[Introduction](#)

Dans cet exemple de configuration, un PIX distant reçoit une adresse IP via le protocole DHCP (Dynamic Host Configuration Protocol) et se connecte à un PIX central. Cette configuration permet au PIX central d'accepter des connexions IPSec dynamiques. Le PIX distant utilise la traduction d'adresses de réseau (NAT) pour « rejoindre » les périphériques à adresse privée derrière lui au réseau à adresse privée derrière le PIX central. Le PIX distant peut initier des connexions au PIX central (il connaît le point d'extrémité), mais le PIX central ne peut pas initier de connexions au PIX distant (il ne connaît pas le point d'extrémité).

Dans cet exemple de configuration, Tiger est le PIX distant et Lion est le PIX central. Il n'est pas connu quelle adresse IP Tiger va être, donc vous devez configurer Lion pour accepter dynamiquement des connexions de n'importe où en connaissant la clé pré-partagée générique. Tiger sait quel trafic doit être chiffré (parce qu'il est spécifié par la liste d'accès) et où se trouve le point d'extrémité du Lion. Tiger doit initier la connexion. Les deux côtés font NAT et nat 0 pour contourner NAT pour le trafic IPsec.

En outre, l'utilisateur distant dans cette configuration se connecte au PIX central (Lion) à l'aide du Client VPN Cisco 3.x. L'utilisateur distant ne peut pas se connecter au PIX distant (Tiger), car les

deux côtés auraient attribué dynamiquement des adresses IP et ne sauraient pas où envoyer la demande.

Référez-vous à [Exemple de configuration PIX/ASA 7.x PIX-to-PIX Dynamic-to-Static IPsec avec NAT et VPN Client](#) afin d'en savoir plus sur le même scénario dans PIX/ASA 7.x avec Cisco VPN Client 4.x.

Conditions préalables

Conditions requises

Aucune spécification déterminée n'est requise pour ce document.

Components Used

Les informations contenues dans ce document sont basées sur les versions de matériel et de logiciel suivantes :

- Logiciel Cisco PIX Firewall version 6.0(1) (ou ultérieure pour Cisco VPN Client 3.x)
- Logiciel Cisco PIX Firewall Version 5.3.1 (PIX distant)
- Client VPN Cisco Version 3.x

The information in this document was created from the devices in a specific lab environment. All of the devices used in this document started with a cleared (default) configuration. If your network is live, make sure that you understand the potential impact of any command.

Conventions

Pour plus d'informations sur les conventions utilisées dans ce document, reportez-vous à [Conventions relatives aux conseils techniques Cisco](#).

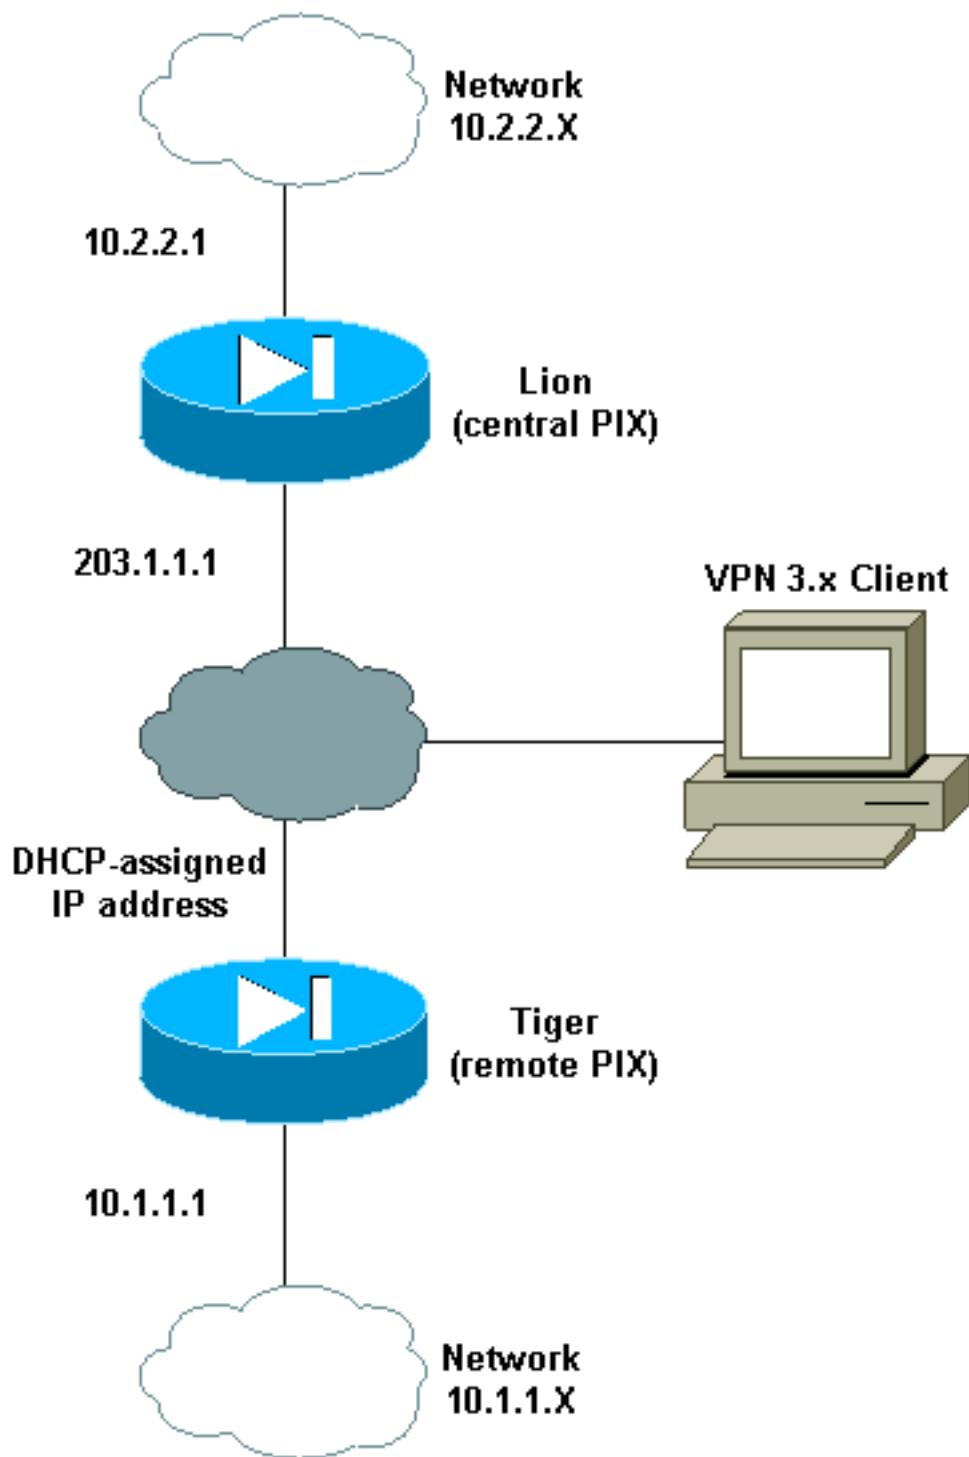

Configuration

Cette section vous fournit des informations pour configurer les fonctionnalités décrites dans ce document.

Remarque : utilisez l'[outil de recherche de commandes](#) (clients [enregistrés](#) uniquement) pour obtenir plus d'informations sur les commandes utilisées dans cette section.

Diagramme du réseau

Ce document utilise la configuration réseau suivante :

Vérification

Cette section fournit des informations qui vous permettront de vérifier que votre configuration fonctionne correctement.

L'[Outil Interpréteur de sortie \(clients enregistrés uniquement\) \(OIT\)](#) prend en charge certaines commandes `show`. Utilisez l'OIT pour afficher une analyse de la sortie de la commande `show`.

Remarque : Les commandes `clear` doivent être exécutées en mode de configuration.

- **clear crypto ipsec sa** - Réinitialise les associations IPsec après des tentatives échouées de négociation d'un tunnel VPN.

- **clear crypto isakmp sa** - Réinitialise les associations de sécurité ISAKMP (Internet Security Association and Key Management Protocol) après des tentatives infructueuses de négociation d'un tunnel VPN.
- **show crypto engine ipsec** : affiche les sessions chiffrées.

Dépannage

Cette section fournit des informations que vous pouvez utiliser pour dépanner votre configuration.

Dépannage des commandes

L'[Outil Interpréteur de sortie \(clients enregistrés uniquement\) \(OIT\)](#) prend en charge certaines commandes **show**. Utilisez l'OIT pour afficher une analyse de la sortie de la commande **show**.

Remarque : Consulter les [renseignements importants sur les commandes de débogage](#) avant d'utiliser les commandes de **débogage**.

- **debug crypto ipsec** - Utilisé pour voir si un client négocie la partie IPsec de la connexion VPN.
- **debug crypto isakmp connection** - Utilisé pour voir si les homologues négocient la partie ISAKMP du VPN.

Exemple de sortie de débogage « bonne »

- [Débogues PIX centraux](#)
