Introducción

Este documento describe cómo configurar la función de paso a través de Web en un controlador de LAN inalámbrica (WLC).

Prerequisites

Requirements

Este documento asume que las configuraciones iniciales ya se han completado en el WLC.

Componentes Utilizados

La información que contiene este documento se basa en las siguientes versiones de software y hardware.

- Un WLC 5760 que ejecuta código de la versión 3.3
- Cisco Aironet 3600 Series Lightweight Access Point
- Solicitante inalámbrica nativa Microsoft* Windows 7

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is

live, make sure that you understand the potential impact of any command.

Paso a través de la Web en los controladores de LAN inalámbricos

El paso a través de la Web es una solución que suele utilizarse para el acceso de invitados. El proceso de paso a través de la Web es similar al de la autenticación Web, excepto que no se requieren credenciales de autenticación para el paso a través de la Web.

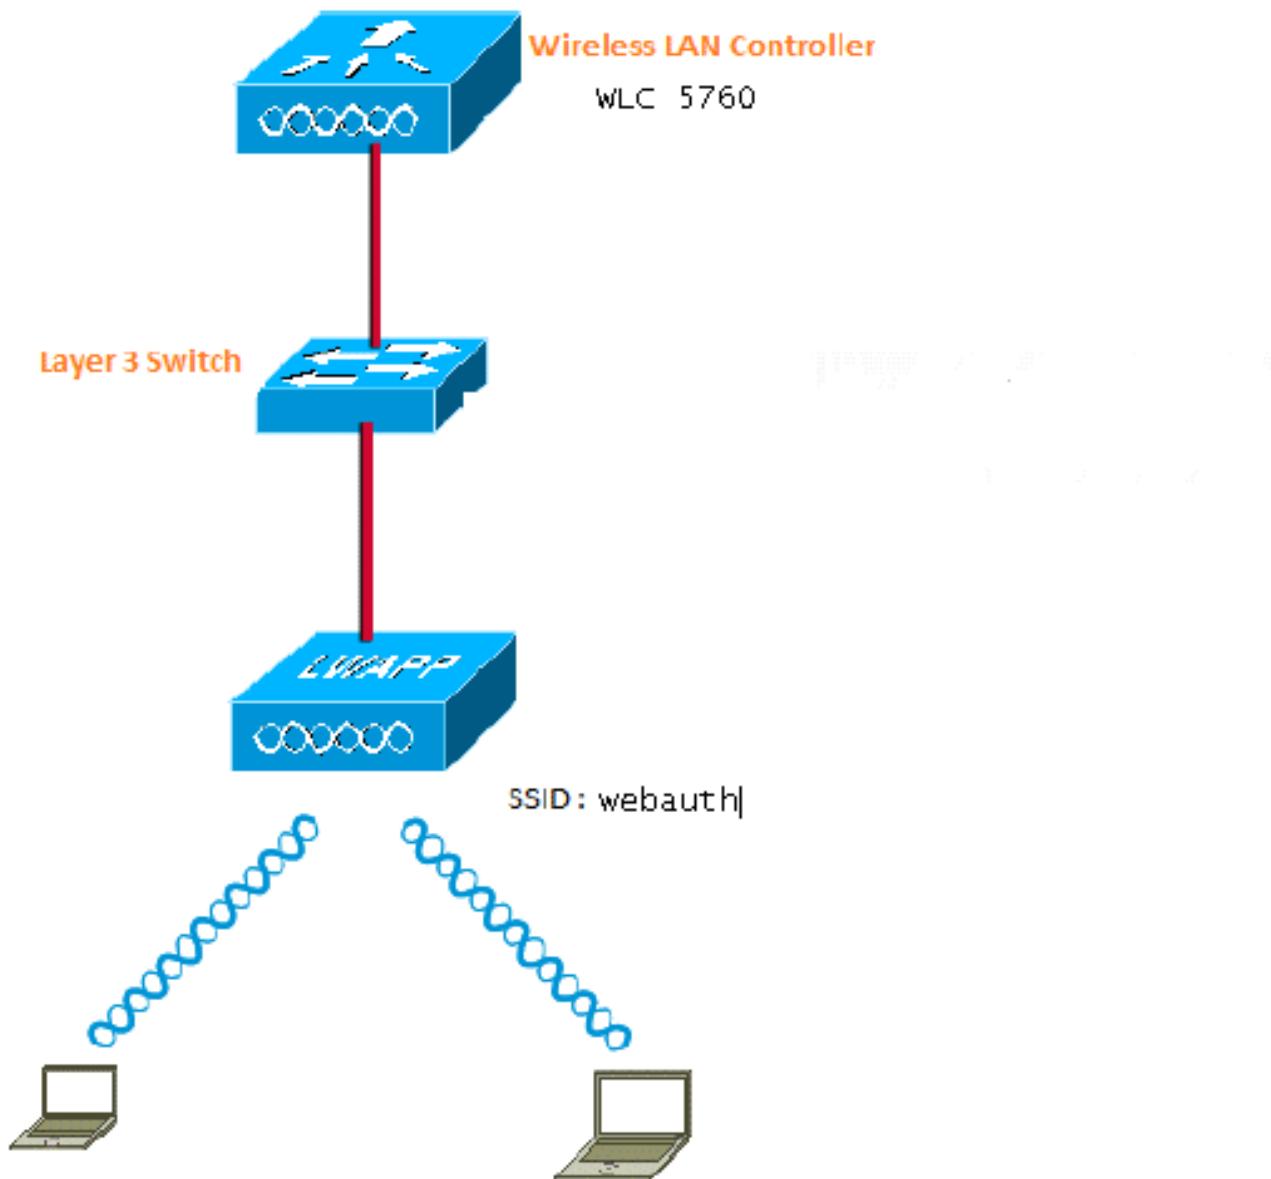

En el paso a través de la Web, los usuarios inalámbricos se redirigen a la página de directivas de uso cuando intentan utilizar Internet por primera vez. Una vez que los usuarios aceptan la política, pueden navegar por Internet. Este redireccionamiento a la página de políticas es manejado por el WLC.

En este ejemplo, se crea una interfaz VLAN en una subred independiente en el WLC. A continuación, se crea y configura un identificador de red LAN inalámbrica (WLAN)/conjunto de servicios (SSID) independiente con paso a través de la Web, y se asigna a esta interfaz VLAN.

Nota: El paso a través de Web no proporciona ningún cifrado de datos.

Configurar

Este es el diagrama de red:

Puede completar esta configuración con la CLI o la GUI.

Configuración con la CLI

Configure la indagación DHCP para las VLAN que utiliza para los clientes. en este ejemplo, VLAN20 se utiliza para los clientes. El grupo está configurado en el mismo WLC.

TenGigabitEthernet1/0/1 de WLC 5760 se conecta al switch de link ascendente. Si tiene el servidor DHCP configurado en el servidor más allá del WLC o en un servidor DHCP externo, entonces debe confiar en la información de indagación y retransmisión DHCP.

```

ip device tracking
ip dhcp snooping vlan 12,20,30,40
ip dhcp snooping
!
ip dhcp pool vlan20
  network 20.20.20.0 255.255.255.0

```

```

default-router 20.20.20.1

interface Vlan20
 ip address 20.20.20.1 255.255.255.0

interface TenGigabitEthernet1/0/1
 switchport trunk native vlan 12
 switchport mode trunk
 ip dhcp relay information trusted
 ip dhcp snooping trust

parameter-map type webauth global
 type consent
 virtual-ip ipv4 192.168.200.1
!
!
parameter-map type webauth web
 type consent

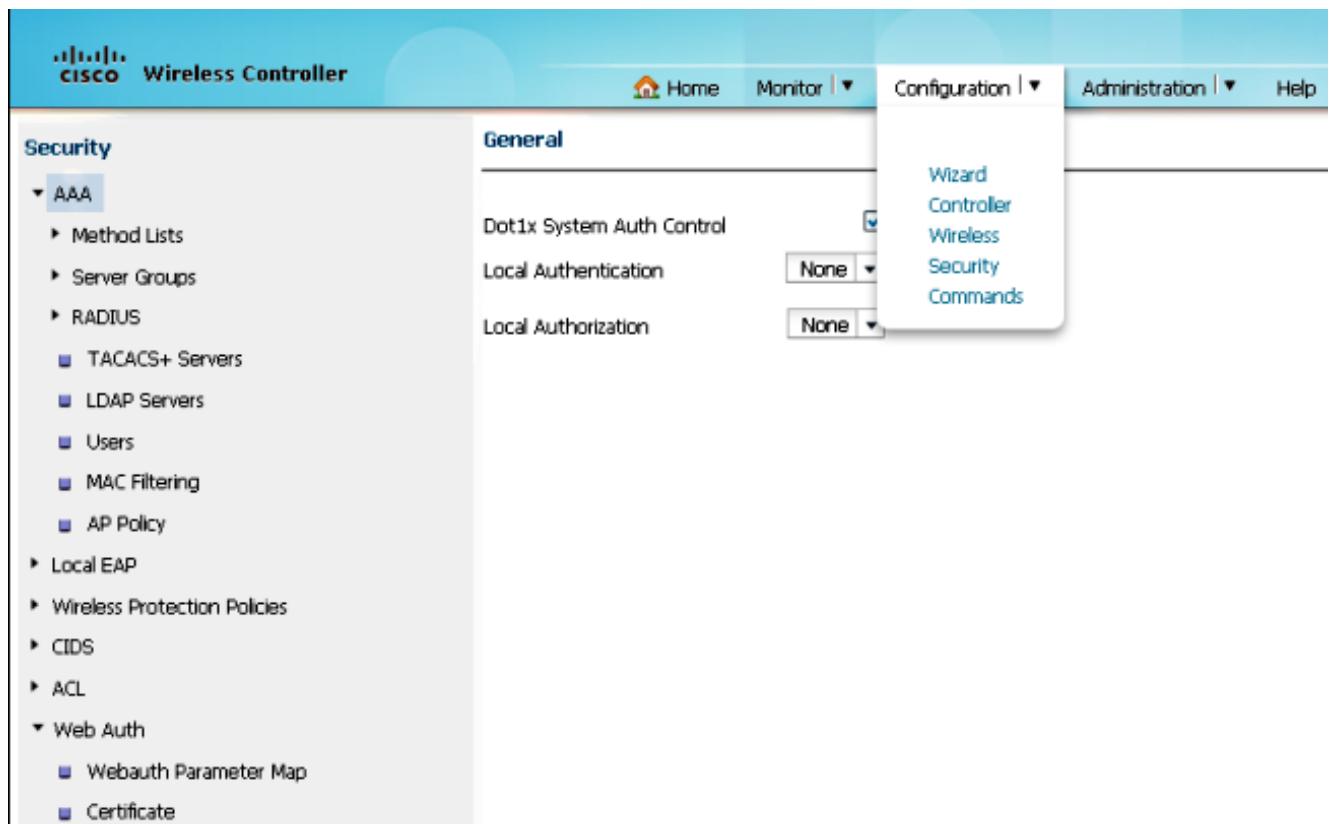

wlan Webauth 9 Webauth
 client vlan VLAN0020
 no security wpa
 no security wpa akm dot1x
 no security wpa wpa2
 no security wpa wpa2 ciphers aes
 security web-auth
 security web-auth parameter-map web
 session-timeout 1800

```

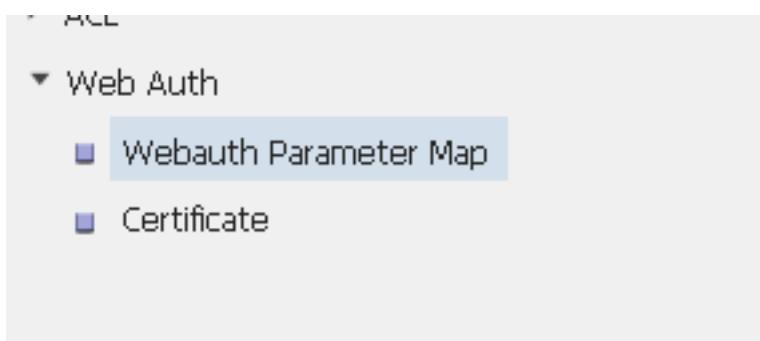

Configuración con la GUI

Complete estos pasos para configurar en la GUI.

1. Desde la GUI del WLC, navegue hasta Configuration > Security:

2. En la parte inferior derecha de la página **Seguridad**, vaya a **Webauth > Webauth Parameter Map**:

3. Elija **global** para el mapa de parámetro predeterminado:

The screenshot shows a table titled 'Webauth Parameter Map' with two buttons at the top: 'New' and 'Remove'. There is one row in the table:

Parameter-map name	Parameter-map type
<input type="checkbox"/> global	Global

4. Navegue hasta **Mapa de parámetro de Webauth > Editar** para configurar la dirección IP virtual. Es **192.169.200.1** en este ejemplo. Cambie el Tipo para **dar su consentimiento**, de modo que el parámetro global se convierta en **consentimiento** (paso a través de Web).

Nota: No es obligatorio configurar el mapa de parámetros global para dar su consentimiento.

The screenshot shows the 'Edit Webauth Parameter Map' configuration page. It includes fields for 'Parameter-map name' (set to 'global'), 'Banner' (a large empty text area), 'Maximum HTTP connections(1-200)' (set to '30'), 'Timeout (1-65535 in minutes)' (set to '2'), 'Type' (set to 'consent'), 'Turn-on Consent with Email' (unchecked), 'Virtual IPv4 Address' (set to '192.168.200.1'), and 'Virtual IPv4 hostname' (empty).

Parameter-map name	global
Banner	(Large empty text area)
Maximum HTTP connections(1-200)	30
Timeout (1-65535 in minutes)	2
Type	consent ▾
Turn-on Consent with Email	<input type="checkbox"/>
Virtual IPv4 Address	192.168.200.1
Virtual IPv4 hostname	(Empty text field)

5. Cree el mapa de parámetros y elija **consentimiento** para el tipo. Este ejemplo utiliza **web** como nombre de mapa de parámetro, que se utiliza bajo la WLAN para que los usuarios accedan a la página Consent.

Webauth Parameter Map
Webauth Parameter Map > Edit

Parameter-map name	web
Banner	
Maximum HTTP connections(1-200)	30
Timeout (1-65535 in minutes)	2
Type	consent ▾
Turn-on Consent with Email	<input type="checkbox"/>

A continuación se muestra una captura de pantalla de los mapas de parámetros en la GUI:

Webauth Parameter Map

New Remove	
Parameter-map name	Parameter-map type
<input type="checkbox"/> global	Global
<input type="checkbox"/> web	Named

6. Desde la GUI del WLC, navegue hasta **Configuration > Wireless > WLAN** para crear una nueva WLAN. Este ejemplo tiene **Webauth** como WLAN asignada a **VLAN20**:

WLAN

WLAN > Edit

General	Security	QoS	AVC	Advanced
Profile Name	Webauth			
Type	WLAN			
SSID	Webauth			
Status	<input checked="" type="checkbox"/>			
Security Policies	Web-Auth (Modifications done under security tab will appear after applying the changes.)			
Radio Policy	All			
Interface/Interface Group(G)	VLAN0020			
Broadcast SSID	<input checked="" type="checkbox"/>			
Multicast VLAN Feature	<input type="checkbox"/>			

7. Navegue hasta WLAN > Edit > Security > Layer2 y seleccione **None** para Layer 2 Security:

WLAN

WLAN > Edit

General	Security	QoS	AVC	Advanced
Layer2	Layer3	AAA Server		
Layer 2 Security	None			
MAC Filtering				
Fast Transition	<input type="checkbox"/>			
Over the DS	<input checked="" type="checkbox"/>			
Reassociation Timeout	20			

8. Navegue hasta WLAN > Edit > Security > Layer3, y elija la configuración apropiada para **Webauth Parameter Map**. En este ejemplo, es **web**.

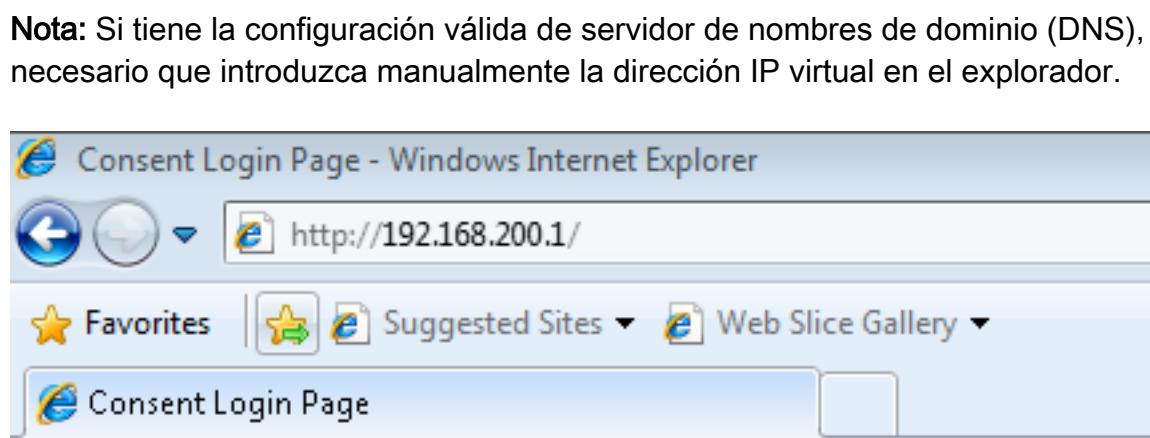

WLAN

WLAN > Edit

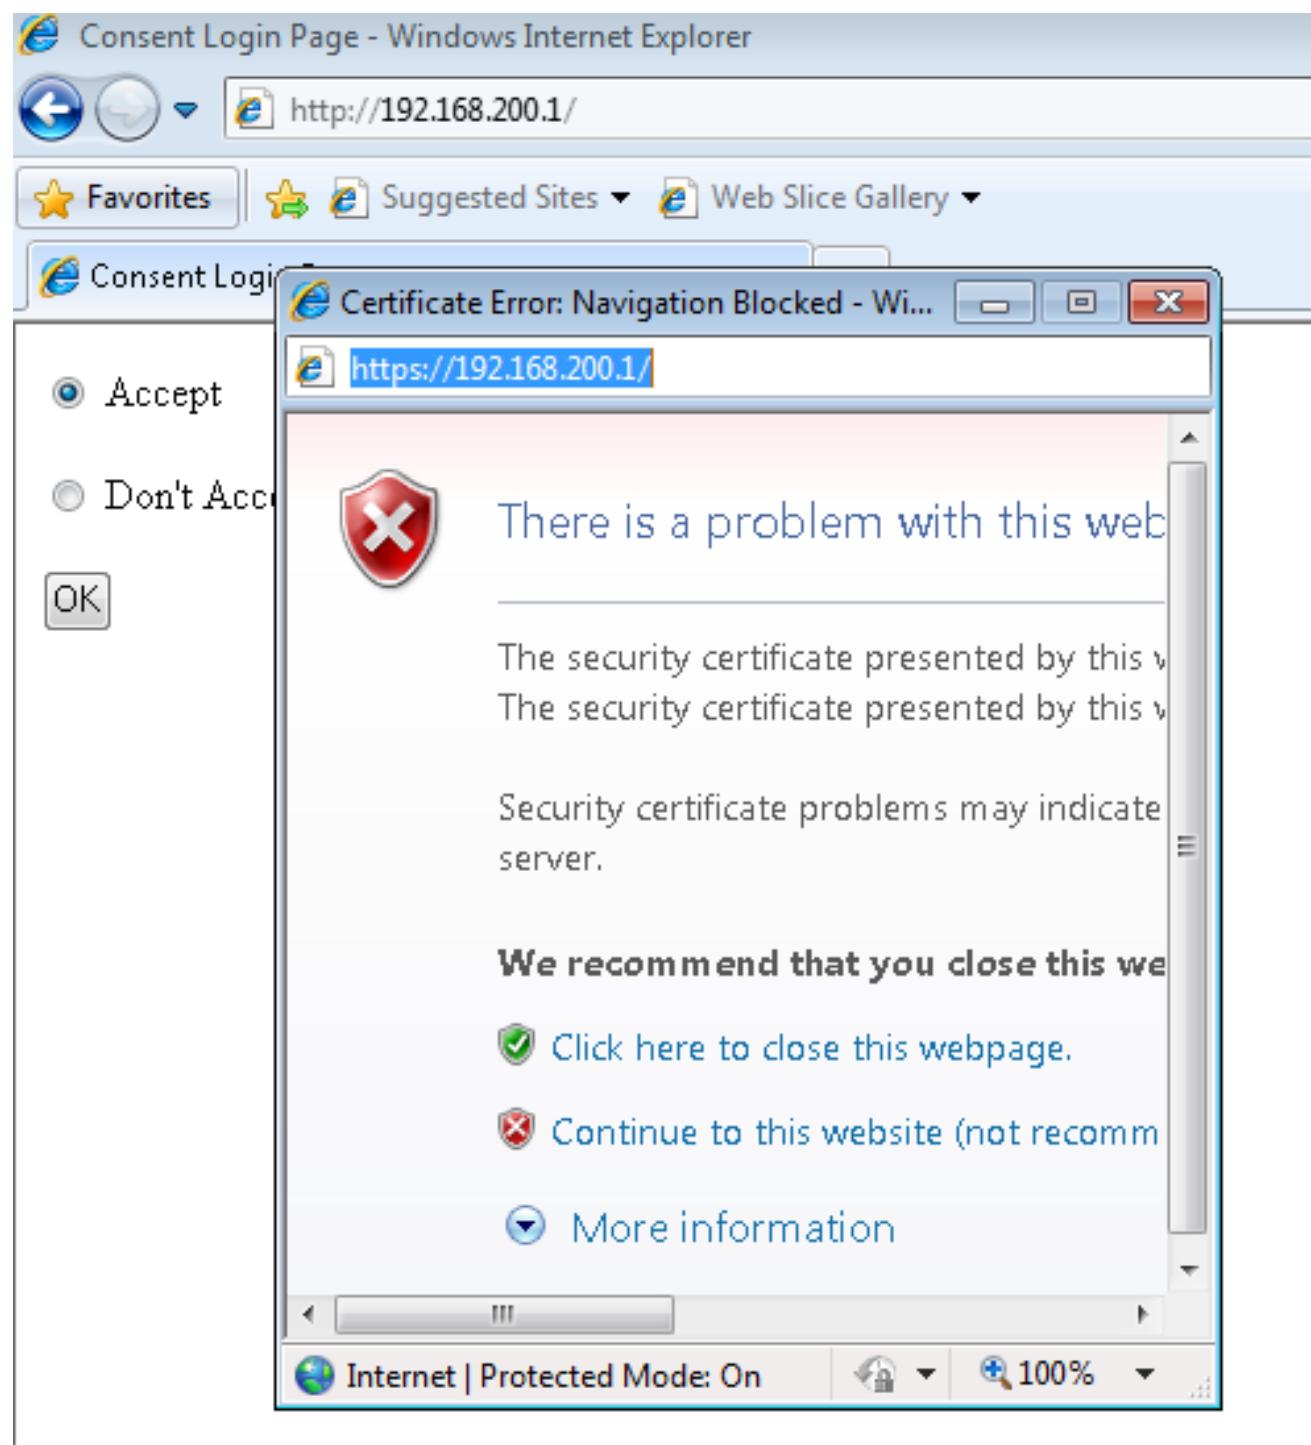

General	Security	QoS	AVC	Advanced
Layer2	Layer3	AAA Server		
Web Policy	<input checked="" type="checkbox"/>			
Conditional Web Redirect	<input type="checkbox"/>			
Webauth Profile	Local_webauth			
Webauth Parameter Map	web	<input type="button" value="▼"/>		
Webauth On-mac-filter Failure	<input type="checkbox"/>			
Preauthentication IPv4 ACL	Unconfigured			
Preauthentication IPv6 ACL	Unconfigured			

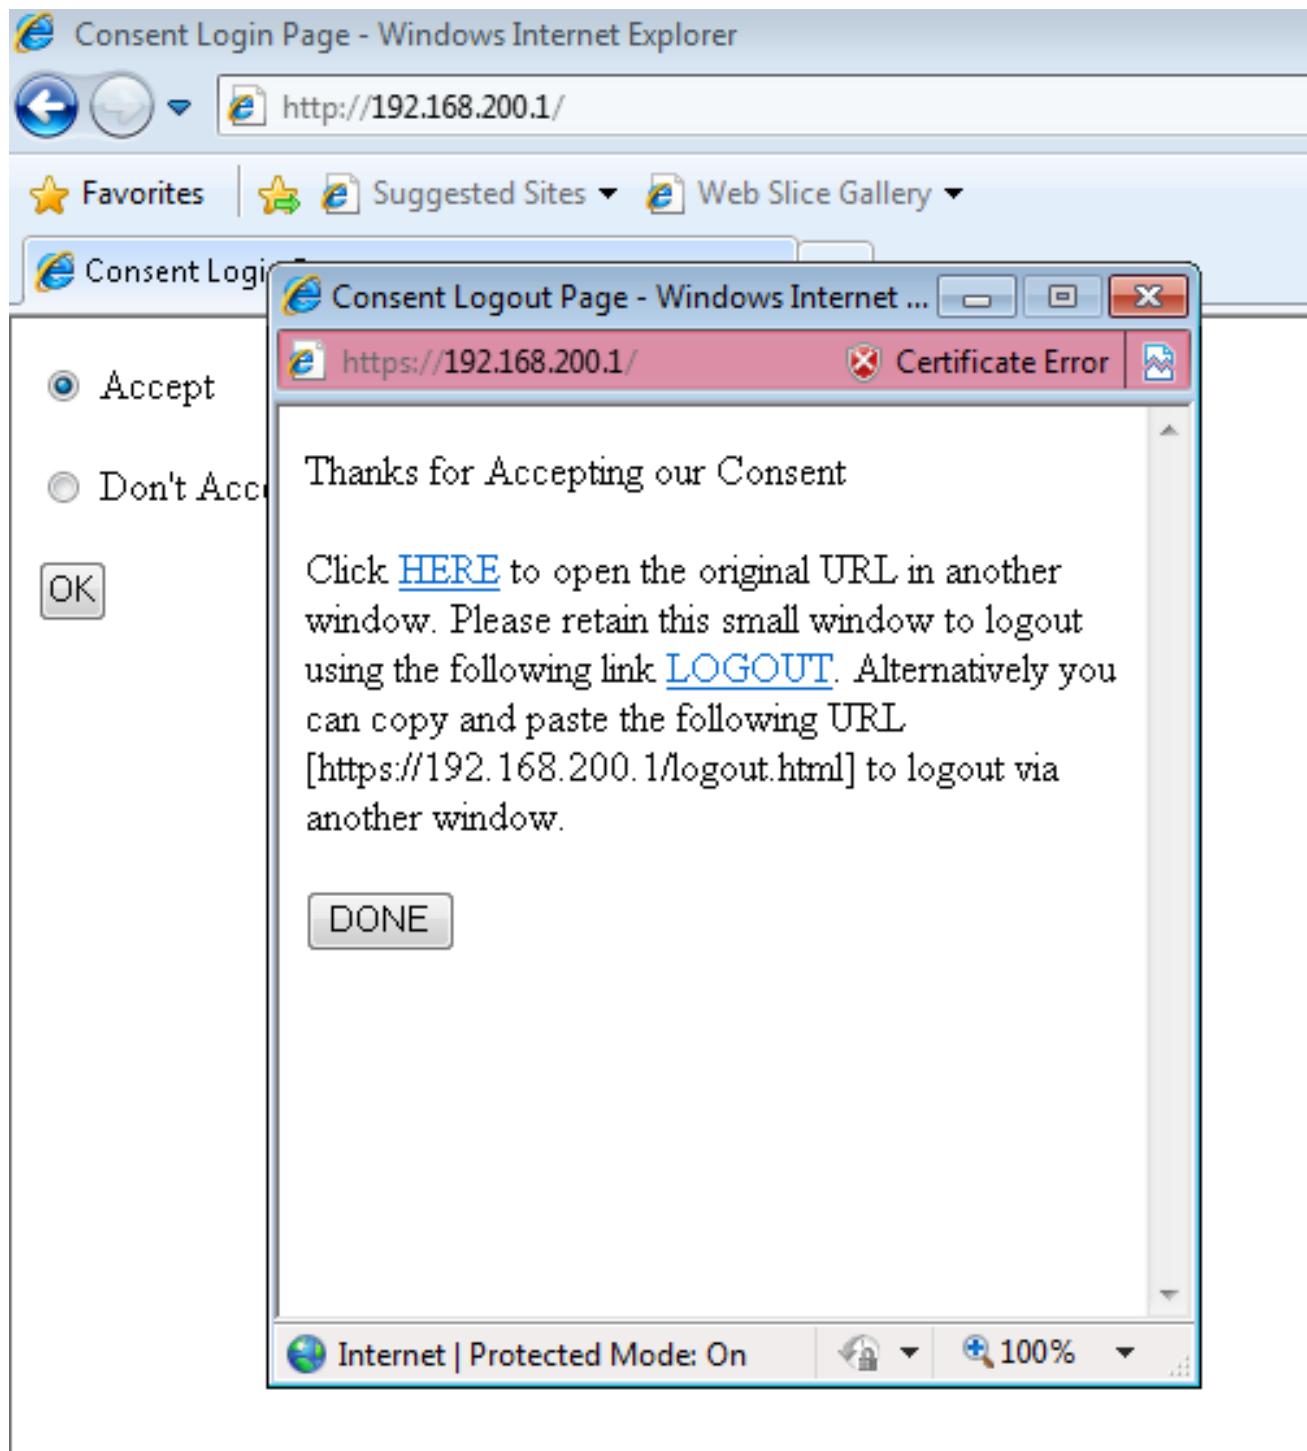

9. Guarde la configuración y estará listo para probarla.

10. Después de conectarse a la WLAN, el cliente recibe la dirección IP. Cuando intenta abrir el explorador con la dirección IP virtual, se muestra la **página de inicio de sesión de consentimiento** y debe hacer clic en el botón de opción **Aceptar**.

11. Una vez que haga clic en **Aceptar**, se iniciará la página de autenticación correcta, que le da la opción de navegar a la página solicitada.

Ejemplo de Cliente

Esta es la captura de paquetes del portátil cliente cuando el cliente recibe el DHCP:

No.	Time	Source	Destination	Protocol	Length	Source Port	Destination Port	Info
1	09:35:51.540559000	0.0.0.0	255.255.255.255	DHCP	340	68	67	67 DHCP Request - Transaction ID 0xd73023c4
2	09:35:51.546600000	20.20.20.1	20.20.20.6	DHCP	342	67	68	68 DHCP ACK - Transaction ID 0xd73023c4

Después de que el cliente recibe la dirección IP, el cliente abre el explorador y escribe la dirección IP virtual.

Nota: Si el DNS está configurado correctamente, no es necesario que introduzca la dirección IP virtual en el explorador.
