Introduction

Ce document illustre une configuration IPSec (IP Security) à l'aide d'un tunnel GRE (Generic Routing Encapsulation) entre deux routeurs. IPSec peut être utilisé pour chiffrer les tunnels GRE afin de fournir une sécurité de couche réseau pour le trafic non IP, tel que Novell Internetwork Packet Exchange (IPX), AppleTalk, etc. Le tunnel GRE dans cet exemple est uniquement utilisé pour le transport de trafic non IP. Par conséquent, aucune adresse IP n'est configurée dans le tunnel. Voici quelques considérations de configuration :

- Avec le logiciel IOS 12.2(13)T et les versions ultérieures (logiciel T-train numéroté supérieur, 12.3 et ultérieures), la crypto-carte IPSec configurée doit uniquement être appliquée à l'interface physique et n'est plus nécessaire à l'application sur l'interface de tunnel GRE. Dans les versions logicielles antérieures à cette version, les crypto-cartes IPSec doivent être appliquées à l'interface du tunnel et à l'interface physique. La présence de la carte de chiffrement sur l'interface physique et de tunnel lors de l'utilisation du logiciel 12.2.(13)T et ultérieur doit continuer à fonctionner ; Cependant, Cisco vous recommande vivement de l'appliquer uniquement sur l'interface physique.
- Assurez-vous que le tunnel GRE fonctionne avant d'appliquer les crypto-cartes.
- La liste de contrôle d'accès de chiffrement (ACL) doit avoir GRE comme protocole autorisé. Par exemple, **access-list 101 permit gre host #.#.#.# host #.#.#.#** (où le premier numéro d'hôte est l'adresse IP de la source du tunnel du tunnel GRE et le second numéro d'hôte est l'adresse IP de la destination du tunnel).
- Utilisez les adresses IP de l'interface physique (ou de l'interface de bouclage) pour identifier les homologues IKE (Internet Key Exchange).

- Dans certaines versions antérieures de Cisco IOS, la commutation rapide sur l'interface de tunnel doit être désactivée pour qu'elle fonctionne, en raison d'un bogue. Désactivez la commutation rapide sur l'interface de tunnel. Vous pouvez afficher les détails du bogue pour ce problème sur [CSCdm10376](#) (clients [enregistrés](#) uniquement).

Avant de commencer

Conditions préalables

Avant d'essayer cette configuration, veuillez vous assurer que vous remplissez les conditions préalables suivantes :

- [connaissance de la configuration et du routage IPX](#)
- [connaissance et configuration des tunnels GRE](#)
- [connaissance de fonctionnement et configuration d'IPSec](#)

Components Used

Les informations dans ce document sont basées sur les versions de logiciel et de matériel ci-dessous.

- Logiciel Cisco IOS® Version 12.2(7)
- Routeurs de la gamme Cisco 3600

Les informations présentées dans ce document ont été créées à partir de périphériques dans un environnement de laboratoire spécifique. All of the devices used in this document started with a cleared (default) configuration. Si vous travaillez dans un réseau opérationnel, assurez-vous de bien comprendre l'impact potentiel de toute commande avant de l'utiliser.

Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

Configuration

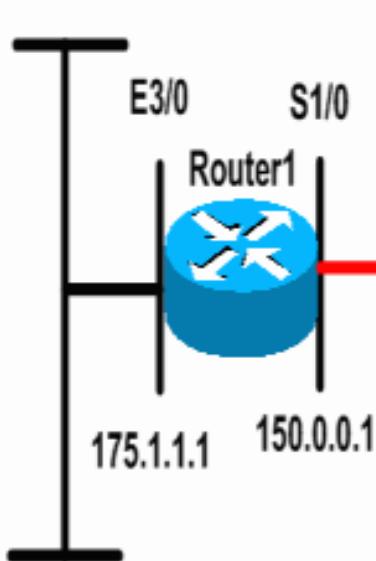

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

Remarque : Pour en savoir plus sur les commandes utilisées dans le présent document, utilisez [l'outil de recherche de commandes](#) (clients [inscrits](#) seulement).

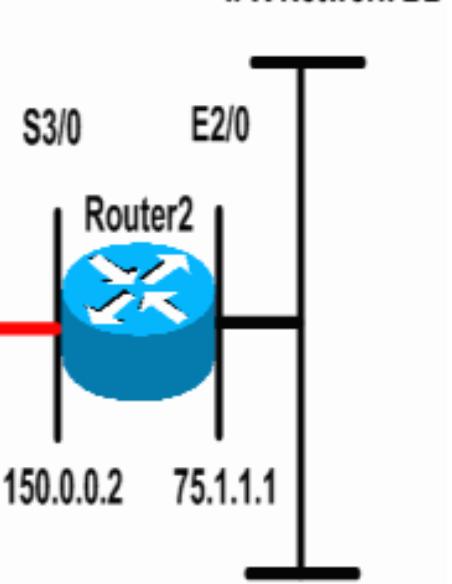

Diagramme du réseau

Ce document utilise la configuration réseau indiquée dans le diagramme suivant :

IPX Network AA

GRE TUNNEL

Configurations

Ce document utilise les configurations présentées ci-dessous.

Vérification

Cette section présente des informations que vous pouvez utiliser pour vous assurer que votre configuration fonctionne correctement.

Certaines commandes **show** sont prises en charge par l'[Output Interpreter Tool](#) (clients enregistrés uniquement), qui vous permet de voir une analyse de la sortie de la commande show.

- [**show ipx interface**](#) : affiche l'état et les paramètres des interfaces IPX configurées sur le périphérique, telles que le réseau IPX et l'adresse du noeud.
- [**show ipx route**](#) : affiche le contenu de la table de routage IPX.

- **[show crypto isakmp sa](#)** - Affiche les associations de sécurité de phase 1 en affichant l'association de sécurité IKE du routeur. L'état affiché doit être QM_IDLE pour qu'une SA IKE soit considérée comme active et opérationnelle.
- **[show crypto ipsec sa](#)** - Affiche les associations de sécurité de phase 2 en affichant une liste détaillée des SA IPSec actives du routeur.
- **[show crypto map](#)** - Affiche les crypto-cartes configurées sur le routeur, ainsi que ses détails tels que les listes d'accès de chiffrement, les jeux de transformation, les homologues, etc.
- **[show crypto engine connections active](#)** - Affiche une liste des SA actives avec leurs interfaces, transformations et compteurs associés.

[Exemple de sortie de show](#)

Cette section capture les sorties de la commande **show** sur le périphérique Router1 lorsque la commande **ping IPX** est exécutée sur Router1 destiné à Router2. Les sorties sur Router2 sont similaires. Les paramètres clés du résultat sont indiqués en **gras**. Pour obtenir des explications sur les sorties de commande, reportez-vous au document [IP Security Troubleshooting - Understanding and Using debug Commands](#).

```
Router1#show ipx interface ethernet 3/0
Ethernet3/0 is up, line protocol is up
IPX address is AA.00b0.64cb.eab1, NOVELL-ETHER [up]
Delay of this IPX network, in ticks is 1 throughput 0 link delay 0
IPXWAN processing not enabled on this interface.
!--- Output suppressed. Router2#show ipx interface ethernet 2/0
Ethernet2/0 is up, line protocol is up
IPX address is BB.0002.16ae.c161, NOVELL-ETHER [up]
Delay of this IPX network, in ticks is 1 throughput 0 link delay 0
IPXWAN processing not enabled on this interface.
!--- Output suppressed. Router1#show ipx route
Codes: C - Connected primary network, c - Connected secondary network

Dépannage

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration.

Dépannage des commandes

Note : Avant d'émettre des commandes debug, consultez [Informations importantes sur les commandes de débogage](#).

- [debug crypto engine](#) - Affiche des informations sur le moteur de chiffrement qui effectue le chiffrement et le déchiffrement.
- [debug crypto ipsec](#) - Affichez les négociations IPSec de la phase 2.
- [debug crypto isakmp](#) - Affichez les négociations IKE de la phase 1.

Exemple de sortie de débogage

Cette section capture les sorties de la commande debug sur les routeurs configurés avec IPSec. La commande ping IPX est exécutée sur le routeur 1 destiné au routeur 2.

- [Routeur 1](#)
