Introducción

Esta configuración de muestra configura un EtherChannel entre un Cisco Catalyst 6500 en el que se ejecuta Catalyst OS (CatOS) y un switch Catalyst 3500XL. El EtherChannel se puede llamar Fast EtherChannel (FEC) o Gigabit EtherChannel (GEC). El nombre depende de la velocidad de las interfaces o de los puertos que utilice para formar el EtherChannel. Puede utilizar cualquiera de estos switches en este escenario para obtener los mismos resultados:

- Cualquier switch Catalyst de las series 4500/4000, 5500/5000 o 6500/6000 que ejecute CatOS
- Cualquiera de los switches de la serie Catalyst 2900XL o 3500XL de configuración fija de Capa 2 (L2)

En este documento, dos puertos Fast Ethernet de cada uno de los switches se agrupan en un FEC. En este documento, los términos "FEC", "GEC", "canal de puerto", "canal" y "grupo de puertos" hacen referencia a EtherChannel.

Prerequisites

Requirements

Asegúrese de cumplir estos requisitos antes de intentar esta configuración:

- Familiaridad con los comandos a utilizar para configurar EtherChannel en un switch Catalyst 2900XL o 3500XLPara obtener más información sobre los comandos, consulte la sección <u>Configuración de los Puertos del Switch</u> del documento <u>Guía de Configuración del Software</u> <u>Catalyst 2900 XL y Catalyst 3500 XL, 12.0(5)WC5, 12.0(5)WC6</u>.
- Familiaridad con los comandos a utilizar para configurar EtherChannel en un switch que ejecuta CatOSPara obtener más información sobre los comandos, consulte la sección <u>Configuración de EtherChannel</u> del documento <u>Guía de Configuración de Software de</u> <u>Catalyst 6500 Series, 8.7</u>.

Componentes Utilizados

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Switch Catalyst 3500XL (modelo WS-C3524-PWR-XL-EN) que ejecuta Cisco IOS® Software Release 12.0(5)WC9
- Switch Catalyst 6500 (modelo 6506 con Supervisor Engine II) que ejecuta la versión 8.2.1 del software CatOS

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Convenciones

Consulte <u>Convenciones de Consejos TécnicosCisco para obtener más información sobre las</u> <u>convenciones del documento.</u>

Antecedentes

Debe crear manualmente EtherChannel porque los switches Catalyst 2900XL/3500XL no admiten el protocolo de agregación de puertos (PAgP); Los switches CatOS admiten PAgP. PAgP facilita la creación automática de FEC y GEC. Para obtener más información sobre PAgP, consulte la sección Configuración EtherChannel del documento de la Guía de configuración de software Catalyst de la serie 6500, 8.7.

Cree el canal de puerto en el orden de estos pasos:

Nota: Cuando realiza los pasos en este orden, evita posibles problemas con el protocolo de árbol de extensión (STP) que pueden ocurrir durante el proceso de configuración. STP puede apagar los puertos con el estado errdisable en el switch Catalyst 6500 si configura el switch CatOS como un canal antes de configurar el switch XL como un canal.

- 1. Ejecute el comando **set port disable** *module/port* en el switch CatOS.El comando establece para inhabilitar el modo de los puertos para su uso en la canalización de puertos.
- 2. Cree el canal de puerto (grupo de puertos) en el switch XL.
- 3. Cree el canal de puerto en el switch CatOS.**Nota:** Asegúrese de establecer el modo de canal en "on". Esta configuración es necesaria para inhabilitar PAgP en los puertos y obligar a los

puertos a formar un canal.

4. Ejecute el comando **set port enable** *module/port* en el switch CatOS.El comando vuelve a habilitar los puertos que se desactivaron anteriormente.

Configurar

En esta sección encontrará la información para configurar las funciones descritas en este documento.

Nota: Use la <u>Command Lookup Tool</u> (<u>sólo</u> clientes registrados) para obtener más información sobre los comandos utilizados en este documento.

Diagrama de la red

En este documento, se utiliza esta configuración de red:

Configuraciones

En este documento, se utilizan estas configuraciones:

- <u>Catalyst 3524XL</u>
- <u>Catalyst 6506</u>

Catalyst 3524XL

Verificación

Use esta sección para confirmar que su configuración funciona correctamente.

La herramienta Output Interpreter Tool (clientes registrados solamente) (OIT) soporta ciertos comandos show. Utilice la OIT para ver un análisis del resultado del comando show.

- Verifique el canal del puerto en el switch Catalyst 2900XL/3500XL:**show port groupshow port** group group-number
- Verifique el estado del árbol de expansión en el switch Catalyst 2900XL/3500XL:show spanning-tree
- Verifique el canal del puerto en el switch CatOS:show port capabilities moduleshow port channelmostrar módulo de canal de puerto/puertoshow port channel info
- Verifique el estado del árbol de expansión en el switch CatOS:**show spantreeshow spantree** vlanshow spantree module/port
