Extensions

From this page, you can manage Cyber Vision Extensions. Extensions are optional add-ons to Cyber Vision Center which provide more features, such as the management of new device types, additional detection engines, or integrations with external services.

The screenshot displays the Cisco Cyber Vision Center interface for managing extensions. On the left is a dark sidebar with the Cisco logo and a list of navigation items: System, Data management, Sensors, Users, Events, API, License, LDAP, PxGrid, SNORT, Integrations, and Extensions (highlighted). The main content area is titled 'Extensions' and includes a descriptive paragraph. Below this is a yellow 'Update' notification box indicating that the 'Cyber Vision sensor management' extension is being updated. A table titled 'Installed extensions' lists the 'Cyber Vision sensor management' extension with version 1.0.0 and an 'Update this extension' button. At the bottom, there is an 'Install a new extension' section with an 'Import extension file' button.

Name	Version	Update this extension
Cyber Vision sensor management	1.0.0	[Update]
