show access-group mode interface

To display the ACL configuration on a Layer 2 interface, use the **show access-group mode interface** command.

show access-group mode interface [interface interface-number]

Syntax Description	interface	(Optional) Interface type; valid values are ethernet , fastethernet , gigabitethernet , tengigabitethernet , and port-channel .		
	interface-number	(Optional) Interface number.		
Defaults	This command has	This command has no default settings.		
ommand Modes	Privileged EXEC mode			
Command History	Release	Modification		
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.		
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.		
lsage Guidelines	The valid values for	the port number depend on the chassis used.		
xamples	This example shows	s how to display the ACL configuration on the Fast Ethernet interface 6/1:		
	Switch# show acce Interface FastEth Access group m Switch#			
Related Commands	Command	Description		
	access-group mod	e Specifies the override modes (for example, VACL overrides PACL) and the non-override modes (for example, merge or strict mode).		

show adjacency

To display information about the Layer 3 switching adjacency table, use the show adjacency command.

Control Description		
Syntax Description	interface	(Optional) Interface type; possible valid values are ethernet , fastethernet , gigabitethernet , tengigabitethernet , pos , ge-wan , and atm .
	interface-number	(Optional) Module and port number; see the "Usage Guidelines" section for valid values.
	null interface-number	(Optional) Specifies the null interface; the valid value is 0 .
	port-channel number	(Optional) Specifies the channel interface; valid values are a maximum of 64 values ranging from 1 to 256.
	vlan vlan-id	(Optional) Specifies the VLAN; valid values are from 1 to 4094.
	detail	(Optional) Displays the information about the protocol detail and timer.
	internal	(Optional) Displays the information about the internal data structure.
	summary	(Optional) Displays a summary of CEF-adjacency information.

- MAC address of the adjacent router.
- Time left before the adjacency rolls out of the adjacency table. After it rolls out, a packet must use the same next hop to the destination.

Examples

This example shows how to display adjacency information:

Switch# :	show adjacency	
Protocol	Interface	Address
IP	FastEthernet2/3	172.20.52.1(3045)
IP	FastEthernet2/3	172.20.52.22(11)
Switch#		

This example shows how to display a summary of adjacency information:

```
Switch# show adjacency summary
Adjacency Table has 2 adjacencies
Interface Adjacency Count
FastEthernet2/3 2
Switch#
```

This example shows how to display protocol detail and timer information:

Switch# :	show adjacency detail		
Protocol	Interface	Address	
IP	FastEthernet2/3	172.20.52.2	1(3045)
		0 packets,	0 bytes

C + + + + + +			

Switch#

This example shows how to display adjacency information for a specific interface:

Switch# :	show adjacency fastethernet	t2/3
Protocol	Interface	Address
IP	FastEthernet2/3	172.20.52.1(3045)
IP	FastEthernet2/3	172.20.52.22(11)
Switch#		

Related Commands	Command	Description
debug adjacency		Displays information about the adjacency debugging.

show ancp multicast

To display multicast streams activated by Access Node Control Protocol (ANCP), use the **show ancp multicast** command.

show ancp multicast [**group** *groupaddr*] [**source** *sourceaddr*] | [**interface** *interfacename*]

Syntax Description	group groupaddr	(Optional) Specifies a multicast group address.
	source sourceaddr	(Optional) Specifies a multicast source address.
	interface interfacename	(Optional) Specifies a multicast flowing on a specific interface.
Defaults	Displays all the multicast	streams activated with ANCP.
Command Modes	Privileged EXEC

show arp access-list

To display detailed information on an ARP access list, use the show arp command.

	show arp access-list				
Syntax Description	This command has no arguments or keywords.				
Defaults	This command has no default	This command has no default settings.			
Command Modes	EXEC				
Command History	Release Mo	odification			
		pport for this command was introduced on the Catalyst 4500 series itch.			
Examples	This example shows how to d Switch# show arp access-1: ARP access list rose permit ip 10.101.1.1 (permit ip 20.3.1.0 0.0	0.0.255 mac any			
Related Commands	Command	Description			
	access-group mode	Specifies the override modes (for example, VACL overrides PACL) and the non-override modes (for example, merge or strict mode).			
	arp access-list	Defines an ARP access list or adds clauses at the end of a predefined list.			
	ip arp inspection filter vlan	Permits ARPs from hosts that are configured for static IP when DAI is enabled, defines an ARP access list, and applies the access list to a VLAN.			

show authentication

To display the Auth Manager information, use the **show authentication** command in EXEC or Privileged EXEC mode.

show authentication {interface interface | registrations | sessions [session-id session-id] [handle handle] [interface interface] [mac mac] [method method]

Syntax Description	interface interface	Displays all of the Auth Manager details associated with the specified interface.	
	registrations	Displays details of all methods registered with the Auth Manager.	
	sessions	Displays details of the current Auth Manager sessions (for example, client devices). If you do not enter any optional specifiers, all current active sessions are displayed. You can enter the specifiers singly or in combination to display a specific session (or group of sessions).	
	session-id session-id	(Optional) Specifies an Auth Manager session.	
	handle handle	(Optional) Specifies the particular handle for which Auth Manager information is displayed. Range is 1 to 4294967295.	
	mac mac	(Optional) Displays Auth Manager session information for a specified MAC address.	
	method method	(Optional) Displays all clients authorized by a specified authentication method. Valid values are as follows:	
		• dot1x	
		• mab	
		• webauth	
Command Default	This command has no	default settings.	
Command Modes	EXEC		
Command History	Release Mo	dification	
	12.2(50)SG Thi	is command was introduced.	
Usage Guidelines	Table 2-13 describes t	he significant fields shown in the show authentication display.	
Note	The possible values for	or the status of sessions are given below. For a session in terminal state, "Authz	
NUCC	The possible values it	The status of sessions are given below. For a session in terminal state, Autiz	

The possible values for the status of sessions are given below. For a session in terminal state, "Authz Success" or "Authz Failed" are displayed. "No methods" is displayed if no method has provided a result.

Field	Description		
Idle	The session has been initialized and no methods have run yet.		
Running	A method is running for this session.		
No methods	o methods No method has provided a result for this session.		
Authc Success	A method has resulted in authentication success for this session.		
Authc Failed	the Failed A method has resulted in authentication fail for this session.		
Authz Success All features have been successfully applied for this session.			
Authz Failed	A feature has failed to be applied for this session.		

Table 2-13show authentication Command Output

Table 2-14 lists the possible values for the state of methods. For a session in terminal state, "Authc Success," "Authc Failed," or "Failed over" are displayed (the latter indicates a method ran and failed over to the next method which did not provide a result. "Not run" is displayed in the case of sessions that are synchronized on standby.

Method State	State Level	Description		
Not run	Terminal	The method has not run for this session.		
Running	Intermediate	The method is running for this session.		
Failed over	Terminal	The method has failed and the next method is expected to provide a result.		
Authc Success	Terminal	The method has provided a successful authentication result for the session.		
Authc Failed	Terminal	The method has provided a failed authentication result for the session.		

Table 2-14 State Method Values

Examples

The following example shows how to display authentication methods registered with Auth Manager:

Switch# show authentication registrations Auth Methods registered with the Auth Manager: Handle Priority Name 3 0 dot1x 2 1 mab 1 2 webauth Switch#

The following example shows how to display Auth Manager details for a specific interface:

Switch# show authentication interface gigabitethernet1/23 Client list: MAC Address Domain Status Handle Interface 000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1/0/23 Available methods list: Handle Priority Name 3 0 dot1x Runnable methods list: Handle Priority Name 3 0 dot1x Switch#

The following example shows how to display all Auth Manager sessions on the switch:

Switch# show authentication sessions							
Interface	MAC Address	Method	Domain	Status	Session ID		
Gi3/45	(unknown)	N/A	DATA	Authz Failed	0908140400000007003651EC		
Gi3/46	(unknown)	N/A	DATA	Authz Success	09081404000000080057C274		

The following example shows how to display all Auth Manager sessions on an interface:

```
Switch# show authentication sessions int gi 3/46
           Interface: GigabitEthernet3/46
         MAC Address: Unknown
          IP Address: Unknown
              Status: Authz Success
              Domain: DATA
      Oper host mode: multi-host
    Oper control dir: both
       Authorized By: Guest Vlan
         Vlan Policy: 4094
     Session timeout: N/A
        Idle timeout: N/A
    Common Session ID: 0908140400000080057C274
     Acct Session ID: 0x000000A
             Handle: 0xCC000008
Runnable methods list:
      Method State
```

The following example shows how to display Auth Manager session for a specified MAC address:

Switch# show authentication sessions mac 000e.84af.59bd

Interface: GigabitEthernet1/23
MAC Address: 000e.84af.59bd
Status: Authz Success
Domain: DATA
Oper host mode: single-host
Authorized By: Authentication Server
Vlan Policy: 10
Handle: 0xE0000000
Runnable methods list:
Method State
dot1x Authc Success
Switch#

dot1x Failed over

The following example shows how to display all clients authorized via a specified auth method:

```
Switch# show authentication sessions method mab
No Auth Manager contexts match supplied criteria
Switch# show authentication sessions method dot1x
MAC Address Domain Status Handle Interface
000e.84af.59bd DATA Authz Success 0xE0000000 GigabitEthernet1/23
Switch#
```

Related Commands	Command	Description	
	authentication control-direction	Changes the port control to unidirectional or bidirectional.	
	authentication critical recovery delay	Configures the 802.1X critical authentication parameters.	
	authentication event	Configures the actions for authentication events.	
	authentication fallback	Enables the Webauth fallback and specifies the fallback profile to use when failing over to Webauth.	
	authentication host-mode	Defines the classification of a session that will be used to apply the access-policies using the host-mode configuration.	
	authentication open	Enables open access on this port.	
	authentication order	Specifies the order in which authentication methods should be attempted for a client on an interface.	
	authentication periodic	Enables reauthentication for this port.	
	authentication port-control	Configures the port-control value.	
	authentication priority	Specifies the priority of authentication methods on an interface.	
	authentication timer	Configures the authentication timer.	
	authentication violation	Specifies the action to be taken when a security violation exists on a port.	

show auto install status

To display the status of an automatic installation, use the show auto install status command.

show auto install status

Syntax Description This command has no arguments or keywords.

Defaults This command has no default settings.

Command Modes Privileged EXEC mode

 Command History
 Release
 Modification

 12.2(20)EW
 Support for this command was introduced on the Catalyst 4500 series switch.

Examples This example shows how to display the IP address of the TFTP server and to display whether or not the switch is currently acquiring the configuration file on the TFTP server:

Switch# show auto install status

Status: Downloading config fileDHCP Server: 20.0.0.1TFTP Server: 30.0.0.3Config File Fetched : Undetermined

The first IP address in the display indicates the server that is used for the automatic installation. The second IP address indicates the TFTP server that provided the configuration file.

show auto qos

To display the automatic quality of service (auto-QoS) configuration that is applied, use the **show auto qos** user EXEC command.

show auto qos [interface [interface-id]] [{begin | exclude | include} expression]

Syntax Description	interface interface-id	(Optional) Displays auto-QoS information for the specified interface or for all interfaces. Valid interfaces include physical ports.	
	begin	(Optional) Begins with the line that matches the expression.	
	exclude	(Optional) Excludes lines that match the expression.	
	include	(Optional) Includes lines that match the specified expression.	
	expression	(Optional) Expression in the output to use as a reference point.	
Command Modes	Privileged EXEC mode		
Command History	Release	Modification	
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.	
Usage Guidelines	The show auto qos interface <i>interface-id</i> command displays the auto-QoS configuration; it does not display any user changes to the configuration that might be in effect.		
		bout the QoS configuration that might be affected by auto-QoS on a 5-E, use one of these commands:	
	• show qos		
	• show qos map		
	• show qos interface	interface-id	
	• show running-confi	ig	
	Expressions are case sensitive. For example, if you enter exclude output , the lines that contain <i>output</i> do not appear, but the lines that contain <i>Output</i> appear.		
Examples	This example shows output from the show auto qos command when auto-QoS is enabled:		
	Switch# show auto qos GigabitEthernet1/2 auto qos voip cisco-ph Switch#	none	
Related Commands	Command	Description	
	auto qos voip	Automatically configures quality of service (auto-QoS) for Voice	

show bootflash:

To display information about the bootflash: file system, use the show bootflash: command.

show bootflash: [all | chips | filesys]

```
Syntax Description
                   all
                               (Optional) Displays all possible Flash information.
                   chips
                               (Optional) Displays Flash chip information.
                   filesys
                               (Optional) Displays file system information.
Defaults
                   This command has no default settings.
Command Modes
                   EXEC
Command History
                                   Modification
                   Release
                   12.1(8a)EW
                                   Support for this command was introduced on the Catalyst 4500 series switch.
Examples
                   This example shows how to display file system status information:
                   Switch> show bootflash: filesys
                   ----- FILE SYSTEM STATUS ------
                    Device Number = 0

show bootvar

To display BOOT environment variable information, use the show bootvar command.

show bootvar

Syntax Description	This command has no arguments or keywords.
ojinak booonpilon	This command has no arguments of hey words.

- **Defaults** This command has no default settings.
- **Command Modes** Privileged EXEC mode

 Release
 Modification

 12.1(8a)EW
 Support for this command was introduced on the Catalyst 4500 series switch.

Examples This example shows how to display BOOT environment variable information:

Switch# show bootvar BOOT variable = sup:1; CONFIG_FILE variable does not exist BOOTLDR variable does not exist Configuration register is 0x0 Switch#

show cable-diagnostics tdr

To display the test results for the TDR cable diagnostics, use the show cable-diagnostics tdr command.

show cable-diagnostics tdr {interface {interface interface-number}}

Note	This command wil instead.	Il be deprecated in future Cisco IOS releases; use the diagnostic start command		
Syntax Description	interface interface interface-number	 <i>e</i> Interface type; valid values are fastethernet and gigabitethernet. Module and port number. 		
Defaults	This command has	This command has no default settings.		
Command Modes	Privileged EXEC 1	node		
Command History	Release	Modification		
-	12.2(25)SG	Support for this command was introduced on the Catalyst 4500 series switch.		
Usage Guidelines	The TDR test is su the following line • WS-X4548-G			
	• WS-X4548-G	B-RJ45V		
	• WS-X4524-G	B-RJ45V		
	• WS-X4013+T	S		
	• WS-C4948			
	• WS-C4948-10GE			
	The distance to the fault is displayed in meters (m).			
Examples	This example show	vs how to display information about the TDR test:		
-	Switch# show cab	<pre>le-diagnostics tdr interface gi4/13 Local pair Cable length Remote channel Status 1-2 102 +-2m Unknown Fault 3-6 100 +-2m Unknown Fault 4-5 102 +-2m Unknown Fault 7-8 102 +-2m Unknown Fault</pre>		

Switch#

Table 2-15 describes the fields in the show cable-diagnostics tdr command output.

Field	Description	
Interface	Interface tested.	
Speed	Current line speed.	
Pair	Local pair name.	
Cable Length	Distance to the fault in meters (m).	
Channel	Pair designation (A, B, C, or D).	
Status	Pair status displayed is one of the following:	
	• Terminated—The link is up.	
	• Fault—Cable fault (open or short)	

Table 2-15	show cable-diagnostics tdr Command Output Fields

D-I-A-I	A
Related	Commands
nonucou	oommunus

Command	Description
test cable-diagnostics tdr	Tests the condition of copper cables on 48-port 10/100/1000 BASE-T modules.

show call-home

To display the configured CallHome information, use the **show call-home** command in privileged EXEC mode.

show call-home [alert-group | detail | mail-server | profile {all | name} | statistics]

Syntax Description	alert-group	(Optional) Displays the available alert group.
	detail	(Optional) Displays the CallHome configuration in detail.
	mail-server	(Optional) Displays the CallHome mail server-related information.
	profile all	(Optional) Displays configuration information for all existing profiles.
	profile name	(Optional) Displays configuration information for a specific destination profile.
	statistics	(Optional) Displays the CallHome statistics.
mmand Default	This command has no	o default settings.
mmand Modes	Privileged EXEC (#)	
mmand History	Release	Modification
	12.2(52)SG	This command was introduced on the Catalyst 4500 series switch,
		Supervisor Engine 6-E, and Catalyst 4900M chassis.

Table 2-16 describes the fields that are shown in the example.

Field	Definition
Device ID	Configured ID (name), MAC address, or serial number of the neighbor device.
Local Intrfce	(Local Interface) The protocol that is used by the connectivity media.
Holdtme	(Holdtime) Remaining amount of time, in seconds, that the current device holds the CDP advertisement from a transmitting router before discarding it.
Capability	Capability code that is discovered on the device. This device type is listed in the CDP Neighbors table. Possible values are as follows:
	R—Router
	T—Transparent bridge
	B—Source-routing bridge
	S—Switch
	H—Host
	I—IGMP device
	r—Repeater
	P—Phone
Platform	Product number of the device.
Port ID	Protocol and port number of the device.

Table 2-16show cdp neighbors Field Descriptions

This example shows how to display detailed information about your CDP neighbors:

```
Switch# show cdp neighbors detail
_____
Device ID: lab-7206
Entry address(es):
 IP address: 172.19.169.83

Entry address(es):
 IP address: 172.19.169.87
Switch#
```

Table 2-17 describes the fields that are shown in the example.

Field	Definition
Device ID	Name of the neighbor device and either the MAC address or the serial number of this device.
Entry address(es)	List of network addresses of neighbor devices.
[network protocol] address	Network address of the neighbor device. The address can be in IP, IPX, AppleTalk, DECnet, or CLNS protocol conventions.
Platform	Product name and number of the neighbor device.
Capabilities	Device type of the neighbor. This device can be a router, a bridge, a transparent bridge, a source-routing bridge, a switch, a host, an IGMP device, or a repeater.
Interface	Protocol and port number of the port on the current device.
Holdtime	Remaining amount of time, in seconds, that the current device holds the CDP advertisement from a transmitting router before discarding it.
Version:	Software version running on the neighbor device.
advertisement version:	Version of CDP that is being used for CDP advertisements.
Duplex:	Duplex state of connection between the current device and the neighbor device.

Table 2-17show cdp neighbors detail Field Descriptions

Related Commands	Command	Description
	show cdp (refer to Cisco IOS documentation)	Displays global CDP information, including timer and hold-time information.
	show cdp entry (refer to Cisco IOS documentation)	Displays information about a specific neighboring device discovered using Cisco Discovery Protocol (CDP).
	show cdp interface (refer to Cisco IOS documentation)	Displays information about the interfaces on which Cisco Discovery Protocol (CDP) is enabled.
	show cdp traffic (refer to Cisco IOS documentation)	Displays traffic information from the CDP table.

show class-map

To display class map information, use the show class-map command.

Switch#

<u>Note</u>

Table 2-18 provides a partial list of the displayed fields. The remaining fields in the display show internal state information. For a detailed description of these state machines and their settings, refer to the 802.1X specification.

Field	Description
PortStatus	Status of the port (authorized or unauthorized). The status of a port is displayed as authorized if the dot1x port-control interface configuration command is set to auto and has successfully completed authentication.
Port Control	Setting of the dot1x port-control interface configuration command.
MultiHosts	Setting of the dot1x multiple-hosts interface configuration command (allowed or disallowed).

This is an example of output from the **show dot1x statistics interface gigabitethernet1/1** command. Table 2-19 describes the fields in the display.

```
Switch# show dot1x statistics interface gigabitethernet1/1
```

```
PortStatistics Parameters for Dot1x
```

```

Switch#
```

Table 2-19	show dot1x statistics Field Descriptions
------------	--

Field	Description	
TxReq/TxReqId	Number of EAP-request/identity frames that have been sent.	
TxTotal	Number of EAPOL frames of any type that have been sent.	
RxStart	Number of valid EAPOL-start frames that have been received.	
RxLogoff	Number of EAPOL-logoff frames that have been received.	
RxRespId	Number of EAP-response/identity frames that have been received.	
RxResp	Number of valid EAP-response frames (other than response/identity frames) that have been received.	
RxInvalid	Number of EAPOL frames that have been received and have an unrecognized frame type.	
RxLenError	Number of EAPOL frames that have been received in which the packabody length field is invalid.	
RxTotal	Number of valid EAPOL frames of any type that have been received.	
RxVersion	Protocol version number carried in the most recently received EAPOI frame.	
LastRxSrcMac	Source MAC address carried in the most recently received EAPOL frame.	

Related Commands

Command	Description
dot1x critical	Enables the 802.1X critical authentication on a port.
dot1x critical eapol	Enables sending EAPOL success packets when a port is critically authorized partway through an EAP exchange.
dot1x critical recovery delay	Sets the time interval between port reinitializations.
dot1x critical vlan	Assigns a critically authenticated port to a specific VLAN.
dot1x guest-vlan	Enables a guest VLAN on a per-port basis.
dot1x max-reauth-req	Sets the maximum number of times that the switch will retransmit an EAP-Request/Identity frame to the client before restarting the authentication process.
dot1x port-control	Enables manual control of the authorization state on a port.
mac-address-table notification	Enables MAC address notification on a switch.

show energywise

Use the **show energywise** privileged EXEC command to display the EnergyWise settings and status of the entity and the power over Ethernet (PoE) ports.

show flowcontrol

To display the per-interface status and statistics related to flow control, use the **show flowcontrol** command.

show flowcontrol [module slot | interface interface]

Syntax Description	module <i>slot</i>	(Optional) Limits the display to interfaces on a specific module.
	interface interface	<i>ce</i> (Optional) Displays the status on a specific interface.
Defaults	This command ha	is no default settings.
Command Modes	Privileged EXEC	mode
Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.

Usage Guidelines Table 2-20 describes the fields in the **show flowcontrol** command output.

Table 2-20show flowcontrol Command Output

Field	Description
Port	Module and port number.
Send-Flowcontrol-Admin	Flow-control administration. Possible settings: on indicates the local port sends flow control to the far end; off indicates the local port does not send flow control to the far end; desired indicates the local end sends flow control to the far end if the far end supports it.
Send-Flowcontrol-Oper	Flow-control operation. Possible setting: disagree indicates the two ports could not agree on a link protocol.
Receive-Flowcontrol-Admin	Flow-control administration. Possible settings: on indicates the local port requires the far end to send flow control; off indicates the local port does not allow the far end to send flow control; desired indicates the local end allows the far end to send flow control.
Receive-Flowcontrol-Oper	Flow-control operation. Possible setting: disagree indicates the two ports could not agree on a link protocol.
RxPause	Number of pause frames received.
TxPause	Number of pause frames transmitted.

Examp	es

This example shows how to display the flow control status on all the Gigabit Ethernet interfaces:

Switch# show flowcontrol

Port	Send Flo admin	wControl oper	Receive admin	FlowControl oper	RxPause	TxPause
Te1/1	off	off	on	off	0	0
Te1/2	off	off	on	off	0	0
Gi1/3	off	off	desired	on	0	0
Gi1/4	off	off	desired	on	0	0
Gi1/5	off	off	desired	on	0	0
Gi1/6	off	off	desired	on	0	0
Gi3/1	off	off	desired	off	0	0
Gi3/2	off	off	desired	off	0	0

Related Commands	Command		Description	
	hw-module port-group		Selects either Gigabit Ethernet or Ten Gigabit Ethernet interfaces on your module.	

show hw-module uplink

To display the current uplink mode, use the show hw-module uplink command. show hw-module uplink Defaults This command has no default settings. **Command Modes** Privileged EXEC mode Release Modification **Command History** 12.2(25)EW Support for this command was introduced on the Catalyst 4500 series switch. **Usage Guidelines** If the active uplink mode is different than configured mode, the output displays the change. By default, the current (operational) uplink selection is displayed. **Examples** This example shows the output displaying the current (active) uplinks: Switch# show hw-module uplink Active uplink configuration is TenGigabitEthernet This example shows the output for redundant systems in SSO mode if the 10-Gigabit Ethernet uplinks are active, and the Gigabit Ethernet uplinks are selected: Switch# show hw-module uplink Active uplink configuration is TenGigabitEthernet (will be GigabitEthernet after next reload) A 'redundancy reload shelf' or power-cycle of chassis is required to apply the new configuration This example shows the output for redundant systems in RPR mode if the 10-Gigabit Ethernet uplinks are active, and the Gigabit Ethernet uplinks are selected: Switch# show hw-module uplink Active uplink configuration is TenGigabitEthernet (will be GigabitEthernet after next reload) A reload of active supervisor is required to apply the new configuration. **Related Commands** Command Description hw-module uplink select Selects the 10-Gigabit Ethernet or Gigabit Ethernet uplinks on the Supervisor Engine V-10GE within the W-C4510R

chassis.

show idprom

To display the IDPROMs for the chassis, supervisor engine, module, power supplies, fan trays, clock module, and multiplexer (mux) buffer, use the **show idprom** command.

show idprom {all | chassis | module [mod] | interface int_name | supervisor | power-supply
 number | fan-tray}

Syntax Description	all	Displays information for all IDPROMs.
	chassis	Displays information for the chassis IDPROMs.
	module	Displays information for the module IDPROMs.
	mod	(Optional) Specifies the module name.
	<pre>interface int_name</pre>	Displays information for the GBIC or SFP IDPROMs.
	supervisor	Displays information for the supervisor engine IDPROMs.
	power-supply number	Displays information for the power supply IDPROMs.
	fan-tray	Displays information for the fan tray IDPROMs.

Defaults

This command has no default settings.

Command Modes Privileged EXEC mode

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for the power-supply , fan-tray , clock-module , and mux-buffer keywords was added.
	12.1(13)EW	Support for interface keyword was added.
	12.2(18)EW	Enhanced the show idprom interface output to include the hexadecimal display of the GBIC/SFP SEEPROM contents.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.

Usage Guidelines

When you enter the **show idprom interface** command, the output lines for Calibration type and Rx (receive) power measurement may not be displayed for all GBICs.

Examples

show interfaces

To display traffic on a specific interface, use the show interfaces command.

show interfaces [{{fastethernet mod/interface-number} | {gigabitethernet mod/interface-number} | {tengigabitethernet mod/interface-number} | {null interface-number} | vlan vlan_id} | status}]

	fastethernet mod/interface-n	umber	(Optional) Specifies the Fast Ethernet module and interface.		
	gigabitethernet mod/interface-number tengigabitethernet mod/interface-number null interface-number vlan vlan_id status		(Optional) Specifies the Gigabit Ethernet module and interface.		
			(Optional) Specifies the 10-Gigabit Ethernet module and interface.		
			(Optional) Specifies the null interface; the valid value is 0.(Optional) Specifies the VLAN; valid values are from 1 to 4094.(Optional) Displays status information.		
Command Modes	Privileged EXE	C mode			
Command History	Release	Modification			
Command History	Release	Modification			
Command History	Release 12.1(8a)EW 12.1(12c)EW	Support for	this command was introduced on the Catalyst 4500 series switch.

Command History	12.1(8a)EW 12.1(12c)EW 12.2(25)EW	Support for Support for Support for series switch Support for	this command was introduced on the Catalyst 4500 series switch. extended VLAN addresses was added. the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 h.		

In some cases, the duplex mode that is displayed by the **show interfaces** command is different than that displayed by the **show running-config** command. The duplex mode that is displayed in the **show interfaces** command is the actual duplex mode that the interface is running. The **show interfaces** command shows the operating mode for an interface, but the **show running-config** command shows the configured mode for an interface.

If you do not enter any keywords, all counters for all modules are displayed.

Line cards that support auto-MDIX configuration on their copper media ports include: WS-X4124-RJ45, WS-X4148-RJ with hardware revision 3.0 or later, and WS-X4232-GB-RJ with hardware revision 3.0 or later.

Examples

This example shows how to display traffic for Gigabit Ethernet interface 2/5:

Switch# show interfaces gigabitethernet2/5 GigabitEthernet9/5 is up, line protocol is up (connected) (vlan-err-dis) Hardware is C4k 1000Mb 802.3, address is 0001.64f8.3fa5 (bia 0001.64f8.3fa5) Internet address is 172.20.20.20/24 MTU 1500 bytes, BW 1000000 Kbit, DLY 10 usec, reliability 255/255, txload 1/255, rxload 1/255 Encapsulation ARPA, loopback not set Keepalive set (10 sec) Full-duplex, 1000Mb/s ARP type: ARPA, ARP Timeout 04:00:00 Last input 00:00:00, output never, output hang never Last clearing of "show interface" counters never Queueing strategy: fifo Output queue 0/40, 0 drops; input queue 0/75, 0 drops 5 minute input rate 1000 bits/sec, 2 packets/sec 5 minute output rate 0 bits/sec, 0 packets/sec L2 Switched: ucast: 8199 pkt, 1362060 bytes - mcast: 6980 pkt, 371952 bytes L3 in Switched: ucast: 0 pkt, 0 bytes - mcast: 0 pkt, 0 bytes mcast L3 out Switched: ucast: 0 pkt, 0 bytes - mcast: 0 pkt, 0 bytes 300114 packets input, 27301436 bytes, 0 no buffer Received 43458 broadcasts, 0 runts, 0 giants, 0 throttles 0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored 0 input packets with dribble condition detected 15181 packets output, 1955836 bytes, 0 underruns 0 output errors, 0 collisions, 3 interface resets 0 babbles, 0 late collision, 0 deferred 0 lost carrier, 0 no carrier 0 output buffer failures, 0 output buffers swapped out

```
Switch#
```

This example shows how to display traffic for 10-Gigabit Ethernet interface 1/1:

```
Switch# show interfaces tengigabitethernet1/1
Name: Tengigabitethernet1/1
Switchport: Enabled
Administrative Mode: private-vlan promiscuous trunk
Operational Mode: private-vlan promiscuous (suspended member of bundle Pol)

Capture VLANs Allowed: ALL
Switch#
```

This example shows how to verify the status of auto-MDIX on an RJ-45 port:

Note

You can verify the configuration setting and the operational state of auto-MDIX on the interface by entering the **show interfaces** EXEC command. This field is applicable and appears only on the **show interfaces** command output for 10/100/1000BaseT RJ-45 copper ports on supported linecards including WS-X4124-RJ45, WS-X4148-RJ with hardware revision 3.0 or later, and WS-X4232-GB-RJ with hardware revision 3.0 or later.

```
FastEthernet6/3 is up, line protocol is up (connected)
 Hardware is Fast Ethernet Port, address is 0003.6ba8.ee68 (bia 0003.6ba8.ee68)
 MTU 1500 bytes, BW 100000 Kbit, DLY 100 usec,
    reliability 255/255, txload 1/255, rxload 1/255

     0 input packets with dribble condition detected
     157082 packets output, 13418032 bytes, 0 underruns
     0 output errors, 0 collisions, 0 interface resets
     0 babbles, 0 late collision, 0 deferred
     1 lost carrier, 0 no carrier
     0 output buffer failures, 0 output buffers swapped out
Switch#
```

This example shows how to display status information for Gigabit Ethernet interface 1/2:

Switch#	show interf	aces gigabitethe	ernet1/2	status	
Port	Name	Status	Vlan	Duplex	Speed Type
Gi1/2		notconnect	1	auto	1000 1000-XWDM-RXONLY
Switch#					

This example shows how to display status information for the interfaces on the supervisor engine:

Switch# show interfaces status

Port	Name	Status	Vlan	Duplex	Speed Type
Te1/1		connected	1	full	10G 10GBase-LR
Te1/2		connected	1	full	10G 10GBase-LR
Switch#					

show interfaces capabilities

To display the interface capabilities for an interface or for all the interfaces on a switch, use the **show interfaces capabilities** command.

show interfaces capabilities [{module mod}]

show interfaces [interface interface-number] capabilities

Syntax Description	module mod	(Optional) Displays information for the specified module only.
	interface	(Optional) Interface type; valid values are fastethernet , gigabitethernet , tengigabitethernet , and port-channel .
	interface-number	(Optional) Port number.
Defaults	This command has n	o default settings.
Command Modes	Privileged EXEC mo	ode
Command History	Release	Modification
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Support for the 10-Gigabit Ethernet interface was introduced on the Catalyst 4500 series switch.
	12.2(31)SGA	Support for auto-MDIX reflected in command output.
Usage Guidelines	<i>interface-number</i> de 10/100-Mbps Fast E chassis, valid values Line cards that suppo	er argument designates the module and port number. Valid values for pend on the chassis and module used. For example, if you have a 48-port thernet RJ-21 (telco connector) switching module installed in a Catalyst 4507 for the slot number are from 2 to 13 and valid values for the port number are 1 to 48 ort auto-MDIX configuration on their copper media ports include: WS-X4124-RJ45, hardware revision 3.0 or higher, and WS-X4232-GB-RJ with hardware revision 3.0

show interfaces link

To display how long a cable has been disconnected from an interface, use the **show interfaces link** command:

show interfaces link [module mod_num]

Syntax Description	<pre>module mod_n</pre>	(Optional) Limits the display to interfaces on a module.
Defaults	This command	has no default settings.
Command Modes	Privileged EXE	C mode
Command History	Release	Modification
	12.2(18)EW	Support for this command was introduced on the Catalyst 4500 series switch.
Usage Guidelines		state is up, the command displays 0:00. If the interface state is down, the time (in hours, conds) is displayed.
Examples	_	hows how to display active link-level information:
	Port Name Gi1/1 Gi1/2 Gi3/1 Gi3/2 Fa4/1 Fa4/2 Fa4/3 Fa4/4	Down Time 00:00:00 00:00:00 00:00:00 00:00:00 00:00:00 00:00:00 00:00:00 00:00:00 00:00:00
	This example sl	hows how to display inactive link-level information:
	Switch# show i	interfaces link
	Port Name Gi3/4 Gi3/5 Gi3/6 Gi4/1	Down Time 1 minute 28 secs 1 minute 28 secs 1 minute 28 secs 1 minute 28 secs
	In this example	, the cable has been disconnected from the port for 1 minute and 28 seconds.

show interfaces mtu

To display the maximum transmission unit (MTU) size of all the physical interfaces and SVIs on the switch, use the **show interfaces mtu** command.

show interfaces mtu [module mod]

Syntax Description	module mod	(Optional) Limits the display to interfaces on a specific module.
Defaults	This command	l has no default settings.
command Modes	EXEC	
Command History	Release	Modification
zamples	12.1(13)EW This example s	Support for this command was introduced on the Catalyst 4500 series switch. shows how to display the MTU size for all interfaces on module 1:
Examples	This example s	
Examples	This example s	shows how to display the MTU size for all interfaces on module 1:
Examples	This example s Switch> show Port Name Gi1/1	shows how to display the MTU size for all interfaces on module 1: interfaces mtu module 1 MTU 1500
Examples	This example s Switch> show Port Name	shows how to display the MTU size for all interfaces on module 1: interfaces mtu module 1 MTU
Examples Related Commands	This example s Switch> show Port Name Gi1/1 Gi1/2	shows how to display the MTU size for all interfaces on module 1: interfaces mtu module 1 MTU 1500

show interfaces private-vlan mapping

To display PVLAN mapping information for VLAN SVIs, use the **show interfaces private-vlan mapping** command.

show interfaces private-vlan mapping [active]

Syntax Description	active (Optional) Displays active interfaces only.
Defaults	This command	has no default settings.
Command Modes	Privileged EXI	C mode
Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
Usage Guidelines Examples		displays SVI information only. nows how to display PVLAN mapping information:
		nterfaces private-vlan mapping ndary VLAN Type
	vlan2 301 vlan2 302 Switch#	isolated isolated
Related Commands	Command	Description
	private-vlan	Configures private VLANs and the association between a private VLAN and a secondary VLAN.
	private-vlan i	appingCreates a mapping between the primary and the secondary VLANs so that both share the same primary VLAN SVI.

show interfaces status

To display the interface status or a list of interfaces in error-disabled state, use the **show interfaces status** command.

show interfaces status [err-disabled | inactive] [module {module}]

Syntax Description	err-disabled	(Optional) Displays interfaces in error-disabled state.
	inactive	(Optional) Displays interfaces in inactive state.
	module module	(Optional) Displays interfaces on a specific module.
Defaults	This command	as no default settings.
Command Modes	Privileged EXE	C mode
Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(40)SG	Support for WS-X4606-10GE-E Twin Gigabit converter introduced.
	12.2(52)SG	Support for per-VLAN error-disable was introduced by adding Err-Disabled VLAN column to output.
Examples	This example sl	<i>rr-dis</i> in the VLAN column. ows how to display the status of all interfaces:
	Switch# Show 1	nterfaces status
	Port Name Tel/1 Tel/2 Switch#	Status Vlan Duplex Speed Type connected 1 full 10G 10GBase-LR connected vl-err-dis full 10G 10GBase-LR
	_	ows how to display the status of interfaces in an error-disabled state: nterfaces status err-disabled
	Port Name	Status Reason Err-Disabled VLANs
	Fa9/4 Fa9/5 Fa9/6 Switch#	notconnect link-flap err-disabled psecure_violation 3-5 connected psecure_violation 10,15

This example shows how to display the Gigabit Ethernet interfaces on a WS-X4606-10GE-E switch using the TwinGig Convertor:

Switch# show interfaces status module 1 Port Name Status Vlan Duplex Speed Type Te1/1 inactive 1 full 10G No X2 Te1/2 inactive 1 full 10G No X2 Te1/3 inactive 1 full 10G No X2 Tel/4 notconnect 1 full 10G No X2 Tel/5 notconnect 1 full 10G No X2 Te1/6 notconnect 1 full 10G No X2 Gi1/7 notconnect 1 full 1000 No Gbic Gi1/8 notconnect 1 full 1000 No Gbic Gi1/9 notconnect 1 full 1000 No Gbic Gi1/10 notconnect 1 full 1000 No Gbic Gi1/11 notconnect 1 full 1000 No Gbic Gi1/12 notconnect 1 full 1000 No Gbic Gi1/13 inactive 1 full 1000 No Gbic Gi1/14 inactive 1 full 1000 No Gbic Gi1/15 inactive 1 full 1000 No Gbic Gi1/16 inactive 1 full 1000 No Gbic Gi1/17 inactive 1 full 1000 No Gbic Gi1/18 inactive 1 full 1000 No Gbic Switch#

Related Commands 0

Command	Description
errdisable detect	Enables error-disable detection.
hw-module port-group	Selects either Gigabit Ethernet or Ten Gigabit Ethernet interfaces on your module.
show errdisable recovery	Displays error-disable recovery timer information.

show interfaces switchport

To display the administrative and operational status of a switching (nonrouting) port, use the **show interfaces switchport** command.

show interfaces [interface-id] switchport [module mod]

Syntax Description	interface-id	(Optional) Interface ID for the physical port.
	module mod	(Optional) Limits the display to interfaces on the specified module; valid values are from 1 to 6.
efaults	This command l	nas no default settings.
command Modes	Privileged EXE	C mode
Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(19)EW	Support for per-interface display.
	12.2(18)EW	Support for displaying the status of native VLAN tagging in the command output.
	Trunking VLANs Pruning VLANs Switch#	
	This example sh	nows how to display switch-port information for module 1:
	Switch# show i Name:Gil/1 Switchport:Ena Administrative Operational Mo Administrative Negotiation of Access Mode VL Trunking Nativ Administrative Administrative Operational pr Trunking VLANS	<pre>nterfaces switchport module 1 bled Mode:dynamic auto de:down Trunking Encapsulation:negotiate Trunking:On AN:1 (default) e Mode VLAN:1 (default) private-vlan host-association:none private-vlan mapping:none ivate-vlan:none</pre>

```
Administrative Mode:dynamic auto
Operational Mode:down
Administrative Trunking Encapsulation:negotiate
Negotiation of Trunking:On
Access Mode VLAN:1 (default)

Voice VLAN: none
Administrative private-vlan host-association: none
Administrative private-vlan mapping: none
Administrative private-vlan trunk native VLAN: 1
Administrative private-vlan trunk Native VLAN tagging: enabled
Administrative private-vlan trunk encapsulation: dotlg
Administrative private-vlan trunk normal VLANs: 1
Administrative private-vlan trunk associations: none
Administrative private-vlan trunk mappings:
    10 (VLAN0010) 100 (VLAN0100)
Operational private-vlan:
  10 (VLAN0010) 100 (VLAN0100)
Trunking VLANs Enabled: ALL
Pruning VLANs Enabled: 2-1001
Capture Mode Disabled
Capture VLANs Allowed: ALL
Unknown unicast blocked: disabled
```

Unknown multicast blocked: disabled Appliance trust: none Switch#

Related Commands	Command	Description
	show interfaces capabilities	Displays the interface capabilities for an interface or for all the interfaces on a switch.
	show interfaces counters	Displays the traffic on the physical interface.

show interfaces transceiver

confirm.

To display diagnostic-monitoring data for all interfaces that have transceivers installed, use the **show** interfaces transceiver command.

show interfaces {{[int_name] transceiver {[detail]} | {transceiver [module mod] | detail
[module mod]}}

Control Description	· .	
Syntax Description	int_name	(Optional) Interface name.
	detail	(Optional) Displays the calibrated values and the A2D readouts if the readout values
		differ from the calibrated values. Also displays the high-alarm, high-warning,
		low-warning, and low-alarm thresholds.
	module mod	(Optional) Limits the display to interfaces on a specific module.
Defaults	The noninterfac	e-specific versions of the show interfaces transceiver command are enabled by default.
	a transceiver (G	becific versions of these commands are enabled by default if the specified interface has BIC or SFP) that is configured for diagnostic monitoring, and the transceiver is in a ports diagnostic monitoring.
Command Modes	Privileged EXE	C mode
Command History	Release	Modification
	12.1(20)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(18)EW	Support for the calibration keyword was withdrawn.
Usage Guidelines	The chow inter	faces transceiver command provides useful information under the following conditions:
Usaye duluelilles		
	• At least one	e transceiver is installed on a chassis that is configured for diagnostic monitoring.
	• The transce	iver is in a module that supports diagnostic monitoring.
	If you notice tha	at the alarm and warning flags have been set on a transceiver, reenter the command to

Examples

This example shows how to display diagnostic monitoring data for all interfaces with transceivers installed on the switch:

Switch# show interfaces transceiver

++ : hig NA or N	ce is external gh alarm, + : /A: not applic liamperes, dBm	high war able, Tx:	ning, - : transmit,	low warni Rx: recei	ng, : 1	-
				Optical	Optical	
	Temperature	Voltage	Current	Tx Power	Rx Power	
Port	(Celsius)	(Volts)	(mA)	(dBm)	(dBm)	
Gi1/1	48.1	3.30	0.0	8.1 ++	N/A	
Gi1/2	33.0	3.30	1.8	-10.0	-36.9	
Gi2/1	43.7	5.03	50.6 +	-16.7	N/A	
Gi2/2	39.2	5.02	25.7	0.8	N/A	
witch#						

Switch#

Note The value for the Optical Tx Power (in dBm) equals ten times log (Tx Power in mW). If the Tx Power value is 3 mW, then the Optical Tx Power value equals 10 * log (3), which equals 10 * .477 or 4.77 dBm. The Optical Rx Power value behaves similarly. If the Tx Power or the Rx Power is zero, then its dBm value is undefined and is shown as N/A (not applicable).

This example shows how to display detailed diagnostic monitoring data, including calibrated values, alarm and warning thresholds, A2D readouts, and alarm and warning flags. The A2D readouts are reported separately in parentheses only if they differ from the calibrated values:

```
Switch# show interfaces transceiver detail
```

mA: milliamperes, dBm: decibels (milliwatts), NA or N/A: not applicable. ++ : high alarm, + : high warning, - : low warning, -- : low alarm. A2D readouts (if they differ), are reported in parentheses. The threshold values are calibrated.

Switch#
```

This example shows how to display the trust state of Fast Ethernet interface 6/1:

Switch# show ip arp inspection interfaces fastEthernet 6/1 Interface Trust State Rate (pps) Burst Interval ----- -----_____ 20 5 Fa6/1 Untrusted Switch#

This example shows how to display the trust state of the interfaces on the switch:

Switch# show ip Interface	arp inspection Trust State	interfaces Rate (pps)
Gi1/1	Untrusted	15
Gi1/2	Untrusted	15
Gi3/1	Untrusted	15
Gi3/2	Untrusted	15
Fa3/3	Trusted	None
Fa3/4	Untrusted	15
Fa3/5	Untrusted	15
Fa3/6	Untrusted	15
Fa3/7	Untrusted	15
Switch#		

Related Commands

Command	Description
arp access-list	Defines an ARP access list or adds clauses at the end of a predefined list.
clear ip arp inspection log	Clears the status of the log buffer.
show ip arp inspection log	Displays the status of the log buffer.

show ip arp inspection log

To show the status of the log buffer, use the show ip arp inspection log command.

show ip arp inspection log

Syntax Description	This command has no	arguments or keywords.
--------------------	---------------------	------------------------

- **Defaults** This command has no default settings.
- **Command Modes** Privileged EXEC mode

 Release
 Modification

 12.1(19)EW
 Support for this command was introduced on the Catalyst 4500 series switch.

Examples This example shows how to display the current contents of the log buffer before and after the buffers are cleared:

Switch# show ip arp inspection log Total Log Buffer Size : 10 Syslog rate : 0 entries per 10 seconds.

Interface	Vlan	Sender MAC	Sender IP	Num of Pkts
Fa6/3	1	0002.0002.0002	1.1.1.2	1(12:02:52 UTC Fri Apr 25 2003)
Fa6/3	1	0002.0002.0002	1.1.1.3	1(12:02:52 UTC Fri Apr 25 2003)
Fa6/3	1	0002.0002.0002	1.1.1.4	1(12:02:52 UTC Fri Apr 25 2003)
Fa6/3	1	0002.0002.0002	1.1.1.5	1(12:02:52 UTC Fri Apr 25 2003)

show ip dhcp snooping

To display the DHCP snooping configuration, use the **show ip dhcp snooping** command.

show ip dhcp snooping

Syntax Description This command has no arguments or keywords
--

- **Defaults** This command has no default settings.
- **Command Modes** Privileged EXEC mode

Command History	Release	Modification
	12.1(12c)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EWA	Support for option 82 on untrusted ports was added.

Examples	This example shows how to display the DHCP snooping configuration:
----------	--

```
Switch# show ip dhcp snooping
Switch DHCP snooping is enabled
DHCP snooping is configured on following VLANs:
500,555
DHCP snooping is operational on following VLANs:
500,555
DHCP snooping is configured on the following L3 Interfaces:
Insertion of option 82 is enabled
circuit-id default format: vlan-mod-port
remote-id: switch123 (string)
Option 82 on untrusted port is not allowed Verification of hwaddr field is enabled DHCP
snooping trust/rate is configured on the following Interfaces:
Interface Trusted Rate limit (pps)
FastEthernet5/1 yes 100
Custom circuit-ids:
VLAN 555: customer-555
FastEthernet2/1 no unlimited
Custom circuit-ids:
VLAN 500: customer-500
Switch#
```

Related Commands	Command	Description		
	ip dhcp snooping	Globally enables DHCP snooping.		
ip dhcp snooping information optic		Enables DHCP option 82 data insertion.		
	ip dhcp snooping limit rate	Configures the number of the DHCP messages that an interface can receive per second.		

Command	Description
ip dhcp snooping trust	Enables DHCP snooping on a trusted VLAN.
ip dhcp snooping vlan	Enables DHCP snooping on a VLAN or a group of VLANs.

show ip dhcp snooping binding

To display the DHCP snooping binding entries, use the show ip dhcp snooping binding command.

show ip dhcp snooping binding [ip-address] [mac-address] [vlan vlan_num]
[interface interface_num]

Syntax Descriptio	n ip-address	(Optional) IP address for the binding entries.
-,	mac-address	(Optional) MAC address for the binding entries.
	vlan vlan_num	(Optional) Specifies a VLAN.
	interface interface_num	
Defaults If no argument is specified, t		ed, the switch will display the entire DHCP snooping binding table.
Command Modes	Privileged EXEC mode	
Command History	Release Modi	fication
	12.1(12c)EW Supp	ort for this command was introduced on the Catalyst 4500 series switch.
Jsage Guidelines	enabled.	led on a VLAN only if both the global snooping and the VLAN snooping ar VLANs, use the optional <i>last_vlan</i> argument to specify the end of the VLAN

 Command
 Description

 ip igmp profile
 Creates an IGMP profile.

show ip igmp snooping

show ip igmp snooping

To display information on dynamically learned and manually configured VLAN switch interfaces, use the **show ip igmp snooping** command.

show ip igmp snooping [querier | groups | mrouter] [vlan vlan_id] a.b.c.d [summary | sources |
hosts] [count]

Syntax Description	querier	(Optional) Specifies that the display will contain IP address and version information.				
	groups	(Optional) Specifies that the display will list VLAN members sorted by group IP addresses.				
	mrouter	(Optional) Specifies that the display will contain information on dynamically learned and manually configured multicast switch interfaces.				
	vlan_id(Optional) Specifies a VLAN; valid values are from 1 to 1001 and from 1006a.b.c.dGroup or multicast IP address.					
	summary (Optional) Specifies a display of detailed information for a v2 or v3 group					
	sources(Optional) Specifies a list of the source IPs for the specified group.hosts(Optional) Specifies a list of the host IPs for the specified group.					
	count (Optional) Specifies a display of the total number of group addresses learned by system on a global or per-VLAN basis.					
Command Modes	EXEC					
Command History	Release	Modification				
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.				
	12.1(19)EW	Support for extended addressing was added.				
	12.1(20)EW	Added support to display configuration state for IGMPv3 explicit host tracking.				
Usage Guidelines		se the show mac-address-table multicast command to display the entries in the MAC or a VLAN that has IGMP snooping enabled.				
	You can displa snooping com	y IGMP snooping information for VLAN interfaces by entering the show ip igmp mand.				

Examples

This example shows how to display the global snooping information on the switch:

Switch# show ip igmp snooping

Global IGMP Snooping confi	gu	iratio	on:
IGMP snooping IGMPv3 snooping Report suppression TCN solicit query TCN flood query count	:	Enab Enab Enab Disal 2	led led

Vlan 2: IGMP snooping IGMPv2 immediate leave Explicit host tracking Multicast router learning CGMP interoperability mode Switch>		: i de :	Enabled Disabled Enabled pim-dvmrp IGMP_ONLY

This example shows how to display the snooping information on VLAN 2:

Switch# show ip igmp snooping vlan 2

Global IGMP Snooping configuration: IGMP snooping : Enabled

IGMPv3 snooping	: Enabled
Report suppression	: Enabled
TCN solicit query	: Disabled
TCN flood query count	: 2

Vlan 2:

IGMP snooping : Enabled IGMPv2 immediate leave : Disabled Explicit host tracking : Enabled Multicast router learning mode : pim-dvmrp CGMP interoperability mode : IGMP_ONLY Switch>

This example shows how to display IGMP querier information for all VLANs on a switch:

Switch#	show ip igmp s	nooping querier	
Vlan	IP Address	IGMP Version	Port
2	10.10.10.1	v2	Router
3	172.20.50.22	v3	Fa3/15
Switch>			

This example shows how to display IGMP querier information for VLAN 5 when running IGMPv2:

```
Switch# show ip igmp snooping querier vlan 5
IP address :5.5.5.10
IGMP version :v2
Port :Fa3/1
Max response time :10s
Switch>
```

This example shows how to display IGMP querier information for VLAN 5 when running IGMPv3:

Switch# show ip igmp	snooping querier vlan 5
IP address	:5.5.5.10
IGMP version	:v3
Port	:Fa3/1
Max response time	:10s
Query interval	:60s
Robustness variable	:2
Switch>	

This example shows how to display snooping information for a specific group:

Switch# show ip igmp snooping group

Vlan	Group	Version	Ports
2 2	224.0.1.40 224.2.2.2	v3 v3	Router Fa6/2
Switch>			

This example shows how to display the group's host types and ports in VLAN 1:

Switch#	show ip igmp	snooping g	group v	lan 1
Vlan	Group	Host 1	Гуре	Ports
1	229.2.3.4	v3	f	a2/1 fa2/3
1	224.2.2.2	v3	1	Fa6/2
Switch>				

This example shows how to display the group's host types and ports in VLAN 1:

```
        Switch#
        show ip igmp snooping group vlan 10 226.6.6.7

Sources	: 2
Reporters (Include/Exclude)	: 2/0
Switch>	

This example shows how to display multicast router information for VLAN 1:

```
Switch# show ip igmp snooping mrouter vlan 1
vlan ports
1 Gi1/1,Gi2/1,Fa3/48,Router
Switch#
```

This example shows how to display the total number of group addresses learned by the system globally:

Switch# **show ip igmp snooping group count** Total number of groups: 54 Switch>

This example shows how to display the total number of group addresses learned on VLAN 5:

```
Switch# show ip igmp snooping group vlan 5 count
Total number of groups: 30
Switch>
```

Related Commands C

Command	Description
ip igmp snooping	Enable IGMP snooping.
ip igmp snooping vlan immediate-leave	Enable IGMP immediate-leave processing.
ip igmp snooping vlan mrouter	Configures a Layer 2 interface as a multicast router interface for a VLAN.
ip igmp snooping vlan static	Configures a Layer 2 interface as a member of a group.
show ip igmp interface	Displays the information about the IGMP-interface status and configuration.
show ip igmp snooping mrouter	Displays information on the dynamically learned and manually configured multicast switch interfaces.
show mac-address-table multicast	Displays information about the multicast MAC address table.

show ip igmp snooping membership

To display host membership information, use the show ip igmp snooping membership command.

show ip igmp snooping membership [interface interface_num] [vlan vlan_id]
[reporter a.b.c.d] [source a.b.c.d group a.b.c.d]

Syntax Description	<pre>interface interface_num</pre>	(Optional) Displays IP address and version information of an interface.
	vlan vlan_id	(Optional) Displays VLAN members sorted by group IP address of a VLAN; valid values are from 1 to 1001 and from 1006 to 4094.
	reporter a.b.c.d	(Optional) Displays membership information for a specified reporter.
	source a.b.c.d	(Optional) Specifies a reporter, source, or group IP address.
	group a.b.c.d	(Optional) Displays all members of a channel (source, group), sorted by interface or VLAN.

Related Commands C

Command	Description
ip igmp snooping	Enable IGMP snooping.
ip igmp snooping vlan immediate-leave	Enable IGMP immediate-leave processing.
ip igmp snooping vlan mrouter	Statically configures a Layer 2 interface as a multicast router interface for a VLAN.
ip igmp snooping vlan static	Configures a Layer 2 interface as a member of a group.
show ip igmp interface	Displays the information about the IGMP-interface status and configuration.
show ip igmp snooping mrouter	Displays information on the dynamically learned and manually configured multicast switch interfaces.
show mac-address-table multicast	Displays information about the multicast MAC address table.

show ip interface

To display the usability status of interfaces that are configured for IP, use the **show ip interface** command.

show ip interface [type number]

Syntax Description	<i>type</i> (Optional) Interface type.					
	number	(Optional) Interface number.				
Defaults	This command has no default settings.					
Command Modes	EXEC	EXEC				
Command History	Release	Modification				
	12.2(25)EW	Extended to include the 10-Gigabit Ethernet interface.				
Usage Guidelines	The Cisco IOS software automatically enters a directly connected route in the routing table if the interface is usable. A usable interface is one through which the software can send and receive packets. If the software determines that an interface is not usable, it removes the directly connected routing entry from the routing table. Removing the entry allows the software to use dynamic routing protocols to determine backup routes to the network, if any.					
	If the interface can provide two-way communication, the line protocol is marked "up." If the interface hardware is usable, the interface is marked "up."					
	If you specify an optional interface type, you see information only on that specific interface.					
	If you specify no optional arguments, you see information on all the interfaces.					
	When an asynchronous interface is encapsulated with PPP or Serial Line Internet Protocol (SLIP), IP fast switching is enabled. The show ip interface command on an asynchronous interface that is encapsulated with PPP or SLIP displays a message indicating that IP fast switching is enabled.					
Examples	This example s	shows how to display the usability status for a specific VLAN:				
	Switch# show ip interface vlan 1 Vlan1 is up, line protocol is up Internet address is 10.6.58.4/24 Broadcast address is 255.255.255 Address determined by non-volatile memory MTU is 1500 bytes Helper address is not set Directed broadcast forwarding is disabled Outgoing access list is not set Inbound access list is not set Proxy ARP is enabled					

```
Local Proxy ARP is disabled
 Security level is default
 Split horizon is enabled
 ICMP redirects are always sent
  ICMP unreachables are always sent
  ICMP mask replies are never sent
 IP fast switching is enabled
 IP fast switching on the same interface is disabled
  IP Flow switching is disabled
  IP CEF switching is enabled
 IP Fast switching turbo vector
 IP Normal CEF switching turbo vector
 IP multicast fast switching is enabled
 IP multicast distributed fast switching is disabled
 IP route-cache flags are Fast, CEF
 Router Discovery is disabled
 IP output packet accounting is disabled
  IP access violation accounting is disabled
  TCP/IP header compression is disabled
  RTP/IP header compression is disabled
  Probe proxy name replies are disabled
  Policy routing is disabled
 Network address translation is disabled
  WCCP Redirect outbound is disabled
 WCCP Redirect inbound is disabled
 WCCP Redirect exclude is disabled
 BGP Policy Mapping is disabled
  Sampled Netflow is disabled
  IP multicast multilayer switching is disabled
 Netflow Data Export (hardware) is enabled
Switch#
```

Table 2-22 describes the fields that are shown in the example.

Field	Description		
Ethernet0 is up	If the interface hardware is usable, the interface is marked "up." For an interface to be usable, both the interface hardware and line protocol must be up.		
line protocol is up	If the interface can provide two-way communication, the line protocol is marked "up." For an interface to be usable, both the interface hardware and line protocol must be up.		
Internet address and subnet mask	IP address and subnet mask of the interface.		
Broadcast address	Broadcast address.		
Address determined by	Status of how the IP address of the interface was determined.		
MTU	MTU value that is set on the interface.		
Helper address	Helper address, if one has been set.		
Secondary address	Secondary address, if one has been set.		
Directed broadcast forwarding	Status of directed broadcast forwarding.		
Multicast groups joined	Multicast groups to which this interface belongs.		
Outgoing access list	Status of whether the interface has an outgoing access list set.		
Inbound access list	Status of whether the interface has an incoming access list set.		

Table 2-22show ip interface Field Descriptions

Field	Description		
Proxy ARP	Status of whether Proxy Address Resolution Protocol (ARP) is enabled for the interface.		
Security level	IP Security Option (IPSO) security level set for this interface.		
Split horizon	Status of split horizon.		
ICMP redirects	tatus of the redirect messages on this interface.		
ICMP unreachables	Status of the unreachable messages on this interface.		
ICMP mask replies	Status of the mask replies on this interface.		
IP fast switching	Status of whether fast switching has been enabled for this interface. Fast switching is typically enabled on serial interfaces, such as this one.		
IP SSE switching	Status of the IP silicon switching engine (SSE).		
Router Discovery	Status of the discovery process for this interface. It is typically disabled on serial interfaces.		
IP output packet accounting	Status of IP accounting for this interface and the threshold (maximum number of entries).		
TCP/IP header compression	Status of compression.		
Probe proxy name	Status of whether the HP Probe proxy name replies are generated.		
WCCP Redirect outbound is enabled	Status of whether packets that are received on an interface are redirected to a cache engine.		
WCCP Redirect exclude is disabled	Status of whether packets that are targeted for an interface are excluded from being redirected to a cache engine.		
Netflow Data Export (hardware) is enabled	NDE hardware flow status on the interface.		

 Table 2-22
 show ip interface Field Descriptions (continued)

show ip mfib

To display all active Multicast Forwarding Information Base (MFIB) routes, use the **show ip mfib** command.

show ip mfib [all | counters | log [n]]

Syntax Description	all	(Optional) Specifies all routes in the MFIB, including those routes that are used to accelerate fast switching but that are not necessarily in the upper-layer routing protocol table.				
	counters	(Optional) Specifies the counts of MFIB-related events. Only nonzero counters are shown.				
	log	(Optional) Specifies a log of the most recent number of MFIB-related events. The most recent event is first.				
	n	(Optional) Number of events.				
Defaults	This comman	d has no default settings.				
Command Modes	Privileged EX	KEC mode				
Command History	Release	Modification				
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.				
	12.2(40)SG	Support for command introduced on the Supervisor Engine 6-E and Catalyst 4900M chassis.				
Usage Guidelines		isor Engine 6-E and Catalyst 4900M chassis, the output of the show ip mfib command does				
		hy hardware counters.				
	The MFIB table contains a set of IP multicast routes; each route in the MFIB table contains several flags that associate to the route.					
	The route flags indicate how a packet that matches a route is forwarded. For example, the IC flag on an MFIB route indicates that some process on the switch needs to receive a copy of the packet. These flags are associated with MFIB routes:					
		Copy (IC) flag—Set on a route when a process on the switch needs to receive a copy of all natching the specified route.				
	• Signaling (S) flag—Set on a route when a switch process needs notification that a packet matching the route is received. In the expected behavior, the protocol code updates the MFIB state in response to having received a packet on a signaling interface.					
	the C flag	ed (C) flag—When set on a route, the C flag has the same meaning as the S flag, except that g indicates that only packets sent by directly connected hosts to the route should be signaled pcol process.				

Examples

A route can also have a set of flags associated with one or more interfaces. For an (S,G) route, the flags on interface 1 indicate how the ingress packets should be treated and whether packets matching the route should be forwarded onto interface 1. These per-interface flags are associated with the MFIB routes:

- Accepting (A)—Set on the RPF interface when a packet that arrives on the interface and that is marked as Accepting (A) is forwarded to all Forwarding (F) interfaces.
- Forwarding (F)—Used with the A flag as described above. The set of forwarding interfaces together form a multicast olist or output interface list.
- Signaling (S)—Set on an interface when a multicast routing protocol process in Cisco IOS needs to be notified of ingress packets on that interface.
- Not Platform (NP) fast-switched—Used with the F flag. A forwarding interface is also marked as Not Platform fast-switched whenever that output interface cannot be fast-switched by the platform hardware and requires software forwarding.

For example, the Catalyst 4506 switch with Supervisor Engine III cannot switch tunnel interfaces in hardware so these interfaces are marked with the NP flag. When an NP interface is associated with a route, a copy of every ingress packet arriving on an Accepting interface is sent to the switch software forwarding path for software replication and then forwarded to the NP interface.

This example shows how to display all active MFIB routes:

```
Switch# show ip mfib
IP Multicast Forwarding Information Base
Entry Flags: C - Directly Connected, S - Signal,
             IC - Internal Copy
Interface Flags: A - Accept, F - Forward, NS - Signal,
            NP - Not platform switched
Packets: Fast/Partial/Slow Bytes: Fast/Partial/Slow:
(171.69.10.13, 224.0.1.40), flags (IC)

Switch#
```

Related Commands

Command Description clear ip mfib counters Clears the global MFIB counters and the counters for all active MFIB routes.

show ip mfib fastdrop

To display all currently active fast-drop entries and to show whether fast drop is enabled, use the **show** ip mfib fastdrop command.

show ip mfib fastdrop

Syntax Description This command has no arguments or keywords. Defaults This command has no default settings. **Command Modes** Privileged EXEC mode **Command History** Release Modification 12.1(8a)EW Support for this command was introduced on the Catalyst 4500 series switch. Examples This example shows how to display all currently active fast-drop entries and whether fast drop is enabled. Switch# show ip mfib fasttdrop MFIB fastdrop is enabled. MFIB fast-dropped flows: (10.0.0.1, 224.1.2.3, Vlan9) 00:01:32 (10.1.0.2, 224.1.2.3, Vlan9) 00:02:30 (1.2.3.4, 225.6.7.8, Vlan3) 00:01:50 Switch# **Related Commands** Command Description clear ip mfib fastdrop

Clears all the MFIB fast-drop entries.

show ip mroute

To display IP multicast routing table information, use the show ip mroute command.

show ip mroute [interface_type slot/port | host_name | host_address [source] | active [kbps |
interface_type num] | count | pruned | static | summary]

Syntax Description	interface_type slot/port	(Optional) Interface type and number of the slot and port; valid values for <i>interface type</i> are fastethernet , gigabitethernet , tengigabitethernet , null , and vlan .			
	host_name	(Optional) Name or IP address as defined in the DNS hosts table.			
	host_address source	(Optional) IP address or name of a multicast source.			
	active	(Optional) Displays the rate that active sources are sending to multicast groups.			
	kbps interface_type num	(Optional) Minimum rate at which active sources are sending to multicast groups; active sources sending at this rate or greater will be displayed. Valid values are from 1 to 4294967295 kbps.			
	count	(Optional) Displays the route and packet count information.			
	pruned	(Optional) Displays the pruned routes.			
	static	(Optional) Displays the static multicast routes.			
	summary (Optional) Displays a one-line, abbreviated summary of each entry in the IP multicast routing table.				
Command Modes	This command has r Privileged EXEC m				
Command History	Release N	Nodification			
	12.1(8a)EW S	support for this command was introduced on the Catalyst 4500 series switch.			
	12.2(25)EW A	Added support for the 10-Gigabit Ethernet interface.			
Usage Guidelines	entries in the IP mult The show ip mroute to <i>kbps</i> . The multicast routin entries. The star reference refers to the destinat	e active <i>kbps</i> command displays all the sources sending at a rate greater than or equal ag table is populated by creating source, group (S,G) entries from star, group (*,G) ers to all source addresses, the "S" refers to a single source address, and the "G" ion multicast group address. In creating (S,G) entries, the software uses the best path			
	to that destination g	roup found in the unicast routing table (through Reverse Path Forwarding (RPF).			

Examples This example shows how to display all the entries in the IP multicast routing table: Switch# show ip mroute IP Multicast Routing Table Flags:D - Dense, S - Sparse, s - SSM Group, C - Connected, L - Local, P - Pruned, R - RP-bit set, F - Register flag, T - SPT-bit set, J - Join SPT, M - MSDP created entry, X - Proxy Join Timer Running A - Advertised via MSDP, U - URD, I - Received Source Specific Host Report. Outgoing interface flags:H - Hardware switched Timers:Uptime/Expires Interface state: Interface, Next-Hop or VCD, State/Mode (*, 230.13.13.1), 00:16:41/00:00:00, RP 10.15.1.20, flags:SJC Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20 Outgoing interface list: GigabitEthernet4/9, Forward/Sparse-Dense, 00:16:41/00:00:00, H (*, 230.13.13.2), 00:16:41/00:00:00, RP 10.15.1.20, flags:SJC Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20, RPF-MFD Outgoing interface list: GigabitEthernet4/9, Forward/Sparse-Dense, 00:16:41/00:00:00, H (10.20.1.15, 230.13.13.1), 00:14:31/00:01:40, flags:CJT Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20, RPF-MFD Outgoing interface list: GigabitEthernet4/9, Forward/Sparse-Dense, 00:14:31/00:00:00, H (132.206.72.28, 224.2.136.89), 00:14:31/00:01:40, flags:CJT Incoming interface:GigabitEthernet4/8, RPF nbr 10.15.1.20, RPF-MFD Outgoing interface list:Null Switch#

Switch# show ip mroute active

This example shows how to display the rate that the active sources are sending to the multicast groups and to display only the active sources that are sending at greater than the default rate:

Active IP Multicast Sources - sending > = 4 kbps
Group: 224.2.127.254, (sdr.cisco.com)
Source: 146.137.28.69 (mbone.ipd.anl.gov)
Rate: 1 pps/4 kbps(lsec), 4 kbps(last 1 secs), 4 kbps(life avg)

Switch#
```

This example shows how to display summary information:

```
Switch# show ip mroute summary
IP Multicast Routing Table
Flags: D - Dense, S - Sparse, s - SSM Group, C - Connected, L - Local,
        P - Pruned, R - RP-bit set, F - Register flag, T - SPT-bit set,
        J - Join SPT, M - MSDP created entry, X - Proxy Join Timer Running
        A - Advertised via MSDP, U - URD, I - Received Source Specific Host
        Report
Outgoing interface flags: H - Hardware switched
Timers: Uptime/Expires
Interface state: Interface, Next-Hop or VCD, State/Mode
```

Switch#

Table 2-23 describes the fields shown in the output.

Field	Description			
Flags:	Information about the entry.			
D - Dense	Entry is operating in dense mode.			
S - Sparse	Entry is operating in sparse mode.			
s - SSM Group	Entry is a member of an SSM group.			
C - Connected	Member of the multicast group is present on the directly connected interface.			
L - Local	Switch is a member of the multicast group.			
P - Pruned	Route has been pruned. This information is retained in case a downstream member wants to join the source.			
R - Rp-bit set	Status of the (S,G) entry; is the (S,G) entry pointing toward the RP. The R - Rp-bit set is typically a prune state along the shared tree for a particular source.			
F - Register flag	Status of the software; indicates if the software is registered for a multicast source.			
T - SPT-bit set	Status of the packets; indicates if the packets been received on the shortest path source tree.			

Table 2-23 show ip mroute Field Descriptions

Field	Description		
J - Join SPT	For (*, G) entries, indicates that the rate of traffic flowing down the shared tree is exceeding the SPT-Threshold set for the group. (The default SPT-Threshold setting is 0 kbps.) When the J - Join SPT flag is set, the next (S,G) packet received down the shared tree triggers an (S,G) join in the direction of the source causing the switch to join the source tree.		
	For (S, G) entries, indicates that the entry was created because the SPT-Threshold for the group was exceeded. When the J - Join SPT flag is set for (S,G) entries, the switch monitors the traffic rate on the source tree and attempts to switch back to the shared tree for this source if the traffic rate on the source tree falls below the group's SPT-Threshold for more than one minute.		
	The switch measures the traffic rate on the shared tree and compares the measured rate to the group's SPT-Threshold once every second. If the traffic rate exceeds the SPT-Threshold, the J- Join SPT flag is set on the (*, G) entry until the next measurement of the traffic rate. The flag is cleared when the next packet arrives on the shared tree and a new measurement interval is started.		
	If the default SPT-Threshold value of 0 Kbps is used for the group, the J- Join SPT flag is always set on (*, G) entries and is never cleared. When the default SPT-Threshold value is used, the switch immediately switches to the shortest-path tree when traffic from a new source is received.		
Outgoing interface flag:	Information about the outgoing entry.		
H - Hardware switched	Entry is hardware switched.		
Timer:	Uptime/Expires.		
Interface state:	Interface, Next-Hop or VCD, State/Mode.		
(*, 224.0.255.1) (198.92.37.100/32, 224.0.255.1)	Entry in the IP multicast routing table. The entry consists of the IP address of the source switch followed by the IP address of the multicast group. An asterisk (*) in place of the source switch indicates all sources.		
	Entries in the first format are referred to as (*,G) or "star comma G" entries. Entries in the second format are referred to as (S,G) or "S comma G" entries. (*,G) entries are used to build (S,G) entries.		
uptime	How long (in hours, minutes, and seconds) the entry has been in the IP multicast routing table.		
expires	How long (in hours, minutes, and seconds) until the entry is removed from the IP multicast routing table on the outgoing interface.		

Field	Description		
RP	Address of the RP switch. For switches and access servers operating in sparse mode, this address is always 0.0.0.0.		
flags:	Information about the entry.		
Incoming interface	Expected interface for a multicast packet from the source. If the packet is not received on this interface, it is discarded.		
RPF neighbor	IP address of the upstream switch to the source. "Tunneling" indicates that this switch is sending data to the RP encapsulated Register packets. The hexadecimal number in parentheses indicates to which RP it is registering. Each bit indicates a differ RP if multiple RPs per group are used.		
DVMRP or Mroute	Status of whether the RPF information is obtained from the DVMRP routing table or the static mroutes configuration.		
Outgoing interface list	Interfaces through which packets are forwarded. When the ip p nbma-mode command is enabled on the interface, the IP addre of the PIM neighbor is also displayed.		
Ethernet0	Name and number of the outgoing interface.		
Next hop or VCD	Next hop specifies downstream neighbor's IP address. VCD specifies the virtual circuit descriptor number. VCD0 indicates that the group is using the static-map virtual circuit.		
Forward/Dense	Status of the packets; indicates if they are they forwarded on the interface if there are no restrictions due to access lists or the TTL threshold. Following the slash (/), mode in which the interface is operating (dense or sparse).		
Forward/Sparse	Sparse mode interface is in forward mode.		
time/time (uptime/expiration time)	Per interface, how long (in hours, minutes, and seconds) the entry has been in the IP multicast routing table. Following the slash (/), how long (in hours, minutes, and seconds) until the entry is removed from the IP multicast routing table.		

Related Commands	Command	Description		
	ip multicast-routing (refer to Cisco IOS documentation)	Enables IP multicast routing.		
	ip pim (refer to Cisco IOS documentation)	Enables Protocol Independent Multicast (PIM) on an interface.		

show ip source binding

To display IP source bindings that are configured on the system, use the **show ip source binding** EXEC command.

show ip source binding [ip-address] [mac-address] [dhcp-snooping | static] [vlan vlan-id]
[interface interface-name]

ileiatea ooliilliallas

```

This example shows how to display the status of the local IPC server:

Switch# show ipc status IPC System Status: This processor is the IPC master server. 6000 IPC message headers in cache 3363 messages in, 1680 out, 1660 delivered to local port, 1686 acknowledgements received, 1675 sent, 0 NACKS received, 0 sent, 0 messages dropped on input, 0 messages dropped on output 0 no local port, 0 destination unknown, 0 no transport 0 missing callback or queue, 0 duplicate ACKs, 0 retries, 0 message timeouts. 0 ipc_output failures, 0 mtu failures, 0 msg alloc failed, 0 emer msg alloc failed, 0 no origs for RPC replies 0 pak alloc failed, 0 memd alloc failed 0 no hwq, 1 failed opens, 0 hardware errors No regular dropping of IPC output packets for test purposes Switch#

show ipv6 mld snooping

To display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping configuration of the switch or the VLAN, use the **show ipv6 mld snooping** command.

show ipv6 mld snooping [vlan vlan-id]

Syntax Description	vlan vlan-id	(Optional) Specifies a VLAN; the range is 1 to 1001 and 1006 to 4094.			
Command Modes	User EXEC mode				
Command History	Release	Modification			
	12.2(40)SG	This command was introduced on the Catalyst 4500.			
Usage Guidelines		o display MLD snooping configuration for the switch or for a specific VLAN. 2 through 1005 are reserved for Token Ring and FDDI VLANs and cannot be used			
Examples	This is an example of output from the show ipv6 mld snooping vlan command. It shows snooping characteristics for a specific VLAN.

	ipv6 mld snoopin	g Enables IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping globally or on the specified VLAN.			
	ipv6 mld snoopin	g vlan Configures IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping parameters on the VLAN			

show ipv6 mld snooping querier

To display IP version 6 (IPv6) Multicast Listener Discovery (MLD) snooping querier-related information most recently received by the switch or the VLAN, use the **show ipv6 mld snooping querier** command.

show ipv6 mld snooping querier [vlan vlan-id]

Syntax Description	vlan vlan-id	(Optional) Specif	fiesa VLAN; the range is 1 to 1001 and 1006 to 4094.		
Command Modes	User EXEC mode				
Command History	Release	Modification			
	12.2(40)SG	This command w	vas introduced on the Catalyst 4500.		
Usage Guidelines	detected device that	at sends MLD query mes	command to display the MLD version and IPv6 address of a ssages, which is also called a <i>querier</i> . A subnet can have ne MLD querier. The querier can be a Layer 3 switch.		
	the querier was det	tected. If the querier is th	nmand output also shows the VLAN and interface on which he switch, the output shows the <i>Port</i> field as <i>Router</i> . If the rt number on which the querier is learned in the <i>Port</i> field.		
	The output of the show ipv6 mld snoop querier vlan command displays the information received in response to a query message from an external or internal querier. It does not display user-configured VLAN values, such as the snooping robustness variable on the particular VLAN. This querier information is used only on the MASQ message that is sent by the switch. It does not override the user-configured robustness variable that is used for aging out a member that does not respond to query messages.				
	VLAN numbers 10 in MLD snooping.	002 through 1005 are rese	erved for Token Ring and FDDI VLANs and cannot be used		
Examples	_	of output from the show	v ipv6 mld snooping querier command: r		
	Vlan IP Add:		D Version Port		
		201:C9FF:FE40:6000 v1	Gi3/0/1		
	This is an example of output from the show ipv6 mld snooping querier vlan command:				
		<pre>6 mld snooping querier 0::201:C9FF:FE40:6000 e : 1000s</pre>	r vlan 2		

Related Commands Command Description Enables IP version 6 (IPv6) Multicast Listener Discovery ipv6 mld snooping (MLD) snooping globally or on the specified VLAN. ipv6 mld snooping Configures IP version 6 (IPv6) Multicast Listener last-listener-query-count Discovery Mulitcast Address Specific Queries (MASQs) that will be sent before aging out a client. ipv6 mld snooping Configures IP version 6 (IPv6) MLD snooping last-listener query interval on the switch or on a VLAN. last-listener-query-interval ipv6 mld snooping robustness-variable Configures the number of IP version 6 (IPv6) MLD queries that the switch sends before deleting a listener that does not respond. Configures IP version 6 (IPv6) MLD Topology Change ipv6 mld snooping tcn Notifications (TCNs).

show issu capability

To display the ISSU capability for a client, use the **show issu capability** command.

show issu capability {entries | groups | types } [client_id]

Syntax Description	entries	Displays a list of Capability Types and Dependent Capability Types that are included in a single Capability Entry. Types within an entry can also be independent.			
	groups	Displays a list of Capability Entries in priority order (the order that they will be negotiated on a session).			
	types	Displays an ID that identifies a particular capability.			
	client_id	(Optional) Identifies the client registered to the ISSU infrastructure.			
		To obtain a list of client IDs, use the show issu clients command.			
Defaults	This command has r	no default settings.			
Command Modes	User EXEC mode				
Command History	Release	Modification			
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.			
Usage Guidelines	Capability is a functionality that an ISSU client can support and is required to interoperate with peers.				
		re client establishes its session with the peer, an ISSU negotiation takes place. The uses the registered information to negotiate the capabilities and the message version e session.			
Examples	The following exam (clientid=2082):	ple shows how to display the ISSU capability types for the IP host ISSU client			
	Switch# show issu Client_ID = 2082, Cap_Type = 0	<pre>capability types 2082 Entity_ID = 1 :</pre>			
	Switch#				
	Switch#	ple shows how to display the ISSU capabilities entries for the IP host ISSU client			

The following example shows how to display the ISSU capabilities groups for the IP host ISSU client (clientid=2082):

```
Switch# show issu capability groups 2082
Client_ID = 2082, Entity_ID = 1 :
    Cap_Group = 1 :
        Cap_Entry = 1
        Cap_Type = 0
Guiteb#
```

Switch#

Related Commands	Command	Description		
	show issu clients	Displays the ISSU clients.		

show issu clients

To display the ISSU clients, use the show issu clients command.

show issu clients [peer_uid]

Syntax Description	peer_uid	(Optional) Displays a list of clients registered to ISSU infrastructure at the peer supervisor engine.				
Defaults	Displays a list of clie command is entered.	Displays a list of clients registered to the ISSU infrastructure at the supervisor engine where the command is entered.				
Command Modes	User EXEC mode					
Command History	Release	Modification				
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.				
Usage Guidelines	-	ersioning functionality, a client must first register itself, client capability, and client with the ISSU infrastructure during the system initialization.				
Examples	<pre>Switch# show issu c Client_ID = 2, Cl Client_ID = 3, Cl Client_ID = 4, Cl Client_ID = 5, Cl Client_ID = 7, Cl Client_ID = 7, Cl Client_ID = 9, Cl Client_ID = 10, Cl Client_ID = 11, Cl Client_ID = 100, Client_ID = 110, Client_ID = 200,</pre>	<pre>lient_Name = ISSU Proto client, Entity_Count = 1 lient_Name = ISSU RF, Entity_Count = 1 lient_Name = ISSU CF client, Entity_Count = 1 lient_Name = ISSU Network RF client, Entity_Count = 1 lient_Name = ISSU ifIndex sync, Entity_Count = 1 lient_Name = ISSU IPC client, Entity_Count = 1 Client_Name = ISSU IPC Server client, Entity_Count = 1 Client_Name = ISSU Red Mode Client, Entity_Count = 1 Client_Name = ISSU rfs client, Entity_Count = 1 Client_Name = ISSU ifs client, Entity_Count = 1 Client_Name = ISSU ifs client, Entity_Count = 1 Client_Name = ISSU FS client, Entity_Count = 1 Client_Name = ISSU ifs client, Entity_Count = 1 Client_Name = ISSU ifs client, Entity_Count = 1 Client_Name = ISSU Event Manager client, Entity_Count = 1 Client_Name = CEF Push ISSU client, Entity_Count = 1</pre>

Related Commands

ands	Command	Description		
	show issu capability	Displays the ISSU capability for a client.		
	show issu entities	Displays the ISSU entity information.		

show issu comp-matrix

To display information regarding the In Service Software Upgrade (ISSU) compatibility matrix, use the **show issu comp-matrix** command.

show issu comp-matrix {negotiated | stored | xml}

Syntax Description	negotiated	Displays negotiated compatibility matrix information.				
	stored	Displays stored compatibility matrix information.				
	xml	Displays negotiated compatibility matrix information in XML format.				
Defaults	This command has	no default settings.				
Command Modes	User EXEC mode					
Command History	Release	Modification				
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.				
Usage Guidelines	Before attempting an ISSU, you should know the compatibility level between the old and the new Cisco IOS software versions on the active and the standby supervisor engines. ISSU will not work if the two versions are incompatible. The compatibility matrix is available on Cisco.com so that you can also veiw in advance whether an upgrade can be performed with the ISSU process. The compatibility matrix during the ISSU process and later by entering the show issu comp-matrix command. To display information on the negotiation of the compatibility matrix data between two software versions on a given system, use the show issu comp-matrix negotiated command.					
	Compatibility matrix data is stored with each Cisco IOS software image that supports ISSU capability. To display stored compatibility matrix information, use the show issu comp-matrix stored command.					
	The compatibility matrix information are built-in any Cisco IOS ISSU image. The ISSU infrastructure performs a matrix lookup as soon as the communication with the standby supervisor engine is established. There are three possible results from the lookup operation:					
	• Compatible—The Base-level system infrastructure and all optional HA-aware subsystems are compatible. In-service upgrade or downgrade between these versions will succeed with minimal service impact.					
	• Base-Level Compatible—One or more of the optional HA-aware subsystems are not compatible. Although an in-service upgrade or downgrade between these versions will succeed, some subsystems will not be able to maintain their state during the switchover. Prior to attempting an in-service upgrade or downgrade, the impact of this on operation and service of the switch must be considered carefully.					

• Incompatible—A set of core system infrastructure must be able to execute in a stateful manner for SSO to function correctly. If any of these "required" features or subsystems is not compatible in two different Cisco IOS images, the two versions of the Cisco IOS images are declared "Incompatible". This means that an in-service upgrade or downgrade between these versions is not possible. The systems operates in RPR mode during the period when the versions of Cisco IOS at the active and standby supervisor engines differ.

Examples

This example displays negotiated compatibility matrix information:

Switch# show issu comp-matrix negotiated

Related Commands	Command	Description
	show issu clients	Displays the ISSU clients.
	show issu sessions	Displays ISSU session information for a specified client.

show issu endpoints

To display the ISSU endpoint information, use the show issu endpoints command.

show issu endpoints **Syntax Description** This command has no arguments or keywords Defaults This command has no default settings. **Command Modes** User EXEC mode Modification **Command History** Release 12.2(31)SGA This command was introduced on the Catalyst 4500 series switch. **Usage Guidelines** Endpoint is an execution unit within a redundancy domain. There are only 2 endpoints on the Catalyst 4500 series switch redundant chassis: 1 and 2. The endpoints correspond to the slot numbers for the supervisor engine. The ISSU infrastructure communicates between these two endpoints to establish session and to perform session negotiation for ISSU clients. Examples The following example shows how to display the ISSU endpoints: Switch# show issu endpoints My_Unique_ID = 1/0x1, Client_Count = 46 This endpoint communicates with 1 peer endpoints : Peer_Unique_ID CAP VER XFORM ERP Compatibility 2/0x2 1 1 1 1 Same Shared Negotiation Session Info : Nego_Session_ID = 15 Nego_Session_Name = shared nego session Transport_Mtu = 4096 $Ses_In_Use = 2$ Switch#

Related Commands	Command	Description
	show issu clients	Displays the ISSU clients.

show issu entities

To display the ISSU entity information, use the show issu entities command.

show issu entities [client_id]

Syntax Description	client_id	(Optional) ISSU client ID.
Defaults	This command has	no default settings.
Command Modes	User EXEC mode	
Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.
Usage Guidelines		oup of sessions with some common attributes (like capability list and message type). U clients on the Catalyst 4500 series switch have only one entity.
Examples	The following exam	ple shows how to display the entity information for a specified ISSU client:
	-	
Related Commands	Command	Description
	show issu clients	Displays the ISSU clients.

show issu fsm

Note	This command is not intended for end-users.			
	To display the ISSU finite state machine (FSM) information corresponding to an ISSU session, use the show issu fsm command.			
	show issu fsm [.	session_id]		
Syntax Description	session_id	(Optional) P session.	rovides detailed in	nformation about the FSM for the specified
Defaults	This command has n	o default settings.		
Command Modes	User EXEC mode			
Command History	Release	Modification	1	
	12.2(31)SGA	This comma	nd was introduced	on the Catalyst 4500 series switch.
Examples	The following exam	ple displays and ve	erifies the ISSU st	ate after LOADVERSION:

show issu message

To display checkpoint messages for a specified ISSU client, use the show issu message command.

show issu message {groups | types} [client_id]

	·			
Syntax Description	groups	Displays information on Message Group supported by the specified client.		
	types	Displays information on all Message Types supported by the specified client.		
	client_id	(Optional) Specifies a client ID.		
Defaults		t specified, displays message groups or message types information for all clients ISSU infrastructure.		
Command Modes	User EXEC mode	2		
Command History	Release	Modification		
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.		
Usage Guidelines Examples	When an ISSU-av ISSU infrastructu to be used during	ac-data (also known as checkpoint data) sent between two endpoints. ware client establishes its session with a peer, an ISSU negotiation takes place. The are uses the registered information to negotiate the capabilities and the message version the session.		
Lingitot	Switch# show iss	u message groups 2082 2, Entity_ID = 1 :		
	The following example shows how to display the message types for Client_id 2082:			
	Client_ID = 208 Message_Typ Messa Messa Message_Typ Messa	u message types 2082 2, Entity_ID = 1 : e = 1, Version_Range = 1 ~ 2 ge_Ver = 1, Message_Mtu = 12 ge_Ver = 2, Message_Mtu = 8 e = 2, Version_Range = 1 ~ 2 ge_Ver = 1, Message_Mtu = 32 ge_Ver = 2, Message_Mtu = 28		

Related Commands	Command	Description
	show issu clients	Displays the ISSU clients.

show issu negotiated

To display the negotiated capability and message version information of the ISSU clients, use the **show issu negotiated** command.

show issu negotiated {capability | version} [session_id]

Syntax Description	capability	Displays all negotiated capabilities.
	version	Displays details of all negotiated messages.
	session_id	(Optional) Specifies the ISSU session ID for which the capability or version information is displayed.
Defaults	Displays negotiated cap	pability or version information for all ISSU sessions.
Command Modes	User EXEC mode	
Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.
Examples	The following example	shows how to display the message types for a specific group:
	Session_ID = 26 :	gotiated capability 26
		Cap_Result = 1 No cap value assigned gotiated version 26 1, Negotiated_Version = 1, Message_MTU = 44 2, Negotiated_Version = 1, Message_MTU = 4
Related Commands	Command	Description
	show issu sessions	Displays ISSU session information for a specified client.

show issu rollback-timer

To display ISSU rollback-timer status, use the show issu rollback-timer command.

show issu rollback-timer

Syntax Description This command has no an	rguments or keywords.
---	-----------------------

- **Defaults** This command has no default settings.
- **Command Modes** Priviledged EXEC mode

Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Examples The following example shows how to display the rollback-timer status:

```
Switch#show issu rollback-timer
Rollback Process State = Not in progress
Configured Rollback Time = 45:00
```

Switch#

Related Commands	Command	Description
	issu acceptversion	Halts the rollback timer and ensures that the new Cisco IOS software image is not automatically stopped during the ISSU process.
	issu runversion	Forces a change from the active supervisor engine to the standby supervisor engine and causes the newly active supervisor engine to run the new image specified in the issu loadversion command.

show issu sessions

To display ISSU session information for a specified client, use the **show issu sessions** command.

show issu sessions [client_id]

Syntax Description	client_id	(Optional) Specifies the ISSU client ID.	
Defaults	Displays session in	formation for all clients registered to the ISSU infrastructure.	
Command Modes	User EXEC mode		
Command History	Release 12.2(31)SGA	Modification This command was introduced on the Catalyst 4500 series switch.	
Usage Guidelines	Session is bidirectional and a reliable connection is established between two endpoints. Sync-data and negotiation messages are sent to the peer endpoint through a session. On a Catalyst 4500 series switch, each ISSU-aware client has a maximum of one session at each endpoint.		
		re client establishes its session with the peer, an ISSU negotiation takes place. The uses the registered information to negotiate the capabilities and the message version he session.	
Examples	The following exam	ple shows how to display the rollback-timer status:	
	Switch# show issu sessions 2072 Client_ID = 2072, Entity_ID = 1 :		
	*** Session_ID =	26, Session_Name = dot1x :	
	Peer Peer UniqueID Sid 2 26	Negotiate Negotiated Cap Msg Session Role Result GroupID GroupID Signature PRIMARY COMPATIBLE 1 1 0 (no policy)	
	Nego_Ses Nego_Ses	ession Info for This Message Session: sion_ID = 26 sion_Name = dot1x t_Mtu = 17884	
Related Commands	Command	Description	

Displays the ISSU clients.

show issu clients

show issu state

To display the ISSU state and current booted image name during the ISSU process, use the **show issu state** command.

show issu state [slot_number] [detail]

Syntax Description	slot_number	(Optional) Specifies the slot number whose ISSU state needs to be displayed (1 or 2).
	detail	(Optional) Provides detailed information about the state of the active and standby supervisor engines.
Defaults	The command displa supervisor engines.	ays the ISSU state and current booted image name of both the active and standby
Command Modes	Privileged EXEC m	ode
Command History	Release	Modification
-	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.

Related Commands	Command	Description
	issu abortversion	Cancels the ISSU upgrade or the downgrade process in progress and restores the switch to its state before the start of the process.
	issu acceptversion	Halts the rollback timer and ensures that the new Cisco IOS software image is not automatically stopped during the ISSU process.
	issu commitversion	Loads the new Cisco IOS software image into the new standby supervisor engine.
	issu loadversion	Starts the ISSU process.
	issu runversion	Forces a change from the active supervisor engine to the standby supervisor engine and causes the newly active supervisor engine to run the new image specified.

show I2protocol-tunnel

To display information about the Layer 2 protocol tunnel ports, use the show l2protocol-tunnel command. This command displays information for the interfaces with protocol tunneling enabled.

show l2protocol-tunnel [interface interface-id] [[summary] | {begin | exclude | include} expression]

Syntax Description	interface interface-id	(Optional) Specifies the interface for which protocol tunneling information appears. Valid interfaces are physical ports and port channels; the port channel range is 1 to 64.
	summary	(Optional) Displays only Layer 2 protocol summary information.
begin		(Optional) Displays information beginning with the line that matches the <i>expression</i> .
	exclude	(Optional) Displays information that excludes lines that match the <i>expression</i> .
	include	(Optional) Displays the lines that match the specified <i>expression</i> .
	expression	(Optional) Expression in the output to use as a reference point.

Command Modes User EXEC mode

Command History	Release	Modification
	12.2(18)EW	This command was first introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Usage Guidelines After enabling Layer 2 protocol tunneling on an access or 802.1Q tunnel port with the l2protocol-tunnel command, you can configure some or all of these parameters:

- Protocol type to be tunneled
- Shutdown threshold
- Drop threshold

If you enter the **show l2protocol-tunnel** [interface interface-id] command, only information about the active ports on which all the parameters are configured appears.

If you enter the **show l2protocol-tunnel summary** command, only information about the active ports on which some or all of the parameters are configured appears.

Expressions are case sensitive. For example, if you enter | exclude output, the lines that contain output do not appear, but the lines that contain Output appear.

Examples

This is an example of output from the show l2protocol-tunnel command:

Switch> **show 12protocol-tunnel** COS for Encapsulated Packets: 5

		Threshold	Threshold	Encapsulation Counter	Counter	Counter
 Fa0/10						
Fa0/10	stp			9847	1866	0
	vtp				12	0

Fa4/4	saC	bndl	30s	32768	100	100	0xc4	0x75
Switch#								

Table 2-24 lists the output field definitions.

Field	Description			
State	State of the specific port at the current moment is displayed; allowed values are as follows:			
	• <i>bndl</i> —Port is attached to an aggregator and bundled with other ports.			
	• <i>susp</i> —Port is in a suspended state; it is not attached to any aggregator.			
	• <i>indep</i> —Port is in an independent state (not bundled but able to switch data traffic. In this case, LACP is not running on the partner port).			
	• <i>hot-sby</i> —Port is in a hot-standby state.			
	• <i>down</i> —Port is down.			
LACPDUs Interval	Interval setting.			
LACP Port Priority	Port priority setting.			
Admin Key	Administrative key.			
Oper Key	Operator key.			
Port Number	Port number.			
Port State	State variables for the port encoded as individual bits within a single octet with the following meaning [1]:			
	• bit0 : <i>LACP_Activity</i>			
	• bit1 : <i>LACP_Timeout</i>			
	• bit2 : Aggregation			
	• bit3: Synchronization			
	• bit4 : Collecting			
	• bit5 : <i>Distributing</i>			
	• bit6 : <i>Defaulted</i>			
	• bit7 : <i>Expired</i>			

Table 2-24show lacp internal Command Output Fields

This example shows how to display LACP neighbors information for a specific port channel:

```
Switch# show lacp 1 neighbor

Switch#
```

In the case where no PDUs have been received, the default administrative information is displayed in braces.

This example shows how to display the LACP system identification:

```
Switch> show lacp sys-id
8000,AC-12-34-56-78-90
Switch>
```

The system identification is made up of the system priority and the system MAC address. The first two bytes are the system priority, and the last six bytes are the globally administered individual MAC address associated to the system.

Related Commands	Command	Description
lacp port-priority		Sets the LACP priority for the physical interfaces.
	lacp system-priority	Sets the priority of the system for LACP.

show mab

To display MAC authentication bypass (MAB) information, use the **show mab** command in EXEC mode.

show mab {interface interface interface-number | all} [detail]

Syntax Description	interface interface	Interface type; possible valid value is gigabitethernet .
	interface-number	Module and port number.
	all	Displays MAB information for all interfaces.
	detail	(Optional) Displays detailed MAB information.
Command Default	None.	
Command Modes	Privileged EXEC mo	ode

MAB SM state	MAB state machine state	
Auth Status	Authorization status	

Table 2-26 lists the possible values for the state of the MAB state machine.

Table 2-26 MAB State Machine Values

State	State Level	Description
Initialize	Intermediate	The state of the session when it initializes
Acquiring	Intermediate	The state of the session when it is obtaining the client MAC address

Authorizing	The state of the session during MAC-based authorization
Terminate	The state of the session once a result has been obtained. For a session in terminal state, "TERMINATE" displays.

Table 2-26	MAD State	Machina	Valuas	(continued)
1able 2-20	WAD State	wachine	values	(continued)

Table 2-27 lists the possible displayed values for the MAB authorization status.

Table 2-27MAB Authorization Status Values

Status	Description
AUTHORIZED	The session has successfully authorized.
UNAUTHORIZED	The session has failed to be authorized.

Examples

The following example shows how to display MAB information:

```
Switch# show mab all
MAB details for GigaEthernet1/3
------
Mac-Auth-Bypass = Enabled
Inactivity Timeout = None
Switch#
```

The following example shows how to display detailed MAB information:

```
Switch# show mab all detail
MAB details for GigaEthernet1/3
------
Mac-Auth-Bypass = Enabled
Inactivity Timeout = None
MAB Client List
------
Client MAC = 000f.23c4.a401
MAB SM state = TERMINATE
Auth Status = AUTHORIZED
```

The following example shows how to display MAB information for a specific interface:

Switch# show mab interface GigaEthernet1/3 MAB details for GigaEthernet1/3 ------Mac-Auth-Bypass = Enabled Inactivity Timeout = None

The following example shows how to display detailed MAB information for a specific interface:

```
Switch# show mab interface gigabitethernet1/1 detail
MAB details for GigaEthernet1/1
------
Mac-Auth-Bypass = Enabled
Inactivity Timeout = None
MAB Client List
------
Client MAC = 000f.23c4.a401
MAB SM state = TERMINATE
Auth Status = AUTHORIZED
Switch#
```

Related Commands	Command	Description
	mab	Enables and configures MAC authorization bypass (MAB) on a port.

show mac access-group interface

To display the ACL configuration on a Layer 2 interface, use the **show mac access-group interface** command.

show mac access-group interface [interface interface-number]

Syntax Description	interface	(Optional) Specifies the interface type; valid values are ethernet , fastethernet , gigabitethernet , tengigabitethernet , pos , atm , port-channel , and ge-wan .		
	interface-number	(Optional) Specifies the port number.		
Defaults	This command has	no default settings.		
Command Modes	Privileged EXEC m	ode		
Command History	Release	Modification		
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.		
Usage Guidelines	The valid values for	the port number depend on the chassis used.		
Examples	This example shows how to display the ACL configuration on interface fast 6/1:			
	Interface FastEth Inbound access	access-group interface fast 6/1 ernet6/1: -list is simple-mac-acl s-list is not set		
Related Commands	Command	Description		
	access-group mod	e Specifies the override modes (for example, VACL overrides PACL) and the non-override modes (for example, merge or strict mode).		

show mac-address-table address

To display MAC address table information for a specific MAC address, use the **show mac-address-table address** command.

show mac-address-table address mac_addr [interface type slot/port | protocol protocol | vlan
vlan_id]

Syntax Description	mac_addr	48-bit MAC address; the valid format is H.H.H.
	interface type slot/por	<i>t</i> (Optional) Displays information for a specific interface; valid values for <i>type</i> are fastethernet , gigabitethernet , and tengigabitethernet .
	protocol protocol	(Optional) Specifies a protocol. See the "Usage Guidelines" section for more information.
	vlan vlan_id	(Optional) Displays entries for the specific VLAN only; valid values are from 1 to 4094.
Defaults	This command has no c	lefault settings.
Command Modes	Privileged EXEC mode

Examples

This example shows how to display MAC address table information for a specific MAC address:

Switch# show mac-address-table address 0030.94fc.0dff

vlan	Entries mac address	type +	protocols	port
1 Fa6/1	0030.94fc.0dff 0030.94fc.0dff 0030.94fc.0dff	static static	<pre>ip, ipx, assigned, other ip, ipx, assigned, other ip, ipx, assigned, other</pre>	Switch Switch

Related Commands

Command	Description
show mac-address-table aging-time	Displays MAC address table aging information.
show mac-address-table count	Displays the number of entries currently in the MAC address table.
show mac-address-table dynamic	Displays the dynamic MAC address table entries only.
show mac-address-table interface	Displays the MAC address table information for a specific interface.
show mac-address-table multicast	Displays information about the multicast MAC address table.
show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.
show mac-address-table static	Displays the static MAC address table entries only.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table aging-time

To display the MAC address aging time, use the show mac-address-table aging-time command.

show mac-address-table aging-time [vlan vlan_id]

Syntax Description	vlan <i>vlan_id</i>	(Optional) Specifies a	a VLAN; valid values are from 1 to 4094.
Defaults	This command I	nas no default settings.	
Command Modes	Privileged EXE	C mode	
Command History	Release	Modification	
	12.1(8a)EW	Support for this com	nmand was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for extended	d addressing was added.
	This example shows how to display the Switch# show mac-address-table agin Vlan Aging Time 		e currently configured aging time for a specific VLAN:
Related Commands	Command		Description
	show mac-add	ress-table address	Displays the information about the MAC-address table.
	show mac-add	ress-table count	Displays the number of entries currently in the MAC address table.
	show mac-add	ress-table dynamic	Displays the dynamic MAC address table entries only.
	show mac-add	ress-table interface	Displays the MAC address table information for a specif interface.

Command	Description
show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.
show mac-address-table static	Displays the static MAC address table entries only.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table count

To display the number of entries currently in the MAC address table, use the **show mac-address-table count** command.

show mac-address-table count [vlan vlan_id]

Syntax Description	vlan <i>vlan_id</i>	(Optional) Specifies a	VLAN; valid values are from 1 to 4094.
Defaults	This command h	nas no default settings.	
Command Modes	Privileged EXE	C mode	
Command History	Release	Modification	
	12.1(8a)EW	Support for this comm	nand was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Added support for ex-	tended VLAN addresses.
Examples	This example sh	ows how to display the e	entry count for a specific VLAN:
	MAC Entries fo Dynamic Unicas Static Unicast Static Unicast Total Unicast Total Unicast Multicast MAC	t Address Count: Address (User-defined Address (System-defin MAC Addresses In Use: MAC Addresses Availab	0 d) Count: 0 ned) Count: 1 1 le: 32768 1
Related Commands	Command		Description
	show mac-add	ress-table address	Displays the information about the MAC-address table.
	show mac-add	ress-table aging-time	Displays MAC address table aging information.
		ress-table dynamic	Displays the dynamic MAC address table entries only.
		ress-table interface	Displays the MAC address table information for a specific interface.
	show mac-add	ress-table multicast	Displays information about the multicast MAC address table.
	show mac-add	ress-table protocol	Displays the MAC address table information that is based on the protocol.

Command	Description
show mac-address-table static	Displays the static MAC address table entries only.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table dynamic

To display the dynamic MAC address table entries only, use the **show mac-address-table dynamic** command.

show mac-address-table dynamic [address mac_addr | interface type slot/port |
 protocol protocol | vlan vlan_id]

Syntax Description	address mac_ad	dr (Optional) Specifies a 48-bit MAC address; the valid format is H.H.H.
	interface type sl	<i>ot/port</i> (Optional) Specifies an interface to match; valid values for <i>type</i> are fastethernet , gigabitethernet , and tengigabitethernet .
	protocol protoco	<i>ol</i> (Optional) Specifies a protocol. See the "Usage Guidelines" section for more information.
	vlan vlan_id	(Optional) Displays entries for a specific VLAN; valid values are from 1 to 4094.
Defaults	This command h	as no default settings.
Command Modes	Privileged EXEC	mode
Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Added support for extended VLAN addresses.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.
Usage Guidelines	The keyword def	initions for the <i>protocol</i> argument are as follows:
Jsage Guidelines	•	initions for the <i>protocol</i> argument are as follows: ecifies assigned protocol entries.
Usage Guidelines	•	ecifies assigned protocol entries.
Jsage Guidelines	assigned speedip specifies l	ecifies assigned protocol entries.
Jsage Guidelines	 assigned spee ip specifies l ipx specifies 	ecifies assigned protocol entries. IP protocol.
Usage Guidelines	 assigned speed ip specifies I ipx specifies other specifies The show mac-age 	Protocol. IP protocol. IPX protocols.

Examples

This example shows how to display all the dynamic MAC address entries:

Switch# show mac-address-table dynamic

Unicast	Entries			
vlan	mac address	type	protocols	port
	+	++	+	+
1	0000.0000.0201	dynamic	ip	FastEthernet6/15
1	0000.0000.0202	dynamic	ip	FastEthernet6/15
1	0000.0000.0203	dynamic	ip,assigned	FastEthernet6/15
1	0000.0000.0204	dynamic	ip,assigned	FastEthernet6/15
1	0000.0000.0205	dynamic	ip,assigned	FastEthernet6/15
2	0000.0000.0101	dynamic	ip	FastEthernet6/16
2	0000.0000.0102	dynamic	ip	FastEthernet6/16
2	0000.0000.0103	dynamic	ip,assigned	FastEthernet6/16
2	0000.0000.0104	dynamic	ip,assigned	FastEthernet6/16
2	0000.0000.0105	dynamic	ip,assigned	FastEthernet6/16
Switch#				

This example shows how to display the dynamic MAC address entries with a specific protocol type (in this case, assigned):

Switch# show mac-address-table dynamic protocol assigned

vlan	Entries mac address	type	protocols	port
1	0000.0000.0203	-	ip,assigned	FastEthernet6/15
1	0000.0000.0204	dynamic	ip,assigned	FastEthernet6/15
1	0000.0000.0205	dynamic	ip,assigned	FastEthernet6/15
2	0000.0000.0103	dynamic	ip,assigned	FastEthernet6/16
2	0000.0000.0104	dynamic	ip,assigned	FastEthernet6/16
2	0000.0000.0105	dynamic	ip,assigned	FastEthernet6/16
Switch#

show mac-address-table static	Displays the static MAC address table entries only.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table notification

To display the MAC address table notification status and history, use the **show mac-address-table notification** command.

show mac-address-table notification [change] [interface [interface-id]] | [mac-move] | [threshold] | [learn-fail]

	luiresi	
Syntax Description	change	(Optional) Displays the MAC address change notification status.
	interface	(Optional) Displays MAC change information for an interfaces.
	interface-id	(Optional) Displays the information for a specific interface. Valid interfaces include physical ports and port channels.
	mac-move	(Optional) Displays MAC move notification status.
	threshold	(Optional) Displays the MAC threshold notification status.
	learn-fail	(Optional) Displays general information of hardware MAC learning failure notifications.
Defaults	This command	has no default settings.
Command Modes	Privileged EXE	C mode
Command History	Release	Modification
	12.2(31)SG	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(52)SG	Support for learn-fail keyword, Supervisor Engine 6-E, and Catalyst 4900M chassis added.
Usage Guidelines	notification inte contents, and w	nac-address-table notification change command to display the MAC change erval, the maximum number of entries allowed in the history table, the history table whether the MAC change feature is enabled or disabled.
		ce keyword to display the flags for all interfaces. If the <i>interface-id</i> is included, only the terface are displayed.
Examples	This example sl	hows how to display all the MAC address notification information:
	MAC Notificati Interval betwee Number of MAC Number of MAC Number of Noti Maximum Number Current Histor	<pre>mac-address-table notification change ion Feature is Enabled on the switch een Notification Traps : 1 secs Addresses Added : 5 Addresses Removed : 1 ifications sent to NMS : 3 r of entries configured in History Table : 500 ry Table Length : 3 ion Traps are Enabled</pre>

This example shows how to display the MAC address change status on the FastEthernet interface 7/1:

Switch# show mac-address-table notification change interface FastEthernet 7/1

MAC Notification	Feature	is En	abled	on	the	swite	ch
Interface	MAC	Added	Trap	MAC	Ren	noved	Trap

Commands Command Description show mac-address-table address Displays the information about the MAC-address table. show mac-address-table aging-time Displays MAC address table aging information. show mac-address-table count Displays the number of entries currently in the MAC address table. show mac-address-table dynamic Displays the dynamic MAC address table entries only. show mac-address-table interface Displays the MAC address table information for a specific interface.

Command	Description
show mac-address-table multicast	Displays information about the multicast MAC address table.
show mac-address-table protocol	Displays the MAC address table information that is based on the protocol.
show mac-address-table vlan	Displays information about the MAC address table for a specific VLAN.

show mac-address-table vlan

To display information about the MAC address table for a specific VLAN, use the **show mac-address-table vlan** command.

show mac-address-table [vlan vlan_id] [protocol protocol]

Syntax Description	vlan vlan_id	(Optional) Displays the entries for a specific VLAN; valid values are from 1 to 4094.					
	protocol protoco	<i>l</i> (Optional) Specifies a protocol. See the "Usage Guidelines" section for more information.					
Defaults	This command ha	s no default settings.					
Command Modes	Privileged EXEC	mode					
Command History	Release	Modification					
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.					
	12.1(12c)EW	Support for extended addressing was added.					
Usage Guidelines		ress table entries used by the routed ports, the routed port name is displayed in the t the the internal VLAN number.					
	The keyword defi	nitions for the <i>protocol</i> variable are as follows:					
	-	cifies the assigned protocol entries.					
	0 1	ne IP protocol.					
		-					
		the IPX protocols.					
	• other specifie	es the other protocol entries.					

Examples

This example shows how to display information about the MAC address table for a specific VLAN:

Switch# show mac-address-table vlan 1

vlan	Entries mac address	type	protocols	port
1 1 1 1 1	0000.0000.0201 0000.0000.0202 0000.0000.	dynamic dynamic dynamic dynamic	ip ip other	FastEthernet6/15 FastEthernet6/15 FastEthernet6/15 FastEthernet6/15 Switch
vlan	st Entries mac address +		ports 	
		system :	JW1 CCII, F a0/ 1J	

This example shows how to display MAC address table information for a specific protocol type:

Switch# show mac-address-table vlan 100 protocol other

vlan	Entries mac address	type	protocols	port
1 1 1	0000.0000.0203 0000.0000.0204 0030.94fc.0dff	dynamic dynamic	other	FastEthernet6/15 FastEthernet6/15 Switch

show monitor

To display information about the SPAN session, use the show monitor command.

show monitor [session] [range session-range | local | remote | all | session-number] [detail]

Syntax Description	session	(Optional) Displays the SPAN information for a session.
	range	(Optional) Displays information for a range of sessions.
	session-range	(Optional) Specifies a range of sessions.
	local	(Optional) Displays all local SPAN sessions.
	remote	(Optional) Displays the RSPAN source and destination sessions.
	all	(Optional) Displays the SPAN and RSPAN sessions.
	session-number	(Optional) Session number; valid values are from1 to 6.
	detail	(Optional) Displays the detailed SPAN information for a session.
Defaults	The detail keywo	rd only displays lines with a nondefault configuration.
Command Modes	Privileged EXEC	mode
	Thinkeged Entre	linde
Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(13)EW	Added support for differing directions within a single user session.
	12.1(19)EW	Output enhanced to display configuration status of SPAN enhancements.
	12.1(20)EW	Added support to display configuration state for remote SPAN and learning.
	12.2(20)EW	Added support to display ACLs that are applied to SPAN sessions.
Examples	This example sho	ws how to display whether ACLs are applied to a given SPAN session on a
•	Catalyst 4500 seri	
	Switch# show mor	nitor

	show class-ma	р	Displays class map information.		
	show policy-m	-	Displays the statistics and configurations of the input and		

show policy-map control-plane

To display the configuration either of a class or of all classes for the policy map of a control plane, use the **show policy-map control-plane** command.

show policy-map control-plane [input [class class-name] | [class class-name]]

Syntax Description	input	(Optional) Displays statistics for the attached input policy.		
	class class-name	(Optional) Displays the name of the class.		
Defaults This command has no default settings.				
Command Modes	Privileged EXEC m	node		
Command History	Release	Modification		
	12.2(31)SG	Support for this command was introduced on the Catalyst 4500 series switch.		
Usage Guidelines	The show policy-m	ot supported on the Supervisor Engine 6-E and Catalyst 4900M chassis. hap control-plane command displays information for aggregate control-plane of the number or rate of packets that are going to the process level.		
Examples	polices traffic that i	s that the policy map TEST is associated with the control plane. This policy map matches the class-map TEST, while allowing all other traffic (that matches the fault) to go through as is. Table 2-28 describes the fields shown in the display.		
	Switch# show poli	cy-map control-plane

```
Switch#
```

	Field	Description			
	Fields Associated with Classes or Service	Policies			
	Service-policy input	Name of the input service policy that is applied to the control plane. (If configured, this field will also show the output service policy.)			
	Class-map	Class of traffic being displayed. Traffic is displayed for each configured class. The choice for implementing class matches (for example, match-all or match-any) can also appear next to the traffic class.			
	Match	Match criteria for the specified class of traffic.			
		Note For more information about the variety of match criteria options available, refer to the chapter "Configuring the Modular Quality of Service Command-Line Interface" in the <i>Cisco IOS Quality of Service Solutions Configuration Guide</i> .			
	Fields Associated with Traffic Policing				
	police	police command has been configured to enable traffic policing.			
	conformed	Action to be taken on packets conforming to a specified rate displays the number of packets and bytes on which the action was taken.			
	exceeded	Action to be taken on packets exceeding a specified rate; displays the number of packets and bytes on which the action was taken.			
elated Commands	Command	Description			
	control-plane	Enters control-plane configuration mode.			
	service-policy input (control-plane)	Attaches a policy map to a control plane for aggregate			

control plane services.

Table 2-28	show policy-map control-plane Field Descriptions
------------	--

show policy-map interface

To display the statistics and configurations of the input and output policies that are attached to an interface, use the **show policy-map interface** command.

show policy-map interface [{fastethernet interface-number} | {gigabitethernet interface-number} | {port-channel number} | {vlan vlan_id}] [input | output]

Syntax Description	fastethernet ini	terface-number	(Optional) Specifies the Fast Ethernet 802.3 interface.		
	gigabitethernet interface-number		(Optional) Specifies the Gigabit Ethernet 802.3z interface.		
	port-channel n	umber	(Optional) Specifies the port channel.		
	vlan vlan_id		(Optional) Specifies the VLAN ID; valid values are from 1 to 4094.		
	input		(Optional) Specifies input policies only.		
	output		(Optional) Specifies output policies only.		
Defaults	This command h	aas no default settings	5.		
Command Modes	Privileged EXE	C mode			
Command History	Release	Modification			
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.			
	12.1(12c)EW	Added support for extended VLAN addresses.			
	12.2(25)SG	Displays results fo	r full flow policing.		
Examples	This example shows how to display the statistics and configurations of all input and output policies attached to an interface:				
	Switch# show p	olicy-map interface			
	FastEthernet6/1				
	service-policy input:ipp5-policy				
	0 packet match:ip set:	ipp5 (match-all) s precedence 5 cedence 6			
	class-map: 0 packet match:an 0 pack	У	h-any)		

```
service-policy output:ipp5-policy
class-map:ipp5 (match-all)
0 packets
match:ip precedence 5
set:
    ip precedence 6
class-map:class-default (match-any)
0 packets
match:any
0 packets
Switch#
```

This example shows how to display the input policy statistics and configurations for a specific interface:

```
Switch# show policy-map interface fastethernet 5/36 input
service-policy input:ipp5-policy
```

```
class-map:ipp5 (match-all)
    0 packets
    match:ip precedence 5
    set:
        ip precedence 6
    class-map:class-default (match-any)
        0 packets
    match:any
        0 packets
Switch#
```

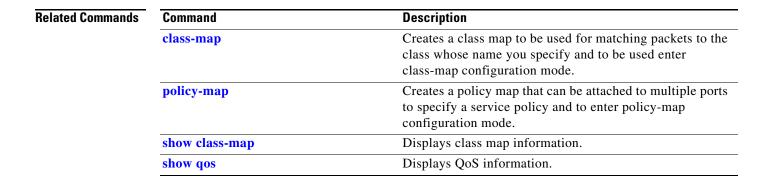

With the following configuration, each flow is policed to a 1000000 bps with an allowed 9000-byte burst value.

If you use the **match flow ip source-address/destination-address** command, these two flows are consolidated into one flow and they have the same source and destination address.

```
Switch# config terminal
Enter configuration commands, one per line. End with CNTL/Z.
Switch(config)# class-map c1
Switch(config-cmap)# match flow ip source-address ip destination-address ip protocol 14
source-port 14 destination-port

show policy-map interface vlan

To show the QoS policy-map information applied to a specific VLAN on an interface, use the **show policy-map interface vlan** command.

show policy-map interface vlan interface-id vlan vlan-id

Syntax Description	interface interface-id	(Optional) Displays QoS policy-map information for a specific interface.			
	vlan vlan-id	(Optional) Displays QoS policy-map information for a specific VLAN.			
Command Modes	Privileged EXEC mode				
Command History	Release Moo	lification			
John Maria Motory		port for this command was introduced on the Catalyst 4500 series switch.			
xamples	The following example	show a configuration on a non-Supervisor Engine 6-E:

The following example shows a configuration on a Supervisor Engine 6-E:

```
interface gigabitethernet3/1
vlan-range 100
service-policy in p1
```

This example shows how to display policy-map statistics on VLAN 100 on the FastEthernet interface:

```
Switch# show policy-map interface gigabitethernet 3/1 vlan 100
GigabitEthernet3/1 vlan 100
```

```
Service-policy input: p1
    Class-map: c1 (match-all)
       0 packets
      Match: ip dscp af11 (10)
      police:
         rate 128000 bps, burst 4000 bytes
          conformed 0 packets, 0 bytes; action:
            transmit
           exceeded 0 packets, 0 bytes; action:
            drop
          conformed 0 bps, exceeded 0 bps
    Class-map: class-default (match-any)
       0 packets
      Match: any
         0 packets
Switch#
```

Related Commands	Command	Description
	service-policy (interface configuration)	Attaches a policy map to an interface.
	show policy-map interface	Displays the statistics and configurations of the input and output policies that are attached to an interface.

show port-security

To display the port security settings for an interface or for the switch, use the **show port-security** command.

show port-security [address] [interface interface-id]
[interface port-channel port-channel-number] [vlan vlan-id]

Syntax Description	address	(Optional) Displays all secure MAC addresses for all ports or for a specific port.
	interface interface-id	(Optional) Displays port security settings for a specific interface.
	interface port-channel port channel-	(Optional) Displays port security for a specific port-channel interface.
	vlan vlan-id	(Optional) Displays port security settings for a specific VLAN.

Command Modes Privileged EXEC mode

Command History	Release	Modification
	12.1(13)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(18)EW Support was enhanced to display sticky MAC addresses.	
12.2(25)EWA Support was enhanced to display se		Support was enhanced to display settings on a per-VLAN basis.
	12.2(31)SGA	Support was enhanced to display settings on EtherChannel interfaces.

Usage Guidelines

If you enter the command without keywords, the output includes the administrative and operational status of all secure ports on the switch.

If you enter the *interface-id* value or *port-channel-interface* value, the **show port-security** command displays port security settings for the interface.

If you enter the **address** keyword, the **show port-security address** command displays the secure MAC addresses for all interfaces and the aging information for each secure address.

If you enter the *interface-id* value and the **address** keyword, the **show port-security address interface** command displays all the MAC addresses for the interface with aging information for each secure address. You can also use this command to display all the MAC addresses for an interface even if you have not enabled port security on it.

Sticky MAC addresses are addresses that persist across switch reboots and link flaps.

Examples

This example shows how to display port security settings for the entire switch:

Switch# show port-security

inds	Command	Description		
	switchport port-security	Enables port security on an interface.		

show power

To display information about the power status, use the show power command.

show power [available | capabilities | detail | inline {[interface] detail | consumption default |
 module mod detail} | module | status | supplies]

Syntax Description	available	(Optional) Displays the available system power.		
	capabilities	(Optional) Displays the individual power supply capabilities.		
	detail	(Optional) Displays detailed information on power resources.		
	inline	(Optional) Displays the PoE status.		
	interface detail	(Optional) Detailed information on the PoE status for the interface		
	consumption d	efault (Optional) Displays the PoE consumption.		
	module mod de	fault (Optional) Displays the PoE consumption for the specified module.		
	status	(Optional) Displays the power supply status.		
	supplies	(Optional) Displays the number of power supplies needed by the system.		
Defaults	This command h	nas no default settings.		
Command Modes	Privileged EXEC	2 mode		
Command History	Release	Modification		
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.		
	12.2(25)SG	Displays inline power handling for the Supervisor Engine II-Plus-TS.		
	12.2(52)SG	Support to display detailed PoE consumption information on an interface/module.		
Usage Guidelines	-	vice is connected to an interface with external power, the switch does not recognize the The Device column in the output of the show power inline command displays as		
	If your port is no	ot capable of supporting PoE, you will receive this message:		
	Power over Eth	ernet not supported on interface Admin		
	-	r inline <i>interface</i> <i>module</i> command displays the amount of power that is used to operate e. To view the amount of power requested, use the show cdp neighbors command.		
	Because FPGAs and other hardware components on the WS-X4548-RJ45V+ and WS-X4648-RJ45V+E modules consume PoE, the operating PoE consumption for an 802.3af-compliant module can be nonzero when there are no powered devices attached to the module. The operating PoE can vary by as much as 20 W because of fluctuations in the PoE that is consumed by the hardware components.			

Examples

This example shows how to display information about the general power supply:

Power	show power Model No	Туре	Status	Fan Sensor	Inline Status

When the Supervisor Engine II+TS is used with the 1400 W DC power supply (PWR-C45-1400DC), and only one 12.5 A input of the DC power supply is used, the supervisor engine's power consumption may vary depending on whether there is any linecard inserted at slot 2 and 3, as well as on the type of linecards inserted. This amount varies between 155 W and 330 W. This variability also affects the

maximum amount of available supervisor engine inline power, which can also vary from 0 W to 175 W. Therefore, it is possible for a supervisor engine to deny inline power to some connected inline power devices when one or more linecards are inserted into the chassis.

The output of the commands **show power detail** and **show power module** display the supervisor engine's variable power consumption and its inline power summary:

Switch#

This example shows how to display redundancy facility client information:

Switch# show redundancy clients

clientID = 0	clientSeq = 0	RF_INTERNAL_MSG
clientID = 30	clientSeq = 135	Redundancy Mode RF
clientID = 28	clientSeq = 330	GALIOS_CONFIG_SYNC
clientID = 65000	clientSeq = 65000	RF_LAST_CLIENT Switch

The output displays the following information:

- clientID displays the client's ID number.
- clientSeq displays the client's notification sequence number.
- Current redundancy facility state.

This example shows how to display the redundancy facility counter information:

```
Switch# show redundancy counters
Redundancy Facility OMs
              comm link up = 1
        comm link down down = 0
          invalid client tx = 0
          null tx by client = 0
               tx failures = 0
      tx msg length invalid = 0
      client not rxing msgs = 0
 rx peer msg routing errors = 0
          null peer msg rx = 0
        errored peer msg rx = 0
                 buffers tx = 1535
     tx buffers unavailable = 0
                 buffers rx = 1530
      buffer release errors = 0
 duplicate client registers = 0
  failed to register client = 0
       Invalid client syncs = 0
Switch#
```

This example shows how to display redundancy facility history information:

```
Switch# show redundancy history
00:00:01 client added: RF_INTERNAL_MSG(0) seq=0
00:00:01 client added: RF_LAST_CLIENT(65000) seq=65000

show redundancy config-sync

To display an ISSU config-sync failure or the ignored mismatched command list (MCL), if any, use the **show redundancy config-sync** command.

show redundancy config-sync {failures | ignored } {bem | mcl | prc}

show redundancy config-sync ignored failures mcl

Syntax Description	failures	Displays MCL entries or BEM/PRC failures.
	ignored	Displays the ignored MCL entries.
	bem	(Deprecated)
	mcl	Displays commands that exist in the active supervisor engine's running configuration, but are not supported by the image on the standby supervisor engine.
	prc	Displays a Parser Return Code (PRC) failure and forces the system to operate in RPR mode provided there is a mismatch in the return code for a command execution at the active and standby supervisor engine.
Defaults	This command	l has no default settings.
Command Modes	User EXEC m	ode
Command History	Release	Modification
	12.2(31)SGA	This command was introduced on the Catalyst 4500 series switch.
	12.2(44)SG	Updated command syntax from issu config-sync to redundancy config-sync.
Usage Guidelines	differ. If any o supervisor eng syntax check f	sions of Cisco IOS images are involved, the command sets supported by two images might f those mismatched commands are executed on the active supervisor engine, the standby ine might not recognize those commands. This causes a config mismatch condition. If the for the command fails on standby supervisor engine during a bulk sync, the command is e MCL and the standby supervisor engine is reset. To display all the mismatched

To *clean* the MCL, follow these steps:

- **Step 1** Remove all mismatched commands from the active supervisor engines' running configuration.
- **Step 2** Revalidate the MCL with a modified running configuration using the **redundancy config-sync validate mismatched-commands** command.
- **Step 3** Reload the standby supervisor engine.

Alternatively, you could ignore the MCL by following these steps:

- Step 1 Enter the redundancy config-sync ignore mismatched-commands command.
- **Step 2** Reload the standby supervisor engine; the system transitions to SSO mode.

Note If you ignore the mismatched commands, the *out-of-sync* configuration at the active supervisor engine and the standby supervisor engine still exists.

Step 3 You can verify the ignored MCL with the **show redundancy config-sync ignored mcl** command.

Each command sets a return code in the action function that implements the command. This return code indicates whether or not the command successfully executes. The active supervisor engine maintains the PRC after executing a command. The standby supervisor engine executes the command and sends PRC back to the active supervisor engine. PRC failure occurs if these two PRCs do not match. If a PRC error occurs at the standby supervisor engine either during bulk sync or LBL sync, the standby supervisor engine is reset. To display all PRC failures, use the **show redundancy config-sync failures prc** command.

To display best effort method (BEM) errors, use the **show redundancy config-sync failures bem** command.

 Examples

	mismatched-commands	Command List (MCL) and resets the standby supervisor
		engine.

show running-config

To display the module status and configuration, use the show running-config command.

show running-config [module slot]

Syntax Description	module slot	(Optional) Specifies the module slot number; valid values are from 1 to 6.
Defaults	This command l	nas no default settings.
Command Modes	Privileged EXE	C mode
Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
Usage Guidelines	interfaces com mode displayed The show inter	You might see a difference in the duplex mode displayed when you enter the show nand and the show running-config command. If you do see a difference, the duplex in the show interfaces command is the actual duplex mode that the interface is running. faces command shows the operating mode for an interface, while the show command shows the configured mode for an interface.
	but no configura interface speed i once the speed i	ing-config command output for an interface may display a duplex mode configuration tion for the speed. When no speed is displayed in the output, it indicates that the s configured to be auto and that the duplex mode shown becomes the operational setting s configured to something other than auto. With this configuration, it is possible that the x mode for that interface does not match the duplex mode shown with the show command.
Examples	This example sh	nows how to display the module and status configuration for all modules:
	Switch# show r 03:23:36:%SYS- Building confi	5-CONFIG_I:Configured from console by consolesh runn
	! version 12.1 no service pad service timest service timest	amps debug uptime amps log uptime sword-encryption h required 1

```
!
!
interface FastEthernet1
no ip address
shutdown
duplex auto
speed auto
Switch#
```

This example shows the output for the **show running-config** command when you have enabled the **switchport voice vlan** command:

```
Switch# show running-config int fastethernet 6/1
Building configuration...
Current configuration:133 bytes
!
interface FastEthernet6/1
switchport voice vlan 2
no snmp trap link-status
spanning-tree portfast
channel-group 1 mode on
end
```

Switch#

show slavebootflash:

To display information about the standby bootflash file system, use the **show slavebootflash:** command.

show slavebootflash: [all | chips | filesys]

```
Syntax Description
                   all
                               (Optional) Displays all possible Flash information.
                   chips
                               (Optional) Displays Flash chip information.
                   filesys
                               (Optional) Displays file system information.
Defaults
                   This command has no default settings.
Command Modes
                   Privileged EXEC mode
Command History
                                   Modification
                   Release
                   12.1(8a)EW
                                   Support for this command was introduced on the Catalyst 4500 series switch.
Examples
                   This example shows how to display file system status information:
                   Switch# show slavebootflash: filesys
                   ----- FILE SYSTEM STATUS ------

show spanning-tree

To display spanning-tree state information, use the show spanning-tree command.

show spanning-tree [bridge_group | active | backbonefast | bridge [id] | inconsistentports |
interface type | root | summary [total] | uplinkfast | vlan vlan_id | pathcost method | detail]

yntax Description	bridge_group	(Optional) Specifies the bridge group number; valid values are from 1 to 255.
	active	(Optional) Displays the spanning-tree information on active interfaces only.
	backbonefast	(Optional) Displays the spanning-tree BackboneFast status.
	bridge	(Optional) Displays the bridge status and configuration information.
	id	(Optional) Name of the bridge.
	inconsistentports	(Optional) Displays the root inconsistency state.
	interface type	(Optional) Specifies the interface type and number; valid values are fastethernet ,
		gigabitethernet , tengigabitethernet , port-channel (1 to 64), and vlan (1 to 4094).
	root	(Optional) Displays the root bridge status and configuration.
	summary	(Optional) Specifies a summary of port states.
	total	(Optional) Displays the total lines of the spanning-tree state section.
	uplinkfast	(Optional) Displays the spanning-tree UplinkFast status.
	vlan vlan_id	(Optional) Specifies the VLAN ID; valid values are from 1 to 4094.
	pathcost method	(Optional) Displays the default path cost calculation method used.
	detail	(Optional) Displays a summary of interface information.

Defaults

Interface information summary is displayed.

Command Modes Privileged EXEC mode

Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.1(12c)EW	Support for extended addressing was added.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.

Examples This example shows how to display spanning-tree information on the active interfaces only: Switch# show spanning-tree active UplinkFast is disabled BackboneFast is disabled VLAN1 is executing the ieee compatible Spanning Tree protocol Bridge Identifier has priority 32768, address 0050.3e8d.6401 Configured hello time 2, max age 20, forward delay 15 Current root has priority 16384, address 0060.704c.7000 Root port is 265 (FastEthernet5/9), cost of root path is 38 Topology change flag not set, detected flag not set Number of topology changes 0 last change occurred 18:13:54 ago Times: hold 1, topology change 24, notification 2 hello 2, max age 14, forward delay 10 Timers: hello 0, topology change 0, notification 0 Port 265 (FastEthernet5/9) of VLAN1 is forwarding Port path cost 19, Port priority 128, Port Identifier 129.9. Spanning tree enabled protocol ieee

This example shows how to display spanning-tree information for Fast Ethernet interface 5/9:

```
Switch# show spanning-tree interface fastethernet5/9
Interface Fa0/10 (port 23) in Spanning tree 1 is ROOT-INCONSISTENT
Port path cost 100, Port priority 128
Designated root has priority 8192, address 0090.0c71.a400
Designated bridge has priority 32768, address 00e0.1e9f.8940
Designated port is 23, path cost 115
Timers: message age 0, forward delay 0, hold 0
BPDU: sent 0, received 0
The port is in the portfast mode
Switch#
```

This example shows how to display spanning-tree information for a specific VLAN:

```
Switch# show spanning-tree vlan 1
VLAN1 is executing the ieee compatible Spanning Tree protocol
Bridge Identifier has priority 32768, address 0030.94fc.0a00
Configured hello time 2, max age 20, forward delay 15
We are the root of the spanning tree
Topology change flag not set, detected flag not set
Number of topology changes 5 last change occurred 01:50:47 ago
from FastEthernet6/16
Times: hold 1, topology change 35, notification 2
hello 2, max age 20, forward delay 15
Timers:hello 0, topology change 0, notification 0, aging 300
Port 335 (FastEthernet6/15) of VLAN1 is forwarding
```

```
Port path cost 19, Port priority 128, Port Identifier 129.79.
Designated root has priority 32768, address 0030.94fc.0a00
Designated bridge has priority 32768, address 0030.94fc.0a00
Designated port id is 129.79, designated path cost 0
Timers:message age 0, forward delay 0, hold 0
Number of transitions to forwarding state:1
BPDU:sent 6127, received 0
Switch#
```

This example shows how to display spanning-tree information for a specific bridge group:

```
Switch# show spanning-tree vlan 1
UplinkFast is disabled
BackboneFast is disabled
Switch#
```

This example shows how to display a summary of port states:

```
Switch# show spanning-tree summary
Root bridge for:VLAN1, VLAN2.
PortFast BPDU Guard is disabled
EtherChannel misconfiguration guard is enabled
UplinkFast is disabled
BackboneFast is disabled
Default pathcost method used is short
```

Name		Blocking	Listenin	g Learning	g Forwardin	g STP Active
VLAN1 VLAN2		0	0	0 0	1 1	1
Switch#	2 VLANS 0	0		0 2	2	2

This example shows how to display the total lines of the spanning-tree state section:

```
Switch# show spanning-tree summary totals
Root bridge for:VLAN1, VLAN2.
PortFast BPDU Guard is disabled
EtherChannel misconfiguration guard is enabled
UplinkFast is disabled
BackboneFast is disabled
Default pathcost method used is short
```

Name			E	lockir	ng I	Listenir	ıg	Learning	Forwardin	g STP	Active
	2	VLANs	0		0		0	2		2	
Switch#											

This example shows how to determine whether any ports are in root inconsistent state:

Switch# show spanning-tree inconsistentports

Name	Interface	Inconsistency
VLAN1	FastEthernet3/1	Root Inconsistent

Number of inconsistent ports (segments) in the system:1 Switch#

Related Commands

Description Command spanning-tree backbonefast Enables BackboneFast on a spanning-tree VLAN. Calculates the path cost of STP on an interface. spanning-tree cost spanning-tree guard Enables root guard. spanning-tree pathcost method Sets the path cost calculation method. Enables PortFast by default on all access ports. spanning-tree portfast default spanning-tree portfast (interface Enables PortFast mode. configuration mode) spanning-tree port-priority Prioritizes an interface when two bridges compete for position as the root bridge. Enables the UplinkFast feature. spanning-tree uplinkfast Configures STP on a per-VLAN basis. spanning-tree vlan

show spanning-tree mst

To display MST protocol information, use the show spanning-tree mst command.

show spanning-tree mst [configuration]

show spanning-tree mst [instance-id] [detail]

show spanning-tree mst [instance-id] interface interface [detail]

configuration	(Optional) Displays region configuration information.
instance-id	(Optional) Instance identification number; valid values are from 0 to 15.
detail	(Optional) Displays detailed MST protocol information.
interface interface	(Optional) Interface type and number; valid values for type are fastethernet , gigabitethernet , tengigabitethernet , port-channel , and vlan . See the "Usage Guidelines" section for more information.

```

Related Commands	Command	Description
	spanning-tree mst	Sets the path cost and port-priority parameters for any MST instance.
	spanning-tree mst forward-time	Sets the forward delay timer for all the instances.
	spanning-tree mst hello-time	Sets the hello-time delay timer for all the instances.
	spanning-tree mst max-hops	Specifies the number of possible hops in the region before a BPDU is discarded.
	spanning-tree mst root	Designates the primary root.

show storm-control

To display the broadcast storm control settings on the switch or on the specified interface, use the **show storm-control** command.

show storm-control [interface-id | broadcast]

Supervisor Engine 6-E and Catalyst 4900M chassis

show storm-control [interface-id | broadcast | multicast]

	interface-id	(Optional) Specifies the interface ID for the physical port.				
	broadcast	(Optional) Displays the broadcast storm threshold setting.				
	multicast	(Optional) Displays the multicast storm threshold setting.				
Defaults	This command h	has no default settings.				
Command Modes	Privileged EXE	C mode				
Command History	Release	Modification				
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.				
	12.2(25)EWAdded support for the 10-Gigabit Ethernet interface.					
	12.2(40)SG	Added support for the Supervisor Engine 6-E and Catalyst 4900M chassis.				
Usage Guidelines	-	an interface ID, the storm control thresholds are displayed for the specified interface. ter an interface ID, the settings are displayed for the broadcast traffic type for all ports				
		ple of output from the show storm-control command when no keywords are entered.				
Examples	-	fic type keyword was entered, the broadcast storm control settings are displayed.				
Examples	Because no traff Switch# show s Interface Fil	fic type keyword was entered, the broadcast storm control settings are displayed. torm-control ter State Upper Lower Current				
Examples	Because no traff Switch# show s Interface Fil Gi2/1 For	fic type keyword was entered, the broadcast storm control settings are displayed.				

This is an example of output from the **show storm-control multicast** command on a Supervisor Engine 6-E:

This is an example of output from the **show storm-control** command on a Supervisor Engine 6-E when no keywords are entered:

```
Switch# show storm-control
```

This is an example of output from the **show storm-control** command for a specified interface:

This is an example of output from the **show storm-control** command for a specified interface on a Supervisor Engine 6-E:

```
Switch# show storm-control interface fastethernet6/1Interface Filter StateBroadcast MulticastLevel-----------------Fa6/1BlockingEnabledDisabled81%Switch#
```

Table 2-29 describes the fields in the show storm-control display.

Table 2-29show storm-control Field Descriptions

Field	Description
Interface	Displays the ID of the interface.
Filter State	Displays the status of the filter:
	• Blocking—Storm control is enabled, and a storm has occurred.
	• Forwarding—Storm control is enabled, and no storms have occurred.
	• Inactive—Storm control is disabled.
Level	Displays the threshold level set on the interface for broadcast traffic.
Current	Displays the bandwidth utilization of broadcast traffic as a percentage of total available bandwidth. This field is valid only when storm control is enabled.
	Note N/A is displayed for interfaces that do storm control in the hardware.

Related Commands

Commands	Command	Description
	storm-control	Enables broadcast storm control on a port and specifies
		what to do when a storm occurs on a port.
	show interfaces counters	Displays the traffic on the physical interface.
	show running-config	Displays the running configuration of a switch.

show system mtu

To display the global MTU setting, use the **show system mtu** command.

show system mtu Syntax Description This command has no arguments or keywords. Defaults This command has no default settings. **Command Modes** Privileged EXEC mode **Command History** Release Modification 12.1(12c)EW Support for this command was introduced on the Catalyst 4500 series switch. Examples This example shows how to display the global MTU setting: Switch# show system mtu Global Ethernet MTU is 1550 bytes. Switch# **Related Commands** Command Description system mtu Sets the maximum Layer 2 or Layer 3 payload size.

show tech-support

To display troubleshooting information for TAC, use the **show tech-support** command.

show tech-support [bridging | cef | ipmulticast | isis | password [page] | page]

- show ip dvmrp route

Examples For a sample display of the **show tech-support** command output, see the commands listed in the "Usage Guidelines" section for more information.

Related Commands See the "Usage Guidelines" section.

show udld

To display the administrative and operational UDLD status, use the show udld command.

show udld interface-id

Syntax Description	interface-id	Name of the interface.
Defaults	This command	has no default settings.
Command Modes	Privileged EXE	EC mode
Command History	Release	Modification
	12.1(8a)EW	Support for this command was introduced on the Catalyst 4500 series switch.
	12.2(25)EW	Added support for the 10-Gigabit Ethernet interface.
Usage Guidelines	If you do not en interfaces is dis	nter an interface ID value, the administrative and operational UDLD status for all splayed.
Examples	This example s	hows how to display the UDLD state for Gigabit Ethernet interface 2/2:
	Switch# show Interface Gi2	udld gigabitethernet2/2 /2
	Port enable au Port enable op Current bidir Current opera Message inter Time out inte	
	Device ID Current na Device nau Port ID: 2 Neighbor o Neighbor o Message in	eighbor state: Bidirectional me: 0050e2826000

Related Commands	Command	Description
	udld (global configuration mode)	Enables aggressive or normal mode in the UDLD protocol and sets the configurable message timer time.
	udld (interface configuration mode)	Enables UDLD on an individual interface or prevents a fiber interface from being enabled by the udld (global configuration mode) command.

show vlan

To display VLAN information, use the **show vlan** command.

show vlan [brief | id vlan_id | name name]

show vlan private-vlan [type]

Syntax Description	brief (Optional) Displays only a single line for each VLAN, naming the VLAN, status, and ports.							
	id vlan_id	(Optional) Displays information about a single VLAN identified by VLAN ID number; valid values are from 1 to 4094.						
	name name	me name(Optional) Displays information about a single VLAN identified by VLAN name; valid values are an ASCII string from 1 to 32 characters.						
	private-vlan Displays private VLAN information.							
	type	(Optional) Private VLAN type.

```

Table 2-30 describes the fields in the show vlan command output.

Field	Description
VLAN	VLAN number.
Name	Name, if configured, of the VLAN.
Status	Status of the VLAN (active or suspend).
Ports	Ports that belong to the VLAN.
Туре	Media type of the VLAN.
SAID	Security Association Identifier value for the VLAN.
MTU	Maximum transmission unit size for the VLAN.
Parent	Parent VLAN, if one exists.
RingNo	Ring number for the VLAN, if applicable.
BrdgNo	Bridge number for the VLAN, if applicable.
Stp	Spanning Tree Protocol type used on the VLAN.

Table 2-30 show vlan Command Output Fields

The following example shows how to verify that the primary VLAN and secondary VLANs are correctly associated with each other and the same association also exists on the PVLAN port:

Switch# show vlan private-vlan

```
Primary Secondary Type Ports

10 100 community Fa3/1, Fa3/2
```

The following example shows how to remove the VLAN association:

```
Switch(config)# vlan 10

Switch(config-vlan)# private-vlan association remove 100

Switch(config-vlan)# end

Switch# show vlan private

Primary Secondary Type Ports

------

10 primary

100 community
```

This example show how to verify PVLAN configuration on the interface:

Switch#	show interface f3/2	status			
Port	Name	Status	Vlan	Duplex	Speed Type
Fa3/2		connected	pvlan seco	a-full	a-100 10/100BaseTX

Related Commands	Vlan access-may match: action Switch#	ip address 13 n: forward capture Description

show vlan counters

To display the software-cached counter values, use the show vlan counters command.

show vlan [id vlanid] counters

Syntax Description	id vlanid	(Optional) Displays th	he software-cached counter values for a specific VLAN.	
Defaults	This command has no default settings. Privileged EXEC mode			
Command Modes				
Command History	Release 12.1(13)EW	Modification Support for this co	ommand was introduced on the Catalyst 4500 series switches.	
Usage Guidelines		he show vlan counters es for all VLANs are dis	command without specifying the VLAN ID, the software-cached played.	
Examples	This example shows how to display the software-cached counter values for a specific VLAN: Switch# show vlan counters * Multicast counters include broadcast packets			
	L3 Input Un L3 Output Un L3 Output Un L3 Output M L3 Output M L3 Input Mu	Octets icast Packets icast Octets nicast Packets nicast Octets ulticast Packets lticast Octets lticast Octets lticast Octets	: 1 : 0 : 0 : 0 : 0 : 0 : 0 : 0 : 0 : 0 : 0	
Related Commands	Command clear vlan c	ounters	Description Clears the software-cached counter values to start from zero again for a specified VLAN or all existing VLANs.	

show vlan dot1q tag native

To display all the ports on the switch that are eligible for native VLAN tagging as well as their current native VLAN tagging status, use the show vlan dot1q tag native command.

show vlan dot1q tag native

- **Syntax Description** This command has no arguments or keywords.
- Defaults This command has no default settings.

Command Modes User EXEC mode

Command History	Release	Modification
	12.1(18)EW	This command was introduced on the Catalyst 4500 series switch.

Examples

This is an example of output from the **show vlan dot1q tag native** command:

Switch# show vlan dot1q tag native dot1q native vlan tagging is disabled globally

Per Port Native Vlan Tagging State

Port	Operational Mode	Native VLAN Tagging State
£3/2	trunk	enabled
£3/16	PVLAN trunk	disabled
£3/16	trunk	enabled

Related Commands Command

Command	Description
switchport mode	Sets the interface type.
vlan (global configuration) (refer to Cisco IOS documentation)	Enters global VLAN configuration mode.
vlan (VLAN configuration) (refer to Cisco IOS documentation)	Enters VLAN configuration mode.

show vlan internal usage

To display information about the internal VLAN allocation, use the show vlan internal usage command.

show vlan [id vlan-id] internal usage

Syntax Description	id vlan-id	(Optional) Displays internal VLAN allocation information for the specified VLAN; valid values are from 1 to 4094.	
Defaults	This command	has no default settings.	
Command Modes	Privileged EXE	C mode	
Command History	Release	Modification	
	12.1(19)EW	Support for this command was introduced on the Catalyst 4500 series switch.	
Examples	-	hows how to display information about the current internal VLAN allocation:	
	VLAN Usage 	nnel6 thernet1/2 rnet3/20	
	This example shows how to display information about the internal VLAN allocation for a specific VLAN:		
	Switch# show VLAN Usage	vlan id 1030 internal usage	
	 1030 GigabitE		
Related Commands	Command	Description	
	vlan internal a	allocation policy Configures the internal VLAN allocation scheme.	

show vlan mtu

To display the minimum and maximum transmission unit (MTU) sizes of each VLAN, use the **show vlan mtu** command.

show vlan mtu

Syntax Description This command has no arguments or keywords Defaults This command has no default settings. **Command Modes** Privileged EXEC mode **Command History** Modification Release 12.1(13)EW Support for this command was introduced on the Catalyst 4500 series switch. **Usage Guidelines** The MTU Mismatch column in the command output indicates whether all the ports in the VLAN have the same MTU. When "yes" is displayed in the MTU_Mismatch column, it means that the VLAN has a port with different MTUs, and packets might be dropped that are switched from a port with a larger MTU to a port with a smaller MTU. If the VLAN does not have an SVI, the hyphen (-) symbol is displayed in the SVI MTU column. For a VLAN, if the MTU-Mismatch column displays "yes," the names of the port with the MinMTU and the port with the MaxMTU are displayed. For a VLAN, if the SVI_MTU is bigger than the MinMTU, "TooBig" is displayed after the SVI_MTU. Examples This is an example of output from the **show vlan mtu** command: Switch# show vlan mtu SVI_MTU MinMTU(port) VLAN MaxMTU(port) MTU_Mismatch _____ _____ _____ 1 1500 1500 1500 No Switch> **Related Commands** Command Description Enables jumbo frames on an interface by adjusting the mtu maximum size of a packet or maximum transmission unit (MTU).

show vlan private-vlan

To display private VLAN information, use the show vlan private-vlan command.

show vlan private-vlan [type]

Syntax Description	type		Optional) Displays the private VLAN type; valid types are isolated, primommunity, nonoperational, and normal.	nary,
Defaults	This con	mand has r	no default settings.	
Command Modes	Privilege	d EXEC m	node

This example shows how to display information about all currently configured private VLAN types:

Switch# show vlan private-vlan type

Vlan	Туре
202	primary
303	community
304	community
305	community
306	community
307	community
308	normal
309	community
440	isolated
Swite	ch#

Table 2-31 describes the fields in the show vlan private-vlan command output.

Field	Description	
Primary	Number of the primary VLAN.	
Secondary	Number of the secondary VLAN.	
Secondary-Type	Secondary VLAN type is isolated or community.	
Ports	Indicates the ports within a VLAN.	
Туре	Type of VLAN; possible values are primary, isolated , community, nonoperational, or normal .	

 Table 2-31
 show vlan private-vlan Command Output Fields

Related Commands

Command	Description
private-vlan	Configures private VLANs and the association between a private VLAN and a secondary VLAN.
private-vlan mapping	Creates a mapping between the primary and the secondary VLANs so that both share the same primary VLAN SVI.

show vlan remote-span

To display a list of Remote SPAN (RSPAN) VLANs, use the show vlan remote-span command.

show vlan remote-span

Syntax Description This command has no arguments or keywords.

Defaults This command has no default settings.

Command Modes Privileged EXEC mode

Command History	Release	Modification
	12.1(12)EW	This command was introduced on the Catalyst 4500 series switches.

 Examples
 This example shows how to display a list of RSPAN VLANs:

 Router# show vlan remote-span

 Remote SPAN VLANs

 2,20

Related Commands	Command	Description	
	remote-span	Converts a VLAN into an RSPAN VLAN.	
	vlan (VLAN Database mode)	Configures a specific VLAN.	

show vmps

To display the VLAN Query Protocol (VQP) version, reconfirmation interval, retry count, VLAN Membership Policy Server (VMPS) IP addresses, current servers, and primary servers, use the **show vmps** command.

show vmps [statistics]

Syntax Description	statistics(Optional) Displays the client-side statistics.		
Defaults	This command has no default settings.		
Command Modes	Privileged EXEC mode		
Command History	Release Modification		
	12.1(13)EW Support for this command was introduced on the Catalyst 4500 series switch.		
Examples	This is an example of output from the show vmps command:		
	Switch# show vmps VQP Client Status:		
	VMPS VQP Version: 1 Reconfirm Interval: 60 min Server Retry Count: 3 VMPS domain server: 172.20.50.120 (primary, current)		
	Reconfirmation status		
	 VMPS Action: No Dynamic Port Switch#		
	This is an example of output from the show vmps statistics command:		
	Switch# show vmps statistics VMPS Client Statistics		
	VQPQueries:0VQPResponses:0VMPSChanges:0VQPShutdowns:0VQPDenied:0VQPWrong Domain:0VQPWrong Version:0VQPInsufficient Resource:0Switch#		

Related Commands	Command	Description	
	vmps reconfirm (privileged EXEC)	Sends VLAN Query Protocol (VQP) queries to reconfirm all the dynamic VLAN assignments with the VLAN Membership Policy Server (VMPS).	

show vtp

To display VTP statistics and domain information, use the show vtp command.

show vtp {counters | status}

Syntax Description	counters	Specifies the VTP	statistics.	
	status	Specifies the VTP		
Defaults	This comma	nd has no default settin	ngs.	
Command Modes	Privileged E	XEC mode		
Command History	Release	Modification		
	12.1(8a)EW	Support for this	command was introd	luced on the Catalyst 4500 series switch.
Examples	This example	e shows how to display	y the VTP statistics:	
	VTP statist Summary adv Subset adve Request adv Subset adve Request adv Number of c Number of c	w vtp counters ics: ertisements received ertisements received ertisements transmi rtisements transmit ertisements transmi onfig revision erro: onfig digest errors 1 summary errors statistics:	: 1 d : 0 tted : 31 ted : 1 tted : 0 rs : 0	
	Trunk	Join Transmit	ted Join Received	Summary advts received from non-pruning-capable device
	 Fa5/9 Switch#	1555	1564	0
	This example shows how to display the VTP domain status:			
	VTP Version Configurati Maximum VLA	on Revision Ns supported locall xisting VLANs ng Mode Name Mode	: 2 : 250 y : 1005 : 33 : Server : Lab_Network : Enabled : Enabled	
	VTP V2 Mode VTP Traps G		: Disabled	

```
MD5 digest : 0xE6 0xF8 0x3E 0xDD 0xA4 0xF5 0xC2 0x0E
Configuration last modified by 172.20.52.18 at 9-22-99 11:18:20
Local updater ID is 172.20.52.18 on interface V11 (lowest numbered VLAN interfac
e found)
Switch#
```

This example shows how to display only those lines in the **show vtp** output that contain the word Summary:

```
Switch# show vtp counters | include Summary
Summary advertisements received : 1
Summary advertisements transmitted : 32
Trunk Join Transmitted Join Received Summary advts received from
Switch#
```

Table 2-32 describes the fields in the **show vtp** command output.

Field	Description		
Summary advertisements received	Total number of summary advertisements received.		
Subset advertisements received	Total number of subset advertisements received.		
Request advertisements received	Total number of request advertisements received.		
Summary advertisements transmitted	Total number of summary advertisements transmitted.		
Subset advertisements transmitted	Total number of subset advertisements transmitted.		
Request advertisements transmitted	Total number of request advertisements transmitted.		
Number of config revision errors	Number of config revision errors.		
Number of config digest errors	Number of config revision digest errors.		
Number of V1 summary errors	Number of V1 summary errors.		
Trunk	Trunk port participating in VTP pruning.		
Join Transmitted	Number of VTP-Pruning Joins transmitted.		
Join Received	Number of VTP-Pruning Joins received.		
Summary advts received from non-pruning-capable device	Number of Summary advertisements received from nonpruning-capable devices.		
Number of existing VLANs	Total number of VLANs in the domain.		
Configuration Revision	VTP revision number used to exchange VLAN information.		
Maximum VLANs supported locally	Maximum number of VLANs allowed on the device.		
Number of existing VLANs	Number of existing VLANs.		
VTP Operating Mode	Indicates whether VTP is enabled or disabled.		
VTP Domain Name	Name of the VTP domain.		
VTP Pruning Mode	Indicates whether VTP pruning is enabled or disabled.		
VTP V2 Mode	Indicates the VTP V2 mode as server, client, or transparent.		
VTP Traps Generation	Indicates whether VTP trap generation mode is enabled or disabled.		
MD5 digest	Checksum values.		

Table 2-32show vtp Command Output Fields

Command	Description		
vtp (global configuration mode)	Modifies the name of a VTP configuration storage file.		
vtp client	Places a device in VTP client mode.		
vtp domain	Configures the administrative domain name for a device.		
vtp password	Creates a VTP domain password.		
vtp pruning	Enables pruning in the VLAN database.		
vtp server	Places the device in VTP server mode.		
vtp transparent	Places device in VTP transparent mode.		
vtp v2-mode	Enables version 2 mode.
