## [Introduction](#)

Le concentrateur Cisco VPN 3000 peut être configuré pour authentifier les clients VPN Cisco via un serveur Security Dynamics International (SDI). Le concentrateur VPN 3000 agit comme un client SDI, communiquant avec le serveur SDI sur le port UDP (User Datagram Protocol) 5500. Le document suivant indique comment s'assurer que le serveur SDI, le concentrateur VPN 3000 et le client VPN Cisco fonctionnent correctement, puis comment combiner les composants. Si votre concentrateur VPN 3000 n'a pas encore été configuré, suivez les étapes de [Installer et configurer un concentrateur VPN 3000 sans SDI](#) à l'aide de l'interface de ligne de commande (CLI) pour l'installation et la configuration initiales. Si votre concentrateur VPN 3000 a déjà été configuré, suivez les étapes pour [Modifier la configuration existante \(sans SDI\)](#).

## [Conditions préalables](#)

### [Conditions requises](#)

Aucune condition préalable spécifique n'est requise pour ce document.

## Components Used

Cette configuration a été développée et testée à l'aide des versions logicielle et matérielle ci-dessous.

- Serveur SDI 3.3 (UNIX et NT)
- Concentrateur VPN 3000 (2.5.2)
- Client VPN 2.5.2.A

Les informations présentées dans ce document ont été créées à partir de périphériques dans un environnement de laboratoire spécifique. All of the devices used in this document started with a cleared (default) configuration. Si vous travaillez dans un réseau opérationnel, assurez-vous de bien comprendre l'impact potentiel de toute commande avant de l'utiliser.

## Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

## Informations générales

Ce document s'applique à la fois au client VPN Cisco 3000 (2.5.x) et au client VPN Cisco (3.x). Avec la version 3.0 et ultérieure, vous pouvez désormais configurer des serveurs SDI individuels pour des groupes individuels par opposition à un serveur SDI défini globalement et utilisé par tous les groupes. Les groupes qui ne disposent pas de serveurs SDI individuels configurés utiliseront le serveur SDI défini globalement.

Il existe trois types de nouveaux modes de numéro d'identification personnel (NIP) dans SDI. Le concentrateur VPN 3000 prend en charge les deux premières options, comme indiqué ci-dessous.

- L'utilisateur choisit un nouveau code PIN.
- Le serveur choisit un nouveau code PIN et informe les utilisateurs.
- Le serveur choisit un nouveau code PIN et en informe les utilisateurs ; les utilisateurs peuvent modifier le code PIN.

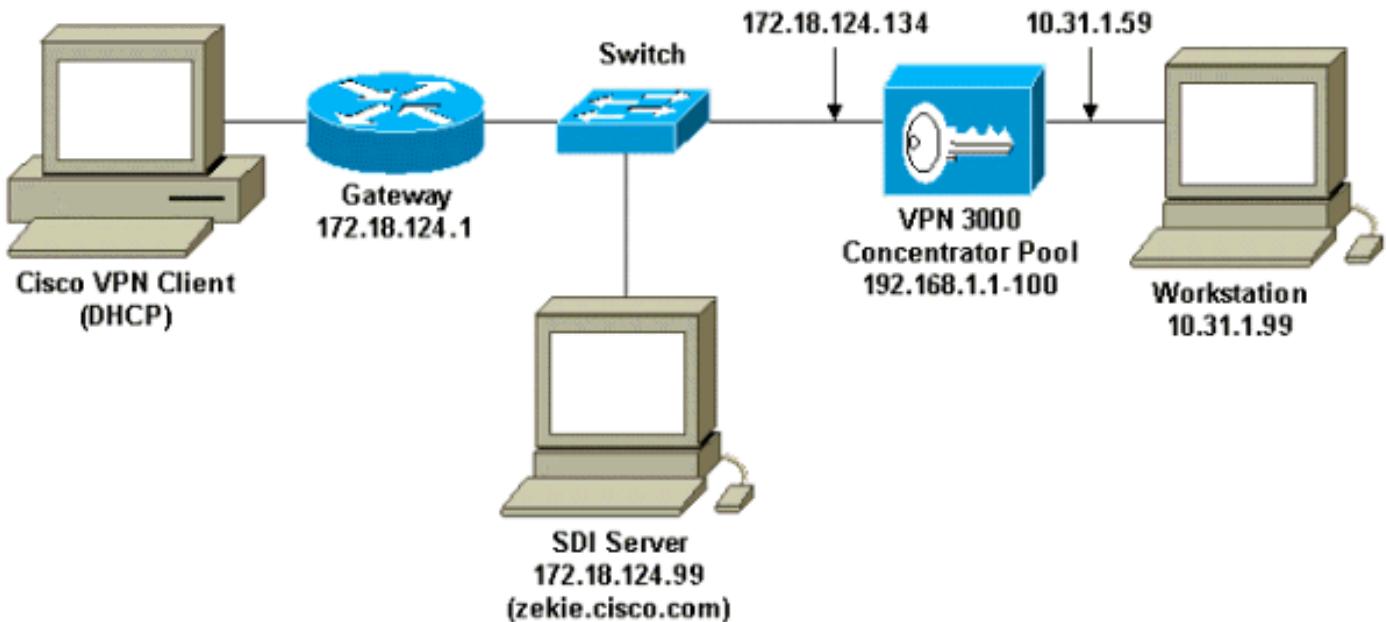

## Configuration

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

**Remarque :** Pour en savoir plus sur les commandes utilisées dans le présent document, utilisez [l'outil de recherche de commandes](#) (clients [inscrits](#) seulement).

## Diagramme du réseau

Ce document utilise la configuration réseau indiquée dans le diagramme suivant :

## Configurations

### Installation et configuration du concentrateur VPN 3000 sans SDI

Nous avons configuré le concentrateur VPN 3000 pour authentifier localement un utilisateur dans un groupe ; en procédant ainsi avant d'ajouter SDI, nous pourrions déterminer si IPSec entre le client VPN Cisco et le concentrateur VPN 3000 fonctionne. Nous avons effacé la configuration du concentrateur VPN 3000 sur le port de console en accédant à **Administration > System Reboot > Schedule reboot > Reboot with Factory/Default Configuration**.

Après le redémarrage, la configuration initiale suivante a été effectuée :

```
Configuration du concentrateur VPN 3000

### [Modifier la configuration existante \(sans SDI\)](#)

Si le concentrateur VPN 3000 a déjà été configuré, les écrans suivants sont utilisés pour vérifier les paramètres de groupe, d'utilisateur et IPSec/IKE :

1. Utilisez cet écran pour ajouter un groupe avec l'authentification locale  
:

## Configuration | User Management | Groups | Modify vpn3000

Check the **Inherit?** box to set a field that you want to default to the base group value. Uncheck the **Inherit?** box and enter a new value to override base group values.

Identity	General	IPSec	PPTP/L2TP
<b>Identity Parameters</b>			
<b>Attribute</b>	<b>Value</b>	<b>Description</b>	
<b>Group Name</b>	vpn3000	Enter a unique name for the group.	
<b>Password</b>	*****	Enter the password for the group.	
<b>Verify</b>	*****	Verify the group's password.	
<b>Type</b>	Internal <input type="checkbox"/>	<i>External</i> groups are configured on an external authentication server (e.g. RADIUS). <i>Internal</i> groups are configured on the VPN 3000 Concentrator Series's Internal Database.	
<input type="button" value="Apply"/> <input type="button" value="Cancel"/>			

2. Utilisez cet écran pour ajouter un utilisateur au groupe avec l'authentification locale

## Configuration | User Management | Users | Modify 37297304

Check the **Inherit?** box to set a field that you want to default to the group value. Uncheck the **Inherit?** box and enter a new value to override group values.

Identity	General	IPSec	PPTP/L2TP
<b>Identity Parameters</b>			
Attribute	Value	Description	
<b>User Name</b>	37297304	Enter a unique user name.	
<b>Password</b>	*****	Enter the user's password. The password must satisfy the group password requirements.	
<b>Verify</b>	*****	Verify the user's password.	
<b>Group</b>	vpn3000	Enter the group to which this user belongs.	
<b>IP Address</b>		Enter the IP address assigned to this user.	
<b>Subnet Mask</b>		Enter the subnet mask assigned to this user.	

**Buttons:** Apply | Cancel

3. Utilisez l'écran de proposition IPSec > IKE pour ajouter des paramètres IKE (les paramètres affichés sont les paramètres par défaut du système)

:

Select an **Active Proposal** and click **Deactivate** to make it **Inactive**, or click **Move Up** or **Move Down** to change its priority.

Click **Add** or **Copy** to add a new **Inactive Proposal**. IKE Proposals are used by [Security Associations](#) to specify IKE parameters.

Active Proposals	Actions	Inactive Proposals
IKE-3DES-MD5 IKE-3DES-MD5-DH1 IKE-DES-MD5	<< Activate Deactivate >> Move Up Move Down Add Modify Copy Delete	IKE-3DES-MD5-RSA IKE-3DES-SHA-DSA IKE-3DES-MD5-RSA-DH1

### [Tester le client VPN Cisco et le concentrateur VPN 3000 sans SDI](#)

Après avoir modifié la configuration existante sur le concentrateur VPN 3000, nous installons le client VPN Cisco et configurons une nouvelle connexion pour se terminer à 172.18.124.134 (l'interface publique du concentrateur). Nos informations d'accès au groupe étaient « vpn3000 » (le nom du groupe) et le mot de passe du groupe était le mot de passe du groupe. Lorsque nous avons cliqué sur **Connect**, le nom d'utilisateur était « 37297304 » (nom de l'utilisateur) et le mot de passe de l'utilisateur était le mot de passe de l'utilisateur (stocké localement sur le concentrateur VPN 3000 ; aucun SDI n'est encore impliqué). Voir [Good IPSec Debug With Local Authentication](#) pour IKE, IKEDBG, IKEDECODE, IPSEC, IPSECDBG, IPSECDECODE debug.

### [Tester le fonctionnement du serveur SDI sans concentrateur VPN 3000](#)

#### UNIX (Solaris)

1. Sur le serveur SDI, créez un compte le plus rapide à l'aide de l'outil d'administration Solaris. L'entrée /etc/passwd doit ressembler à :  

```
sditest:x:76:10::/local/0/sditest:/local/0/opt/ace/prog/sdshell
```

**Remarque :** les valeurs et les chemins d'accès au répertoire d'accueil de l'utilisateur et à « sdshell » dépendent du système.
2. Attribuez un jeton à sditest.
3. Essayez Telnet sur l'hôte UNIX comme étant le plus rapide. L'hôte vous invite à saisir un mot de passe UNIX et le CODE DE PASSE. Après l'authentification, il vous permet de vous connecter en tant que plus facile dans cet hôte.

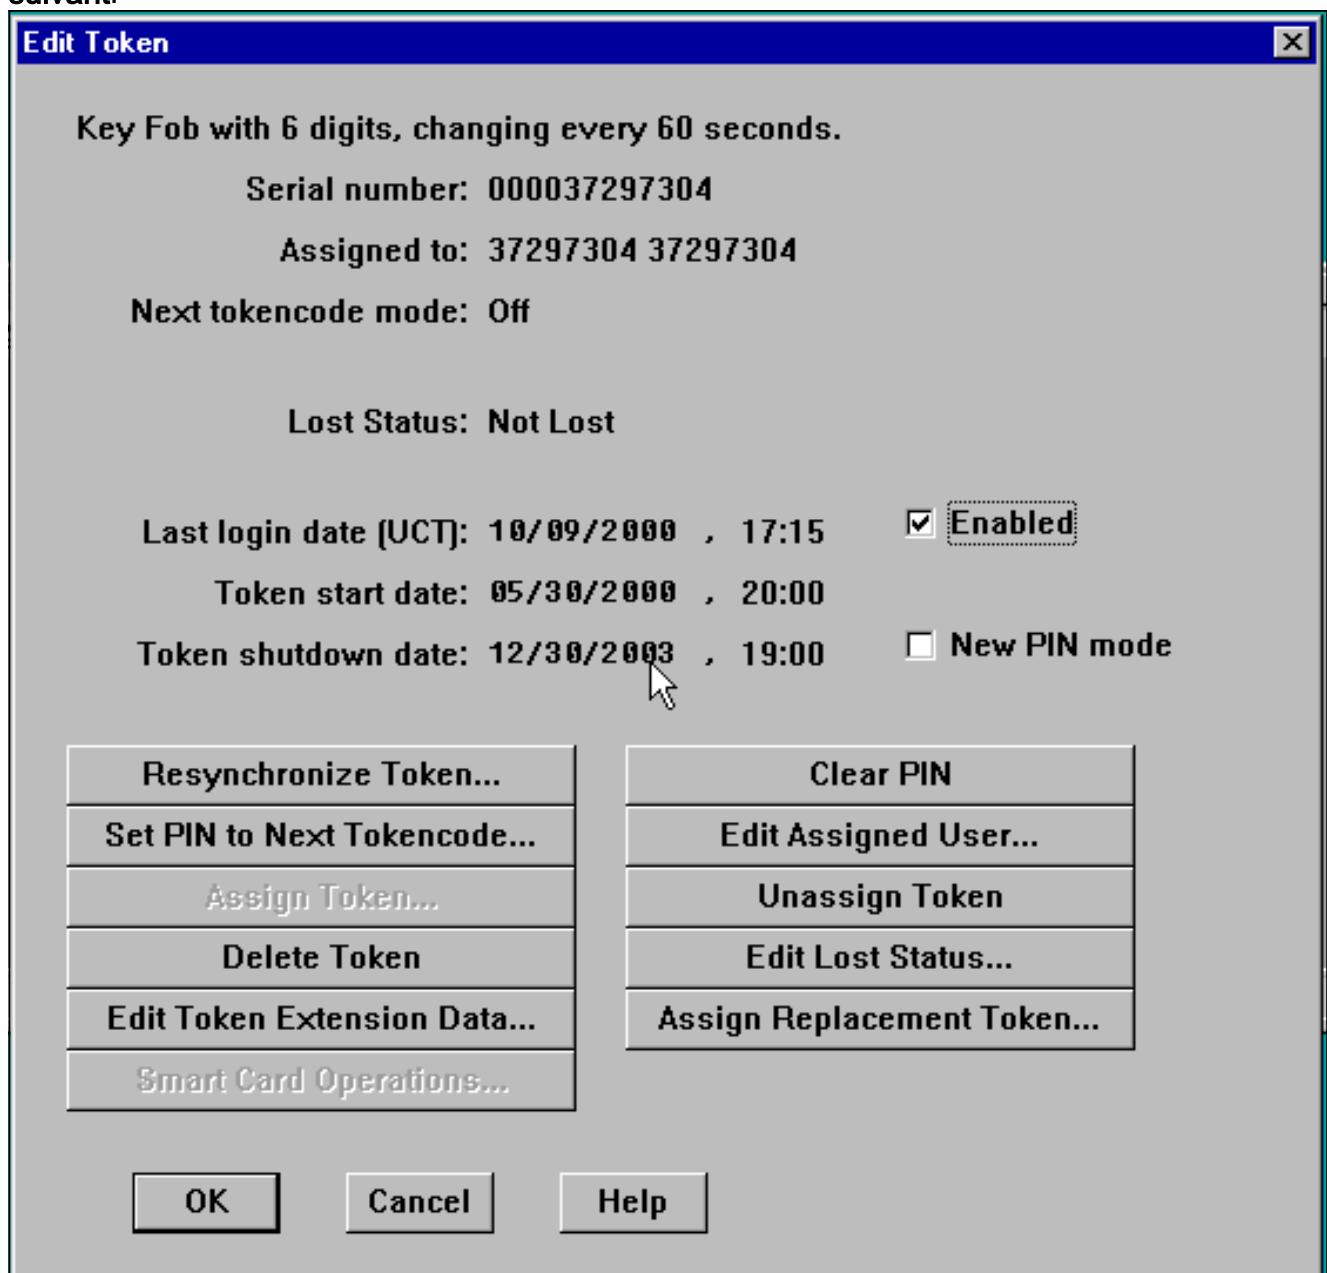

## Microsoft Windows NT

1. Installez l'agent SecurSight.
2. Sélectionnez Programmes > SecurSight > Test Authentication.

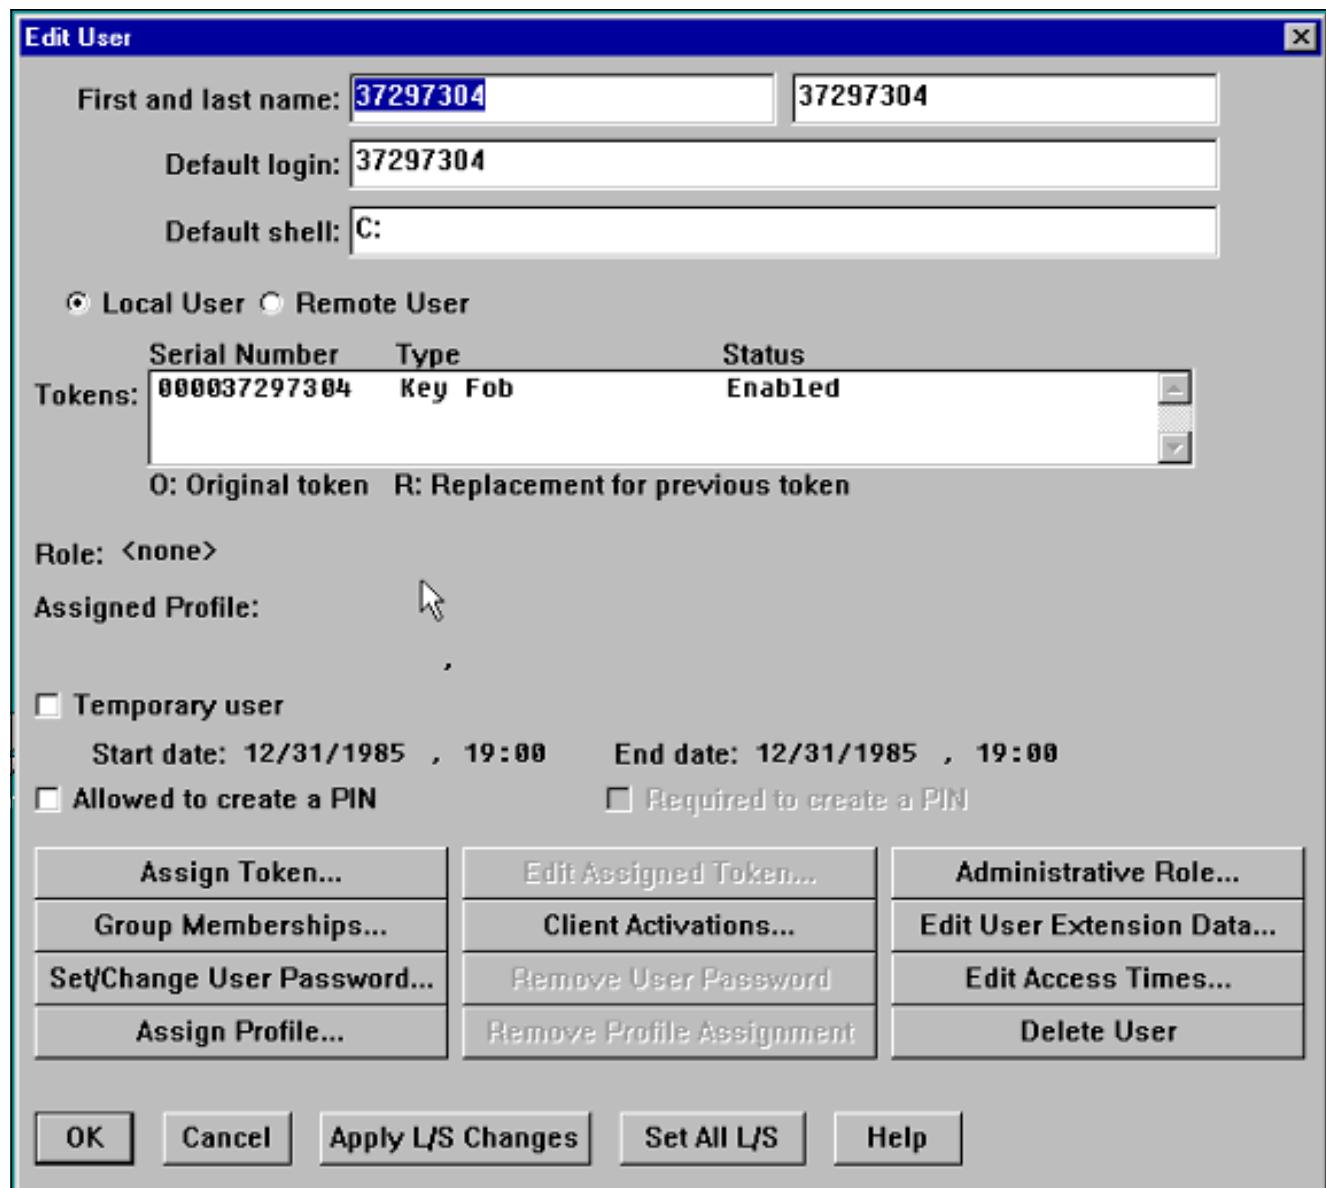

### [Configurer SDI/Utilisateur pour parler au concentrateur VPN 3000](#)

Procédez comme suit pour configurer SDI/User pour parler au concentrateur VPN 3000 :

1. Sur l'écran SDI Server Edit Token, vérifiez que le jeton est activé et non en mode Nouveau code PIN.
2. Cliquez sur Resynchroniser le jeton et définir le code PIN sur le code jeton suivant.

3. Dans l'écran Modifier l'utilisateur, affectez un jeton à l'utilisateur et vérifiez que la case Autorisé à créer un code confidentiel n'est pas cochée.
4. Cliquez sur Client Activations et vérifiez que le concentrateur VPN 3000 est inclus.

Remarque : le concentrateur VPN 3000 est considéré comme un client du serveur SDI ; l'écran ci-dessous est l'écran Add/Edit Client du serveur SDI. Comme il s'agit d'un nouveau client, la zone « Sent Node Secret » est grisée. Le serveur SDI n'a pas eu l'occasion d'envoyer le fichier « noeud secret » au concentrateur (ce fichier serait affiché dans le concentrateur dans la section **Administration > Gestion des fichiers > Fichiers** comme « SECURID »). Après une authentification réussie à partir du VPN 3000, le fichier « node secret » s'affiche sur le concentrateur VPN 3000 et la case « Sent Node Secret » est cochée.

5. Cliquez sur **Activations utilisateur** et vérifiez que l'utilisateur est inclus.

### Configuration et test du concentrateur VPN 3000 vers SDI

Procédez comme suit pour configurer et tester le concentrateur VPN 3000 sur SDI.

1. Utilisez l'écran suivant pour configurer le concentrateur VPN 3000 afin qu'il s'authentifie auprès de SDI

:

Change a configured user authentication server.

**Server Type**

SDI

Selecting *Internal Server* will let you add users to the internal user database.

**Authentication Server**

[172.18.124.99]

Enter IP address or hostname.

**Server Port**

[0]

Enter 0 for default port (5500).

**Timeout**

[4]

Enter the timeout for this server (seconds).

**Retries**

[2]

Enter the number of retries for this server.

Apply

Cancel

2. À partir de SDI, accédez à Report > Log Monitor > Activity Monitor et cliquez sur OK pour observer les demandes entrantes.

ACE/Server Log Monitor : ZEKIE		
From: 10/10/2000 16:33:17	Activity Log Monitor	Date: 10/10/2000 16:33:17
For: All Users		Page: 1 of 1
Date	Time	Current User/Client (Group)
		Description
10/10/2000	20:33:17U	Administrator
		-----
10/10/2000	16:33:17L	Exited Report Selection Criteria zekie.cisco.com

█

**Hold**    **Exit**    **Previous**    **Next**    **To To**    **Page:**    **1**

3. Sur le concentrateur VPN 3000, cliquez sur **Test** pour tester la connexion.

This section lets you configure parameters for servers that authenticate users.

You should have a properly configured RADIUS, NT Domain, or SDI server to access, or you can configure the internal server and add users to the internal database.

Click the **Add** button to add a server, or select a server and click **Modify**, **Delete**, **Move**, or **Test**.

Servers	Actions
<b>Internal (Internal)</b> <b>172.18.124.99 (SDI)</b>	<b>Add</b> <b>Modify</b> <b>Delete</b> <b>Move Up</b> <b>Move Down</b> <b>Test</b>

4. Si l'authentification est correcte, le concentrateur VPN 3000 affiche :Authentification réussie  
Dans l'exemple ci-dessus, nous avons défini un serveur SDI global. Nous pouvons également choisir de définir des serveurs SDI individuels pour chaque groupe en accédant à Configuration > User Management > Groups, en mettant en surbrillance le groupe respectif et en sélectionnant Modify Auth Server.

Pour obtenir des informations sur le débogage, reportez-vous aux sections suivantes de ce document :

- [Activation du débogage sur le concentrateur VPN 3000](#)
- [Bon débogage avec SDI](#)
- [Débogues incorrects](#)

## Vérification

Cette section présente des informations que vous pouvez utiliser pour vous assurer que votre configuration fonctionne correctement.

### [Tester le client VPN Cisco sur le concentrateur VPN 3000 avec SDI](#)

Si tout fonctionne jusqu'ici, il est temps de combiner le client VPN Cisco, le concentrateur VPN 3000 et le serveur SDI. Nous devons apporter une modification au concentrateur VPN 3000 en modifiant le groupe de travail que nous avons appelé « vpn3000 » pour envoyer des requêtes au serveur SDI.

**Configuration | User Management | Groups | Modify vpn3000**

Check the **Inherit?** box to set a field that you want to default to the base group value. Uncheck the **Inherit?** box and enter a new value to override base group values.

Identity	General	IPSec	PPTP/L2TP
<b>IPSec Parameters</b>			
Attribute	Value	Inherit?	Description
IPSec SA	ESP-3DES-MD5	<input checked="" type="checkbox"/>	Select the group's IPSec Security Association.
Tunnel Type	Remote Access	<input checked="" type="checkbox"/>	Select the type of tunnel for this group. Update the Remote Access parameters below as needed.
<b>Remote Access Parameters</b>			
Group Lock	<input type="checkbox"/>	<input checked="" type="checkbox"/>	Lock users into this group.
Authentication	SDI	<input type="checkbox"/>	Select the authentication method for users in this group.
Mode Configuration	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	Check to use Mode Configuration for users of this group. Update parameters below if checked.
<b>Mode Configuration Parameters</b>			
Banner	<input type="text"/>	<input checked="" type="checkbox"/>	Enter the banner for this group.

## Dépannage

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration.

### Activation du débogage sur le concentrateur VPN 3000

Nom de classe pour l'authentification :

- AUTORITÉ
- AUTHDBG
- CODE AUTOMATIQUE

Nom de la classe pour IPSec :

- IKE, IKEDBG, IKEDECODE
- IPSEC, IPSECDBG, IPSECDECODE
- Gravité au journal = 1-9
- Gravité vers la console = 1-3

## Configuration | System | Events | Classes | Add

This screen lets you add and configure an event class for special handling.

**Class Name**

Select Class

Select the event class to configure.

**Enable**

Check to enable special handling of this class.

**Severity to Log**

1–5

Select the range of severity values to enter in the log.

**Severity to Console**

1–3

Select the range of severity values to display on the console.

**Severity to Syslog**

None

Select the range of severity values to send to a Syslog server.

**Severity to Email**

None

Select the range of severity values to send via email to the recipient list.

**Severity to Trap**

None

Select the range of severity values to send to an SNMP system.

Cliquez sur Get Log pour afficher les résultats de l'opération de débogage.

```

## **Débogues incorrects**

### **Nom d'utilisateur incorrect ou utilisateur non activé sur le client**

#### *Débogage SDI*

```
10/06/2000 16:30:21U junk/vpn3000
10/06/2000 12:30:21L User Not on Client zekie.cisco.com
```

#### *Débogage VPN 3000*

```
21 10/06/2000 14:20:06.310 SEV=3 AUTH/5 RPT=5
Authentication rejected: Reason = Unspecified
handle = 15, server = 172.18.124.99, user = junk
```

### **Bon nom d'utilisateur, mauvais code secret**

#### *Débogage SDI*

```
10/06/2000 16:33:07U 37297304/vpn3000 000037297304/37297304 372
10/06/2000 12:33:07L ACCESS DENIED, PASSCODE Incorrect zekie.cisco.com
```

#### *Débogage VPN 3000*

```
249 10/06/2000 14:22:52.160 SEV=3 AUTH/5 RPT=6
Authentication rejected: Reason = Unspecified
handle = 16, server = 172.18.124.99, user = 37297304
```

### **Serveur SDI inaccessible ou démon désactivé**

#### *Débogage SDI*

N'affiche rien (aucune demande n'a été reçue)

#### *Débogage VPN 3000*

```
77 10/06/2000 14:28:55.600 SEV=4 AUTH/9 RPT=7
Authentication failed: Reason = Network error
handle = 17, server = 172.18.124.99, user = 37297304
```

## VPN 3000 non configuré en tant que client sur la boîte SDI

### *Débogage SDI*

```
10/06/2000 17:37:42U --/172.18.124.134 -->/
10/06/2000 13:36:42L Client Not Found zekie.cisco.com
```

### *Débogage VPN 3000*

```
113 10/06/2000 15:26:27.440 SEV=3 AUTH/5 RPT=8
Authentication rejected: Reason = Unspecified
handle = 21, server = 172.18.124.99, user = 37297304
```

## Le concentrateur VPN 3000 a été supprimé en tant que client du serveur SDI, puis il a été réajouté.

Le serveur SDI a essayé d'envoyer le fichier SECURID pour remplacer l'ancien, mais le VPN 3000 avait déjà ce fichier.

### *Message sur SDI*

```
10/06/2000 13:42:18L Node Verification Failed zekie.cisco.com
```

### *Débogage VPN 3000*

```
21 10/06/2000 15:32:03.030 SEV=3 AUTH/5 RPT=9
Authentication rejected: Reason = Unspecified
handle = 22, server = 172.18.124.99, user = 37297304
```

Pour résoudre ce problème, supprimez le fichier SECURID sur le concentrateur VPN 3000 en accédant à **Administration > File management > Files > SECURID > Delete**. Lors du nouveau test, le concentrateur VPN 3000 accepte le nouveau fichier du serveur SDI. Si la case à cocher **Modifier le client > Noeud envoyé secret** est grisée sur l'identificateur SDI, le serveur SDI n'a pas pu terminer l'échange. Une fois que le concentrateur VPN 3000 dispose du fichier SECURID, la case **Sent Node Secret** est cochée/non grisée.
