

Configuring T3 or E3 Interfaces

This section provides the information about how to configure a T3 or E3 interface. The T3 or E3 interface can be configured as clear channel mode or channelized mode.

- [Configuring the Mode, on page 1](#)
- [Configuring the Controller, on page 1](#)
- [SATOP, on page 3](#)
- [CESoPN, on page 5](#)
- [STS-1 Electricals, on page 14](#)

Configuring the Mode

To enable the mode on the T3/E3 interface module, follow these steps:

```
enable
configure terminal
controller mediatype 0/4/0
mode t3
exit
```

To disable the mode use the **no mode** command.

Configuring the Controller

Configuring the Controller - Clear Channel T3 or E3 Interfaces

Before You Begin

When the clear channel T3 or E3 interface is used for the first time, the running configuration does not show the T3 or E3 controller. You can use the **show platform** command to check whether the chassis recognizes the T3 or E3 port and initializes the card correctly. After the port is configured for the slot, the respective controller appears in the running configuration and you can configure the clear channel T3 or E3 interface.

Perform this task to configure clear channel controller as T3.

```
enable
```

Configuring the Controller - Channelized T3 or E3 Interfaces

```
configure terminal
controller t3 0/4/40
no channelized
clock source line
no shut
exit
```

Note By default, the T3 controller is in C-Bit framing mode. To configure CEM, the framing mode must be set to unframed.

Perform this task to configure clear channel controller as E3.

```
enable
configure terminal
controller e3 0/4/40
clock source line
no shut
exit
```

Configuring the Controller - Channelized T3 or E3 Interfaces

Before You Begin

When the channelized T3 or E3 interface is used for the first time, the running configuration does not show the T3 or E3 controller. You can use the **show platform** command to check if the chassis recognizes the T3 or E3 port and initializes the card properly. After the port is configured for the slot, the respective controller appears in the running configuration and you can configure the channelized T3 or E3 interface.

Perform this task to configure channelized controller as T3.

```
enable
configure terminal
controller t3 0/4/46
channelized
clock source line
no shut
exit
```

Note The channelized mode is the default mode for T3 interface.

Perform this task to configure channelized controller as E3.

```
enable
configure terminal
controller e3 0/4/46
channelized mode e1
framing g751
exit
```

Note The clear channel mode is the default mode for E3 interface.

Table 1: Feature History

| Feature Name | Release Information | Description |
|---|-------------------------------|--|
| Channelize the T3 interface into E1 lines | Cisco IOS XE Bengaluru 17.6.2 | Support for the T3 interface to be channelized into 21 E1 lines. |

Starting with Cisco IOS XE Bengaluru 17.6.2, T3 interface can be channelized to 21 E1 lines.

To channelize the T3 interface into E1 lines, use the following commands:

```
enable
configure terminal
controller MediaType 0/1/1
mode t3
controller t3 0/1/1
channelized mode e1
framing c-bit
exit
```

SATOP

Configuring SAToP - Clear Channel T3 or E3 Interfaces

Before You Begin

Before Structure-Agnostic TDM over Packet (SAToP) is configured, the controller of clear channel T3 interface must be configured.

```
enable
configure terminal
controller t3 0/4/40
no channelized
cem-group 0 unframed
interface CEM 0/4/40
cem 0
xconnect 10.10.2.2 204 encapsulation mpls
exit
```

Before You Begin

Before SAToP is configured, the controller of clear channel E3 interface must be configured.

```
enable
configure terminal
controller e3 0/4/40
no channelized
cem-group 0 unframed
```

```
interface CEM 0/4/40
cem 0
xconnect 10.10.2.2 204 encapsulation mpls
exit
```

Verifying the configuration

Note The **no channelize** is displayed in show running-configuration when cem-group 0 unframed is configured.

```
Router(config-controller)# show run
controller MediaType 0/4/40
mode e3
controller 0/4/40
threshold sd-ber 6
threshold sf-ber 3
no channelized
framing g751
cablelength short
  cem-group 0 framed
controller MediaType 0/4/40
interface CEM8/1/10/4/40
  no ip address
  cem 0
!
```

Configuring SAToP - Channelized T3 Interfaces

Before You Begin

Before SAToP is configured, the controller of channelized T3 interface must be configured.

```
enable
configure terminal
controller t3 0/4/12
channelized
t1 1 cem-group 0 unframed
interface CEM 0/4/12
cem 0
xconnect 10.10.2.2 204 encapsulation mpls
exit
```

Configuring SAToP - Channelized E3 Interfaces

Before You Begin

Before SAToP is configured, the controller of channelized E3 interfaces must be configured.

```
enable
configure terminal
controller e3 0/4/46
channelized
e1 1 cem-group 0 unframed
interface CEM 0/4/46
```

```

cem 0
xconnect 10.10.2.2 204 encapsulation mpls
exit

```

Configuring Framed SAToP - Channelized T3 Interfaces

Note Framing type should be maintained same in all routers end to end.

To configure the controller of channelized T3 interface for framed SAToP:

```

enable
configure terminal
controller t3 0/4/46
channelized mode
framing c-bit
t1 1 cem-group 0 framed
interface CEM 0/4/46
cem 0
xconnect 10.10.2.2 204 encapsulation mpls
exit

```

Configuring Framed SAToP - Channelized E3 Interfaces

To configure the controller of channelized E3 interfaces for Framed SAToP:

```

enable
configure terminal
controller e3 0/4/46
channelized mode e1
framing g751
e1 1 cem-group 0 framed
interface CEM 0/4/46
cem 0
xconnect 10.10.2.2 204 encapsulation mpls
exit

```

CESoPN

Configuring CESoPSN - Channelized T3 or E3 Interfaces

Before You Begin

Create CEM group for channelized T3 interface, use the following commands:

```

enable
configure terminal
controller MediaType 0/5/1
mode t3
channelized
controller T3 0/5/1
framing c-bit

```

Verifying CESoPSN Configurations - Channelized E3 Interface

```
cablelength short
t1 1 cem-group 1 timeslots 10
exit
```

Create CEM group for channelized E3 interface, use the following commands:

```
enable
configure terminal
controller MediaType 0/5/1
mode e3
channelized mode e1
controller e3 0/14/0
channelized
cablelength short
e1 1 cem-group 0 timeslots 10
exit
```

Configure xconnect:

```
int cem 0/14/0
cem 0
xconnect 10.1.1.1 9999 encapsulation mpls
```

Verify the xconnect status:

```
sh xconnect all | i 9999
UP pri ac CE0/14/0:0(CESoPSN Basic)      UP mpls 10.1.1.1:9999          UP
```

Verifying CESoPSN Configurations - Channelized E3 Interface

This section includes show commands for CESoPSN:

```
Router# show controllers e3 0/14/2

Configuring CEM Group for CESoPSN - Channelized T3 Interface

The following section describes how to configure a CEM group for CESoPSN on the channelized T3 interface:

```
controller MediaType 0/5/1
mode t3
channelized
controller T3 0/5/1
framing c-bit
cablelength short
t1 1 cem-group 1 timeslots 1-10
```

Verifying CEM for CESoPSN - Channelized T3 Interface

Use the following commands to verify the pseudowire configuration for CESoPSN:

- **show cem circuit**—Displays information about the circuit state, administrative state, the CEM ID of the circuit, and the interface on which it is configured. If cross connect is configured under the circuit, the command output also includes information about the attachment circuit status.
- **show mpls 12 vc**—Displays information about the MPLS VC.
- **show mpls 12 vc detail**—Displays detailed information about the MPLS VC.

```

Configuring DS1 Local Connect on T3/E3 Interface

The following section describes how to configure the first segment for DS1 local connection:

```

enable
configure terminal
controller MediaType 0/5/7
  mode e3
channelized mode e1
controller E3 0/5/7
  e1 2 cem-group 1 timeslots 1-10

```

The following section describes how to configure the second segment for DS1 local connection:

```

enable
configure terminal
controller MediaType 0/5/2
  mode e3
channelized mode e1
controller E3 0/5/2
  e1 2 cem-group 1 timeslots 1-10

```

The following section describes how to create a DS1 local connection:

```

enable
configure terminal
connect dsl_connect CEM0/5/7 1 CEM CEM0/5/2 1

```

Verifying DS1 Local Connect on T3 Interface

Use the following commands to verify the DS1 local connection:

- **show connection name**—Displays information about the connection state and segment state.

```

ASR907# sh xconnect all | i 0/14/7
UP pri    ac CE0/14/2:2(CESoPSN Basic)      UP    ac CE0/14/7:2(CESoPSN Basic)      UP

ASR907# sh connection all | i 0/14/7

```

Configuring T3 or E3 CEP

Pre-requisites:

The default mode is channelized mode. Use **no channelized** command to change to non-channelized mode.

To configure T3 or E3 CEP for mode T3:

```

enable
controller MediaType 0/3/0
mode t3
controller t3 0/3/0
no channelized
cem-group 0 cep

```

To configure T3 or E3 CEP for mode E3:

```

enable
controller MediaType 0/3/0
mode e3
controller e3 0/3/0
no channelized
cem-group 0 cep

```

Configuration of Overhead C2 and J1 Bytes:

You can configure overhead C2 and J1 bytes after you configure T3 or E3 CEP.

```

enable
controller MediaType 0/14/44
mode e3
controller e3 0/14/44
threshold sd-ber 6
threshold sf-ber 3
no channelized
framing g751
cablelength short
cem group 0 cep
overhead j1 tx length 16
overhead j1 expected length 16

```

For loopback configuration, see *Loopback on T3 or E3 Interfaces* section.

Verifying T3 or E3 CEP Configuration

Use **show controller t3 0/1/20 path** to verify T3 or E3 CEP configuration:

```

router#show controller t3 0/1/20 path

T3 0/1/20 PATH 1.

STS-1 Electricals

Configuring STS-1e Modes

Configuring STS-1e Modes for Unframed SAToP

STS-1e supports unframed SAToP and you can configure STS-1e under VT-15, CT3, T3, and unframed modes. There is no default mode for STS-1e.

To configure STS-1e modes for unframed SAToP, use the following commands:

```

enable
configure terminal
controller sts-1e 0/0/16
sts-1 1
mode {vt-15 | ct3 | t3 | unframed}
end

```

Note To restore the system to its default condition, use the **no** form of the command.

Configuring STS-1e Modes for Framed SAToP

Starting from Cisco IOS XE Bengaluru 17.4.1, STS-1e supports framed SAToP. You can configure STS-1e under VT-15, CT3, and T3 modes for framed SAToP:

To configure STS-1e modes for framed SAToP, use the following commands:

```
enable
configure terminal
controller sts-1e 0/0/16
sts-1 1
mode {vt-15 | ct3 | t3}
end
```

Configuring VT-15 Mode of STS-1e

Configuring VT-15 Mode of STS-1e for Unframed SAToP

To configure VT-15 mode of STS-1e for unframed SAToP, enter the following commands:

```
enable
configure terminal
controller STS1E 0/3/14
no ais-shut
alarm-report all
clock source internal
!
sts-1 1
clock source internal
mode vt-15
vtx 1 t1 1 framing unframed
vtx 1 t1 1 cem-group 0 unframed
```

Configuring VT-15 Mode of STS-1e for Framed SAToP

To configure VT-15 mode of STS-1e for framed SAToP, enter the following commands:

```
enable
configure terminal
controller STS1E 0/3/14
no ais-shut
alarm-report all
clock source internal
!
sts-1 1
clock source internal
mode vt-15
vtx 1 t1 1 cem-group 0 framed
```

Configuring T1 CT3 mode of STS-1e

Configuring T1 CT3 mode of STS-1e for Unframed SAToP

To configure T1 CT3 mode of STS-1, you can configure the T1 link using the following steps:

```
enable
configure terminal
controller sts-1e 0/0/16
sts-1 1
mode ct3
```

Configuring T3 mode of STS-1e

```
t1 1 clock source internal
t1 1 framing unframed
end
```

Note To restore the system to its default condition, use the **no** form of the command.

Configuring T1 CT3 mode of STS-1e for Framed SAToP

To configure T1 CT3 mode of STS-1 for framed SAToP, you can configure the T1 link using the following steps:

```
enable
configure terminal
controller sts-1e 0/0/16
sts-1 1
mode ct3
t1 1 clock source internal
t1 1 cem-group 0 framed
end
```

Configuring T3 mode of STS-1e

Configuring T3 mode of STS-1e for Unframed SAToP

```
controller STS1E 0/3/14
no ais-shut
alarm-report all
clock source internal
!
sts-1 1
clock source internal
mode t3
cem-group 0 unframed
t3 clock source internal
```

Configuring T3 mode of STS-1e for Framed SAToP

```
controller STS1E 0/3/14
no ais-shut
alarm-report all
clock source internal
!
sts-1 1
clock source internal
mode t3
cem-group 0 framed
t3 clock source internal
```

Configuring Unframed Mode of STS-1e

```
controller STS1E 0/3/14
no ais-shut
alarm-report all
clock source internal
!
sts-1 1
clock source internal
```

```
mode unframed
cem-group 0 cep
```

Configuring Line and Section Overhead

To configure line and section overhead, use the following commands:

```
enable
configure terminal
controller MediaType 0/0/16
mode sts-1e
controller sts-1e 0/0/16
overhead s1s0 2
overhead j0 tx length 1-byte
end
```

Note To restore the system to its default condition, use the **no** form of the command.

Configuring Line Loopback

To configure loopback, use the following commands:

```
enable
configure terminal
controller sts-1e 0/0/16
loopback local
end
```

Note To restore the system to its default condition, use the **no** form of the command.

Configuring AIS Shut

Alarm Indication Signal (AIS) shut when enabled on the STS-1e controller results in sending AIS alarm to peer node.

To configure AIS-Shut, use the following commands:

```
enable
configure terminal
controller sts-1e 0/0/16
ais-shut
end
```

Note The **no ais-shut** command will not send AIS.

Configuring Shut

To configure Shut, use the following commands:

```
enable
configure terminal
controller sts-1e 0/0/16
shutdown
end
```

Note Use the **no shutdown** command to disable the interface.

Configuring Clock

To configure clock, use the following commands:

```
enable
configure terminal
controller MediaType 0/0/16
mode sts-1e
controller sts-1e 0/0/16
clock source line
end
```

Note The default mode is internal.

Note ACR and DCR clock recovery are also supported.

Configuring Clock Recovery on STS-1e for Framed SAToP

Starting from Cisco IOS XE Bengaluru 17.4.1, ACR and DCR is supported on STS-1e for framed SAToP.

For more information, see *Configuring Clock Recovery on STS-1e Controller for Framed SAToP*.

Configuring Network-Clock STS-1e

To configure network-clock STS-1e, use the following commands:

```
enable
configure terminal
network-clock input-source 1 controller STS-1e 0/0/16
end
```

Configuring Clock Recovery on STS-1e Controller for Framed SAToP

Table 2: Feature History

| Feature Name | Release Information | Description |
|-------------------------------------|-------------------------------|--|
| STS1E Framed SAToP Support on IMA3G | Cisco IOS XE Bengaluru 17.4.1 | Support on clock recovery on STS-1e controller for framed SAToP on the following modes: <ul style="list-style-type: none"> • T3 • CT3 • VT-15 |

Starting from Cisco IOS XE Bengaluru 17.4.1, ACR and DCR are supported on STS-1e controller for framed SAToP.

To configure the clock on STS-1e controller for framed SAToP on the T3 mode, enter the following commands:

```
enable
configure terminal
controller STS-1e slot/bay/port
sts-1 1
mode t3
t3 framing c-bit
cem-group 0 framed
t3 clock source recovered 1
```

To configure the clock on STS-1e controller for framed SAToP on the CT3 mode, enter the following commands:

```
enable
configure terminal
controller STS-1e slot/bay/port
sts-1 1
clock source internal
mode ct3
t3 framing c-bit
t1 1 cem-group 0 framed
t1 1 clock source recovered 1
```

To configure the clock on STS-1e controller for framed SAToP on the VT-15 mode, enter the following commands:

```
enable
configure terminal
controller STS-1e slot/bay/port
sts-1 1
mode vt-15
vtg 1 t1 1 cem-group 0 framed
vtg 1 t1 1 clock source recovered 2
```

The following example shows how to configure the clock on STS-1e controller for framed SAToP on the T3 mode:

Verifying STS-1e Configuration

```
enable
configure terminal
controller STS-1e 0/8/12
sts-1 1
mode t3
t3 framing c-bit
cem-group 0 framed
t3 clock source recovered 1
```

The following example shows how to configure the clock on STS-1e controller for framed SAToP on the CT3 mode:

```
enable
configure terminal
controller STS-1e 0/8/12
sts-1 1
clock source internal
mode ct3
t3 framing c-bit
t1 1 cem-group 0 framed
t1 1 clock source recovered 1
```

The following example shows how to configure the clock on STS-1e controller for framed SAToP on the VT-15 mode:

```
enable
configure terminal
controller STS-1e 0/8/12
sts-1 1
mode vt-15
vtg 1 t1 1 cem-group 0 framed
vtg 1t1 1 clock source recovered 2
```

Verifying STS-1e Configuration

The following sample output shows the verification of STS-1e configuration in unframed mode:

```
router#show controllers sts1e 0/3/14
