[Información Relacionada](#)

## [Introducción](#)

Esta configuración de ejemplo muestra un diseño IPsec de hub y spoke entre tres routers. Esta configuración difiere de otras configuraciones de hub y spoke porque en este ejemplo se ha activado la comunicación entre los sitios spoke pasando a través del hub. Es decir, no hay un túnel IPsec directo entre los dos routers spoke. Todos los paquetes se envían a través del túnel al router hub, donde se redistribuyen hacia el túnel IPsec compartido con el otro router spoke. Esta configuración es posible como resultado de la resolución al ID de bug de Cisco [CSCdp09904](#) ([sólo](#) clientes registrados) . Este arreglo se integró en Cisco IOS® Software Release 12.2(5) y esta versión es el requisito mínimo para esta configuración.

Para configurar el túnel de encapsulación de ruteo genérico (GRE) sobre IPsec con OSPF, consulte [Configuración de un Túnel GRE sobre IPsec con OSPF](#).

Para configurar la configuración básica del firewall Cisco IOS® en un túnel GRE con traducción de direcciones de red (NAT), consulte [Configuración de IPsec de router a router \(claves previamente compartidas\) en el túnel GRE con firewall IOS y NAT](#).

## [Prerequisites](#)

### [Requirements](#)

Este documento requiere una comprensión básica del protocolo IPSec Consulte [Introducción al Cifrado de Seguridad IP \(IPSec\)](#) para obtener más información sobre IPsec.

El objetivo de este documento es asegurar que el cifrado se realice entre estos routers:

- 172.16.1.0/24 (Spoke 1) a 10.1.1.0/24 (Hub)
- 192.168.1.0/24 (Spoke 2) a 10.1.1.0/24 (Hub)
- 172.16.1.0/24 (Spoke 1) a 192.168.1.0/24 (Spoke 2)

## [Componentes Utilizados](#)

La información que contiene este documento se basa en estas versiones de software y hardware.

- Versión 12.2(24a) del software del IOS de Cisco (c2500-ik8s-l.122-24a.bin)
- Routers Cisco 2500

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

## [Convenciones](#)

Consulte [Convenciones de Consejos TécnicosCisco](#) para obtener más información sobre las convenciones del documento.

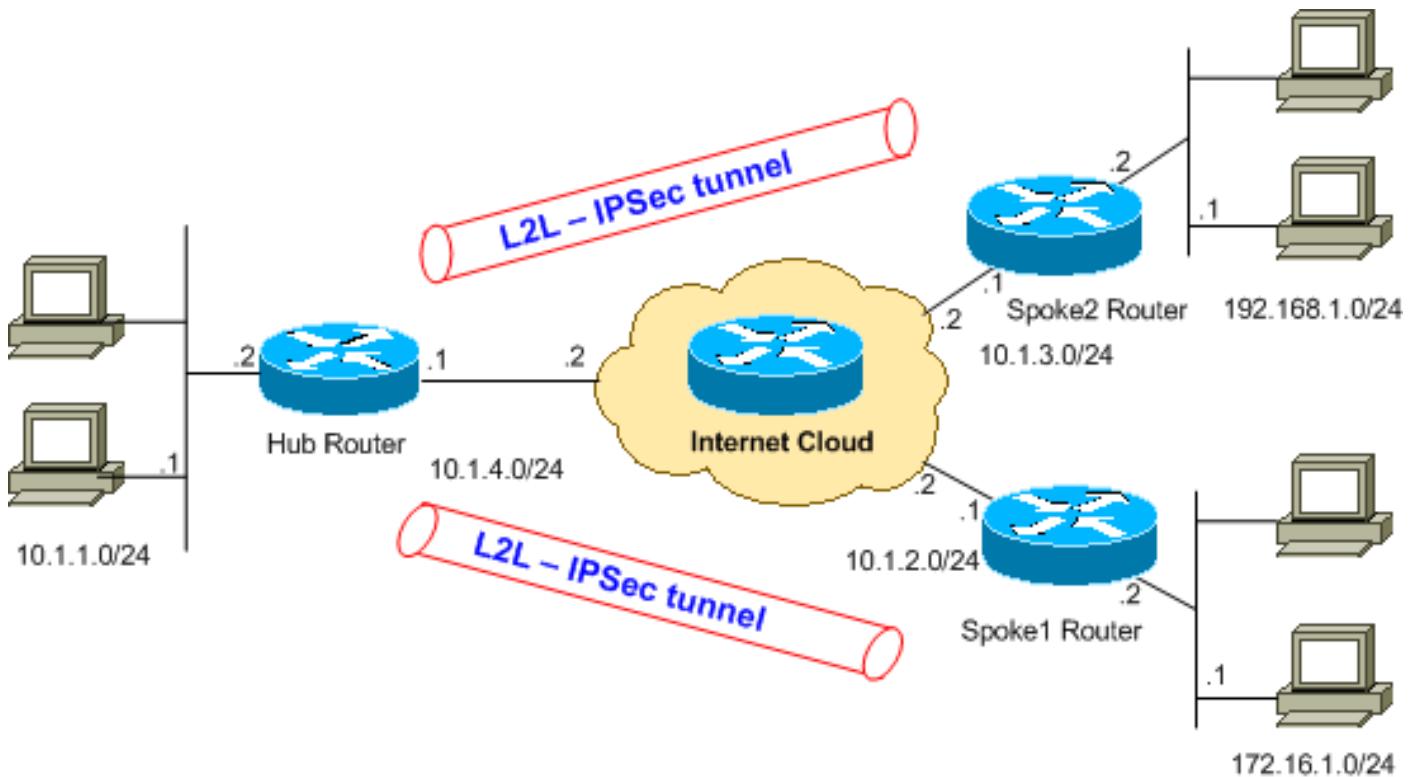

## [Configurar](#)

En esta sección encontrará la información para configurar las funciones descritas en este documento.

**Nota:** Use la [Command Lookup Tool](#) (sólo [clientes registrados](#)) para obtener más información sobre los comandos utilizados en este documento.

## [Diagrama de la red](#)

Este documento utiliza la configuración de red que se muestra en el siguiente diagrama.

**Nota:** Los esquemas de direccionamiento IP utilizados en esta configuración no son legalmente enruteables en Internet. Son [direcciones RFC 1918](#) que se han utilizado en un entorno de laboratorio.

## Configuraciones

Este documento usa estas configuraciones.

El comando [\*\*show running-config\*\*](#) muestra la configuración en ejecución en el router.

- [Router del eje de conexión](#)
- [Router Spoke 1](#)
- [Router Spoke 2](#)

### Router del eje de conexión

## Añadir otro radio

Si necesita agregar otro router spoke (spoke3) al router hub existente además de spoke1 y spoke2, todo lo que se necesita es la creación de un nuevo túnel de LAN a LAN (L2L) del hub al spoke3. Sin embargo, dado que sólo se puede configurar un mapa criptográfico por interfaz física, debe utilizar el mismo nombre de mapa criptográfico al agregar este túnel. Esto es posible cuando se utilizan números de línea diferentes para cada sitio remoto.

**Nota:** Es posible que el mapa criptográfico deba eliminarse y aplicarse de nuevo a la interfaz cuando se agrega la nueva entrada de túnel. Cuando se elimina el mapa criptográfico, se borran todos los túneles activos.

### **Router del eje de conexión**

## Verificación

Use esta sección para confirmar que su configuración funciona correctamente.

[La herramienta Output Interpreter Tool \(clientes registrados solamente\) \(OIT\) soporta ciertos comandos show.](#) Utilice la OIT para ver un análisis del resultado del comando show.

Para verificar esta configuración, intente un comando [ping](#) extendido originado en la dirección de interfaz ethernet1 en el Spoke 1, destinado a la dirección de interfaz ethernet1 en el Spoke 2.

- **ping —Se utiliza para diagnosticar la conectividad básica de la red.**

```

Spoke1#ping
Protocol [ip]:
Target IP address: 192.168.1.1
Repeat count [5]:
Datagram size [100]:
Timeout in seconds [2]:
Extended commands [n]: y
Source address or interface: 172.16.1.1

```

```

Type of service [0]:
Set DF bit in IP header? [no]:
Validate reply data? [no]:
Data pattern [0xABCD]:
Loose, Strict, Record, Timestamp, Verbose[none]:
Sweep range of sizes [n]:
Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 192.168.1.1, timeout is 2 seconds:
!!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 64/64/68 ms

```

- [\*\*show crypto ipsec sa\*\*](#) —Muestra la configuración utilizada por las asociaciones de seguridad (SA) actuales (IPSec).
- [\*\*show crypto isakmp sa\*\*](#) — Muestra todas las IKE SAs actuales en un par.
- [\*\*show crypto engine connections active\*\*](#): muestra el número de paquetes transmitidos a través de cada SA IPSec.

## [\*\*Ejemplo de resultado del comando show\*\*](#)

Este resultado proviene del comando **show crypto engine connections active** ejecutado en el router Hub.

```

Hub#show crypto engine connections active

ID Interface IP-Address State Algorithm Encrypt Decrypt
5 Ethernet0 10.1.4.1 set HMAC_MD5+DES_56_CB 0 0
6 <none> <none> set HMAC_MD5+DES_56_CB 0 0
2000 Ethernet0 10.1.4.1 set HMAC_MD5+DES_56_CB 0 10
2001 Ethernet0 10.1.4.1 set HMAC_MD5+DES_56_CB 10 0
2002 Ethernet0 10.1.4.1 set HMAC_MD5+DES_56_CB 0 10
2003 Ethernet0 10.1.4.1 set HMAC_MD5+DES_56_CB 10 0

```

A partir de este ejemplo, puede ver que cada túnel tiene 10 paquetes cifrados y descifrados, lo que demuestra que el tráfico se produjo a través del router hub.

**Nota:** Se crean dos SA IPsec para cada par (una en cada dirección). Por ejemplo, en el router hub hay cuatro SA IPsec creadas para dos peers.

## [\*\*Troubleshoot\*\*](#)

En esta sección encontrará información que puede utilizar para solucionar problemas de configuración.

## [\*\*Comandos para resolución de problemas\*\*](#)

**Nota:** Consulte [Información Importante sobre Comandos Debug](#) antes de utilizar los comandos debug.

- [\*\*depuración crypto ipsec\*\*](#) — Muestra los IPSec Negotiations de la Fase 2.
- [\*\*debug crypto isakmp\*\*](#) — muestra las negociaciones ISAKMP para la fase 1.
- [\*\*debug crypto engine\*\*](#) — muestra el tráfico codificado.
- [\*\*clear crypto isakmp\*\*](#) —Borra las SA relacionadas con la fase 1.
- [\*\*clear crypto sa\*\*](#) —Borra las SA relacionadas con la fase 2.

## Ejemplo de resultado del comando debug

Ésta es la salida del router hub de los comandos **debug crypto ipsec** y **debug crypto isakmp**.
