Applicable Platform(s)	• ASR 5500 • VPC-DI
Feature Default	Disabled - Configuration Required
Related Changes in This Release	Not Applicable
Related Documentation	Not Applicable

Revision History

Revision Details	Release
ePDG skips the unsupported container and continue parsing the next container in APCO.	21.28.m0

Feature Changes

Previous Behavior: ePDG stops parsing when it encounters an unknown container ID in Additional Protocol Configuration Options (APCO) in Create Session Response.

New Behavior: ePDG allows you to skip the unsupported container and continue parsing the next container in APCO.
