

IGMP and MLD Snooping Commands on Cisco ASR 9000 Series Routers

This chapter describes the commands used to configure and monitor IGMP and MLD snooping on Cisco ASR 9000 Series Router.

For detailed information about IGMP snooping concepts, configuration tasks, and examples, refer to the *Implementing Layer 2 Multicast Using IGMP / MLD Snooping on Cisco ASR 9000 Series Routers* module in the *Multicast Configuration Guide for Cisco ASR 9000 Series Routers*.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

- [access-group \(snooping profile\), on page 3](#)
- [clear igmp snooping bridge-domain, on page 4](#)
- [clear igmp snooping group, on page 6](#)
- [clear igmp snooping port, on page 8](#)

access-group (snooping profile)

To instruct IGMP /MLD snooping to apply the specified access list filter to received membership reports, use the **access-group** command in the appropriate snooping profile configuration mode. To discontinue membership report filtering, use the **no** form of this command.

```
access-group acl-name
no access-group
```

Syntax Description	<i>acl-name</i> Name of the ACL filter.				
Command Default	Membership reports are not filtered by default.				
Command Modes	IGMP snooping profile configuration MLD snooping profile configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.9.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.9.0	This command was introduced.
Release	Modification				
Release 3.9.0	This command was introduced.				
Usage Guidelines	No specific guidelines impact the use of this command.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>l2vpn</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	l2vpn	read, write
Task ID	Operations				
l2vpn	read, write				

Examples

The following examples shows how to configure an ACL to filter membership reports:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# access-group acl-name
```

Related Commands	Command	Description
	group limit, on page 12	Specifies the group limit of the port.
	group policy, on page 14	Instructs IGMP snooping to use the specified route policy to determine the weight contributed by a new <*,G> or <S,G> membership request.
	show igmp snooping profile, on page 81	Displays the contents of profiles and to see associations of profiles with bridge-domains and ports, including access group, group limit, and TCN flood parameters.

clear igmp snooping bridge-domain

To clear IGMP snooping information at the bridge domain level, use the **clear igmp snooping bridge-domain** command in EXEC mode.

clear igmp snooping bridge-domain [*bridge-domain-name*] **statistics** [**include-ports**]

Syntax Description	
bridge-domain-name	(Optional) Clears information for the named bridge domain.
statistics	Clears counters and other statistics. In Release 3.7.2, this is the only keyword available and it is required.
include-ports	(Optional) Clears port-level counters and statistics in addition to the bridge domain level.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 3.9.0	This command was modified to clear new statistical information added in the current release to support multicast admission control.

Usage Guidelines In Release 3.7.2, the only items available for clearing are counters and statistics. You have the option to clear statistics for one or all bridge domains. You also have the option to clear only bridge domain statistics, or bridge domain statistics plus all statistics for all ports under the cleared bridge domains.

Task ID	Task ID	Operations
	l2vpn	execute

Examples

The following example clears IGMP snooping statistics for all bridge domains on the router:

```
RP/0/RSP0/CPU0:router# clear igmp snooping bridge-domain statistics
```

The following example clears IGMP snooping statistics for one bridge domain and all ports under it:

```
RP/0/RSP0/CPU0:router# clear igmp snooping bridge-domain bd-1 statistics include-ports
```

Related Commands

Command	Description
show igmp snooping bridge-domain, on page 60	Displays IGMP snooping configuration information and statistics for bridge domains.

clear igmp snooping group

To clear IGMP snooping group states, use the **clear igmp snooping group** command in EXEC mode.

```
clear igmp snooping group [group-address] [{port {interface-name | neighbor ipaddr pw-id id} | bridge-domain bridge-domain}]
```

Syntax Description		
<i>group-address</i>	(Optional)	Clears the specified group from the forwarding tables.
port <i>interface-name</i>	(Optional)	Clears groups for the named interface from the forwarding tables.
port neighbor <i>ipaddr</i> pw-id <i>id</i>	(Optional)	Clears groups for the named pseudowire (PW) from the forwarding tables.
bridge-domain <i>bridge-domain</i>	(Optional)	Clears groups for the named bridge domain from the forwarding tables.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines IGMP snooping propagates the request to clear group information through the L2FIB to the forwarding plane. After this command is issued, IGMP snooping relearns group information by snooping packets as they are received from the network.

Use the **address** keyword to clear one group, identified by address. Otherwise, all groups are cleared. You can clear the named group from all ports or bridges, or from a specifically identified port or bridge.

Use the **bridge-domain** keyword to clear groups only for a named bridge domain. Use the **port** keyword to clear groups for a named port. A port can be an access interface or a pseudowire. The **bridge-domain** and **port** keywords are mutually exclusive.

Task ID	Task ID	Operations
	l2vpn	execute

Examples

The following example clears all group membership information from the forwarding tables:

```
RP/0/RSP0/CPU0:router# clear igmp snooping group
```

The following example clears one group from the forwarding table for one identified access circuit:

```
RP/0/RSP0/CPU0:router# clear igmp snooping group port
GigabitEthernet
0/1/1/1
```

The following example clears all group membership information from the forwarding table for one identified pseudowire:

```
RP/0/RSP0/CPU0:router# clear igmp snooping group port
neighbor
10.5.5.5 pw-id 5
```

The following example clears one group from the forwarding table for one identified pseudowire:

```
RP/0/RSP0/CPU0:router# clear igmp snooping group 10.10.10.1 port
neighbor
10.5.5.5 pw-id 5
```

Related Commands

Command	Description
show igmp snooping group, on page 67	Displays IGMP snooping configuration information and statistics by group address.

clear igmp snooping port

To clear IGMP snooping port information, use the **clear igmp snooping port** command in EXEC mode.

clear igmp snooping port [{**interface-name** | **neighbor ipaddr pw-id id** | **bridge-domain bridge-domain-name**}] **statistics**

Syntax Description		
interface-name	(Optional) Clears information for the named interface from the forwarding tables.	
neighbor ipaddr pw-id id	(Optional) Clears information for the named PW from the forwarding tables.	
bridge-domain bridge-domain-name	(Optional) Clears information for all ports under the named bridge domain.	
statistics	Clears counters and other statistics. In Release 3.7.2, this keyword is required.	

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 3.9.0	This command was modified to clear new statistical information added in the current release to support multicast admission control.

Usage Guidelines You can use this command to clear IGMP snooping information at the port level for:

- All ports on the router
- A specific port, using its interface name
- A specific PW, using the **neighbor** keyword
- All ports under a named bridge domain, using the **bridge-domain** keyword. In this case, only the port-level information is cleared under the bridge-domain. Use the **clear igmp snooping bridge-domain** command to clear statistics at the bridge-domain level.

Task ID	Task ID	Operations
	l2vpn	execute

Examples

The following example clears IGMP snooping port-level counters for all ports on the router.

```
RP/0/RSP0/CPU0:router# clear igmp snooping port statistics
```

The following example clears IGMP snooping counters for one AC.

```
RP/0/RSP0/CPU0:router# clear igmp snooping port GigabitEthernet 0/1/1/1 statistics
```

The following example clears IGMP snooping counters for one PW.

```
RP/0/RSP0/CPU0:router# clear igmp snooping port neighbor 10.5.5.5 pw-id 5 statistics
```

Related Commands

Command	Description
clear igmp snooping bridge-domain, on page 4	Clears IGMP snooping information at the bridge level.
show igmp snooping port, on page 75	Displays IGMP snooping configuration information and statistics by port.

clear igmp snooping summary

To clear IGMP snooping summary counters, use the **clear igmp snooping summary** command in EXEC mode.

clear igmp snooping summary statistics

Syntax Description	statistics Clears counters and other statistics. In Release 3.7.2, this is the only keyword available and it is required.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	EXEC
----------------------	------

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 3.9.0	This command was modified to clear new statistical information added in the current release to support multicast admission control.

Usage Guidelines	This command clears summary level statistics about IGMP snooping. This command does not affect statistics at the bridge domain level or the port level.
-------------------------	---

Task ID	Task ID	Operations
	l2vpn	execute

Examples	The following example clears all IGMP snooping statistics.
-----------------	--

```
RP/0/RSP0/CPU0:router# clear igmp snooping summary statistics
```

Related Commands	Command	Description
	show igmp snooping summary, on page 88	Displays IGMP snooping configuration and traffic statistics at a summary level for the router.

clear l2vpn forwarding bridge-domain mroute

To clear multicast routes from the Layer-2 forwarding tables, use the **clear l2vpn forwarding bridge-domain mroute** command in EXEC mode.

```
clear l2vpn forwarding bridge-domain [bg:bd] mroute [{ipv4 | ipv6}] [location node-id ]
```

Syntax Description	[bg:bd]	(Optional) Clears Layer-2 multicast routes only for the specified bridge group and bridge domain.
	ipv4	(Optional) Specifies the IPv4 addressing scheme.
	location node-id	(Optional) Clears Layer-2 multicast routes only for the specified node ID.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines This command removes multicast routes in the Layer-2 forwarding information base (l2fib) tables. If you issue the command without a specific bridge group and bridge domain, information for all bridge groups and domains is cleared.

Note This command does not remove the state from the control plane. So, multicast routes will not be recreated. You can use the **clear igmp snooping group** command which not only clears state from the control plane but also clears the state from the forwarding plane.

Task ID	Task ID	Operations
	l2vpn	execute

Examples The following example clears all multicast routes across all bridge domains on one module.

```
RP/0/RSP0/CPU0:router# clear l2vpn forwarding mroute location 0/5/CPU0
```

group limit

To specify the maximum number of groups or source-groups that may be joined on a port, use the **group limit** command in the appropriate snooping profile configuration mode. By default, each group or source-group contributes a weight of 1 towards this limit. To remove the group limit, use the **no** form of this command.

group limit *group-limit-value*

Syntax Description	<i>group-limit-value</i> Limit value for the port. Range is from 0-65535.
---------------------------	---

Command Default	No group limit
------------------------	----------------

Command Modes	IGMP snooping profile configuration MLD snooping profile configuration
----------------------	---

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines	No new group or source group will be accepted if its contributed weight would cause this limit to be exceeded.
-------------------------	--

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to set the group limit of a port for weighting:

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router(config)#igmp snooping profile
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# group limit 699
```

Related Commands

Command	Description
access-group (snooping profile), on page 3	Instructs IGMP snooping to apply the specified access list filter to received membership reports
group policy, on page 14	Instructs IGMP snooping to use the specified route policy to determine the weight contributed by a new <*,G> or <S,G> membership request.
show igmp snooping profile, on page 81	Displays the contents of profiles and to see associations of profiles with bridge-domains and ports, including access group, group limit, and TCN flood parameters.

Command	Description
show igmp snooping group, on page 67	Displays a summary of IGMP group information by group.
show igmp snooping group detail	Displays detailed IGMP group information in a multiline display per group.
show igmp snooping port, on page 75	Displays IGMP snooping configuration information and traffic counters by router interface port.
show igmp snooping port detail	Displays IGMP snooping configuration information and traffic counters by router interface port. You can use this command to see groups admitted against the configured limit.
show igmp snooping port group detail	Displays detailed IGMP membership information by port. You can use this command to see how group limits are assigned to groups on a port.

group policy

To instruct IGMP / MLD snooping to use the specified route policy to determine the weight contributed by a new <*,G> or <S,G> membership request, use the **group policy** command in the appropriate snooping profile configuration mode. To remove the group weight route policy from the profile and use the default group weight of 1 for all groups, use the **no** form of this command.

group policy *policy-name*

Syntax Description	<i>policy-name</i> Name of the route policy that should determine the weight contributed by a new <*,G> or <S,G> membership request.
---------------------------	--

Command Default	Default weight for all groups is 1. By default, no route policy is configured to determine the weight of new <*,G> or <S,G> membership requests.
------------------------	--

Command Modes	IGMP snooping profile configuration MLD snooping profile configuration
----------------------	---

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines	To limit the number of IGMP v2/v3 groups, in which the maximum number of concurrently allowed multicast channels must be configurable on a per EFP-basis and per PW-basis, configure group weighting.
-------------------------	---

IGMP snooping limits the membership on a bridge port to a configured maximum limit. This feature also supports IGMPv3 source groups and allows different weights to be assigned to individual groups or source groups. This enables the IPTV provider, for example, to associate standard and high- definition IPTV streams, as appropriate, to specific subscribers.

This feature does not limit the actual multicast bandwidth that may be transmitted on a port. Rather, it limits the number of IGMP groups and source-groups, of which a port can be a member. It is the responsibility of the IPTV operator to configure subscriber membership requests to the appropriate multicast flows.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example shows how to configure a group route policy for weighting new <*,G> or <S,G>membership requests:
-----------------	--

```
RP/0/RSP0/CPU0:router# configure
RP/0/RSP0/CPU0:router (config)#igmp snooping profile
RP/0/RSP0/CPU0:router (config-igmp-snooping-profile)# group policy
policy name
```

```
RP/0/RSP0/CPU0:router# configure  
RP/0/RSP0/CPU0:router(config)#mld snooping profile  
RP/0/RSP0/CPU0:router(config-mld-snooping-profile)# group policy  
policy name
```

Related Commands

Command	Description
access-group (snooping profile), on page 3	Instructs IGMP snooping to apply the specified access list filter to received membership reports
group limit, on page 12	Specifies the group limit of a port for weighting purposes.
show run route-policy	Displays the route policy information.

igmp snooping profile

To create or change an IGMP snooping profile, or to attach an IGMP snooping profile to a bridge or a port, use the **igmp snooping profile** command in the appropriate configuration mode. To detach a profile from a bridge domain or port, use the **no** form of this command. To delete a profile from the database, use the **no** form of this command in global configuration mode.

igmp snooping profile *profile-name*

Syntax Description	<i>profile-name</i> Name that uniquely identifies the IGMP snooping profile.				
Command Default	IGMP snooping is inactive on a bridge domain until a profile is attached to the bridge domain.				
Command Modes	Global configuration L2 VPN bridge group bridge domain configuration L2 VPN bridge group bridge domain interface configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.7.2</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.7.2	This command was introduced.
Release	Modification				
Release 3.7.2	This command was introduced.				
Usage Guidelines	<p>This command accomplishes different tasks depending on the configuration mode you are in when you issue it.</p> <ul style="list-style-type: none"> • In global configuration mode, this command creates and changes profiles. • In L2 VPN bridge group bridge domain configuration mode, this command attaches profiles to bridge domains. • In L2 VPN bridge group bridge domain interface configuration mode, this command attaches profiles to ports. <p>Use the igmp snooping profile command in global configuration mode to create a new IGMP snooping profile or to change an existing profile. The command enters you into IGMP snooping profile configuration mode, from which you can issue commands that configure IGMP snooping.</p> <p>The minimum configuration is an empty profile. An empty profile enables IGMP snooping with a default configuration.</p> <p>To enable IGMP snooping on a bridge domain, you must attach a profile to the bridge domain. To disable IGMP snooping on a bridge domain, detach the profile from the bridge domain.</p> <p>To attach a profile to a bridge domain, use the igmp snooping profile command in Layer-2 VPN bridge group bridge domain configuration mode. At the bridge domain level, only one IGMP snooping profile can be attached to a bridge.</p> <p>If a profile attached to a bridge domain contains port-specific configuration options, the values apply to all of the ports under the bridge, unless a port-specific profile is attached to one of the ports. In that case, the port with the attached profile is configured using only the commands in the port profile, and any port configurations in the bridge profile are ignored.</p>				

Optionally, profiles can be attached to specific ports under a bridge domain. To attach a profile to a port, use the **igmp snooping profile** command in Layer-2 VPN bridge group bridge domain interface configuration mode. Each port can have only one port-specific profile attached to it.

IGMP snooping must be enabled on the bridge domain for any port-specific configurations to take effect. When a profile is attached to a port, IGMP snooping reconfigures that port, disregarding any port configurations that may exist in the bridge-level profile.

To detach a profile from a bridge domain, use the **no** form of this command in Layer-2 VPN bridge group bridge domain configuration mode. To detach a profile from a port, use the **no** form of this command in the interface configuration mode under the bridge domain.

When you detach a profile from a bridge domain or a port, the profile still exists and is available for use at a later time.

Detaching a profile has the following results:

- If you detach a profile from a bridge domain, IGMP snooping is deactivated in the bridge domain.
- If you detach a profile from a port, IGMP snooping configuration values for the port are instantiated from the bridge domain profile.

An active profile is one that is currently attached.

If you need to change an active profile, you must detach it from all bridges or ports, change it, and reattach it. An alternate procedure is to create a new profile incorporating the desired changes, detach the existing one, and immediately attach the new one.

To access an existing profile, use the **igmp snooping profile** command with the existing *profile-name* in global configuration mode. The command enters you into IGMP snooping profile configuration mode, from which you can issue commands to add to the current configuration or enter the **no** form of existing commands to delete them from the configuration.

To delete a profile from the router database, use the **no** form of this command in global configuration mode.

Task ID

Task ID	Operations
---------	------------

l2vpn	read, write
-------	----------------

Examples

The following example shows how to create a new IGMP snooping profile or edit an existing profile:

```
router(config)# igmp snooping profile Profile-1
router(config-igmp-snooping-profile)#
```

The following example attaches a profile to the bridge domain ISP1:

```
RP/0/RSP0/CPU0:router(config)# l2vpn
RP/0/RSP0/CPU0:router(config-l2vpn)# bridge group GRP1
RP/0/RSP0/CPU0:router(config-l2vpn-bg)# bridge-domain ISP1
RP/0/RSP0/CPU0:router(config-l2vpn-bg-bd)# igmp snooping profile profile-1
```

The following example attaches a profile to the GigabitEthernet 0/1/1/1 port:

```
RP/0/RSP0/CPU0:router(config)# l2vpn
RP/0/RSP0/CPU0:router(config-l2vpn)# bridge group GRP1
```

```
RP/0/RSP0/CPU0:router(config-l2vpn-bg)# bridge-domain ISP1  
RP/0/RSP0/CPU0:router(config-l2vpn-bg-bd)# interface GigabitEthernet 0/1/1/1  
RP/0/RSP0/CPU0:router(config-l2vpn-bg-bd-if)# igmp snooping profile mrouter-port-profile  
RP/0/RSP0/CPU0:router(config-l2vpn-bg-bd-if)# commit
```

immediate-leave

To configure fast leave processing on a port for IGMPv2 / MLDv1 queriers, use the **immediate-leave** command in the appropriate snooping profile configuration mode. To remove the functionality, use the **no** form of this command.

immediate-leave

Syntax Description This command has no arguments or keywords.

Command Default Disabled

Command Modes IGMP snooping profile configuration
MLD snooping profile configuration

Command History

Release	Modification
Release 3.7.2	This command was introduced.

Usage Guidelines Immediate leave is an optional port-level configuration parameter. Immediate leave processing causes IGMP snooping to remove a Layer-2 interface from the forwarding table entry immediately, without first sending IGMP group-specific queries to the interface. Upon receiving an IGMP leave message, IGMP snooping immediately removes the interface from the Layer-2 forwarding table entry for that multicast group, unless a multicast router was learned on the port.

Immediate leave processing improves leave latency but is appropriate only when one receiver is configured on a port. For example, immediate leave is appropriate in the following situations:

- Point-to-point configurations, such as an IPTV channel receiver.
- Downstream DSLAMs with proxy reporting.

Caution Do not use immediate leave on a port when the possibility exists for more than one receiver per port. Doing so could prevent an interested receiver from receiving traffic. For example, immediate leave is not appropriate in a LAN.

Immediate leave processing is a port-level option. You can configure this option explicitly per port in port profiles or in the bridge domain profile, in which case it applies to all ports under the bridge.

For MLD snooping - Immediate-leave should only be configured if there is a single MLD host on the port. Immediate-leave is implicitly enabled for MLDv2, if explicit-tracking is enabled.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example shows how to add immediate leave to a profile:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# immediate-leave
```

```
RP/0/RSP0/CPU0:router(config-mls-snooping-profile)# immediate-leave
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

internal-querier

To configure an internal IGMP /MLD querier on a bridge domain, use the **internal-querier** command in the appropriate snooping profile configuration mode. To disable the internal querier, use the **no** form of this command.

internal-querier

Syntax Description This command has no arguments or keywords.

Command Default The internal querier is disabled by default.

Command Modes IGMP snooping profile configuration
MLD snooping profile configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines Use this command to configure an IGMP querier in a bridge domain where no external querier exists. An internal querier injects query packets into the bridge domain.

In a network where IP multicast routing is configured, the IP multicast router acts as the IGMP querier. In situations when no mrouter port exists in the bridge domain (because the multicast traffic does not need to be routed), but local multicast sources exist, you must configure an internal querier to implement IGMP snooping. The internal querier solicits membership reports from hosts in the bridge domain so that IGMP snooping can build constrained multicast forwarding tables for the multicast traffic within the bridge domain.

An internal querier might also be useful when there are interoperability issues that prevent IGMP snooping from working correctly with an external querier. In this case, you can:

1. Prevent the uncooperative external querier from being discovered by placing the **router-guard** command on that port.
2. Configure an internal querier to learn group membership interests from the ports in the bridge domain.
3. Configure static mrouter ports to receive multicast traffic.

The minimum configuration for an internal querier is as follows. Both of the following commands are required.

- Add the **internal-querier** command to a profile attached to the bridge domain. This command configures the internal querier with the default configuration.
- Add the **system-ip-address** command to a profile attached to the bridge domain to configure an address other than the default 0.0.0.0.

You can disable the internal querier (using the **no** form of the **internal-querier** command) without removing any other internal querier commands. The additional internal querier commands are ignored in that case.

The scope for the **internal-querier** command is per bridge domain. If the command appears in profiles attached to ports, it has no effect.

The local IGMP snooping process responds to the internal querier's general queries. In particular, the IGMPv3 proxy (if enabled) generates a current-state report and forwards it to all mrouter. For IGMPv2 or when the IGMPv3 proxy is disabled, IGMP snooping generates current-state reports for static group state only.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example activates an internal querier with default configuration values:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# system-ip-address 10.1.1.1
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# internal-querier
```

```
RP/0/RSP0/CPU0:router(config-mls-snooping-profile)# internal-querier
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.
internal-querier max-response-time, on page 24	Configures the maximum response time advertised by the internal querier.
internal-querier query-interval, on page 26	Configures the time between general queries issued by the internal querier.
internal-querier robustness-variable, on page 27	Configures the robustness variable for the internal querier.
internal-querier tcn query count, on page 29	Configures the number of queries the internal querier sends after receiving a group leave from IGMP snooping.
internal-querier tcn query interval, on page 31	Configures the time between queries that the internal querier sends after receiving a group leave from IGMP snooping.
internal-querier timer expiry , on page 33	Configure the time IGMP snooping waits to receive messages from an external querier before making the internal querier the active querier
internal-querier version, on page 35	Configures the IGMP version that the internal querier runs,.
mrouter, on page 45	Sets a port to receive query packets.
router-guard, on page 58	Sets a port to block query packets.
system-ip-address, on page 140	Configures an IP address for IGMP snooping use.

internal-querier (MLD)

To configure an internal MLD querier on a bridge domain, use the **internal querier** command in the MLD snooping profile configuration mode. To disable the internal querier, use the **no** form of the command.

internal-querier

Syntax Description This command has no keywords or arguments.

Command Default The internal querier is disabled by default.

Command Modes MLD snooping profile configuration mode

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines The internal-querier is disabled by default. However, if PIMv6 snooping is active in the domain, then the internal-querier is active. If queries are received from another querier in the domain, MLD querier election is performed (where the lowest ip-address wins). If the internal-querier is the election-loser, then a timer (the other-querier-present-timer) is run for the timer expiry interval. If this timer expires before another query is received from the election-winner, then the internal-querier becomes the querier.

Task ID	Task ID	Operation
	l2vpn	read, write

Example

The following example shows how to use the internal-querier command:

```
RP/0/RSP0/CPU0:router(config-mld-snooping-profile) # internal-querier
```

internal-querier max-response-time

To configure the maximum response time advertised by the internal querier, use the **internal-querier max-response-time** command in the appropriate snooping profile configuration mode. To return to the default value, use the **no** form of this command.

internal-querier max-response-time *seconds*

Syntax Description	<i>seconds</i> Configures the maximum response time included in queries from the internal querier. Valid values are from 1 to 25 (seconds).
---------------------------	---

Command Default	10 (seconds)
------------------------	--------------

Command Modes	IGMP snooping profile configuration MLD snooping profile configuration
----------------------	---

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines	The maximum response time (MRT) is the amount of time during which receivers are required to report their membership state.
-------------------------	---

In addition, the maximum response time is used in the calculation of the Group Management Interval (GMI). GMI controls when IGMP snooping expires stale group membership states. See the “Implementing IGMP Snooping on Cisco ASR 9000 Series Router” module in the *Cisco ASR 9000 Series Routers Multicast Configuration Guide* for more information about the GMI.

The maximum response time is advertised in general queries issued by the internal querier.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example configures a maximum response time for the internal querier, overriding the default value:
-----------------	--

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# internal-querier max-response-time 5
```

```
RP/0/RSP0/CPU0:router(config-mls-snooping-profile)# internal-querier max-response-time 5
```

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.
internal-querier, on page 21	Enables an internal querier in the bridge domain.

internal-querier query-interval

To configure the time between general queries issued by the internal querier, use the **internal-querier query-interval** command in the appropriate snooping profile configuration mode. To return to the default value, use the **no** form of this command.

internal-querier query-interval *seconds*

Syntax Description	<i>seconds</i> Configures the number of seconds between general queries for membership reports issued by the internal querier. Valid values are from 1 to 18000 (seconds).
---------------------------	--

Command Default	60 (seconds). This is a nonstandard default value.
------------------------	--

Command Modes	IGMP snooping profile configuration MLD snooping profile configuration
----------------------	---

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines	When the internal querier is the active querier in the domain, it solicits membership reports by sending IGMP general queries at the interval specified by this command on every active port in the bridge domain.
-------------------------	--

Note	Cisco IOS and Cisco IOS XR software use the non-standard default value of 60 for query interval.
-------------	--

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example sets a query interval for the internal querier, overriding the default value:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# internal-querier query-interval 125
```

```
RP/0/RSP0/CPU0:router(config-mlD-snooping-profile)# internal-querier query-interval 125
```

internal-querier timer expiry

To configure the time IGMP/MLD snooping waits to receive messages from an external querier before making the internal querier the active querier, use the **internal-querier timer expiry** command in the appropriate snooping profile configuration mode. To return to the default value, use the **no** form of this command.

internal-querier timer expiry *seconds*

Syntax Description	<i>seconds</i> The time IGMP snooping waits to receive messages from an external querier before making the internal querier the active querier. Valid values are from 60 to 300 (seconds).				
Command Default	125 (seconds), as defined in RFC-3376, Section 8.5: $(robustness-variable * query-interval) + \frac{1}{2}(max-response-time)$ Using the default values for all components: $(2 * 60) + \frac{1}{2} (10) = 125$				
Command Modes	IGMP snooping profile configuration MLD snooping profile configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.7.2</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.7.2	This command was introduced.
Release	Modification				
Release 3.7.2	This command was introduced.				
Usage Guidelines	A bridge domain can have only one active querier at a time. If the internal querier receives queries from another querier in a bridge domain, it performs querier election. The lowest IP address wins. If the internal querier is the election loser, the snooping technique sets a timer to the internal-querier timer expiry value. If this timer expires before another query is received from the election winner, the internal querier becomes the active querier.

last-member-query count

To configure the number of group-specific queries IGMP snooping sends in response to a leave message, use the **last-member-query count** command in IGMP snooping profile configuration mode. To return to the default value, use the **no** form of this command.

last-member-query count *number*

Syntax Description	<i>number</i> Specifies the number of queries IGMP snooping sends in response to a leave message. Valid values are from 1 to 7.				
Command Default	2				
Command Modes	IGMP snooping profile configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.7.2</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.7.2	This command was introduced.
Release	Modification				
Release 3.7.2	This command was introduced.				
Usage Guidelines	<p>Last member query is the default group leave processing method used by IGMP snooping. With last member query processing, IGMP snooping processes leave messages as follows:</p> <ul style="list-style-type: none"> • IGMP snooping sends group-specific queries on the port that receives the leave message to determine if any other devices connected to that interface are interested in traffic for the specified multicast group. Using the following two configuration commands, you can control the latency between the request for a leave and the actual leave: <ul style="list-style-type: none"> • last-member-query-count command—Controls the number of group-specific queries IGMP snooping sends in response to a leave message. • last-member-query-interval command—Controls the amount of time between group-specific queries. • If IGMP snooping does not receive an IGMP Join message in response to group-specific queries, it assumes that no other devices connected to the port are interested in receiving traffic for this multicast group, and it removes the port from its Layer-2 forwarding table entry for that multicast group. • If the leave message was from the only remaining port, IGMP snooping removes the group entry and generates an IGMP leave to the multicast routers. 				

Task ID	Task Operations ID
	l2vpn read, write

Examples

The following example configures the number of queries that IGMP snooping sends in response to a leave, overriding the default value:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# last-member-query count 1
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.
last-member-query interval, on page 39	Configures the time between queries sent in response to an IGMP leave.

last-member-query count (MLD)

To configure the number of group-specific queries MLD snooping sends in response to a leave message, use the **last-member-query count** command in MLD snooping profile configuration mode. To return to the default value, use the **no** form of this command.

last-member-query count *number*

Syntax Description

number Specifies the number of queries MLD snooping sends in response to a leave message. Range is from 1 to 7.

Command Default

The default count is 2.

Command Modes

MLD snooping profile configuration mode.

Command History

Release	Modification
Release 4.3.0	This command was introduced.

Usage Guidelines

Last member query is the default group leave processing method used by MLD snooping. MLD snooping sends group-specific queries on the port that receives the leave message to determine if any other devices connected to that interface are interested in traffic for the specified multicast group. Using the following two configuration commands, you can control the latency between the request for a leave and the actual leave: **last-member-query count** and **last-member-query interval**.

Task ID

Task ID	Operation
l2vpn	read, write

Example

The following example shows how to set the last member query count to 5:

```
RP/0/RSP0/CPU0:router (config-mld-snooping-profile) # last-member-query count 5
```

last-member-query interval

To configure the amount of time between group-specific queries, use the **last-member-query interval** command in IGMP snooping profile configuration mode. To return to the default value, use the **no** form of this command.

last-member-query interval *milliseconds*

Syntax Description	<i>milliseconds</i> Specifies the time between queries that IGMP snooping sends in response to a leave message. Valid values are from 100 to 5000 (milliseconds).				
Command Default	1000 (milliseconds)				
Command Modes	IGMP snooping profile configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.7.2</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.7.2	This command was introduced.
Release	Modification				
Release 3.7.2	This command was introduced.				

Usage Guidelines Last member query is the default group leave processing method used by IGMP snooping. With last member query processing, IGMP snooping processes leave messages as follows:

- IGMP snooping sends group-specific queries on the port that receives the leave message to determine if any other devices connected to that interface are interested in traffic for the specified multicast group. Using the following two configuration commands, you can control the latency between the request for a leave and the actual leave:
 - **last-member-query-count** command—Controls the number of group-specific queries IGMP snooping sends in response to a leave message.
 - **last-member-query-interval** command—Controls the amount of time between group-specific queries.
- If IGMP snooping does not receive an IGMP Join message in response to group-specific queries, it assumes that no other devices connected to the port are interested in receiving traffic for this multicast group, and it removes the port from its Layer-2 forwarding table entry for that multicast group.
- If the leave message was from the only remaining port, IGMP snooping removes the group entry and generates an IGMP leave to the multicast routers.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example configures the interval between queries that IGMP snooping sends in response to a leave, overriding the default value:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# last-member-query interval 2000
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.
last-member-query count, on page 36	Configures the number of queries sent in response to an IGMP leave.

last-member-query interval (MLD)

To configure the amount of time between group-specific queries, use the **last-member-query interval** command in MLD snooping profile configuration mode. To return to the default value, use the **no** form of this command.

last-member-query interval *milliseconds*

Syntax Description	<i>milliseconds</i> Specifies the time between queries that MLD snooping sends in response to a leave message. Valid values are from 100 to 5000 (milliseconds).				
Command Default	1000 milliseconds				
Command Modes	MLD snooping profile				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 4.3.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 4.3.0	This command was introduced.
Release	Modification				
Release 4.3.0	This command was introduced.				
Usage Guidelines	No specific guidelines impact the use of this command.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operation</th> </tr> </thead> <tbody> <tr> <td>l2vpn</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operation	l2vpn	read, write
Task ID	Operation				
l2vpn	read, write				

Example

The following example shows how to set the last member query interval to 2000 ms:

```
RP/0/RSP0/CPU0:router(config-mld-snooping-profile) # last-member-query interval 2000
```

minimum-version

To change the IGMP versions supported by IGMP snooping, use the **minimum-version** command in IGMP snooping profile configuration mode. To return to the default value, use the **no** form of this command.

minimum-version *number*

Syntax Description	<p><i>number</i> Specifies the minimum IGMP version supported by IGMP snooping. Supported values are:</p> <ul style="list-style-type: none"> • 2—Snoops messages from IGMPv2 and IGMPv3. • 3—Only IGMPv3 messages are snooped. All IGMPv2 messages are ignored by IGMP snooping.
---------------------------	--

Command Default	2 (supporting IGMPv2 and IGMPv3)
------------------------	----------------------------------

Command Modes	IGMP snooping profile configuration
----------------------	-------------------------------------

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines

The **minimum-version** command controls which IGMP versions are supported by IGMP snooping in the bridge domain.

- When **minimum-version** is 2, IGMP snooping intercepts IGMPv2 and IGMPv3 messages. This is the default value.
- When **minimum-version** is 3, IGMP snooping intercepts only IGMPv3 messages and drops all IGMPv2 messages.

The scope for this configuration option is per bridge domain. If the command appears in profiles attached to ports, it has no effect.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example configures IGMP snooping to support only IGMPv3 and to ignore IGMPv2 reports and queries:

```
RP/0/RSP0/CPU0:router (config-igmp-snooping-profile) # minimum-version 3
```

Related Commands	Command	Description
	igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

minimum version (MLD)

To enable MLD snooping to filter out all packets of MLD versions, less than the minimum-version, use the **minimum version** command in the MLD snooping profile configuration mode. To disable minimum version, use the **no** form of the command.

minimum-version *number*

Syntax Description	<i>number</i> Specifies the MLD version supported by MLD snooping. The available values are - 1 and 2.				
Command Default	By default, MLD snooping supports minimum-version 1.				
Command Modes	MLD snooping profile configuration mode.				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 4.3.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 4.3.0	This command was introduced.
Release	Modification				
Release 4.3.0	This command was introduced.				
Usage Guidelines	If minimum version is set to 2, all MLD packets set to (minimum version) 1, are dropped.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operation</th> </tr> </thead> <tbody> <tr> <td>multicast</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operation	multicast	read, write
Task ID	Operation				
multicast	read, write				

Example

This example shows how to use the **minimum version** command:

```
RP/0/RSP0/CPU0:router (config-mls-snooping-profile) # minimum-version 2
```

mld snooping profile

To enter Multicast Listener Discovery (MLD) snooping profile configuration mode, use the **mld snooping profile** command in configuration mode. To exit from the MLD snooping profile configuration mode, use the **no**form of the command.

mld snooping profile *profile-name*

Syntax Description	<i>profile-name</i> Name that uniquely identifies the MLD snooping profile.
---------------------------	---

Command Default	No default behavior or values.
------------------------	--------------------------------

Command Modes	Global configuration
----------------------	----------------------

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines	No specific guidelines impact the use of this command.
-------------------------	--

Task ID	Task ID	Operation
	multicast	read, write

Example

This example shows how to use the **mld snooping profile** command:

```
RP/0/RSP0/CPU0:router(config) #mld snooping profile p1
```

mrouter

To statically configure a port to receive query packets, use the **mrouter** command in the appropriate snooping profile configuration mode. To remove the configuration, use the **no** form of this command.

mrouter

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes IGMP snooping profile configuration
MLD snooping profile configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines You can statically configure a port as an mrouter port with the **mrouter** command.

You can use the **router-guard** and the **mrouter** commands on the same port to configure a guarded port as a static mrouter. For example:

- In situations where there are a large number of downstream host ports, you may want to block dynamic mrouter discovery and configure static mrouters. In this case, configure the router guard feature at the domain level. By default, it will be applied to all ports, including the (typically) large number of downstream host ports. Then use another profile without router guard configured for the relatively few upstream ports on which you want to permit dynamic mrouter discovery or configure static mrouters.
- In situations when incompatibilities with non-Cisco equipment prevents correct dynamic discovery, you can disable all attempts for dynamic discovery using the router guard feature, and statically configure the mrouter.

If you are using the router guard feature because there is an incompatible IGMP router on the port, you should also configure the **mrouter** command on the port to ensure that the router receives snooping reports and multicast flows.

The scope of this command is port level. If you use this command in a profile attached to a bridge domain, you are configuring all ports as mrouter ports.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to add static mrouter configuration to a profile:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# mrouter
```

```
RP/0/RSP0/CPU0:router(config-mlD-snooping-profile)# mrouter
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.
internal-querier, on page 21	Sets a port to send query packets to bridge domain ports.
router-guard, on page 58	Blocks query packets on the port.

nv satellite offload ipv4 multicast enable

To enable the IPv4 Multicast Satellite Offloading, use the `nv satellite offload ipv4 multicast enable` command in L2vpn bridge domain, nv satellite configuration sub mode.

nv satellite offload ipv4 multicast enable

Command Default

By default, the configuration command is disabled.

Command Modes

L2vpn bridge domain nv satellite configuration sub mode

Command History

Release	Modification
Release 5.2.2	This command was introduced.

Usage Guidelines

Use this command only when you want to enable replication of IPv4 multicast on the satellite nodes. When set, the replication will be offloaded to the satellite devices that have offload eligible ports configured under this bridge-domain.

Task ID

Task ID	Operation
multicast	read, write

Example

This example shows how to enable the IPv4 Multicast Offload feature on the Satellite nV System:

```
RP/0/0/CPU0:ios(config)#l2vpn
RP/0/0/CPU0:ios(config-l2vpn)#bridge group <bg>
RP/0/0/CPU0:ios(config-l2vpn-bg)#bridge-domain <bd>
RP/0/0/CPU0:ios(config-l2vpn-bg-bd)#nv
RP/0/0/CPU0:ios(config-l2vpn-bg-bd-nv)#nv satellite offload ipv4 multicast enable
```

querier query-interval

To configure the query interval for processing IGMPv2 membership states, use the **querier query-interval** command in IGMP snooping profile configuration mode. To return to the default setting, use the **no** form of this command.

querier query-interval *seconds*

Syntax Description

seconds Specifies the integer to use as the query interval in calculations performed by IGMP snooping when processing IGMPv2 messages.

Note IGMPv3 messages convey the query interval from the querier.

Valid values are integers from 1 to 18000 (seconds). The default is 60.

Command Default

60 (seconds). This is a nonstandard default value.

Command Modes

IGMP snooping profile configuration

Command History

Release	Modification
Release 3.7.2	This command was introduced.

Usage Guidelines

Query interval is the interval between general queries and is used in the calculated group management interval (GMI). GMI controls when IGMP snooping expires stale group membership states. For more information about GMI, see the “Implementing IGMP Snooping on Cisco ASR 9000 Series Routers” module in the *Cisco ASR 9000 Series Routers Multicast Configuration Guide*.

If the querier is running IGMPv2, IGMP snooping uses the IGMP snooping configured values for robustness variable and query interval. These parameter values must match the configured values for the querier. In most cases, if you are interacting with other Cisco routers, you should not need to explicitly configure these values—the default values for IGMP snooping should match the default values of the querier. If they do not, use the **querier robustness-variable** and **querier query-interval** commands to configure matching values.

Note Cisco IOS and Cisco IOS XR software use the nonstandard default value of 60 for query interval.

Note IGMPv3 general queries convey values for robustness variable and query interval (QRV and QQI, respectively). IGMP snooping uses the values from the query, making the IGMP snooping GMI exactly match that of the querier.

The scope for this command is per bridge domain. If the command appears in profiles attached to ports, it has no effect.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example shows how to add the command to a profile that configures the query interval:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# querier query-interval 1500
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.
internal-querier robustness-variable, on page 27	Configures a robustness variable for an internal querier.
internal-querier query-interval, on page 26	Configures the query interval for an internal querier.
querier robustness-variable, on page 50	Configures the robustness variable required for processing IGMPv2 membership reports.

querier robustness-variable

To configure the robustness variable for processing IGMPv2 membership states, use the **querier robustness-variable** command in IGMP snooping profile configuration mode. To return to the default setting, use the **no** form of this command.

querier robustness-variable *robustness-number*

Syntax Description	<i>robustness-number</i> Specifies the integer to use as the robustness variable in calculations performed by IGMP snooping when processing IGMPv2 messages.
---------------------------	--

Note IGMPv3 messages convey the robustness variable from the querier.

Valid values are integers from 1 to 7. The default is 2.

Command Default	2
------------------------	---

Command Modes	IGMP snooping profile configuration
----------------------	-------------------------------------

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines	Robustness variable is an integer used to influence the calculated GMI. GMI controls when IGMP snooping expires stale group membership states. For more information about GMI, see the “Implementing IGMP Snooping on Cisco ASR 9000 Series Routers” module in the <i>Cisco ASR 9000 Series Routers Multicast Configuration Guide</i> .
-------------------------	---

If the querier is running IGMPv2, IGMP snooping uses the IGMP snooping configured values for robustness variable and query interval. These parameter values must match the configured values for the querier. In most cases, if you are interacting with other Cisco routers, you should not need to explicitly configure these values—the default values for IGMP snooping should match the default values of the querier. If they do not, use the **querier robustness-variable** and **querier query-interval** commands to configure matching values.

Note	IGMPv3 general queries convey values for robustness variable and query interval (QRV and QQI, respectively). IGMP snooping uses the values from the query, making the IGMP snooping GMI exactly match that of the querier.
-------------	--

The scope for this command is per bridge domain. If the command appears in profiles attached to ports, it has no effect.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example shows how to add the command to a profile that configures the robustness variable:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# querier robustness-variable 1
```

internal-querier query-interval, on page 26	Configures the query interval for an internal querier.
querier query-interval, on page 48	Configures the query interval required for processing IGMPv2 membership reports.

redundancy iccp-group report-standby-state disable

To enable IGMP Snooping for generating unsolicited state-change reports only when the port transitions from standby to active, use the **redundancy iccp-group report-standby-state disable** command in IGMP snooping profile configuration mode. To use the default behavior, use the **no** form of this command.

redundancy iccp-group report-standby-state disable

Note By default, IGMP Snooping generates state-change and current-state reports to all mulicast routers to reflect state that exists on standby MC-LAG ports only. This causes the upstream sources to forward multicast streams to the router, where they will be dropped (on egress side).

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes IGMP snooping profile configuration (config-igmp-snooping-profile)

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines

Note This command is applicable only when MC-LAG is configured.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

This example shows how to use the **redundancy iccp-group report-standby-state disable** command:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# redundancy iccp-group
report-standby-state disable
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

report-suppression disable

To disable IGMPv2 report suppression or IGMPv3 proxy reporting, use the **report-suppression disable** command in IGMP snooping profile configuration mode. To enable report suppression or proxy reporting functionality, use the **no** form of this command.

report-suppression disable

Syntax Description

This command has no arguments or keywords.

Command Default

Report suppression and proxy reporting, whichever is appropriate, are enabled by default

Command Modes

IGMP snooping profile configuration

Command History

Release	Modification
Release 3.7.2	This command was introduced.

Usage Guidelines

Use this command to disable report suppression for IGMPv2 queriers and proxy reporting for IGMPv3 queriers.

Both features are enabled by default, with the following results:

- IGMPv2 report suppression—For IGMPv2 bridge domain queriers, IGMP snooping suppresses reports from a host if the report was previously forwarded from another host. IGMP snooping sends only the first join and last leave to mrouter ports.
- IGMPv3 proxy reporting—For IGMPv3 bridge domain queriers, IGMP snooping acts as a proxy, generating state change reports from a proxy reporting IP address. You can configure that IP address using the **system-ip-address** command. The default is 0.0.0.0.

These features are enabled and disabled per bridge domain. This command is ignored if it appears in a profile attached to a port.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to add the command to a profile to turn off report suppression and proxy reporting:

```
RP/0/RSP0/CPU0:router (config-igmp-snooping-profile) # report-suppression disable
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.
system-ip-address, on page 140	Configures an IP address used by IGMP snooping.

report-suppression disable(MLD)

To minimize the number of MLD reports sent to the mrrouters, use the **report-suppression disable** command in the MLD snooping profile configuration mode.

report-suppression disable

Syntax Description This command has no keywords or arguments.

Command Default By default, report suppression is enabled.

Command Modes MLD snooping profile configuration mode.

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines The report suppression command instructs MLD Snooping to suppress the forwarding of reports from individual hosts and instead to send the first-join and last-leave reports to the mrrouters.

If the querier in the BD is running at MLD version 1, then report-suppression is performed and the snooper suppresses reports from a host if it has already forwarded the same report from another host. If the querier is on version 2, then proxy-reporting is performed. In this mode, the snooper acts as a proxy, generating reports from the proxy reporting IP address.

Task ID	Task ID	Operation
	multicast	read, write

Example

This example shows how to use the report suppression disable command:

```
RP/0/RSP0/CPU0:router (config-ml-d-snooping-profile) # report suppression disable
```

router-alert-check disable

To disable the IGMP snooping check for the presence of the router alert option in the IP packet header, use the **router-alert-check disable** command in IGMP snooping profile configuration mode. To enable this functionality after a disable, use the **no** form of this command.

router-alert-check disable

Syntax Description	This command has no arguments or keywords.	
Command Default	The router alert check feature is enabled by default.	
Command Modes	IGMP snooping profile configuration	
Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines	<p>By default, IGMP snooping checks for the presence of the router alert option in the IP packet header of the IGMP message and drops packets that do not include this option. If your network performs this validation elsewhere, you can disable this IGMP snooping validation.</p> <p>You can disable this check using the router-alert-check disable command, in which case IGMP snooping does perform the validation before processing the message.</p> <p>The scope for this configuration option is per bridge domain. If the command appears in profiles attached to ports, it has no effect.</p>
-------------------------	--

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example shows how to add the command to a profile that turns off the router alert check:
-----------------	--

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# router-alert-check disable
```

Related Commands	Command	Description
	igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

router-guard

To block a port from receiving query packets, use the **router-guard** command in the appropriate snooping profile configuration mode. To remove the restriction, use the **no** form of this command.

router-guard

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes

IGMP snooping profile configuration

MLD snooping profile configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines Router guard is a security feature that prevents malicious users from making a host port into an mrouter port. (This undesirable behavior is known as spoofing.) When a port is protected with the **router-guard** command, it cannot be dynamically discovered as an mrouter. When router guard is on a port, IGMP snooping filters protocol packets sent to the port and discards any that are multicast router control packets.

Caution If you add the **router-guard** command in a bridge domain profile, you disable dynamic discovery of all mrouters in that bridge domain.

You can use the **router-guard** and the **mrouter** commands on the same port to configure a guarded port as a static mrouter. For example:

- In situations where there are a large number of downstream host ports, you may want to block dynamic mrouter discovery and configure static mrouters. In this case, configure the router guard feature at the domain level. By default, it will be applied to all ports, including the (typically) large number of downstream host ports. Then use another profile without router guard configured for the relatively few upstream ports on which you want to permit dynamic mrouter discovery or configure static mrouters.
- In situations when incompatibilities with non-Cisco equipment prevents correct dynamic discovery, you can disable all attempts for dynamic discovery using the router guard feature, and statically configure the mrouter.

If you are using the router guard feature because there is an incompatible IGMP router on the port, you should also configure the **mrouter** command on the port to ensure that the router receives reports and multicast flows.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following example shows how to add the command to a profile that prevents a port from being dynamically discovered as an mrouter:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# router-guard
```

```
RP/0/RSP0/CPU0:router(config-mlD-snooping-profile)# router-guard
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.
internal-querier, on page 21	Sets a port to send query packets to bridge domain ports.
mrouter, on page 45	Sets a port to receive query packets.

show igmp snooping bridge-domain

To display IGMP snooping configuration information and traffic statistics for bridge domains, use the **show igmp snooping bridge-domain** command in EXEC mode.

show igmp snooping bridge-domain [*bridge-domain-name*] [**detail** [**statistics** [**include-zeroes**]]]

Syntax Description	
<i>bridge-domain-name</i>	(Optional) Displays information only for the specified bridge domain.
detail	(Optional) Includes more details, including configuration information about the bridge domain querier.
statistics	(Optional) Includes traffic counters and statistics.
include-zeroes	(Optional) Includes all statistics, even if they are zero. Without this keyword, many statistics are omitted from the display when their values are zero.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 3.9.0	Bridge domain counters for access group permits, access group denials, and group limits exceeded fields were added to the detail statistics display output.
	Release 5.2.2	The command output was enhanced to include the Multicast Offload information.

Usage Guidelines This command displays IGMP snooping information by bridge domain. Use the command without any keywords to display summary information about all bridge domains, in a single line per bridge domain.

Use optional keywords to request additional details and traffic statistics per bridge domain. You can also limit the display to a single bridge domain.

The **statistics** keyword displays IGMP traffic information, including IGMP queries, reports, and leaves. The three columns in the statistics section of the display are:

- Received—Number of packets received.
- Rejected—Number of packets received, processed, and re-injected back into the forwarding path.
- Generated—Number of packets generated by the IGMP snooping application and injected into the forwarding path.

Task ID	Task ID	Operations
	l2vpn	read

Examples

The following example shows the basic command without any keywords.

```
RP/0/RSP0/CPU0:router# show igmp snooping bridge-domain
```

The detail statistics display shows the following new bridge-domain counters:

```

RP/0/RSP0/CPU0:router# show igmp snooping bridge-domain Group1:BD-1 detail statistics
#Access Group Permits
#Access Group Denials
#Group Limits Exceeded

```

```
show igmp snooping bridge-domain
```

Related Commands

Command	Description
clear igmp snooping bridge-domain, on page 4	Clears traffic counters at the bridge domain level.

show igmp snooping group

To display IGMP group membership information, use the **show igmp snooping group** command in EXEC mode.

```
{show igmp snooping group [summary [group-address] [{bridge-domain bridge-domain-name |
port {interface-name | neighbor ipaddr pw-id id}}] | [[group-address] [{bridge-domain
bridge-domain-name | port {interface-name | neighbor ipaddr pw-id id}}] [source source-address]
[detail]]}
```

Syntax Description		
summary		(Optional) Provides per group summary information.
<i>group-address</i>		(Optional) Provides IP group address information for the specified group in <i>A.B.C.D</i> format.
bridge-domain <i>bridge-domain-name</i>		(Optional) Provides group membership information for the specified bridge domain.
port <i>interface-name</i>		(Optional) Provides group membership information for the specified AC port.
port neighbor <i>ipaddr pw-id id</i>		(Optional) Provides group membership information for the specified PW port.
source <i>source-address</i>		(Optional) Provides group membership information for groups indicating interest in a specified source address.
detail		(Optional) Provides detailed information in a multiline display per group.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use this command to display information about group membership in the Layer -2 forwarding tables. The display includes indicators identifying whether the group information was obtained dynamically (for example, snooped) or statically configured.

The command offers the following levels of detail:

- The basic command with no keywords displays group membership information as one line per port within group.

show igmp snooping group

- The **summary** keyword summarizes the port statistics into one line per group. The **summary** keyword is mutually exclusive with the **port-view**, **source**, and **detail** keywords.
- The **detail** keyword includes traffic statistics and counters.

Task ID	Task ID	Operations
	l2vpn	read

Related Commands

Command	Description
clear igmp snooping group, on page 6	Clears group states.

show igmp snooping port

To display IGMP snooping configuration information and traffic counters by router interface port, use the **show igmp snooping port** command in EXEC mode.

show igmp snooping port

interface-name | **neighbor** *ipaddr* **pw-id** *id* | **bridge-domain** *bridge-domain-name*

detail [**statistics** [**include-zeroes**]]

group [*group-address*] [**source** *source-address*] [**detail**]

Syntax Description							
<i>interface-name</i>	(Optional) Displays information only for the specified AC port.						
neighbor <i>ipaddr</i> pw-id <i>id</i>	(Optional) Displays information only for the specified PW port.						
bridge-domain <i>bridge-domain-name</i>	(Optional) Displays information for ports in the specified bridge domain.						
detail	(Optional) Includes port details, rather than a single line summary.						
statistics	(Optional) Includes IGMP traffic counters and statistics in the detail display.						
include-zeroes	(Optional) Includes all statistics, even if they are zero. Without this keyword, many statistics are omitted from the display when their values are zero.						
group	(Optional) Provides group membership information in its entirety as received at each port. The display is organized by port, showing groups within ports.						
<i>group-address</i>	(Optional) Displays information only for the specified group address, organized by port.						
source <i>source-address</i>	(Optional) Displays information only for the specified source address, organized by port.						
detail	(Optional) Includes group details.						
Command Default	None						
Command Modes	EXEC						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.7.2</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 3.9.0</td> <td>The total group weight accumulated by all groups and source groups on the port, the configured limit, access group permits, access group denials, and group limits exceeded fields were added to the detail display output.</td> </tr> </tbody> </table>	Release	Modification	Release 3.7.2	This command was introduced.	Release 3.9.0	The total group weight accumulated by all groups and source groups on the port, the configured limit, access group permits, access group denials, and group limits exceeded fields were added to the detail display output.
Release	Modification						
Release 3.7.2	This command was introduced.						
Release 3.9.0	The total group weight accumulated by all groups and source groups on the port, the configured limit, access group permits, access group denials, and group limits exceeded fields were added to the detail display output.						

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This command displays IGMP snooping information organized by IGMP snooping port. Use the command without any keywords to display summary information about all ports, in a single line per port.

Use optional arguments and keywords to request the following:

- Limit the display to a specified port.
- Limit the display to ports under a specified bridge.
- Request details and traffic statistics per port.

Note The **statistics** keyword cannot be used in the same command with the **group** keyword.

- Organize the display by group within ports. Use the **group** keyword with or without a specified interface or bridge domain.
- Limit the group information to specific groups or source addresses.

The **statistics** keyword displays IGMP traffic information, including IGMP queries, reports, and leaves. The three columns in the statistics section of the display are:

- Received—Number of packets received.
- Reinject—Number of packets received, processed, and reinjected back into the forwarding path.
- Generated—Number of packets generated by the IGMP snooping application and injected into the forwarding path.

Examples

The following example shows summary information per port:

```
RP/0/RSP0/CPU0:router# show igmp snooping port

      Bridge Domain bgl:bgl_bd1

Port                               State
----                               -
Bundle-Ether10                     Up    -   S   1     0
Neighbor 40.40.40.40 pw-id 1       Up    -   -     4     0
```

The following example shows summary information for a specific port.

```
RP/0/RSP0/CPU0:router# show igmp snooping port GigabitEthernet 0/1/0/3.215

      Bridge Domain 215:215
                        State
Port                               Oper  STP  Red  #Grps  #SGs
```

```

-----
GigabitEthernet0/1/0/3.215          Up    -    -    1    0

```

The following example shows detail information about a specified port.

```
RP/0/RSP0/CPU0:router# show igmp snooping port Bundle-Ether10 detail
```

```

Command	Description
clear igmp snooping port, on page 8	Clears traffic counters at the port level.

show igmp snooping profile

To display IGMP snooping profile information, use the **show igmp snooping profile** command in EXEC mode.

```
{show igmp snooping profile [summary] | [profile-name] [detail [include-defaults]] [references
[bridge-domain [bridge-domain-name]] | port [{interface-name | neighbor ipaddr pw-id id}]}
```

Syntax Description		
summary	(Optional) Displays a summary of profile instances, bridge domain references, and port references.	
<i>profile-name</i>	(Optional) Displays information only for the named profile.	
detail	(Optional) Displays the contents of profiles.	
include-defaults	(Optional) Displays all default configurations with the profile contents. Without this keyword, only configured profile information is displayed.	
references	(Optional) Shows which bridge domains and bridge ports reference each profile.	
bridge-domain <i>[bridge-domain-name]</i>	(Optional) Provides a bridge domain filter for the references keyword. Without <i>bridge-domain-name</i> , the display shows profiles attached to all bridge domains. With <i>bridge-domain-name</i> , the display shows only the profile attached to the specified bridge domain.	
port <i>[interface-name]</i> or port [neighbor ipaddr pw-id id]	(Optional) Provides a port filter for the references keyword. <ul style="list-style-type: none"> With <i>interface-name</i> or neighbor specified, the display shows the profile attached to the named AC or PW. Using the port keyword alone shows profiles attached to all ports. 	
Command Default	None	
Command Modes	EXEC	
Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 3.9.0	New fields were added to the detail display to show access-group, group limit, and TCN flood parameters.
	Release 4.0.0	New fields were added to the detail display to show ICCP Group statistics, and Startup Query parameters.
Usage Guidelines	Use this command to display the contents of profiles and to see associations of profiles with bridge-domains and ports.	

The **summary** keyword lists profile names and summarizes their usage on bridge domains and ports. No other keywords can be used with **summary**.

Use the **details** keyword with a profile name to show the contents of a specific profile. Without a profile name, the **detail** keyword shows the contents of all profiles.

Use the **references** keyword to list the relationships between profiles and bridge domains or profiles and ports. You have the following options:

- Use the **references** keyword without any other keywords to show all profiles and the ports and bridge domains they are attached to.
- Use the **references** keyword with the **name** keyword to show a specific profile and where it is attached.
- Use the **port** keyword to list all ports and the profiles attached to them.
- Use the **port** keyword with a specific AC interface or PW to see the profile attached to the named port.
- Use the **bridge-domain** keyword to list all bridge domains and the profiles attached to them.
- Use the **bridge-domain** keyword with a specific bridge domain name to see the profile attached to a specific bridge domain.

show igmp snooping redundancy

To display IGMP snooping redundancy information, use the **show igmp snooping redundancy** command in EXEC mode.

```
{show igmp snooping redundancy iccp | [profile-name] [detail [include-defaults]] [{references
[bridge-domain [bridge-domain-name]] | port [{interface-name | neighbor ipaddr pw-id id}]}}
```

Syntax Description		
iccp		Displays ICCP redundancy information.
<i>profile-name</i>	(Optional)	Displays information only for the named profile.
detail	(Optional)	Displays the contents of profiles.
include-defaults	(Optional)	Displays all default configurations with the profile contents. Without this keyword, only configured profile information is displayed.
references	(Optional)	Shows which bridge domains and bridge ports reference each profile.
bridge-domain <i>[bridge-domain-name]</i>	(Optional)	Provides a bridge domain filter for the references keyword. Without <i>bridge-domain-name</i> , the display shows profiles attached to all bridge domains. With <i>bridge-domain-name</i> , the display shows only the profile attached to the specified bridge domain.
port <i>[interface-name]</i>	(Optional)	Provides a port filter for the references keyword.
or		<ul style="list-style-type: none"> With <i>interface-name</i> or neighbor specified, the display shows the profile attached to the named AC or PW.
port [neighbor ipaddr pw-id id]		<ul style="list-style-type: none"> Using the port keyword alone shows profiles attached to all ports.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use this command to display the contents of profiles and to see associations of profiles with bridge-domains and ports.

The **summary** keyword lists profile names and summarizes their usage on bridge domains and ports. No other keywords can be used with **summary**.

Use the **details** keyword with a profile name to show the contents of a specific profile. Without a profile name, the **detail** keyword shows the contents of all profiles.

Use the **references** keyword to list the relationships between profiles and bridge domains or profiles and ports. You have the following options:

- Use the **references** keyword without any other keywords to show all profiles and the ports and bridge domains they are attached to.
- Use the **references** keyword with the **name** keyword to show a specific profile and where it is attached.
- Use the **port** keyword to list all ports and the profiles attached to them.
- Use the **port** keyword with a specific AC interface or PW to see the profile attached to the named port.
- Use the **bridge-domain** keyword to list all bridge domains and the profiles attached to them.
- Use the **bridge-domain** keyword with a specific bridge domain name to see the profile attached to a specific bridge domain.

Examples

The following example lists profile names and shows summary level profile usage.

```
RP/0/RSP0/CPU0:router# show igmp snooping redundancy
```

Profile	Bridge Domain	Port
-----	-----	----
profile1	3	0
profile2	0	1
profile3	0	1

show igmp snooping summary

To display summary information about IGMP snooping configuration and traffic statistics for the router, use the **show igmp snooping summary** command in EXEC mode.

show igmp snooping summary [**statistics** [**include-zeroes**]]

Syntax Description	statistics (Optional) Displays IGMP traffic counters and statistics.
	include-zeroes (Optional) Displays all statistics, even if they are zero. Without this keyword, many statistics are omitted from the display when their values are zero.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 3.9.0	Three new fields were added to the output for the statistics display.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This command summarizes the number of bridge domains, mrouter ports, host ports, groups, and sources configured on the router.

The **statistics** keyword displays IGMP traffic information, including IGMP queries, reports, and leaves. The three columns in the statistics section of the display are:

- Received—Number of packets received.
- Rejected—Number of packets received, processed, and rejected back into the forwarding path.
- Generated—Number of packets generated by the IGMP snooping application and injected into the forwarding path.

show igmp snooping trace

To display IGMP snooping process activity, use the **show igmp snooping trace** command in EXEC mode.

```
show igmp snooping trace [{all | error | packet-error}]
```

Syntax Description	all	(Optional) Displays all IGMP snooping process activity.
	error	(Optional) Displays only error tracepoints.
	packet-error	(Optional) Displays packet error tracepoints.

Command Default The **all** keyword is the default when no keywords are used.

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use this command to research IGMP snooping process activity.

Task ID	Task Operations ID
	l2vpn read

Examples

The following example shows IGMP snooping process status during a restart and a new profile configuration.

```
RP/0/RSP0/CPU0:router# show igmp snooping summary trace all

show l2vpn forwarding bridge-domain mroute

To display multicast routes in the forwarding tables, use the **show l2vpn forwarding bridge-domain mroute** command in EXEC mode.

show l2vpn forwarding bridge-domain [*bridge-group-name* : *bridge-domain-name*] **mroute** [**ipv4**]
location *rack/slot/module*

Syntax Description	
<i>bridge-group-name bridge-domain-name</i>	(Optional) Displays information for a specific bridge domain. The colon that separates the two arguments is required.
ipv4	This keyword is required.
location <i>rack/slot/module</i>	Displays route information for a specific rack/slot/module.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.
	Release 5.2.2	The show output command was enhanced to include the satellite multicast offload information.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This command displays multicast routes as they are converted into the forwarding plane forwarding tables. The source for the conversion is the multicast routes configured in the control plane with IGMP snooping configuration commands. If the routes displayed by this command are not as expected, check the control plane configuration and correct the corresponding IGMP snooping profiles.

Use optional arguments to limit the display to a specific bridge domain.

Task ID	Task ID	Operations
	l2vpn	read

Examples

This example displays high-level statistics about routes for one bridge domain:

```
RP/0/RSP0/CPU0:router# show l2vpn forwarding bridge-domain mroute ipv4 location 0/5/cPU0
mroute ipv4 location 0/5/cPU0
Bridge-Domain Name: nv-mcast:nv-mcast-1
Prefix: (0.0.0.0,224.0.0.0/4) P2MP enabled: N
IRB platform data: {0x84a0000, 0x0, 0x4a00008d, 0x123bb4e0}, len: 16
Ingress
```

```
show l2vpn forwarding bridge-domain mroute
```

```
Forwarded (Packets/Bytes): 0/0  
Received (Packets/Bytes): 0/0  
Punted (Packets/Bytes): 0/0  
Dropped (Packets/Bytes): 0/0
```

show l2vpn forwarding bridge-domain mroute detail

To display multicast routes in the forwarding tables, use the **show l2vpn forwarding bridge-domain mroute detail** command in EXEC mode.

show l2vpn forwarding bridge-domain [*bridge-group-name* : *bridge-domain-name*] **mroute** [**ipv4**] **detail***location rack/slot/module*

Syntax Description	
<i>bridge-group-name bridge-domain-name</i>	(Optional) Displays information for a specific bridge domain. The colon that separates the two arguments is required.
ipv4	This keyword is required.
location <i>rack/slot/module</i>	Displays route information for a specific rack/slot/module.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This command displays multicast routes as they are converted into the forwarding plane forwarding tables. show mld snooping bridge-domain

To display MLD snooping configuration information and traffic statistics for bridge domains, use the **show mld snooping bridge-domain** command in EXEC mode.

show mld snooping bridge-domain [*bridge-domain-name*] [**detail** [**statistics** [**include-zeroes**]]]

Syntax Description	
<i>bridge-domain-name</i>	(Optional) Displays information only for the specified bridge domain.
detail	(Optional) Includes more details, including configuration information about the bridge domain querier.
statistics	(Optional) Includes traffic counters and statistics.
include-zeroes	(Optional) Includes all statistics, even if they are zero. Without this keyword, many statistics are omitted from the display when their values are zero.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

This command displays mld snooping information by bridge domain. Use the command without any keywords to display summary information about all bridge domains, in a single line per bridge domain.

Use optional keywords to request additional details and traffic statistics per bridge domain. You can also limit the display to a single bridge domain.

The **statistics** keyword displays mld traffic information, including mld queries, reports, and leaves. The three columns in the statistics section of the display are:

- Received—Number of packets received.
- Reinject—Number of packets received, processed, and reinjected back into the forwarding path.
- Generated—Number of packets generated by the mld snooping application and injected into the forwarding path.

Task ID	Task ID	Operations
	l2vpn	read

Examples

The following example shows the basic command without any keywords.

```
RP/0/RSP0/CPU0:router# show mld snooping bridge-domain
```

Bridge Domain	Profile	Act	Ver	#Ports	#Mrtrs	#Grps	#Srcs
Domain1:BD-1	profile1	Y	V2	8195	0	4096	0
Domain1:BD-4	profile1	Y	V2	100	2	512	0
Domain1:BD-7	profile1	Y	V2	55	0	44	0

The following example shows the summary line for a named bridge domain.

```
RP/0/RSP0/CPU0:router# show mld snooping bridge-domain Group1:BD-1
```

Bridge Domain	Profile	Act	Ver	#Ports	#Mrtrs	#Grps	#Srcs
Domain1:BD-1	profile1	Y	V2	8195	0	4096	0

The following example shows detailed information about all bridge domains:

```
RP/0/RSP0/CPU0:router# show mld snooping bridge-domain detail
```

```
Bridge Domains: 5
MLD Snooping Bridge Domains: 3
```

Bridge Domain	Profile	Act	Ver	#Ports	#Mrtrs	#Grps	#Srcs
Domain1:BD-1	profile1	Y	V2	8195	0	4096	0

```

show mld snooping group

To display MLD group membership information, use the **show mld snooping group** command in EXEC mode.

```
{show mld snooping group [summary [group-address] [{bridge-domain bridge-domain-name | port
{interface-name | neighbor ipaddr pw-id id}}] | [[group-address] [{bridge-domain bridge-domain-name
| port {interface-name | neighbor ipaddr pw-id id}}] [source source-address] [detail]]}
```

Syntax Description		
	summary	(Optional) Provides per group summary information.
	<i>group-address</i>	(Optional) Provides IP group address information for the specified group in <i>A.B.C.D</i> format.
	bridge-domain <i>bridge-domain-name</i>	(Optional) Provides group membership information for the specified bridge domain.
	port <i>interface-name</i>	(Optional) Provides group membership information for the specified AC port.
	port neighbor <i>ipaddr pw-id id</i>	(Optional) Provides group membership information for the specified PW port.
	source <i>source-address</i>	(Optional) Provides group membership information for groups indicating interest in a specified source address.
	detail	(Optional) Provides detailed information in a multiline display per group.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines Use this command to display information about group membership in the Layer -2 forwarding tables. The display includes indicators identifying whether the group information was obtained dynamically (for example, snooped) or statically configured.

The command offers the following levels of detail:

- The basic command with no keywords displays group membership information as one line per port within group.
- The **summary** keyword summarizes the port statistics into one line per group. The **summary** keyword is mutually exclusive with the **port-view**, **source**, and **detail** keywords.
- The **detail** keyword includes traffic statistics and counters.

show mld snooping port

To display MLD snooping configuration information and traffic counters by router interface port, use the **show mld snooping port** command in EXEC mode.

```
show mld snooping port
interface-name | neighbor ipaddr pw-id id | bridge-domain bridge-domain-name
detail [statistics [include-zeroes]]
group [ group-address ] [source source-address] [detail]
```

Syntax Description		
interface-name	<i>interface-name</i>	(Optional) Displays information only for the specified AC port.
neighbor ipaddr pw-id id	<i>ipaddr</i> <i>pw-id</i> <i>id</i>	(Optional) Displays information only for the specified PW port.
bridge-domain	<i>bridge-domain-name</i>	(Optional) Displays information for ports in the specified bridge domain.
detail		(Optional) Includes port details, rather than a single line summary.
statistics		(Optional) Includes mld traffic counters and statistics in the detail display.
include-zeroes		(Optional) Includes all statistics, even if they are zero. Without this keyword, many statistics are omitted from the display when their values are zero.
group		(Optional) Provides group membership information in its entirety as received at each port. The display is organized by port, showing groups within ports.
	<i>group-address</i>	(Optional) Displays information only for the specified group address, organized by port.
	source <i>source-address</i>	(Optional) Displays information only for the specified source address, organized by port.
	detail	(Optional) Includes group details.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 4.3.0	This command was introduced.

Usage Guidelines This command displays mld snooping information organized by mld snooping port. Use the command without any keywords to display summary information about all ports, in a single line per port.

Use optional arguments and keywords to request the following:

- Limit the display to a specified port.
- Limit the display to ports under a specified bridge.
- Request details and traffic statistics per port.

Note The **statistics** keyword cannot be used in the same command with the **group** keyword.

- Organize the display by group within ports. Use the **group** keyword with or without a specified interface or bridge domain.
- Limit the group information to specific groups or source addresses.

The **statistics** keyword displays mld traffic information, including mld queries, reports, and leaves. The three columns in the statistics section of the display are:

- Received—Number of packets received.
- Rejected—Number of packets received, processed, and reinjected back into the forwarding path.
- Generated—Number of packets generated by the mld snooping application and injected into the forwarding path.

show mld snooping profile

To display MLD snooping profile information, use the **show mld snooping profile** command in EXEC mode.

```
{show mld snooping profile [summary] | [profile-name] [detail [include-defaults]] [{references
[bridge-domain [bridge-domain-name]] | port [{interface-name | neighbor ipaddr pw-id id}]}}
```

Syntax Description

summary	(Optional) Displays a summary of profile instances, bridge domain references, and port references.
<i>profile-name</i>	(Optional) Displays information only for the named profile.
detail	(Optional) Displays the contents of profiles.
include-defaults	(Optional) Displays all default configurations with the profile contents. Without this keyword, only configured profile information is displayed.
references	(Optional) Shows which bridge domains and bridge ports reference each profile.
bridge-domain <i>[bridge-domain-name]</i>	(Optional) Provides a bridge domain filter for the references keyword. Without <i>bridge-domain-name</i> , the display shows profiles attached to all bridge domains. With <i>bridge-domain-name</i> , the display shows only the profile attached to the specified bridge domain.
port <i>[interface-name]</i> or port [neighbor ipaddr pw-id id]	(Optional) Provides a port filter for the references keyword. <ul style="list-style-type: none"> • With <i>interface-name</i> or neighbor specified, the display shows the profile attached to the named AC or PW. • Using the port keyword alone shows profiles attached to all ports.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 4.3.0	This command was introduced.

Usage Guidelines

Use this command to display the contents of profiles and to see associations of profiles with bridge-domains and ports.

The **summary** keyword lists profile names and summarizes their usage on bridge domains and ports. No other keywords can be used with **summary**.

Use the **details** keyword with a profile name to show the contents of a specific profile. Without a profile name, the **detail** keyword shows the contents of all profiles.

Use the **references** keyword to list the relationships between profiles and bridge domains or profiles and ports. You have the following options:

- Use the **references** keyword without any other keywords to show all profiles and the ports and bridge domains they are attached to.
- Use the **references** keyword with the **name** keyword to show a specific profile and where it is attached.
- Use the **port** keyword to list all ports and the profiles attached to them.
- Use the **port** keyword with a specific AC interface or PW to see the profile attached to the named port.
- Use the **bridge-domain** keyword to list all bridge domains and the profiles attached to them.
- Use the **bridge-domain** keyword with a specific bridge domain name to see the profile attached to a specific bridge domain.

Examples

The following example lists profile names and shows summary level profile usage.

```
RP/0/RSP0/CPU0:router# show mld snooping profile
```

Profile	Bridge Domain	Port
-----	-----	----
profile1	0	8193
profile2	1	0
profile3	1	0
profile4	0	0
profile5	1	0
profile6	0	0
profile7	1	2

The following example shows summary level profile usage for a named profile.

```
RP/0/RSP0/CPU0:router# show mld snooping profile profile1
```

Profile	Bridge Domain	Port
-----	-----	----
profile1	0	8193

The following example shows the contents of each profile.

```
RP/0/RSP0/CPU0:router# show mld snooping profile detail
```

```
mld Snoop Profile profile1:
```

```
Bridge Domain References:    3
Port References:             0
```

```
MLD Snoop Profile profile2:
```

```
Static Groups:              ff28:1:1::2
                             ff29:1:1::4      2000:1::2
```

```
Bridge Domain References:    0
Port References:             1
```

show mld snooping profile

```
MLD Snoop Profile profile3:

  Static Mrouter:                Enabled

  Bridge Domain References:      0
  Port References:               1
```

The following example shows output reflecting the **access-group** , **group limit** , and **tcn flood disable** parameters:

```
RP/0/RSP0/CPU0:router# show mld snooping profile detail
MLD Snoop Profile profile:
```

```
  Querier LMQ Count:            2

  Access Group ACL:             iptv-white-list
  Group Policy:                 iptv-group-weights
  Group Limit:                  16
  Immediate Leave:              Enabled
  TCN Flood:                    Disabled

  Bridge Domain References:      1
  Port References:               0
```

The following example shows the contents of a named profile and the implied default configurations:

```
RP/0/RSP0/CPU0:router# show mld snooping profile profile1 detail include-defaults
```

```
mld Snoop Profile profile p1:

  System IP Address:            fe80::1aef:63ff:fee2:5fc6

                  GigabitEthernet 0/1/0/5
                  (... missing lines)
                  GigabitEthernet 0/3/3/1109
                  GigabitEthernet 0/3/3/1110
                  GigabitEthernet 0/3/3/1111

```

The following example shows the profile attached to a specific bridge domain.

```
RP/0/RSP0/CPU0:router# show mld snooping profile references bridge-domain Group1:BD-1
```

```

Profile:          profile1
  Bridge Domains: Group1:BD-1

```

The following example shows the profile attached to a specific port.

```
RP/0/RSP0/CPU0:router# show mld snooping profile references port GigabitEthernet 0/1/0/2
```

```

Profile:          profile2
  Ports:          GigabitEthernet0/1/0/2

```

show mld snooping summary

To display summary information about MLD snooping configuration and traffic statistics for the router, use the **show mld snooping summary** command in EXEC mode.

show mld snooping summary [**statistics** [**include-zeroes**]]

Syntax Description	statistics	(Optional) Displays mld traffic counters and statistics.
	include-zeroes	(Optional) Displays all statistics, even if they are zero. Without this keyword, many statistics are omitted from the display when their values are zero.
Command Default	None	
Command Modes	EXEC	
Command History	Release	Modification
	Release 4.3.0	This command was introduced.
Usage Guidelines	This command summarizes the number of bridge domains, mrouter ports, host ports, groups, and sources configured on the router.

startup query count

To configure the number of startup G-queries that are to be sent to the recipient routers, use the **startup query count** command in the appropriate snooping profile configuration mode. To restore the default startup query count to be the Querier's Robustness Value (QRV), use the **no** form of this command.

startup query count *number*

Syntax Description	<i>number</i> Indicates the number of startup queries sent. The range is from 0-7.				
Command Default	2

startup query iccp-group

To enable the generation of startup G-query on a port, when an MC-LAG transitions from standby state to active state, use the **startup query iccp-group** command in the appropriate snooping profile configuration mode. The snooping technique performs a mark and sweep synchronization of the snooping state over the startup query period.

To disable the startup query generation on this event, use the **no** form of this command.

startup query iccp-group port-active

Syntax Description

port-active (Optional) Issues startup queries when iccp-group goes active. This parameter is specific to IGMP Snooping over MC-LAG.

Command Default

None

Command Modes

IGMP snooping profile configurationMLD snooping profile configuration

Command History

Release	Modification
Release 4.0.0	This command was introduced.

Usage Guidelines

If configured in a bridge-domain profile, the **startup query iccp-group** command applies to all ports in that bridge-domain. If configured in a profile attached to a specific port, this command applies to that port only.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following examples show how to enable the startup G-query configuration:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# startup query iccp-group
```

```
RP/0/RSP0/CPU0:router(config-mlD-snooping-profile)# startup query iccp-group
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

startup query interval

To configure the time between successive startup G-queries, use the **startup query interval** command in the appropriate snooping profile configuration mode. To restore the default startup query interval of 1/4 querier's query-interval (up to a max of 32 secs), use the **no** form of this command.

startup query interval *number*

Syntax Description	<i>number</i> Interval, in seconds. The range is from 1 to 18000.				
Command Default	15 seconds				
Command Modes	IGMP snooping profile configuration MLD snooping profile configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 4.0.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 4.0.0	This command was introduced.

Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>igmp snooping profile, on page 16</td> <td>Creates or edits a profile, and attaches a profile to a bridge domain or port.</td> </tr> </tbody> </table>	Command	Description	igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.
Command	Description				
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.				

startup query max-response-time

To configure the maximum response time (MRT) transmitted in the startup G-queries in seconds, use the **startup query max-response-time** command in the appropriate snooping profile configuration mode. To restore the default startup query max-response-time to be the querier's max-response-time (MRT), use the **no** form of this command.

startup query max-response-time *number*

Syntax Description	<i>number</i> Enter an interval between 1 to 25 seconds.
---------------------------	--

Command Default	10 seconds
------------------------	------------

Command Modes	IGMP snooping profile configuration
----------------------	-------------------------------------

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines	No specific guidelines impact the use of this command.
-------------------------	--

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following examples show how to configure the MRT :

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# startup query max-reponse-time
```

```
RP/0/RSP0/CPU0:router(config-mls-snooping-profile)# startup query max-response-time
```

Related Commands	Command	Description
	igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

startup query port-up disable

To disable the sending of startup G-queries on port-up, use the **startup query port-up disable** command in IGMP snooping profile configuration mode. To restore the default behavior that sends G-queries on port-up, use the **no** form of this command.

startup query port-up disable

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes IGMP snooping profile configuration

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines If configured in a bridge-domain profile, this command applies to all ports in the bridge-domain. If configured in a profile attached to a specific port, this command applies to only the specific port.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following examples show how to use the **startup query port-up disable** command:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# startup query port-up disable
```

Related Commands	Command	Description
	igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

startup query process start

To enable the startup G-query generation on all ports in the bridge domain when the IGMP Snooping (IGMPSN) process restarts, use the **startup query process start** command in IGMP snooping profile configuration mode. To disable the startup query generation of this event, use the **no** form of this command. This command must be included in the bridge-domain profile.

startup query process start [**sync**]

Syntax Description	sync (Optional) Removes the unrefreshed membership state. This parameter instructs the IGMPSN to perform a mark and sweep synchronization of the IGMP snooping state over the startup query period.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	IGMP snooping profile configuration
----------------------	-------------------------------------

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines	No specific guidelines impact the use of this command.
-------------------------	--

Task ID	Task ID	Operations
	l2vpn	read, write

Examples

The following examples show how to use the **startup query process start** command into an IGMP snooping profile:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# startup query process start
```

Related Commands	Command	Description
	igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

startup query topology-change

To enable startup G-query generation on all ports in the bridge domain when a topology change is indicated and the bridge is the root, use the **startup query topology-change** command in IGMP snooping profile configuration mode.

To disable the startup query generation on this event, use the **no** form of this command.

startup query topology-change [{sync | always}]

Syntax Description

sync (Optional) Removes the unrefreshed membership state. Instructs the IGMP Snooping profile to perform a mark and sweep synchronization of the IGMP snooping state over the startup query period.

always (Optional) Instructs the IGMP Snooping profile to generate startup G-queries regardless of whether the bridge is the root.

Command Default

None

Command Modes

IGMP snooping profile configuration

Command History

Release	Modification
Release 4.0.0	This command was introduced.

Usage Guidelines

No specific guidelines impact the use of this command.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to use the **startup query topology-change** command into an IGMP snooping profile in the Command Line Interface:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# startup query topology-change
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

static group

To configure static group membership entries in the Layer-2 forwarding tables, use the **static group** command in IGMP snooping profile configuration mode. To remove a static group entry from the forwarding tables, use the **no** form of this command.

```
static group group-addr [source source-addr]
```

Syntax Description

<i>group-addr</i>	IP multicast group address.
source	(Optional) Statically forwards an (S, G) channel out of the port.
<i>source-addr</i>	IP multicast source address.

Command Default

None

Command Modes

IGMP snooping profile configuration

Command History

Release	Modification
Release 3.7.2	This command was introduced.

Usage Guidelines

IGMP snooping learns Layer-2 multicast groups dynamically. You can also statically configure Layer-2 multicast groups.

You can use the **static group** command in profiles intended for bridge domains or ports. If you configure this option in a profile attached to a bridge domain, it applies to all ports under the bridge.

A profile can contain multiple static groups. You can define different source addresses for the same group address. Using the **source** keyword, you can configure IGMPv3 source groups.

Static group membership supersedes any dynamic manipulation by IGMP snooping. Multicast group membership lists can contain both static and dynamic group definitions.

When you configure a static group or source group on a port, IGMP snooping adds the port as an outgoing port to the corresponding <S/*,G> forwarding entry and sends an IGMPv2 join or IGMPv3 report to all mrouter ports. IGMP snooping continues to send the membership report in response to general queries for as long as the static group remains configured on the port.

The scope of this command can be either bridge domain level or port level. If you use this command in a profile attached to a bridge domain, the static group membership applies to all ports under the bridge. If you use the command in a profile attached to a port, the static group membership applies only to that port.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following examples show how to add static group membership configuration into an IGMP snooping profile:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# static group 10.1.1.1  
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# static group 10.1.1.1 source 10.1.12.0
```

Related Commands

Command	Description
igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

system-ip-address

To configure an IP address for the internal querier, use the **system-ip-address** command in IGMP snooping profile configuration mode. To return to the default value, use the **no** form of this command.

system-ip-address *ip-address*

Syntax Description	<i>ip-address</i> Assigns an IP address for IGMP use.
---------------------------	---

Command Default	0.0.0.0
------------------------	---------

Command Modes	IGMP snooping profile configuration
----------------------	-------------------------------------

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines	The system-ip-address command configures an IP address for IGMP snooping use. If not explicitly configured, the default address is 0.0.0.0. The default is adequate except in the following circumstances:
-------------------------	---

- If you are configuring an internal querier. The internal querier cannot use 0.0.0.0.
- If the bridge needs to communicate with a non-Cisco IGMP router that does not accept the 0.0.0.0 address.

IGMP snooping uses the value set by the **system-ip-address** command in the following ways:

- The internal-querier sends queries from the system IP address. An address other than the default 0.0.0.0 must be configured.
- IGMPv3 sends proxy reports from the system IP address. The default address 0.0.0.0 is preferred but may not be acceptable to some IGMP routers.
- In response to topology change notifications (TCNs) in the bridge domain, IGMP snooping sends global-leaves from the system IP address. The default address 0.0.0.0 is preferred but may not be acceptable to some IGMP routers.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples	The following example assigns a system IP address, overriding the default value:
-----------------	--

```
RP/0/RSP0/CPU0:router (config-igmp-snooping-profile) # system-ip-address 10.1.1.1
```

Related Commands

	tcn query solicit, on page 146	Enables global leave messaging on non-root bridges in response to STP topology changes.

tcn flood query count

To configure how long IGMP snooping floods all routes in response to topology changes, use the **tcn flood query count** command in IGMP snooping profile configuration mode. To return to the default value, use the **no** form of this command.

tcn flood query count *number*

Syntax Description	<i>number</i> Specifies the number of general queries that must occur after a TCN before IGMP snooping stops multicast flooding to all ports and resumes restricted forwarding. Valid values are integers from 1 to 10.

Release 3.7.2	This command was introduced.				

Usage Guidelines In a Spanning Tree Protocol (STP) topology, a topology change notification (TCN) indicates that an STP topology change has occurred. As a result of a topology change, mrouter and hosts reporting group membership may migrate to other STP ports under the bridge domain. Mrouter and membership states must be relearned after a TCN.

IGMP snooping reacts to TCNs in the following way:

1. IGMP snooping temporarily extends the flood set for all known multicast routes to include all ports participating in STP that are in forwarding state. The short term flooding ensures that multicast delivery continues to all mrouter and all member hosts in the bridge domain while mrouter and membership states are relearned.
2. The STP root bridge issues a global leave (leave for group 0.0.0.0) on all ports. This action triggers mrouter to send general queries, expediting the relearning process.

Note Sending global leaves for query solicitation is a Cisco-specific implementation.

1. When the TCN refresh period ends, IGMP snooping withdraws the non-mrouter and non-member STP ports from the multicast route flood sets. You can control the amount of time that flooding occurs with the **tcn flood query count** command. This command sets the number of IGMP general queries for which the multicast traffic is flooded following a TCN, thus influencing the refresh period.

IGMP snooping default behavior is that the STP root bridge always issues a global leave in response to a TCN, and the non-root bridges do not issue global leaves.

With the **tcn query solicit** command, you can enable a bridge to always issue a global leave in response to TCNs, even when it is not the root bridge. In that case, the root bridge and the non-root bridge would issue the global leave and both would solicit general queries in response to a TCN. Use the **no** form of the command to turn off soliciting when the bridge is not the root.

The root bridge always issues a global leave in response to a TCN. This behavior can not be disabled.

The internal querier has its own set of configuration options that control its reactions to TCNs.

The scope for this configuration option is per bridge domain. If the command appears in profiles attached to ports, it has no effect.

Examples

The following example shows how to configure the tcn flood query count in an IGMP snooping profile, overriding the default:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# tcn flood query count 5
```

	l2vpn	read, write

Example

The following example shows how to ensure that a bridge will always issue a global leave in response to a TCN, even when it is not the STP root-bridge:

```
RP/0/RSP0/CPU0:router (config-ml-d-snooping-profile) # tcn query solicit
```

ttl-check disable

To disable the IGMP snooping check on the time-to-live (TTL) field in the IGMP header, use the **ttl-check disable** command in IGMP snooping profile configuration mode. To enable this functionality after a disable, use the **no** form of this command.

ttl-check disable

Syntax Description This command has no arguments or keywords.

Command Default It is enabled by default.

Command Modes IGMP snooping profile configuration

Command History	Release	Modification
	Release 3.7.2	This command was introduced.

Usage Guidelines By default, IGMP snooping examines the time-to-live (TTL) field in the IGMP header and processes packets as follows:

- If the TTL field is 1, IGMP snooping processes the packet. The TTL field is always set to 1 in the headers of IGMP reports and queries.
- If the TTL field is not 1, IGMP snooping drops the packet

When the IGMP snooping TTL check feature is disabled, IGMP snooping processes all packets without examining the TTL field in the IGMP header.

The scope for this configuration option is per bridge domain. If the command appears in profiles attached to ports, it has no effect.

Task ID	Task ID	Operations
	l2vpn	read, write

Examples The following example shows how to turn off the check on the ttl field:

```
RP/0/RSP0/CPU0:router(config-igmp-snooping-profile)# ttl-check disable5
```

	igmp snooping profile, on page 16	Creates or edits a profile, and attaches a profile to a bridge domain or port.

unsolicited-report-interval

To set the length of time that IGMP snooping has to send state change reports for IGMPv3 queriers when proxy reporting is enabled, use the **unsolicited-report-interval** command in IGMP snooping profile configuration mode. To return to the default value, use the **no** form of this command.

unsolicited-report-interval *timer-value*

Syntax Description

timer-value Specifies the length of time that IGMP snooping can take to send state change reports for IGMPv3 queriers.

Valid values are integers from 100 to 5000 (milliseconds).

Command Default

1000 (milliseconds)

Command Modes

IGMP snooping profile configuration

Command History

Release	Modification
Release 3.7.2	This command was introduced.

Usage Guidelines

If a bridge domain querier is running IGMPv3 and proxy reporting is enabled, IGMP snooping acts as a proxy, generating reports from the proxy reporting address. As insurance against lost reports, IGMP snooping generates and forwards state change reports *robustness-variable* times, where the *robustness-variable* is the QRV value in the querier's general query. IGMP snooping forwards the reports at random intervals within the timeframe configured with the **unsolicited-report-timer** command.

Proxy reporting is enabled by default. To disable proxy reporting, use the **report-suppression disable** command.

Task ID

Task ID	Operations
l2vpn	read, write

Examples

The following example shows how to configure the unsolicited report interval:

```
RP/0/RSP0/CPU0:router (config-igmp-snooping-profile) # unsolicited-report-interval 2000
```
