

Release Notes for Cisco C881G-U-K9

First Published: May 30, 2011

Release: Cisco IOS Release 15.1(4)M or later releases

OL-24268-01

Contents

- [Introduction, page 1](#)
- [New Features, page 2](#)
- [List of New Commands, page 9](#)

Introduction

This document describes the release features of the Universal High Speed Packet Access (HSPA-U) version of the Cisco C881G Series Integrated Services Router (ISR). The C881G-U-K9 ISR comes with an embedded modem. This modem is a multiband, multiservice WAN modem for use over GSM networks.

For more information about this release, see www.cisco.com/go/3g.

Americas Headquarters:
Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA

New Features

This section describes the new features in this release.

- [Dual SIM, page 3](#)
- [SMS, page 6](#)
- [GPS, page 4](#)
- [3G WWAN MIB Persistence, page 7](#)
- [Remotely Initiated Data Call Back Using SMS, page 8](#)

Dual SIM

The Dual SIM feature implements auto-switch and failover between two cellular networks on a C881G-U-K9 ISR. This feature is enabled by default with SIM slot 0 being the primary slot and slot 1 being the secondary (failover) slot.

The GPS feature provides the following commands:

Command	Syntax	Description
gsm failovertimer	gsm failovertimer <1-7>	Sets the failover timer in minutes.
gsm sim authenticate	gsm sim authenticate <0,7> <pin> slot <0-1>	Verifies the SIM CHV1 code.
gsm sim max-retry	gsm sim max-retry <0-65535>	Specifies the maximum number of failover retries. The default value is 10.
gsm sim primary slot	gsm sim primary slot <0-1>	Modifies the primary slot assignment.
gsm sim profile	gsm sim profile <1-16> slot <0-1>	Configures the SIM profile.

Note the following:

- For auto-switch and failover to work, configure the SIM profile for slots 0 and 1 using the **gsm sim profile** command.
- For auto-switch and failover to work, configure the chat script without a specific profile number.
- If no SIM profile is configured, profile #1 is used by default.
- If no GSM failover timer is configured, the default failover timeout is 2 minutes.
- If no GSM SIM primary slot is configured, the default primary SIM is slot 0.

This example shows you how to set SIM switchover the timeout period to 3 minutes:

```
router#conf t
router(config-controller)# gsm failovertimer 3
```

This example shows you how to authenticate using an unencrypted pin:

```
router(config-controller)#gsm sim authenticate 0 1234 slot 0
```

This example shows you how to set the maximum number of SIM switchover retries to 20:

```
router(config-controller)#gsm sim max-retry 20
```

This example shows you how to set SIM slot 1 as the primary slot:

```
router(config-controller)#gsm sim primary slot 1
```

This example shows you how to configure the SIM card in slot 0 to use profile 10:

```
router(config-controller)#gsm sim profile 10 slot 0
```

GPS

The GPS feature provides the following commands:

Command	Syntax	Description
cdma gps mode	gsm gps mode standalone	Enables the GPS standalone mode.
cdma gps nmea	gsm gps nmea	Enables the NMEA mode.
show cellular gps	show cellular <i>unit</i> gps	Displays a summary of GPS data.
	show cellular <i>unit</i> gps detail	Displays a detailed list of GPS data.

In the syntax of these commands, the value of the *unit* parameter refers to:

- (EHWIC-3G-HSPA-U) The router slot, WAN interface card (WIC) slot, and port separated by slashes (for example, 0/1/0).
- (C881G-U-K9) The number 0.

These examples show how to enable GPS standalone and NMEA for EHWIC-3G-HSPA-U:

```
router(config)#controller cellular 0/0
router(config-controller)#gsm gps mode standalone
...
controller Cellular 0/0
  gsm gps mode standalone
!

router(config-controller)#gsm gps nmea
...
controller Cellular 0/0
  gsm gps nmea
!
```

These examples show how to display summary and detailed GPS data for C881G-U-K9:

```
router#show cellular 0 gps
GPS Info
-----
GPS State: GPS enabled
GPS Mode Configured: standalone
Latitude: 37 Deg 24 Min 59 Sec North
Longitude: 121 Deg 55 Min 8 Sec West
Timestamp (GMT): Thu Jul 29 11:08:39 2010
Fix type: 3D, Height: -6 m
Heading: 408, Velocity Horiz: 3, Velocity Vert: 0
Satellite Info
-----
Satellite #13, elevation 75, azimuth 46, SNR 21
...

router#show cellular 0 gps detail
GPS Info
-----
GPS State: GPS enabled
GPS Mode Configured: standalone
Latitude: 37 Deg 24 Min 59 Sec North
Longitude: 121 Deg 55 Min 7 Sec West
Timestamp (GMT): Thu Jul 29 22:17:57 2010
Fix type: 3D, Height: 12 m
Heading: 0, Velocity Horiz: 0, Velocity Vert: 0
HEPE: 2680 cm
```

```
Uncertainty Info:  
    Angle: 0 deg, A: 24 m, Position: 12 m, Vertical: 12 m  
Satellite Info  
-----  
Satellite #7, elevation 16, azimuth 123, SNR 14 *  
...
```

**Note**

Obtaining a GPS-fixed location requires a supported GPS antenna to be connected to the DIV/GPS port.

**Note**

Obtaining a GPS-fixed location using the Standalone mode can take up to 12 minutes. This depends on the location and type of antenna used.

SMS

The SMS feature enables the router to send and receive SMS messages. This feature also enables the router to save and store the SMS messages in an FTP server.

Note SMS is enabled by default. However, you need to define the FTP server to store incoming and outgoing SMS messages.

The SMS feature provides the following commands:

Command	Syntax	Description
cellular cdma sms send	cellular unit gsm sms send telNum message	Sends SMS messages (up to 160 characters per message).
cellular cdma sms delete	cellular unit gsm sms delete {all msg_ID}	Deletes SMS messages.
cellular cdma sms view	cellular unit gsm sms view {summary all msg_ID}	Displays SMS messages.
cdma sms archive path	gsm sms archive path ftp:path_to_FTP_server	Saves SMS messages on an FTP server.

In the syntax of these commands, the value of the *unit* parameter refers to:

- (EHWIC) The router slot, WIC slot, and port separated by slashes (for example, 0/1/0).
- (C881G-U-K9) The number 0.

Note You can use the call screening command **dialer caller number callback** to authenticate SMS messages that you can use to establish data connections.

This example shows you how to send an SMS message (C881G-U-K9):

```
router#cellular 0 gsm sms send <phone number> "Test message"
```

This example deletes all SMS messages (EHWIC-3G-HSPA-U):

```
router#cellular 0/1/0 gsm sms delete all
```

This example shows you how to display a summary of SMS messages (EHWIC-3G-HSPA-U):

```
router#cellular 0/1/0 gsm sms view summary
ID      FROM                      YY/MM/DD HR:MN:SC  SIZE   CONTENT
0       4087993680                10/05/04 21:29:55 32     from John ...
1       4087993680                10/05/04 21:52:45 32     from Jane ...
2       4087993680                10/05/04 21:56:56 32     from Jake ...
3       4087993680                10/05/04 21:56:58 32     from Tom ...
4       4087993680                10/05/04 21:57:00 32     from Sam ...
```

The following example sets FTP path to the SMS_archive directory on the FTP server at 192.168.1.3 (C881G-U-K9 and EHWIC-3G-HSPA-U):

```
router(config-controller)# gsm sms archive path
ftp://username:password@192.168.1.3/SMS_archive
```

3G WWAN MIB Persistence

This feature allows you to retain 3G WWAN MIB object values and trap settings across router reloads.

Before configuring 3G WWAN MIB, you should perform some SNMP pre-configuration to avoid getting warning messages. The following is an example of SNMP pre-configuration:

```
snmp-server community public RO
snmp-server community private RW
snmp-server enable traps c3g
```

The following example shows you how the settings that you need to configure this feature:

```
controller Cellular 0
    gsm event rssi onset mib-trap All-gsm
    gsm event rssi onset threshold -84
    gsm event rssi abate mib-trap All-gsm
    gsm event rssi abate threshold -82
    gsm event temperature onset mib-trap
    gsm event temperature onset threshold 41
    gsm event temperature abate mib-trap
    gsm event temperature abate threshold 40
    gsm event modem-state mib-trap down
    gsm event modem-state mib-trap up
    gsm event service mib-trap
    gsm event network mib-trap
    gsm event connection-status mib-trap All-gsm
!
```

Remotely Initiated Data Call Back Using SMS

This feature remotely brings up the cellular interface by sending SMS messages over GSM networks.

The following example shows you how to configure this feature:

Note In this example, the phone number of the administrator who wants to remotely bring up the link using SMS is 408-123-4567 on a GSM network. Replace this number with your own number.

```
chat-script wcdma "" "atdt*99#" TIMEOUT 180 "CONNECT"

interface Loopback1
    ip address 1.1.1.1 255.255.255.0
interface Cellular 0
    ip address negotiated
    ip virtual-reassembly in
    encapsulation ppp
    load-interval 30
    dialer in-band
    dialer pool-member 1
    dialer idle-timeout 0
    no peer default ip address
    async mode interactive
    ppp chap hostname abc.cell.org
    ppp chap password 0 nopassword
    ppp ipcp dns request
    routing dynamic

interface Dialer1
    ip address negotiated
    encapsulation ppp
    dialer pool 1
    dialer idle-timeout 0
    dialer string wcdma
    dialer caller 4081234567 callback
    dialer-group 1
    ppp chap hostname abc.cell.org
        ppp chap password 0 nopassword
    ppp ipcp dns request

    ip route 0.0.0.0 0.0.0.0 Dialer1
!
access-list 1 permit any
dialer-list 1 protocol ip list 1
!
line 3
    script dialer wcdma
    login
    modem InOut
        no exec
        transport input all
        transport output all
```

To test this example, send an SMS message from phone number 408-123-4567. This brings the cellular link up.

List of New Commands

The following is a list of the new commands supported by the EHWIC-3G-HSPA-U card embedded in the C881G-U-K9 ISR:

- cellular gsm sms delete
- cellular gsm sms send
- cellular gsm sms view
- debug cellular messages gps
- debug cellular messages nmea
- debug cellular messages sms
- gsm event connection-status mib-trap
- gsm event ecio abate
- gsm event ecio onset
- gsm event modem-state mib-trap
- gsm event network mib-trap
- gsm event rssi abate
- gsm event rssi onset
- gsm event service mib-trap
- gsm event temperature abate
- gsm event temperature onset
- gsm failovertimer
- gsm gps mode standalone
- gsm gps nmea
- gsm sim authenticate
- gsm sim profile
- gsm sim primary slot
- gsm sim max-retry
- gsm sms archive path
- show cellular gps
- show cellular sms

These commands are described in the *Configuring Cisco EHWIC-3G-HSPA-U and C881G-U-K9* guide.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, submitting a service request, and gathering additional information, see the monthly *What's New in Cisco Product Documentation*, which also lists all new and revised Cisco technical documentation, at:

<http://www.cisco.com/en/US/docs/general/whatsnew/whatsnew.html>

Subscribe to the *What's New in Cisco Product Documentation* as a Really Simple Syndication (RSS) feed and set content to be delivered directly to your desktop using a reader application. The RSS feeds are a free service. Cisco currently supports RSS Version 2.0.
