

# show access-group mode interface

To display the ACL configuration on a Layer 2 interface, use the **show access-group mode interface** command.

**show access-group mode interface** [*interface interface-number*]

Syntax Description	
<i>interface</i>	(Optional) Interface type; valid values are <b>ethernet</b> , <b>fastethernet</b> , <b>gigabitethernet</b> , <b>tengigabitethernet</b> , and <b>port-channel</b> .
<i>interface-number</i>	(Optional) Interface number.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** The valid values for the port number depend on the chassis used.

**Examples** This example shows how to display the ACL configuration on the Fast Ethernet interface 6/1:

```
Switch# show access-group mode interface fa6/1
Interface FastEthernet6/1:
  Access group mode is: merge
Switch#
```

**Related Commands** [access-group mode](#)

# show adjacency

To display information about the Layer 3 switching adjacency table, use the **show adjacency** command.

```
show adjacency [{interface interface-number} | {null interface-number} | {port-channel number}
| {vlan vlan-id} | detail | internal | summary]
```

Syntax Description	
<i>interface</i>	(Optional) Interface type; possible valid values are <b>ethernet</b> , <b>fastethernet</b> , <b>gigabitethernet</b> , <b>tengigabitethernet</b> , <b>pos</b> , <b>ge-wan</b> , and <b>atm</b> .
<i>interface-number</i>	(Optional) Module and port number; see the “Usage Guidelines” section for valid values.
<b>null</b> <i>interface-number</i>	(Optional) Specifies the null interface; the valid value is <b>0</b> .
<b>port-channel</b> <i>number</i>	(Optional) Specifies the channel interface; valid values are a maximum of 64 values ranging from 1 to 256.
<b>vlan</b> <i>vlan-id</i>	(Optional) Specifies the VLAN; valid values are from 1 to 4094.
<b>detail</b>	(Optional) Displays the information about the protocol detail and timer.
<b>internal</b>	(Optional) Displays the information about the internal data structure.
<b>summary</b>	(Optional) Displays a summary of CEF-adjacency information.

**Defaults** This command has no default settings.

**Command Modes** EXEC

Command History	Release	Modification
	12.2(25)EW	Extended to include the 10-Gigabit Ethernet interface.

**Usage Guidelines** The *interface-number* argument designates the module and port number. Valid values for *interface-number* depend on the specified interface type and the chassis and module that are used. For example, if you specify a Gigabit Ethernet interface and have a 48-port 10/100BASE-T Ethernet module that is installed in a 13-slot chassis, valid values for the module number are from 1 to 13, and valid values for the port number are from 1 to 48.

Hardware Layer 3 switching adjacency statistics are updated every 60 seconds.

The following information is contained in the **show adjacency** command:

- Protocol interface.
- Type of routing protocol that is configured on the interface.
- Interface address.
- Method of adjacency that was learned.

- MAC address of the adjacent router.
- Time left before the adjacency rolls out of the adjacency table. After it rolls out, a packet must use the same next hop to the destination.

### Examples

This example shows how to display adjacency information:

```
Switch# show adjacency
Protocol Interface          Address
IP       FastEthernet2/3        172.20.52.1(3045)
IP       FastEthernet2/3        172.20.52.22(11)
Switch#
```

This example shows how to display a summary of adjacency information:

```
Switch# show adjacency summary
Adjacency Table has 2 adjacencies
  Interface          Adjacency Count
  FastEthernet2/3    2
Switch#
```

This example shows how to display protocol detail and timer information:

```
Switch# show adjacency detail
Protocol Interface          Address
IP       FastEthernet2/3        172.20.52.1(3045)
                                0 packets, 0 bytes
                                000000000FF920000380000000000000
                                00000000000000000000000000000000
                                00605C865B2800D0BB0F980B0800
                                ARP          03:58:12
IP       FastEthernet2/3        172.20.52.22(11)
                                0 packets, 0 bytes
                                000000000FF920000380000000000000
                                00000000000000000000000000000000
                                00801C93804000D0BB0F980B0800
                                ARP          03:58:06
Switch#
```

This example shows how to display adjacency information for a specific interface:

```
Switch# show adjacency fastethernet2/3
Protocol Interface          Address
IP       FastEthernet2/3        172.20.52.1(3045)
IP       FastEthernet2/3        172.20.52.22(11)
Switch#
```

### Related Commands

[debug adjacency](#)

# show arp access-list

To display detailed information on an ARP access list, use the **show arp** command.

```
show arp access-list
```

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** This command has no default settings.

---

**Command Modes** EXEC

---

Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

---

---

**Examples** This example shows how to display the ARP ACL information for a switch:

```
Switch# show arp access-list
ARP access list rose
  permit ip 10.101.1.1 0.0.0.255 mac any
  permit ip 20.3.1.0 0.0.0.255 mac any
```

# show auto install status

To display the status of an automatic installation, use the **show auto install status** command.

**show auto install status**

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** This command has no default settings.

---

**Command Modes** Privileged EXEC

---

Command History	Release	Modification
	12.2(20)EW	Support for this command was introduced on the Catalyst 4500 series switch.

---

---

**Examples** This example shows how to display the IP address of the TFTP server and to display whether or not the switch is currently acquiring the configuration file on the TFTP server:

```
Switch# show auto install status

Status           : Downloading config file
DHCP Server      : 20.0.0.1
TFTP Server      : 30.0.0.3
Config File Fetched : Undetermined
```

The first IP address in the display indicates the server that is used for the automatic installation. The second IP address indicates the TFTP server that provided the configuration file.

# show auto qos

To display the automatic quality of service (auto-QoS) configuration that is applied, use the **show auto qos** user EXEC command.

```
show auto qos [interface interface-id] [{begin | exclude | include} expression]
```

## Syntax Description

<b>interface</b> <i>interface-id</i>	(Optional) Displays auto-QoS information for the specified interface or for all interfaces. Valid interfaces include physical ports.
<b>begin</b>	(Optional) Begins with the line that matches the expression.
<b>exclude</b>	(Optional) Excludes lines that match the expression.
<b>include</b>	(Optional) Includes lines that match the specified expression.
<i>expression</i>	(Optional) Expression in the output to use as a reference point.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

## Usage Guidelines

The **show auto qos interface *interface-id*** command displays the auto-QoS configuration; it does not display any user changes to the configuration that might be in effect.

To display information about the QoS configuration that might be affected by auto-QoS, use one of these commands:

- **show qos**
- **show qos map**
- **show qos interface *interface-id***
- **show running-config**

Expressions are case sensitive. For example, if you enter **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

## Examples

This example shows output from the **show auto qos** command when auto-QoS is enabled:

```
Switch# show auto qos
00:00:55:qos
00:00:56:qos map cos 3 to dscp 26
00:00:57:qos map cos 5 to dscp 46
00:00:58:qos map dscp 16 to tx-queue 1
00:00:58:qos map dscp 32 to tx-queue 1
00:00:58:qos db1
00:00:59:policy-map autoqos-voip-policy
00:00:59: class class-default
00:00:59: db1
00:00:59:interface GigabitEthernet1/1
```

```
00:00:59: qos trust device cisco-phone
00:00:59: qos trust cos
00:00:59: tx-queue 3
00:00:59: priority high
00:00:59: shape percent 70
00:00:59: service-policy output autoqos-voip-policyend
```

This example shows output from the **show auto qos interface** command when the **auto qos voip cisco-phone** interface configuration command is entered:

```
Switch# show auto qos interface
Initial configuration applied by AutoQoS:
!
interface GigabitEthernet1/1
qos trust device cisco-phone
qos trust cos
tx-queue 3
priority high
shape percent 70
service-policy output autoqos-voip-policy
!
interface GigabitEthernet1/2
qos trust device cisco-phone
qos trust cos
tx-queue 3
priority high
shape percent 70
service-policy output autoqos-voip-policy
```

This example shows output from the **show auto qos interface gigabitethernet1/1** command when the **auto qos voip cisco-phone** interface configuration command is entered:

```
Switch# show auto qos interface gigabitethernet1/1
Initial configuration applied by AutoQoS:
!
interface GigabitEthernet1/1
qos trust device cisco-phone
qos trust cos
tx-queue 3
priority high
shape percent 70
service-policy output autoqos-voip-policy
```

This example shows output from the **show auto qos** command when auto-QoS is disabled:

```
Switch# show auto qos
AutoQoS is disabled
```

---

■ show bootflash:

## show bootflash:

To display information about the bootflash: file system, use the **show bootflash:** command.

**show bootflash:** [**all** | **chips** | **fileSYS**]

Syntax Description	
<b>all</b>	(Optional) Displays all possible Flash information.
<b>chips</b>	(Optional) Displays Flash chip information.
<b>fileSYS</b>	(Optional) Displays file system information.

**Defaults** This command has no default settings.

**Command Modes** EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display file system status information:

```
Switch> show bootflash: fileSYS

----- F I L E   S Y S T E M   S T A T U S -----
  Device Number = 0

# show bootvar

To display BOOT environment variable information, use the **show bootvar** command.

**show bootvar**

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** This command has no default settings.

---

**Command Modes** Privileged EXEC

---

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

---

---

**Examples** This example shows how to display BOOT environment variable information:

```
Switch# show bootvar
BOOT variable = sup:1;
CONFIG_FILE variable does not exist
BOOTLDR variable does not exist
Configuration register is 0x0
Switch#
```

# show cable-diagnostics tdr

To display the test results for the TDR cable diagnostics, use the **show cable-diagnostics tdr** command.

```
show cable-diagnostics tdr {interface {interface interface-number}}
```

## Note

This command will be deprecated in future Cisco IOS releases. Please use the **diagnostic start** command.

## Syntax Description

**interface** *interface* Interface type; valid values are **fastethernet** and **gigabitethernet**.

*interface-number* Module and port number.

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.2(25)SG	Support for this command was introduced on the Catalyst 4500 series switch.

## Usage Guidelines

The TDR test is supported on Catalyst 4500 series switches running Cisco IOS Release 12.2(25)SG for the following line cards only:

- WS-X4548-GB-RJ45
- WS-X4548-GB-RJ45V
- WS-X4524-GB-RJ45V
- WS-X4013+TS
- WS-C4948
- WS-C4948-10GE

The distance to the fault is displayed in meters (m).

## Examples

This example shows how to display information about the TDR test:

```
Switch# show cable-diagnostics tdr interface gi4/13
Interface Speed  Local pair Cable length Remote channel Status
Gi4/13      0Mbps    1-2        102 +-2m    Unknown    Fault
             3-6        100 +-2m    Unknown    Fault
             4-5        102 +-2m    Unknown    Fault
             7-8        102 +-2m    Unknown    Fault
Switch#
```

Table 2-13 describes the fields in the **show cable-diagnostics tdr** command output.

**Table 2-13** *show cable-diagnostics tdr Command Output Fields*

Field	Description
Interface	Interface tested.
Speed	Current line speed.
Pair	Local pair name.
Cable Length	Distance to the fault in meters (m).
Channel	Pair designation (A, B, C, or D).
Status	Pair status displayed is one of the following: <ul style="list-style-type: none"> <li>• Terminated—The link is up.</li> <li>• Fault—Cable fault (open or short)</li> </ul>

**Related Commands** [test cable-diagnostics tdr](#)

# show cdp neighbors

To display detailed information about the neighboring devices that are discovered through CDP, use the **show cdp neighbors** command.

**show cdp neighbors** [*type number*] [**detail**]

Syntax Description	
<i>type</i>	(Optional) Interface type that is connected to the neighbors about which you want information; possible valid values are <b>ethernet</b> , <b>fastethernet</b> , <b>gigabitethernet</b> , <b>tengigabitethernet</b> , <b>port-channel</b> , and <b>vlan</b> .
<i>number</i>	(Optional) Interface number that is connected to the neighbors about which you want information.
<b>detail</b>	(Optional) Displays detailed information about a neighbor (or neighbors) including network address, enabled protocols, hold time, and software version.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(25)EW	Extended to include the 10-Gigabit Ethernet interface.

**Usage Guidelines** The **vlan** keyword is supported in Catalyst 4500 series switches that are configured with a Supervisor Engine II.

The **port-channel** values are from 0 to 282; values from 257 to 282 are supported on the CSM and the FWSM only.

**Examples** This example shows how to display the information about the CDP neighbors:

```
Switch# show cdp neighbors
Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge
                  S - Switch, H - Host, I - IGMP, r - Repeater, P - Phone
Device ID        Local Intrfce  Holdtme    Capability  Platform  Port ID
lab-7206         Eth 0          157        R           7206VXR   Fas 0/0/0
lab-as5300-1     Eth 0          163        R           AS5300    Fas 0
lab-as5300-2     Eth 0          159        R           AS5300    Eth 0
lab-as5300-3     Eth 0          122        R           AS5300    Eth 0
lab-as5300-4     Eth 0          132        R           AS5300    Fas 0/0
lab-3621         Eth 0          140        R S         3631-telcoFas 0/0
008024 2758E0    Eth 0          132        T           CAT3000   1/2
Switch#
```

Table 2-14 describes the fields that are shown in the example.

**Table 2-14** *show cdp neighbors Field Descriptions*

Field	Definition
Device ID	Configured ID (name), MAC address, or serial number of the neighbor device.
Local Intrfce	(Local Interface) The protocol that is used by the connectivity media.
Holdtme	(Holdtime) Remaining amount of time, in seconds, that the current device holds the CDP advertisement from a transmitting router before discarding it.
Capability	Capability code that is discovered on the device. This device type is listed in the CDP Neighbors table. Possible values are as follows: R—Router T—Transparent bridge B—Source-routing bridge S—Switch H—Host I—IGMP device r—Repeater P—Phone
Platform	Product number of the device.
Port ID	Protocol and port number of the device.

This example shows how to display detailed information about your CDP neighbors:

```
Switch# show cdp neighbors detail
-----
Device ID: lab-7206
Entry address(es):
  IP address: 172.19.169.83
Platform: cisco 7206VXR, Capabilities: Router

advertisement version: 2
Duplex: half

-----
Device ID: lab-as5300-1
Entry address(es):
  IP address: 172.19.169.87
.
.
.
Switch#
```

Table 2-15 describes the fields that are shown in the example.

**Table 2-15** *show cdp neighbors detail Field Descriptions*

Field	Definition
Device ID	Name of the neighbor device and either the MAC address or the serial number of this device.
Entry address(es)	List of network addresses of neighbor devices.
[network protocol] address	Network address of the neighbor device. The address can be in IP, IPX, AppleTalk, DECnet, or CLNS protocol conventions.
Platform	Product name and number of the neighbor device.
Capabilities	Device type of the neighbor. This device can be a router, a bridge, a transparent bridge, a source-routing bridge, a switch, a host, an IGMP device, or a repeater.
Interface	Protocol and port number of the port on the current device.
Holdtime	Remaining amount of time, in seconds, that the current device holds the CDP advertisement from a transmitting router before discarding it.
Version:	Software version running on the neighbor device.
advertisement version:	Version of CDP that is being used for CDP advertisements.
Duplex:	Duplex state of connection between the current device and the neighbor device.

#### Related Commands

# show class-map

To display class map information, use the **show class-map** command.

**show class-map** *class\_name*

<b>Syntax Description</b>	<i>class_name</i> Name of the class map.
---------------------------	--

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	Privileged EXEC
----------------------	-----------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)SG	Displays results from the full flow option.

**Examples** This example shows how to display class map information for all class maps:

```
Switch# show class-map
Class Map match-any class-default (id 0)
  Match any
Class Map match-any class-simple (id 2)
  Match any
Class Map match-all ipp5 (id 1)
  Match ip precedence 5
Class Map match-all agg-2 (id 3)
Switch#
```

This example shows how to display class map information for a specific class map:

```
Switch# show class-map ipp5
Class Map match-all ipp5 (id 1)
  Match ip precedence 5
Switch#
```

Assume there are two active flows as shown below on Fast Ethernet interface 6/1:

SrcIp	DstIp	IpProt	SrcL4Port	DstL4Port
192.168.10.10	192.168.20.20	20	6789	81
192.168.10.10	192.168.20.20	20	6789	21

With following configuration, each flow will be policed to a 1000000 bps with an allowed 9000-byte burst value.

### Note

If you use the **match flow ip source-address|destination-address** command, these two flows are consolidated into one flow and they have the same source and destination address.

```
Switch# config terminal
Enter configuration commands, one per line.  End with CNTL/Z.
Switch(config)# class-map c1
Switch(config-cmap)# match flow ip source-address ip destination-address ip protocol 14
source-port 14 destination-port
Switch(config-cmap)# exit
Switch(config)# policy-map p1

# show diagnostic content

To display test information about the test ID, test attributes, and supported coverage test levels for each test and for all modules, use the **show diagnostic content** command.

**show diagnostic content module** {all | num}

Syntax Description	all	Displays all the modules on the chassis.
	num	Module number.

**Defaults** This command has no default settings.

**Command Modes** EXEC

Command History	Release	Modification
	12.2(20)EWA	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display the test suite, monitoring interval, and test attributes for all the modules of the chassis:

```
Switch# show diagnostic content module all
```

```
module 1:
```

```
Diagnostics test suite attributes:
```

```

  B/* - Basic ondemand test / NA
  P/V/* - Per port test / Per device test / NA
  D/N/* - Disruptive test / Non-disruptive test / NA
  S/* - Only applicable to standby unit / NA
  X/* - Not a health monitoring test / NA
  F/* - Fixed monitoring interval test / NA
  E/* - Always enabled monitoring test / NA
  A/I - Monitoring is active / Monitoring is inactive
  m/* - Mandatory bootup test, can't be bypassed / NA
  o/* - Ongoing test, always active / NA

```

ID	Test Name	Attributes	Testing Interval (day hh:mm:ss.ms)
1)	supervisor-bootup	**D***I**	not configured
2)	packet-memory-bootup	**D***I**	not configured
3)	packet-memory-ongoing	**N***I*o	not configured

```
module 6:
```

```
Diagnostics test suite attributes:
  B/* - Basic ondemand test / NA
  P/V/* - Per port test / Per device test / NA
  D/N/* - Disruptive test / Non-disruptive test / NA
  S/* - Only applicable to standby unit / NA
  X/* - Not a health monitoring test / NA
  F/* - Fixed monitoring interval test / NA
  E/* - Always enabled monitoring test / NA

### Related Commands

[show diagnostic result module](#)

[show diagnostic result module test 2](#)

[show diagnostic result module test 3](#)

# show diagnostic result module

To display the module-based diagnostic test results, use the **show diagnostic result module** command.

**show diagnostic result module** [*slot-num* | **all**] [**test** [*test-id* | *test-id-range* | **all**]] [**detail**]

Syntax Description		
<i>slot-num</i>	(Optional)	Specifies the slot on which diagnostics are displayed.
<b>all</b>	(Optional)	Displays the diagnostics for all slots.
<b>test</b>	(Optional)	Displays selected tests on the specified module.
<i>test-id</i>	(Optional)	Specifies a single test ID.
<i>test-id-range</i>	(Optional)	Specifies a range of test IDs.
<b>all</b>	(Optional)	Displays the diagnostics for all tests.
<b>detail</b>	(Optional)	Displays the complete test results.

**Defaults** A summary of the test results for all modules in the chassis is displayed.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(18)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display the summary results for all modules in the chassis:

```
Switch# show diagnostic result module

Current bootup diagnostic level: minimal

module 1:

  Overall diagnostic result: PASS
  Diagnostic level at card bootup: bypass

  Test results: (. = Pass, F = Fail, U = Untested)

# show diagnostic result module test

To display the results of the bootup packet memory test, use the **show diagnostic result module test** command. The output indicates whether the test passed, failed, or was not run.

```
show diagnostic result module [N | all] [test test-id] [detail]
```

Syntax Description	
<i>N</i>	Specifies the module number.
<b>all</b>	Specifies all modules.
<b>test</b> <i>test-id</i>	Specifies the number for the tdr test on the platform.
<b>detail</b>	(Optional) Specifies the display of detailed information for analysis. This option is recommended.

**Defaults** Non-detailed results

**Command Modes** EXEC mode

Command History	Release	Modification
	12.2(25)SG	This command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** The **detail** keyword is intended for use by Cisco support personnel when analyzing failures.

**Examples** This example shows how to display the results of the bootup packet memory tests:

```
Switch# show diagnostic result module 6 detail
module 6:

Overall diagnostic result:PASS

[diagnostic monitor action](#)  
[show diagnostic result module test 2](#)

# show dot1x

To display the 802.1X statistics and operational status for the entire switch or for a specified interface, use the **show dot1x** command.

```
show dot1x [interface interface-id] | [statistics [interface interface-id]] | [all]
```

Syntax Description	
<b>interface</b> <i>interface-id</i>	(Optional) Displays the 802.1X status for the specified port.
<b>statistics</b>	(Optional) Displays 802.1X statistics for the switch or the specified interface.
<b>all</b>	(Optional) Displays per-interface 802.1X configuration information for all interfaces with a non-default 802.1X configuration.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(19)EW	Display enhanced to show the guest-VLAN value.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.
	12.2(25)EWA	Support for currently-assigned reauthentication timer (if the timer is configured to honor the Session-Timeout value) was added.
	12.2(31)SG	Support for port direction control and critical recovery was added.

**Usage Guidelines** If you do not specify an interface, the global parameters and a summary are displayed. If you specify an interface, the details for that interface are displayed.

If you enter the **statistics** keyword without the **interface** option, the statistics are displayed for all interfaces. If you enter the **statistics** keyword with the **interface** option, the statistics are displayed for the specified interface.

Expressions are case sensitive. For example, if you enter **exclude output**, the lines that contain *output* are not displayed, but the lines that contain *Output* are displayed.

The **show dot1x** command displays the currently assigned reauthentication timer and time remaining before reauthentication, if reauthentication is enabled.

**Examples**

This example shows how to display the output from the **show dot1x** command:

```
Switch# show dot1x
Sysauthcontrol = Disabled
Dot1x Protocol Version = 2
Dot1x Oper Controlled Directions = Both
Dot1x Admin Controlled Directions = Both
Critical Recovery Delay = 500
Critical EAP = Enabled
Switch#
```

This example shows how to display the 802.1X statistics for a specific port:

```
Switch# show dot1x interface fastethernet6/1

Switch#
```

**Note**

[Table 2-16](#) provides a partial list of the displayed fields. The remaining fields in the display show internal state information. For a detailed description of these state machines and their settings, refer to the 802.1X specification.

**Table 2-16** *show dot1x interface Field Description*

Field	Description
PortStatus	Status of the port (authorized or unauthorized). The status of a port is displayed as authorized if the <b>dot1x port-control</b> interface configuration command is set to <b>auto</b> and has successfully completed authentication.
Port Control	Setting of the <b>dot1x port-control</b> interface configuration command.
MultiHosts	Setting of the <b>dot1x multiple-hosts</b> interface configuration command (allowed or disallowed).

This is an example of output from the **show dot1x statistics interface gigabitethernet1/1** command. [Table 2-17](#) describes the fields in the display.

```
Switch# show dot1x statistics interface gigabitethernet1/1

PortStatistics Parameters for Dot1x
-----
TxReqId = 0      TxReq = 0      TxTotal = 0
RxStart = 0      RxLogoff = 0    RxRespId = 0  RxResp = 0
RxInvalid = 0    RxLenErr = 0    RxTotal= 0
RxVersion = 0    LastRxSrcMac 0000.0000.0000
Switch#
```

**Table 2-17** *show dot1x statistics Field Descriptions*

Field	Description
TxReq/TxReqId	Number of EAP-request/identity frames that have been sent.
TxTotal	Number of EAPOL frames of any type that have been sent.
RxStart	Number of valid EAPOL-start frames that have been received.
RxLogoff	Number of EAPOL-logoff frames that have been received.
RxRespId	Number of EAP-response/identity frames that have been received.
RxResp	Number of valid EAP-response frames (other than response/identity frames) that have been received.
RxInvalid	Number of EAPOL frames that have been received and have an unrecognized frame type.
RxLenError	Number of EAPOL frames that have been received in which the packet body length field is invalid.
RxTotal	Number of valid EAPOL frames of any type that have been received.
RxVersion	Protocol version number carried in the most recently received EAPOL frame.
LastRxSrcMac	Source MAC address carried in the most recently received EAPOL frame.

# show environment

To display the environment alarm, operational status, and current reading for the chassis, use the **show environment** command.

```
show environment [alarm] | [status [chassis | fantray | powersupply | supervisor]] |
[temperature]
```

## Syntax Description

<b>alarm</b>	(Optional) Specifies the alarm status of the chassis.
<b>status</b>	(Optional) Specifies the operational status information.
<b>chassis</b>	(Optional) Specifies the operational status of the chassis.
<b>fantray</b>	(Optional) Specifies the status of the fan tray, and shows fan tray power consumption.
<b>powersupply</b>	(Optional) Specifies the status of the power supply.
<b>supervisor</b>	(Optional) Specifies the status of the supervisor engine.
<b>temperature</b>	(Optional) Specifies the current chassis temperature readings.

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Support for the ability to display generic environment information with the <b>show environment</b> command was added.

## Examples

This example shows how to display information about the environment alarms, operational status, and current temperature readings for the chassis:

```
Switch# show environment
no alarm

Chassis Temperature           = 32 degrees Celsius
Chassis Over Temperature Threshold = 75 degrees Celsius
Chassis Critical Temperature Threshold = 95 degrees Celsius

Power Supply Model No      Type      Fan Status      Sensor
-----
PS1    PWR-C45-1400AC    AC 1400W    good      good
PS2    none                --          --        --

Power Supply Max      Min      Max      Min      Absolute
(Nos in Watts) Inline  Inline  System  System  Maximum
-----
PS1           0       0      1360    1360    1400
PS2           --      --       --      --      --
```

```

Power supplies needed by system : 1

Chassis Type : WS-C4507R

Supervisor Led Color : Green

Fantray : good

Power consumed by Fantray : 50 Watts

```

This example shows how to display information about the environment alarms:

```

Switch# show environment alarm
no alarm
Switch#

```

This example shows how to display information about the power supplies, chassis type, and fan trays:

```

Switch# show environment status
Power
Supply  Model No          Type          Status        Fan
-----  -----
PS1     PWR-C45-1400AC      AC 1400W     good          good
PS2     none                --           --           --

Power Supply      Max      Min      Max      Min      Absolute
(Nos in Watts)   Inline  Inline  System  System  Maximum
-----
PS1                0        0    1360    1360    1400
PS2                --        --      --       --       --

Power supplies needed by system : 1

Chassis Type : WS-C4507R

Supervisor Led Color : Green

Fantray : good

Power consumed by Fantray : 50 Watts

Switch#

```

This example shows how to display information about the chassis:

```

Switch# show environment status chassis
Chassis Type :WS-C4507R
Switch#

```

This example shows how to display information about the fan tray:

```

Switch# show environment status fantray
Fantray : good
Power consumed by Fantray : 50 Watts
Switch#

```

This example shows how to display information about the power supply:

```
Switch# show environment status powersupply
Power
Supply Model No          Type          Status      Fan
-----
PS1     WS-X4008             AC 400W      good        good
PS2     WS-X4008             AC 400W      good        good
PS3     none                 --           --          --
Switch#
```

This example shows how to display information about the supervisor engine:

```
Switch# show environment status supervisor
Supervisor Led Color :Green
Switch#
```

This example shows how to display information about the temperature of the chassis:

```
Switch# show environment temperature
Chassis Temperature           = 32 degrees Celsius
Chassis Over Temperature Threshold = 75 degrees Celsius
Chassis Critical Temperature Threshold = 95 degrees Celsius
Switch#
```

# show errdisable detect

To display the error disable detection status, use the **show errdisable detect** command.

## show errdisable detect

**Syntax Description** This command has no arguments or keywords.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(19)EW	Display includes the status of storm control.

**Examples** This example shows how to display the error disable detection status:

```
Switch# show errdisable detect
ErrDisable Reason      Detection status
-----
udld                    Enabled
bpduguard              Enabled
security-violatio     Enabled
channel-misconfig     Disabled
psecure-violation     Enabled
vmps                   Enabled
pagp-flap             Enabled
dtp-flap              Enabled
link-flap             Enabled
l2ptguard             Enabled
gbic-invalid          Enabled
dhcp-rate-limit       Enabled
unicast-flood         Enabled
storm-control         Enabled
ilpower               Enabled
arp-inspection        Enabled
Switch#
```

**Related Commands**

- [errdisable detect](#)
- [errdisable recovery](#)
- [show interfaces status](#)

# show errdisable recovery

To display error disable recovery timer information, use the **show errdisable recovery** command.

## show errdisable recovery

**Syntax Description** This command has no arguments or keywords.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(19)EW	Display includes the status of storm control.

**Examples** This example shows how to display recovery timer information for error disable:

```
Switch# show errdisable recovery
ErrDisable Reason      Timer Status
-----
udld                    Disabled
bpduguard               Disabled
security-violatio      Disabled
channel-misconfig      Disabled
vmps                    Disabled
paggp-flap             Disabled
dtp-flap                Disabled
link-flap               Disabled
l2ptguard               Disabled
psecure-violation      Disabled
gbic-invalid            Disabled
dhcp-rate-limit        Disabled
unicast-flood           Disabled
storm-control           Disabled
arp-inspection          Disabled

Timer interval:30 seconds

Interfaces that will be enabled at the next timeout:

Interface      Errdisable reason      Time left(sec)
-----
Fa7/32         arp-inspect             13
```

**Related Commands**

- [errdisable detect](#)
- [errdisable recovery](#)
- [show interfaces status](#)

# show etherchannel

To display EtherChannel information for a channel, use the **show etherchannel** command.

```
show etherchannel [channel-group] {port-channel | brief | detail | summary | port | load-balance | protocol}
```

Syntax Description	
<i>channel-group</i>	(Optional) Number of the channel group; valid values are from 1 to 64.
<b>port-channel</b>	Displays port-channel information.
<b>brief</b>	Displays a summary of EtherChannel information.
<b>detail</b>	Displays detailed EtherChannel information.
<b>summary</b>	Displays a one-line summary per channel group.
<b>port</b>	Displays EtherChannel port information.
<b>load-balance</b>	Displays load-balance information.
<b>protocol</b>	Displays the enabled protocol.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(13)EW	Support for LACP was added to this command.

**Usage Guidelines** If you do not specify a channel group, all channel groups are displayed.

In the output below, the Passive port list field is displayed for Layer 3 port channels only. This field means that the physical interface, which is still not up, is configured to be in the channel group (and indirectly is in the only port channel in the channel group).

**Examples** This example shows how to display port-channel information for a specific group:

```
Switch# show etherchannel 1 port-channel
      Port-channels in the group:
      -----
Port-channel: Po1
-----
Age of the Port-channel   = 02h:35m:26s
Logical slot/port        = 10/1           Number of ports in agport = 0
GC                       = 0x00000000    HotStandBy port = null
Passive port list        = Fa5/4 Fa5/5
Port state                = Port-channel L3-Ag Ag-Not-Inuse
```

## show etherchannel

```
Ports in the Port-channel:
Index  Load  Port
-----
Switch#
```

This example shows how to display load-balancing information:

```
Switch# show etherchannel load-balance
Source XOR Destination mac address
Switch#
```

This example shows how to display a summary of information for a specific group:

```
Switch# show etherchannel 1 brief
Group state = L3
Ports: 2 Maxports = 8
port-channels: 1 Max port-channels = 1
Switch#
```

This example shows how to display detailed information for a specific group:

```
Switch# show etherchannel 1 detail
Group state = L3
Ports: 2 Maxports = 8
Port-channels: 1 Max Port-channels = 1
                Ports in the group:
                -----
Port: Fa5/4
-----

Port state      = EC-Enbld Down Not-in-Bndl Usr-Config
Channel group = 1          Mode = Desirable      Gchange = 0
Port-channel   = null      GC   = 0x00000000      Pseudo-agport = Po1
Port indx      = 0          Load = 0x00

Flags:  S - Device is sending Slow hello.  C - Device is in Consistent state.
        A - Device is in Auto mode.        P - Device learns on physical port.
Timers: H - Hello timer is running.        Q - Quit timer is running.
        S - Switching timer is running.    I - Interface timer is running.

Local information:

Port      Flags State  Timers  Hello  Partner  PAgP    Learning  Group

<...output truncated...>

Switch#

This example shows how to display the protocol enabled:

```

Switch# show etherchannel protocol
          Channel-group listing:
          -----

Group: 12
-----
Protocol: PAgP

Group: 24
-----
Protocol:  - (Mode ON)
Switch#

```

**Related Commands**

[channel-group](#)  
[interface port-channel](#)

# show flowcontrol

To display the per-interface status and statistics related to flow control, use the **show flowcontrol** command.

```
show flowcontrol [module slot | interface interface]
```

Syntax Description	module slot	(Optional) Limits the display to interfaces on a specific module.
	interface interface	(Optional) Displays the status on a specific interface.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** Table 2-18 describes the fields in the **show flowcontrol** command output.

**Table 2-18** show flowcontrol Command Output

Field	Description
Port	Module and port number.
Send-Flowcontrol-Admin	Flow-control administration. Possible settings: <b>on</b> indicates the local port sends flow control to the far end; <b>off</b> indicates the local port does not send flow control to the far end; <b>desired</b> indicates the local end sends flow control to the far end if the far end supports it.
Send-Flowcontrol-Oper	Flow-control operation. Possible setting: <b>disagree</b> indicates the two ports could not agree on a link protocol.
Receive-Flowcontrol-Admin	Flow-control administration. Possible settings: <b>on</b> indicates the local port requires the far end to send flow control; <b>off</b> indicates the local port does not allow the far end to send flow control; <b>desired</b> indicates the local end allows the far end to send flow control.
Receive-Flowcontrol-Oper	Flow-control operation. Possible setting: <b>disagree</b> indicates the two ports could not agree on a link protocol.
RxPause	Number of pause frames received.
TxPause	Number of pause frames transmitted.

**Examples**

This example shows how to display the flow control status on all the Gigabit Ethernet interfaces:

```
Switch# show flowcontrol
Port          Send FlowControl  Receive FlowControl  RxPause TxPause
              admin    oper              admin    oper
-----
Te1/1         off     off              on       off        0       0
Te1/2         off     off              on       off        0       0
Gi1/3         off     off              desired  on         0       0
Gi1/4         off     off              desired  on         0       0
Gi1/5         off     off              desired  on         0       0
Gi1/6         off     off              desired  on         0       0
Gi3/1         off     off              desired  off        0       0
Gi3/2         off     off              desired  off        0       0
Gi3/3         off     off              desired  off        0       0
Gi3/4         off     off              desired  off        0       0
Gi3/5         off     off              desired  off        0       0
Gi3/6         off     off              desired  off        0       0
Switch#
```

This example shows how to display the flow control status on module 1:

```
Switch# show flowcontrol module 1
Port          Send FlowControl  Receive FlowControl  RxPause TxPause
              admin    oper              admin    oper
-----
Gi1/1         desired  off              off     off        0       0
Gi1/2         on       disagree on              on      0       0
Switch#
```

This example shows how to display the flow control status on Gigabit Ethernet interface 3/4:

```
Switch# show flowcontrol interface gigabitethernet3/4
Port          Send FlowControl  Receive FlowControl  RxPause TxPause
              admin    oper              admin    oper
-----
Gi3/4         off     off              on       on         0       0
Switch#
```

This example shows how to display the flow control status on 10-Gigabit Ethernet interface 1/1:

```
Switch# show flowcontrol interface tengigabitethernet1/1
Port          Send FlowControl  Receive FlowControl  RxPause TxPause
              admin    oper              admin    oper
-----
Te1/1         off     off              on       off        0       0
Switch#
```

**Related Commands**

[flowcontrol](#)  
[show interfaces status](#)

# show hw-module uplink

To display the current uplink mode, use the **show hw-module uplink** command.

**show hw-module uplink**

**Defaults** None

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(25)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** If the active uplink mode is different than configured mode, the output displays the change. By default, the current (operational) uplink selection is displayed.

**Examples** This example shows the output displaying the current (active) uplinks:

```
Switch# show hw-module uplink
Active uplink configuration is TenGigabitEthernet
```

This example shows the output for redundant systems in SSO mode if the 10-Gigabit Ethernet uplinks are active, and the Gigabit Ethernet uplinks are selected:

```
Switch# show hw-module uplink
Active uplink configuration is TenGigabitEthernet
(will be GigabitEthernet after next reload)
A 'redundancy reload shelf' or power-cycle of chassis is required to
apply the new configuration
```

This example shows the output for redundant systems in RPR mode if the 10-Gigabit Ethernet uplinks are active, and the Gigabit Ethernet uplinks are selected:

```
Switch# show hw-module uplink
Active uplink configuration is TenGigabitEthernet
(will be GigabitEthernet after next reload)
A reload of active supervisor is required to apply the new configuration.
```

**Related Commands** [hw-module uplink select](#)

# show idprom

To display the IDPROMs for the chassis, supervisor engine, module, power supplies, fan trays, clock module, and multiplexer (mux) buffer, use the **show idprom** command.

```
show idprom { all | chassis | module [mod] | interface int_name | supervisor | power-supply
  number | fan-tray }
```

Syntax Description		
<b>all</b>		Displays information for all IDPROMs.
<b>chassis</b>		Displays information for the chassis IDPROMs.
<b>module</b>		Displays information for the module IDPROMs.
<i>mod</i>		(Optional) Specifies the module name.
<b>interface</b> <i>int_name</i>		Displays information for the GBIC or SFP IDPROMs.
<b>supervisor</b>		Displays information for the supervisor engine IDPROMs.
<b>power-supply</b> <i>number</i>		Displays information for the power supply IDPROMs.
<b>fan-tray</b>		Displays information for the fan tray IDPROMs.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for the <b>power-supply</b> , <b>fan-tray</b> , <b>clock-module</b> , and <b>mux-buffer</b> keywords was added.
	12.1(13)EW	Support for <b>interface</b> keyword was added.
	12.2(18)EW	Enhanced the <b>show idprom interface</b> output to include the hexadecimal display of the GBIC/SFP SEEPROM contents.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** When you enter the **show idprom interface** command, the output lines for Calibration type and Rx (receive) power measurement may not be displayed for all GBICs.

**Examples**

This example shows how to display IDPROM information for module 4:

```
Switch# show idprom module 4
Module 4 Idprom:
Common Block Signature = 0xABAB

Switch#
```

# show interfaces

To display traffic on a specific interface, use the **show interfaces** command.

```
show interfaces [{fastethernet mod/interface-number} | {gigabitethernet
  mod/interface-number} | {tengigabitethernet mod/interface-number} | {null
  interface-number} | vlan vlan_id] | status}]
```

Syntax Description		
<b>fastethernet</b> <i>mod/interface-number</i>	(Optional)	Specifies the Fast Ethernet module and interface.
<b>gigabitethernet</b> <i>mod/interface-number</i>	(Optional)	Specifies the Gigabit Ethernet module and interface.
<b>tengigabitethernet</b> <i>mod/interface-number</i>	(Optional)	Specifies the 10-Gigabit Ethernet module and interface.
<b>null</b> <i>interface-number</i>	(Optional)	Specifies the null interface; the valid value is 0.
<b>vlan</b> <i>vlan_id</i>	(Optional)	Specifies the VLAN; valid values are from 1 to 4094.
<b>status</b>	(Optional)	Displays status information.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for extended VLAN addresses was added.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.
	12.2(31)SGA	Support for auto-MDIX reflected in command output.

**Usage Guidelines** The statistics are collected on a per-VLAN basis for Layer 2 switched packets and Layer 3 switched packets. The statistics are available for both unicast and multicast. The Layer 3 switched packet counts are available for both the ingress and egress directions. The per-VLAN statistics are updated every 5 seconds.

In some cases, you might see a difference in the duplex mode that is displayed between the **show interfaces** command and the **show running-config** commands. The duplex mode that is displayed in the **show interfaces** command is the actual duplex mode that the interface is running. The **show interfaces** command shows the operating mode for an interface, while the **show running-config** command shows the configured mode for an interface.

If you do not enter any keywords, all counters for all modules are displayed.

Linecards that support auto-MDIX configuration on their copper media ports include: WS-X4124-RJ45, WS-X4148-RJ with hardware revision 3.0 or higher, and WS-X4232-GB-RJ with hardware revision 3.0 or higher.

## Examples

This example shows how to display traffic for Gigabit Ethernet interface 2/5:

```
Switch# show interfaces gigabitethernet2/5
GigabitEthernet9/5 is up, line protocol is up
Hardware is C4k 1000Mb 802.3, address is 0001.64f8.3fa5 (bia 0001.64f8.3fa5)
Internet address is 172.20.20.20/24
MTU 1500 bytes, BW 1000000 Kbit, DLY 10 usec,
reliability 255/255, txload 1/255, rxload 1/255
Encapsulation ARPA, loopback not set
Keepalive set (10 sec)
Full-duplex, 1000Mb/s
ARP type: ARPA, ARP Timeout 04:00:00
Last input 00:00:00, output never, output hang never
Last clearing of "show interface" counters never
Queueing strategy: fifo
Output queue 0/40, 0 drops; input queue 0/75, 0 drops
5 minute input rate 1000 bits/sec, 2 packets/sec
5 minute output rate 0 bits/sec, 0 packets/sec
L2 Switched: ucast: 8199 pkt, 1362060 bytes - mcast: 6980 pkt, 371952 bytes
L3 in Switched: ucast: 0 pkt, 0 bytes - mcast: 0 pkt, 0 bytes mcast
L3 out Switched: ucast: 0 pkt, 0 bytes - mcast: 0 pkt, 0 bytes
300114 packets input, 27301436 bytes, 0 no buffer
Received 43458 broadcasts, 0 runts, 0 giants, 0 throttles
0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
0 input packets with dribble condition detected
15181 packets output, 1955836 bytes, 0 underruns
0 output errors, 0 collisions, 3 interface resets
0 babbles, 0 late collision, 0 deferred
0 lost carrier, 0 no carrier
0 output buffer failures, 0 output buffers swapped out
Switch#
```

This example shows how to display traffic for 10-Gigabit Ethernet interface 1/1:

```
Switch# show interfaces tengigabitethernet1/1
Name: Tengigabitethernet1/1
Switchport: Enabled
Administrative Mode: private-vlan promiscuous trunk
Operational Mode: private-vlan promiscuous (suspended member of bundle Po1)
Administrative Trunking Encapsulation: negotiate
Operational Trunking Encapsulation: native
Negotiation of Trunking: Off
Access Mode VLAN: none
Trunking Native Mode VLAN: none
Administrative Native VLAN tagging: enabled
Voice VLAN: none
Administrative private-vlan host-association: none
Administrative private-vlan mapping: 202 (VLAN0202) 303 (VLAN0303) 304 (VLAN0304)
Administrative private-vlan trunk native VLAN: none
Administrative private-vlan trunk
Native VLAN tagging: enabled
Administrative private-vlan trunk encapsulation: 802.1q
Administrative private-vlan trunk normal VLANs: none
Administrative private-vlan trunk private VLANs: none
Administrative private-vlan mapping trunk: New 202 (VLAN0202) 303 (VLAN0303) 304
(VLAN0304) 204 (VLAN0204) 305 (VLAN0305) 306 (VLAN0306)
```

```
Operational private-vlan: 202 (VLAN0202) 303 (VLAN0303) 304 (VLAN0304)
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: 2-1001
Capture Mode Disabled
Capture VLANs Allowed: ALL
Switch#
```

This example shows how to check the status of auto-MDIX on a RJ-45 port:

**Note**

You can verify the configuration setting and the operational state of auto-MDIX on the interface by entering the **show interfaces EXEC** command. This field is applicable and appears only on the **show interfaces** command output for 10/100/1000BaseT RJ45 copper ports on supported linecards including WS-X4124-RJ45, WS-X4148-RJ with hardware revision 3.0 or higher, and WS-X4232-GB-RJ with hardware revision 3.0 or higher.

```
FastEthernet6/3 is up, line protocol is up (connected)
Hardware is Fast Ethernet Port, address is 0003.6ba8.ee68 (bia 0003.6ba8.ee68)
MTU 1500 bytes, BW 100000 Kbit, DLY 100 usec,
    reliability 255/255, txload 1/255, rxload 1/255
Encapsulation ARPA, loopback not set
Keepalive set (10 sec)
Full-duplex, 100Mb/s, link type is auto, media type is 10/100BaseTX
input flow-control is unsupported output flow-control is unsupported
Auto-MDIX on (operational: on)
ARP type: ARPA, ARP Timeout 04:00:00
Last input never, output never, output hang never
Last clearing of "show interface" counters never
Input queue: 0/2000/0/0 (size/max/drops/flushes); Total output drops: 0
Queueing strategy: fifo
Output queue: 0/40 (size/max)
5 minute input rate 0 bits/sec, 0 packets/sec
5 minute output rate 0 bits/sec, 0 packets/sec
    0 packets input, 0 bytes, 0 no buffer
Received 0 broadcasts (0 multicasts)
    0 runts, 0 giants, 0 throttles
    0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored
    0 input packets with dribble condition detected
157082 packets output, 13418032 bytes, 0 underruns
    0 output errors, 0 collisions, 0 interface resets
    0 babbles, 0 late collision, 0 deferred
    1 lost carrier, 0 no carrier
    0 output buffer failures, 0 output buffers swapped out
Switch#
```

This example shows how to display status information for Gigabit Ethernet interface 1/2:

```
Switch# show interfaces gigabitethernet1/2 status
Port      Name      Status      Vlan      Duplex  Speed Type
Gi1/2                    notconnect  1          auto     1000 1000-XWDM-RXONLY
Switch#
```

This example shows how to display status information for the interfaces on the supervisor engine:

```
Switch# show interfaces status

Port      Name      Status      Vlan      Duplex  Speed Type
Te1/1                    connected  1          full     10G 10GBase-LR
Te1/2                    connected  1          full     10G 10GBase-LR
Switch#
```

# show interfaces capabilities

To display the interface capabilities for an interface or for all the interfaces on a switch, use the **show interfaces capabilities** command.

```
show interfaces capabilities [{module mod}]
```

```
show interfaces [interface interface-number] capabilities
```

Syntax Description	Parameter	Description
	<b>module</b> <i>mod</i>	(Optional) Display information for the specified module only.
	<i>interface</i>	(Optional) Interface type; valid values are <b>fastethernet</b> , <b>gigabitethernet</b> , <b>tengigabitethernet</b> , and <b>port-channel</b> .
	<i>interface-number</i>	(Optional) Port number.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.
	12.2(31)SGA	Support for auto-MDIX reflected in command output.

**Usage Guidelines** The *interface-number* argument designates the module and port number. Valid values for *interface-number* depend on the chassis and module used. For example, if you have a 48-port 10/100-Mbps Fast Ethernet RJ-21 (telco connector) switching module installed in a Catalyst 4507 chassis, valid values for the slot number are from 2 to 13 and valid values for the port number are 1 to 48. Linecards that support auto-MDIX configuration on their copper media ports include: WS-X4124-RJ45, WS-X4148-RJ with hardware revision 3.0 or higher, and WS-X4232-GB-RJ with hardware revision 3.0 or higher.

**Examples**

This example shows how to display the interface capabilities for a module:

```
Switch# show interfaces capabilities module 1
GigabitEthernet1/1
  Model: WS-X4516-Gbic
  Type: Unsupported GBIC
  Speed: 1000
  Duplex: full
  Trunk encap. type: 802.1Q, ISL
  Trunk mode: on, off, desirable, nonegotiate
  Channel: yes
  Broadcast suppression: percentage(0-100), hw
  Flowcontrol: rx-(off, on, desired), tx-(off, on, desired)
  VLAN Membership: static, dynamic
  Fast Start: yes
  Queuing: rx-(N/A), tx-(4q1t, Sharing/Shaping)
  CoS rewrite: yes
  ToS rewrite: yes
  Inline power: no
  SPAN: source/destination
  UDLD: yes
  Link Debounce: no
  Link Debounce Time: no
  Port Security: yes
  Dot1x: yes
GigabitEthernet1/2
  Model: WS-X4516-Gbic
  Type: Unsupported GBIC
  Speed: 1000
  Duplex: full
  Trunk encap. type: 802.1Q, ISL
  Trunk mode: on, off, desirable, nonegotiate
  Channel: yes
  Broadcast suppression: percentage(0-100), hw
  Flowcontrol: rx-(off, on, desired), tx-(off, on, desired)
  VLAN Membership: static, dynamic
  Fast Start: yes
  Queuing: rx-(N/A), tx-(4q1t, Sharing/Shaping)
  CoS rewrite: yes
  ToS rewrite: yes
  Inline power: no
  SPAN: source/destination
  UDLD: yes
  Link Debounce: no
  Link Debounce Time: no
  Port Security: yes
  Dot1x: yes
Switch#
```

This example shows how to display the interface capabilities for the 10-Gigabit Ethernet interface 1/1:

```
Switch# show interfaces tengigabitethernet1/1 capabilities
TenGigabitEthernet1/1
  Model: WS-X4517-X2
  Type: 10GBase-LR
  Speed: 10000
  Duplex: full
  Trunk encap. type: 802.1Q, ISL
  Trunk mode: on, off, desirable, nonegotiate
  Channel: yes
  Broadcast suppression: percentage(0-100), hw
  Flowcontrol: rx-(off, on), tx-(off, on)
  VLAN Membership: static, dynamic
  Fast Start: yes
```

```

Queuing:                rx-(N/A), tx-(1p3q1t, Sharing/Shaping)
CoS rewrite:            yes
ToS rewrite:            yes
Inline power:           no
SPAN:                   source/destination
UDLD:                   yes
Link Debounce:          no
Link Debounce Time:     no
Port Security:          yes
Dot1x:                  yes
Maximum MTU:            9198 bytes (Jumbo Frames)
Multiple Media Types:   no
Diagnostic Monitoring:  N/A
Switch#

```

This example shows how to display the interface capabilities for Gigabit Ethernet interface 1/1:

```

Switch# show interfaces gigabitethernet1/1 capabilities
GigabitEthernet1/1
  Model:                WS-X4014-Gbic
  Type:                 No Gbic
  Speed:                1000
  Duplex:               full
  Trunk encap. type:    802.1Q, ISL
  Trunk mode:           on, off, desirable, nonegotiate
  Channel:              yes
  Broadcast suppression: percentage(0-100), hw
  Flowcontrol:          rx-(off, on, desired), tx-(off, on, desired)
  VLAN Membership:      static, dynamic
  Fast Start:           yes
  Queuing:              rx-(N/A), tx-(4q1t, Sharing/Shaping)
  CoS rewrite:          yes
  ToS rewrite:          yes
  Inline power:         no
  SPAN:                 source/destination
  UDLD:                 yes
  Link Debounce:        no
  Link Debounce Time:  no
  Port Security:        yes
  Dot1x:                yes
  MTU Supported:        jumbo frames, baby giants
Switch#

```

This example shows how to display the interface capabilities for Fast Ethernet interface 3/1:

```

Switch# show interfaces fastethernet3/1 capabilities
FastEthernet3/1
  Model:                WS-X4148-RJ-RJ-45
  Type:                 10/100BaseTX
  Speed:                10, 100, auto
  Duplex:               half, full, auto
  Trunk encap. type:    802.1Q, ISL
  Trunk mode:           on, off, desirable, nonegotiate
  Channel:              yes
  Broadcast suppression: percentage(0-100), sw
  Flowcontrol:          rx-(none), tx-(none)
  VLAN Membership:      static, dynamic
  Fast Start:           yes
  Queuing:              rx-(N/A), tx-(4q1t, Shaping)
  CoS rewrite:          yes
  ToS rewrite:          yes
  Inline power:         no
  SPAN:                 source/destination
  UDLD:                 yes

```

**show interfaces capabilities**

```

Link Debounce:          no
Link Debounce Time:    no
Port Security:         yes
Dot1x:                 yes
MTU Supported:         no jumbo frames, baby giants
Switch#

```

This example shows how to check if auto-MDIX configuration is supported on a port:

```

Switch# show interfaces fa 6/3 capabilities
FastEthernet6/3
  Model:                WS-X4232-GB-RJ-RJ-45
  Type:                 10/100BaseTX
  Speed:                10,100,auto
  Duplex:               half,full,auto
  Auto-MDIX             yes
  Trunk encap. type:    802.1Q,ISL
  Trunk mode:           on,off,desirable,nonegotiate
  Channel:              yes
  Broadcast suppression: percentage(0-100), hw
  Flowcontrol:          rx-(none),tx-(none)
  VLAN Membership:      static, dynamic
  Fast Start:           yes
  Queuing:              rx-(N/A), tx-(lp3q1t, Sharing/Shaping)
  CoS rewrite:          yes
  ToS rewrite:          yes
  Inline power:         no
  SPAN:                 source/destination
  UDLD:                 yes
  Link Debounce:        no
  Link Debounce Time:  no
  Port Security:        yes
  Dot1x:                yes
  Maximum MTU:          1552 bytes (Baby Giants)
  Multiple Media Types: no
  Diagnostic Monitoring: N/A
Switch#

```

**Related Commands** [show interfaces counters](#)

# show interfaces counters

To display the traffic on the physical interface, use the **show interfaces counters** command.

**show interfaces counters** [**all** | **detail** | **errors** | **storm-control** | **trunk**] [**module** *mod*]

Syntax Description	
<b>all</b>	(Optional) Displays all the interface counters including errors, trunk, and detail.
<b>detail</b>	(Optional) Displays the detailed interface counters.
<b>errors</b>	(Optional) Displays the interface error counters.
<b>storm-control</b>	(Optional) Displays the number of packets discarded due to suppression on the interface.
<b>trunk</b>	(Optional) Displays the interface trunk counters.
<b>module</b> <i>mod</i>	(Optional) Limits the display to interfaces on a specific module.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(19)EW	Support for storm control.
	12.2(18)EW	Support for the display of total suppression discards.

**Usage Guidelines** If you do not enter any keywords, all the counters for all modules are displayed. The display for the **storm-control** keyword includes the suppressed multicast bytes.

**Examples** This example shows how to display the error counters for a specific module:

```
Switch# show interfaces counters errors module 1

Port          Align-Err   FCS-Err    Xmit-Err    Rcv-Err    UnderSize
Gi1/1         0           0           0           0           0
Gi1/2         0           0           0           0           0

Port          Single-Col  Multi-Col   Late-Col    Excess-Col  Carri-Sen   Runts      Giants
Gi1/1         0           0           0           0           0           0           0
Gi1/2         0           0           0           0           0           0           0
Switch#
```

**show interfaces counters**

This example shows how to display the traffic that is seen by a specific module:

```
Switch# show interfaces counters module 1

Port          InOctets  InUcastPkts  InMcastPkts  InBcastPkts
Gi1/1         0         0             0             0
Gi1/2         0         0             0             0

Port          OutOctets  OutUcastPkts  OutMcastPkts  OutBcastPkts
Gi1/1         0         0             0             0
Gi1/2         0         0             0             0
Switch#
```

This example shows how to display the trunk counters for a specific module:

```
Switch# show interfaces counters trunk module 1

Port          TrunkFramesTx  TrunkFramesRx  WrongEncap
Gi1/1         0              0              0
Gi1/2         0              0              0
Switch#
```

This example shows how to display the number of packets that are discarded due to suppression:

```
Switch# show interfaces counters storm-control

Multicast Suppression : Enabled

Port          BcastSuppLevel  TotalSuppressionDiscards
Fa5/35        10.00%          6278550
Switch#
```

Switch#
```

---

<b>Related Commands</b>	<b>description</b> (refer to Cisco IOS documentation)
-------------------------	---

# show interfaces link

To display how long a cable has been disconnected from an interface, use the **show interfaces link** command:

```
show interfaces link [module mod_num]
```

<b>Syntax Description</b>	<b>module</b> <i>mod_num</i> (Optional) Limits the display to interfaces on a module.
---------------------------	---

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.2(18)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** If the interface state is up, the command displays 0:00. If the interface state is down, the time (in hours, minutes, and seconds) is displayed.

**Examples** This example shows how to display active link-level information:

```
Switch# show interfaces link

Port      Name           Down Time
-----
Gi1/1     Gi1/1          00:00:00
Gi1/2     Gi1/2          00:00:00
Gi3/1     Gi3/1          00:00:00
Gi3/2     Gi3/2          00:00:00
Fa4/1     Fa4/1          00:00:00
Fa4/2     Fa4/2          00:00:00
Fa4/3     Fa4/3          00:00:00
Fa4/4     Fa4/4          00:00:00
```

This example shows how to display inactive link-level information:

```
Switch# show interfaces link

Port      Name           Down Time
-----
Gi3/4     Gi3/4          1 minute 28 secs
Gi3/5     Gi3/5          1 minute 28 secs
Gi3/6     Gi3/6          1 minute 28 secs
Gi4/1     Gi4/1          1 minute 28 secs
```

In this example, the cable has been disconnected from the port for 1 minute and 28 seconds.

# show interfaces mtu

To display the maximum transmission unit (MTU) size of all the physical interfaces and SVIs on the switch, use the **show interfaces mtu** command.

```
show interfaces mtu [module mod]
```

<b>Syntax Description</b>	<b>module <i>mod</i></b> (Optional) Limits the display to interfaces on a specific module.
---------------------------	--

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	EXEC
----------------------	------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.

<b>Examples</b>	This example shows how to display the MTU size for all interfaces on module 1:
-----------------	--

```
Switch> show interfaces mtu module 1

Port      Name           MTU
Gi1/1     Gi1/1          1500
Gi1/2     Gi1/2          1500
Switch>
```

<b>Related Commands</b>	<a href="#">mtu</a>

# show interfaces private-vlan mapping

To display PVLAN mapping information for VLAN SVIs, use the **show interfaces private-vlan mapping** command.

**show interfaces private-vlan mapping [active]**

<b>Syntax Description</b>	<b>active</b> (Optional) Displays active interfaces only.
---------------------------	---

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	Privileged EXEC
----------------------	-----------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

<b>Usage Guidelines</b>	This command displays SVI information only.
-------------------------	---

<b>Examples</b>	This example shows how to display PVLAN mapping information:
-----------------	--

```
Switch# show interfaces private-vlan mapping
Interface Secondary VLAN Type
-----
vlan2      301          isolated
vlan2      302          isolated
Switch#
```

<b>Related Commands</b>	<a href="#">private-vlan</a> <a href="#">private-vlan mapping</a>
-------------------------	--

# show interfaces status

To display the interface status or a list of interfaces in error-disabled state, use the **show interfaces status** command.

**show interfaces status [err-disabled]**

<b>Syntax Description</b>	<b>err-disabled</b> (Optional) Displays interfaces in error-disabled state.				
<b>Defaults</b>	This command has no default settings.				
<b>Command Modes</b>	Privileged EXEC				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>12.1(8a)EW</td> <td>Support for this command was introduced on the Catalyst 4500 series switch.</td> </tr> </tbody> </table>	Release	Modification	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
Release	Modification				
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.				

## Examples

This example shows how to display the status of all interfaces:

```
Switch# show interfaces status

Port      Name           Status      Vlan      Duplex Speed Type
Gi1/1     Gi1/1          disabled    routed    full   1000 missing
Gi1/2     Gi1/2          notconnect  1         full   1000 unknown (4)
Fa5/1     Fa5/1          disabled    routed    auto   auto 10/100BaseTX
Fa5/2     Fa5/2          disabled    routed    auto   auto 10/100BaseTX
Fa5/3     Fa5/3          disabled    routed    auto   auto 10/100BaseTX
Fa5/4     Fa5/4          disabled    routed    auto   auto 10/100BaseTX
...
Fa5/15    Fa5/15         disabled    routed    auto   auto 10/100BaseTX
Fa5/16    Fa5/16         disabled    routed    auto   auto 10/100BaseTX
Fa5/17    Fa5/17         disabled    routed    auto   auto 10/100BaseTX
Switch#
```

This example shows how to display the status of interfaces in an error-disabled state:

```
Switch# show interfaces status err-disabled

Port      Name           Status      Reason
Fa9/4     Fa9/4          notconnect  link-flap

informational error message when the timer expires on a cause
-----

5d04h:%PM-SP-4-ERR_RECOVER:Attempting to recover from link-flap err-disable state on Fa9/4
Switch#
```

## Related Commands

# show interfaces switchport

To display the administrative and operational status of a switching (nonrouting) port, use the **show interfaces switchport** command.

```
show interfaces [interface-id] switchport [module mod]
```

Syntax Description	
<i>interface-id</i>	(Optional) Interface ID for the physical port.
<b>module mod</b>	(Optional) Limits the display to interfaces on the specified module; valid values are from 1 to 6.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(19)EW	Support for per-interface display.
	12.2(18)EW	Support for displaying the status of native VLAN tagging in the command output.

**Examples** This example shows how to display switch-port information using the **begin** output modifier:

```
Switch# show interfaces switchport | include VLAN
Name: Fa5/6
Access Mode VLAN: 200 (VLAN0200)
Trunking Native Mode VLAN: 1 (default)
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: ALL
Switch#
```

This example shows how to display switch-port information for module 1:

```
Switch# show interfaces switchport module 1
Name:Gi1/1
Switchport:Enabled
Administrative Mode:dynamic auto
Operational Mode:down
Administrative Trunking Encapsulation:negotiate
Negotiation of Trunking:On
Access Mode VLAN:1 (default)
Trunking Native Mode VLAN:1 (default)
Administrative private-vlan host-association:none
Administrative private-vlan mapping:none
Operational private-vlan:none
Trunking VLANs Enabled:ALL
Pruning VLANs Enabled:2-1001

Name:Gi1/2
Switchport:Enabled
```

```

Administrative Mode:dynamic auto
Operational Mode:down
Administrative Trunking Encapsulation: negotiate
Negotiation of Trunking:On
Access Mode VLAN:1 (default)
Trunking Native Mode VLAN:1 (default)
Administrative private-vlan host-association:none
Administrative private-vlan mapping:none
Operational private-vlan:none
Trunking VLANs Enabled:ALL
Pruning VLANs Enabled:2-1001
Switch#

```

This example shows how to display the status of native VLAN tagging on the port:

```

Switch# show interfaces f3/1 switchport
show interface f3/1 switchport
Name: Fa3/1
Switchport: Enabled
Administrative Mode: private-vlan trunk promiscuous
Operational Mode: private-vlan trunk promiscuous
Administrative Trunking Encapsulation: negotiate
Operational Trunking Encapsulation: dot1q
Negotiation of Trunking: On
Access Mode VLAN: 1 (default)
Trunking Native Mode VLAN: 1 (default)
Administrative Native VLAN tagging: enabled
Voice VLAN: none
Administrative private-vlan host-association: none
Administrative private-vlan mapping: none
Administrative private-vlan trunk native VLAN: 1
Administrative private-vlan trunk Native VLAN tagging: enabled
Administrative private-vlan trunk encapsulation: dot1q
Administrative private-vlan trunk normal VLANs: 1
Administrative private-vlan trunk associations: none
Administrative private-vlan trunk mappings:
    10 (VLAN0010) 100 (VLAN0100)
Operational private-vlan:
    10 (VLAN0010) 100 (VLAN0100)
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: 2-1001
Capture Mode Disabled
Capture VLANs Allowed: ALL

Unknown unicast blocked: disabled
Unknown multicast blocked: disabled
Appliance trust: none
Switch#

```

### Related Commands

[show interfaces capabilities](#)  
[show interfaces counters](#)

# show interfaces transceiver

To display diagnostic-monitoring data for all interfaces that have transceivers installed, use the **show interfaces transceiver** command.

```
show interfaces {[int_name] transceiver {[detail]} | {transceiver [module mod] | detail
[module mod]}}
```

## Syntax Description

<i>int_name</i>	(Optional) Interface.
<b>detail</b>	(Optional) Displays the calibrated values and the A2D readouts if the readout values differ from the calibrated values. Also displays the high-alarm, high-warning, low-warning, and low-alarm thresholds.
<b>module mod</b>	(Optional) Limits the display to interfaces on a specific module.

## Defaults

The noninterface-specific versions of the **show interfaces transceiver** command are enabled by default. The interface-specific versions of these commands are enabled by default if the specified interface has a transceiver (GBIC or SFP) that is configured for diagnostic monitoring, and the transceiver is in a module that supports diagnostic monitoring.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(20)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(18)EW	Support for the <b>calibration</b> keyword was withdrawn.

## Usage Guidelines

The **show interfaces transceiver** command provides useful information under the following conditions:

- At least one transceiver is installed on a chassis that is configured for diagnostic monitoring.
- The transceiver is in a module that supports diagnostic monitoring.

If you notice that the alarm and warning flags have been set on a transceiver, reenter the command to confirm.

**Examples**

This example shows how to display diagnostic monitoring data for all interfaces with transceivers installed on the switch:

```
Switch# show interfaces transceiver
If device is externally calibrated, only calibrated values are printed.
++ : high alarm, + : high warning, - : low warning, -- : low alarm.
NA or N/A: not applicable, Tx: transmit, Rx: receive.
mA: milliamperes, dBm: decibels (milliwatts).
```

Port	Temperature (Celsius)	Voltage (Volts)	Current (mA)	Optical Tx Power (dBm)	Optical Rx Power (dBm)
Gi1/1	48.1	3.30	0.0	8.1 ++	N/A
Gi1/2	33.0	3.30	1.8	-10.0	-36.9
Gi2/1	43.7	5.03	50.6 +	-16.7 --	N/A
Gi2/2	39.2	5.02	25.7	0.8	N/A

```
Switch#
```

**Note** The value for the Optical Tx Power (in dBm) equals ten times log (Tx Power in mW). If the Tx Power value is 3 mW, then the Optical Tx Power value equals  $10 * \log(3)$ , which equals  $10 * .477$  or 4.77 dBm. The Optical Rx Power value behaves similarly. If the Tx Power or the Rx Power is zero, then its dBm value is undefined and is shown as N/A (not applicable).

This example shows how to display detailed diagnostic monitoring data, including calibrated values, alarm and warning thresholds, A2D readouts, and alarm and warning flags. The A2D readouts are reported separately in parentheses only if they differ from the calibrated values:

```
Switch# show interfaces transceiver detail
mA: milliamperes, dBm: decibels (milliwatts), NA or N/A: not applicable.
++ : high alarm, + : high warning, - : low warning, -- : low alarm.
A2D readouts (if they differ), are reported in parentheses.
The threshold values are calibrated.
```

Port	Temperature (Celsius)	High Alarm Threshold (Celsius)	High Warn Threshold (Celsius)	Low Warn Threshold (Celsius)	Low Alarm Threshold (Celsius)
Gi1/1	48.1	100.0	100.0	0.0	0.0
Gi1/2	34.9	100.0	100.0	0.0	0.0
Gi2/1	43.5	70.0	60.0	5.0	0.0
Gi2/2	39.1	70.0	60.0	5.0	0.0

Port	Voltage (Volts)	High Alarm Threshold (Volts)	High Warn Threshold (Volts)	Low Warn Threshold (Volts)	Low Alarm Threshold (Volts)
Gi1/1	3.30	6.50	6.50	N/A	N/A
Gi1/2	3.30	6.50	6.50	N/A	N/A
Gi2/1	5.03	5.50	5.25	4.75	4.50
Gi2/2	5.02	5.50	5.25	4.75	4.50

Port	Current (milliamperes)	High Alarm Threshold (mA)	High Warn Threshold (mA)	Low Warn Threshold (mA)	Low Alarm Threshold (mA)
Gi1/1	0.0	130.0	130.0	N/A	N/A
Gi1/2	1.7	130.0	130.0	N/A	N/A
Gi2/1	50.6 +	60.0	40.0	10.0	5.0
Gi2/2	25.8	60.0	40.0	10.0	5.0

## show interfaces transceiver

Port	Optical Transmit Power (dBm)		High Alarm Threshold (dBm)	High Warn Threshold (dBm)	Low Warn Threshold (dBm)	Low Alarm Threshold (dBm)
Gi1/1	8.1	++	8.1	8.1	N/A	N/A
Gi1/2	-9.8		8.1	8.1	N/A	N/A
Gi2/1	-16.7 (-13.0)	--	3.4	3.2	-0.3	-0.5

Port	Optical Transmit Power (dBm)		High Alarm Threshold (dBm)	High Warn Threshold (dBm)	Low Warn Threshold (dBm)	Low Alarm Threshold (dBm)
Gi2/1	-16.7 (-13.0)	--	3.4	3.2	-0.3	-0.5
Gi2/2	0.8 ( 5.1)		3.4	3.2	-0.3	-0.5

  

Port	Optical Receive Power (dBm)		High Alarm Threshold (dBm)	High Warn Threshold (dBm)	Low Warn Threshold (dBm)	Low Alarm Threshold (dBm)
Gi2/1	N/A (-28.5)		5.9	-6.7	-28.5	-28.5
Gi2/2	N/A (-19.5)		5.9	-6.7	-28.5	-28.5

Switch#

This example shows how to display the monitoring data for the transceivers on interface Gi1/2:

```
Switch# show interfaces g1/2 transceiver
ITU Channel 23 (1558.98 nm),
Transceiver is externally calibrated.
If device is externally calibrated, only calibrated values are printed.
++ : high alarm, + : high warning, - : low warning, -- : low alarm.
NA or N/A: not applicable, Tx: transmit, Rx: receive.
mA: milliamperes, dBm: decibels (milliwatts).
```

Port	Temperature (Celsius)	Voltage (Volts)	Current (mA)	Optical Tx Power (dBm)	Optical Rx Power (dBm)
Gi2/1	43.7	5.03	50.6 +	-16.7 --	N/A

Switch#

This example shows how to display detailed the monitoring data for the transceivers on interface Gi1/2:

```
Switch# show interfaces g1/2 transceiver detail
ITU Channel 23 (1558.98 nm),
Transceiver is externally calibrated.
mA: milliamperes, dBm: decibels (milliwatts), NA or N/A: not applicable.
++ : high alarm, + : high warning, - : low warning, -- : low alarm.
A2D readouts (if they differ), are reported in parentheses.
The threshold values are calibrated.
```

Port	Temperature (Celsius)	High Alarm Threshold (Celsius)	High Warn Threshold (Celsius)	Low Warn Threshold (Celsius)	Low Alarm Threshold (Celsius)
Gi2/1	43.5	70.0	60.0	5.0	0.0

  

Port	Voltage (Volts)	High Alarm Threshold (Volts)	High Warn Threshold (Volts)	Low Warn Threshold (Volts)	Low Alarm Threshold (Volts)
Gi2/1	5.03	5.50	5.25	4.75	4.50

**show interfaces transceiver**

Port	Current (milliamperes)		High Alarm Threshold (mA)	High Warn Threshold (mA)	Low Warn Threshold (mA)	Low Alarm Threshold (mA)
Gi2/1	50.6	+	60.0	40.0	10.0	5.0

  

Port	Optical Transmit Power (dBm)		High Alarm Threshold (dBm)	High Warn Threshold (dBm)	Low Warn Threshold (dBm)	Low Alarm Threshold (dBm)
Gi2/1	-16.7 (-13.0)	--	3.4	3.2	-0.3	-0.5

  

Port	Optical Receive Power (dBm)		High Alarm Threshold (dBm)	High Warn Threshold (dBm)	Low Warn Threshold (dBm)	Low Alarm Threshold (dBm)

Switch#

**Related Commands**

[show idprom](#)  
[show interfaces status](#)

# show interfaces trunk

To display port and module interface-trunk information, use the **show interfaces trunk** command.

```
show interfaces trunk [module mod]
```

<b>Syntax Description</b>	<b>module <i>mod</i></b> (Optional) Limits the display to interfaces on the specified module; valid values are from 1 to 6.				
<b>Defaults</b>	This command has no default settings.				
<b>Command Modes</b>	Privileged EXEC				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>12.1(8a)EW</td> <td>Support for this command was introduced on the Catalyst 4500 series switch.</td> </tr> </tbody> </table>	Release	Modification	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
Release	Modification				
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.				

**Usage Guidelines** If you do not specify a keyword, only information for trunking ports is displayed.

**Examples** This example shows how to display interface-trunk information for module 5:

```
Switch# show interfaces trunk module 5

Port      Mode      Encapsulation  Status      Native vlan
Fa5/1     routed    negotiate       routed      1

Switch#

```

# show ip arp inspection

To show the status of dynamic ARP inspection for a specific range of VLANs, use the **show ip arp inspection** command.

```
show ip arp inspection {[statistics] vlan vlan-range | interfaces [interface-name]}
```

Syntax Description		
<b>statistics</b>	(Optional) Displays statistics for the following types of packets that have been processed by this feature: forwarded, dropped, MAC validation failure, and IP validation failure.	
<b>vlan <i>vlan-range</i></b>	(Optional) When used with the <b>statistics</b> keyword, displays the statistics for the selected range of VLANs. Without the <b>statistics</b> keyword, displays the configuration and operating state of DAI for the selected range of VLANs.	
<b>interfaces <i>interface-name</i></b>	(Optional) Displays the trust state and the rate limit of ARP packets for the provided interface. When the interface name is not specified, the command displays the trust state and rate limit for all applicable interfaces in the system.	

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display the statistics of packets that have been processed by DAI for VLAN 3:

```
Switch# show ip arp inspection statistics vlan 3

Vlan      Forwarded      Dropped      DHCP Drops      ACL Drops
-----
3         31753         102407         102407          0

Vlan      DHCP Permits    ACL Permits    Source MAC Failures
-----
3         31753          0              0

Vlan      Dest MAC Failures  IP Validation Failures
-----
3         0                0

Switch#
```

This example shows how to display the statistics of packets that have been processed by DAI for all active VLANs:

```
Switch# show ip arp inspection statistics
```

Vlan	Forwarded	Dropped	DHCP Drops	ACL Drops
1	0	0	0	0
2	0	0	0	0

[clear ip arp inspection log](#)

# show ip cef vlan

To view IP CEF VLAN interface status and configuration information and display the prefixes for a specific interface, use the **show ip cef vlan** command.

**show ip cef vlan** *vlan\_num* [**detail**]

## Syntax Description

<i>vlan_num</i>	Number of the VLAN.
<b>detail</b>	(Optional) Displays detailed information.

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

## Examples

This example shows how to display the prefixes for a specific VLAN:

```
Switch# show ip cef vlan 1003
Prefix          Next Hop          Interface
0.0.0.0/0       172.20.52.1       FastEthernet3/3
0.0.0.0/32      receive
10.7.0.0/16     172.20.52.1       FastEthernet3/3
10.16.18.0/23   172.20.52.1       FastEthernet3/3
Switch#
```

This example shows how to display detailed IP CEF information for a specific VLAN:

```
Switch# show ip cef vlan 1003 detail
IP Distributed CEF with switching (Table Version 2364), flags=0x0
 1383 routes, 0 reresolve, 0 unresolved (0 old, 0 new)
 1383 leaves, 201 nodes, 380532 bytes, 2372 inserts, 989 invalidations
 0 load sharing elements, 0 bytes, 0 references
 universal per-destination load sharing algorithm, id 9B6C9823
 3 CEF resets, 0 revisions of existing leaves
 refcounts: 54276 leaf, 51712 node

Adjacency Table has 5 adjacencies
Switch#
```

# show ip dhcp snooping

To display the DHCP snooping configuration, use the **show ip dhcp snooping** command.

**show ip dhcp snooping**

**Syntax Description** This command has no arguments or keywords.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EWA	Support for option 82 on untrusted ports was added.

**Examples** This example shows how to display the DHCP snooping configuration:

```
Switch# show ip dhcp snooping
Switch DHCP snooping is enabled
DHCP snooping is configured on the following VLANs:
5 10
Insertion of option 82 is enabled
Option82 on untrusted port is not allowed
Verification of hwaddr field is enabled
Interface           Trusted      Rate limit (pps)
-----
FastEthernet6/11    no          10
FastEthernet6/36    yes         50
Switch#
```

# show ip dhcp snooping binding

To display the DHCP snooping binding entries, use the **show ip dhcp snooping binding** command.

```
show ip dhcp snooping binding [ip-address] [mac-address] [vlan vlan_num]
[interface interface_num]
```

Syntax Description		
<i>ip-address</i>	(Optional) IP address for the binding entries.	
<i>mac-address</i>	(Optional) MAC address for the binding entries.	
<b>vlan</b> <i>vlan_num</i>	(Optional) Specifies a VLAN.	
<b>interface</b> <i>interface_num</i>	(Optional) Specifies an interface.	

**Defaults** If no argument is specified, the switch will display the entire DHCP snooping binding table.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** DHCP snooping is enabled on a VLAN only if both the global snooping and the VLAN snooping are enabled.

To configure a range of VLANs, use the optional *last\_vlan* argument to specify the end of the VLAN range.

**Examples** This example shows how to display the DHCP snooping binding entries for a switch:

```
Switch# show ip dhcp snooping binding
```

```
MacAddress      IP Address      Lease (seconds)  Type              VLAN  Interface
-----
0000.0100.0201  10.0.0.1        1600             dhcp-snooping     100   FastEthernet3/1
Switch#
```

This example shows how to display an IP address for DHCP snooping binding entries:

```
Switch# show ip dhcp snooping binding 172.100.101.102
```

```
MacAddress      IP Address      Lease (seconds)  Type              VLAN  Interface
-----
0000.0100.0201  172.100.101.102  1600             dhcp-snooping     100   FastEthernet3/1
Switch#
```

## show ip dhcp snooping binding

This example shows how to display the MAC address for the DHCP snooping binding entries:

```
Switch# show ip dhcp snooping binding 55.5.5.2 0002.b33f.3d5f
```

MacAddress	IpAddress	Lease(sec)	Type	VLAN	Interface
00:02:B3:3F:3D:5F	55.5.5.2	492	dhcp-snooping	99	FastEthernet6/36

This example shows how to display the DHCP snooping binding entries' MAC address for a specific VLAN:

```
Switch# show ip dhcp snooping binding 55.5.5.2 0002.b33f.3d5f vlan 99
```

MacAddress	IpAddress	Lease(sec)	Type	VLAN	Interface
00:02:B3:3F:3D:5F	55.5.5.2	479	dhcp-snooping	99	FastEthernet6/36

This example shows how to display the dynamic DHCP snooping binding entries:

```
Switch# show ip dhcp snooping binding dynamic
```

MacAddress	IP Address	Lease (seconds)	Type	VLAN	Interface
0000.0100.0201	10.0.0.1	1600	dhcp-snooping	100	FastEthernet3/1

This example shows how to display the DHCP snooping binding entries on VLAN 100:

```
Switch# show ip dhcp snooping binding vlan 100'
```

MacAddress	IP Address	Lease (seconds)	Type	VLAN	Interface
0000.0100.0201	10.0.0.1	1600	dhcp-snooping	100	FastEthernet3/1

This example shows how to display the DHCP snooping binding entries on Ethernet interface 0/1:

```
Switch# show ip dhcp snooping binding interface fastethernet3/1
```

MacAddress	IP Address	Lease (seconds)	Type	VLAN	Interface
0000.0100.0201	10.0.0.1	1600	dhcp-snooping	100	FastEthernet3/1

Table 2-19 describes the fields in the `show ip dhcp snooping` command output.

**Table 2-19** show ip dhcp snooping Command Output

Field	Description
Mac Address	Client hardware MAC address.
IP Address	Client IP address assigned from the DHCP server.
Lease (seconds)	IP address lease time.
Type	Binding type; statically configured from CLI or dynamically learned.
VLAN	VLAN number of the client interface.
Interface	Interface that connects to the DHCP client host.

# show ip dhcp snooping database

To display the status of the DHCP snooping database agent, use the **show ip dhcp snooping database** command.

**show ip dhcp snooping database [detail]**

<b>Syntax Description</b>	<b>detail</b> (Optional) Provides additional operating state and statistics information.
---------------------------	--

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	Privileged EXEC
----------------------	-----------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(19)EW	Added support of state and statistics information.

<b>Examples</b>	This example shows how to display the DHCP snooping database:
-----------------	---

```
Switch# show ip dhcp snooping database
Agent URL :
Write delay Timer : 300 seconds
Abort Timer : 300 seconds

Agent Running : No
Delay Timer Expiry : Not Running
Abort Timer Expiry : Not Running

Last Succeeded Time : None
Last Failed Time : None
Last Failed Reason : No failure recorded.

Total Attempts      :          0   Startup Failures :          0
Successful Transfers :          0   Failed Transfers :          0

# show ip igmp interface

To view IP IGMP interface status and configuration information, use the **show ip igmp interface** command.

```
show ip igmp interface [fastethernet slot/port | gigabitethernet slot/port |
tengigabitethernet slot/port | null interface-number | vlan vlan_id]
```

Syntax Description		
<b>fastethernet</b> <i>slot/port</i>	(Optional) Specifies the Fast Ethernet interface and the number of the slot and port.	
<b>gigabitethernet</b> <i>slot/port</i>	(Optional) Specifies the Gigabit Ethernet interface and the number of the slot and port; valid values are from 1 to 9.	
<b>tengigabitethernet</b> <i>slot/port</i>	(Optional) Specifies the 10-Gigabit Ethernet interface and the number of the slot and port; valid values are from 1 to 2.	
<b>null</b> <i>interface-number</i>	(Optional) Specifies the null interface and the number of the interface; the only valid value is <b>0</b> .	
<b>vlan</b> <i>vlan_id</i>	(Optional) Specifies the VLAN and the number of the VLAN; valid values are from 1 to 4094.	

**Defaults** If you do not specify a VLAN, information for VLAN 1 is shown.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Added support for extended VLAN addresses.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

**Usage Guidelines** If you omit the optional arguments, the **show ip igmp interface** command displays information about all interfaces.

**Examples** This example shows how to view IGMP information for VLAN 200:

```
Switch# show ip igmp interface vlan 200
IGMP snooping is globally enabled
IGMP snooping is enabled on this Vlan
IGMP snooping immediate-leave is disabled on this Vlan
IGMP snooping mrouter learn mode is pim-dvmrp on this Vlan
IGMP snooping is running in IGMP-ONLY mode on this VLAN
Switch#
```

**Related Commands**

[clear ip igmp group](#)  
[show ip igmp snooping mrouter](#)

# show ip igmp profile

To view all configured IGMP profiles or a specified IGMP profile, use the **show ip igmp profile** privileged EXEC command.

**show ip igmp profile** [*profile number*]

Syntax Description	
	<i>profile number</i> (Optional) IGMP profile number to be displayed; valid ranges are from 1 to 4294967295.

Defaults	
	This command has no default settings.

Command Modes	
	Privileged EXEC

Command History	Release	Modification
	12.1(11b)EW	Support for this command was introduced on the Catalyst 4500 series switch.

Usage Guidelines	
	If no profile number is entered, all IGMP profiles are displayed.

Examples	
	This example shows how to display IGMP profile 40:

```
Switch# show ip igmp profile 40
IGMP Profile 40
  permit
  range 233.1.1.1 233.255.255.255
Switch#
```

This example shows how to display all IGMP profiles:

```
Switch# show ip igmp profile
IGMP Profile 3
  range 230.9.9.0 230.9.9.0
IGMP Profile 4
  permit
  range 229.9.9.0 229.255.255.255
Switch#
```

Related Commands	
	<a href="#">ip igmp profile</a>

# show ip igmp snooping

To display information on dynamically learned and manually configured VLAN switch interfaces, use the **show ip igmp snooping** command.

```
show ip igmp snooping [querier | groups | mrouter] [vlan vlan_id] a.b.c.d [summary | sources |
hosts] [count]
```

Syntax Description	
<b>querier</b>	(Optional) Specifies that the display will contain IP address and version information.
<b>groups</b>	(Optional) Specifies that the display will list VLAN members sorted by group IP addresses.
<b>mrouter</b>	(Optional) Specifies that the display will contain information on dynamically learned and manually configured multicast switch interfaces.
<b>vlan vlan_id</b>	(Optional) Specifies a VLAN; valid values are from 1 to 1001 and from 1006 to 4094.
<b>a.b.c.d</b>	Group or multicast IP address.
<b>summary</b>	(Optional) Specifies a display of detailed information for a v2 or v3 group.
<b>sources</b>	(Optional) Specifies a list of the source IPs for the specified group.
<b>hosts</b>	(Optional) Specifies a list of the host IPs for the specified group.
<b>count</b>	(Optional) Specifies a display of the total number of group addresses learned by the system on a global or per-VLAN basis.

## Defaults

This command has no default settings.

## Command Modes

EXEC

## Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(19)EW	Support for extended addressing was added.
12.1(20)EW	Added support to display configuration state for IGMPv3 explicit host tracking.

## Usage Guidelines

You can also use the **show mac-address-table multicast** command to display the entries in the MAC address table for a VLAN that has IGMP snooping enabled.

You can display IGMP snooping information for VLAN interfaces by entering the **show ip igmp snooping** command.

**Examples**

This example shows how to display the global snooping information on the switch:

```
Switch# show ip igmp snooping
Global IGMP Snooping configuration:
-----
IGMP snooping           : Enabled
IGMPv3 snooping        : Enabled
Report suppression     : Enabled
TCN solicit query      : Disabled
TCN flood query count   : 2

Vlan 1:
-----
IGMP snooping           : Enabled
IGMPv2 immediate leave : Disabled
Explicit host tracking  : Enabled
Multicast router learning mode : pim-dvmrp
CGMP interoperability mode : IGMP_ONLY

Vlan 2:
-----
IGMP snooping           : Enabled
IGMPv2 immediate leave : Disabled
Explicit host tracking  : Enabled
Multicast router learning mode : pim-dvmrp
CGMP interoperability mode : IGMP_ONLY
Switch>
```

This example shows how to display the snooping information on VLAN 2:

```
Switch# show ip igmp snooping vlan 2
Global IGMP Snooping configuration:
-----
IGMP snooping           : Enabled
IGMPv3 snooping        : Enabled
Report suppression     : Enabled
TCN solicit query      : Disabled
TCN flood query count   : 2

Vlan 2:
-----
IGMP snooping           : Enabled
IGMPv2 immediate leave : Disabled
Explicit host tracking  : Enabled
Multicast router learning mode : pim-dvmrp
CGMP interoperability mode : IGMP_ONLY
Switch>
```

This example shows how to display IGMP querier information for all VLANs on a switch:

```
Switch# show ip igmp snooping querier
Vlan      IP Address      IGMP Version      Port
-----
2         10.10.10.1      v2                 Router
3         172.20.50.22   v3                 Fa3/15
Switch>
```

This example shows how to display IGMP querier information for VLAN 5 when running IGMPv2:

```
Switch# show ip igmp snooping querier vlan 5
IP address           :5.5.5.10
IGMP version         :v2
Port                 :Fa3/1
Max response time    :10s
Switch>
```

This example shows how to display IGMP querier information for VLAN 5 when running IGMPv3:

```
Switch# show ip igmp snooping querier vlan 5
IP address           :5.5.5.10
IGMP version         :v3
Port                 :Fa3/1
Max response time    :10s
Query interval       :60s
Robustness variable  :2
Switch>
```

This example shows how to display snooping information for a specific group:

```
Switch# show ip igmp snooping group

Vlan      Group          Version  Ports
-----
2         224.0.1.40     v3      Router
2         224.2.2.2      v3      Fa6/2
Switch>
```

This example shows how to display the group's host types and ports in VLAN 1:

```
Switch# show ip igmp snooping group vlan 1

Vlan      Group          Host Type  Ports
-----
1         229.2.3.4     v3        fa2/1 fa2/3
1         224.2.2.2     v3        Fa6/2
Switch>
```

This example shows how to display the group's host types and ports in VLAN 1:

```
Switch# show ip igmp snooping group vlan 10 226.6.6.7

Vlan      Group          Version  Ports
-----
10        226.6.6.7     v3      Fa7/13, Fa7/14
Switch>
```

This example shows how to display the current state of a group with respect to a source IP address:

```
Switch# show ip igmp snooping group vlan 10 226.6.6.7 sources
Source information for group 226.6.6.7:
Timers: Expired sources are deleted on next IGMP General Query

SourceIP      Expires      Uptime      Inc Hosts  Exc Hosts
-----
2.0.0.1       00:03:04    00:03:48    2          0
2.0.0.2       00:03:04    00:02:07    2          0
Switch>
```

## show ip igmp snooping

This example shows how to display the current state of a group with respect to a host MAC address:

```
Switch# show ip igmp snooping group vlan 10 226.6.6.7 hosts
IGMPv3 host information for group 226.6.6.7
Timers: Expired hosts are deleted on next IGMP General Query

Host (MAC/IP)  Filter mode    Expires    Uptime     # Sources
-----
175.1.0.29    INCLUDE         stopped    00:00:51   2
175.2.0.30    INCLUDE         stopped    00:04:14   2
Switch>
```

This example shows how to display summary information for a v3 group:

```
Switch# show ip igmp snooping group vlan 10 226.6.6.7 summary
Group Address (Vlan 10)      : 226.6.6.7
Host type                    : v3
Member Ports                 : Fa7/13, Fa7/14
Filter mode                  : INCLUDE
Expires                      : stopped
Sources                      : 2
Reporters (Include/Exclude) : 2/0
Switch>
```

This example shows how to display multicast router information for VLAN 1:

```
Switch# show ip igmp snooping mrouter vlan 1
vlan          ports
-----+-----
1             Gi1/1,Gi2/1,Fa3/48,Router
Switch#
```

This example shows how to display the total number of group addresses learned by the system globally:

```
Switch# show ip igmp snooping group count
Total number of groups: 54
Switch>
```

This example shows how to display the total number of group addresses learned on VLAN 5:

```
Switch# show ip igmp snooping group vlan 5 count
Total number of groups: 30
Switch>
```

# show ip igmp snooping membership

To display host membership information, use the **show ip igmp snooping membership** command.

```
show ip igmp snooping membership [interface interface_num] [vlan vlan_id]
[reporter a.b.c.d] [source a.b.c.d group a.b.c.d]
```

## Syntax Description

<b>interface</b> <i>interface_num</i>	(Optional) Displays IP address and version information of an interface.
<b>vlan</b> <i>vlan_id</i>	(Optional) Displays VLAN members sorted by group IP address of a VLAN; valid values are from 1 to 1001 and from 1006 to 4094.
<b>reporter</b> <i>a.b.c.d</i>	(Optional) Displays membership information for a specified reporter.
<b>source</b> <i>a.b.c.d</i>	(Optional) Specifies a reporter, source, or group IP address.
<b>group</b> <i>a.b.c.d</i>	(Optional) Displays all members of a channel (source, group), sorted by interface or VLAN.

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(20)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

## Usage Guidelines

This command is valid only if explicit host tracking is enabled on the switch.

## Examples

This example shows how to display host membership for the Gigabit Ethernet interface 4/1:

```
Switch# show ip igmp snooping membership interface gigabitethernet4/1
#channels: 5
#hosts : 1
Source/Group Interface Reporter Uptime Last-Join Last-Leave
40.40.40.2/224.10.10.10 Gi4/1 20.20.20.20 00:23:37 00:06:50 00:20:30

Switch#
```

This example shows how to display host membership for VLAN 20 and group 224.10.10.10:

```
Switch# show ip igmp snooping membership vlan 20 source 40.40.40.2 group 224.10.10.10
#channels: 5
#hosts : 1
Source/Group Interface Reporter Uptime Last-Join Last-Leave
40.40.40.2/224.10.10.10 Gi4/1 20.20.20.20 00:23:37 00:06:50 00:20:30
Switch#
```

**show ip igmp snooping membership**

This example shows how to display host membership information for VLAN 20 and to delete the explicit host tracking:

```
Switch# show ip igmp snooping membership vlan 20
Snooping Membership Summary for Vlan 20
```

```
-----
Total number of channels:5
```

```
Total number of hosts :4
```

# show ip igmp snooping vlan

To display information on the dynamically learned and manually configured VLAN switch interfaces, use the **show ip igmp snooping vlan** command.

```
show ip igmp snooping vlan vlan_num
```

<b>Syntax Description</b>	<i>vlan_num</i> Number of the VLAN; valid values are from 1 to 1001 and from 1006 to 4094.
---------------------------	--

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	Privileged EXEC
----------------------	-----------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for extended addressing was added.

<b>Usage Guidelines</b>	You can also use the <a href="#">show mac-address-table multicast</a> command to display the entries in the MAC address table for a VLAN that has IGMP snooping enabled.
-------------------------	--

<b>Examples</b>	This example shows how to display snooping information for a specific VLAN:
-----------------	---

```
Switch# show ip igmp snooping vlan 2
vlan 2
-----
IGMP snooping is globally enabled
IGMP snooping TCN solicit query is globally enabled
IGMP snooping global TCN flood query count is 2
IGMP snooping is enabled on this Vlan
IGMP snooping immediate-leave is disabled on this Vlan
IGMP snooping mrouter learn mode is pim-dvmrp on this Vlan
IGMP snooping is running in IGMP_ONLY mode on this Vlan
Switch#
```

<b>Related Commands</b>	<a href="#">ip igmp snooping</a> <a href="#">ip igmp snooping vlan immediate-leave</a> <a href="#">ip igmp snooping vlan mrouter</a> <a href="#">ip igmp snooping vlan static</a> <a href="#">show ip igmp interface</a> <a href="#">show ip igmp snooping mrouter</a> <a href="#">show mac-address-table multicast</a>
-------------------------	---

# show ip interface

To display the usability status of interfaces that are configured for IP, use the **show ip interface** command.

```
show ip interface [type number]
```

Syntax Description	
<i>type</i>	(Optional) Interface type.
<i>number</i>	(Optional) Interface number.

**Defaults** This command has no default settings.

**Command Modes** EXEC

Command History	Release	Modification
	12.2(25)EW	Extended to include the 10-Gigabit Ethernet interface.

**Usage Guidelines** The Cisco IOS software automatically enters a directly connected route in the routing table if the interface is usable. A usable interface is one through which the software can send and receive packets. If the software determines that an interface is not usable, it removes the directly connected routing entry from the routing table. Removing the entry allows the software to use dynamic routing protocols to determine backup routes to the network, if any.

If the interface can provide two-way communication, the line protocol is marked “up.” If the interface hardware is usable, the interface is marked “up.”

If you specify an optional interface type, you see information only on that specific interface.

If you specify no optional arguments, you see information on all the interfaces.

When an asynchronous interface is encapsulated with PPP or Serial Line Internet Protocol (SLIP), IP fast switching is enabled. The **show ip interface** command on an asynchronous interface that is encapsulated with PPP or SLIP displays a message indicating that IP fast switching is enabled.

**Examples** This example shows how to display the usability status for a specific VLAN:

```
Switch# show ip interface vlan 1
Vlan1 is up, line protocol is up
  Internet address is 10.6.58.4/24
  Broadcast address is 255.255.255.255
  Address determined by non-volatile memory
  MTU is 1500 bytes
  Helper address is not set
  Directed broadcast forwarding is disabled
  Outgoing access list is not set
  Inbound access list is not set
  Proxy ARP is enabled
```

## show ip interface

```

Local Proxy ARP is disabled
Security level is default
Split horizon is enabled
ICMP redirects are always sent
ICMP unreachable are always sent
ICMP mask replies are never sent
IP fast switching is enabled
IP fast switching on the same interface is disabled
IP Flow switching is disabled
IP CEF switching is enabled
IP Fast switching turbo vector
IP Normal CEF switching turbo vector
IP multicast fast switching is enabled
IP multicast distributed fast switching is disabled
IP route-cache flags are Fast, CEF
Router Discovery is disabled
IP output packet accounting is disabled
IP access violation accounting is disabled
TCP/IP header compression is disabled
RTP/IP header compression is disabled
Probe proxy name replies are disabled
Policy routing is disabled
Network address translation is disabled
WCCP Redirect outbound is disabled
WCCP Redirect inbound is disabled
WCCP Redirect exclude is disabled
BGP Policy Mapping is disabled
Sampled Netflow is disabled
IP multicast multilayer switching is disabled
Netflow Data Export (hardware) is enabled
Switch#

```

Table 2-20 describes the fields that are shown in the example.

**Table 2-20** show ip interface Field Descriptions

Field	Description
Ethernet0 is up	If the interface hardware is usable, the interface is marked “up.” For an interface to be usable, both the interface hardware and line protocol must be up.
line protocol is up	If the interface can provide two-way communication, the line protocol is marked “up.” For an interface to be usable, both the interface hardware and line protocol must be up.
Internet address and subnet mask	IP address and subnet mask of the interface.
Broadcast address	Broadcast address.
Address determined by...	Status of how the IP address of the interface was determined.
MTU	MTU value that is set on the interface.
Helper address	Helper address, if one has been set.
Secondary address	Secondary address, if one has been set.
Directed broadcast forwarding	Status of directed broadcast forwarding.
Multicast groups joined	Multicast groups to which this interface belongs.
Outgoing access list	Status of whether the interface has an outgoing access list set.
Inbound access list	Status of whether the interface has an incoming access list set.

**Table 2-20** *show ip interface Field Descriptions (continued)*

<b>Field</b>	<b>Description</b>
Proxy ARP	Status of whether Proxy Address Resolution Protocol (ARP) is enabled for the interface.
Security level	IP Security Option (IPSO) security level set for this interface.
Split horizon	Status of split horizon.
ICMP redirects	Status of the redirect messages on this interface.
ICMP unreachable	Status of the unreachable messages on this interface.
ICMP mask replies	Status of the mask replies on this interface.
IP fast switching	Status of whether fast switching has been enabled for this interface. Fast switching is typically enabled on serial interfaces, such as this one.
IP SSE switching	Status of the IP silicon switching engine (SSE).
Router Discovery	Status of the discovery process for this interface. It is typically disabled on serial interfaces.
IP output packet accounting	Status of IP accounting for this interface and the threshold (maximum number of entries).
TCP/IP header compression	Status of compression.
Probe proxy name	Status of whether the HP Probe proxy name replies are generated.
WCCP Redirect outbound is enabled	Status of whether packets that are received on an interface are redirected to a cache engine.
WCCP Redirect exclude is disabled	Status of whether packets that are targeted for an interface are excluded from being redirected to a cache engine.
Netflow Data Export (hardware) is enabled	NDE hardware flow status on the interface.

# show ip mfib

To display all active Multicast Forwarding Information Base (MFIB) routes, use the **show ip mfib** command.

```
show ip mfib [all | counters | log [n]]
```

Syntax Description	all	(Optional) Specifies all routes in the MFIB, including those routes that are used to accelerate fast switching but that are not necessarily in the upper-layer routing protocol table.
	counters	(Optional) Specifies the counts of MFIB-related events. Only nonzero counters are shown.
	log	(Optional) Specifies a log of the most recent number of MFIB-related events. The most recent event is first.
	n	(Optional) Number of events.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** The MFIB table contains a set of IP multicast routes; each route in the MFIB table contains several flags that associate to the route.

The route flags indicate how a packet that matches a route is forwarded. For example, the IC flag on an MFIB route indicates that some process on the switch needs to receive a copy of the packet. These flags are associated with MFIB routes:

- Internal Copy (IC) flag—Set on a route when a process on the switch needs to receive a copy of all packets matching the specified route.
- Signaling (S) flag—Set on a route when a switch process needs notification that a packet matching the route is received. In the expected behavior, the protocol code updates the MFIB state in response to having received a packet on a signaling interface.
- Connected (C) flag—When set on a route, the C flag has the same meaning as the S flag, except that the C flag indicates that only packets sent by directly connected hosts to the route should be signaled to a protocol process.

A route can also have a set of flags associated with one or more interfaces. For an (S,G) route, the flags on interface 1 indicate how the ingress packets should be treated and whether packets matching the route should be forwarded onto interface 1. These per-interface flags are associated with the MFIB routes:

- Accepting (A)—Set on the RPF interface when a packet that arrives on the interface and that is marked as Accepting (A) is forwarded to all Forwarding (F) interfaces.
- Forwarding (F)—Used with the A flag as described above. The set of forwarding interfaces together form a multicast olist or output interface list.
- Signaling (S)—Set on an interface when a multicast routing protocol process in Cisco IOS needs to be notified of ingress packets on that interface.
- Not Platform (NP) fast-switched—Used with the F flag. A forwarding interface is also marked as Not Platform fast-switched whenever that output interface cannot be fast-switched by the platform hardware and requires software forwarding.

For example, the Catalyst 4506 switch with Supervisor Engine III cannot switch tunnel interfaces in hardware so these interfaces are marked with the NP flag. When an NP interface is associated with a route, a copy of every ingress packet arriving on an Accepting interface is sent to the switch software forwarding path for software replication and then forwarded to the NP interface.

### Examples

This example shows how to display all active MFIB routes:

```
Switch# show ip mfib
IP Multicast Forwarding Information Base
Entry Flags: C - Directly Connected, S - Signal,
             IC - Internal Copy
Interface Flags: A - Accept, F - Forward, NS - Signal,
                NP - Not platform switched
Packets: Fast/Partial/Slow Bytes: Fast/Partial/Slow:
(171.69.10.13, 224.0.1.40), flags (IC)
  Packets: 2292/2292/0, Bytes: 518803/0/518803
  Vlan7 (A)
  Vlan100 (F NS)
  Vlan105 (F NS)
(*, 224.0.1.60), flags ()
  Packets: 2292/0/0, Bytes: 518803/0/0
  Vlan7 (A NS)
(*, 224.0.1.75), flags ()
  Vlan7 (A NS)
(10.34.2.92, 239.192.128.80), flags ()
  Packets: 24579/100/0, 2113788/15000/0 bytes
  Vlan7 (F NS)
  Vlan100 (A)
(*, 239.193.100.70), flags ()
  Packets: 1/0/0, 1500/0/0 bytes
  Vlan7 (A)
Switch#
```

### Related Commands

[clear ip mfib counters](#)

# show ip mfib fastdrop

To show all currently active fast-drop entries and to show whether fast drop is enabled, use the **show ip mfib fastdrop** command.

**show ip mfib fastdrop**

**Syntax Description** This command has no arguments or keywords.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display all currently active fast-drop entries and whether fast drop is enabled.

```
Switch# show ip mfib fastdrop
MFIB fastdrop is enabled.
MFIB fast-dropped flows:
(10.0.0.1, 224.1.2.3, Vlan9 ) 00:01:32
(10.1.0.2, 224.1.2.3, Vlan9 ) 00:02:30
(1.2.3.4, 225.6.7.8, Vlan3) 00:01:50
Switch#
```

**Related Commands** [clear ip mfib fastdrop](#)

# show ip mroute

To display IP multicast routing table information, use the **show ip mroute** command.

```
show ip mroute [interface_type slot/port | host_name | host_address [source] | active [kbps | interface_type num] | count | pruned | static | summary]
```

Syntax Description	
<i>interface_type slot/port</i>	(Optional) Interface type and number of the slot and port; valid values for <i>interface type</i> are <b>fastethernet</b> , <b>gigabitethernet</b> , <b>tengigabitethernet</b> , <b>null</b> , and <b>vlan</b> .
<i>host_name</i>	(Optional) Name or IP address as defined in the DNS hosts table.
<i>host_address source</i>	(Optional) IP address or name of a multicast source.
<b>active</b>	(Optional) Displays the rate that active sources are sending to multicast groups.
<i>kbps interface_type num</i>	(Optional) Minimum rate at which active sources are sending to multicast groups; active sources sending at this rate or greater will be displayed. Valid values are from 1 to 4294967295 kbps.
<b>count</b>	(Optional) Displays the route and packet count information.
<b>pruned</b>	(Optional) Displays the pruned routes.
<b>static</b>	(Optional) Displays the static multicast routes.
<b>summary</b>	(Optional) Displays a one-line, abbreviated summary of each entry in the IP multicast routing table.

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

## Usage Guidelines

If you omit all the optional arguments and keywords, the **show ip mroute** command displays all the entries in the IP multicast routing table.

The **show ip mroute active kbps** command displays all the sources sending at a rate greater than or equal to *kbps*.

The multicast routing table is populated by creating source, group (S,G) entries from star, group (\*,G) entries. The star refers to all source addresses, the “S” refers to a single source address, and the “G” refers to the destination multicast group address. In creating (S,G) entries, the software uses the best path to that destination group found in the unicast routing table (through Reverse Path Forwarding (RPF)).

**Examples**

This example shows how to display all the entries in the IP multicast routing table:

```
Switch# show ip mroute

IP Multicast Routing Table
Flags:D - Dense, S - Sparse, s - SSM Group, C - Connected, L - Local,
      P - Pruned, R - RP-bit set, F - Register flag, T - SPT-bit set,
      J - Join SPT, M - MSDP created entry, X - Proxy Join Timer Running
      A - Advertised via MSDP, U - URD, I - Received Source Specific Host
      Report
Outgoing interface flags:H - Hardware switched
Timers:Uptime/Expires
Interface state:Interface, Next-Hop or VCD, State/Mode

(*, 230.13.13.1), 00:16:41/00:00:00, RP 10.15.1.20, flags:SJC
  Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20
  Outgoing interface list:

GigabitEthernet4/9, Forward/Sparse-Dense, 00:16:41/00:00:00, H

(*, 230.13.13.2), 00:16:41/00:00:00, RP 10.15.1.20, flags:SJC

  Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20, RPF-MFD
  Outgoing interface list:
    GigabitEthernet4/9, Forward/Sparse-Dense, 00:16:41/00:00:00, H

(10.20.1.15, 230.13.13.1), 00:14:31/00:01:40, flags:CJT

  Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20, RPF-MFD
  Outgoing interface list:
    GigabitEthernet4/9, Forward/Sparse-Dense, 00:14:31/00:00:00, H
(132.206.72.28, 224.2.136.89), 00:14:31/00:01:40, flags:CJT
  Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20, RPF-MFD

  Outgoing interface list:Null
Switch#
```

This example shows how to display the rate that the active sources are sending to the multicast groups and to display only the active sources that are sending at greater than the default rate:

```
Switch# show ip mroute active

Active IP Multicast Sources - sending > = 4 kbps

Group: 224.2.127.254, (sdr.cisco.com)
  Source: 146.137.28.69 (mbone.ipd.anl.gov)
  Rate: 1 pps/4 kbps(1sec), 4 kbps(last 1 secs), 4 kbps(life avg)

Group: 224.2.201.241, ACM 97
  Source: 130.129.52.160 (webcast3-e1.acm97.interop.net)
  Rate: 9 pps/93 kbps(1sec), 145 kbps(last 20 secs), 85 kbps(life avg)

Group: 224.2.207.215, ACM 97
  Source: 130.129.52.160 (webcast3-e1.acm97.interop.net)
  Rate: 3 pps/31 kbps(1sec), 63 kbps(last 19 secs), 65 kbps(life avg)
Switch#
```

This example shows how to display route and packet count information:

```
Switch# show ip mroute count
IP Multicast Statistics
56 routes using 28552 bytes of memory
13 groups, 3.30 average sources per group
Forwarding Counts:Pkt Count/Pkts per second/Avg Pkt Size/Kilobits per second

Other counts:Total/RPF failed/Other drops(OIF-null, rate-limit etc)

Group:224.2.136.89, Source count:1, Group pkt count:29051
Source:132.206.72.28/32, Forwarding:29051/-278/1186/0, Other:85724/8/56665
Switch#
```

This example shows how to display summary information:

```
Switch# show ip mroute summary
IP Multicast Routing Table
Flags: D - Dense, S - Sparse, s - SSM Group, C - Connected, L - Local,
       P - Pruned, R - RP-bit set, F - Register flag, T - SPT-bit set,
       J - Join SPT, M - MSDP created entry, X - Proxy Join Timer Running
       A - Advertised via MSDP, U - URD, I - Received Source Specific Host
       Report
Outgoing interface flags: H - Hardware switched
Timers: Uptime/Expires
Interface state: Interface, Next-Hop or VCD, State/Mode

Switch#
```

Table 2-21 describes the fields shown in the output.

**Table 2-21** *show ip mroute Field Descriptions*

Field	Description
Flags:	Information about the entry.
D - Dense	Entry is operating in dense mode.
S - Sparse	Entry is operating in sparse mode.
s - SSM Group	Entry is a member of an SSM group.
C - Connected	Member of the multicast group is present on the directly connected interface.
L - Local	Switch is a member of the multicast group.
P - Pruned	Route has been pruned. This information is retained in case a downstream member wants to join the source.
R - Rp-bit set	Status of the (S,G) entry; is the (S,G) entry pointing toward the RP. The R - Rp-bit set is typically a prune state along the shared tree for a particular source.
F - Register flag	Status of the software; indicates if the software is registered for a multicast source.
T - SPT-bit set	Status of the packets; indicates if the packets been received on the shortest path source tree.

Table 2-21 show ip mroute Field Descriptions (continued)

Field	Description
J - Join SPT	<p>For (*, G) entries, indicates that the rate of traffic flowing down the shared tree is exceeding the SPT-Threshold set for the group. (The default SPT-Threshold setting is 0 kbps.) When the J - Join SPT flag is set, the next (S,G) packet received down the shared tree triggers an (S,G) join in the direction of the source causing the switch to join the source tree.</p> <p>For (S, G) entries, indicates that the entry was created because the SPT-Threshold for the group was exceeded. When the J - Join SPT flag is set for (S,G) entries, the switch monitors the traffic rate on the source tree and attempts to switch back to the shared tree for this source if the traffic rate on the source tree falls below the group's SPT-Threshold for more than one minute.</p> <p>The switch measures the traffic rate on the shared tree and compares the measured rate to the group's SPT-Threshold once every second. If the traffic rate exceeds the SPT-Threshold, the J- Join SPT flag is set on the (*, G) entry until the next measurement of the traffic rate. The flag is cleared when the next packet arrives on the shared tree and a new measurement interval is started.</p> <p>If the default SPT-Threshold value of 0 Kbps is used for the group, the J- Join SPT flag is always set on (*, G) entries and is never cleared. When the default SPT-Threshold value is used, the switch immediately switches to the shortest-path tree when traffic from a new source is received.</p>
Outgoing interface flag:	Information about the outgoing entry.
H - Hardware switched	Entry is hardware switched.
Timer:	Uptime/Expires.
Interface state:	Interface, Next-Hop or VCD, State/Mode.
(*, 224.0.255.1) (198.92.37.100/32, 224.0.255.1)	<p>Entry in the IP multicast routing table. The entry consists of the IP address of the source switch followed by the IP address of the multicast group. An asterisk (*) in place of the source switch indicates all sources.</p> <p>Entries in the first format are referred to as (*,G) or "star comma G" entries. Entries in the second format are referred to as (S,G) or "S comma G" entries. (*,G) entries are used to build (S,G) entries.</p>
uptime	How long (in hours, minutes, and seconds) the entry has been in the IP multicast routing table.
expires	How long (in hours, minutes, and seconds) until the entry is removed from the IP multicast routing table on the outgoing interface.

**Table 2-21** show ip mroute Field Descriptions (continued)

Field	Description
RP	Address of the RP switch. For switches and access servers operating in sparse mode, this address is always 0.0.0.0.
flags:	Information about the entry.
Incoming interface	Expected interface for a multicast packet from the source. If the packet is not received on this interface, it is discarded.
RPF neighbor	IP address of the upstream switch to the source. “Tunneling” indicates that this switch is sending data to the RP encapsulated in Register packets. The hexadecimal number in parentheses indicates to which RP it is registering. Each bit indicates a different RP if multiple RPs per group are used.
DVMRP or Mroute	Status of whether the RPF information is obtained from the DVMRP routing table or the static mroutes configuration.
Outgoing interface list	Interfaces through which packets are forwarded. When the <b>ip pim nbma-mode</b> command is enabled on the interface, the IP address of the PIM neighbor is also displayed.
Ethernet0	Name and number of the outgoing interface.
Next hop or VCD	Next hop specifies downstream neighbor’s IP address. VCD specifies the virtual circuit descriptor number. VCD0 indicates that the group is using the static-map virtual circuit.
Forward/Dense	Status of the packets; indicates if they are they forwarded on the interface if there are no restrictions due to access lists or the TTL threshold. Following the slash (/), mode in which the interface is operating (dense or sparse).
Forward/Sparse	Sparse mode interface is in forward mode.
time/time (uptime/expiration time)	Per interface, how long (in hours, minutes, and seconds) the entry has been in the IP multicast routing table. Following the slash (/), how long (in hours, minutes, and seconds) until the entry is removed from the IP multicast routing table.

**Related Commands****ip multicast-routing** (refer to Cisco IOS documentation)**ip pim** (refer to Cisco IOS documentation)

# show ip source binding

To display IP source bindings that are configured on the system, use the **show ip source binding** EXEC command.

```
show ip source binding [ip-address] [mac-address] [dhcp-snooping | static] [vlan vlan-id]
[interface interface-name]
```

Syntax Description	
<i>ip-address</i>	(Optional) Binding IP address.
<i>mac-address</i>	(Optional) Binding MAC address.
<b>dhcp-snooping</b>	(Optional) DHCP-snooping type binding.
<b>static</b>	(Optional) Statically configured binding.
<b>vlan</b> <i>vlan-id</i>	(Optional) VLAN number.
<b>interface</b> <i>interface-name</i>	(Optional) Binding interface.

**Defaults** Displays both static and DHCP snooping bindings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** The optional parameters filter the display output result.

**Examples** This example shows how to display the IP source bindings:

```
Switch# show ip source binding
MacAddress      IpAddress      Lease(sec)  Type           VLAN  Interface
-----
00:00:00:0A:00:0B  11.0.0.1      infinite    static         10    FastEthernet6/10

Switch#
```

This example shows how to display the static IP binding entry of IP address 11.0.0.1:

```
Switch# show ip source binding 11.0.0.1 0000.000A.000B static vlan 10 interface Fa6/10
show ip source binding 11.0.0.1 0000.000A.000B static vlan 10 interface Fa6/10
MacAddress      IpAddress      Lease(sec)  Type           VLAN  Interface
-----
00:00:00:0A:00:0B  11.0.0.1      infinite    static         10    FastEthernet6/10

Switch#
```

**Related Commands** [ip source binding](#)

# show ip verify source

To display the IP source guard configuration and filters on a particular interface, use the **show ip verify source** command.

**show ip verify source** [**interface** *interface\_num*]

<b>Syntax Description</b>	<b>interface</b> <i>interface_num</i> (Optional) Specifies an interface.				
<b>Defaults</b>	This command has no default settings.				
<b>Command Modes</b>	Privileged EXEC				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>12.1(19)EW</td> <td>Support for this command was introduced on the Catalyst 4500 series switch.</td> </tr> </tbody> </table>	Release	Modification	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.
Release	Modification				
12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.				

## Examples

These examples show how to display the IP source guard configuration and filters on a particular interface with the **show ip verify source interface** command:

- This output appears when DHCP snooping is enabled on VLANs 10–20, interface fa6/1 has IP source filter mode that is configured as IP, and an existing IP address binding 10.0.0.1 is on VLAN 10:

Interface	Filter-type	Filter-mode	IP-address	Mac-address	Vlan
fa6/1	ip	active	10.0.0.1		10
fa6/1	ip	active	deny-all		11-20

**Note** The second entry shows that a default PVACL (deny all IP traffic) is installed on the port for those snooping-enabled VLANs that do not have a valid IP source binding.

- This output appears when you enter the **show ip verify source interface fa6/2** command and DHCP snooping is enabled on VLANs 10–20, interface fa6/1 has IP source filter mode that is configured as IP, and there is an existing IP address binding 10.0.0.1 on VLAN 10:

Interface	Filter-type	Filter-mode	IP-address	Mac-address	Vlan
fa6/2	ip	inactive-trust-port			

- This output appears when you enter the **show ip verify source interface fa6/3** command and the interface fa6/3 does not have a VLAN enabled for DHCP snooping:

Interface	Filter-type	Filter-mode	IP-address	Mac-address	Vlan
fa6/3	ip	inactive-no-snooping-vlan			

- This output appears when you enter the **show ip verify source interface fa6/4** command and the interface fa6/4 has an IP source filter mode that is configured as IP MAC and the existing IP MAC that binds 10.0.0.2/aaaa.bbbb.cccc on VLAN 10 and 11.0.0.1/aaaa.bbbb.cccd on VLAN 11:

Interface	Filter-type	Filter-mode	IP-address	Mac-address	Vlan
fa6/4	ip-mac	active	10.0.0.2	aaaa.bbbb.cccc	10
fa6/4	ip-mac	active	11.0.0.1	aaaa.bbbb.cccd	11
fa6/4	ip-mac	active	deny-all	deny-all	12-20

- This output appears when you enter the **show ip verify source interface fa6/5** command and the interface fa6/5 has IP source filter mode that is configured as IP MAC and existing IP MAC binding 10.0.0.3/aaaa.bbbb.cccc on VLAN 10, but port security is not enabled on fa6/5:

Interface	Filter-type	Filter-mode	IP-address	Mac-address	Vlan
fa6/5	ip-mac	active	10.0.0.3	permit-all	10
fa6/5	ip-mac	active	deny-all	permit-all	11-20

**Note** Enable port security first because the DHCP security MAC filter cannot apply to the port or VLAN.

- This output appears when you enter the **show ip verify source interface fa6/6** command and the interface fa6/6 does not have IP source filter mode that is configured:

DHCP security is not configured on the interface fa6/6.

This example shows how to display all the interfaces on the switch that have DHCP snooping security and IP Port Security tracking enabled with the **show ip verify source** command.

The output is an accumulation of per-interface **show** CLIs:

Interface	Filter-type	Filter-mode	IP-address	Mac-address	Vlan
fa6/1	ip	active	10.0.0.1		10
fa6/1	ip	active	deny-all		11-20
fa6/2	ip	inactive-trust-port			
Fa6/3	ip trk	active	40.1.1.24		10
Fa6/3	ip trk	active	40.1.1.20		10
Fa6/3	ip trk	active	40.1.1.21		10
fa6/4	ip-mac	active	10.0.0.2	aaaa.bbbb.cccc	10
fa6/4	ip-mac	active	11.0.0.1	aaaa.bbbb.cccd	11
fa6/4	ip-mac	active	deny-all	deny-all	12-20
fa6/5	ip-mac	active	10.0.0.3	permit-all	10
fa6/5	ip-mac	active	deny-all	permit-all	11-20

# show ipc

To display IPC information, use the **show ipc** command.

**show ipc { nodes | ports | queue | status }**

Syntax Description	nodes	Displays the participating nodes.
	ports	Displays the local IPC ports.
	queue	Displays the contents of the IPC retransmission queue.
	status	Displays the status of the local IPC server.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display the participating nodes:

```
Switch# show ipc nodes
There are 3 nodes in this IPC realm.
  ID      Type      Name                               Last Sent  Last Heard
  10000   Local      IPC Master                         0          0
  2010000 Local      GALIOS IPC:Card 1                  0          0
  2020000 Ethernet  GALIOS IPC:Card 2                  12         26
Switch#
```

This example shows how to display the local IPC ports:

```
Switch# show ipc ports
There are 11 ports defined.
Port ID      Type      Name                               (current/peak/total)
  10000.1     unicast   IPC Master:Zone
  10000.2     unicast   IPC Master:Echo
  10000.3     unicast   IPC Master:Control
  10000.4     unicast   Remote TTY Server Port
  10000.5     unicast   GALIOS RF :Active
  index = 0  seat_id = 0x2020000  last sent = 0  heard = 1635  0/1/1635
  10000.6     unicast   GALIOS RED:Active
  index = 0  seat_id = 0x2020000  last sent = 0  heard = 2  0/1/2
  2020000.3   unicast   GALIOS IPC:Card 2:Control
  2020000.4   unicast   GALIOS RFS :Standby
  2020000.5   unicast   Slave: Remote TTY Client Port
  2020000.6   unicast   GALIOS RF :Standby
  2020000.7   unicast   GALIOS RED:Standby
```

```
RPC packets: current/peak/total
                                                0/1/17
Switch#
```

This example shows how to display the contents of the IPC retransmission queue:

```
Switch# show ipc queue
There are 0 IPC messages waiting for acknowledgement in the transmit queue.
There are 0 IPC messages waiting for a response.
There are 0 IPC messages waiting for additional fragments.
There are 0 IPC messages currently on the IPC inboundQ.
There are 0 messages currently in use by the system.
Switch#
```

This example shows how to display the status of the local IPC server:

```
Switch# show ipc status
IPC System Status:

This processor is the IPC master server.

6000 IPC message headers in cache
3363 messages in, 1680 out, 1660 delivered to local port,
1686 acknowledgements received, 1675 sent,
0 NACKS received, 0 sent,
0 messages dropped on input, 0 messages dropped on output
0 no local port, 0 destination unknown, 0 no transport
0 missing callback or queue, 0 duplicate ACKs, 0 retries,
0 message timeouts.
0 ipc_output failures, 0 mtu failures,
0 msg alloc failed, 0 emer msg alloc failed, 0 no origs for RPC replies
0 pak alloc failed, 0 memd alloc failed
0 no hwq, 1 failed opens, 0 hardware errors
No regular dropping of IPC output packets for test purposes
Switch#
```

# show issu capability

To display the ISSU capability for a client, use the **show issu capability** command.

```
show issu capability {entries | groups | types} [client_id]
```

Syntax Description		
<b>entries</b>		Displays a list of Capability Types and Dependent Capability Types that are included in a single Capability Entry. Types within an entry can also be independent.
<b>groups</b>		Displays a list of Capability Entries in priority order (the order that they will be negotiated on a session).
<b>types</b>		Displays an ID that identifies a particular capability.
<i>client_id</i>		(Optional) Identifies the client registered to the ISSU infrastructure. To obtain a list of client IDs, use the <b>show issu clients</b> command.

**Defaults** This command has no default settings.

**Command Modes** User EXEC

Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** Capability is a functionality that an ISSU client can support and is required to interoperate with peers. When an ISSU-aware client establishes its session with the peer, an ISSU negotiation takes place. The ISSU infrastructure uses the registered information to negotiate the capabilities and the message version to be used during the session.

**Examples** The following example shows how to display the ISSU capability types for the IP host ISSU client (clientid=2082):

```
Switch#show issu capability types 2082
Client_ID = 2082, Entity_ID = 1 :
    Cap_Type = 0
Switch#
```

The following example shows how to display the ISSU capabilities entries for the IP host ISSU client (clientid=2082):

```
Switch#show issu capability entries 2082
Client_ID = 2082, Entity_ID = 1 :
    Cap_Entry = 1 :
        Cap_Type = 0
Switch#
```

**show issu capability**

The following example shows how to display the ISSU capabilities groups for the IP host ISSU client (clientid=2082):

```
Switch#show issu capability groups 2082
Client_ID = 2082, Entity_ID = 1 :
  Cap_Group = 1 :
    Cap_Entry = 1
      Cap_Type = 0
Switch#
```

**Related Commands**    [show issu clients](#)

# show issu clients

To display the ISSU clients, use the **show issu clients** command.

```
show issu clients [peer_uid]
```

<b>Syntax Description</b>	<i>peer_uid</i>	(Optional) Displays a list of clients registered to ISSU infrastructure at the peer supervisor engine.
---------------------------	-----------------	--

<b>Defaults</b>	Displays a list of clients registered to the ISSU infrastructure at the supervisor engine where the command is entered.
-----------------	---

<b>Command Modes</b>	User EXEC
----------------------	-----------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

<b>Usage Guidelines</b>	To implement ISSU versioning functionality, a client must first register itself, client capability, and client message information with the ISSU infrastructure during the system initialization.
-------------------------	---

**Examples** The following example shows how to display the ISSU clients:

```
Switch# show issu clients
Client_ID = 2, Client_Name = ISSU Proto client, Entity_Count = 1
Client_ID = 3, Client_Name = ISSU RF, Entity_Count = 1
Client_ID = 4, Client_Name = ISSU CF client, Entity_Count = 1

```

**Related Commands**

[show issu capability](#)  
[show issu entities](#)

# show issu comp-matrix

To display information regarding the In Service Software Upgrade (ISSU) compatibility matrix, use the **show issu comp-matrix** command.

```
show issu comp-matrix { negotiated | stored | xml }
```

Syntax Description	negotiated	Displays negotiated compatibility matrix information.
	stored	Displays stored compatibility matrix information.
	xml	Displays negotiated compatibility matrix information in XML format.

**Defaults** This command has no default settings.

**Command Modes** User EXEC

Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** Before attempting an ISSU, you should know the compatibility level between the old and the new Cisco IOS software versions on the active and the standby-supervisor engines. ISSU will not work if the two versions are incompatible.

The compatibility matrix is available on Cisco.com so that you can also view in advance whether an upgrade can be performed with the ISSU process. The compatibility matrix during the ISSU process and later by entering the **show issu comp-matrix** command. To display information on the negotiation of the compatibility matrix data between two software versions on a given system, use the **show issu comp-matrix negotiated** command.

Compatibility matrix data is stored with each Cisco IOS software image that supports ISSU capability. To display stored compatibility matrix information, use the **show issu comp-matrix stored** command.

The compatibility matrix information are built-in any IOS ISSU image. The ISSU infrastructure performs a matrix lookup as soon as the communication with the standby supervisor engine is established. There are three possible results from the lookup operation:

- **Compatible**—The Base-level system infrastructure and all optional HA-aware subsystems are compatible. In-service upgrade or downgrade between these versions will succeed with minimal service impact.
- **Base-Level Compatible**—One or more of the optional HA-aware subsystems are not compatible. Although an in-service upgrade or downgrade between these versions will succeed, some subsystems will not be able to maintain their state during the switchover. Prior to attempting an in-service upgrade or downgrade, the impact of this on operation and service of the switch must be considered carefully.

- **Incompatible**—A set of core system infrastructure must be able to execute in a stateful manner for SSO to function correctly. If any of these “required” features or subsystems is not compatible in two different IOS images, the two versions of the Cisco IOS images are declared “Incompatible”. This means that an in-service upgrade or downgrade between these versions is not possible. The systems operates in RPR mode during the period when the versions of IOS at the active and standby supervisor engines differ.

## Examples

This example displays negotiated compatibility matrix information:

```
Switch# show issu comp-matrix negotiated
```

```
CardType: WS-C4507R(112), Uid: 2, Image Ver: 12.2(31)SGA
Image Name: cat4500-ENTSERVICES-M
```

# show issu config-sync

To display an ISSU config-sync failure or the ignored mismatched command list (MCL), if any, use the **show issu config-sync** command.

```
show issu config-sync {failures | ignored} {bem | mcl prc}
```

```
show issu config-sync ignored failures mcl
```

Syntax Description		
<b>failures</b>		Displays MCL entries or BEM/PRC failures.
<b>ignored</b>		Displays the ignored MCL entries.
<b>bem</b>		(Deprecated)
<b>mcl</b>		Displays commands that exist in the active supervisor engine's running config, but are not supported by the image on the standby supervisor engine.
<b>prc</b>		Displays a Parser Return Code (PRC) failure and forces the system to operate in RPR mode provided there is a mismatch in the return code for a command execution at the active and standby supervisor engine.

## Defaults

This command has no default settings.

## Command Modes

User EXEC

## Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

## Usage Guidelines

When two different versions of Cisco IOS images are involved, there is a possibility that the command sets supported by two images might differ. If any of those mismatched commands are executed on the active supervisor engine, the standby supervisor engine might not recognize those commands. This causes a Config Mismatch Condition. If the syntax-check for the command fails on standby supervisor engine during a bulk sync, the command is moved into the MCL and the standby supervisor engine is reset. To display all the mismatched commands, use the **show issu config-sync failures mcl** command.

To *clean* the MCL, use the following steps:

- Step 1** Remove all mismatched commands from the active supervisor engines' running-config.
- Step 2** Revalidate the MCL with a modified running-configuration using the **issu config-sync validate mismatched-commands** command.
- Step 3** Reload the standby supervisor engine.

Alternatively, you could ignore the MCL by doing the following:

- 
- Step 1** Issue the **issu config-sync ignore mismatched-commands** command.
- Step 2** Reload the standby supervisor engine; the system transitions to SSO mode.

---

**Note** If you ignore the mismatched commands, the *out-of-sync* configuration at the active supervisor engine and the standby supervisor engine still exists.

---

- Step 3** You can verify the ignored MCL with the **show issu config-sync ignored mcl** command.
- 

Each command sets a return code in the action function that implements the command. This return code indicates whether or not the command successfully executes. The active supervisor engine maintains the PRC after executing a command. The standby supervisor engine executes the command and sends PRC back to the active supervisor engine. PRC failure occurs if these two PRCs do not match. If a PRC error occurs at the standby supervisor engine either during bulk sync or LBL sync, the standby supervisor engine is reset. To display all PRC failures, use the **show issu config-sync failures prc** command.

To display best effort method (BEM) errors, use the **show issu config-sync failures bem** command.

---

## Examples

The following example shows how to display the ISSU BEM failures:

```
Switch# show issu config-sync failures bem
BEM Failed Command List
-----

The list is Empty
Switch#
```

The following example shows how to display the ISSU MCL failures:

```
Switch#show issu config-sync failures mcl
Mismatched Command List
-----

The list is Empty
Switch#
```

The following example shows how to display the ISSU PRC failures:

```
Switch#show issu config-sync failures prc
PRC Failed Command List
-----
interface FastEthernet3/2
! <submode> "interface"
- channel-protocol pagp
! </submode> "interface"
```

---

# show issu endpoints

To display the ISSU endpoint information, use the **show issu endpoints** command.

## show issu endpoints

**Syntax Description** This command has no arguments or keywords

**Defaults** This command has no default settings.

**Command Modes** User EXEC

Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** Endpoint is an execution unit within a redundancy domain. There are only 2 endpoints on the Catalyst 4500 series switch redundant chassis: 1 and 2; they correspond to the slot numbers for the supervisor engine. The ISSU infrastructure communicates between these two endpoints to establish session and to perform session negotiation for ISSU clients.

**Examples** The following example shows how to display the ISSU endpoints:

```
Switch# show issu endpoints
My_Unique_ID = 1/0x1, Client_Count = 46

This endpoint communicates with 1 peer endpoints :
  Peer_Unique_ID    CAP    VER    XFORM    ERP    Compatibility
          2/0x2         1      1      1      1      Same

Shared Negotiation Session Info :
  Nego_Session_ID = 15
  Nego_Session_Name = shared nego session
  Transport_Mtu = 4096
  Ses_In_Use = 2
Switch#
```

**Related Commands** [show issu clients](#)

# show issu entities

To display the ISSU entity information, use the **show issu entities** command.

```
show issu entities [client_id]
```

<b>Syntax Description</b>	<i>client_id</i> (Optional) ISSU client ID.
---------------------------	---

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	User EXEC
----------------------	-----------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

<b>Usage Guidelines</b>	Entity is a logical group of sessions with some common attributes (like capability list and message type). Currently, most ISSU clients on the Catalyst 4500 series switch have only one entity.
-------------------------	--

<b>Examples</b>	The following example shows how to display the entity information for a specified ISSU client:
-----------------	--

```
Switch#show issu entities 2072
Client_ID = 2072 :
  Entity_ID = 1, Entity_Name = ISSU dot1x entity :
    MsgType MsgGroup CapType CapEntry CapGroup
    Count   Count   Count   count   Count
    28      1       1       1       1
Switch#
```

<b>Related Commands</b>	<a href="#">show issu clients</a>
-------------------------	-----------------------------------

# show issu fsm

## Note

This command is not intended for end-users.

To display the ISSU finite state machine (FSM) information corresponding to an ISSU session, use the **show issu fsm** command.

```
show issu fsm [session_id]
```

## Syntax Description

<i>session_id</i>	(Optional) Provides detailed information about the FSM for the specified session.
-------------------	---

## Defaults

This command has no default settings.

## Command Modes

User EXEC

## Command History

Release	Modification
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

## Examples

The following example displays and verifies the ISSU state after LOADVERSION:

```
Switch# show issu fsm 26
Session_ID = 26 :
  FSM_Name      Curr_State      Old_State      Error_Reason
  FSM_L1        TRANS          A_VER         none
  FSM_L2_HELLO  EXIT           RCVD          none
  FSM_L2_A_CAP  A_EXIT        A_RSP         none
  FSM_L2_P_CAP  P_INIT        unknown       none
  FSM_L2_A_VER  A_EXIT        A_RES_RSP     none
  FSM_L2_P_VER  P_INIT        unknown       none
  FSM_L2_TRANS  COMP          COMP          none
Current FSM is FSM_L2_TRANS
Session is compatible
Negotiation started at 00:01:07.688, duration is 0.148 seconds
Switch#
```

[show issu clients](#)  
[show issu sessions](#)

# show issu message

To display checkpoint messages for a specified ISSU client, use the **show issu message** command.

```
show issu message {groups | types} [client_id]
```

Syntax Description	groups	Displays information on Message Group supported by the specified client.
	types	Displays information on all Message Types supported by the specified client.
	client_id	(Optional) Specifies a client ID.

**Defaults** If client ID is not specified, displays message groups or message types information for all clients registered to the ISSU infrastructure.

**Command Modes** User EXEC

Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** Messages are sync-data (also known as checkpoint data) sent between two endpoints. When an ISSU-aware client establishes its session with a peer, an ISSU negotiation takes place. The ISSU infrastructure uses the registered information to negotiate the capabilities and the message version to be used during the session.

**Examples** The following example shows how to display the message groups for Client\_id 2082:

```
Switch#show issu message groups 2082
Client_ID = 2082, Entity_ID = 1 :
  Message_Group = 1 :
    Message_Type = 1, Version_Range = 1 ~ 2
    Message_Type = 2, Version_Range = 1 ~ 2
Switch#
```

The following example shows how to display the message types for Client\_id 2082:

```
Switch#show issu message types 2082
Client_ID = 2082, Entity_ID = 1 :
  Message_Type = 1, Version_Range = 1 ~ 2
    Message_Ver = 1, Message_Mtu = 12
    Message_Ver = 2, Message_Mtu = 8
  Message_Type = 2, Version_Range = 1 ~ 2
    Message_Ver = 1, Message_Mtu = 32
    Message_Ver = 2, Message_Mtu = 28
Switch#
```

**Related Commands** [show issu clients](#)

# show issu negotiated

To display the negotiated capability and message version information of the ISSU clients, use the **show issu negotiated** command.

```
show issu negotiated {capability | version} [session_id]
```

Syntax Description	capability	Displays all negotiated capabilities.
	version	Displays details of all negotiated messages.
	session_id	(Optional) Specifies the ISSU session ID for which the capability or version information is displayed.

**Defaults** Displays negotiated capability or version information for all ISSU sessions.

**Command Modes** User EXEC

Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

**Examples** The following example shows how to display the message types for a specific group:

```
Switch# show issu negotiated capability 26
Session_ID = 26 :
  Cap_Type = 0,      Cap_Result = 1      No cap value assigned

Switch# show issu negotiated version 26
Session_ID = 26 :
  Message_Type = 1,  Negotiated_Version = 1,  Message_MTU = 44
  Message_Type = 2,  Negotiated_Version = 1,  Message_MTU = 4
```

**Related Commands** [show issu sessions](#)

# show issu rollback-timer

To display ISSU rollback-timer status, use the **show issu rollback-timer** command.

**show issu rollback-timer**

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** This command has no default settings.

---

**Command Modes** Privileged EXEC

---

Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

---

---

**Examples** The following example shows how to display the rollback-timer status:

```
Switch#show issu rollback-timer
      Rollback Process State = Not in progress
      Configured Rollback Time = 45:00
Switch#
```

---

**Related Commands** [issu acceptversion](#)  
[issu runversion](#)

# show issu sessions

To display ISSU session information for a specified client, use the **show issu sessions** command.

```
show issu sessions [client_id]
```

<b>Syntax Description</b>	<i>client_id</i> (Optional) Specifies the ISSU client ID.				
<b>Defaults</b>	Displays session information for all clients registered to the ISSU infrastructure.				
<b>Command Modes</b>	User EXEC				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>12.2(31)SGA</td> <td>This command was introduced on the Catalyst 4500 series switch.</td> </tr> </tbody> </table>	Release	Modification	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.
Release	Modification				
12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.				

**Usage Guidelines** Session is bidirectional and a reliable connection is established between two endpoints. Sync-data and negotiation messages are sent to the peer endpoint through a session. On a Catalyst 4500 series switch, each ISSU-aware client has a maximum of one session at each endpoint.

When an ISSU-aware client establishes its session with the peer, an ISSU negotiation takes place. The ISSU infrastructure uses the registered information to negotiate the capabilities and the message version to be used during the session.

**Examples** The following example shows how to display the rollback-timer status:

```
Switch#show issu sessions 2072
Client_ID = 2072, Entity_ID = 1 :

*** Session_ID = 26, Session_Name = dot1x :

      Peer   Peer   Negotiate   Negotiated   Cap      Msg      Session
      UniqueID Sid   Role        Result       GroupID  GroupID  Signature
      2       26   PRIMARY    COMPATIBLE   1        1        0
                        (no policy)

      Negotiation Session Info for This Message Session:
      Nego_Session_ID = 26
      Nego_Session_Name = dot1x
      Transport_Mtu = 17884
Switch#
```

**Related Commands** [show issu clients](#)

# show issu state

To display the ISSU state and current booted image name during the ISSU process, use the **show issu state** command.

```
show issu state [slot_number] [detail]
```

Syntax Description	
<i>slot_number</i>	(Optional) Specifies the slot number whose ISSU state needs to be displayed (1 or 2).
<b>detail</b>	(Optional) Provides detailed information about the state of the active and standby supervisor engines.

**Defaults** The command displays the ISSU state and current booted image name of both the active and standby supervisor engines.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** It might take several seconds after the **issu loadversion** command is entered for Cisco IOS software to load onto the standby supervisor engine and the standby supervisor engine to transition to SSO mode. If you enter the **show issu state** command too soon, you might not see the information you need.

**Examples** The following example displays and verifies the ISSU state after LOADVERSION:

```
Switch# show issu state detail
      Slot = 1
      RP State = Active
      ISSU State = Load Version
      Boot Variable = bootflash:old_image,12
      Operating Mode = Stateful Switchover
      Primary Version = bootflash:old_image
      Secondary Version = bootflash:new_image
      Current Version = bootflash:old_image

      Slot = 2
      RP State = Standby
      ISSU State = Load Version
      Boot Variable = bootflash:new_image,12;bootflash:old_image,12
      Operating Mode = Stateful Switchover
      Primary Version = bootflash:old_image
      Secondary Version = bootflash:new_image
      Current Version = bootflash:new_image

Switch#
```

# show l2protocol-tunnel

To display information about the Layer 2 protocol tunnel ports, use the **show l2protocol-tunnel** command. This command displays information for the interfaces with protocol tunneling enabled.

```
show l2protocol-tunnel [interface interface-id] [[summary] | {begin | exclude | include}
expression]
```

## Syntax Description

<b>interface</b> <i>interface-id</i>	(Optional) Specifies the interface for which protocol tunneling information appears. Valid interfaces are physical ports and port channels; the port channel range is 1 to 64.
<b>summary</b>	(Optional) Displays only Layer 2 protocol summary information.
<b>begin</b>	(Optional) Displays information beginning with the line that matches the <i>expression</i> .
<b>exclude</b>	(Optional) Displays information that excludes lines that match the <i>expression</i> .
<b>include</b>	(Optional) Displays the lines that match the specified <i>expression</i> .
<i>expression</i>	(Optional) Expression in the output to use as a reference point.

## Command Modes

User EXEC

## Command History

Release	Modification
12.2(18)EW	This command was first introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

## Usage Guidelines

After enabling Layer 2 protocol tunneling on an access or 802.1Q tunnel port with the **l2protocol-tunnel** command, you can configure some or all of these parameters:

- Protocol type to be tunneled
- Shutdown threshold
- Drop threshold

If you enter the **show l2protocol-tunnel [interface *interface-id*]** command, only information about the active ports on which all the parameters are configured appears.

If you enter the **show l2protocol-tunnel summary** command, only information about the active ports on which some or all of the parameters are configured appears.

Expressions are case sensitive. For example, if you enter **exclude output**, the lines that contain *output* do not appear, but the lines that contain *Output* appear.

**Examples**

This is an example of output from the **show l2protocol-tunnel** command:

```
Switch> show l2protocol-tunnel
COS for Encapsulated Packets: 5

                          [l2protocol-tunnel cos](#)

# show lacp

To display LACP information, use the **show lacp** command.

```
show lacp [channel-group] { counters | internal | neighbors | sys-id }
```

Syntax Description	
<i>channel-group</i>	(Optional) Number of the channel group; valid values are from 1 to 64.
<b>counters</b>	Displays the LACP statistical information.
<b>internal</b>	Displays the internal information.
<b>neighbors</b>	Displays the neighbor information.
<b>sys-id</b>	Displays the LACP system identification.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switches.

**Usage Guidelines** This command is not supported on systems that are configured with a Supervisor Engine I. If you do not specify a *channel-group* value, all channel groups are displayed. You can enter the optional *channel-group* value to specify a channel group for all keywords, except the **sys-id** keyword.

**Examples** This example shows how to display LACP statistical information for a specific channel group:

```
Switch# show lacp 1 counters
          LACPDU      Marker      LACPDU
Port      Sent  Recv   Sent  Recv   Pkts Err
-----
Channel group: 1
  Fa4/1    8    15     0    0     3    0
  Fa4/2   14   18     0    0     3    0
  Fa4/3   14   18     0    0     0
  Fa4/4   13   18     0    0     0
Switch#
```

The output displays the following information:

- The LACPDU Sent and Recv columns display the LACPDU sent and received on each specific interface.
- The LACPDU Pkts and Err columns display the marker protocol packets.

This example shows how to display internal information for the interfaces belonging to a specific channel:

```
Switch# show lacp 1 internal
Flags: S - Device sends PDUs at slow rate. F - Device sends PDUs at fast rate.
      A - Device is in Active mode.           P - Device is in Passive mode.

Channel group 1

Port      Flags   State   LACPDU  LACP Port  Admin  Oper  Port  Port
         interval  Interval  Priority  Key       Key    Number State
Fa4/1    saC     bndl    30s     32768     100   100   0xc1  0x75
Fa4/2    saC     bndl    30s     32768     100   100   0xc2  0x75
Fa4/3    saC     bndl    30s     32768     100   100   0xc3  0x75
Fa4/4    saC     bndl    30s     32768     100   100   0xc4  0x75
Switch#
```

Table 2-22 lists the output field definitions.

**Table 2-22** show lacp internal Command Output Fields

Field	Description
State	State of the specific port at the current moment is displayed; allowed values are as follows: <ul style="list-style-type: none"> <li><i>bndl</i>—Port is attached to an aggregator and bundled with other ports.</li> <li><i>susp</i>—Port is in a suspended state; it is not attached to any aggregator.</li> <li><i>indep</i>—Port is in an independent state (not bundled but able to switch data traffic. In this case, LACP is not running on the partner port).</li> <li><i>hot-sby</i>—Port is in a Hot-standby state.</li> <li><i>down</i>—Port is down.</li> </ul>
LACPDU Interval	Interval setting.
LACP Port Priority	Port priority setting.
Admin Key	Administrative key.
Oper Key	Operator key.
Port Number	Port number.
Port State	State variables for the port encoded as individual bits within a single octet with the following meaning [1]: <ul style="list-style-type: none"> <li><b>bit0</b>: <i>LACP_Activity</i></li> <li><b>bit1</b>: <i>LACP_Timeout</i></li> <li><b>bit2</b>: <i>Aggregation</i></li> <li><b>bit3</b>: <i>Synchronization</i></li> <li><b>bit4</b>: <i>Collecting</i></li> <li><b>bit5</b>: <i>Distributing</i></li> <li><b>bit6</b>: <i>Defaulted</i></li> <li><b>bit7</b>: <i>Expired</i></li> </ul>

This example shows how to display LACP neighbors information for a specific port channel:

```
Switch# show lacp 1 neighbor
Flags: S - Device sends PDUs at slow rate. F - Device sends PDUs at fast rate.
      A - Device is in Active mode.          P - Device is in Passive mode.

Channel group 1 neighbors

Port      Partner                               Partner
System ID System ID                               Port Number  Age    Flags
Fa4/1     8000,00b0.c23e.d84e                    0x81         29s   P
Fa4/2     8000,00b0.c23e.d84e                    0x82         0s    P
Fa4/3     8000,00b0.c23e.d84e                    0x83         0s    P
Fa4/4     8000,00b0.c23e.d84e                    0x84         0s    P

Port      Admin Oper      Port
Priority  Key   Key       State
Fa4/1     32768 200    200    0x81
Fa4/2     32768 200    200    0x81
Fa4/3     32768 200    200    0x81
Fa4/4     32768 200    200    0x81
Switch#
```

In the case where no PDUs have been received, the default administrative information is displayed in braces.

This example shows how to display the LACP system identification:

```
Switch> show lacp sys-id
8000,AC-12-34-56-78-90
Switch>
```

The system identification is made up of the system priority and the system MAC address. The first two bytes are the system priority, and the last six bytes are the globally administered individual MAC address associated to the system.

[lacp port-priority](#)  
[lacp system-priority](#)

# show mac access-group interface

To display the ACL configuration on a Layer 2 interface, use the **show mac access-group interface** command.

**show mac access-group interface** [*interface interface-number*]

Syntax Description	
<i>interface</i>	(Optional) Specifies the interface type; valid values are <b>ethernet</b> , <b>fastethernet</b> , <b>gigabitethernet</b> , <b>tengigabitethernet</b> , <b>pos</b> , <b>atm</b> , <b>port-channel</b> , and <b>ge-wan</b> .
<i>interface-number</i>	(Optional) Specifies the port number.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** The valid values for the port number depend on the chassis used.

**Examples** This example shows how to display the ACL configuration on interface fast 6/1:

```
Switch# show mac access-group interface fast 6/1
Interface FastEthernet6/1:
  Inbound access-list is simple-mac-acl
  Outbound access-list is not set
```

**Related Commands** [access-group mode](#)

# show mac-address-table address

To display MAC address table information for a specific MAC address, use the **show mac-address-table address** command.

```
show mac-address-table address mac_addr [interface type slot/port | protocol protocol | vlan
vlan_id]
```

Syntax Description		
<i>mac_addr</i>		48-bit MAC address; the valid format is H.H.H.
<b>interface</b> <i>type slot/port</i>	(Optional)	Displays information for a specific interface; valid values for <i>type</i> are <b>fastethernet</b> , <b>gigabitethernet</b> , and <b>tengigabitethernet</b> .
<b>protocol</b> <i>protocol</i>	(Optional)	Specifies a protocol. See the “Usage Guidelines” section for more information.
<b>vlan</b> <i>vlan_id</i>	(Optional)	Displays entries for the specific VLAN only; valid values are from 1 to 4094.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Added support for extended VLAN addresses.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

**Usage Guidelines** For the MAC address table entries that are used by the routed ports, the routed port name is displayed in the “vlan” column not the internal VLAN number.

The keyword definitions for the *protocol* variable are as follows:

- **ip** specifies the IP protocol.
- **ipx** specifies the IPX protocols.
- **assigned** specifies the assigned protocol entries.
- **other** specifies the other protocol entries.

**Examples**

This example shows how to display MAC address table information for a specific MAC address:

```
Switch# show mac-address-table address 0030.94fc.0dff
Unicast Entries
  vlan  mac address      type          protocols          port
-----+-----+-----+-----+-----
    1   0030.94fc.0dff    static ip,ipx,assigned,other Switch
Fa6/1  0030.94fc.0dff    static ip,ipx,assigned,other Switch
Fa6/2  0030.94fc.0dff    static ip,ipx,assigned,other Switch
Switch#
```

# show mac-address-table aging-time

To display the MAC address aging time, use the **show mac-address-table aging-time** command.

```
show mac-address-table aging-time [vlan vlan_id]
```

<b>Syntax Description</b>	<b>vlan <i>vlan_id</i></b> (Optional) Specifies a VLAN; valid values are from 1 to 4094.
---------------------------	--

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	Privileged EXEC
----------------------	-----------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for extended addressing was added.

**Examples** This example shows how to display the currently configured aging time for all VLANs:

```
Switch# show mac-address-table aging-time
Vlan    Aging Time
----    -
100     300
200     1000

Switch#
```

This example shows how to display the currently configured aging time for a specific VLAN:

```
Switch# show mac-address-table aging-time vlan 100
Vlan    Aging Time
----    -
100     300

Switch#
```

<b>Related Commands</b>	<a href="#">show mac-address-table address</a> <a href="#">show mac-address-table count</a> <a href="#">show mac-address-table dynamic</a> <a href="#">show mac-address-table interface</a> <a href="#">show mac-address-table multicast</a> <a href="#">show mac-address-table protocol</a> <a href="#">show mac-address-table static</a> <a href="#">show mac-address-table vlan</a>
-------------------------	---

# show mac-address-table count

To display the number of entries currently in the MAC address table, use the **show mac-address-table count** command.

```
show mac-address-table count [vlan vlan_id]
```

<b>Syntax Description</b>	<b>vlan <i>vlan_id</i></b> (Optional) Specifies a VLAN; valid values are from 1 to 4094.
---------------------------	--

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	Privileged EXEC
----------------------	-----------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Added support for extended VLAN addresses.

<b>Examples</b>	This example shows how to display the entry count for a specific VLAN:
-----------------	--

```
Switch# show mac-address-table count vlan 1
MAC Entries for Vlan 1:
Dynamic Unicast Address Count:          0
Static Unicast Address (User-defined) Count: 0
Static Unicast Address (System-defined) Count: 1
Total Unicast MAC Addresses In Use:      1
Total Unicast MAC Addresses Available:    32768
Multicast MAC Address Count:             1
Total Multicast MAC Addresses Available:  16384
Switch#
```

<b>Related Commands</b>	<a href="#">show mac-address-table address</a> <a href="#">show mac-address-table aging-time</a> <a href="#">show mac-address-table dynamic</a> <a href="#">show mac-address-table interface</a> <a href="#">show mac-address-table multicast</a> <a href="#">show mac-address-table protocol</a> <a href="#">show mac-address-table static</a> <a href="#">show mac-address-table vlan</a>
-------------------------	--

# show mac-address-table dynamic

To display the dynamic MAC address table entries only, use the **show mac-address-table dynamic** command.

```
show mac-address-table dynamic [address mac_addr | interface type slot/port |
protocol protocol | vlan vlan_id]
```

Syntax Description		
<b>address</b> <i>mac_addr</i>	(Optional) Specifies a 48-bit MAC address; the valid format is H.H.H.	
<b>interface</b> <i>type slot/port</i>	(Optional) Specifies an interface to match; valid values for <i>type</i> are <b>fastethernet</b> , <b>gigabitethernet</b> , and <b>tengigabitethernet</b> .	
<b>protocol</b> <i>protocol</i>	(Optional) Specifies a protocol. See the “Usage Guidelines” section for more information.	
<b>vlan</b> <i>vlan_id</i>	(Optional) Displays entries for a specific VLAN; valid values are from 1 to 4094.	

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Added support for extended VLAN addresses.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

**Usage Guidelines** The keyword definitions for the *protocol* argument are as follows:

- **assigned** specifies assigned protocol entries.
- **ip** specifies IP protocol.
- **ipx** specifies IPX protocols.
- **other** specifies other protocol entries.

The **show mac-address-table dynamic** command output for an EtherChannel interface changes the port number designation (such as, 5/7) to a port group number (such as, Po80).

For the MAC address table entries that are used by the routed ports, the routed port name is displayed in the “vlan” column not the internal VLAN number.

**Examples**

This example shows how to display all the dynamic MAC address entries:

```
Switch# show mac-address-table dynamic
Unicast Entries
  vlan  mac address      type      protocols      port
-----+-----+-----+-----+-----
    1   0000.0000.0201   dynamic  ip              FastEthernet6/15
    1   0000.0000.0202   dynamic  ip              FastEthernet6/15
    1   0000.0000.0203   dynamic  ip,assigned     FastEthernet6/15
    1   0000.0000.0204   dynamic  ip,assigned     FastEthernet6/15
    1   0000.0000.0205   dynamic  ip,assigned     FastEthernet6/15
    2   0000.0000.0101   dynamic  ip              FastEthernet6/16
    2   0000.0000.0102   dynamic  ip              FastEthernet6/16
    2   0000.0000.0103   dynamic  ip,assigned     FastEthernet6/16
    2   0000.0000.0104   dynamic  ip,assigned     FastEthernet6/16
    2   0000.0000.0105   dynamic  ip,assigned     FastEthernet6/16
Switch#
```

This example shows how to display the dynamic MAC address entries with a specific protocol type (in this case, assigned):

```
Switch# show mac-address-table dynamic protocol assigned
Unicast Entries
  vlan  mac address      type      protocols      port
-----+-----+-----+-----+-----
    1   0000.0000.0203   dynamic  ip,assigned     FastEthernet6/15
    1   0000.0000.0204   dynamic  ip,assigned     FastEthernet6/15
    1   0000.0000.0205   dynamic  ip,assigned     FastEthernet6/15
    2   0000.0000.0103   dynamic  ip,assigned     FastEthernet6/16
    2   0000.0000.0104   dynamic  ip,assigned     FastEthernet6/16
    2   0000.0000.0105   dynamic  ip,assigned     FastEthernet6/16
Switch#
```

# show mac-address-table notification

To display the MAC address table notification status and history, use the **show mac-address-table notification** command.

```
show mac-address-table notification [change] [interface interface-id] | [mac-move] |
[threshold]
```

Syntax Description	change	(Optional) Displays the MAC address change notification status.
	<b>interface</b>	(Optional) Displays MAC change information for an interfaces.
	<i>interface-id</i>	(Optional) Displays the information for a specific interface. Valid interfaces include physical ports and port channels.
	<b>mac-move</b>	(Optional) Displays MAC move notification status.
	<b>threshold</b>	(Optional) Displays the MAC threshold notification status.

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.2(31)SG	Support for this command was introduced on the Catalyst 4500 series switch

## Usage Guidelines

Use the **show mac-address-table notification change** command to display whether the MAC change feature is enabled or disabled, the MAC change notification interval, the maximum number of entries allowed in the history table, and the history table contents.

Use the **interface** keyword to display the flags for all interfaces. If the *interface-id* is included, only the flags for that interface are displayed.

## Examples

This example shows how to display all the MAC address notification information:

```
Switch# show mac-address-table notification change
MAC Notification Feature is Enabled on the switch
Interval between Notification Traps : 1 secs
Number of MAC Addresses Added : 5
Number of MAC Addresses Removed : 1
Number of Notifications sent to NMS : 3
Maximum Number of entries configured in History Table : 500
Current History Table Length : 3
MAC Notification Traps are Enabled
History Table contents
-----
History Index 1, Entry Timestamp 478433, Despatch Timestamp 478433
MAC Changed Message :
Operation: Added   Vlan: 1       MAC Addr: 1234.5678.9ab0 Dot1dBasePort: 323
```

**show mac-address-table notification**

```

History Index 2, Entry Timestamp 481834, Despatch Timestamp 481834
MAC Changed Message :
Operation: Added   Vlan: 1      MAC Addr: 1234.5678.9ab1 Dot1dBasePort: 323
Operation: Added   Vlan: 1      MAC Addr: 1234.5678.9ab2 Dot1dBasePort: 323
Operation: Added   Vlan: 1      MAC Addr: 1234.5678.9ab3 Dot1dBasePort: 323
Operation: Added   Vlan: 1      MAC Addr: 1234.5678.9ab4 Dot1dBasePort: 323
History Index 3, Entry Timestamp 484334, Despatch Timestamp 484334
MAC Changed Message :
Operation: Deleted Vlan: 1      MAC Addr: 1234.5678.9ab0 Dot1dBasePort: 323
Switch#

```

This example shows how to display the MAC address change status on the FastEthernet interface 7/1:

```

Switch# show mac-address-table notification change interface FastEthernet 7/1
MAC Notification Feature is Enabled on the switch
Interface          MAC Added Trap  MAC Removed Trap
-----
FastEthernet7/1    Enabled         Disabled

Switch#

```

This example shows how to display the MAC address move status:

```

Switch# show mac-address-table notification mac-move
MAC Move Notification: Enabled
Switch#

```

This example shows how to display the MAC address table utilization status:

```

Switch# show mac-address-table notification threshold
Status      limit      Interval

# show mac-address-table protocol

To display the MAC address table information that is based on the protocol, use the **show mac-address-table protocol** command.

```
show mac-address-table protocol {assigned | ip | ipx | other }
```

Syntax Description	Parameter	Description
	<b>assigned</b>	Specifies the assigned protocol entries.
	<b>ip</b>	Specifies the IP protocol entries.
	<b>ipx</b>	Specifies the IPX protocol entries.
	<b>other</b>	Specifies the other protocol entries.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** For the MAC address table entries that are used by the routed ports, the routed port name is displayed in the “vlan” column not the the internal VLAN number.

**Examples** This example shows how to display the MAC address table entries that have a specific protocol type (in this case, assigned):

```
Switch# show mac-address-table protocol assigned
vlan  mac address      type    protocol  qos      ports
-----+-----+-----+-----+-----+-----
 200  0050.3e8d.6400  static  assigned  --      Switch
 100  0050.3e8d.6400  static  assigned  --      Switch
   5  0050.3e8d.6400  static  assigned  --      Switch
4092  0000.0000.0000  dynamic  assigned  --      Switch
   1  0050.3e8d.6400  static  assigned  --      Switch
   4  0050.3e8d.6400  static  assigned  --      Switch
4092  0050.f0ac.3058  static  assigned  --      Switch
4092  0050.f0ac.3059  dynamic  assigned  --      Switch
   1  0010.7b3b.0978  dynamic  assigned  --      Fa5/9
Switch#
```

## show mac-address-table protocol

This example shows the other output for the previous example:

```
Switch# show mac-address-table protocol other
Unicast Entries
vlan  mac address      type      protocols      port
-----+-----+-----+-----+-----
   1    0000.0000.0201    dynamic  other          FastEthernet6/15

# show mac-address-table static

To display the static MAC address table entries only, use the **show mac-address-table static** command.

```
show mac-address-table static [address mac_addr | interface type number | protocol protocol |
                               vlan vlan_id]
```

Syntax Description		
<b>address</b> <i>mac_addr</i>	(Optional) Specifies a 48-bit MAC address to match; the valid format is H.H.H.	
<b>interface</b> <i>type number</i>	(Optional) Specifies an interface to match; valid values for <i>type</i> are <b>fastethernet</b> , <b>gigabitethernet</b> , and <b>tengigabitethernet</b> .	
<b>protocol</b> <i>protocol</i>	(Optional) Specifies a protocol. See the “Usage Guidelines” section for more information.	
<b>vlan</b> <i>vlan_id</i>	(Optional) Displays the entries for a specific VLAN; valid values are from 1 to 4094.	

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Added support for extended VLAN addresses.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

## Usage Guidelines

For the MAC address table entries that are used by the routed ports, the routed port name is displayed in the “vlan” column not the internal VLAN number.

The keyword definitions for the *protocol* argument are as follows:

- **assigned** specifies the assigned protocol entries.
- **ip** specifies the IP protocol.
- **ipx** specifies the IPX protocols.
- **other** specifies the other protocol entries.

**Examples**

This example shows how to display all the static MAC address entries:

```
Switch# show mac-address-table static
Unicast Entries
  vlan  mac address      type      protocols      port
-----+-----+-----+-----+-----
    1    0030.94fc.0dff     static ip,ipx,assigned,other Switch
Fa6/1    0030.94fc.0dff     static ip,ipx,assigned,other Switch
Fa6/2    0030.94fc.0dff     static ip,ipx,assigned,other Switch

Multicast Entries
  vlan  mac address      type      ports
-----+-----+-----+-----
    1    ffff.ffff.ffff     system Switch,Fa6/15
    2    ffff.ffff.ffff     system Fa6/16
1002    ffff.ffff.ffff     system
1003    ffff.ffff.ffff     system
1004    ffff.ffff.ffff     system
1005    ffff.ffff.ffff     system
Fa6/1    ffff.ffff.ffff     system Switch,Fa6/1
Fa6/2    ffff.ffff.ffff     system Switch,Fa6/2
.
.
Switch#
```

This example shows how to display the static MAC address entries with a specific protocol type (in this case, assigned):

```
Switch# show mac-address-table static protocol assigned
Unicast Entries
  vlan  mac address      type      protocols      port
-----+-----+-----+-----+-----
    1    0030.94fc.0dff     static ip,ipx,assigned,other Switch
Fa6/1    0030.94fc.0dff     static ip,ipx,assigned,other Switch
Fa6/2    0030.94fc.0dff     static ip,ipx,assigned,other Switch

Multicast Entries
  vlan  mac address      type      ports
-----+-----+-----+-----
    1    ffff.ffff.ffff     system Switch,Fa6/15
    2    ffff.ffff.ffff     system Fa6/16
1002    ffff.ffff.ffff     system
1003    ffff.ffff.ffff     system
1004    ffff.ffff.ffff     system
1005    ffff.ffff.ffff     system
Fa6/1    ffff.ffff.ffff     system Switch,Fa6/1
Fa6/2    ffff.ffff.ffff     system Switch,Fa6/2
Switch#
```

**Related Commands**

## show mac-address-table vlan

To display information about the MAC address table for a specific VLAN, use the **show mac-address-table vlan** command.

```
show mac-address-table [vlan vlan_id] [protocol protocol]
```

Syntax Description		
<b>vlan</b> <i>vlan_id</i>	(Optional) Displays the entries for a specific VLAN; valid values are from 1 to 4094.	
<b>protocol</b> <i>protocol</i>	(Optional) Specifies a protocol. See the “Usage Guidelines” section for more information.	

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for extended addressing was added.

**Usage Guidelines** For the MAC address table entries used by the routed ports, the routed port name is displayed in the “vlan” column not the the internal VLAN number.

The keyword definitions for the *protocol* variable are as follows:

- **assigned** specifies the assigned protocol entries.
- **ip** specifies the IP protocol.
- **ipx** specifies the IPX protocols.
- **other** specifies the other protocol entries.

**Examples**

This example shows how to display information about the MAC address table for a specific VLAN:

```
Switch# show mac-address-table vlan 1
Unicast Entries
vlan  mac address      type      protocols      port
-----+-----+-----+-----+-----
  1    0000.0000.0201    dynamic  ip              FastEthernet6/15
  1    0000.0000.0202    dynamic  ip              FastEthernet6/15
  1    0000.0000.0203    dynamic  other           FastEthernet6/15
  1    0000.0000.0204    dynamic  other           FastEthernet6/15
  1    0030.94fc.0dff     static   ip,ipx,assigned,other  Switch

Multicast Entries
vlan  mac address      type      ports
-----+-----+-----+-----
  1    ffff.ffff.ffff     system   Switch,Fa6/15
Switch#
```

This example shows how to display MAC address table information for a specific protocol type:

```
Switch# show mac-address-table vlan 100 protocol other
Unicast Entries
vlan  mac address      type      protocols      port
-----+-----+-----+-----+-----
  1    0000.0000.0203    dynamic  other           FastEthernet6/15
  1    0000.0000.0204    dynamic  other           FastEthernet6/15
  1    0030.94fc.0dff     static   ip,ipx,assigned,other  Switch

Multicast Entries
vlan  mac address      type      ports
-----+-----+-----+-----
  1    ffff.ffff.ffff     system   Switch,Fa6/15
Switch#
```

# show module

To display information about the module, use the **show module** command.

**show module** [*mod* | **all**]

Syntax Description	
<i>mod</i>	(Optional) Number of the module; valid values vary from chassis to chassis.
<b>all</b>	(Optional) Displays information for all modules.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Enhanced the output of the <b>show idprom interface command</b> to include the 10-Gigabit Ethernet interface.

**Usage Guidelines** In the Mod Sub-Module fields in the command output, the **show module** command displays the supervisor engine number but appends the uplink daughter card's module type and information. If the PoE consumed by the module is more than 50 W above the administratively allocated PoE, the "Status" displays as "PwrOver." If the PoE consumed by the module is more than 50 W above the PoE module limit, the "Status" displays as "PwrFault."

**Examples**

This example shows how to display information for all the modules.

This example shows the **show module** command output for a system with inadequate power for all installed modules. The system does not have enough power for Module 5; the “Status” displays it as “PwrDeny.”

```
Switch# show module all
Mod  Ports Card Type                               Model                               Serial No.

# show monitor

To display information about the SPAN session, use the **show monitor** command.

**show monitor** [**session**] [**range** *session-range* | **local** | **remote** | **all** | *session-number*] [**detail**]

Syntax Description		
<b>session</b>	(Optional)	Displays the SPAN information for a session.
<b>range</b>	(Optional)	Displays information for a range of sessions.
<i>session-range</i>	(Optional)	Specifies a range of sessions.
<b>local</b>	(Optional)	Displays all local SPAN sessions.
<b>remote</b>	(Optional)	Displays the RSPAN source and destination sessions.
<b>all</b>	(Optional)	Displays the SPAN and RSPAN sessions.
<i>session-number</i>	(Optional)	Session number; valid values are from 1 to 6.
<b>detail</b>	(Optional)	Displays the detailed SPAN information for a session.

**Defaults** The **detail** keyword only displays lines with a nondefault configuration.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(13)EW	Added support for differing directions within a single user session.
	12.1(19)EW	Output enhanced to display configuration status of SPAN enhancements.
	12.1(20)EW	Added support to display configuration state for remote SPAN and learning.
	12.2(20)EW	Added support to display ACLs that are applied to SPAN sessions.

**Examples** This example shows how to display whether ACLs are applied to a given SPAN session on a Catalyst 4500 series switch:

```
Switch# show monitor

Session 1
-----
Type           : Local Session
Source Ports   :
  Both         : Fa6/1
Destination Ports : Fa6/2
  Encapsulation : Native
  Ingress      : Disabled
  Learning     : Disabled
Filter VLANs   : 1
IP Access-group : 10
```

This example shows how to display SPAN information for session 2:

```
Switch# show monitor session 2
Session 2
-----
Type : Remote Source Session
Source Ports:
    RX Only:      Fa1/1-3
Dest RSPAN VLAN: 901
Ingress : Enabled, default VLAN=2
Learning : Disabled
Switch#
```

This example shows how to display the detailed SPAN information for session 1:

```
Switch# show monitor session 1 detail
Session 1
-----
Type           : Local Session
Source Ports   :
    RX Only    : None
    TX Only    : None
    Both       : Gi1/1, CPU
Source VLANs   :
    RX Only    : None
    TX Only    : None
    Both       : None
Source RSPAN VLAN : Fa6/1
Destination Ports : Fa6/1
    Encapsulation : DOT1Q
    Ingress      : Enabled, default VLAN = 2
Filter VLANs   : None
    Filter Types RX : Good
    Filter Types TX : None
Dest Rspan Vlan : 901
Ingress : Enabled, default VLAN=2
Learning : Disabled
IP Access-group : None
Switch#
```

This example shows how to display SPAN information for session 1 beginning with the line that starts with Destination:

```
Switch# show monitor session 1 | begin Destination
Destination Ports: None
Filter VLANs:      None
Switch#
Switch#
```

## Related Commands [monitor session](#)

# show pagp

To display information about the port channel, use the **show pagp** command.

```
show pagp [group-number] {counters | internal | neighbor}
```

Syntax Description	
<i>group-number</i>	(Optional) Channel-group number; valid values are from 1 to 64.
<b>counters</b>	Specifies the traffic counter information.
<b>internal</b>	Specifies the PAgP internal information.
<b>neighbor</b>	Specifies the PAgP neighbor information.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** You can enter any **show pagp** command to display the active PAgP port-channel information. To display the nonactive information, enter the **show pagp** command with a group.

**Examples** This example shows how to display information about the PAgP counter:

```
Switch# show pagp counters
          Information          Flush
Port      Sent   Recv    Sent   Recv
-----
Channel group: 1
  Fa5/4    2660   2452    0      0
  Fa5/5    2676   2453    0      0
Channel group: 2
  Fa5/6    289    261     0      0
  Fa5/7    290    261     0      0
Switch#
```

**show pagp**

This example shows how to display internal PAgP information:

```
Switch# show pagp 1 internal
Flags: S - Device is sending Slow hello. C - Device is in Consistent state.
      A - Device is in Auto mode.
Timers: H - Hello timer is running.      Q - Quit timer is running.

# show policy-map

To display information about the policy map, use the **show policy-map** command.

```
show policy-map [policy_map_name]
```

<b>Syntax Description</b>	<i>policy_map_name</i> (Optional) Name of the policy map.				
<b>Defaults</b>	This command has no default settings.				
<b>Command Modes</b>	Privileged EXEC				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>12.1(8a)EW</td> <td>Support for this command was introduced on the Catalyst 4500 series switch.</td> </tr> </tbody> </table>	Release	Modification	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
Release	Modification				
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.				

## Examples

This example shows how to display information for all the policy maps:

```
Switch# show policy-map
Policy Map ipp5-policy
  class ipp5
    set ip precedence 6
Switch#
```

This example shows how to display information for a specific policy map:

```
Switch# show policy ipp5-policy
Policy Map ipp5-policy
  class ipp5
    set ip precedence 6
Switch#
```

# show policy-map control-plane

To display the configuration either of a class or of all classes for the policy map of a control plane, use the **show policy-map control-plane** command.

```
show policy-map control-plane [input [class class-name] | [class class-name]]
```

## Syntax Description

<b>input</b>	(Optional) Displays statistics for the attached input policy.
<b>class <i>class-name</i></b>	(Optional) Displays the name of the class.

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.2(31)SG	Support for this command was introduced on the Catalyst 4500 series switch

## Usage Guidelines

The **show policy-map control-plane** command displays information for aggregate control-plane services that control the number or rate of packets that are going to the process level.

## Examples

This example shows that the policy map TEST is associated with the control plane. This policy map polices traffic that matches the class-map TEST, while allowing all other traffic (that matches the class-map class-default) to go through as is. [Table 2-23](#) describes the fields shown in the display.

```
Switch# show policy-map control-plane

Control Plane

  Service-policy input: system-cpp-policy

```

**Table 2-23** show policy-map control-plane Field Descriptions

Field	Description
<b>Fields Associated with Classes or Service Policies</b>	
Service-policy input	Name of the input service policy that is applied to the control plane. (If configured, this field will also show the output service policy.)
Class-map	Class of traffic being displayed. Traffic is displayed for each configured class. The choice for implementing class matches (for example, match-all or match-any) can also appear next to the traffic class.
Match	Match criteria for the specified class of traffic. <b>Note</b> For more information about the variety of match criteria options available, refer to the chapter “Configuring the Modular Quality of Service Command-Line Interface” in the <i>Cisco IOS Quality of Service Solutions Configuration Guide</i> .
<b>Fields Associated with Traffic Policing</b>	
police	<b>police</b> command has been configured to enable traffic policing.
conformed	Action to be taken on packets conforming to a specified rate; displays the number of packets and bytes on which the action was taken.
exceeded	Action to be taken on packets exceeding a specified rate; displays the number of packets and bytes on which the action was taken.

**Related Commands**

[control-plane](#)  
[service-policy input \(control-plane\)](#)

# show policy-map interface

To display the statistics and configurations of the input and output policies that are attached to an interface, use the **show policy-map interface** command.

```
show policy-map interface [{fastethernet interface-number} | {gigabitethernet
interface-number} | {port-channel number} | {vlan vlan_id}] [input | output]
```

Syntax Description		
<b>fastethernet</b> <i>interface-number</i>	(Optional)	Specifies the Fast Ethernet 802.3 interface.
<b>gigabitethernet</b> <i>interface-number</i>	(Optional)	Specifies the Gigabit Ethernet 802.3z interface.
<b>port-channel</b> <i>number</i>	(Optional)	Specifies the port channel.
<b>vlan</b> <i>vlan_id</i>	(Optional)	Specifies the VLAN ID; valid values are from 1 to 4094.
<b>input</b>	(Optional)	Specifies input policies only.
<b>output</b>	(Optional)	Specifies output policies only.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Added support for extended VLAN addresses.
	12.2(25)SG	Displays results for full flow policing.

**Examples** This example shows how to display the statistics and configurations of all input and output policies attached to an interface:

```
Switch# show policy-map interface

FastEthernet6/1

  service-policy input:ipp5-policy

    class-map:ipp5 (match-all)
      0 packets
      match:ip precedence 5
      set:
        ip precedence 6

    class-map:class-default (match-any)
      0 packets
      match:any
      0 packets
```

■ **show policy-map interface**

```

service-policy output:ipp5-policy

class-map:ipp5 (match-all)
  0 packets
  match:ip precedence 5
  set:
    ip precedence 6

class-map:class-default (match-any)
  0 packets
  match:any
  0 packets
Switch#

```

This example shows how to display the input policy statistics and configurations for a specific interface:

```

Switch# show policy-map interface fastethernet 5/36 input
service-policy input:ipp5-policy

class-map:ipp5 (match-all)
  0 packets
  match:ip precedence 5
  set:
    ip precedence 6

class-map:class-default (match-any)
  0 packets
  match:any
  0 packets
Switch#

```

With the following configuration, each flow is policed to a 1000000 bps with an allowed 9000-byte burst value.

**Note**

---

If you use the **match flow ip source-address|destination-address** command, these two flows are consolidated into one flow and they have the same source and destination address.

---

```

Switch# config terminal
Enter configuration commands, one per line. End with CNTL/Z.

Switch#
```

**Related Commands**

[class-map](#)  
[policy-map](#)  
[show class-map](#)  
[show qos](#)

# show policy-map interface vlan

To show the QoS policy-map information applied to a specific VLAN on an interface, use the **show policy-map interface vlan** command.

```
show policy-map interface vlan interface-id vlan vlan-id
```

Syntax Description	interface <i>interface-id</i>	(Optional) Displays QoS policy-map information for a specific interface.
	vlan <i>vlan-id</i>	(Optional) Displays QoS policy-map information for a specific VLAN.

Command Modes	Privileged EXEC
---------------	-----------------

Command History	Release	Modification
	12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** Take the following configuration as an example:

```
interface GigabitEthernet3/1
vlan-range 20,400
 service-policy input p1
vlan-range 300-301
 service-policy output p2
```

This example shows how to display policy-map statistics on VLAN 20 on the Gigabit Ethernet 6/1 interface:

```
Switch# show policy-map interface gigabitEthernet 3/1 vlan 20
GigabitEthernet3/1 vlan 20

Service-policy input: p1

Class-map: class-default (match-any)
  0 packets
Match: any
  0 packets
police: Per-interface
  Conform: 0 bytes Exceed: 0 bytes
```

Related Commands	<a href="#">service-policy</a> <a href="#">show policy-map interface</a>
------------------	---

# show port-security

To display the port security settings for an interface or for the switch, use the **show port-security** command.

```
show port-security [address] [interface interface-id]
                  [interface port-channel port-channel-number] [vlan vlan-id]
```

Syntax Description		
<b>address</b>	(Optional)	Displays all secure MAC addresses for all ports or for a specific port.
<b>interface interface-id</b>	(Optional)	Displays port security settings for a specific interface.
<b>interface port-channel port channel-number</b>	(Optional)	Displays port security for a specific port-channel interface.
<b>vlan vlan-id</b>	(Optional)	Displays port security settings for a specific VLAN.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(18)EW	Support was enhanced to display sticky MAC addresses.
	12.2(25)EWA	Support was enhanced to display settings on a per-VLAN basis.
	12.2(31)SGA	Support was enhanced to display settings on EtherChannel interfaces.

**Usage Guidelines**

If you enter the command without keywords, the output includes the administrative and operational status of all secure ports on the switch.

If you enter the *interface-id* value or *port-channel-interface* value, the **show port-security** command displays port security settings for the interface.

If you enter the **address** keyword, the **show port-security address** command displays the secure MAC addresses for all interfaces and the aging information for each secure address.

If you enter the *interface-id* value and the **address** keyword, the **show port-security address interface** command displays all the MAC addresses for the interface with aging information for each secure address. You can also use this command to display all the MAC addresses for an interface even if you have not enabled port security on it.

**Examples**

This example shows how to display port security settings for the entire switch:

```
Switch# show port-security
Secure Port    MaxSecureAddr  CurrentAddr  SecurityViolation  Security Action
              (Count)        (Count)      (Count)

**Related Commands**    [switchport port-security](#)

# show power

To display information about the power status, use the **show power** command.

```
show power [available | capabilities | detail | inline {[interface] | consumption default | module
mod} | module | status | supplies]
```

Syntax Description		
<b>available</b>	(Optional)	Displays the available system power.
<b>capabilities</b>	(Optional)	Displays the individual power supply capabilities.
<b>detail</b>	(Optional)	Displays detailed information on power resources.
<b>inline</b>	(Optional)	Displays the PoE status.
<i>interface</i>	(Optional)	Type of interface; the only valid value is <b>fastethernet</b> .
<b>consumption default</b>	(Optional)	Displays the PoE consumption.
<b>module</b> <i>mod</i>	(Optional)	Displays the PoE consumption for the specified module.
<b>module</b>	(Optional)	Displays the power consumption for each module.
<b>status</b>	(Optional)	Displays the power supply status.
<b>supplies</b>	(Optional)	Displays the number of power supplies needed by the system.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)SG	Displays inline power handling for the Supervisor Engine II-TS.

**Usage Guidelines** If a powered device is connected to an interface with external power, the switch does not recognize the powered device. The Device column in the output of the **show power inline** command displays as unknown.

If your port is not capable of supporting Power over Ethernet, you will receive this message:

```
Power over Ethernet not supported on interface Admin
```

The **show power in-line interface | module** command displays the amount of power that is used to operate a Cisco 7960 IP Phone. To view the amount of power requested, use the **show cdp neighbors** command.

Because of the PoE consumed by FPGAs and other hardware components on the module the operating PoE consumption for an 802.3af-compliant module can be nonzero, even when there are no powered devices attached to the module. The operating PoE can vary by as much as 20 W because of fluctuations in the PoE that is consumed by the hardware components.

**Examples**

This example shows how to display information about the general power supply:

```
Switch# show power
Power
Supply Model No          Type          Status          Fan      Inline

#### Note

When the Supervisor Engine II+TS is used with the 1400 W DC power supply (PWR-C45-1400DC), and only one 12.5 A input of the DC power supply is used, the supervisor engine's power consumption may vary depending on whether there is any linecard inserted at slot 2 and 3, as well as on the type of linecards inserted. This amount varies between 155 W and 330 W. This variability also affects the maximum amount of available supervisor engine inline power, which can also vary from 0 W to 175 W. Therefore, it is possible for a supervisor engine to deny inline power to some connected inline power devices when one or more linecards are inserted into the chassis.

The output of the commands **show power detail** and **show power module** display the supervisor engine's variable power consumption and its inline power summary.

```

# show qos

To display QoS information, use the **show qos** command.

**show qos**

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** This command has no default settings.

---

**Command Modes** Privileged EXEC

---

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

---

---

**Examples** This example shows the output that might be displayed if you do not enter any keywords:

```
Switch# show qos
  QoS is enabled globally
Switch#
```

---

**Related Commands** [qos \(global configuration mode\)](#)  
[qos \(interface configuration mode\)](#)

# show qos aggregate policer

To display QoS aggregate policer information, use the **show qos aggregate policer** command.

```
show qos aggregate policer [aggregate_name]
```

<b>Syntax Description</b>	<i>aggregate_name</i> (Optional) Named aggregate policer.
---------------------------	---

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

<b>Usage Guidelines</b>	The aggregate policer name is case sensitive.
-------------------------	---

<b>Examples</b>	This example shows the output if you do not enter any keywords:
-----------------	---

```
Switch# show qos aggregate policer
Policer aggr-1
Rate(bps):10000000 Normal-Burst(bytes):1000000
conform-action:transmit exceed-action:policed-dscp-transmit
Policymaps using this policer:
    ipp5-policy
Switch#
```

# show qos dbl

To display global Dynamic Buffer Limiting (DBL) information, use the **show qos dbl** command.

**show qos dbl**

**Syntax Description** This command has no arguments or keywords.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display global DBL information:

```
Switch# show qos dbl
DBL is enabled globally
DBL flow includes vlan
DBL flow includes l4-ports
DBL does not use ecn to indicate congestion
DBL exceed-action mark probability:15%
DBL max credits:15
DBL aggressive credit limit:10
DBL aggressive buffer limit:2 packets
DBL DSCPs with default drop probability:
    1-10
Switch#
```

# show qos interface

To display queuing information, use the **show qos interface** command.

```
show qos interface {fastethernet interface-number | gigabitethernet interface-number} |
[vlan vlan_id | port-channel number]
```

Syntax Description		
<b>fastethernet</b> <i>interface-number</i>		Specifies the Fast Ethernet 802.3 interface.
<b>gigabitethernet</b> <i>interface-number</i>		Specifies the Gigabit Ethernet 802.3z interface.
<b>vlan</b> <i>vlan_id</i>		(Optional) Specifies the VLAN ID; valid values are from 1 to 4094.
<b>port-channel</b> <i>number</i>		(Optional) Specifies the port channel; valid ranges are from 1 to 64.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(13)EW	Added support for extended VLAN addresses.
	12.1(19)EW	Display changed to include the Port Trust Device.

**Examples** This example shows how to display queuing information:

```
Switch# show qos interface fastethernet 6/1
  QoS is enabled globally
  Port QoS is enabled
  Administrative Port Trust State: 'dscp'
  Operational Port Trust State: 'untrusted'
  Port Trust Device: 'cisco-phone'
  Default DSCP:0 Default CoS:0

  Tx-Queue  Bandwidth  ShapeRate  Priority  QueueSize
            (bps)      (bps)      N/A       (packets)
  1         31250000  disabled   N/A       240
  2         31250000  disabled   N/A       240
  3         31250000  disabled   normal    240
  4         31250000  disabled   N/A       240
Switch#
```

**Related Commands** [qos map cos](#)

[tx-queue](#)

# show qos maps

To display QoS map information, use the **show qos maps** command.

```
show qos maps [cos | dscp [policed | tx-queue]]
```

Syntax Description	
<b>cos</b>	(Optional) Displays CoS map information.
<b>dscp</b>	(Optional) Displays DSCP map information.
<b>policed</b>	(Optional) Displays policed map information.
<b>tx-queue</b>	(Optional) Displays tx-queue map information.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display QoS map settings:

```

# show redundancy

To display redundancy facility information, use the **show redundancy** command.

**show redundancy { clients | counters | history | states }**

Syntax Description	
<b>clients</b>	(Optional) Displays information about the redundancy facility client.
<b>counters</b>	(Optional) Displays information about the redundancy facility counter.
<b>history</b>	(Optional) Displays a log of past status and related information for the redundancy facility.
<b>states</b>	(Optional) Displays information about the redundancy facility state, such as disabled, initialization, standby, active.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1.(13)EW	Support for this command was introduced on the Catalyst 4500 series switch (Catalyst 4507R only).
	12.2(31)SGA	Support for ISSU was introduced.

**Examples** This example shows how to display information about the redundancy facility:

```
Switch# show redundancy
Switch# show redundancy
4507r-demo#show redundancy
Redundant System Information :
-----
    Available system uptime = 2 days, 2 hours, 39 minutes
Switchovers system experienced = 0
    Standby failures = 0
    Last switchover reason = none

    Hardware Mode = Duplex
    Configured Redundancy Mode = Stateful Switchover
    Operating Redundancy Mode = Stateful Switchover
    Maintenance Mode = Disabled
    Communications = Up

Current Processor Information :
-----
    Active Location = slot 1
    Current Software state = ACTIVE
    Uptime in current state = 2 days, 2 hours, 39 minutes
    Image Version = Cisco Internetwork Operating System Software
IOS (tm) Catalyst 4000 L3 Switch Software (cat4000-I5S-M), Version 12.2(20)EWA(3
.92), CISCO INTERNAL USE ONLY ENHANCED PRODUCTION VERSION
```

## show redundancy

```

Switch#

```

This example shows how to display redundancy facility client information:

```

Switch# show redundancy clients
clientID = 0          clientSeq = 0          RF_INTERNAL_MSG
clientID = 30        clientSeq = 135        Redundancy Mode RF
clientID = 28        clientSeq = 330        GALIOS_CONFIG_SYNC
clientID = 65000     clientSeq = 65000     RF_LAST_CLIENT Switch

```

The output displays the following information:

- clientID displays the client's ID number.
- clientSeq displays the client's notification sequence number.
- Current redundancy facility state.

This example shows how to display the redundancy facility counter information:

```

Switch# show redundancy counters

# show running-config

To display the module status and configuration, use the **show running-config** command.

```
show running-config [module slot]
```

<b>Syntax Description</b>	<b>module slot</b> (Optional) Specifies the module slot number; valid values are from 1 to 6.				
<b>Defaults</b>	This command has no default settings.				
<b>Command Modes</b>	Privileged EXEC				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>12.1(8a)EW</td> <td>Support for this command was introduced on the Catalyst 4500 series switch.</td> </tr> </tbody> </table>	Release	Modification	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
Release	Modification				
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.				

## Usage Guidelines

In some cases, you might see a difference in the duplex mode displayed when you enter the **show interfaces** command and the **show running-config** command. If you do see a difference, the duplex mode displayed in the **show interfaces** command is the actual duplex mode that the interface is running. The **show interfaces** command shows the operating mode for an interface, while the **show running-config** command shows the configured mode for an interface.

The **show running-config** command output for an interface may display a duplex mode configuration but no configuration for the speed. When no speed is displayed in the output, it indicates that the interface speed is configured to be auto and that the duplex mode shown becomes the operational setting once the speed is configured to something other than auto. With this configuration, it is possible that the operating duplex mode for that interface does not match the duplex mode shown with the **show running-config** command.

## Examples

This example shows how to display the module and status configuration for all modules:

```
Switch# show running-config
03:23:36:%SYS-5-CONFIG_I:Configured from console by consolesh runn
Building configuration...

Current configuration:3268 bytes
!
version 12.1
no service pad
service timestamps debug uptime
service timestamps log uptime
no service password-encryption
!
hostname Switch
!
!
power supplies required 1
ip subnet-zero
```

```
!  
!  
!  
interface FastEthernet1  
  no ip address  
  shutdown  
  duplex auto  
  speed auto  
Switch#
```

This example shows the output for the **show running-config** command when you have enabled the **switchport voice vlan** command:

```
Switch# show running-config int fastethernet 6/1  
Building configuration...  
  
Current configuration:133 bytes  
!  
interface FastEthernet6/1  
  switchport voice vlan 2  
  no snmp trap link-status  
  spanning-tree portfast  
  channel-group 1 mode on  
end  
  
Switch#
```

■ **show slavebootflash:**

## show slavebootflash:

To display information about the standby bootflash file system, use the **show slavebootflash:** command.

**show slavebootflash:** [all | chips | filesys]

Syntax Description	all	(Optional) Displays all possible Flash information.
	<b>chips</b>	(Optional) Displays Flash chip information.
	<b>filesys</b>	(Optional) Displays file system information.

**Defaults** This command has no default settings.

**Command Modes** EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

■ show slaveslot0:

## show slaveslot0:

To display information about the file system on the standby supervisor engine, use the **show slaveslot0:** command.

**show slot0:** [all | chips | filesys]

Syntax Description	all	(Optional) Displays all Flash information including the output from the <b>show slot0: chips</b> and <b>show slot0: filesys</b> commands.
	<b>chips</b>	(Optional) Displays Flash chip register information.
	<b>filesys</b>	(Optional) Displays file system status information.

**Defaults** This command has no default settings.

**Command Modes** EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display a summary of the file system:

```
Switch# show slaveslot0:
-# - ED --type-- --crc--- -seek-- nlen -length- -----date/time----- name
1  .. image      6375DBB7  A4F144    6 10678468 Nov 09 1999 10:50:42 halley

5705404 bytes available (10678596 bytes used)
Switch>
```

This example shows how to display Flash chip information:

```
Switch# show slaveslot0: chips

# show spanning-tree

To display spanning-tree state information, use the **show spanning-tree** command.

```
show spanning-tree [bridge_group | active | backbonefast | bridge [id] | inconsistentports |
interface type | root | summary [total] | uplinkfast | vlan vlan_id | pathcost method | detail]
```

Syntax	Description
<i>bridge_group</i>	(Optional) Specifies the bridge group number; valid values are from 1 to 255.
<b>active</b>	(Optional) Displays the spanning-tree information on active interfaces only.
<b>backbonefast</b>	(Optional) Displays the spanning-tree BackboneFast status.
<b>bridge</b>	(Optional) Displays the bridge status and configuration information.
<i>id</i>	(Optional) Name of the bridge.
<b>inconsistentports</b>	(Optional) Displays the root inconsistency state.
<b>interface</b> <i>type</i>	(Optional) Specifies the interface type and number; valid values are <b>fastethernet</b> , <b>gigabitethernet</b> , <b>tengigabitethernet</b> , <b>port-channel</b> (1 to 64), and <b>vlan</b> (1 to 4094).
<b>root</b>	(Optional) Displays the root bridge status and configuration.
<b>summary</b>	(Optional) Specifies a summary of port states.
<b>total</b>	(Optional) Displays the total lines of the spanning-tree state section.
<b>uplinkfast</b>	(Optional) Displays the spanning-tree UplinkFast status.
<b>vlan</b> <i>vlan_id</i>	(Optional) Specifies the VLAN ID; valid values are from 1 to 4094.
<b>pathcost method</b>	(Optional) Displays the default path cost calculation method used.
<b>detail</b>	(Optional) Displays a summary of interface information.

**Defaults** Interface information summary is displayed.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for extended addressing was added.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

**Examples**

This example shows how to display spanning-tree information on the active interfaces only:

```
Switch# show spanning-tree active
UplinkFast is disabled
BackboneFast is disabled

VLAN1 is executing the ieee compatible Spanning Tree protocol
Bridge Identifier has priority 32768, address 0050.3e8d.6401
Configured hello time 2, max age 20, forward delay 15
Current root has priority 16384, address 0060.704c.7000
Root port is 265 (FastEthernet5/9), cost of root path is 38
Topology change flag not set, detected flag not set
Number of topology changes 0 last change occurred 18:13:54 ago
Times: hold 1, topology change 24, notification 2
      hello 2, max age 14, forward delay 10
Timers: hello 0, topology change 0, notification 0

Port 265 (FastEthernet5/9) of VLAN1 is forwarding
Port path cost 19, Port priority 128, Port Identifier 129.9.
Designated root has priority 16384, address 0060.704c.7000
Designated bridge has priority 32768, address 00e0.4fac.b000
Designated port id is 128.2, designated path cost 19
Timers: message age 3, forward delay 0, hold 0
Number of transitions to forwarding state: 1
BPDU: sent 3, received 32852
Switch#
```

This example shows how to display the spanning-tree BackboneFast status:

```
Switch# show spanning-tree backbonefast
BackboneFast is enabled

BackboneFast statistics
-----
Number of transition via backboneFast (all VLANs) : 0
Number of inferior BPDUs received (all VLANs)    : 0
Number of RLQ request PDUs received (all VLANs)  : 0
Number of RLQ response PDUs received (all VLANs) : 0
Number of RLQ request PDUs sent (all VLANs)      : 0
Number of RLQ response PDUs sent (all VLANs)     : 0
Switch#
```

This example shows how to display spanning-tree information for the bridge:

```
Switch# show spanning-tree bridge
VLAN1
  Bridge ID  Priority    32768
            Address     0050.3e8d.6401
            Hello Time  2 sec  Max Age 20 sec  Forward Delay 15 sec
VLAN2
  Bridge ID  Priority    32768
            Address     0050.3e8d.6402
            Hello Time  2 sec  Max Age 20 sec  Forward Delay 15 sec
VLAN3
  Bridge ID  Priority    32768
            Address     0050.3e8d.6403
            Hello Time  2 sec  Max Age 20 sec  Forward Delay 15 sec
Switch#
```

This example shows how to display a summary of interface information:

```
Switch# show spanning-tree

VLAN1
```

## show spanning-tree

```

```

This example shows how to display spanning-tree information for Fast Ethernet interface 5/9:

```

Switch# show spanning-tree interface fastethernet5/9
Interface Fa0/10 (port 23) in Spanning tree 1 is ROOT-INCONSISTENT
Port path cost 100, Port priority 128
Designated root has priority 8192, address 0090.0c71.a400
Designated bridge has priority 32768, address 00e0.1e9f.8940
Designated port is 23, path cost 115
Timers: message age 0, forward delay 0, hold 0
BPDU: sent 0, received 0
The port is in the portfast mode
Switch#

```

This example shows how to display spanning-tree information for a specific VLAN:

```

Switch# show spanning-tree vlan 1
VLAN1 is executing the ieee compatible Spanning Tree protocol
Bridge Identifier has priority 32768, address 0030.94fc.0a00
Configured hello time 2, max age 20, forward delay 15
We are the root of the spanning tree
Topology change flag not set, detected flag not set
Number of topology changes 5 last change occurred 01:50:47 ago
      from FastEthernet6/16
Times: hold 1, topology change 35, notification 2
      hello 2, max age 20, forward delay 15

Timers:hello 0, topology change 0, notification 0, aging 300

Port 335 (FastEthernet6/15) of VLAN1 is forwarding

```

```

Port path cost 19, Port priority 128, Port Identifier 129.79.
Designated root has priority 32768, address 0030.94fc.0a00
Designated bridge has priority 32768, address 0030.94fc.0a00
Designated port id is 129.79, designated path cost 0
Timers:message age 0, forward delay 0, hold 0
Number of transitions to forwarding state:1
BPDU:sent 6127, received 0
Switch#

```

This example shows how to display spanning-tree information for a specific bridge group:

```

Switch# show spanning-tree vlan 1
UplinkFast is disabled
BackboneFast is disabled
Switch#

```

This example shows how to display a summary of port states:

```

Switch# show spanning-tree summary
Root bridge for:VLAN1, VLAN2.
PortFast BPDU Guard is disabled
EtherChannel misconfiguration guard is enabled
UplinkFast is disabled
BackboneFast is disabled
Default pathcost method used is short

Name                               Blocking Listening Learning Forwarding STP Active
-----
VLAN1                               0           0           0           1           1
VLAN2                               0           0           0           1           1
-----
2 VLANs 0           0           0           2           2

Switch#

```

This example shows how to display the total lines of the spanning-tree state section:

```

Switch# show spanning-tree summary totals
Root bridge for:VLAN1, VLAN2.
PortFast BPDU Guard is disabled
EtherChannel misconfiguration guard is enabled
UplinkFast is disabled
BackboneFast is disabled
Default pathcost method used is short

Name                               Blocking Listening Learning Forwarding STP Active

# show spanning-tree mst

To display MST protocol information, use the **show spanning-tree mst** command.

**show spanning-tree mst** [**configuration**]

**show spanning-tree mst** [*instance-id*] [**detail**]

**show spanning-tree mst** [*instance-id*] **interface** *interface* [**detail**]

## Syntax Description

<b>configuration</b>	(Optional) Displays region configuration information.
<i>instance-id</i>	(Optional) Instance identification number; valid values are from 0 to 15.
<b>detail</b>	(Optional) Displays detailed MST protocol information.
<b>interface</b> <i>interface</i>	(Optional) Interface type and number; valid values for type are <b>fastethernet</b> , <b>gigabitethernet</b> , <b>tengigabitethernet</b> , <b>port-channel</b> , and <b>vlan</b> . See the “Usage Guidelines” section for more information.

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

## Usage Guidelines

This command is not supported on systems that are configured with a Supervisor Engine I.

In the output display of the **show spanning-tree mst configuration** command, a warning message might display. This message appears if you do not map secondary VLANs to the same instance as the associated primary VLAN. The display includes a list of the secondary VLANs that are not mapped to the same instance as the associated primary VLAN. The warning message is as follows:

```
These secondary vlans are not mapped to the same instance as their primary:
-> 3
```

See the [show spanning-tree](#) command for output definitions.

**Examples**

This example shows how to display region configuration information:

```
Switch# show spanning-tree mst configuration
```

```
Name      [leo]
Revision  2702
Instance  Vlans mapped
-----
0         1-9,11-19,21-29,31-39,41-4094
1         10,20,30,40
-----
```

```
Switch#
```

This example shows how to display additional MST protocol values:

```
Switch# show spanning-tree mst 3 detail
```

```
# # # # # MST03 vlans mapped: 3,3000-3999
Bridge address 0002.172c.f400 priority 32771 (32768 sysid 3)
Root this switch for MST03
```

```
GigabitEthernet1/1 of MST03 is boundary forwarding
Port info port id 128.1 priority 128
cost 20000
Designated root address 0002.172c.f400 priority 32771
cost 0
Designated bridge address 0002.172c.f400 priority 32771 port
id 128.1
Timers: message expires in 0 sec, forward delay 0, forward transitions 1
Bpdus (MRecords) sent 4, received 0
```

```
FastEthernet4/2 of MST03 is backup blocking
Port info port id 128.194 priority 128 cost
200000
Designated root address 0002.172c.f400 priority 32771
cost 0
Designated bridge address 0002.172c.f400 priority 32771 port id
128.193
Timers: message expires in 2 sec, forward delay 0, forward transitions 1
Bpdus (MRecords) sent 3, received 252
Switch#
```

This example shows how to display MST information for a specific interface:

```
Switch# show spanning-tree mst 0 interface fastethernet4/1 detail
```

```
Edge port: no (trunk) port guard : none
(default)
Link type: point-to-point (point-to-point) bpdu filter: disable
(default)
Boundary : internal bpdu guard : disable
(default)
FastEthernet4/1 of MST00 is designated forwarding
Vlans mapped to MST00 1-2,4-2999,4000-4094
Port info port id 128.193 priority 128 cost
200000
Designated root address 0050.3e66.d000 priority 8193
cost 20004
Designated ist master address 0002.172c.f400 priority 49152
cost 0
Designated bridge address 0002.172c.f400 priority 49152 port id
128.193
Timers: message expires in 0 sec, forward delay 0, forward transitions 1
Bpdus sent 492, received 3
Switch#
```

# show storm-control

To display the broadcast storm control settings on the switch or on the specified interface, use the **show storm-control** command.

```
show storm-control [interface-id | broadcast]
```

Syntax Description	
<i>interface-id</i>	(Optional) Specifies the interface ID for the physical port.
<b>broadcast</b>	(Optional) Displays the broadcast storm threshold setting.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

**Usage Guidelines** When you enter an interface ID, the storm control thresholds are displayed for the specified interface. If you do not enter an interface ID, the settings are displayed for the broadcast traffic type for all ports on the switch.

**Examples** This is an example of output from the **show storm-control** command when no keywords are entered. Because no traffic type keyword was entered, the broadcast storm control settings are displayed.

```
Switch# show storm-control
Interface  Filter State  Upper   Lower   Current
-----  -
Gi2/1     Forwarding    30.00%  30.00%  N/A
Gi4/1     Forwarding    30.00%  30.00%  N/A
Gi4/3     Forwarding    30.00%  30.00%  N/A
Switch#
```

This is an example of output from the **show storm-control** command for a specified interface. Because no traffic type keyword was entered, the broadcast storm control settings are displayed.

```
Switch# show storm-control fastethernet2/17
Interface  Filter State  Level   Current
-----  -
Fa2/17     Forwarding    50.00%  0.00%
Switch#
```

This is an example of output from the **show storm-control** command for a specified interface and traffic type, where no storm control threshold has been set for that traffic type on the specified interface.

```
Switch# show storm-control gigabitethernet2/1 broadcast
Interface  Filter State  Level  Current
-----
Gi2/1     forwarding    100.00%  N/A
<output truncated>
Switch#
```

Table 2-24 describes the fields in the **show storm-control** display.

**Table 2-24** *show storm-control Field Descriptions*

Field	Description
Interface	Displays the ID of the interface.
Filter State	Displays the status of the filter: <ul style="list-style-type: none"> <li>Blocking—Storm control is enabled, and a storm has occurred.</li> <li>Forwarding—Storm control is enabled, and no storms have occurred.</li> <li>Inactive—Storm control is disabled.</li> </ul>
Level	Displays the threshold level set on the interface for broadcast traffic.
Current	Displays the bandwidth utilization of broadcast traffic as a percentage of total available bandwidth. This field is valid only when storm control is enabled. <p><b>Note</b> N/A is displayed for interfaces that do storm control in the hardware.</p>

[show running-config](#)

# show system mtu

To display the global MTU setting, use the **show system mtu** command.

```
show system mtu
```

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** This command has no default settings.

---

**Command Modes** Privileged EXEC

---

Command History	Release	Modification
	12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.

---

---

**Examples** This example shows how to display the global MTU setting:

```
Switch# show system mtu
Global Ethernet MTU is 1550 bytes.
Switch#
```

---

**Related Commands** [system mtu](#)

# show tech-support

To display troubleshooting information for TAC, use the **show tech-support** command.

```
show tech-support [bridging | cef | ipmulticast | isis | password [page] | page]
```

Syntax Description	
<b>bridging</b>	(Optional) Specifies bridging-related information.
<b>cef</b>	(Optional) Specifies CEF-related information.
<b>ipmulticast</b>	(Optional) Specifies IP multicast-related information.
<b>isis</b>	(Optional) Specifies CLNS and ISIS-related information.
<b>password</b>	(Optional) Includes passwords and other security information in the output.
<b>page</b>	(Optional) Displays one page of information at a time in the output.

## Defaults

The defaults are as follows:

- Outputs are displayed without page breaks.
- Passwords and other security information are removed from the output.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

## Usage Guidelines

Output from the **show tech-support** command may be terminated in midstream with the key combination Ctrl+Alt+6. The command output is buffered so that the command terminates when output of the current sub-command running under this command completes.

Press the **Return** key to display the next line of output, or press the **Space** bar to display the next page of information. If you do not enter the **page** keyword, the output scrolls. It does not stop for page breaks.

If you enter the **password** keyword, password encryption is enabled, but only the encrypted form appears in the output.

If you do not enter the **password** keyword, the passwords and other security-sensitive information in the output are replaced in the output with the word “removed.”

The **show tech-support** commands are a compilation of several **show** commands and the output can be quite lengthy. For a sample display of the output of the **show tech-support** command, see the individual **show** command listed.

If you enter the **show tech-support** command without arguments, the output displays the equivalent of these **show** commands:

- **show version**
- **show running-config**
- **show stacks**

- **show interfaces**
- **show controllers**
- **show process memory**
- **show process cpu**
- **show buffers**
- **show logging**
- **show module**
- **show power**
- **show environment**
- **show interfaces switchport**
- **show interfaces trunk**
- **show vlan**

If you enter the **ipmulticast** keyword, the output displays the equivalent of these **show** commands:

- **show ip pim interface**
- **show ip pim interface count**
- **show ip pim neighbor**
- **show ip pim rp**
- **show ip igmp groups**
- **show ip igmp interface**
- **show ip mroute count**
- **show ip mroute**
- **show ip mcache**
- **show ip dvmrp route**

---

**Examples**

For a sample display of the **show tech-support** command output, see the commands listed in the “Usage Guidelines” section for more information.

---

**Related Commands**

See the “Usage Guidelines ” section.

# show udld

To display the administrative and operational UDLD status, use the **show udld** command.

```
show udld interface-id
```

<b>Syntax Description</b>	<i>interface-id</i> Name of the interface.
---------------------------	--

<b>Defaults</b>	This command has no default settings.
-----------------	---------------------------------------

<b>Command Modes</b>	Privileged EXEC
----------------------	-----------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

<b>Usage Guidelines</b>	If you do not enter an interface ID value, the administrative and operational UDLD status for all interfaces is displayed.
-------------------------	--

<b>Examples</b>	This example shows how to display the UDLD state for Gigabit Ethernet interface 2/2:
-----------------	--

```
Switch# show udld gigabitethernet2/2
Interface Gi2/2
---
Port enable administrative configuration setting: Follows device default
Port enable operational state: Enabled
Current bidirectional state: Bidirectional
Current operational state: Advertisement
Message interval: 60
Time out interval: 5
No multiple neighbors detected
  Entry 1
  ---
  Expiration time: 146
  Device ID: 1
  Current neighbor state: Bidirectional
  Device name: 0050e2826000
  Port ID: 2/1
  Neighbor echo 1 device: SAD03160954
  Neighbor echo 1 port: Gi1/1
  Message interval: 5
  CDP Device name: 066527791
Switch#
```

■ show udd

# show vlan

To display VLAN information, use the **show vlan** command.

```
show vlan [brief | id vlan_id | name name]
```

```
show vlan private-vlan [type]
```

Syntax Description	
<b>brief</b>	(Optional) Displays only a single line for each VLAN, naming the VLAN, status, and ports.
<b>id <i>vlan_id</i></b>	(Optional) Displays information about a single VLAN identified by VLAN ID number; valid values are from 1 to 4094.
<b>name <i>name</i></b>	(Optional) Displays information about a single VLAN identified by VLAN name; valid values are an ASCII string from 1 to 32 characters.
<b>private-vlan</b>	Displays private VLAN information.
<b><i>type</i></b>	(Optional) Private VLAN type.

## Defaults

This command has no default settings.

## Command Modes

Privileged EXEC

## Command History

Release	Modification
12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
12.1(12c)EW	Added support for extended VLAN addresses.

## Examples

This example shows how to display the VLAN parameters for all VLANs within the administrative domain:

```
Switch# show vlan
VLAN Name                Status      Ports
-----
1    default                active     Fa5/9
2    VLAN0002                active     Fa5/9

```

Switch#

This example shows how to display the VLAN name, status, and associated ports only:

```
Switch# show vlan brief
```

VLAN	Name	Status	Ports
1	default	active	Fa5/9
2	VLAN0002	active	Fa5/9
3	VLAN0003	active	Fa5/9
4	VLAN0004	active	Fa5/9
5	VLAN0005	active	Fa5/9
10	VLAN0010	active	Fa5/9
.			
.			
.			
999	VLAN0999	active	Fa5/9
1002	fddi-default	active	Fa5/9
1003	trcrf-default	active	Fa5/9
1004	fddinet-default	active	Fa5/9
1005	trbrf-default	active	Fa5/9

Switch#

This example shows how to display the VLAN parameters for VLAN 3 only:

```
Switch# show vlan id 3

VLAN Name                Status    Ports
-----
3    VLAN0003                active    Fa5/9

VLAN Type  SAID      MTU    Parent RingNo BridgeNo  Stp  BrdgMode Trans1 Trans2
-----
3    enet    100003  1500  -      -      -      -      -      303    0
Switch#
```

Table 2-25 describes the fields in the **show vlan** command output.

**Table 2-25** show vlan Command Output Fields

Field	Description
VLAN	VLAN number.
Name	Name, if configured, of the VLAN.
Status	Status of the VLAN (active or suspend).
Ports	Ports that belong to the VLAN.
Type	Media type of the VLAN.
SAID	Security Association Identifier value for the VLAN.
MTU	Maximum transmission unit size for the VLAN.
Parent	Parent VLAN, if one exists.
RingNo	Ring number for the VLAN, if applicable.
BrdgNo	Bridge number for the VLAN, if applicable.
Stp	Spanning Tree Protocol type used on the VLAN.

The following example shows how to verify that the primary vlan and secondary vlans are correctly associated with each other and the same association also exists on the PVLAN port:

```
Switch# show vlan private-vlan

Primary Secondary Type          Ports
-----
10      100      community    Fa3/1, Fa3/2
```

Now, let's say that you remove the VLAN association, as follows:

```
Switch(config)# vlan 10
Switch(config-vlan)# private-vlan association remove 100
Switch(config-vlan)# end
Switch# show vlan private

Primary Secondary Type          Ports
-----
10      primary
      100      community
```

You can use the following command to verify PVLAN configuration on the interface:

```
Switch# show interface f3/2 status
Port      Name              Status      Vlan      Duplex  Speed Type
Fa3/2                    connected  pvlan seco a-full  a-100  10/100BaseTX

Switch# show interface f3/1 status
Port      Name              Status      Vlan      Duplex  Speed Type
Fa3/1                    connected  pvlan prom a-full  a-100  10/100BaseTX
Switch#
```

# show vlan internal usage

Use the **show vlan internal usage** command to display information about the internal VLAN allocation.

**show vlan [id *vlan-id*] internal usage**

<b>Syntax Description</b>	<b>id <i>vlan-id</i></b> (Optional) Displays internal VLAN allocation information for the specified VLAN; valid values are from 1 to 4094.
---------------------------	--

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display information about the current internal VLAN allocation:

```
Switch# show vlan internal usage
```

```
VLAN Usage
-----
1025 -
1026 -
1027 -
1028 -
1029 Port-channel6
1030 GigabitEthernet1/2
1032 FastEthernet3/20
1033 FastEthernet3/21
1129 -
```

This example shows how to display information about the internal VLAN allocation for a specific VLAN:

```
Switch# show vlan id 1030 internal usage
```

```
VLAN Usage
-----
1030 GigabitEthernet1/2
```

**Related Commands** [vlan internal allocation policy](#)

# show vlan mtu

To display the minimum and maximum transmission unit (MTU) sizes of each VLAN, use the **show vlan mtu** command.

**show vlan mtu**

**Syntax Description** This command has no arguments or keywords

**Defaults** This command has no default settings.

**Command Modes** EXEC

Command History	Release	Modification
	12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Usage Guidelines** The MTU\_Mismatch column in the command output indicates whether all the ports in the VLAN have the same MTU. When “yes” is displayed in the MTU\_Mismatch column, it means that the VLAN has a port with different MTUs, and packets might be dropped that are switched from a port with a larger MTU to a port with a smaller MTU. If the VLAN does not have an SVI, the hyphen (-) symbol is displayed in the SVI\_MTU column.

For a VLAN, if the MTU-Mismatch column displays yes, the names of the port with the MinMTU and the port with the MaxMTU are displayed. For a VLAN, if the SVI\_MTU is bigger than the MinMTU, “TooBig” is displayed after the SVI\_MTU.

**Examples** This is an example of output from the **show vlan mtu** command:

```
Switch# show vlan mtu

VLAN      SVI_MTU      MinMTU(port)  MaxMTU(port)  MTU_Mismatch
-----
1         1500         1500          1500          No
Switch>
```

**Related Commands** [mtu](#)

# show vlan private-vlan

To display private VLAN information, use the **show vlan private-vlan** command.

**show vlan private-vlan [type]**

Syntax Description	type	(Optional) Displays the private VLAN type; valid types are isolated, primary, community, nonoperational, and normal.
--------------------	------	--

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(20)EW	Support for community VLAN was added.

**Usage Guidelines** When the **show vlan private-vlan type** command displays a VLAN type as normal, it indicates that a regular VLAN has been used in the private VLAN configuration. When normal is displayed, this indicates that two VLANs have been associated before the type was set, and the private VLAN is not operational. This information is useful for debugging purposes.

**Examples** This example shows how to display information about all currently configured private VLANs:

```
Switch# show vlan private-vlan
```

```

Primary Secondary Type Ports
-----
2          301      community Fa5/3, Fa5/25
2          302      community
                10      community
100        101      isolated
150        151      non-operational
                202     community
                303     community
401        402      non-operational
Switch#
```

**Note**

A blank Primary value indicates that no association exists.

This example shows how to display information about all currently configured private VLAN types:

```
Switch# show vlan private-vlan type
```

```
Vlan Type
-----
202 primary
303 community
304 community
305 community
306 community
307 community
308 normal
309 community
440 isolated
Switch#
```

Table 2-26 describes the fields in the `show vlan private-vlan` command output.

**Table 2-26** *show vlan private-vlan Command Output Fields*

Field	Description
Primary	Number of the primary VLAN.
Secondary	Number of the secondary VLAN.
Secondary-Type	Secondary VLAN type is <b>isolated</b> or <b>community</b> .
Ports	Indicates the ports within a VLAN.
Type	Type of VLAN; possible values are <b>primary</b> , <b>isolated</b> , <b>community</b> , <b>nonoperational</b> , or <b>normal</b> .

# show vlan remote-span

To display a list of Remote SPAN (RSPAN) VLANs, use the **show vlan remote-span** command.

**show vlan remote-span**

---

**Syntax Description** This command has no arguments or keywords.

---

**Defaults** This command has no default settings.

---

**Command Modes** Privileged EXEC

---

Command History	Release	Modification
	12.1(12)EW	This command was introduced on the Catalyst 4500 series switches.

---

---

**Examples** This example shows how to display a list of RSPAN VLANs:

```
Router# show vlan remote-span
Remote SPAN VLANs
-----
2,20
```

---

**Related Commands** [remote-span](#)  
[vlan \(VLAN Database mode\)](#)

# show vmps

To display the VLAN Query Protocol (VQP) version, reconfirmation interval, retry count, VLAN Membership Policy Server (VMPS) IP addresses, current servers, and primary servers, use the **show vmps** command.

**show vmps [statistics]**

<b>Syntax Description</b>	<b>statistics</b> (Optional) Displays the client-side statistics.				
<b>Defaults</b>	This command has no default settings.				
<b>Command Modes</b>	EXEC				
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>12.1(13)EW</td> <td>Support for this command was introduced on the Catalyst 4500 series switch.</td> </tr> </tbody> </table>	Release	Modification	12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.
Release	Modification				
12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.				

## Examples

This is an example of output from the **show vmps** command:

```
Switch# show vmps
VQP Client Status:
-----
VMPS VQP Version: 1
Reconfirm Interval: 60 min
Server Retry Count: 3
VMPS domain server: 172.20.50.120 (primary, current)

Reconfirmation status
-----
VMPS Action:          No Dynamic Port
Switch#
```

This is an example of output from the **show vmps statistics** command:

```
Switch# show vmps statistics
VMPS Client Statistics
-----
VQP Queries:          0
VQP Responses:        0
VMPS Changes:         0
VQP Shutdowns:       0
VQP Denied:           0
VQP Wrong Domain:    0
VQP Wrong Version:    0
VQP Insufficient Resource: 0
Switch#
```

**Related Commands** [vmps reconfirm \(privileged EXEC\)](#)

# show vtp

To display VTP statistics and domain information, use the **show vtp** command.

**show vtp {counters | status}**

Syntax Description	counters	Specifies the VTP statistics.
	status	Specifies the VTP domain status.

**Defaults** This command has no default settings.

**Command Modes** Privileged EXEC

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.

**Examples** This example shows how to display the VTP statistics:

```
Switch# show vtp counters
VTP statistics:
Summary advertisements received      : 1
Subset advertisements received      : 1
Request advertisements received     : 0
Summary advertisements transmitted  : 31
Subset advertisements transmitted   : 1
Request advertisements transmitted   : 0
Number of config revision errors    : 0
Number of config digest errors      : 0
Number of V1 summary errors         : 0

VTP pruning statistics:

Trunk          Join Transmitted  Join Received  Summary advts received from
-----          -----          -----          -----
Pa5/9          1555             1564             0
Switch#
```

This example shows how to display the VTP domain status:

```
Switch# show vtp status
VTP Version          : 2
Configuration Revision : 250
Maximum VLANs supported locally : 1005
Number of existing VLANs : 33
VTP Operating Mode   : Server
VTP Domain Name      : Lab_Network
VTP Pruning Mode     : Enabled
VTP V2 Mode          : Enabled
VTP Traps Generation : Disabled
```

```

MD5 digest                : 0xE6 0xF8 0x3E 0xDD 0xA4 0xF5 0xC2 0x0E
Configuration last modified by 172.20.52.18 at 9-22-99 11:18:20
Local updater ID is 172.20.52.18 on interface V11 (lowest numbered VLAN interface found)
Switch#

```

This example shows how to display only those lines in the **show vtp** output that contain the word **Summary**:

```

Switch# show vtp counters | include Summary
Summary advertisements received      : 1
Summary advertisements transmitted : 32
Trunk          Join Transmitted Join Received      Summary advts received from
Switch#

```

Table 2-27 describes the fields in the **show vtp** command output.

**Table 2-27** *show vtp Command Output Fields*

Field	Description
Summary advertisements received	Total number of summary advertisements received.
Subset advertisements received	Total number of subset advertisements received.
Request advertisements received	Total number of request advertisements received.
Summary advertisements transmitted	Total number of summary advertisements transmitted.
Subset advertisements transmitted	Total number of subset advertisements transmitted.
Request advertisements transmitted	Total number of request advertisements transmitted.
Number of config revision errors	Number of config revision errors.
Number of config digest errors	Number of config revision digest errors.
Number of V1 summary errors	Number of V1 summary errors.
Trunk	Trunk port participating in VTP pruning.
Join Transmitted	Number of VTP-Pruning Joins transmitted.
Join Received	Number of VTP-Pruning Joins received.
Summary advts received from non-pruning-capable device	Number of Summary advertisements received from nonpruning-capable devices.
Number of existing VLANs	Total number of VLANs in the domain.
Configuration Revision	VTP revision number used to exchange VLAN information.
Maximum VLANs supported locally	Maximum number of VLANs allowed on the device.
Number of existing VLANs	Number of existing VLANs.
VTP Operating Mode	Indicates whether VTP is enabled or disabled.
VTP Domain Name	Name of the VTP domain.
VTP Pruning Mode	Indicates whether VTP pruning is enabled or disabled.
VTP V2 Mode	Indicates the VTP V2 mode as server, client, or transparent.
VTP Traps Generation	Indicates whether VTP trap generation mode is enabled or disabled.
MD5 digest	Checksum values.

■ show vtp
