

# CSS Delivery Sequence Configuration Mode Commands

---

The CSS Delivery Sequence Configuration Mode is used to configure the order in which traffic is delivered to Content Service Steering (CSS) services and their associated content servers.

---

**Important** This is a restricted configuration mode. In 9.0 and later releases, this configuration mode is deprecated.

---

---

**Important** The commands or keywords/variables that are available are dependent on platform type, product version, and installed license(s).

---

- [end, on page 1](#)
