```
RP/0/RP0/CPU0:ios#ztp initiate
Fri Jun 17 11:44:08.791 UTC
Initiating ZTP may change your configuration.
Interfaces might be brought up if they are in shutdown state
Would you like to proceed? [no]: yes
ZTP will now run in the background.
Please use "show logging" or look at /var/log/ztp.log to check progress.
RP/0/RP0/CPU0:ios#
```

ztp terminate

To terminate all existing Zero Touch Provisioning (ZTP) processes, use the ztp terminate command in EXECmode.

ztp terminate

Syntax Description

This command has no keywords or arguments.

Command Default

None

Command Modes

Cisco IOS XR Configuration

Command History

Release	Modification
Cisco IOS XR Release 24.2.11	This command was introduced.

Usage Guidelines

None

Example

To terminate the ZTP process use the following command.

```
RP/0/RP0/CPU0:ios#ztp terminate
Fri Apr 29 06:38:59.238 UTC
This would terminate active ZTP session if any (this may leave your system in a partially
configured
state)
Would you like to proceed? [no]: yes
Terminating ZTP
No ZTP process running
```
