[Introducción](#)

Este documento describe cómo configurar Cisco Secure PIX Firewall en una VPN IPSec de sitio a sitio con direcciones de red privadas superpuestas detrás de gateways VPN. La función de traducción de direcciones de red (NAT) mejorada introducida en PIX 6.2 se utiliza en este ejemplo para traducir las redes superpuestas en cada lado del túnel VPN IPSec a espacios de direcciones no superpuestas.

[Prerequisites](#)

[Requirements](#)

No hay requisitos específicos para este documento.

[Componentes Utilizados](#)

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Cisco Secure PIX Firewall 506 con la versión de software 6.3(3)

- Concentrador VPN 3030 con versión de software 4.1(5)

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Convenciones

Para obtener más información sobre las convenciones del documento, consulte [Convenciones de Consejos Técnicos de Cisco](#).

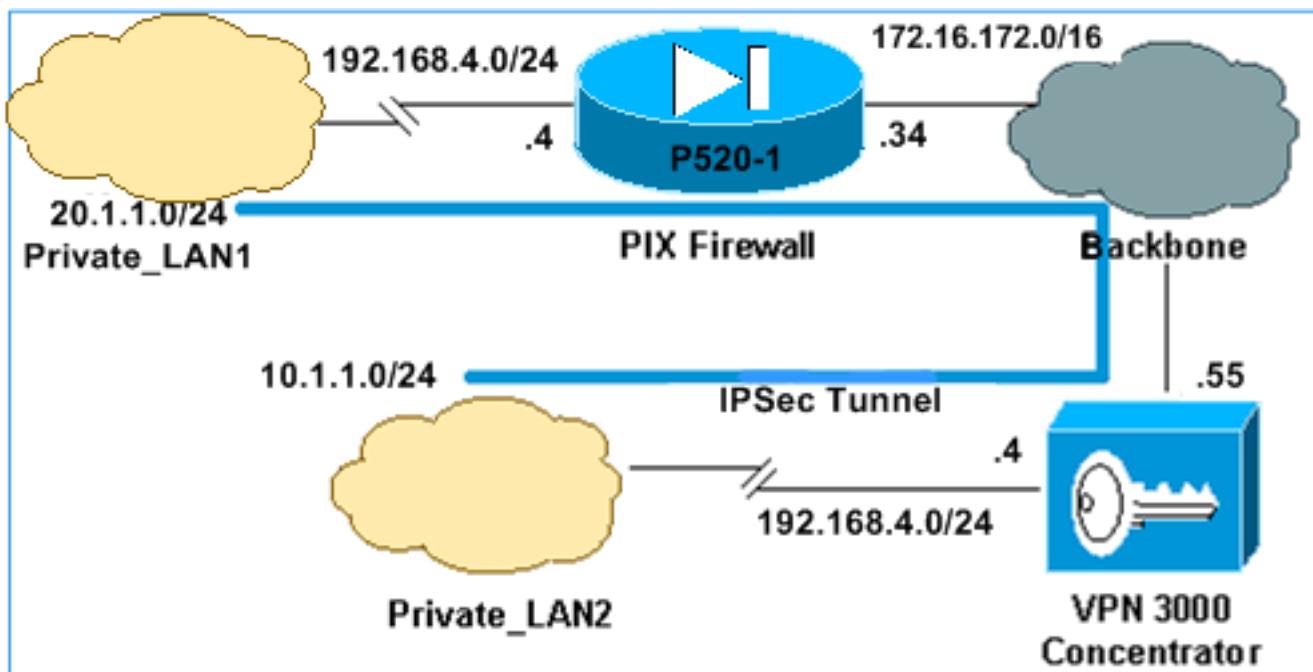

Configurar

En esta sección encontrará la información para configurar las funciones descritas en este documento.

Nota: Para encontrar información adicional sobre los comandos usados en este documento, utilice la [Command Lookup Tool \(sólo clientes registrados\)](#) .

Diagrama de la red

Este documento utiliza la configuración de red que se muestra en el siguiente diagrama.

Tanto Private_LAN1 como Private_LAN2 tienen una subred IP de 192.168.4.0/24. Esto simula el espacio de dirección superpuesto detrás de cada lado del túnel IPSec. El concentrador VPN 3000 se utiliza aquí como ejemplo de un concentrador que no tiene la funcionalidad de NAT sobre el tráfico VPN.

En este ejemplo, el PIX realiza una traducción bidireccional para que las dos LAN privadas puedan comunicarse a través del túnel IPSec. La traducción significa que Private_LAN1 "ve" Private_LAN2 como 10.1.1.0/24 a través del túnel IPSec, y Private_LAN2 "ve" Private_LAN1 como 20.1.1.0/24 a través del túnel IPSec.

Configuración del túnel LAN a LAN del concentrador VPN 3000

Para la dirección de destino 20.1.1.0 /24 (Private_LAN1) necesita tener una ruta estática en la VPN 3000. Para ello, seleccione Configuration > System > IP Routing > Static Routes y elija Add . Cuando haya terminado de llenar los campos, haga clic en Agregar.

Configuration | System | IP Routing | Static Routes | Add

Configure and add a static route.

Network Address	<input type="text" value="20.1.1.0"/>	Enter the network address.
Subnet Mask	<input type="text" value="255.255.255.0"/>	Enter the subnet mask.
Metric	<input type="text" value="1"/>	Enter the numeric metric for this route (1 through 16).
Destination		
Router Address	<input type="text" value="172.16.172.34"/>	Enter the router/gateway IP address.
Interface	<input type="radio"/> Ethernet 2 (Public) (172.16.172.55)	Select the interface to route to.
<input type="button" value="Add"/> <input type="button" value="Cancel"/>		

Utilice los parámetros de estas imágenes para configurar el concentrador VPN 3000.

Configuration | Tunneling and Security | IPSec | LAN-to-LAN | Add

Add a new IPSec LAN-to-LAN connection.

Enable <input checked="" type="checkbox"/>	Check to enable this LAN-to-LAN connection.																				
Name <input type="text" value="ToPIX"/>	Enter the name for this LAN-to-LAN connection.																				
Interface <input type="text" value="Ethernet 2 (Public) (172.16.172.55)"/>	Select the interface for this LAN-to-LAN connection.																				
Connection Type <input type="button" value="Bi-directional"/>	Choose the type of LAN-to-LAN connection. An <i>Originate-Only</i> connection may have multiple peers specified below.																				
<table border="1"><tr><td>Peers</td><td>172.16.172.34</td></tr></table>		Peers	172.16.172.34																		
Peers	172.16.172.34																				
Digital Certificate <input type="button" value="None (Use Preshared Keys)"/>	Enter the remote peer IP addresses for this LAN-to-LAN connection. <i>Originate-Only</i> connection may specify up to ten peer IP addresses. Enter one IP address per line.																				
<table border="0"><tr><td>Certificate <input type="radio"/> Entire certificate chain</td><td>Choose how to send the digital certificate to the IKE peer.</td></tr><tr><td>Transmission <input checked="" type="radio"/> Identity certificate only</td><td></td></tr><tr><td>Preshared Key <input type="text" value="cisco123"/></td><td>Enter the preshared key for this LAN-to-LAN connection.</td></tr><tr><td>Authentication <input type="text" value="ESP/MD5/HMAC-128"/></td><td>Specify the packet authentication mechanism to use.</td></tr><tr><td>Encryption <input type="text" value="DES-56"/></td><td>Specify the encryption mechanism to use.</td></tr><tr><td>IKE Proposal <input type="text" value="IKE-DES-MD5"/></td><td>Select the IKE Proposal to use for this LAN-to-LAN connection.</td></tr><tr><td>Filter <input type="text" value="—None—"/></td><td>Choose the filter to apply to the traffic that is tunneled through this LAN-to-LAN connection.</td></tr><tr><td>IPSec NAT-T <input type="checkbox"/></td><td>Check to let NAT-T compatible IPSec peers establish this LAN-to-LAN connection through a NAT device. You must also enable IPSec over NAT-T under NAT Transparency.</td></tr><tr><td>Bandwidth Policy <input type="text" value="—None—"/></td><td>Choose the bandwidth policy to apply to this LAN-to-LAN connection.</td></tr><tr><td>Routing <input type="text" value="None"/></td><td>Choose the routing mechanism to use. Parameters below are ignored if Network Autodiscovery is chosen.</td></tr></table>		Certificate <input type="radio"/> Entire certificate chain	Choose how to send the digital certificate to the IKE peer.	Transmission <input checked="" type="radio"/> Identity certificate only		Preshared Key <input type="text" value="cisco123"/>	Enter the preshared key for this LAN-to-LAN connection.	Authentication <input type="text" value="ESP/MD5/HMAC-128"/>	Specify the packet authentication mechanism to use.	Encryption <input type="text" value="DES-56"/>	Specify the encryption mechanism to use.	IKE Proposal <input type="text" value="IKE-DES-MD5"/>	Select the IKE Proposal to use for this LAN-to-LAN connection.	Filter <input type="text" value="—None—"/>	Choose the filter to apply to the traffic that is tunneled through this LAN-to-LAN connection.	IPSec NAT-T <input type="checkbox"/>	Check to let NAT-T compatible IPSec peers establish this LAN-to-LAN connection through a NAT device. You must also enable IPSec over NAT-T under NAT Transparency.	Bandwidth Policy <input type="text" value="—None—"/>	Choose the bandwidth policy to apply to this LAN-to-LAN connection.	Routing <input type="text" value="None"/>	Choose the routing mechanism to use. Parameters below are ignored if Network Autodiscovery is chosen.
Certificate <input type="radio"/> Entire certificate chain	Choose how to send the digital certificate to the IKE peer.																				
Transmission <input checked="" type="radio"/> Identity certificate only																					
Preshared Key <input type="text" value="cisco123"/>	Enter the preshared key for this LAN-to-LAN connection.																				
Authentication <input type="text" value="ESP/MD5/HMAC-128"/>	Specify the packet authentication mechanism to use.																				
Encryption <input type="text" value="DES-56"/>	Specify the encryption mechanism to use.																				
IKE Proposal <input type="text" value="IKE-DES-MD5"/>	Select the IKE Proposal to use for this LAN-to-LAN connection.																				
Filter <input type="text" value="—None—"/>	Choose the filter to apply to the traffic that is tunneled through this LAN-to-LAN connection.																				
IPSec NAT-T <input type="checkbox"/>	Check to let NAT-T compatible IPSec peers establish this LAN-to-LAN connection through a NAT device. You must also enable IPSec over NAT-T under NAT Transparency.																				
Bandwidth Policy <input type="text" value="—None—"/>	Choose the bandwidth policy to apply to this LAN-to-LAN connection.																				
Routing <input type="text" value="None"/>	Choose the routing mechanism to use. Parameters below are ignored if Network Autodiscovery is chosen.																				

Local Network: If a LAN-to-LAN NAT rule is used, this is the Translated Network address.

Network List

Use IP Address/Wildcard-mask below

Specify the local network address list or the IP address and wildcard mask for this LAN-to-LAN connection.

IP Address

Note: Enter a **wildcard mask**, which is the **reverse of a subnet mask**. A wildcard mask has 1s in bit positions to ignore, 0s in bit positions to match. For example, 10.10.1.0/0.0.0.255 = all 10.10.1.nnn addresses.

Wildcard Mask

Remote Network: If a LAN-to-LAN NAT rule is used, this is the Remote Network address.

Network List

Use IP Address/Wildcard-mask below

Specify the remote network address list or the IP address and wildcard mask for this LAN-to-LAN connection.

IP Address

Note: Enter a **wildcard mask**, which is the **reverse of a subnet mask**. A wildcard mask has 1s in bit positions to ignore, 0s in bit positions to match. For example, 10.10.1.0/0.0.0.255 = all 10.10.1.nnn addresses.

Wildcard Mask

Verificación

En esta sección encontrará información que puede utilizar para confirmar que su configuración esté funcionando correctamente.

La herramienta [Output Interpreter](#) (sólo para clientes registrados) permite utilizar algunos comandos “show” y ver un análisis del resultado de estos comandos.

- **show crypto isakmp sa:** muestra todas las asociaciones de seguridad (SA) actuales de Intercambio de claves de Internet (IKE) en un par.
- **show crypto isakmp sa detail** - Muestra los detalles de todas las SA IKE actuales en un par.
- **show crypto ipsec sa** - Muestra la configuración utilizada por las SA actuales.
- **show xlate detail** - Muestra información de la ranura de traducción.
