## About Multicloud Defense

Multicloud Defense (MCD) is a comprehensive security solution consisting of two primary components: the Multicloud Defense Controller and Multicloud Defense Gateway. These components collaborate to establish a secure multicloud environment.

Multicloud Defense currently supports Amazon Web Services (AWS), Azure, Google Cloud Platform (GCP), and Oracle OCI cloud accounts. The range of support for these platforms vary.

In essence, Multicloud Defense offers a sophisticated and streamlined security framework, harmonizing controller orchestration, gateway communication, and optimized datapath processing for a robust and efficient multicloud protection mechanism.

This documentation has been prepared for practitioners who have a basic understanding of public cloud networking and security concepts, and participate in various functional teams, including:

- Development Operations (DevOps and DevSecOps)
- Security Operation Centers (SOCs)
- Security Architects Info
- Sec Architects Cloud Architects

### **Additional Multicloud Defense Documentation**

You can find additional information about Multicloud Defense in the following documents:

- [Multicloud Defense Release Notes](#)

## Recommended Versions

We strongly recommended using the following releases for each Multicloud Defense component:

**Multicloud Defense Gateway**

Version 23.08-17, September 4, 2024

**Multicloud Defense Terraform Provider**

Version 24.10.1 November 7, 2024

# Additional Resources and Assistance

**Online Resources**

Cisco provides this additional documentation:
