

# System Testing

---

Revised: December 21, 2009

This chapter describes the tests performed on the Basic Small Branch Network.

## Contents

- [Test Result Summary, page 1](#)
- [Traffic Profile, page 5](#)
- [Test Setups, page 5](#)
- [Test Cases, page 9](#)

## Test Result Summary

Table 1 lists the test cases and their results.

**Table 1**      **Test Cases and Results**

Test Case	Result
<a href="#">Fast Ethernet Primary WAN Connection for Cisco 1900 Series Small Branch</a>	Passed
<a href="#">PPP Primary WAN Connections for Cisco 1900 Series Small Branch</a>	Passed
<a href="#">Frame Relay Primary WAN Connections for Cisco 1900 Series Small Branch</a>	Passed
<a href="#">SHDSL Secondary WAN Connection for Cisco 1900 Series Small Branch</a>	Passed
<a href="#">Layer 2 Access Layer Switch</a>	Passed
<a href="#">L2 Security–802.1x Authentication on the Access Layer Switch</a>	Passed
<a href="#">L2 Security–DHCP Snooping and Dynamic ARP Inspection on the Access Switch</a>	Passed
<a href="#">L2 Security–Port Security on the Access Layer Switch</a>	Passed
<a href="#">L2 Security–IP Source Guard on the Access Layer Switch</a>	Passed
<a href="#">L2 Security–BPDU Guard on the Access Layer Switch</a>	Passed
<a href="#">QoS on the LAN</a>	Passed
<a href="#">WAN Edge QoS–5 Class QoS Model</a>	Passed

**Table 1**      **Test Cases and Results**

<b>Test Case</b>	<b>Result</b>
LLQ for Voice and Interactive Video Traffic	Passed
CBWFQ and WRED for Data Traffic	Passed
Traffic Shaping on Different WAN Links	Passed
DSCP/CoS Marking Incoming/Returning Traffic from WAN to LAN	Passed
Modification and Deletion of ACLs Defined with Class Map match access-group Command	Passed
Unconfigure and Reconfigure QoS	Passed
Unconfigure QoS, Reload Router, and Reconfigure QoS	Passed
OSPF Routing as IGP Between Branch and Headquarters Network	Passed
EIGRP Routing as IGP Between the Branch Router and the Headquarters Router	Passed
Traffic Measurement Using NetFlow When QoS is Enabled on the Branch Router	Passed
NBAR Classification with QoS	Passed
Modify Match Protocol Statements and Bandwidth Percentage	Passed
100 ACLs	Passed
NTP in the Branch Router	Passed
Branch Router as a DHCP Server	Passed
IP SLA VoIP UDP Jitter Codec G.711 u-law (Branch to HQ)	Passed
IP SLA VoIP UDP Jitter Codec G.729A u-law (Branch to HQ)	Passed
IP SLA ICMP Echo (Branch to HQ)	Passed
IPsec Site-to-Site VPN Using DMVPN	Passed
IPsec Using GETVPN	Passed
GETVPN Unicast Rekeying	Passed
GETVPN Multicast Rekeying	Passed
IPsec DMVPN with Prefragmentation	Passed
IPsec DMVPN and IGP	Passed
DMVPN Backup for MPLS Network (Branch to HQ)	Passed
DMVPN Backup for MPLS Network (Branch to Branch)	Passed
DMVPN Backup for MPLS Network Using BFD (Branch to HQ)	Passed
DMVPN Backup for MPLS Network Using BFD (Branch to Branch)	Passed
DMVPN Backup for MPLS Network Using BFD IGP as OSPF (Branch to Branch)	Passed
DMVPN Backup for MPLS Network Using EBGp (Branch to HQ)	Passed
DMVPN with QoS	Passed
GETVPN with QoS	Passed
DMVPN with QoS and NBAR	Passed
GETVPN with QoS and NBAR	Passed
DMVPN/GETVPN with QoS, NBAR, and NetFlow	Passed
Zone-based Policy Firewall Configuration on the Branch Router	Passed

**Table 1**      **Test Cases and Results**

<b>Test Case</b>	<b>Result</b>
NAT and PAT Configuration on the Branch Router	Passed
NAT, QoS, and NetFlow on the Branch	Passed
ZPF, QoS, and NetFlow on the Branch	Passed
ZPF, QoS, NBAR, and NetFlow on the Branch	Passed
ZPF, QoS, NBAR, NAT, and NetFlow on the Branch	Passed
ZPF with DMVPN	Passed
ZPF with GETVPN	Passed
IPsec, ZPF, QoS, NBAR, NAT, and NetFlow on the Branch	Passed
DDOS Prevention Using Cisco IOS IPS	Passed
Cisco IOS IPS with Background Data Traffic	Passed
ZPF with NAT and Cisco IOS IPS	Passed
IPsec, ZPF, QoS, NBAR, NAT, Cisco IOS IPS, and NetFlow on the Branch	Passed
Remote Users Using WebVPN (SSL VPN)	Passed
Remote Users Using WebVPN (SSL VPN) Full Tunnel	Passed
Complete Baseline Test	Passed
EIGRP Subsecond Convergence During Primary WAN Failure	Passed
OSPF Subsecond Convergence During Primary WAN Failure	Passed
IPsec over Backup SHDSL WAN Link	Passed
ZPF, NAT, and IPsec over Backup SHDSL WAN Link	Passed
IPsec, ZPF, QoS, NBAR, and NetFlow on Both Primary and Secondary Link, and NAT on the Secondary Link	Passed
Multicast with Security and QoS Features	Passed
Enable SNMP on the UUTs for Management and Monitoring	Passed
Enable SYSLOG on the UUT for Management and Monitoring	Passed
Using Cisco CCP for Configuration and Monitoring of the UUTs	Passed
SCCP Phone Registration to Cisco Unified CME	Passed
SIP Phone Registration to Cisco Unified CME	Passed
SCCP Local Calls	Passed
SIP Local Calls	Passed
PSTN Calls	Passed
Branch to Headquarters Calls over the WAN with a SIP Trunk	Passed
Branch to Headquarters Calls over the WAN with an H.323 trunk	Passed
Supplementary Services with Cisco Unified CME	Passed
Supplementary Services Between Phones in the Branch, Headquarters, and PSTN	Passed
Call Conference in the Branch Cisco Unified CME	Passed
Call Forward to Voice Mail	Passed

**Table 1**      **Test Cases and Results**

<b>Test Case</b>	<b>Result</b>
Video Call Between Branch and Headquarters	Passed
T.38 Fax Between Branch and Headquarters	Passed
IP SLA VoIP UDP Jitter Codec g711ulaw (Branch to HQ)	Passed
Remote Phones on the Cisco Unified CME	Passed
Cisco Unified CME with WAN Failure Scenario to Headquarters	Passed
Cisco Unified CME with IPsec over the WAN	Passed
Cisco Unified CME with QoS and NBAR	Passed
Cisco Unified CME with ZPF	Passed
Cisco Unified CME Remote Phones with ZPF	Passed
Cisco Unified CME Failover with Secondary Cisco Unified CME	Passed
Baseline Features Plus Cisco Unified CME	Passed
SCCP Phone Registration to Cisco Unified CM	Passed
SIP Phone Registration to Cisco Unified CM	Passed
SIP Local Calls	Passed
SCCP Local Calls	Passed
PSTN Calls with SIP Gateway	Passed
PSTN Calls with H.323 Gateway	Passed
Branch to Headquarters Calls over the WAN	Passed
Supplementary Services Between Phones in Branch, Headquarters, and PSTN	Passed
Call Conference in the Branch	Passed
Call Forward to Voice Mail	Passed
Phone Registration During Cisco Unified Survivable Remote Site Telephony (Cisco Unified SRST)	Passed
Local and PSTN Calls in Cisco Unified SRST Mode	Passed
Supplementary Services in Cisco Unified SRST Mode	Passed
Call Forward to Voice Mail in Cisco Unified SRST Mode	Passed
Call Conference in Cisco Unified SRST Mode	Passed
Branch to Headquarters Calls with IPsec over the WAN	Passed
Branch to Headquarters Voice and Video Calls with QoS and NBAR	Passed
Branch to Headquarters Voice and Video calls with ZPF	Passed
High Availability in Cisco Unified SRST mode	Passed
Baseline Features Plus Cisco Unified Communications Manager	Passed
RSVP Agent in SRST Router–HQ to Branch Call with Phones Registered to Cisco Unified CM	Passed
RSVP Agent with Application ID in SRST Router–HQ to Branch Call with Phones Registered to Cisco Unified CM	Passed
RSVP Agent–HQ to Branch Call with H.323 Trunk	Passed

**Table 1**      **Test Cases and Results**

Test Case	Result
<a href="#">Baseline Performance Test</a>	Passed
<a href="#">Baseline Plus Voice Performance Test with Cisco Unified CME</a>	Passed
<a href="#">Baseline Plus Voice Performance Test with Cisco Unified CM and Cisco Unified SRST</a>	Passed

## Traffic Profile

The following traffic profile was used to represent typical traffic in a large enterprise branch network.

HTTP Traffic—75 percent

- 16 KB object size representing large HTML files containing images (10 URLs)
- 4 KB object size representing transactional data (10 URLs)

FTP Traffic—10 percent

- 1 MB file size

SMTP Traffic—10 percent

- 4 KB fixed object size

DNZ Traffic—5 percent

- 89 byte object size

## Test Setups

The test cases described in this section use the test setups shown in [Figure 1](#) through [Figure 6](#), in addition to test setups shown in the other figures referenced in the specific test case.

Figure 1 Cisco 1861 ISR Private WAN, Cisco Unified CME Mode

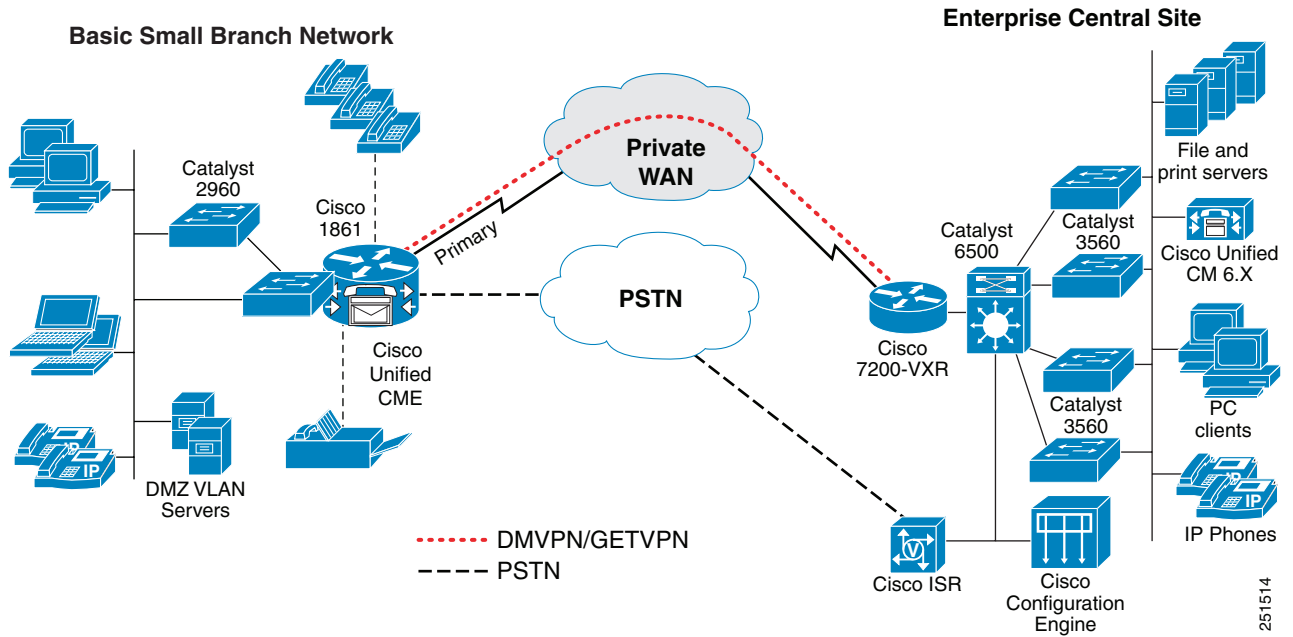

Figure 2 Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode

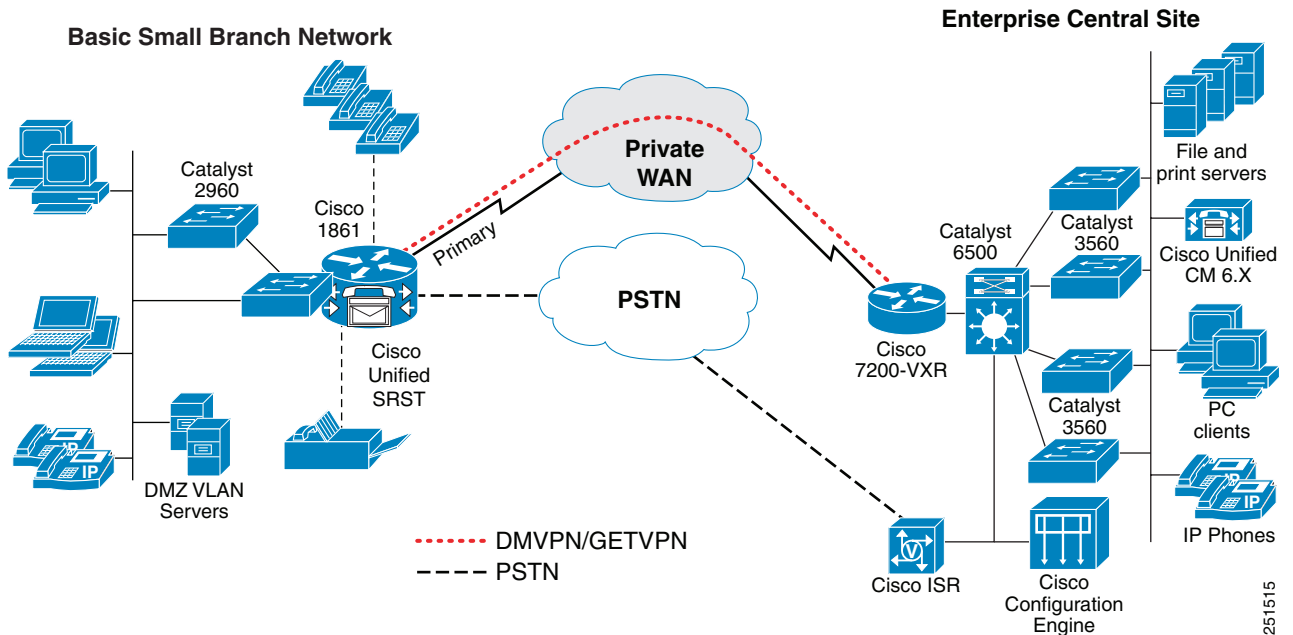

Figure 3 Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode

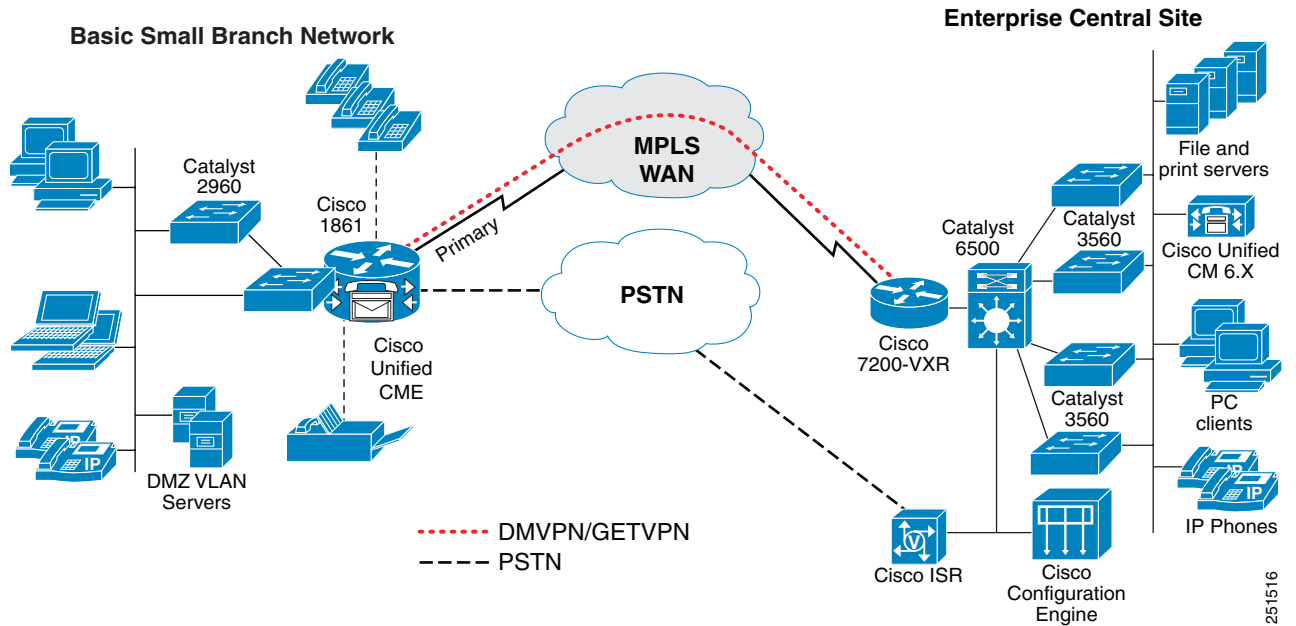

Figure 4 Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode

# Test Cases

This section contains the following test cases:

- [WAN Connectivity Test Cases, page 10](#)
- [Network Services Test Cases, page 12](#)
- [High Availability Test Cases, page 70](#)
- [Network Management Test Cases, page 82](#)
- [Cisco Unified CME Test Cases, page 84](#)
- [Cisco Unified SRST Test Cases, page 99](#)
- [Performance Test Cases, page 116](#)

## WAN Connectivity Test Cases

### Fast Ethernet Primary WAN Connection for Cisco 1900 Series Small Branch

<b>Description</b>	Set up a Fast Ethernet private WAN connection between the branch Cisco ISR and the headend router
<b>Test Setup</b>	<p><a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a>, or</p> <p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a>, or</p> <p><a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>, or</p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p> <p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Connect the Cisco 1900 FE port to the GE port on the headend router using category 5 UTP copper wire.</li> <li>2. Configure the IP address and both routers.</li> <li>3. Make sure that the IP addresses belong to the same segment and have the same subnet mask.</li> <li>4. Ping both routers.</li> <li>5. Send 100-Mb/s bidirectional HTTP and FTP traffic (50 Mb/s in each direction), with 75% HTTP and 25% FTP.</li> <li>6. Measure the branch Cisco ISR CPU utilization.</li> </ol>
<b>Pass/Fail Criteria</b>	The FE link and line protocol should come up on both routers. The ping should be 100% successful. 100-Mb/s throughput should be achieved, and the branch Cisco ISR CPU should be less than 75%.
<b>Result</b>	Passed

### PPP Primary WAN Connections for Cisco 1900 Series Small Branch

<b>Description</b>	Set up a DS1 (T1) private WAN connection between the branch Cisco ISR and headend router
<b>Test Setup</b>	<p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Install an HWIC-1T card into the branch Integrated Services Router (ISR).</li><li>2. Configure the card as T1 on both branch and headend routers.</li><li>3. Connect the card using a T1 serial cable.</li><li>4. Configure the IP address on both routers.</li><li>5. Make sure that the IP addresses belong to the same segment and have the same subnet mask.</li><li>6. Configure PPP encapsulation.</li><li>7. Ping both routers.</li><li>8. Send T1 line rate HTTP and FTP bidirectional traffic, with 75% HTTP and 25% FTP, and measure the branch Cisco ISR CPU utilization.</li></ol>
<b>Pass/Fail Criteria</b>	The T1 link and line protocol should come up on both routers. The ping should be 100% successful. T1 line rate should be achieved, and branch Cisco ISR CPU should be less than 75%.
<b>Result</b>	Passed

#### Frame Relay Primary WAN Connections for Cisco 1900 Series Small Branch

<b>Description</b>	Set up a DS1 (T1) private WAN connection between the branch Cisco ISR and headend router
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Install an HWIC-1T card into the branch Integrated Services Router (ISR).</li><li>2. Configure the card as T1 on both branch and headend routers.</li><li>3. Connect the card using a T1 serial cable.</li><li>4. Configure the IP address on both routers.</li><li>5. Make sure that the IP addresses belong to the same segment and have the same subnet mask.</li><li>6. Configure PPP encapsulation.</li><li>7. Ping both routers.</li><li>8. Send T1 line rate HTTP and FTP bidirectional traffic, with 75% HTTP and 25% FTP, and measure the branch Cisco ISR CPU utilization.</li></ol>
<b>Pass/Fail Criteria</b>	The T1 link and line protocol should come up on both routers. The ping should be 100% successful. T1 line rate should be achieved, and branch Cisco ISR CPU should be less than 75%.
<b>Result</b>	Passed

**SHDSL Secondary WAN Connection for Cisco 1900 Series Small Branch**

<b>Description</b>	Set up an SHDSL WAN connection between the branch Cisco ISR and the DSLAM
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Install an HWIC-2SHDSL card into one of the HWIC slots on the Cisco 1941 ISR.</li> <li>2. Connect to the ISP DSLAM.</li> <li>3. Configure a single port to achieve a bandwidth of 2304 kb/s.</li> <li>4. Configure a PVC with AAL5SNAP encapsulation.</li> <li>5. Configure the IP address on the ATM interface. Verify the connection by pinging the DSLAM IP address.</li> <li>6. Send line rate bidirectional HTTP and FTP traffic over the interface.</li> </ol>
<b>Pass/Fail Criteria</b>	The ATM link and line protocol should come up. The ping should be 100% successful. Close to line rate should be achieved for HTTP and FTP traffic, and the router CPU should be less than 75%.
<b>Result</b>	Passed

**Network Services Test Cases****Layer 2 Access Layer Switch**

<b>Description</b>	Set up Catalyst 2960 switches as access layer switches
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure Catalyst 2960 switches in Layer 2 mode.</li> <li>2. Define VLANs for voice, data, management, and DMZ.</li> <li>3. Enable RSPT for subsecond switchover in case of master switch failure.</li> <li>4. Do not enable Layer 3 routing on the access layer switches.</li> </ol>
<b>Pass/Fail Criteria</b>	Layer 2 voice, data, management, and DMZ VLANs should come up. During master switch failure, Layer 2 convergence should happen within a second.
<b>Result</b>	Passed

**L2 Security–802.1x Authentication on the Access Layer Switch**

<b>Description</b>	Set up to verify 802.1x authentication on one of the access switches
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure DHCP snooping on the switch.</li><li>2. Configure the trunk port connecting the access switch and the router as the trusted port. Configure all other ports as non-trusted ports.</li><li>3. Configure the router as the DHCP server.</li><li>4. Add a Windows DHCP server and connect it to one of the non-trusted ports of the switch.</li><li>5. Configure DAI for VLAN (x,y).</li><li>6. Assign all the switch ports to either x or y VLAN.</li><li>7. Configure the DHCP scope in the DHCP servers to assign IP addresses to x and y VLANs.</li><li>8. Connect phones and PCs to the switch ports.</li><li>9. Place all IP Phones in VLAN x and PCs in VLAN y.</li></ol>
<b>Pass/Fail Criteria</b>	<p>The IP Phones and PCs should obtain IP addresses from the DHCP server on the router and not from the Windows DHCP server, because the Windows server is connected to a non-trusted port.</p> <p>DAI should build dynamic entries (ACLs) with IP addresses (obtained through DHCP) and corresponding MAC addresses for the phones and PCs.</p> <p>If a laptop with a statically configured IP address (in the y VLAN) is connected to a switch port associated to the y VLAN, the DAI should prevent the laptop from obtaining network connectivity; that is, it builds a deny ACL for this laptop.</p>
<b>Result</b>	Passed

**L2 Security–DHCP Snooping and Dynamic ARP Inspection on the Access Switch**

<b>Description</b>	Set up to verify DHCP snooping and Dynamic ARP inspection on one of the access switches
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure 802.1x port authentication on several of the switch ports along with DHCP snooping and DAI.</li> <li>2. Configure AAA on the switch.</li> <li>3. Configure the IP address of the RADIUS server.</li> <li>4. Set up the EtherSwitch module as a NAS by providing its IP address in the Cisco Secure ACS server located in HQ.</li> <li>5. Install a self-signed certificate on the ACS server.</li> <li>6. Configure EAP-PEAP MSCHAPV2 authentication on the ACS server.</li> <li>7. Download the ACS certificate onto one of the PCs that is running Windows XP and that is located in the branch office.</li> <li>8. Install the certificate on the PC.</li> <li>9. Configure the PC for EAP-PEAP MSCHAPV2 authentication.</li> <li>10. Connect the IP Phone to the switch port on which 802.1x authentication is enabled.</li> <li>11. Connect the PC to the switch port of the IP Phone.</li> <li>12. Connect another PC that does not have the ACS certificate installed to another switch port on which 802.1x port authentication is enabled.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>The traffic should be distributed 2:1 between the primary and secondary router.</p> <p>The standby router should take over control after the primary router is power cycled.</p> <p>When power returns to the primary router, it should take over control from the standby router after waiting for the preemption time to expire.</p>
<b>Result</b>	Passed

### L2 Security—Port Security on the Access Layer Switch

<b>Description</b>	Set up to verify port security on one of the access switches
<b>Test Setup</b>	<p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure the port security feature on one of the switch ports of the access switch to allow only one MAC address.</li> <li>2. Configure the port security aging timer to be 2 seconds, and configure the port security violation policy to Restrict.</li> <li>3. Connect a laptop to the switch port.</li> <li>4. After the laptop gets an IP address through DHCP, disconnect the laptop and connect a different laptop to the same switch port.</li> </ol>

<b>Pass/Fail Criteria</b>	<p>When the laptop is connected to the switch port, it should get an IP address through DHCP. The switch should populate the laptop's MAC address and port information into a port security table.</p> <p>When another laptop with a different MAC address is connected to the same port, a port security violation error should be displayed on the console of the switch, and the new laptop should not be provided with an IP address.</p>
<b>Result</b>	Passed

### L2 Security–IP Source Guard on the Access Layer Switch

<b>Description</b>	Set up to verify IP source guard on one of the access switches
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure IP source guard on the switch ports.</li><li>2. Connect a traffic generator to the switch port on which the IP source guard is configured, and send line rate traffic to HQ.</li><li>3. Obtain the IP address of the traffic generator, using DHCP before sending the traffic.</li><li>4. After sending traffic for about 15 minutes, change the source MAC address of the traffic generator connected to the switch port, and observe the behavior.</li></ol>
<b>Pass/Fail Criteria</b>	<p>The traffic from the traffic generator should be successfully allowed from the switch port and should reach the traffic generator at HQ.</p> <p>The IP source guard feature validates the source MAC address of the host that is connected to the switch port on which the IP source guard is enabled. It associates the host MAC address to the IP address obtained through DHCP.</p> <p>Once the traffic generator MAC address is changed, traffic should be dropped and not be allowed to pass from the switch port.</p>
<b>Result</b>	Passed

### L2 Security–BPDU Guard on the Access Layer Switch

<b>Description</b>	Set up to verify BPDU guard on one of the access switches
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

- Procedure**
1. Configure Spanning Tree PortFast with the BPDU guard on the switch port that is connected to PC and phones.
  2. Remove the PC or phone from one of the ports where BPDU guard is enabled, and connect another switch.

**Pass/Fail Criteria**

The phones and PC ports should be operational and able to send traffic normally after enabling BPDU guard.

The port shut down after connecting the switch.

**Result**

Passed

### QoS on the LAN

**Description**

Enable conditionally trusted IP Phone and PC and scavenger-class traffic (Advanced) Model Configuration on the Catalyst 2960 switches

**Test Setup**

[Figure 39 on page 44, Traffic Flow to QoS Class Mapping](#)  
[Figure 38 on page 43, LAN Switch](#)

**Procedure**

1. Enable QoS on the access layer switch. Re-mark all the packets coming from PC endpoints, servers, and so on, with appropriate CoS or DSCP values. Trust the voice and signaling packets coming out of Cisco IP Phones, but re-mark all the packets coming from PCs attached to the IP Phones. Use Ethereal to verify proper packet marking.
2. Enable MLS QoS on the Catalyst switches.
3. Configure CoS to DSCP mapping to map CoS 5 to DSCP EF.
4. Re-mark excess data VLAN traffic marked 0, AF11, AF21, CS3, DSCP 25, and AF41 to scavenger class (CS1).
5. Define class maps for real-time traffic, voice signaling, mission-critical data, and default (best effort).
6. Define policy maps and mark voice traffic to DSCP 46 (EF), voice signaling traffic to DSCP 24 (CS3), interactive video to DSCP 34 (AF41), mission-critical traffic to DSCP 25 (CS3), transactional data traffic to DSCP 18 (AF21), bulk data to DSCP 10 (AF11), and default to DSCP 0.
7. Configure policing (rate limiting) for each class.
8. Configure Catalyst switch egress queue in 1P3Q3T mode, that is, set up Q1 as the priority queue to carry all voice traffic, and set up the rest of the three queues in shared-bandwidth mode. Assign Q2 for mission-critical data traffic, Q3 for best-effort traffic, and Q4 for scavenger and bulk traffic. Configure shared weights of 70, 25, and 5 for Q2, Q3, and Q4, respectively.
9. Configure Weighted Tail Drop (WTD) thresholds per queue as shown in [Figure 39](#). For Q2 set the first threshold to 70% and the second threshold to 80%. For Q4, set the first threshold to 40% and the second threshold to 100%.
10. Verify, using the following **show** commands:  
**show mls qos**  
**show mls qos map**  
**show mls qos interface**  
**show mls qos interface policers**  
**show class-map**  
**show policy-map**  
**show policy interface**

**Pass/Fail Criteria**

Voice and data packets should be properly marked by the switches.

Excess traffic should be re-marked to scavenger class and dropped if the scavenger class limit is also exceeded.

Queuing should be engaged only during congestion.

Each traffic type should be properly queued based on the queue assignments.

**Result**

Passed

**WAN Edge QoS-5 Class QoS Model**

<b>Description</b>	Enable 5-class hierarchical QoS on the primary WAN interface
<b>Test Setup</b>	<pre> class-map match-all REALTIME match ip dscp ef af41 af42 ! <b>VoIP and Interactive Video</b> class-map match-any CALL-SIGNALING match ip dscp cs3 ! <b>Old Call Signaling</b> match ip dscp af31 ! <b>New Call Signaling</b> class-map match-all CRITICAL-DATA match ip dscp af21 af22 af31 cs6 ! <b>Critical Data</b> class-map match-all SCAVENGER match ip dscp cs1 ! <b>Scavenger</b> !</pre>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure class maps for real-time, voice signaling, mission-critical data, scavenger data, and best-effort data.</li> <li>2. Match voice, based on a DSCP value of 46, and also based on IP address/port number using ACLs. Port numbers range from 16384 to 32768.</li> <li>3. Match voice signaling, based on a DSCP of CS3, and also based on IP address/port number using ACLs. Use port number range 2000 to 2002 for SCCP, 1720 for H.323, and 5060 to 5062 for SIP.</li> <li>4. Match interactive video-based on a DSCP value of 34, and also based on IP address/port number using ACLs. Use port number range 16384 to 32768.</li> <li>5. Match mission-critical data traffic-based on a DSCP value of 25, and also based on IP address/port number using ACLs.</li> <li>6. Match transactional data traffic, based on a DSCP value of 18, and also based on IP address/port number using ACLs.</li> <li>7. Match internetwork control traffic, based on a DSCP value of 48, and also based on IP address/port number using ACLs.</li> <li>8. Match bulk/scavenger traffic, based on a DSCP value of 8, and also based on IP address/port number using ACLs.</li> <li>9. Match best-effort traffic, based on a DSCP value of 0, and also based on IP address/port number using ACLs.</li> <li>10. Verify whether packets are matched to the correct class map, using the <b>show policy-map interface</b> command.</li> </ol>
<b>Pass/Fail Criteria</b>	Incoming traffic from the LAN interface of the router should be properly classified, based on the DSCP/CoS values present in the packet.
<b>Result</b>	Passed

**LLQ for Voice and Interactive Video Traffic**

<b>Description</b>	Enable LLQ for RTP traffic, which includes voice and video
<b>Test Setup</b>	<pre> policy-map FIVE-CLASS-V3PN-EDGE class REALTIME priority percent 28 ! VoIP and Interactive Video get 28% LLQ </pre>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure strict priority queuing for voice and video traffic not exceeding 33% of the configured bandwidth.</li> <li>2. Drop excess RTP traffic during link congestion.</li> <li>3. Make voice and video calls, and also send background HTTP traffic.</li> <li>4. Verify using <b>show ip policy-map interface</b> command.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>RTP and data packets should be Cisco Express Forwarding switched.</p> <p>Voice traffic and video traffic should always be given priority, even during congestion, and they should not be dropped, provided they do not exceed their allocated bandwidth.</p>
<b>Result</b>	Passed

**CBWFQ and WRED for Data Traffic**

<b>Description</b>	Configure CBWFQ for various types of data traffic, allocate bandwidth for each category, and configure WRED for congestion management
<b>Test Setup</b>	<pre> class CALL-SIGNALING bandwidth percent 5 ! Call signaling class MISSION-CRITICAL bandwidth percent 20 ! Mission-Critical-Data provisioning queue-limit 18 ! Optional: Anti-Replay tuning class SCAVENGER bandwidth percent 1 ! Scavenger class is throttled queue-limit 1 ! Optional: Anti-Replay tuning class class-default bandwidth percent 45 ! Best Effort needs BW guarantee queue-limit 16 ! Optional: Anti-Replay Tuning </pre>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Allocate A% of bandwidth for mission-critical traffic, B% of bandwidth for transactional data traffic, C% for internetwork control traffic, D% for bulk/scavenger traffic, and the remaining bandwidth for best-effort traffic.</li> <li>2. Configure DSCP-based WRED for mission-critical, transactional, and best-effort traffic. Retain default thresholds, and drop probabilities for WRED.</li> <li>3. Send voice, video, and data traffic, and oversubscribe the bandwidth with data traffic.</li> </ol> <p>The following data traffic types are mandatory:</p> <ul style="list-style-type: none"> <li>• HTTP</li> <li>• HTTPS</li> <li>• FTP</li> <li>• ICMP</li> <li>• DNS</li> </ul> <p>The following data traffic types are optional and based on availability of tools:</p> <ul style="list-style-type: none"> <li>• CIFS</li> <li>• SMTP</li> <li>• POP3</li> <li>• Citrix</li> </ul>
<b>Pass/Fail Criteria</b>	Voice traffic and video traffic should always be given priority, even during congestion, and they should not be dropped, provided they do not exceed their allocated bandwidth. Excess data traffic not conforming to the allocated bandwidth should be dropped based on WRED and DSCP. WRED should minimize tail drops for high-priority traffic.
<b>Result</b>	Passed

#### Traffic Shaping on Different WAN Links

<b>Description</b>	Enable traffic shaping on the WAN interface as part of the hierarchical QoS configuration
<b>Test Setup</b>	<p><a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a>, or</p> <p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a>, or</p> <p><a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>, or</p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure traffic shaping on the WAN links to shape the egress traffic to 95% of the available bandwidth.</li><li>2. Send voice and data traffic to oversubscribe bandwidth.</li></ol>
<b>Pass/Fail Criteria</b>	The egress traffic should be shaped to an average of 95% of the total available bandwidth.
<b>Result</b>	Passed

#### DSCP/CoS Marking Incoming/Returning Traffic from WAN to LAN

<b>Description</b>	Re-mark ingress traffic to the router coming from the WAN and going to the LAN
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</a> <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure DSCP to CoS mapping for the various ingress traffic types from the WAN. The marking should match the DSCP value of similar or the same type of traffic egressing the WAN interface.</li><li>2. Verify using the <b>show policy-map interface</b> command and using the Ethereal packet sniffer on the LAN.</li></ol>
<b>Pass/Fail Criteria</b>	The ingress traffic should be properly marked.
<b>Result</b>	Passed

#### Modification and Deletion of ACLs Defined with Class Map match access-group Command

<b>Description</b>	Modify or delete ACLs defined under class-map configuration mode using <b>match access-group</b> statements
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</a> <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Change ACLs' source and destination IP addresses.</li> <li>2. Change ACLs' source and destination ports.</li> <li>3. Delete ACLs.</li> <li>4. Save configuration.</li> <li>5. Run traffic while making the changes.</li> </ol>
<b>Pass/Fail Criteria</b>	The ACL changes or deletions should not have no adverse impact on the router such as tracebacks, memory leaks, or a crash. The changes should be properly handled and applied to the traffic stream.

**Result** Passed

### Unconfigure and Reconfigure QoS

<b>Description</b>	Remove QoS configuration, and reapply QoS configuration
<b>Test Setup</b>	<p>Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</p> <p>Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</p> <p>Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</p> <p>Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Remove QoS configuration.</li> <li>2. Reapply QoS configuration.</li> </ol>
<b>Pass/Fail Criteria</b>	There should be no adverse impact on the router such as tracebacks, memory leaks, or a crash.
<b>Result</b>	Passed

### Unconfigure QoS, Reload Router, and Reconfigure QoS

<b>Description</b>	Remove QoS configuration, and reapply QoS configuration after router reload
<b>Test Setup</b>	<p>Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</p> <p>Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</p> <p>Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</p> <p>Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</p>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Remove the entire hierarchical QoS configuration from the branch router.</li><li>2. Reload the router.</li><li>3. Reapply the configuration to the branch router while running traffic.</li></ol>
<b>Pass/Fail Criteria</b>	There should be no adverse impact on the router such as tracebacks, memory leaks, or a crash.
<b>Result</b>	Passed

#### OSPF Routing as IGP Between Branch and Headquarters Network

<b>Description</b>	Enable OSPF between the branch router and headend router, and advertise each other's LAN addresses
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure OSPF routing between the branch router and the headend router.</li><li>2. Advertise all the LAN addresses attached to the branch and the LAN addresses attached to the headend so that the headend router can see the branch network and vice versa.</li><li>3. Redistribute connected and static routes in the branch and headend into OSPF.</li><li>4. Verify by OSPF adjacency, using the <b>show ip ospf neighbors</b> command.</li><li>5. Verify by pinging from the branch LAN to the headend LAN and vice versa.</li></ol>
<b>Pass/Fail Criteria</b>	OSPF adjacency should be established between the branch router and the headend router.
<b>Result</b>	Passed

#### EIGRP Routing as IGP Between the Branch Router and the Headquarters Router

<b>Description</b>	Enable EIGRP between the branch router and headend router and advertise each other's LAN addresses
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure EIGRP routing between the branch router and the headend router.</li> <li>2. Advertise all the LAN addresses attached to the branch and the headend so that the headend router can see the branch network and vice versa.</li> <li>3. Redistribute connected and static routes in the branch and headend into EIGRP.</li> <li>4. Verify by EIGRP adjacency, using the <b>show ip eigrp neighbors</b> command.</li> <li>5. Verify by pinging from the branch LAN to the headend LAN and vice versa.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>EIGRP adjacency should be established between the branch router and the headend router.</p> <p>Ping should be 100% successful.</p>
<b>Result</b>	Passed

#### Traffic Measurement Using NetFlow When QoS is Enabled on the Branch Router

<b>Description</b>	Enable NetFlow on the branch router
<b>Test Setup</b>	<p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure NetFlow version 5 or version 9 for both ingress and egress traffic on the WAN and LAN interfaces of the branch router.</li> <li>2. Send bidirectional HTTP, FTP, and voice traffic between the branch and the headend router.</li> <li>3. Collect protocol distribution charts, interface statistics, and QoS statistics.</li> <li>4. Export the statistics to a network analysis module (NAM) located at the enterprise headquarters.</li> </ol>
<b>Pass/Fail Criteria</b>	NetFlow should collect the statistics and export it to the NAM. The collected statistics should be within performance requirements.
<b>Result</b>	Passed

## NBAR Classification with QoS

### Description

Enable NBAR protocol discovery and classification. With the help of QoS, provide bandwidth guarantees for certain traffic flows, and drop certain distributed denial of service (DDoS) traffic such as SQL slammer and worms such as CODE RED, NIMDA, and so on.

### Test Setup

```
ip nbar port-map custom-02 udp 1434 ! SQL Slammer custom PDLM
ip nbar port-map custom-03 tcp 5554 9996 ! Sasser custom PDLM
class-map match-all SQL-SLAMMER
match protocol custom-02 ! Matches the SQL Slammer PDLM
match packet length min 404 max 404 ! Matches the packet length (376+28)
!
class-map match-any WORMS
match protocol http url "*.ida*" ! CodeRed
match protocol http url "*cmd.exe*" ! CodeRed
match protocol http url "*root.exe*" ! CodeRed
match protocol http url "*readme.eml*" ! NIMDA
match class-map SQL-SLAMMER ! SQL Slammer class-map
match protocol custom-03 ! Sasser custom PDLM
!
policy-map WORM-DROP
class WORMS
drop ! Drops all known worms
!
interface GigabitEthernet0/0.1
description DATA VLAN SUBNET
encapsulation dot1Q 301
ip address 10.0.0.1 255.255.255.0
service-policy input WORM-DROP ! Drops known worms (DVLAN only)
!
```

### Procedure

1. Configure NBAR protocol discovery on the interfaces, and match protocol statements in the QoS policy map.
  - Mark HTTP traffic to a certain URL, such as `http://example.com` as mission critical.
  - Mark all other HTTP traffic as best effort.
  - Limit bulk traffic such as FTP.
  - Mark all voice traffic as critical.
2. Provide bandwidth guarantees by specifying bandwidth percentage in the QoS policy map configuration for different classes of traffic.
  - For mission-critical traffic, provide X% bandwidth.
  - For voice traffic, provide Y% bandwidth.
  - For transactional traffic, provide Z% bandwidth.
  - For all other traffic, provide the remaining bandwidth.
3. Measure the various traffic flows, using NBAR.
4. Send HTTP, FTP, and voice traffic.

**Pass/Fail Criteria** NBAR should properly classify the different protocols and provide bandwidth guarantees based on the policy map configuration. NBAR should provide the percentage breakdown of various protocols traversing the LAN and WAN links. NBAR should drop worm packets.

**Result** Passed

### Modify Match Protocol Statements and Bandwidth Percentage

**Description** Modify “match protocol” statements and bandwidth percentage in the policy map configuration

**Test Setup** [Figure 5 on page 8, Private WAN, Cisco 1941 ISR](#)  
[Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR](#)

**Procedure** Modify the match protocol statements in the NBAR configuration by adding more protocols, changing the existing HTTP URL, and modifying the percentage bandwidth allocated for each traffic class over a live network

**Pass/Fail Criteria** Changes should not cause any abnormal behavior in the branch router such as tracebacks, memory leaks, or crashes. Changes should be applied to traffic.

**Result** Passed

### 100 ACLs

**Description** Configure about 100 ACLs on the branch router

**Test Setup** [Figure 5 on page 8, Private WAN, Cisco 1941 ISR](#)  
[Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR](#)

**Procedure**

1. Configure about 100 ACLs, either dummy ACLs or ACLs matching certain hosts or networks.
2. At the end of the list configure a **permit ip any any** statement.
3. Configure the ACL on the primary and secondary WAN interface.
4. Send data traffic.

**Pass/Fail Criteria** If a packet does not match any of the statements in the list, the packet should match the **permit ip any any** statement at the end of the list and be allowed to pass through. If the packet matches any statement in the last, appropriate action such as permit or deny should be taken, depending on what is configured in the ACL statement.

**Result** Passed

### NTP in the Branch Router

<b>Description</b>	NTP in the branch router
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</a> <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure NTP in the branch to source the clock from an NTP server in the network. The NTP server could be local to the branch, or it could be located in either the headquarters or the service provider premises.</li><li>2. Configure Message Digest 5 (MD5) authentication for NTP.</li><li>3. Verify, using the <b>show ntp status</b> command.</li></ol>
<b>Pass/Fail Criteria</b>	NTP should be sourced from the NTP server after successful authentication.
<b>Result</b>	Passed

### Branch Router as a DHCP Server

<b>Description</b>	Branch router as a DHCP server
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure a DHCP server on the branch router to provide IP addresses for DHCP clients such as IP Phones and PCs.</li><li>2. Verify, using the <b>show ip dhcp binding</b> and <b>show ip dhcp server statistics</b> commands.</li></ol>
<b>Pass/Fail Criteria</b>	The DHCP server on the router should be able to provide IP addresses to the clients using DHCP.
<b>Result</b>	Passed

**IP SLA VoIP UDP Jitter Codec G.711 u-law (Branch to HQ)**

<b>Description</b>	Set up for verification of the service level agreement (SLA) for VoIP UDP jitter SLA																		
<b>Test Setup</b>	<p>Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</p> <p>Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</p> <p>Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</p> <p>Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</p>																		
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Enable the IP SLA responder on the HQ router.</li> <li>2. Configure a basic type of VoIP UDP jitter operation on the branch router.</li> <li>3. Configure any available options, such as codec G.711 u-law for a VoIP UDP jitter SLAs operation type.</li> <li>4. Configure any threshold conditions, if required.</li> <li>5. Schedule the operation to run, and then allow the operation to run for enough time to gather statistics.</li> <li>6. Display and interpret the results of the operation, using Cisco IOS CLI or using an NMS system using SNMP.</li> </ol>																		
<b>Pass/Fail Criteria</b>	<p>To view and interpret the results of an IP SLA operation, use the <b>show ip sla monitor statistics</b> command, and check that the boundaries are within limits. For example,</p> <table border="0"> <thead> <tr> <th style="text-align: left;"><b>ICPIF Range</b></th> <th style="text-align: left;"><b>MOS</b></th> <th style="text-align: left;"><b>Quality</b></th> </tr> </thead> <tbody> <tr> <td>0–3</td> <td>5</td> <td>Best</td> </tr> <tr> <td>4–13</td> <td>4</td> <td>High</td> </tr> <tr> <td>14–23</td> <td>3</td> <td>Medium</td> </tr> <tr> <td>24–33</td> <td>2</td> <td>Low</td> </tr> <tr> <td>34–43</td> <td>1</td> <td>Poor</td> </tr> </tbody> </table>	<b>ICPIF Range</b>	<b>MOS</b>	<b>Quality</b>	0–3	5	Best	4–13	4	High	14–23	3	Medium	24–33	2	Low	34–43	1	Poor
<b>ICPIF Range</b>	<b>MOS</b>	<b>Quality</b>																	
0–3	5	Best																	
4–13	4	High																	
14–23	3	Medium																	
24–33	2	Low																	
34–43	1	Poor																	
<b>Result</b>	Passed																		

**IP SLA VoIP UDP Jitter Codec G.729A u-law (Branch to HQ)**

<b>Description</b>	Set up verification of the service level agreement (SLA) for VoIP UDP jitter SLA																		
<b>Test Setup</b>	<p>Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</p> <p>Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</p> <p>Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</p> <p>Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</p>																		
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Enable the IP SLA responder on the HQ router.</li> <li>2. Configure a basic type of VoIP UDP jitter operation on the branch router.</li> <li>3. Configure any available options, such as codec G.729A u-law for a VoIP UDP jitter SLA operation type.</li> <li>4. Configure any threshold conditions, if required.</li> <li>5. Schedule the operation to run, and then allow the operation to run for enough time to gather statistics.</li> <li>6. Display and interpret the results of the operation, using Cisco IOS CLI or using an NMS system using SNMP.</li> </ol>																		
<b>Pass/Fail Criteria</b>	<p>To view and interpret the results of an IP SLA operation, use the <b>show ip sla monitor statistics</b> command and check that the boundaries are within limits. For example,</p> <table border="0"> <thead> <tr> <th style="text-align: left;">ICPIF Range</th> <th style="text-align: left;">MOS</th> <th style="text-align: left;">Quality</th> </tr> </thead> <tbody> <tr> <td>0–3</td> <td>5</td> <td>Best</td> </tr> <tr> <td>4–13</td> <td>4</td> <td>High</td> </tr> <tr> <td>14–23</td> <td>3</td> <td>Medium</td> </tr> <tr> <td>24–33</td> <td>2</td> <td>Low</td> </tr> <tr> <td>34–43</td> <td>1</td> <td>Poor</td> </tr> </tbody> </table>	ICPIF Range	MOS	Quality	0–3	5	Best	4–13	4	High	14–23	3	Medium	24–33	2	Low	34–43	1	Poor
ICPIF Range	MOS	Quality																	
0–3	5	Best																	
4–13	4	High																	
14–23	3	Medium																	
24–33	2	Low																	
34–43	1	Poor																	
<b>Result</b>	Passed																		

**IP SLA ICMP Echo (Branch to HQ)**

<b>Description</b>	Set up verification of the service level agreement (SLA) for ICMP echo
<b>Test Setup</b>	<p>Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</p> <p>Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</p> <p>Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</p> <p>Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</p>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Enable the IP SLA responder on the HQ router.</li> <li>2. Configure ICMP echo operation type on the branch router.</li> <li>3. Configure any options available for SLAs operation type.</li> <li>4. Configure any threshold conditions, if required.</li> <li>5. Schedule the operation to run, and then allow the operation run for enough time to gather statistics.</li> <li>6. Display and interpret the results of the operation, using Cisco IOS CLI or using an NMS system using SNMP. For example</li> </ol> <pre>ip sla monitor 6 type echo protocol ipIcmpEcho 192.168.0.2 source-ipaddr 192.168.0.1 frequency 300! ip sla monitor schedule 6 life forever start-time now</pre>
<b>Pass/Fail Criteria</b>	To view and interpret the results of an IP SLA operation, use the <b>show ip sla monitor 6</b> command to verify details, and report any significant delay issues.
<b>Result</b>	Passed

#### IPsec Site-to-Site VPN Using DMVPN

<b>Description</b>	Setup an IPsec site-to-site VPN between the branch router and the headend router, using DMVPN.
<b>Test Setup</b>	<p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure the headend router as a DMVPN hub and Next Hop Resolution Protocol (NHRP) server with multipoint GRE.</li><li>2. Configure the branch router as a spoke with multipoint GRE.</li><li>3. Configure ISAKMP policy preshared authentication with 3-DES encryption for the keys.</li><li>4. Configure ISAKMP SA lifetime to be 3600.</li><li>5. Configure transform set with 3-DES, ESP-SHA, DH Group 2 and preshared keys.</li><li>6. Configure IPsec SA lifetime to be 86400.</li><li>7. Configure tunnel protection for the DMVPN tunnel interface.</li><li>8. Add the DMVPN tunnel interface network address to the IGP configuration.</li><li>9. Verify IPsec connectivity, using the following <b>show</b> commands:<ul style="list-style-type: none"><li>• <b>show crypto isakmp sa</b></li><li>• <b>show crypto ipsec sa</b></li><li>• <b>show crypto engine connections active</b></li></ul></li><li>10. Send a sweep ping from a host connected to the branch data VLAN to a host connected to the headquarters data VLAN.</li><li>11. Verify whether the ping traffic gets encrypted; use the <b>show crypto engine accelerator statistics</b> command.</li></ol>
<b>Pass/Fail Criteria</b>	ISAKMP and IPsec sessions should be established. The DMVPN tunnel line protocol should come up. Routing tables at both the branch and headquarters routers should be updated. Ping should be 100% successful. Ping traffic should be encrypted.
<b>Result</b>	Passed
<b>IPsec Using GETVPN</b>	
<b>Description</b>	Set up an IPsec VPN between the branch router and the headend router, using GETVPN
<b>Test Setup</b>	<a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a> , <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Set up a GDOI key server for GETVPN in headquarters. The key server can be a Cisco 1900 series ISR platform.</li> <li>2. Configure the key server to send unicast rekeys.</li> <li>3. Configure the network segments associated with branch and headquarters LANs for encryption, using an ACL. Associate the ACL to the GDOI SA.</li> <li>4. Configure AES 256-bit encryption for IPsec.</li> <li>5. Configure a rekey timeout of 10800 seconds.</li> <li>6. Configure antireplay protection.</li> <li>7. Configure the branch routers and the headend routers as group members.</li> <li>8. Configure the GDOI crypto map on the primary WAN interface of the branch router and the headend router.</li> <li>9. Configure the TCP maximum segment size (MSS) to 1360 bytes on the router interfaces.</li> <li>10. Register the group members to the key server.</li> <li>11. Send a sweep ping from a host connected to the branch data VLAN to a host connected to the headquarters data VLAN.</li> <li>12. Verify whether the ping traffic gets encrypted; use the <b>show crypto engine accelerator statistics</b> command.</li> <li>13. Verify GETVPN, using the following <b>show</b> commands: <ul style="list-style-type: none"> <li>• <b>show crypto isakmp sa</b></li> <li>• <b>show crypto ipsec sa</b></li> <li>• <b>show crypto engine connections active</b></li> </ul> </li> </ol>
<b>Pass/Fail Criteria</b>	<p>Group members should be registered to the key server.</p> <p>The key server should successfully push the IPsec SA ACL and rekey the ACL to the group members.</p> <p>The routing tables at both the branch and head quarters routers should be updated.</p> <p>Ping should be 100% successful.</p> <p>Ping traffic should be encrypted.</p>
<b>Result</b>	Passed

**GETVPN Unicast Rekeying**

<b>Description</b>	GETVPN unicast rekeying
<b>Test Setup</b>	<a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a> , <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Set up a GDOI key server for GETVPN in the headquarters. The key server can be a Cisco 1900 series ISR platform.</li><li>2. Configure the key server to send unicast rekeys.</li><li>3. Configure the network segments associated with the branch and headquarters LANs for encryption, using an ACL. Associate the ACL to the GDOI SA.</li><li>4. Configure AES 256-bit encryption for IPsec.</li><li>5. Configure a rekey timeout of 10800 seconds.</li><li>6. Configure the branch router(s) and the headend router (s) as group members.</li><li>7. Configure the GDOI crypto map on the primary WAN interface of the branch router and headend router.</li><li>8. Register the group members to the key server.</li><li>9. Verify rekeying functionality.</li><li>10. Use the <b>show crypto isakmp sa</b> command to verify.</li></ol>
<b>Pass/Fail Criteria</b>	<p>Group members should be registered to the key server.</p> <p>The key server should be able to successfully push the ACL for unicast rekeying to the group members.</p> <p>After the rekey timeout, the key server should send new keys to the group members. For some time, both old keys and new keys should be present in group members. The new key should take over after a certain amount of time, usually within a minute.</p>
<b>Result</b>	Passed

### GETVPN Multicast Rekeying

<b>Description</b>	GETVPN multicast rekeying
<b>Test Setup</b>	<a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a> , <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Set up a GDOI key server for GETVPN in the headquarters. The key server can be a Cisco 1900 series ISR platform.</li> <li>2. Configure the key server to send multicast rekeys, with unicast rekeys as a backup mechanism.</li> <li>3. Define an ACL for multicast rekeying in the key server, and use the 239.x.x.x multicast group for rekeying.</li> <li>4. Configure PIM sparse mode (PIM-SM) on the key server and all the group members.</li> <li>5. Configure the headend router as the rendezvous point (RP).</li> <li>6. Configure the network segments associated with the branch and headquarters LANs for encryption, using an ACL. Associate the ACL to the GDOI SA.</li> <li>7. Configure AES 256-bit encryption for IPsec.</li> <li>8. Configure a rekey timeout of 10800 seconds.</li> <li>9. Configure the branch router(s) and the headend router(s) as group members.</li> <li>10. Configure the GDOI crypto map on the primary WAN interface of the branch router and the headend router.</li> <li>11. Register the group members to the key server.</li> <li>12. Verify rekeying functionality.</li> <li>13. Use the <b>show crypto isakmp sa</b> command to verify.</li> </ol>
------------------	--

<b>Pass/Fail Criteria</b>	<p>Group members should be registered to the key server.</p> <p>The key server should be able to successfully push the ACL for multicast rekeying to the group members.</p> <p>Group members should register to the 239.x.x.x multicast group successfully.</p> <p>After the rekey timeout, the key server should send new keys to the multicast group. For some time, both old keys and new keys should be present in group members, and the new key should take over after a certain amount of time, usually within a minute.</p>
---------------------------	---

<b>Result</b>	Passed

### IPsec DMVPN with Prefragmentation

<b>Description</b>	IPsec DMVPN with prefragmentation
<b>Test Setup</b>	<p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure IPsec VPN between the branch and headquarters with a tunnel MTU of 1000 bytes.</li> <li>2. Enable prefragmentation.</li> <li>3. Send voice and data traffic through the IPsec VPN tunnel.</li> </ol>
<b>Pass/Fail Criteria</b>	The IPsec packets that are larger than 1000 bytes should be fragmented.
<b>Result</b>	Passed

#### IPsec DMVPN and IGP

<b>Description</b>	IPsec DMVPN and IGP
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Bring down the IPsec tunnel between the branch and the headquarters router.</li> <li>2. Verify whether the routing table is updated at both the branch and headquarters routers.</li> <li>3. After 3 minutes, bring up the IPsec tunnel between the branch and headquarters routers.</li> <li>4. Verify whether the routing table is updated at both the branch and headquarters routers.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>When the IPsec tunnel goes down, the routing tables at both the branch and headquarters are updated. At the branch, the headquarters becomes unreachable, and the routes should be removed from the routing table. Similarly, at the headquarters, the branch becomes unreachable, and routes should be removed from the routing table.</p> <p>When the tunnel comes back up, the routes at both the branch and headquarters should reappear.</p>
<b>Result</b>	Passed

#### DMVPN Backup for MPLS Network (Branch to HQ)

<b>Description</b>	DMVPN backup on small branch using static floating route (Spoke-to-HQ)
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. On the small branch Cisco 1941 router, configure the serial interface on the branch that connects to the Internet Cloud router for frame-relay.</li> <li>2. Configure the static route in the branch router to reach to HQ with higher administrative distance (for example, 240).</li> <li>3. Redistribute the static route into the IGP on the branch router.</li> <li>4. Make sure that the entire traffic flow is going through the MPLS network when the branch WAN is up and running.</li> <li>5. Shut down the WAN and verify that the IP traffic flows to HQ using the Internet Cloud.</li> </ol>
------------------	---

<b>Pass/Fail Criteria</b>	Verify that you can reach HQ from the branch when the primary WAN is down.
---------------------------	--

<b>Result</b>	Passed
---------------	--------

#### **DMVPN Backup for MPLS Network (Branch to Branch)**

<b>Description</b>	DMVPN backup on small branch using static floating route (Spoke-to-Spoke)
--------------------	---

<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
-------------------	---

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. On the small branch Cisco 1941 router, configure the serial interface on the branch that connects to the Internet Cloud router for frame-relay.</li> <li>2. Configure the static route in the branch router to reach to HQ with higher administrative distance (for example, 240).</li> <li>3. Redistribute the static route into the IGP on the branch router.</li> <li>4. Make sure that the entire traffic is going through the MPLS network when the branch WAN is up and running.</li> <li>5. Shut down the WAN and verify that IP traffic flows to HQ through the Internet Cloud.</li> <li>6. Verify that from small branch running DMVPN that you can reach the small branch when the WAN link is down.</li> <li>7. Check the DMVPN hub for the NHRP database for all the spoke addresses (registered branch address).</li> <li>8. Verify that a dynamic tunnel has been created between the small branch and the small branch.</li> </ol>
------------------	---

<b>Pass/Fail Criteria</b>	Verify that you can reach HQ and the small branch from the small branch when the primary WAN is down.
---------------------------	---

<b>Result</b>	Passed
---------------	--------

**DMVPN Backup for MPLS Network Using BFD (Branch to HQ)**

<b>Description</b>	DMVPN backup with BFD using EIGRP as IGP (Branch to HQ)
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure the primary WAN interface and secondary WAN interface on the branch router.</li><li>2. Configure the secondary WAN interface as a Frame Relay interface that accesses the Internet.</li><li>3. Configure DMVPN on the branch router.</li><li>4. Configure the secondary WAN to be a higher cost route than the primary WAN so that primary WAN is always the preferred route.</li><li>5. Configure BFD on the primary WAN interface of the branch router and the primary WAN interface of the head-end router with a BFD interval of 50 ms, min_rx of 50 ms, and a BFD multiplier of 5.</li><li>6. Configure BFD on the secondary WAN interface.</li><li>7. Enable BFD for all interfaces in the EIGRP routing process.</li><li>8. Verify whether BFD is up and running by issuing <b>show bfd neighbor</b> command</li><li>9. Send HTTP and voice traffic between the branch and HQ.</li><li>10. Bring down the primary WAN interface by either disconnecting the cable or shutting down the link on the head-end side.</li><li>11. After about three minutes, bring up the primary WAN interface.</li></ol>
<b>Pass/Fail Criteria</b>	Verify that, when the primary WAN fails, EIGRP reconvergence occurs within a second because of BFD. Verify that all the traffic is routed through the secondary WAN interface. Verify that voice and HTTP sessions are maintained during reconvergence. Verify that, when the primary WAN comes up after three minutes, the traffic is routed over the primary WAN interface.
<b>Result</b>	Passed

**DMVPN Backup for MPLS Network Using BFD (Branch to Branch)**

<b>Description</b>	DMVPN backup with BFD using EIGRP as IGP (Branch to Branch)
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure the primary WAN interface and secondary WAN interface on the branch router.</li> <li>2. Configure the secondary WAN interface as a Frame Relay interface that assesses the Internet.</li> <li>3. Configure DMVPN on the branch router.</li> <li>4. Configure the secondary WAN to be a higher cost route than the primary WAN so that primary WAN is always the preferred route.</li> <li>5. Configure BFD on the primary WAN interface of the branch router and the primary WAN interface of the head-end router with BFD interval of 50 ms, min_rx of 50 ms, and a BFD multiplier of 5.</li> <li>6. Configure BFD on the secondary WAN interface.</li> <li>7. Enable BFD for all interfaces in the EIGRP routing process.</li> <li>8. Verify whether BFD is up and running by issuing <b>show bfd neighbor</b> command.</li> <li>9. Send HTTP and voice traffic between the branch and HQ.</li> <li>10. Bring down the primary WAN interface by either disconnecting the cable or shutting down the link on the head-end side.</li> <li>11. After about three minutes, bring up the primary WAN interface.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>Verify that, when the primary WAN fails, EIGRP reconvergence occurs within a second because of BFD.</p> <p>Verify that all the traffic is routed through the secondary WAN interface.</p> <p>Verify that voice and HTTP sessions are maintained during reconvergence.</p> <p>Verify that, when the primary WAN comes up after three minutes, the traffic is routed over the primary WAN interface.</p>
<b>Result</b>	Passed

#### **DMVPN Backup for MPLS Network Using BFD IGP as OSPF (Branch to Branch)**

<b>Description</b>	DMVPN backup with BFD using OSPF as IGP (Branch to Branch)
<b>Test Setup</b>	<p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure the primary WAN interface and secondary WAN interface on the branch router.</li><li>2. Configure the secondary WAN interface as a Frame Relay interface that assesses the Internet.</li><li>3. Configure DMVPN on the branch router.</li><li>4. Configure the secondary WAN to be a higher cost route than the primary WAN so that primary WAN is always the preferred route.</li><li>5. Configure BFD on the primary WAN interface of the branch router and the primary WAN interface of the head-end router with BFD interval of 50 ms, min_rx of 50 ms, and a BFD multiplier of 5.</li><li>6. Configure BFD on the secondary WAN interface.</li><li>7. Enable BFD for all interfaces in the EIGRP routing process.</li><li>8. Verify whether BFD is up and running by issuing <b>show bfd neighbor</b> command.</li><li>9. Send HTTP and voice traffic between the branch and HQ.</li><li>10. Bring down the primary WAN interface by either disconnecting the cable or shutting down the link on the head-end side.</li><li>11. After about three minutes, bring up the primary WAN interface.</li></ol>
<b>Pass/Fail Criteria</b>	<p>Verify that, when the primary WAN fails, EIGRP reconvergence occurs within a second because of BFD.</p> <p>Verify that all the traffic is routed through the secondary WAN interface.</p> <p>Verify that voice and HTTP sessions are maintained during reconvergence.</p> <p>Verify that, when the primary WAN comes up after three minutes, the traffic is routed over the primary WAN interface.</p>
<b>Result</b>	Passed

#### **DMVPN Backup for MPLS Network Using EBG (Branch to HQ)**

<b>Description</b>	DMVPN backup for MPLS using EBG
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure the primary WAN interface and backup WAN interface on the branch router.</li> <li>2. Configure the secondary WAN interface as a Frame Relay interface that assesses the Internet.</li> <li>3. Configure DMVPN on the branch router.</li> <li>4. Configure EBGP peers with the Internet router on the branch router. Under normal conditions, when the primary WAN is up and running, the backup DMVPN is dormant.</li> <li>5. Shut down the primary WAN interface. The backup interface should come up and the EBGP peers become activated. Finally, the DMVPN should come up.</li> <li>6. Send 2 Mb/s of traffic from the backup interface (DMVPN is up) and check the QoS status and various queues.</li> <li>7. Send HTTP and Voice traffic between the branch and HQ</li> <li>8. After about three minutes, bring up the primary WAN interface</li> </ol>
<b>Pass/Fail Criteria</b>	<p>Verify that, when the primary WAN fails, the backup DMVPN comes up.</p> <p>Verify that voice and HTTP sessions pass through.</p> <p>Check for appropriate QoS Queues.</p> <p>When the primary comes up after three minutes, verify that the traffic is routed over the primary WAN interface.</p>
<b>Result</b>	Passed
<b>DMVPN with QoS</b>	
<b>Description</b>	DMVPN with QoS
<b>Test Setup</b>	<p><a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</a></p> <p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</a></p> <p><a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</a></p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure the 5-class QoS model as explained in the QoS test cases.</li> <li>2. Configure DMVPN with the <b>qos pre-classify</b> command to classify IPsec packets before encryption.</li> <li>3. Send voice and data traffic, and verify whether traffic going through the DMVPN tunnel gets the correct QoS treatment, such as voice put in strict priority queue with proper bandwidth percentages applied.</li> </ol>

<b>Pass/Fail Criteria</b>	The IPsec packets should get the correct QoS treatment.
<b>Result</b>	Passed
<b>GETVPN with QoS</b>	
<b>Description</b>	GETVPN with QoS
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</a> <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure the 5-class QoS model as explained in the QoS test cases.</li><li>2. Configure GETVPN with the <b>qos pre-classify</b> command to classify IPsec packets before encryption.</li><li>3. Send voice traffic and data traffic, and verify whether traffic going through the GETVPN gets the correct QoS treatment, such as voice put in strict priority queue with proper bandwidth percentages applied.</li></ol>
<b>Pass/Fail Criteria</b>	The IPsec packets should get the correct QoS treatment.
<b>Result</b>	Passed
<b>DMVPN with QoS and NBAR</b>	
<b>Description</b>	DMVPN with QoS and NBAR
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</a> <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>

- Procedure**
1. Configure the 5-class QoS model as explained in the QoS test cases.
  2. Configure NBAR with the custom **ip nbar port-map** and **ip nbar protocol-discovery** commands as in the NBAR test case.
  3. Configure DMVPN with the **qos pre-classify** command to classify IPsec packets before encryption.
  4. Send voice and data (HTTP, FTP, and ICMP) traffic, and verify whether traffic going through the DMVPN tunnel gets the correct NBAR and QoS treatment, such as voice put in the strict priority queue with the proper bandwidth percentages applied.

**Pass/Fail Criteria** QoS and NBAR classification and bandwidth guarantees should be given to the voice and data traffic egressing the WAN interface before encryption.

**Result** Passed

#### GETVPN with QoS and NBAR

**Description** GETVPN with QoS and NBAR

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#)  
[Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,](#)  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)  
[Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode](#)

- Procedure**
1. Configure the 5-class QoS model as explained in the QoS test cases.
  2. Configure NBAR with the custom **ip nbar port-map** and **ip nbar protocol-discovery** commands as in the NBAR test case.
  3. Configure GETVPN with the **qos pre-classify** command to classify IPsec packets before encryption.
  4. Send voice and data (HTTP, FTP, and ICMP) traffic and verify whether traffic going through the IPsec tunnel gets the correct NBAR and QoS treatment, such as voice put in the strict priority queue with the proper bandwidth percentages applied.

**Pass/Fail Criteria** QoS and NBAR classification and bandwidth guarantees should be given to the voice and data traffic egressing the WAN interface before encryption.

**Result** Passed

**DMVPN/GETVPN with QoS, NBAR, and NetFlow**

<b>Description</b>	DMVPN/GETVPN with QoS, NBAR and NetFlow
<b>Test Setup</b>	<p>Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</p> <p>Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</p> <p>Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</p> <p>Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</p>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure the 5-class QoS model as explained in the QoS test cases.</li><li>2. Configure NBAR with custom <b>ip nbar port-map</b> and <b>ip nbar protocol-discovery</b> commands as in the NBAR test case.</li><li>3. Configure NetFlow version 5 or version 9 for both ingress and egress traffic on the WAN and LAN interfaces of the branch router.</li><li>4. Configure IPsec with the <b>qos pre-classify</b> command to classify IPsec packets before encryption.</li><li>5. Send voice and data (HTTP, FTP, and ICMP) traffic, and verify whether traffic going through the IPsec tunnel gets the correct NBAR and QoS treatment, such as voice put in the strict priority queue with the proper bandwidth percentages applied.</li><li>6. Collect protocol distribution charts, interface statistics, and QoS statistics. Export the statistics to a NAM at the enterprise headquarters.</li></ol>
<b>Pass/Fail Criteria</b>	<p>QoS and NBAR classification and bandwidth guarantees should be given to the voice and data traffic egressing the WAN interface before encryption</p> <p>NetFlow should collect the statistics and export them to the NAM, and the collected statistics should be within performance requirements.</p>
<b>Result</b>	Passed

## Zone-based Policy Firewall Configuration on the Branch Router

**Description** Configure Zone-based Policy Firewall (ZPF) with three zones: Public, Private, and DMZ

**Test Setup**

```

class-map type inspect match-any publicPrivateOutRule10Protocols
match protocol http
match protocol https
match protocol dns
match protocol ssh
match protocol icmp
match protocol ftp
exit
class-map type inspect match-any publicDMZOutRule10Protocols
match protocol http
match protocol https
match protocol dns
exit
class-map type inspect match-all publicPrivateOutRule10
match access-group name publicPrivateOutRule10Acl
match class-map publicPrivateOutRule10Protocols
exit

ip access-list extended publicPrivateOutRule10Acl
permit ip 172.16.0.0 0.0.0.255 any
exit

policy-map type inspect publicPrivateOutFwPolicy
class type inspect publicPrivateOutRule10
inspect publicPrivateOutParamMap
class class-default
drop log
exit
policy-map type inspect publicDMZOutFwPolicy
class type inspect publicDMZOutRule10Protocols
inspect publicPrivateOutParamMap
class class-default
drop log
exit

parameter-map type inspect publicPrivateOutParamMap
alert on
audit-trail on
dns-timeout 5
icmp idle-time 10
max-incomplete low 2000
max-incomplete high 3000
one-minute low 2000
one-minute high 3000
tcp finwait-time 5
tcp idle-time 3600
tcp max-incomplete host 50 block-time 0
tcp synwait-time 30
udp idle-time 30

```

**Test Setup  
(continued)**

```
zone security Public
description Public Internet Connection
exit

zone security Private
description Customer Private Network
exit

interface Serial0/1/0:0.500
zone-member security Public
exit

interface Serial0/1/1:0.500
zone-member security Private
exit

interface FastEthernet0/0
zone-member security Private
exit

zone-pair security publicPrivateOut source Private destination
Public
description Outbound Firewall Policy from Private to Public
service-policy type inspect publicPrivateOutFwPolicy
exit
zone-pair security publicDMZOut source Public destination DMZ
description Outbound Firewall Policy from Public to DMZ
service-policy type inspect publicDMZOutFwPolicy
exit
```

**Procedure**

1. Create the firewall policy.  
Referring to the test setup, the steps for creating zone-based policy firewall are outlined below.
2. Create the class maps to classify network traffic.
3. Create the policy map (firewall policy).
4. Create the Inspect Parameter-Map.
5. Create the security zones: Public, Private, and DMZ.
6. Assign the interfaces to the security zones (zone membership).
7. Assign the primary WAN interfaces to the Private zone.
8. Assign the voice and data VLANs to the Private zone.
9. Assign the DMZ VLAN to the DMZ zone.
10. Assign secondary WAN interface to Public zone.
11. Create the zone pairs in the test setup, and assign a policy map (firewall policy).
12. Send various kinds of traffic, such as HTTP, HTTPS, DNS, FTP, and ICMP, between the zones.

**Pass/Fail Criteria**

From Private zone to Private zone all traffic should be passed without any inspection.

From Private zone to Public zone, HTTP, FTP, DNS, HTTPS, SSH, and ICMP traffic should be inspected and allowed, and the rest of the traffic should be blocked.

From Public zone to Private zone, no traffic should be allowed.

From Public zone to DMZ zone, only HTTP, FTP, and DNS should be allowed.

**Result** Passed

### NAT and PAT Configuration on the Branch Router

**Description** Configure NAT and PAT for traffic going out to the Internet

**Test Setup** [Figure 5 on page 8, Private WAN, Cisco 1941 ISR](#)  
[Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR](#)

**Procedure**

1. Configure static NAT translations for certain hosts on the data VLAN, using an address pool.
2. For the rest of the hosts, configure PAT by using the **overload** command in the NAT configuration.
3. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.
4. Configure the LAN as NAT inside, and configure the secondary WAN interface as NAT outside.
5. Send HTTP, HTTPS, ICMP, DNS, and SSH traffic from clients on the LAN to the Internet.
6. Verify translations and statistics using the **show ip nat translations** and **show ip nat statistics** commands.

**Pass/Fail Criteria**

The inside address should be translated to the outside global address when the traffic from the LAN is going out to the Internet. The return traffic from the Internet to the LAN should always be directed to the outside global address of the inside hosts.

**Result** Passed

### NAT, QoS, and NetFlow on the Branch

**Description** Configure NAT and QoS on the branch

**Test Setup** [Figure 5 on page 8, Private WAN, Cisco 1941 ISR](#)  
[Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR](#)

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure static NAT translations for certain hosts on the data VLAN using an address pool and for the rest of the hosts configure PAT by using the <b>overload</b> command in the NAT configuration.</li><li>2. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.</li><li>3. Configure 5-class H-QoS on the secondary WAN interface.</li><li>4. Mark all the traffic going out to the Internet as best-effort traffic.</li><li>5. Configure traffic shaping to 95% of the available WAN bandwidth.</li><li>6. Configure NetFlow on the secondary WAN interface for ingress and egress traffic.</li><li>7. Collect traffic statistics and distribution charts, and export the statistics to a NAM, using either v5 or v9 NetFlow.</li><li>8. Send HTTP, HTTPS, ICMP, DNS and SSH traffic from clients on the LAN to the Internet.</li><li>9. Verify translations and statistics, using the <b>show ip nat translations</b> and <b>show ip nat statistics</b> commands.</li><li>10. Verify QoS, using the <b>show policy-map interface</b> command.</li><li>11. Verify NetFlow, using the <b>show ip flow</b> command.</li></ol>
<b>Pass/Fail Criteria</b>	<p>The inside address should be translated to the outside global address when the traffic from the LAN is going out to the Internet. The return traffic from the Internet to the LAN should always be directed to the outside global address of the inside hosts.</p> <p>All the Internet traffic should be marked as best effort.</p> <p>Traffic should be shaped to 95% of the WAN bandwidth.</p> <p>The NetFlow statistics collected should be within performance requirements.</p>
<b>Result</b>	Passed

### ZPF, QoS, and NetFlow on the Branch

<b>Description</b>	Configure ZPF, QoS, and NetFlow on the branch router
<b>Test Setup</b>	<p>Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</p> <p>Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</p> <p>Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</p> <p>Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</p>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure ZPF as explained in the <a href="#">Zone-based Policy Firewall Configuration on the Branch Router</a> test case procedure.</li><li>2. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.</li><li>3. Assign the primary WAN interface to the Private zone.</li><li>4. Assign the secondary WAN interface to the Public zone.</li><li>5. Assign the voice VLAN and data VLAN interfaces to the Private zone.</li><li>6. Configure 5-class hierarchical QoS on both the primary and secondary WAN interfaces.</li><li>7. Mark all the traffic going out to the Internet as best-effort traffic.</li><li>8. Configure traffic shaping to 95% of the available WAN bandwidth.</li><li>9. Configure NetFlow on the WAN and LAN interfaces for ingress and egress traffic.</li><li>10. Collect traffic statistics and distribution charts, and export the statistics to a NAM, using NetFlow version 5 or version 9.</li><li>11. Send HTTP, HTTPS, ICMP, DNS, and SSH traffic from clients on the LAN to the Internet.</li><li>12. Send bidirectional HTTP, HTTPS, and FTP traffic between the branch and headquarters.</li><li>13. Ping one of the clients on the LAN from the ISP.</li><li>14. Verify translations and statistics, using the <b>show ip nat translations</b> and <b>show ip nat statistics</b> command.</li><li>15. Verify QoS, using the <b>show policy-map interface</b> command.</li><li>16. Verify NetFlow, using the <b>show ip flow</b> command.</li></ol>
<b>Pass/Fail Criteria</b>	<p>Traffic from the branch to headquarters should not be inspected.</p> <p>Traffic from the branch to the Internet should be inspected.</p> <p>QoS should be applied to the traffic, and ZPF should have no adverse effect on the QoS.</p> <p>All the Internet traffic should be marked as best effort.</p> <p>Traffic should be shaped to 95% of the WAN bandwidth.</p> <p>The NetFlow statistics collected should be within performance requirements.</p> <p>The ping should fail.</p>
<b>Result</b>	Passed

## ZPF, QoS, NBAR, and NetFlow on the Branch

<b>Description</b>	Configure ZPF, QoS, NBAR, and NetFlow on the branch router
<b>Test Setup</b>	<p>Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</p> <p>Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</p> <p>Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</p> <p>Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</p>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure ZPF as explained in the <a href="#">Zone-based Policy Firewall Configuration on the Branch Router</a> test case procedure.</li><li>2. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.</li><li>3. Assign the primary WAN interface to the Private zone.</li><li>4. Assign the secondary WAN interface to the Public zone.</li><li>5. Assign the voice VLAN and data VLAN interfaces to the Private zone.</li><li>6. Configure 5-class hierarchical QoS on both primary and secondary WAN interfaces.</li><li>7. Mark all the traffic going out to the Internet as best-effort traffic.</li><li>8. Configure traffic shaping to 95% of the available WAN bandwidth.</li><li>9. Configure NBAR as in the <a href="#">NBAR Classification with QoS</a> test case.</li><li>10. Configure NetFlow on the WAN and LAN interfaces for ingress and egress traffic.</li><li>11. Collect traffic statistics and distribution charts, and export the statistics to a NAM, using NetFlow version 5 or version 9.</li><li>12. <b>Result</b>	Passed

#### **ZPF, QoS, NBAR, NAT, and NetFlow on the Branch**

<b>Description</b>	Configure ZPF, QoS, NBAR, and NetFlow on the branch router
<b>Test Setup</b>	<p><a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</a></p> <p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</a></p> <p><a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</a></p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p>

**Procedure**

1. Configure ZPF as explained in the [Zone-based Policy Firewall Configuration on the Branch Router](#) test case procedure.
2. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.
3. Assign the primary WAN interface to the Private zone.
4. Assign the secondary WAN interface to the Public zone.
5. Assign the voice VLAN and data VLAN interfaces to the Private zone.
6. Configure static NAT translations for certain hosts on the data VLAN using an address pool. For the rest of the hosts, configure PAT by using the **overload** keyword in the **ip nat inside source** command in the NAT configuration.
7. Configure the data VLAN as NAT inside, and configure the secondary WAN interface as NAT outside.
8. Configure 5-class hierarchical QoS on both primary and secondary WAN interfaces.
9. Mark all the traffic going out to the Internet as best-effort traffic.
10. Configure traffic shaping to 95% of the available WAN bandwidth.
11. Configure NBAR as in the [NBAR Classification with QoS](#) test case.
12. Configure NetFlow on the WAN and LAN interfaces for ingress and egress traffic.
13. Collect traffic statistics and distribution charts, and export the statistics to a NAM, using NetFlow version 5 or version 9.
14. Send HTTP, HTTPS, ICMP, DNS, and SSH traffic from clients on the LAN to the Internet.
15. Send bidirectional HTTP, HTTPS, and FTP traffic between the branch and headquarters.
16. Ping one of the clients on the LAN from the ISP.
17. Verify translations and statistics, using the **show ip nat translations** and **show ip nat statistics** commands.
18. Verify QoS, using the **show policy-map interface** command.
19. Verify NetFlow, using the **show ip flow** command.

<b>Pass/Fail Criteria</b>	<p>Traffic from the branch to headquarters should not be inspected.</p> <p>Traffic from the branch to the Internet should be inspected.</p> <p>Inside addresses should be translated to outside global addresses when the traffic from the LAN is going out to the Internet. The return traffic from the Internet to the LAN should always be directed to the outside global address of the inside hosts.</p> <p>QoS should be applied to the traffic, and ZPF should not have any adverse effect on the QoS.</p> <p>All the Internet traffic should be marked as best effort.</p> <p>Traffic should be shaped to 95% of the WAN bandwidth.</p> <p>NBAR should provide bandwidth guarantees to different flows and should detect and stop worms such as NIMDA and CODE RED.</p> <p>The NetFlow statistics collected should be within performance requirements.</p> <p>The ping should fail.</p>
<b>Result</b>	Passed
<b>ZPF with DMVPN</b>	
<b>Description</b>	Configure ZPF with DMVPN on the primary WAN interface connecting the branch and headquarters
<b>Test Setup</b>	<p><a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</a></p> <p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</a></p> <p><a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</a></p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure ZPF as explained in the <a href="#">Zone-based Policy Firewall Configuration on the Branch Router</a> test case procedure.</li> <li>2. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.</li> <li>3. Assign the primary WAN interface to the Private zone.</li> <li>4. Assign the DMVPN tunnel interface over the primary WAN to the Private zone.</li> <li>5. Assign the voice VLAN and data VLAN interfaces to the Private zone.</li> <li>6. Assign the secondary WAN interface to the Public zone.</li> <li>7. Configure firewall policy for the Private zone to the Public zone, the Private zone to the DMZ zone, and the Public zone to the DMZ zone.</li> <li>8. Send bidirectional HTTP, HTTPS, and FTP traffic between the branch and headquarters.</li> </ol>

**Pass/Fail Criteria** ZPF should have no adverse impact on DMVPN.  
Traffic between the branch and headquarters over the primary WAN interface should be encrypted.

**Result** Passed

### ZPF with GETVPN

**Description** Configure ZPF with GETVPN connecting the branch and headquarters

**Test Setup** [Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#),  
[Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode](#)

**Procedure**

1. Configure ZPF as explained in the [Zone-based Policy Firewall Configuration on the Branch Router](#) test case procedure.
2. Assign the primary WAN interface to the Public zone.
3. Assign the voice VLAN and data VLAN interfaces to the Private zone.
4. Configure GETVPN as in the [IPsec Using GETVPN](#) test case procedure.
5. Send bidirectional HTTP, HTTPS, and FTP traffic between the branch and headquarters.

**Pass/Fail Criteria** Traffic between the branch and headquarters should be encrypted.  
ZPF should have no effect on the traffic between the branch and headquarters.

**Result** Passed

### IPsec, ZPF, QoS, NBAR, NAT, and NetFlow on the Branch

**Description** Configure ZPF, QoS, NBAR, and NetFlow on the branch router

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#),  
[Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode](#),  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#),  
[Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode](#)

**Procedure**

1. Configure IPsec VPN, using either DMVPN or GETVPN on the primary WAN interface.
2. Configure ZPF as explained in the [Zone-based Policy Firewall Configuration on the Branch Router](#) test case procedure.
3. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.
4. Assign the primary WAN interface to the Private zone.
5. Assign the secondary WAN interface to the Public zone.
6. Assign the voice VLAN and data VLAN interfaces to the Private zone.
7. Configure static NAT translations for certain hosts on the data VLAN, using an address pool. For the rest of the hosts, configure PAT by using the **overload** command in the NAT configuration.
8. Configure the data VLAN as NAT inside, and configure the secondary WAN interface as NAT outside.
9. Configure 5-class hierarchical QoS on both the primary and secondary WAN interfaces.
10. Mark all the traffic going out to the Internet as best-effort traffic.
11. Configure traffic shaping to 95% of the available WAN bandwidth.
12. Configure NBAR as in the [NBAR Classification with QoS](#) test case.
13. Configure NetFlow on the WAN and LAN interfaces for ingress and egress traffic.
14. Collect traffic statistics and distribution charts, and export the statistics to a NAM using NetFlow version 5 or version 9.
15. Send HTTP, HTTPS, ICMP, DNS, and SSH traffic from clients on the LAN to the Internet.
16. Send bidirectional HTTP, HTTPS, and FTP traffic between the branch and headquarters.
17. Ping one of the clients on the LAN from the ISP.
18. Verify translations and statistics, using the **show ip nat translations** and **show ip nat statistics** commands.
19. Verify QoS, using the **show policy-map interface** command.
20. Verify NetFlow, using the **show ip flow** command.

**Pass/Fail Criteria**

Traffic from the branch to headquarters should be encrypted.

Traffic from the branch to headquarters should not be inspected.

Traffic from the branch to the Internet should be inspected.

Inside addresses should be translated to outside global addresses when the traffic from the LAN is going out to the Internet. The return traffic from the Internet to the LAN should always be directed to the outside global address of the inside hosts.

QoS should be applied to the traffic, and ZPF should not have any adverse effect on the QoS.

All the Internet traffic should be marked as best-effort.

Traffic should be shaped to 95% of the WAN bandwidth.

NBAR should provide bandwidth guarantees to different flows and should detect and stop worms such as NIMDA and CODE RED.

The NetFlow statistics collected should be within performance requirements.

The ping should fail.

**Result**

Passed

## DDOS Prevention Using Cisco IOS IPS

### IPsec, ZPF, QoS, NBAR, NAT, Cisco IOS IPS, and NetFlow on the Branch

<b>Description</b>	Configure ZPF, QoS, NBAR, NAT, Cisco IOS IPS, and NetFlow on the branch router
<b>Test Setup</b>	<p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure IPsec VPN using either DMVPN or GETVPN on the primary WAN interface.</li> <li>2. Configure ZPF as explained in the <a href="#">Zone-based Policy Firewall Configuration on the Branch Router</a> test case procedure.</li> <li>3. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.</li> <li>4. Assign the primary WAN interface to the Private zone.</li> <li>5. Assign the secondary WAN interface to the Public zone.</li> <li>6. Assign the voice VLAN and data VLAN interfaces to the Private zone.</li> <li>7. Configure static NAT translations for certain hosts on the data VLAN, using an address pool. For the rest of the hosts, configure PAT by using the <b>overload</b> command in the NAT configuration.</li> <li>8. Configure the data VLAN as NAT inside, and configure the secondary WAN interface as NAT outside.</li> <li>9. Configure Cisco IOS IPS with IDCONF v5.0 on the router.</li> <li>10. Enable advanced category signature set.</li> <li>11. Configure Cisco IOS IPS for both directions of traffic on the data and DMZ VLAN and WAN interfaces.</li> </ol>

- Procedure (continued)**
12. Enable syslog on the router and log the syslog messages to a syslog server at the branch.
  13. Configure 5-class hierarchical QoS on both primary and secondary WAN interfaces.
  14. Mark all the traffic going out to the Internet as best-effort traffic.
  15. Configure traffic shaping to 95% of the available WAN bandwidth.
  16. Configure NBAR as in the [NBAR Classification with QoS](#) test case.
  17. Configure NetFlow on the WAN and LAN interfaces for ingress and egress traffic.
  18. Collect traffic statistics and distribution charts, and export the statistics to a NAM, using NetFlow version 5 or version 9.
  19. Send HTTP, HTTPS, ICMP, DNS, and SSH traffic from clients on the LAN to the Internet.
  20. Send bidirectional HTTP, HTTPS, and FTP traffic between the branch and headquarters.
  21. Ping one of the clients on the LAN from the ISP.
  22. Launch DDOS attacks from a PC attached the branch router data VLAN to a server located at the headquarters.
  23. Launch threats from a host in the Internet to the DMZ servers.
  24. Verify translations and statistics, using the **show ip nat translations** and **show ip nat statistics** commands.
  25. Verify whether the attacks are detected by Cisco IOS IPS and whether the alert messages are logged to the syslog server.
  26. Verify QoS, using the **show policy-map interface** command.
  27. Verify NetFlow, using **show ip flow** command.

**Pass/Fail Criteria**

All traffic should be Cisco Express Forwarding switched.

Traffic from the branch to headquarters should be encrypted.

Traffic from the branch to headquarters should not be inspected.

Traffic from the branch to the Internet should be inspected.

Inside addresses should be translated to the outside global address when the traffic from the LAN is going out to the Internet. The return traffic from the Internet to the LAN should always be directed to the outside global address of the inside hosts.

QoS should be applied to the traffic, and ZPF should not have any adverse effect on the QoS.

All the Internet traffic should be marked as best-effort.

Traffic should be shaped to 95% of the WAN bandwidth.

The attacks should be detected by Cisco IOS IPS, and appropriate signatures should be triggered.

Actions such as warning, dropping the packets or dropping the session, blocking host should be taken based on a particular signature configuration.

The alert messages related to the attack should be logged to a syslog server.

NBAR should provide bandwidth guarantees to different flows and should detect and stop worms such as NIMDA and CODE RED.

NetFlow statistics collected should be within performance requirements.

The ping should fail.

<b>Pass/Fail Criteria</b>	<p>All traffic should be Cisco Express Forwarding switched.</p> <p>The remote user should be able to connect to the WebVPN gateway, using the SVC client application.</p> <p>The remote user should be able to access branch intranet web-based applications and Windows shared drives.</p> <p>All the SSL VPN traffic should be accelerated.</p>
<b>Result</b>	Passed

## Complete Baseline Test

<b>Description</b>	<p>Enable all the baseline services in the branch and headend routers. The baseline features include BGP routing, OSPF/EIGRP routing, IPsec using DMVPN or GETVPN, ZPF, NAT, IPS, QoS, NBAR, ACL, NetFlow, DHCP, AAA RADIUS server, NTP, syslog, SNMP, WebVPN, PIM-v2, and IGMP v2.</p> <p>Configure L2 switching on the access layer switches.</p> <p>Enable QoS on the L2 access switches.</p>
<b>Test Setup</b>	<p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure L2 switching with RSTP on the Catalyst 2960 switches. Verify, using the <b>show spanning tree</b> command.</li><li>2. Configure voice, data, and DMZ VLANs.</li><li>3. Configure Catalyst QoS on the Catalyst 2960 switch.</li><li>4. Configure BGP routing. Verify whether the default route is injected into the branch router, using the <b>show ip route</b> and <b>show ip bgp summary</b> commands.</li><li>5. Configure OSPF/EIGRP routing as the IGP. Verify the neighbor relationship between headquarters and branch routers, using the <b>show ip ospf neighbors</b> or <b>show ip eigrp neighbors</b> command. Verify the routes using the <b>show ip route</b> command.</li><li>6. Configure IPsec (DMVPN/GETVPN) over the primary and secondary WAN interfaces. Verify, using the <b>show crypto engine connections active</b> and <b>show crypto session</b> commands.</li><li>7. Configure ZPF with voice VLAN, data VLAN, and primary WAN in the Private zone, DMZ VLAN in the DMZ zone, secondary WAN in the Public zone, and IPsec tunnel in the VPN zone. Verify, using the <b>show policy-map type inspect</b> command.</li><li>8. Configure the 5-class QoS model with the <b>qos pre-classify</b> command. Verify, using the <b>show policy-map interface</b> command.</li><li>9. Configure NBAR to provide bandwidth guarantees to different protocols such as HTTP, HTTPS, FTP, DNS, SSH, and ICMP. Verify, using the <b>show ip nbar protocol-discovery</b> command.</li><li>10. Configure NAT to translate the addresses of hosts in the data VLAN when accessing the Internet through the secondary WAN interface. Verify, using the <b>show ip nat translations</b> command.</li><li>11. Configure IPS to prevent DDOS attacks, slackware, malware, worms, and so on, against the branch/headquarters clients and servers. Send alert messages to a syslog server.</li></ol>

- Procedure (continued)**
12. Configure NetFlow on all the interfaces, and export the statistics to a NAM in headquarters. Verify NetFlow statistics, using the **show ip flow** command.
  13. Configure NTP in the branch router, and authenticate the NTP server using MD5 authentication. Verify, using the **show ntp status** command.
  14. Configure the DHCP server on the branch router to provide dynamic IP addresses to clients in the voice, data, and DMZ VLANs. Verify, using the **show ip dhcp bindings** command.
  15. Configure AAA to authenticate and authorize users using a RADIUS server located in the headquarters.
  16. Configure SNMP to collect traps.
  17. Configure WebVPN in clientless mode, and have at least five remote users access the branch web-based applications and Windows File Sharing from the Internet.
  18. Configure an IPTV server in the headquarters to stream 300 kb/s video using multicast. Set up the headquarters router as an RP, and configure PIM-SM on branch and headend routers.
  19. Send HTTP, HTTPS, DNS, SSH, ICMP, and CIFS traffic between the branch and headquarters.
  20. Send HTTP, FTP, DNS, and SSH traffic between the branch and the Internet.
  21. Send HTTP traffic between the Internet and the DMZ.
  22. Join four clients to the multicast group to receive IPTV video streams.
  23. Launch threats from hosts on the branch LAN to servers on the headquarters.

**Pass/Fail Criteria**

All traffic should be Cisco Express Forwarding switched.

The Catalyst switch should properly mark the traffic and put it in appropriate queues.

Traffic from the branch to headquarters should be encrypted.

Traffic from the branch to headquarters should not be inspected.

Traffic from the branch to the Internet should be inspected.

Inside addresses should be translated to outside global addresses when the traffic from the LAN is going out to the Internet. The return traffic from the Internet to the LAN should always be directed to the outside global address of the inside hosts.

QoS should be applied to the traffic, and ZPF should not have any adverse effect on the QoS.

All Internet traffic should be marked as best effort.

Traffic should be shaped to 95% of the WAN bandwidth.

The attacks should be detected by Cisco IOS IPS, and appropriate signatures should be triggered.

Actions such as warning, dropping the packets or dropping the session, or blocking the host should be taken based on a particular signature configuration.

The alert messages related to the attack should be logged to a syslog server.

NBAR should provide bandwidth guarantees to different flows and should detect and stop worms such as NIMDA and CODE RED.

Remote users should be able to access the branch intranet web-based applications and shared Windows network drives. The WebVPN traffic should be accelerated.

The NetFlow statistics should be collected and exported, and they should be within performance requirements.

The router should be able to source the clock from the NTP server after successful authentication.

The DHCP server on the router should provide IP addresses to the clients on the LAN.

AAA should be able to authenticate users using a RADIUS server.

**Result**

Passed

## High Availability Test Cases

### EIGRP Subsecond Convergence During Primary WAN Failure

<b>Description</b>	Enable BFD for EIGRP subsecond convergence during primary WAN failure
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Set up a primary WAN interface and a secondary WAN interface on the branch router.</li> <li>2. Set up a secondary WAN interface to be an SHDSL interface.</li> <li>3. <b>Result</b>	<p>Passed on Fast Ethernet interfaces</p> <p>BFD is supported only on Fast Ethernet interfaces. Support for additional WAN encapsulations such as Frame Relay and PPP is planned for future releases.</p>

#### IPsec over Backup SHDSL WAN Link

<b>Description</b>	Encryption over backup link between the branch and headquarters
<b>Test Setup</b>	<a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a> <a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a>

- Procedure**
1. Set up a primary WAN interface and a secondary WAN interface on the branch router.
  2. Set up the secondary WAN interface to be an SHDSL interface.
  3. Configure the secondary WAN to be a higher cost route than the primary WAN, using the OSPF `ip ospf cost` command, so that the primary WAN is always preferred.
  4. Configure BFD on the primary WAN interface of the branch router and the primary WAN interface of the headend router with a BFD interval of 50 ms, a `min_rx` of 50 ms, and a BFD multiplier of 5.
  5. Configure BFD on the secondary WAN interface.
  6. Enable BFD for all interfaces in the OSPF routing process.
  7. Verify whether BFD is up by entering the `show bfd neighbor` command.
  8. Configure one of the IPsec types, that is, IPsec DMVPN or GETVPN, on both the primary and secondary WAN interfaces between the branch and headquarters.
  9. Send HTTP, FTP, and ICMP traffic between the branch and headquarters.
  10. Bring down the primary WAN interface by either pulling out the cable or shutting down the link on the headend side.
  11. After about 3 minutes bring up the primary WAN interface.

**Pass/Fail Criteria**

When the primary WAN fails, OSPF reconvergence should occur within a second because of BFD.

All the traffic should be sent through the IPsec tunnel over the secondary WAN interface.

HTTP, FTP, and ICMP sessions should be maintained during the switchover and switchback.

When the primary WAN comes up after 3 minutes, the traffic should be routed over the primary WAN interface IPsec tunnel.

No router tracebacks, memory leaks, or crashes should be observed.

All the traffic should be Cisco Express Forwarding switched.

**Result**

Passed on Fast Ethernet interfaces.

BFD is supported only on Fast Ethernet interfaces. Support for additional WAN encapsulations such as Frame Relay and PPP is planned for future releases.

### ZPF, NAT, and IPsec over Backup SHDSL WAN Link

**Description** ZPF, NAT, and IPsec over backup SHDSL WAN link

**Test Setup** [Figure 5 on page 8, Private WAN, Cisco 1941 ISR](#)  
[Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR](#)

**Procedure**

1. Set up a primary WAN interface and a secondary WAN interface on the branch router.
2. Set up a secondary WAN interface to be an SHDSL interface.
3. Configure the secondary WAN to be a higher cost route than the primary WAN, using the OSPF **ip ospf cost** command, so that the primary WAN is always preferred.
4. Configure BFD on the primary WAN interface of the branch router and the primary WAN interface of the headend router with a BFD interval of 50 ms, a min\_rx of 50 ms, and a BFD multiplier of 5.
5. Configure BFD on the secondary WAN interface.
6. Enable BFD for all interfaces in the OSPF routing process.
7. Verify whether BFD is up by entering the **show bfd neighbor** command.
8. Configure one of the IPsec types, that is, IPsec DMVPN or GETVPN, on both the primary and secondary WAN interfaces between the branch and headquarters.
9. Configure ZPF as explained in the [Zone-based Policy Firewall Configuration on the Branch Router](#) test case procedure.
10. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.
11. Assign the primary WAN interface to the Private zone.
12. Assign the secondary WAN interface to the Public zone.
13. Assign the voice VLAN and data VLAN interfaces to the Private zone.
14. If you are using DMVPN, assign the tunnel interface to the VPN zone.
15. Define a firewall policy between the VPN zone and the Public zone.
16. Define a firewall policy between the VPN zone and the Private zone.
17. Configure static NAT translations for certain hosts on the data VLAN using an address pool. For the rest of the hosts, configure PAT by using the **overload** command in the NAT configuration.
18. Configure the data VLAN as NAT inside, and configure the secondary WAN interface as NAT outside.
19. Send HTTP, FTP, and ICMP traffic between the branch and headquarters.
20. Send HTTP, FTP, DNS, and ICMP traffic between PCs on the branch data VLAN to the Internet.
21. Verify translations and statistics, using the **show ip nat translations** and **show ip nat statistics** commands.
22. Bring down the primary WAN interface by either pulling the cable out or shutting down the link on the headend side.
23. After about 3 minutes bring up the primary WAN interface.

**Pass/Fail Criteria**

When the primary WAN fails, OSPF reconvergence should occur within a second because of BFD.

ZPF should inspect all traffic going out of the secondary WAN interface.

All the traffic between the branch and headquarters should be sent through the IPsec tunnel over the secondary WAN interface.

Inside addresses should be translated to outside global addresses when the traffic from the LAN is going out to the Internet. The return traffic from the Internet to the LAN should always be directed to the outside global addresses of the inside hosts.

HTTP, FTP, and ICMP sessions should be maintained during the switchover and switchback.

When the primary comes up after 3 minutes, the traffic should be routed over the primary WAN interface IPsec tunnel.

No router tracebacks, memory leaks, or crashes should be observed.

All the traffic should be Cisco Express Forwarding switched.

**Result**

Passed on Gigabit Ethernet interfaces.

BFD is supported only on Gigabit Ethernet interfaces. Support for additional WAN encapsulations such as Frame Relay and PPP is planned for future releases.

#### **IPsec, ZPF, QoS, NBAR, and NetFlow on Both Primary and Secondary Link, and NAT on the Secondary Link**

**Description** ZPF, NAT, and IPsec over backup SHDSL WAN link

**Test Setup** [Figure 5 on page 8, Private WAN, Cisco 1941 ISR](#)  
[Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR](#)

**Procedure**

1. Set up a primary WAN interface and a secondary WAN interface on the branch router.
2. Set up the secondary WAN interface to be an SHDSL interface.
3. Configure the secondary WAN to be a higher cost route than the primary WAN, using the OSPF **ip ospf cost** command, so that the primary WAN is always preferred.
4. Configure BFD on the primary WAN interface of the branch router and the primary WAN interface of the headend router with a BFD interval of 50 ms, a min\_rx of 50 ms and a BFD multiplier of 5.
5. Configure BFD on the secondary WAN interface.
6. Enable BFD for all interfaces in the OSPF routing process.
7. Verify whether BFD is up by entering the **show bfd neighbor** command.
8. Configure one of the IPsec types, that is, DMVPN or GETVPN, on both the primary and secondary WAN interfaces between the branch and headquarters.
9. Configure ZPF as explained in the [Zone-based Policy Firewall Configuration on the Branch Router](#) test case procedure.
10. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.
11. Assign the primary WAN interface to the Private zone.
12. Assign the secondary WAN interface to the Public zone.
13. Assign the voice VLAN and data VLAN interfaces to the Private zone.
14. If you are using DMVPN, assign the tunnel interface to the VPN zone.
15. Define a firewall policy between the VPN zone and the Public zone.
16. Define a firewall policy between the VPN zone and the Private zone.
17. Configure static NAT translations for certain hosts on the data VLAN, using an address pool. For the rest of the hosts, configure PAT by using the **overload** command in the NAT configuration.
18. Configure the data VLAN as NAT inside, and configure the secondary WAN interface as NAT outside.
19. Configure Cisco IOS IPS with IDCONF v5.0 on the router.
20. Enable advanced category signature set.
21. Configure Cisco IOS IPS for both directions of traffic on the data and DMZ VLAN and WAN interfaces.
22. Enable syslog on the router, and log the syslog messages to a syslog server located in the branch.
23. Configure 5-class hierarchical QoS on both the primary and secondary WAN interfaces.
24. Mark all the traffic going out to the Internet as best-effort traffic.
25. Configure traffic shaping to 95% of the available WAN bandwidth.
26. Configure NBAR as in the [NBAR Classification with QoS](#) test case.

**Procedure  
(continued)**

27. Configure NetFlow on the WAN and LAN interfaces for ingress and egress traffic.
28. Collect traffic statistics and distribution charts, and export the statistics to a NAM, using NetFlow version 5 or version 9.
29. Send HTTP, FTP, and ICMP traffic between the branch and headquarters.
30. Send HTTP, FTP, DNS, and ICMP traffic between PCs on the branch, and configure NetFlow on the WAN and LAN interfaces for ingress and egress traffic.
31. Verify translations and statistics, using the **show ip nat translations** and **show ip nat statistics** commands.
32. Launch DDOS attacks from a PC attached to the branch router data VLAN to a server located in the headquarters.
33. Launch threats from a host in the Internet to the DMZ servers.
34. Verify translations and statistics, using the **show ip nat translations** and **show ip nat statistics** commands.
35. Verify whether the attacks are detected by Cisco IOS IPS and the alert messages logged to the syslog server.
36. Verify QoS, using the **show policy-map interface** command.
37. Verify NetFlow, using the **show ip flow** command.
38. Bring down the primary WAN interface by either pulling out the cable or shutting down the link on the headend side.
39. After about 3 minutes bring up the primary WAN interface.

**Pass/Fail Criteria**

When the primary WAN fails, OSPF reconvergence should occur within a second because of BFD.

ZPF should inspect all traffic going out the secondary WAN interface.

All the traffic between the branch and headquarters should be sent through the IPsec tunnel over the secondary WAN interface.

Inside addresses should be translated to outside global addresses when the traffic from the LAN is going out to the Internet. The return traffic from the Internet to the LAN should always be directed to the outside global address of the inside hosts.

HTTP, FTP, and ICMP sessions should be maintained during the switchover and switchback.

QoS should be applied to the traffic, and ZPF should not have any adverse effect on the QoS.

All the Internet traffic should be marked as best effort.

Traffic should be shaped to 95% of the WAN bandwidth.

Since the secondary WAN link bandwidth is less than the primary WAN bandwidth, only conforming high-priority traffic, such as voice traffic or mission-critical traffic, should be carried over the secondary WAN link. The rest should be dropped.

The attacks should be detected by Cisco IOS IPS, and appropriate signatures should be triggered.

Actions such as warning, dropping the packets or dropping the session, or blocking the host should be taken based on a particular signature configuration.

The alert messages related to the attack should be logged to a syslog server.

NBAR should provide bandwidth guarantees to different flows and should detect and stop worms such as NIMDA and CODE RED.

NetFlow statistics collected should be within performance requirements.

When the primary comes up after 3 minutes, the traffic should be routed over the primary WAN interface IPsec tunnel.

No router tracebacks, memory leaks, or crashes should be observed.

All the traffic should be Cisco Express Forwarding switched.

**Result**

Passed on Gigabit Ethernet interfaces.

BFD is supported only on Gigabit Ethernet interfaces. Support for additional WAN encapsulations such as Frame Relay and PPP is planned for future releases.

**Multicast with Security and QoS Features**

<b>Description</b>	Configure multicast PIM-v2 sparse mode on the branch and headend routers to send/receive multicast traffic
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</a> <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</a> <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>

**Procedure**

1. Set up a primary WAN interface and a secondary WAN interface on the branch router.
2. Set up the secondary WAN interface to be an SHDSL interface.
3. Configure secondary WAN to be a higher cost route than the primary WAN, using the OSPF **ip ospf cost** command, so that the primary WAN is always preferred.
4. Configure BFD on the primary WAN interface of the branch router and the primary WAN interface of the headend router with a BFD interval of 50 ms, a min\_rx of 50 ms, and a BFD multiplier of 5.
5. Configure BFD on the secondary WAN interface.
6. Enable BFD for all interfaces in the OSPF routing process.
7. Verify whether BFD is up by entering the **show bfd neighbor** command.
8. Configure an IPTV server on the headend to stream a 300-kb/s stream to a multicast group 239.10.x.x.
9. Configure the headend router as an RP, and configure PIM-SM on both the headend and branch routers.
10. Configure IGMP v2 on the access switches.
11. Configure one of the IPsec types, that is, DMVPN or GETVPN, on both the primary and secondary WAN interface between the branch and headquarters.
12. Configure ZPF as explained in the [Zone-based Policy Firewall Configuration on the Branch Router](#) test case procedure.
13. Configure the secondary WAN interface as the interface connecting to the Internet through the ISP.
14. Assign the primary WAN interface to the Private zone.
15. Assign the secondary WAN interface to the Public zone.
16. Assign the voice VLAN and data VLAN interfaces to the Private zone.
17. If you are using DMVPN, assign the tunnel interface to the VPN zone.
18. Define a firewall policy between the VPN zone and the Public zone.
19. Define a firewall policy between the VPN zone and the Private zone.
20. Configure static NAT translations for certain hosts on the data VLAN, using an address pool. For the rest of the hosts, configure PAT by using the **overload** command in the NAT configuration.
21. Configure the data VLAN as NAT inside, and configure the secondary WAN interface as NAT outside.
22. Configure Cisco IOS IPS with IDCONF v5.0 on the router.
23. Enable advanced category signature set.
24. Configure Cisco IOS IPS for both directions of traffic on the data and DMZ VLAN and WAN interfaces.
25. Enable syslog on the router, and log the syslog messages to a syslog server located in the branch.

**Procedure  
(continued)**

26. Configure 5-class hierarchical QoS on both the primary and secondary WAN interfaces.
  27. Mark all the traffic going out to the Internet as best-effort traffic.
  28. Configure traffic shaping to 95% of the available WAN bandwidth.
  29. Configure NBAR as in the [NBAR Classification with QoS](#) test case.
  30. Configure NetFlow on the WAN and LAN interfaces for ingress and egress traffic.
  31. Collect traffic statistics and distribution charts, and export the statistics to a NAM, using NetFlow version 5 or version 9.
  32. Send HTTP, FTP, and ICMP traffic between the branch and headquarters.
  33. Send HTTP, FTP, DNS, and ICMP traffic between PCs on the branch data VLAN to the Internet.
  34. Four clients in the branch join the multicast group 239.10.x.x to view the IPTV video stream.
  35. Verify translations and statistics, using the **show ip nat translations** and **show ip nat statistics** commands.
  36. Launch DDOS attacks from a PC attached the branch router data VLAN to a server located in the headquarters.
  37. Launch threats from a host in the Internet to the DMZ servers.
  38. Verify translations and statistics, using the **show ip nat translations** and **show ip nat statistics** commands.
  39. Verify whether the attacks are detected by Cisco IOS IPS and whether the alert messages are logged to the syslog server.
  40. Verify QoS, using the **show policy-map interface** command.
  41. Verify NetFlow, using the **show ip flow** command.
  42. Verify multicast traffic, using the **show ip mroute active** and **show ip mroute count** commands.
  43. Bring down the primary WAN interface by either pulling out the cable or shutting down the link on the headend side.
  44. After about 3 minutes, bring up the primary WAN interface.
- Note** IPTV clients leave the group after 5 minutes.

**Pass/Fail Criteria**

When the primary WAN fails, OSPF reconvergence should occur within a second because of BFD.

ZPF should inspect all traffic going out of the secondary WAN interface.

All the traffic between the branch and headquarters should be sent through the IPsec tunnel over the secondary WAN interface.

Inside addresses should be translated to outside global addresses when the traffic from the LAN is going out to the Internet. The return traffic from the Internet to the LAN should always be directed to the outside global address of the inside hosts.

HTTP, FTP, and ICMP sessions should be maintained during the switchover and switchback.

QoS should be applied to the traffic, and ZPF should not have any adverse effect on the QoS.

All the Internet traffic should be marked as best-effort.

Traffic should be shaped to 95% of the WAN bandwidth.

Since the secondary WAN link bandwidth is less than the primary WAN bandwidth, only conforming high-priority traffic, such as voice traffic or mission-critical traffic, should be carried over the secondary WAN link. The rest should be dropped.

The attacks should be detected by Cisco IOS IPS, and appropriate signatures should be triggered.

Actions such as warning, dropping the packets or dropping the session, or blocking the host should be taken based on a particular signature configuration.

The alert messages related to the attack should be logged to a syslog server.

NBAR should provide bandwidth guarantees to different flows and should detect and stop worms such as NIMDA and CODE RED.

The multicast join should be successful, and IPTV clients should be able to view the IPTV video stream.

Even when multiple clients join the multicast group, only one stream should be coming from the headend to the branch.

The multicast clients should continue to receive the video stream during primary WAN link failure.

NetFlow statistics collected should be within performance requirements.

When the primary comes up after 3 minutes, the traffic should be routed over the primary WAN interface IPsec tunnel.

No router tracebacks, memory leaks, or crashes should be observed.

The multicast stream should cease from the headend to the branch when all the clients leave the multicast group.

All the traffic should be Cisco Express Forwarding switched.

<b>Result</b>	Passed on Gigabit Ethernet interfaces. BFD is supported only on Gigabit Ethernet interfaces. Support for additional WAN encapsulations such as Frame Relay and PPP is planned for future releases.
---------------	---

## Network Management Test Cases

### Enable SNMP on the UUTs for Management and Monitoring

<b>Description</b>	Network management using SNMP
<b>Test Setup</b>	<p>Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode,</p> <p>Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode,</p> <p>Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode,</p> <p>Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</p> <p>Figure 5 on page 8, Private WAN, Cisco 1941 ISR</p> <p>Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</p>
<b>Procedure</b>	<p>Enable SNMP on the Units Under Test (UUTs) as follows:</p> <ol style="list-style-type: none"> <li>1. Define read-only and read-write community strings, using the <b>snmp-server community</b> command.</li> <li>2. Enable SNMP traps, using the <b>snmp-server enable traps</b> command.</li> <li>3. Enable traps related to link status in the interface, using the <b>snmp trap link-status</b> command,</li> </ol> <p>After enabling the UUTs for SNMP read-only and read-write access, poll an OID using the <b>snmpget</b> command on a UNIX box (for example, poll for the iftable to get a list of the interfaces on the router).</p>
<b>Pass/Fail Criteria</b>	If an SNMP trap-listener is configured, you should be able to see the traps sent by the UUT. You can simulate a link flap by entering a <b>shutdown</b> command, and then entering a <b>no shutdown</b> command. Configure the address of the management station, using the <b>snmp-server host</b> command.
<b>Result</b>	Passed

### Enable SYSLOG on the UUT for Management and Monitoring

<b>Description</b>	Syslog for management and monitoring
<b>Test Setup</b>	Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode, Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode, Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode, Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode Figure 5 on page 8, Private WAN, Cisco 1941 ISR Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Enable syslog on the UUTs, using the <b>logging</b> command in global configuration mode, and redirect it to a syslog server.</li><li>2. Enable syslog using the <b>logging host</b> and <b>logging facility local5</b> commands accordingly.</li></ol>
<b>Pass/Fail Criteria</b>	Syslog messages from the router should be sent to the syslog server; messages can be verified by comparing time stamps.
<b>Result</b>	Passed

### Using Cisco CCP for Configuration and Monitoring of the UUTs

<b>Description</b>	Using CCP for router configuration and management
<b>Test Setup</b>	Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode, Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode, Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode, Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode Figure 5 on page 8, Private WAN, Cisco 1941 ISR Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Enter the <b>ip http server</b> command on the UUT. CCP can reside on the flash memory or on the PC connected to the network.</li><li>2. Use the CCP GUI to configure and monitor the UUT. You can use the CCP GUI to configure most features, including firewall and VPN.</li></ol>
<b>Pass/Fail Criteria</b>	Log on to the UUTs using CCP, and use the GUI to configure and monitor the UUT and interfaces.
<b>Result</b>	Passed

## Cisco Unified CME Test Cases

### SCCP Phone Registration to Cisco Unified CME

<b>Description</b>	Register SCCP phones to the Cisco Unified CME
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure Cisco Unified CME on the branch router with the Cisco Unified CME address belonging to the voice VLAN segment.</li><li>2. For the Cisco 1861 branch, configure the maximum ephones to be 15 phones.</li><li>3. Configure dual lines and auto-registration for each of the phones.</li><li>4. Configure a TFTP server on the branch router for the phones to download the firmware.</li><li>5. Configure a DHCP server on the branch router to provide IP addresses for Cisco IP Phone endpoints.</li><li>6. Register SCCP phones to Cisco Unified CME. Register multiple phone types such as 7960, 7962, 7965, 7971, 7975, 7985, and 7936 phones.</li><li>7. Verify the configuration, using the <b>show telephony-service</b> and <b>show ephone registered</b> commands.</li></ol>
<b>Pass/Fail Criteria</b>	All the phones should successfully register to the Cisco Unified CME.
<b>Result</b>	Passed

### SIP Phone Registration to Cisco Unified CME

<b>Description</b>	Register SIP phones to Cisco Unified CME
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure Cisco Unified CME on the branch router with the Cisco Unified CME address belonging to the voice VLAN segment.</li><li>2. For the Cisco 1861 branch, configure the maximum ephones to be 15 phones.</li><li>3. Configure dual lines and auto-registration for each of the phones.</li><li>4. Configure a TFTP server on the branch router for the phones to download the firmware.</li><li>5. Configure a DHCP server on the branch router to provide IP addresses for the Cisco IP Phone endpoints.</li><li>6. Register SIP phones to Cisco Unified CME. Register multiple phone types such as 7960, 7962, 7965, 7971, 7975, 7985, and 7936 phones.</li><li>7. Verify the configuration, using the <b>show voice register</b> command.</li></ol>
------------------	--

**Pass/Fail Criteria** All the phones should successfully register to the Cisco Unified CME.

**Result** Passed

### SCCP Local Calls

**Description** Make calls between the SCCP phones registered to the Cisco Unified CME

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#), or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)

**Procedure**

1. Make a call between two phones registered to the Cisco Unified CME.
2. Verify ringback tone when the phone is ringing.
3. Verify the voice path, and pass DTMF digits between the phones.

**Pass/Fail Criteria** Voice call should be successful with 100% path confirmation.  
DTMF digit passing should be successful.

**Result** Passed

### SIP Local Calls

**Description** Make calls between the SIP phones registered to the Cisco Unified CME

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#)  
or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)

- Procedure**
1. Make a call between two phones registered to the Cisco Unified CME.
  2. Verify the ringback tone when the phone is ringing.
  3. Verify the voice path, and pass DTMF digits between the phones.

**Pass/Fail Criteria** The voice call should be successful with 100% path confirmation.  
DTMF digit passing should be successful.

**Result** Passed

### PSTN Calls

**Description** Make calls between the IP Phones registered to Cisco Unified CME to PSTN

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#), or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)

- Procedure**
1. Configure a PRI trunk to the PSTN on the branch router.
  2. Configure voice translation rules to translate incoming calls from the PSTN.
  3. Make a call from a PSTN phone to the branch IP Phone.
  4. Verify the ringback tone when the phone is ringing.
  5. Verify the voice path, and pass DTMF digits.
  6. Verify for both SCCP and SIP phones.

**Pass/Fail Criteria** Voice call should be successful with 100% path confirmation.  
DTMF digit passing should be successful.

**Result** Passed

### Branch to Headquarters Calls over the WAN with a SIP Trunk

**Description** Make calls between the IP Phones registered to Cisco Unified CME in the branch and IP Phones registered to Cisco Unified CM in the headquarters

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#), or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure a SIP trunk over the WAN interface between Cisco Unified CME and Cisco Unified CM.</li><li>2. Configure voice class with G.729 and G.711 as the codec options, with the first choice being G.729, and the second choice being G.711.</li><li>3. Configure RFC 2833 for DTMF relay.</li><li>4. Associate the voice class to the SIP trunk dial peer.</li><li>5. Make a call from an IP Phone in the branch to the IP Phone in the headquarters.</li><li>6. Verify the ringback tone when the phone is ringing.</li><li>7. Verify the voice path, and pass DTMF digits.</li><li>8. Verify for both SCCP and SIP phones.</li></ol>
------------------	--

<b>Pass/Fail Criteria</b>	Voice call should be successful with 100% path confirmation. DTMF digit passing should be successful.
---------------------------	--

<b>Result</b>	Passed
---------------	--------

#### Branch to Headquarters Calls over the WAN with an H.323 trunk

<b>Description</b>	Make calls between the IP Phones registered to Cisco Unified CME in the branch and IP Phones registered to Cisco Unified CM in the headquarters
--------------------	---

<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
-------------------	--

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure an H.323 trunk over the WAN interface between Cisco Unified CME and Cisco Unified CM.</li><li>2. Configure voice class with G.729 and G.711 as the codec options, with the first choice being G.729, and the second choice being G.711.</li><li>3. Configure RFC 2833 DTMF relay.</li><li>4. Associate the voice class to the H.323 dial peer.</li><li>5. Make a call from an IP Phone in the branch to the IP Phone in the headquarters.</li><li>6. Verify the ringback tone when the phone is ringing.</li><li>7. Verify the voice path, and pass DTMF digits.</li><li>8. Verify for both SCCP and SIP Phones.</li></ol>
------------------	---

<b>Pass/Fail Criteria</b>	Voice call should be successful with 100% path confirmation. DTMF digit passing should be successful.
---------------------------	--

<b>Result</b>	Passed
---------------	--------

### Supplementary Services with Cisco Unified CME

<b>Description</b>	Test the various supplementary features in Cisco Unified CME with all the phones local to the branch
<b>Test Setup</b>	<p><a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a>, or</p> <p><a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure transfer system full-consult on the Cisco Unified CME.</li> <li>2. Configure music on hold (MOH) to source from a file in flash memory.</li> <li>3. Verify call transfer full consult between phones A, B, and C, with C being the transferrer; that is, make a call from phone A to phone B, and transfer the call to phone C.</li> <li>4. Verify MOH on phone A during call transfer.</li> <li>5. Configure transfer system full-blind on the Cisco Unified CME.</li> <li>6. Verify call transfer full-blind between phones A, B, and C with C being the transferrer, that is, make a call from phone A to phone B, and transfer the call to phone C.</li> <li>7. Verify MOH on phone A during call transfer.</li> <li>8. Configure call forward functionality by configuring forward-to numbers under the ephone-dns.</li> <li>9. Verify call forward no answer to another ephone extension.</li> <li>10. Verify call forward all to another ephone extension.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>Voice call should be successful with 100% path confirmation.</p> <p>Call transfer full-consult should be successful.</p> <p>Call transfer full-blind should be successful.</p> <p>Call forward no answer should be successful.</p> <p>Call forward all should be successful.</p> <p>MOH should be heard.</p>
<b>Result</b>	Passed

### Supplementary Services Between Phones in the Branch, Headquarters, and PSTN

<b>Description</b>	Test the various supplementary features between phones in the branch registered to Cisco Unified CME, phones registered to Cisco Unified CM, and PSTN phones
<b>Test Setup</b>	<p><a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a>, or</p> <p><a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a></p>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure transfer system full-consult on the Cisco Unified CME.</li> <li>2. Configure MOH to source from a file in flash memory.</li> <li>3. Configure multicast MOH.</li> <li>4. Verify call transfer full-consult between phones A, B, and C with C being the transferrer; that is, make a call from phone A to phone B, and transfer the call to phone C. Phone A is located in headquarters, Phone B is located in the branch, and Phone C is in the PSTN.</li> <li>5. Verify MOH on phone A during call transfer.</li> <li>6. Configure transfer system full-blind on the Cisco Unified CME.</li> <li>7. Verify call transfer full-blind between phones A, B, and C with C being the transferrer; that is, make a call from phone A to phone B, and transfer the call to phone C.</li> <li>8. Verify MOH on phone A during call transfer.</li> <li>9. Configure call forward functionality for Cisco Unified CME phones by configuring forward-to numbers under the ephone-dns.</li> <li>10. Verify call forward no answer to another ephone extension.</li> <li>11. Verify call forward all to another ephone extension.</li> </ol>
------------------	--

<b>Pass/Fail Criteria</b>	<p>Voice call should be successful with 100% path confirmation.</p> <p>Call transfer full-consult should be successful.</p> <p>Call transfer full-blind should be successful.</p> <p>Call forward no answer should be successful.</p> <p>Call forward all should be successful.</p> <p>MOH should be heard.</p>
---------------------------	---

<b>Result</b>	Passed
---------------	--------

### Call Conference in the Branch Cisco Unified CME

<b>Description</b>	Test a three-party conference with the branch IP Phone as the conference initiator
<b>Test Setup</b>	<p><a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a>, or</p> <p><a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Make a three-party conference between a branch phone, a headquarters phone, and a PSTN phone, with the branch phone as the conference initiator.</li> </ol>
<b>Pass/Fail Criteria</b>	Conference call should be successful.
<b>Result</b>	Passed

**Call Forward to Voice Mail**

<b>Description</b>	Test call forward to Cisco Unity Express with transcoding on the Cisco Unified CME
<b>Test Setup</b>	Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode, or Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure call forward on no answer or busy to voice mail on the ephone DNs of the IP Phones on the branch.</li> <li>2. Set up Cisco Unity Express as the voice mail system.</li> <li>3. Configure DSP farm on the branch router for Cisco Unified CME transcoding to transcode G.729 codec to G.711-ulaw codec.</li> <li>4. Make a call from the headquarters phone to the branch phone that uses the G.729 codec.</li> <li>5. Make a branch phone busy.</li> <li>6. Verify whether the call was forwarded to voice mail.</li> <li>7. Verify whether the MWI appears on the branch phone.</li> <li>8. Retrieve the voice mail from Cisco Unity Express by dialing the voice mail from the branch phone.</li> <li>9. Verify whether the MWI disappears once the message is heard.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>The call should be forwarded to voice mail.</p> <p>Cisco Unified CME transcoding resources should be invoked when the call is forwarded to voice mail, because Cisco Unity Express supports only the G.711u-law codec.</p> <p>The MWI light should appear when the message is left in Cisco Unity Express and should disappear once the message is retrieved.</p>
<b>Result</b>	Passed

**Video Call Between Branch and Headquarters**

<b>Description</b>	Test a video call between the branch and headquarters using either Cisco Unified Video Advantage or the Cisco Unified IP Phone 7985G.
<b>Test Setup</b>	Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode, or Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode

- Procedure**
1. Make a video call between the branch phone and the headquarters phone using either Cisco Unified Video Advantage or the Cisco Unified IP Phone 7985G with H.263 for the video and G.711u-law codec for the voice.
  2. Test Hold and Resume on the Cisco Unified CME phone.
  3. Test mute.
  4. Verify the voice and video path.

**Pass/Fail Criteria**

The voice and video path confirmation should be 100%.

When the Cisco Unified CME phone puts the call on hold, the headquarters phone should hear MOH.

When the Cisco Unified CME phone mutes the call, the headquarters phone should not hear anything, and the video should freeze.

**Result** Passed

### T.38 Fax Between Branch and Headquarters

**Description** Test T.38 fax between the branch and headquarters

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#), or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)

- Procedure**
1. Configure T.38 fax on the branch router and T.38 fax the Cisco Unified CM.
  2. Using a fax machine in the branch, send a multipage fax to a fax machine in the headquarters.

**Pass/Fail Criteria** The fax should be received properly on the headquarters fax machine.

**Result** Passed

### IP SLA VoIP UDP Jitter Codec g711ulaw (Branch to HQ)

**Description** VoIP UDP Jitter IP SLA codec g711ulaw

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#), or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)

- Procedure**
1. Enable the IP SLA responder on the HQ router.
  2. Configure the basic VoIP UDP Jitter operation type on the branch router.
  3. Configure any options available, such as codec g711ulaw, for the VoIP UDP Jitter SLAs operation type.
  4. Configure the threshold conditions, if required.
  5. Schedule the operation to run and let the operation run for enough of a period of time to gather statistics.
  6. Display and interpret the results of the operation using either the Cisco IOS CLI or an NMS system with SNMP.

**Pass/Fail Criteria** To view and interpret the operational results of an IP SLA, use the **show ip sla monitor statistics** command to check the boundaries the limits, for example:

ICPIF Range	MOS	Quality
0–3	5	Best
4–13	4	High
14–23	3	Medium
24–33	2	Low
34–43	1	Poor

**Result** Passed

### Remote Phones on the Cisco Unified CME

**Description** Test remote phone support in the Cisco Unified CME

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#) or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)

- Procedure**
1. Register a remote phone to the Cisco Unified CME through the Internet; that is, the remote phone is located in the remote teleworker's home office.
  2. Configure the G.729 codec for remote phones.
  3. Configure the media termination point (MTP) option on the Cisco Unified CME to terminate and originate RTP packets from and to the remote phone.
  4. Configure DSP farm assist for the remote phone to transcode G.729 calls to G.711 calls.
  5. Make a call from the remote phone to a branch IP Phone.
  6. Verify the ringback tone when the phone is ringing.
  7. Verify the voice path and also pass DTMF digits.

<b>Pass/Fail Criteria</b>	The ringback tone should be heard. The voice path confirmation should be 100%. DTMF digit passing should be successful.
<b>Result</b>	Passed

#### Cisco Unified CME with WAN Failure Scenario to Headquarters

<b>Description</b>	Test the Cisco Unified CME functionality to the headquarters during WAN failure
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Make a call between a branch IP Phone and a headquarters IP Phone.</li><li>2. Make a call between a branch IP Phone and a PSTN phone.</li><li>3. Make a call between two branch IP Phones.</li><li>4. Bring down the WAN interface of the router.</li></ol>
<b>Pass/Fail Criteria</b>	During WAN failure the call between the branch IP Phone and the headquarters IP Phone should be dropped; however, the call between the IP Phone and the PSTN phone and the call between the two IP Phones in the branch should be sustained.
<b>Result</b>	Passed

#### Cisco Unified CME with IPsec over the WAN

<b>Description</b>	Test Cisco Unified CME functionality with IPsec over the WAN
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure IPsec over the WAN, and test with all types of IPsec.</li><li>2. Make a video call from a branch IP Phone to a headquarters IP Phone.</li><li>3. Verify ringback.</li><li>4. Verify whether signaling, voice, and video packets are encrypted and decrypted properly.</li><li>5. Verify voice and video path, and pass DTMF digits.</li></ol>

<b>Pass/Fail Criteria</b>	Signaling, voice, and video packets should be encrypted and decrypted properly. The ringback tone should be heard when the remote phone rings. The voice and video path confirmation should be 100%. DTMF digit passing should be successful.
<b>Result</b>	Passed

### Cisco Unified CME with QoS and NBAR

<b>Description</b>	Test Cisco Unified CME functionality with QoS and NBAR applied to signaling and RTP packets
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure the 5-class QoS model over the primary WAN interface.</li><li>2. Configure LLQ for voice and video traffic and allocate X% and Y% of the bandwidth for voice and video, but make sure not to exceed 33% of the total bandwidth.</li><li>3. Configure 1P3Q3T on the Catalyst switch, and trust the COS value coming from the Cisco IP Phones.</li><li>4. Configure a DSCP value of CS3 on the SIP/H.323 dial peer to give priority to signaling traffic.</li><li>5. Make voice and video calls from branch IP Phones to headquarters IP Phones.</li><li>6. Verify whether the IP Phone marks the voice traffic with a DSCP value of EF.</li><li>7. Verify whether the Catalyst switch marks the video packets with a DSCP value of AF41.</li><li>8. Verify whether call signaling, voice, and video traffic are classified properly and put in priority queue.</li><li>9. Send more voice and video traffic to exceed the allocated bandwidth, and verify whether voice and video traffic is dropped.</li></ol>

**Pass/Fail Criteria**

The IP Phone should mark the voice traffic with DSCP value of EF.  
The IP Phone should mark SCCP signaling traffic with DSCP value of CS3.  
The Catalyst switch should trust the COS value marked by IP Phone.  
Catalyst switch should remark the video traffic to AF41.  
QoS on the router should properly classify signaling, voice, and video packets, based on their DSCP value.  
Voice and video should get strict priority queuing treatment; that is, adhering voice and video traffic should be sent out first, and exceeding voice and video traffic should be dropped.

**Result** Passed

### Cisco Unified CME with ZPF

**Description** Test Cisco Unified CME functionality with ZPF

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#), or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)

**Procedure**

1. Configure ZPF, with data and voice VLANs in the Private zone and with WAN interface in the Public zone.
2. Configure a policy to inspect router-generated SIP, H.323, and RTP traffic from system-defined self-zone to Public zone, and vice versa.
3. Configure access lists to allow calls originated in headquarters through the firewall.
4. Make a voice call from a branch IP Phone to a headquarters IP Phone.
5. Verify the ringback tone.
6. Verify the voice path and pass DTMF digits.

**Pass/Fail Criteria**

ZPF should inspect call signaling and RTP packets and open holes for the return traffic.  
The ringback tone should be heard.  
The voice path confirmation should be 100%.  
DTMF digit passing should be successful.

**Result** Passed

**Cisco Unified CME Remote Phones with ZPF**

<b>Description</b>	Test Cisco Unified CME remote phone support with ZPF
<b>Test Setup</b>	<p><a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a>, or</p> <p><a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure ZPF, with data and voice VLANs in the Private zone and WAN interface in the Public zone.</li> <li>2. Configure a policy to inspect router generated SIP, H.323, and RTP traffic from system-defined self-zone to Public zone, and vice versa.</li> <li>3. Configure a policy to inspect SCCP traffic for the remote phone.</li> <li>4. Configure an access list to allow incoming SCCP and RTP traffic from a remote phone to the Cisco Unified CME.</li> <li>5. Configure MTP on the Cisco Unified CME.</li> <li>6. Configure DSP farm assist for the remote phone.</li> <li>7. Configure an access list to allow calls originated in headquarters through the firewall.</li> <li>8. Make a voice call from a remote IP Phone to a branch IP Phone.</li> <li>9. Verify the ringback tone.</li> <li>10. Verify the voice path and pass DTMF digits.</li> <li>11. When the call is verified, transfer the call, using full-consult transfer, to a headquarters, with the branch phone being the transferrer. Commit the transfer.</li> <li>12. Verify whether the transfer completes.</li> <li>13. Verify whether the voice path between the remote phone and the headquarters phone is set up.</li> <li>14. Verify DTMF digit passing.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>ZPF should open holes for SCCP traffic for remote phone registration.</p> <p>ZPF should inspect call signaling and RTP packets and open holes for the return traffic.</p> <p>The ringback tone should be heard.</p> <p>The voice path confirmation should be 100%.</p> <p>DTMF digit passing should be successful.</p> <p>Transfer should be successful.</p>
<b>Result</b>	Passed

**Cisco Unified CME Failover with Secondary Cisco Unified CME**

<b>Description</b>	Test Cisco Unified CME failover to a secondary Cisco Unified CME
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Set up Cisco Unified CMEs on two branch routers; make one of the routers the primary Cisco Unified CME, and make the other the secondary.</li><li>2. Register all the phones to the primary Cisco Unified CME.</li><li>3. Verify in the phone network configuration whether both Cisco Unified CMEs exist.</li><li>4. Make a call between the branch IP Phone and the headquarters IP Phone.</li><li>5. Make a call between the branch IP Phone and another branch IP Phone.</li><li>6. Bring down the primary Cisco Unified CME by reloading that router.</li><li>7. Verify whether all the phones register to the secondary Cisco Unified CME.</li><li>8. Verify the status of active calls.</li><li>9. Verify MWI status of phones with active voice mail.</li><li>10. Verify whether the phones fall back to the primary Cisco Unified CME when it comes back up.</li></ol>
<b>Pass/Fail Criteria</b>	<p>When the primary Cisco Unified CME fails, all the phones with no active calls should immediately register to the secondary Cisco Unified CME.</p> <p>For phones with active calls over the WAN to headquarters or the PSTN, those calls should be dropped. The phones should immediately register to the secondary Cisco Unified CME.</p> <p>For phones with active calls local to the branch, those calls should be sustained. When those calls complete, those phones should register to the secondary Cisco Unified CME.</p> <p>Phones with active voice mail should lose their MWI.</p> <p>When the primary Cisco Unified CME comes up, all the phones should register to primary Cisco Unified CME.</p>
<b>Result</b>	Passed

**Baseline Features Plus Cisco Unified CME**

<b>Description</b>	Test baseline features plus Cisco Unified CME
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Enable all baseline features as described in the <a href="#">Complete Baseline Test</a> test case.</li><li>2. Configure a primary Cisco Unified CME and a secondary Unified CME.</li><li>3. Register all the phones to the primary Cisco Unified CME.</li><li>4. Make voice and video calls between branch IP Phones and headquarters IP Phones.<ol style="list-style-type: none"><li>a. Verify the ringback tone, verify the voice and video path, and pass DTMF digits.</li></ol></li><li>5. Make voice calls between branch IP Phones and PSTN phones.<ol style="list-style-type: none"><li>a. Verify the ringback tone, verify the voice path, and pass DTMF digits.</li></ol></li><li>6. Make voice calls between branch IP Phones.<ol style="list-style-type: none"><li>a. Verify the ringback tone, verify the voice path, and pass DTMF digits.</li></ol></li><li>7. Make a 4-party conference call with a branch IP Phone, a branch FXS phone, a headquarters IP Phone, and a PSTN phone as the conference participants.<ol style="list-style-type: none"><li>a. Verify that when the conference initiator leaves the conference, all the parties are dropped.</li></ol></li><li>8. Make a call from a headquarters IP Phone to a branch IP Phone, which is busy.<ol style="list-style-type: none"><li>a. Verify whether the headquarters IP Phone is able to leave voice mail.</li><li>b. Verify whether Cisco Unified CME transcoding is invoked.</li><li>c. Verify whether the branch phone receives an MWI.</li></ol></li><li>9. Retrieve voice mail from branch IP Phones.<ol style="list-style-type: none"><li>a. Verify whether MWI changes status once the voice mail messages are retrieved.</li></ol></li><li>10. Make a call from a remote Cisco Unified CME phone to a branch IP Phone.<ol style="list-style-type: none"><li>a. Verify the ringback tone, verify the voice path, and pass DTMF digits.</li></ol></li><li>11. Verify supplementary services.</li></ol>

<b>Pass/Fail Criteria</b>	<p>The voice and video path confirmation should be 100%.</p> <p>Cisco Unified CME transcoding gets invoked for call transfers to voice mail, with the calling party being in headquarters.</p> <p>DSP farm assist gets invoked for remote phones.</p> <p>The MWI light should turn on when voice mail messages are left and should turn off when the voice mail messages are retrieved.</p> <p>The conference call should be successful.</p> <p>Supplementary services such as call transfer and call forward should be successful.</p>
<b>Result</b>	Passed

## Cisco Unified SRST Test Cases

### SCCP Phone Registration to Cisco Unified CM

<b>Description</b>	Register IP Phones in the branch to the Cisco Unified CM located in the headquarters using SCCP
<b>Test Setup</b>	<p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a>, or</p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. For the Cisco 1861 branch, register 15 phones to Cisco Unified CM.</li> <li>2. Use Cisco Unified CM bulk registration utility to register all the phones.</li> <li>3. Configure regions in Cisco Unified CM for each branch.</li> <li>4. Configure dual lines for each phone.</li> <li>5. Configure the TFTP server as the Cisco Unified CM in the branch router that is used to download the firmware.</li> <li>6. Configure a DHCP server on the branch router to provide IP addresses to IP Phone endpoints.</li> <li>7. Register SCCP phones to Cisco Unified CM. Register multiple phone types such as 7960, 7962, 7965, 7971, 7975, 7985, and 7936 phones.</li> </ol>
<b>Pass/Fail Criteria</b>	All the phones should successfully register to the Cisco Unified CM.
<b>Result</b>	Passed

**SIP Phone Registration to Cisco Unified CM**

<b>Description</b>	Register IP Phones in the branch to the Cisco Unified Communications Manager, located in the headquarters using SIP
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. For the Cisco 1861 branch, register 15 phones to Cisco Unified CM.</li> <li>2. Use the Cisco Unified CM bulk registration utility to register all the phones.</li> <li>3. Configure regions in the Cisco Unified CM for each branch.</li> <li>4. Configure dual lines for each of the phones.</li> <li>5. Configure a TFTP server as the Cisco Unified Communications Manager in the branch router for the phones to download the firmware.</li> <li>6. Configure a DHCP server on the branch router to provide IP addresses to IP Phone endpoints.</li> <li>7. Register SIP phones to Cisco Unified CM. Register multiple phone types such as 7960, 7962, 7965, 7971, 7975, 7985, and 7936 phones.</li> </ol>
<b>Pass/Fail Criteria</b>	All the phones should successfully register to the Cisco Unified CM.
<b>Result</b>	Passed

**SIP Local Calls**

<b>Description</b>	Make calls between the SIP phones registered to the Cisco Unified CM
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Make a call between two phones registered to the Cisco Unified CM.</li> <li>2. Verify the ringback tone when the phone is ringing.</li> <li>3. Verify the voice path, and pass DTMF digits between the phones.</li> </ol>
<b>Pass/Fail Criteria</b>	The voice calls should be successful with 100% path confirmation. DTMF digit passing should be successful.
<b>Result</b>	Passed

**SCCP Local Calls**

<b>Description</b>	Make calls between the SCCP phones registered to the Cisco Unified CM.
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Make a call between two phones registered to the Cisco Unified CM.</li><li>2. Verify the ringback tone when the phone is ringing.</li><li>3. Verify the voice path, and pass DTMF digits between the phones.</li></ol>
<b>Pass/Fail Criteria</b>	The voice call should be successful with 100% path confirmation. DTMF digit passing should be successful.
<b>Result</b>	Passed

**PSTN Calls with SIP Gateway**

<b>Description</b>	Make calls between the IP Phones registered to Cisco Unified CM and PSTN phones
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure a PRI trunk to the PSTN on the branch router.</li><li>2. Configure voice translation rules to translate incoming calls from the PSTN.</li><li>3. Configure a SIP trunk between the branch router and Cisco Unified CM.</li><li>4. Register the branch router as a SIP gateway in Cisco Unified CM.</li><li>5. Configure an autoattendant in Cisco Unified CM that includes route lists, route groups, and route pattern.</li><li>6. Make a call from a PSTN phone to the branch IP Phone.</li><li>7. Verify the ringback tone when the phone is ringing.</li><li>8. Verify the voice path, and pass DTMF digits.</li></ol>
<b>Pass/Fail Criteria</b>	The voice call should be successful with 100% path confirmation. DTMF digit passing should be successful.
<b>Result</b>	Passed

**PSTN Calls with H.323 Gateway**

<b>Description</b>	Make calls between the IP Phones registered to Cisco Unified CM to PSTN
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure a PRI trunk to the PSTN on the branch router.</li> <li>2. Configure voice translation rules to translate incoming calls from the PSTN.</li> <li>3. Configure an H.323 trunk between the branch router and Cisco Unified CM.</li> <li>4. Register the branch router as an H.323 gateway in Cisco Unified CM.</li> <li>5. Configure a autoattendant in Cisco Unified CM that includes route lists, route groups, and route pattern.</li> <li>6. Make a call from a PSTN phone to the branch IP Phone.</li> <li>7. Verify the ringback tone when the phone is ringing.</li> <li>8. Verify the voice path, and pass DTMF digits.</li> </ol>
<b>Pass/Fail Criteria</b>	The voice call should be successful with 100% path confirmation. DTMF digit passing should be successful.
<b>Result</b>	Passed

**Branch to Headquarters Calls over the WAN**

<b>Description</b>	Make calls between the branch IP Phones registered to Cisco Unified CM and IP Phones registered to Cisco Unified CM in the headquarters
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Make a call from an IP Phone in the branch to the IP Phone in the headquarters.</li> <li>2. Verify the ringback tone when the phone is ringing.</li> <li>3. Verify the voice path, and pass DTMF digits.</li> <li>4. Verify for both SCCP and SIP Phones.</li> </ol>
<b>Pass/Fail Criteria</b>	The voice call should be successful with 100% path confirmation. DTMF digit passing should be successful.
<b>Result</b>	Passed

### Supplementary Services Between Phones in Branch, Headquarters, and PSTN

<b>Description</b>	Test the various supplementary features between phones in the branch registered to Cisco Unified CM, phones in headquarters registered to Cisco Unified CM, and PSTN phones
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure the branch router as a SIP gateway.</li><li>2. Configure multicast MOH on Cisco Unified CM.</li><li>3. Enable PIM-SM on the branch router and headend router, with the headend router as the RP.</li><li>4. Verify call transfer full-consult between phones A (located in headquarters), B (located in the branch), and C (on the PSTN) with C being the transferrer; that is, make a call from phone A to phone B, and transfer the call to phone C.</li><li>5. Verify MOH on phone A during call transfer.</li><li>6. Configure call forward functionality for IP Phones by configuring forward-to numbers in the phone configuration in Cisco Unified CM.</li><li>7. Verify call forward no answer to another IP Phone extension.</li><li>8. Verify call forward all to another IP Phone extension.</li></ol>
<b>Pass/Fail Criteria</b>	The voice call should be successful with 100% path confirmation. Call transfer full-consult should be successful. Call forward no answer should be successful. Call forward all should be successful. MOH should be heard.
<b>Result</b>	Passed

### Call Conference in the Branch

<b>Description</b>	Test a three-party conference with the branch IP Phone as the conference initiator
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>

- Procedure**
1. Configure DSP farm conferencing on the branch router to utilize the DSP resources in the branch router for conferencing.
  2. Configure a media resources group for conference in the Cisco Unified CM.
  3. Add the branch router DSP farm resource to the media resource group.
  4. Register the DSP farm to the Cisco Unified CM.
  5. Make a three-party conference between a branch phone, headquarters phone, and a PSTN phone, with the branch phone as the conference initiator.
  6. Verify whether DSP farm conferencing resources is utilized, using the **show dspfarm** and **show sccp connections** commands.

**Pass/Fail Criteria**

Conference call should be successful.

The DSP farm resources on the branch router should be utilized for conferencing.

When the conference initiator drops the call, all the parties should drop out of the conference.

**Result** Passed

#### **Call Forward to Voice Mail**

**Description** Test call forward to Cisco Unity Express with DSP farm transcoding

**Test Setup** [Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode](#), or  
[Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode](#)

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Set up Cisco Unity Express on the branch router and register Cisco Unity Express to Cisco Unified CM using JTAPI.</li> <li>2. Configure CTI ports on Cisco Unified CM.</li> <li>3. Configure call forward on no answer or busy to voice mail in the device, phone configuration in Cisco Unified CM.</li> <li>4. Configure DSP farm transcoding on the branch router to transcode G.729 codec to G.711ulaw codec.</li> <li>5. Configure a media resource group for transcoder in Cisco Unified CM, and add the branch DSP farm transcoding resource to the media resource group.</li> <li>6. Make a call from the headquarters phone to the branch phone using the G.729 codec.</li> <li>7. Make the branch phone busy.</li> <li>8. Verify whether the call was forwarded to voice mail.</li> <li>9. Verify whether MWI appears on the branch phone when the voice mail is left.</li> <li>10. Retrieve the voice mail from the Cisco Unity Express by dialing the voice mail from the branch phone.</li> <li>11. Verify whether the MWI disappears when the message is heard.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>The call should be forwarded to voice mail.</p> <p>The DSP farm transcoding resources should be invoked when the call is forwarded to voice mail, since Cisco Unity Express supports only the G.71u-law codec.</p> <p>The MWI light should appear when the message is left in Cisco Unity Express and should disappear when the message is retrieved.</p>
<b>Result</b>	Passed

#### Phone Registration During Cisco Unified Survivable Remote Site Telephony (Cisco Unified SRST)

<b>Description</b>	Test IP Phone registrations during Cisco Unified SRST mode
<b>Test Setup</b>	<p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a>, or</p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Initially register all the branch phones to Cisco Unified CM.</li> <li>2. Configure Cisco Unified SRST in the branch router.</li> <li>3. Configure Cisco Unified SRST in Cisco Unified CM as the branch router.</li> <li>4. Make calls between branch phones and headquarters phones, local calls, and calls from the branch to the PSTN.</li> <li>5. Bring down the WAN interface or bring down Cisco Unified CM by shutting it down.</li> <li>6. Verify the state of active calls during WAN/Cisco Unified CM failure.</li> <li>7. Verify whether all the phones register to Cisco Unified SRST.</li> <li>8. Bring up the Cisco Unified CM after about 10 minutes, and verify whether all the phones register to Cisco Unified Communications Manager.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>Phones with no active calls should immediately register to Cisco Unified SRST.</p> <p>Phones with active calls to headquarters should drop the call and register to Cisco Unified SRST.</p> <p>Local calls and calls to the PSTN should be sustained. When the call completes, those phones should register to Cisco Unified SRST.</p> <p>All the phones should immediately register to Cisco Unified CM when it comes up.</p>
<b>Result</b>	Passed

#### Local and PSTN Calls in Cisco Unified SRST Mode

<b>Description</b>	Test local and PSTN calls in Cisco Unified SRST mode
<b>Test Setup</b>	<p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a>, or</p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure MOH to source audio files from flash memory.</li> <li>2. Make local calls, and make calls to the PSTN.</li> <li>3. Verify the ringback tone.</li> <li>4. Verify the voice path, and pass DTMF digits.</li> <li>5. Place local calls on hold for 30 seconds, and then resume the call.</li> <li>6. Place PSTN calls on hold for 30 seconds, and then resume the call.</li> </ol>

<b>Pass/Fail Criteria</b>	The ringback tone should be heard. The voice path confirmation should be 100%. DMTF digit passing should be successful. Local call hold/resume should be successful. PSTN call hold/resume should be successful. Locals call should hear tone on hold. PSTN callers should hear music on hold.
<b>Result</b>	Passed

### Supplementary Services in Cisco Unified SRST Mode

<b>Description</b>	Test supplementary services such as call transfers and call forwards in Cisco Unified SRST mode
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure transfer system full-consult on the Cisco Unified SRST.</li><li>2. Configure MOH to source from a file in flash memory.</li><li>3. Configure Multicast MOH.</li><li>4. Verify call transfer full-consult between phones A, B, and C with C being the transferrer; that is, make a call from phone A to phone B, and transfer the call to phone C. Phone C and phone B are located in the branch, and phone A is in the PSTN.</li><li>5. Make a call from phone A to phone B, and transfer the call to phone C.</li><li>6. Verify MOH on phone A during call transfer.</li><li>7. Configure transfer system full-blind on the Cisco Unified SRST.</li><li>8. Verify call transfer full-blind between phones A, B, and C, with C being the transferer; that is, make a call from phone A to phone C, and transfer the call to phone B.</li><li>9. Verify MOH on phone A during call transfer.</li><li>10. Configure call forward functionality for the Cisco Unified SRST phones.</li><li>11. Verify call forward no answer to another ephone extension.</li><li>12. Verify call forward all to another ephone extension.</li></ol>

<b>Pass/Fail Criteria</b>	The voice call should be successful with 100% path confirmation. Call transfer full-consult should be successful. Call forward no answer should be successful. Call forward all should be successful. MOH should be heard.
<b>Result</b>	Passed

#### Call Forward to Voice Mail in Cisco Unified SRST Mode

<b>Description</b>	Test call forward to Cisco Unity Express with transcoding on the Cisco Unified CME
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure call forward on no answer or busy to voice mail in Cisco Unified Communications Manager phone configuration.</li> <li>2. Go to Cisco Unified SRST mode.</li> <li>3. Set up Cisco Unity Express as the voice mail system.</li> <li>4. Make a call from the PSTN phone to a busy branch phone.</li> <li>5. Verify whether the call was forwarded to voice mail.</li> <li>6. Verify whether MWI appears on the branch phone.</li> <li>7. Retrieve the voice mail from Cisco Unity Express by dialing the voice mail from the branch phone.</li> <li>8. Verify whether the MWI disappears when the message is heard.</li> </ol>
<b>Pass/Fail Criteria</b>	The call should be forwarded to voice mail. The MWI light should appear when the message is left in Cisco Unity Express and should disappear when the message is retrieved.
<b>Result</b>	Passed

#### Call Conference in Cisco Unified SRST Mode

<b>Description</b>	Test a three-party conference with the branch IP Phone as the conference initiator
<b>Test Setup</b>	<a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a> , or <a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a>

<b>Procedure</b>	1. Make a three-party conference call between two branch phones and a PSTN phone, with one of the branch phones as the conference initiator.
<b>Pass/Fail Criteria</b>	The conference call should be successful.
<b>Result</b>	Passed

#### Branch to Headquarters Calls with IPsec over the WAN

<b>Description</b>	Test branch to headquarters calls with IPsec over the WAN
<b>Test Setup</b>	Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode, or Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure IPsec over the WAN, and test with all types of IPsec.</li> <li>2. Register the branch phones to the Cisco Unified Communications Manager.</li> <li>3. Make a video call from a branch IP Phone to a headquarters IP Phone.</li> <li>4. Verify the ringback tone.</li> <li>5. Verify whether signaling, voice, and video packets are encrypted and decrypted properly.</li> <li>6. Verify voice and video path, and pass DTMF digits.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>Signaling, voice, and video packets should be encrypted and decrypted properly.</p> <p>The ringback tone should be heard when the remote phone rings.</p> <p>The voice and video path confirmation should be 100%.</p> <p>DTMF digit passing should be successful.</p>
<b>Result</b>	Passed

#### Branch to Headquarters Voice and Video Calls with QoS and NBAR

<b>Description</b>	Test branch to headquarters voice and video calls with QoS and NBAR applied to signaling and RTP packets
<b>Test Setup</b>	Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode, or Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure the 5-class QoS Model over the primary WAN interface.</li> <li>2. Configure LLQ for voice and video traffic, and allocate X% and Y% of the bandwidth for voice and video, but make sure not to exceed 33% of the total bandwidth.</li> <li>3. Configure 1P3Q3T on the Catalyst switch, and trust the CoS value coming from the Cisco IP Phones.</li> <li>4. Configure a DSCP value of CS3 on the SIP/H.323 dial peer to give priority to signaling traffic.</li> <li>5. Register the branch phones to the Cisco Unified Communications Manager.</li> <li>6. Make voice and video calls from branch IP Phones to headquarters IP Phones.</li> <li>7. Verify whether the IP Phone marks the voice traffic with a DSCP value of EF.</li> <li>8. Verify whether the Catalyst switch marks the video packets with a DSCP value of AF41.</li> <li>9. Verify whether call signaling, voice, and video traffic is classified properly and put in priority queue.</li> <li>10. Send more voice and video traffic to exceed the allocated bandwidth, and verify whether voice and video traffic is dropped.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>The IP Phone should mark the voice traffic with a DSCP value of EF.</p> <p>The IP Phone should mark SCCP signaling traffic with a DSCP value of CS3.</p> <p>The Catalyst switch should trust the COS value marked by the IP Phone.</p> <p>The Catalyst switch should re-mark the video traffic to AF41.</p> <p>QoS on the router should properly classify signaling, voice, and video packets, based on their DSCP values.</p> <p>Voice and video traffic should receive strict priority queuing treatment; that is, adhering voice and video traffic should be sent out first, and exceeding voice and video traffic should be dropped.</p>
<b>Result</b>	Passed

#### Branch to Headquarters Voice and Video calls with ZPF

<b>Description</b>	Test Cisco Unified CME functionality with ZPF
<b>Test Setup</b>	<p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a>, or</p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure ZPF with data and voice VLANs in the Private zone and WAN interface in the Public zone.</li><li>2. In the Private-Public zone policy, add statements to inspect SCCP and SIP signaling the traffic from the phones, and add access lists to all incoming calls to the branch from headquarters.</li><li>3. Make a voice call from a branch IP Phone to a headquarters IP Phone.</li><li>4. Verify the ringback tone.</li><li>5. Verify the voice path, and pass DTMF digits.</li></ol>
<b>Pass/Fail Criteria</b>	<p>ZPF should inspect call signaling and dynamically open holes for RTP packets.</p> <p>The ringback tone should be heard.</p> <p>The voice path confirmation should be 100%.</p> <p>DTMF digit passing should be successful.</p>
<b>Result</b>	Passed

#### High Availability in Cisco Unified SRST mode

<b>Description</b>	Test high availability in Cisco Unified SRST mode using HSRP
<b>Test Setup</b>	<p><a href="#">Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode</a>, or</p> <p><a href="#">Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode</a></p>

<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Configure two branch routers with HSRP, with one as the primary router and the other as the secondary router.</li><li>2. Configure the Cisco Unified SRST address as the HSRP virtual address on both the branch routers.</li><li>3. Configure Cisco Unified SRST in Cisco Unified Communications Manager with the HSRP virtual address.</li><li>4. Initially register all the phones to Cisco Unified Communications Manager.</li><li>5. Make local calls in the branch.</li><li>6. Bring down Cisco Unified Communications Manager.</li><li>7. Verify that the phones register to Cisco Unified SRST except the one phone with active calls.</li><li>8. Bring down the primary branch routers after 10 minutes.</li><li>9. Verify that all the phones register to the secondary Cisco Unified SRST router.</li><li>10. Tear down active calls, and verify whether those phones register to the secondary Cisco Unified SRST router.</li><li>11. Bring up the primary branch router after 5 minutes.</li><li>12. Verify whether all the phones register back to the primary Cisco Unified SRST router when it comes up.</li><li>13. Bring up the Cisco Unified Communications Manager after 30 minutes.</li><li>14. Verify whether all the phones register to Cisco Unified Communications Manager when it comes up.</li></ol>
<b>Pass/Fail Criteria</b>	<p>The phones should successfully register to Cisco Unified Communications Manager.</p> <p>The phones should successfully register to the primary Cisco Unified SRST router when Cisco Unified Communications Manager goes down.</p> <p>The phones should successfully register to the secondary Cisco Unified SRST router when the primary Cisco Unified SRST goes down.</p> <p>The phones should switch back to the primary Cisco Unified SRST router when it comes up.</p> <p>The phones should switch back to Cisco Unified Communications Manager when it comes up.</p>
<b>Result</b>	Passed

**Baseline Features Plus Cisco Unified Communications Manager**

<b>Description</b>	Test baseline features plus Cisco Unified Communications Manager
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> , or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"><li>1. Enable all baseline features as described in the <a href="#">Complete Baseline Test</a> test case.</li><li>2. Register all the phones to the primary Cisco Unified Communications Manager.</li><li>3. Register all DSP farm transcoding and conferencing resources to Cisco Unified Communications Manager.</li><li>4. Make voice and video calls between branch IP Phones and headquarters IP Phones.<ol style="list-style-type: none"><li>a. Verify the ringback tone, verify the voice/video path, and pass DTMF digits.</li></ol></li><li>5. Make voice calls between branch IP Phones and PSTN phones.<ol style="list-style-type: none"><li>a. Verify the ringback tone, verify the voice path, and pass DTMF digits.</li></ol></li><li>6. Make voice calls between branch IP Phones.<ol style="list-style-type: none"><li>a. Verify the ringback tone, verify the voice path, and pass DTMF digits.</li></ol></li><li>7. Make a four-party conference call with a branch IP Phone, a branch FXS phone, a headquarters IP Phone and a PSTN phone as the conference participants.<ol style="list-style-type: none"><li>a. Verify that when the conference initiator leaves the conference, all the parties are dropped.</li><li>b. Verify whether DSP farm conferencing resources are utilized.</li></ol></li><li>8. Make a call from a headquarters IP Phone to a branch IP Phone that is busy.<ol style="list-style-type: none"><li>a. Verify whether the headquarters IP Phone is able to leave voice mail.</li><li>b. Verify whether DSP farm transcoding gets invoked.</li><li>c. Verify whether the branch phone receives an MWI.</li></ol></li><li>9. Retrieve the voice mail messages from the branch IP Phones.<ol style="list-style-type: none"><li>a. Verify that MWI changes status when the voice mail messages are retrieved.</li></ol></li><li>10. Verify supplementary services.</li></ol>

**Pass/Fail Criteria** Voice and video path confirmation should be 100%.  
 DSP farm transcoding is invoked for call transfers to voice mail when the calling party is in headquarters.  
 The MWI light should turn on when voice mail messages are left and should turn off when the voice mail messages are retrieved.  
 Conference call should be successful.  
 Supplementary services such as call transfers and call forwards should be successful.

**Result** Passed

### RSVP Agent in SRST Router–HQ to Branch Call with Phones Registered to Cisco Unified CM

**Description** Test calls between the IP Phones in the HQ to phones registered in the branch in centralized call control deployment scenario with RSVP agent enabled in HQ and WAN router

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#)  
 or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#)

**Procedure**

1. Enable SCCP and configure transcoder/MTP profile with RSVP and coded pass-through in SRST branch router and WAN router in HQ.
2. Register both the transcoder and MTP to Cisco Unified CM.
3. Configure HQ and branch phones in different locations.
4. Configure RSVP policy as mandatory for voice and video calls in Cisco Unified CM.
5. Make a voice call from the HQ phone to a branch phone.
6. Make a video call from the HQ phone to a branch phone.
7. Make multiple voice calls from the HQ to the branch, so that the voice bandwidth is consumed.
8. Make a new voice call.

**Pass/Fail Criteria** Verify that an RSVP reservation is made and that both voice and video calls are successful.  
 Verify the voice path and pass DTMF.  
 Verify that both SCCP and SIP Phones work properly.  
 Verify RSVP reservation fails and the call is not successful when the bandwidth is consumed.

**Result** Passed

**RSVP Agent with Application ID in SRST Router–HQ to Branch Call with Phones Registered to Cisco Unified CM**

<b>Description</b>	Make calls between the IP Phones registered to Cisco Unified CM in the HQ and IP Phones registered to Cisco Unified CME in the branch with RSVP agent configured
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>
<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Enable SCCP and configure transcoder/MTP profile with RSVP and coded pass-through in SRST branch router and WAN router in HQ.</li> <li>2. Configure the RSVP application ID for voice and video calls and specify the bandwidth to be 384 for video.</li> <li>3. Register both the transcoder and MTP to Cisco Unified CM.</li> <li>4. Configure HQ and branch phones in different locations.</li> <li>5. Configure RSVP policy as mandatory for voice and video calls in Cisco Unified CM.</li> <li>6. Make a voice call from the HQ phone to a branch phone.</li> <li>7. Make a video call from the HQ phone to a branch phone.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>Verify that an RSVP reservation is made and that both voice and video calls are successful.</p> <p>Verify that the second video call fails because the bandwidth is configured in application ID for video.</p> <p>Verify the voice path and pass DTMF.</p> <p>Verify that both SCCP and SIP phones work properly.</p> <p>Verify that RSVP reservation fails and that the call is not successful when the bandwidth is consumed.</p>
<b>Result</b>	Passed

**RSVP Agent–HQ to Branch Call with H.323 Trunk**

<b>Description</b>	Make calls between the IP Phones in HQ to phones registered in the branch in centralized call control deployment scenario with RSVP agent enabled and with application ID in HQ and WAN router
<b>Test Setup</b>	<a href="#">Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode</a> or <a href="#">Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode</a>

<b>Procedure</b>	<ol style="list-style-type: none"> <li>1. Configure H.323 trunk over the WAN interface between Cisco Unified CME and Cisco Unified CM</li> <li>2. Enable SCCP and configure transcoder/MTP profile with RSVP and coded pass-through in SRST branch router and WAN router in HQ.</li> <li>3. Register both the transcoder and MTP to Cisco Unified CM.</li> <li>4. Configure RSVP policy as mandatory for voice and video calls in Cisco Unified CM.</li> <li>5. Configure voice class with G.729 and G.711 as the codec options, with the first choice being G.729 and second choice being G.711.</li> <li>6. Associate the voice class to the H.323 dial peer.</li> <li>7. Make a voice call from the HQ phone to a branch phone.</li> <li>8. Make a video call from the HQ phone to a branch phone.</li> <li>9. Make multiple voice calls from the HQ to the branch so that the voice bandwidth is consumed, and then make a new voice call.</li> </ol>
<b>Pass/Fail Criteria</b>	<p>Verify that an RSVP reservation is made and that both voice and video calls are successful.</p> <p>Verify the voice path and pass DTMF.</p> <p>Verify that both SCCP and SIP phones work properly.</p> <p>Verify that the RSVP reservation fails and the call is not successful when the bandwidth is consumed.</p>
<b>Result</b>	Passed

## Performance Test Cases

### Baseline Performance Test

<b>Description</b>	<p>Enable all the baseline services in the branch and headend routers. The baseline features include BGP routing, OSPF/EIGRP routing, IPsec using DMVPN or GETVPN, ZPF, NAT, IPS, QoS, NBAR, ACL, NetFlow, DHCP, AAA RADIUS server, NTP, syslog, SNMP, PIM-v2, and IGMP v2.</p> <p>Configure L2 switching on the access layer switches.</p>
<b>Test Setup</b>	<p><a href="#">Figure 5 on page 8, Private WAN, Cisco 1941 ISR</a></p> <p><a href="#">Figure 6 on page 8, MPLS WAN, Cisco 1941 ISR</a></p>

**Procedure**

1. Before the start of the test, measure the CPU utilization and memory utilization of the router.
2. Use the following traffic profile.
  - HTTP: 75% of the traffic
  - FTP: 10% of the traffic
  - SMTP: 10% of the traffic
  - DNS: 5% of the trafficFor HTTP, use two different object sizes:
  - 16-KB object size for large HTML files (10 URLs)
  - 4-KB object size for transactional type dataFor FTP, use a 1-MB file size.  
For SMTP, use a 4-KB fixed object size.  
For DNS, use 89 bytes.
3. Start the traffic to achieve line rate on the primary WAN interface.
4. Record the router performance metrics such as CPU, processor and I/O memory utilization, and LAN/WAN throughput.
5. Do not generate any threats to the router during the performance test.
6. Start adding the features incrementally and measure performance. Take at least five measurements, 3 minutes apart, before turning on the next feature.
7. When all the features are added, check whether the router CPU utilization is less than or equal to 75% with line rate traffic. If it is greater than the 75%, tune the traffic to reach 75% CPU utilization, with a tolerance of +/- 2%.
8. At 75% CPU utilization, take performance readings of the router every 3 minutes for a duration of 1 hour.
9. Stop all traffic at the end of the hour. Wait for about 30 minutes, and take router memory readings. Use the **show memory debug leaks** command to determine whether there were any memory leaks during the test.
10. Collect the following performance readings:
  - Router CPU utilization at 5 seconds, 1 minute, and 5 minutes, using the **show proc cpu** command
  - Router memory, using the **show mem free** and **show proc mem** commands
  - Interface statistics, using the **show interface summary** command
  - Cisco Express Forwarding switching statistics, using the **show interfaces stats** command

- Procedure (continued)** 11. Also record the following feature-specific measurements:
- QoS: **show policy-map interface** command
  - IPsec: **show crypto engine connections active** command
  - ZPF: **show policy-map type inspect** command
  - NAT: **show ip nat statistics** command
  - NetFlow: **show ip cache flow** command
  - Multicast: **show ip mroute count** command
  - NBAR: **show ip nbar protocol-discovery** command
  - IPS: **show ip ips statistics** command

**Pass/Fail Criteria** There are no router tracebacks.  
 There are no router memory leaks.  
 There are no router crashes.  
 Most of the traffic should be Cisco Express Forwarding switched.

**Result** Passed

### Baseline Plus Voice Performance Test with Cisco Unified CME

**Description** Enable all the baseline services in the branch and headend routers. The baseline features include BGP routing, OSPF/EIGRP routing, IPsec using DMVPN or GETVPN, ZPF, NAT, IPS, QoS, NBAR, ACL, NetFlow, DHCP, AAA RADIUS server, NTP, syslog, SNMP, PIM-v2, and IGMP v2.

Configure L2 switching on the access layer switches.

Enable QoS on the L2 access switches.

Enable Cisco Unified CME on the branch router.

Measure the performance of the branch router in terms of CPU utilization, throughput of WAN and LAN interfaces, and processor and IO memory consumption.

**Test Setup** [Figure 1 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified CME Mode](#), or  
[Figure 2 on page 6, Cisco 1861 ISR Private WAN, Cisco Unified SRST Mode](#), or  
[Figure 3 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified CME Mode](#), or  
[Figure 4 on page 7, Cisco 1861 ISR MPLS WAN, Cisco Unified SRST Mode](#)

**Procedure**

1. Before the start of the test, measure the CPU utilization and memory utilization of the router.
2. Register 15 phones to Cisco Unified CME on the Cisco 1861 platform.
3. Configure dual lines for all the phones.
4. Use the following voice traffic profiles:
  - For T1 or 1.5-Mb/s bandwidth:
    - On the Cisco 1861 platform:
      - 3 voice calls over the WAN with G.729r8 codec
      - 1 384-KB video call over the WAN
      - 1 transcoding sessions
      - 1 three-party conference
      - 5 local calls
  - Call duration of voice and video calls is 180 seconds with intercall delay of 10 seconds.
  - Call duration for conferences is 10 minutes.

<b>Procedure (continued)</b>	<p>5. Use the following data traffic profile:</p> <ul style="list-style-type: none"> <li>• HTTP: 75% of the traffic</li> <li>• FTP: 10% of the traffic</li> <li>• SMTP: 10% of the traffic</li> <li>• DNS: 5% of the traffic</li> </ul> <p>For HTTP, use two different object sizes:</p> <ul style="list-style-type: none"> <li>• 16-KB object size for large HTML files (10 URLs)</li> <li>• 4-KB object size for transactional type data (10 URLs)</li> </ul> <p>For FTP, use a 1-MB file size.</p> <p>For SMTP, use 4-KB fixed object size.</p> <p>For DNS, use 89 bytes.</p> <p>6. Start all the voice and video calls. When the calls have stabilized, take a couple of CPU measurements 3 minutes apart. Stop all the voice and video traffic.</p> <p>7. Start the data traffic and take a CPU utilization measurement after stabilization. The CPU utilization measurement should be very close to 75% as measured in the baseline performance test.</p> <p>8. Adjust the data traffic throughput to accommodate all the voice and video traffic, while maintaining 75% CPU utilization. When the router has stabilized, take performance readings for about 1 hour, and stop all the traffic. Wait for about 30 minutes to record the memory readings.</p> <p>9. In addition to the metrics mentioned in the <a href="#">Baseline Performance Test</a>, collect the following metrics:</p> <ul style="list-style-type: none"> <li>• Calls-per-second rate</li> <li>• Voice and video call completion rate</li> <li>• Throughput in bits per second</li> </ul>
<b>Pass/Fail Criteria</b>	<p>There are no router tracebacks.</p> <p>There are no router memory leaks.</p> <p>There are no router crashes.</p> <p>Most of the traffic should be Cisco Express Forwarding switched.</p>
<b>Result</b>	Passed

## Baseline Plus Voice Performance Test with Cisco Unified CM and Cisco Unified SRST

<b>Description</b>	<p>Enable all the baseline services in the branch and headend routers.
