---

## Introduzione

In questo documento viene descritto come configurare il routing di transito in un ambiente multipod ACI (Application Centric Infrastructure).

Contributo di Matthew Rich, Cisco TAC Engineer

## Prerequisiti

### Requisiti

Cisco raccomanda la conoscenza dei seguenti argomenti:

1. ACI multi-pod environment
2. Almeno 2 output L3
3. Almeno 1 direttrice in ciascun pod configurato come riflettore di route MP-BGP:  
[configurazione di un riflettore di route MP-BGP](#)

### Componenti usati

Le informazioni fornite in questo documento si basano sulle seguenti versioni software e hardware:

1. 2 switch N5K-C5548UP (usati come router esterni)
2. 1 switch foglia N9K-C9332PQ e 1 switch foglia N9K-C93108TC-EX
3. 2 Switch a spine N9K-C9336PQ
4. 1 N9K-C9232C (usato come dispositivo IPN)

Le informazioni discusse in questo documento fanno riferimento a dispositivi usati in uno specifico ambiente di emulazione. Su tutti i dispositivi menzionati nel documento la configurazione è stata

ripristinata ai valori predefiniti. Se la rete è operativa, valutare attentamente eventuali conseguenze derivanti dall'uso dei comandi.

## Premesse

Nel routing di transito, il fabric Cisco ACI annuncia i percorsi che vengono appresi da una connessione di uscita di livello 3 (L3Out) a un'altra connessione L3Out. I domini esterni di layer 3 eseguono il peer con il fabric sugli switch foglia del bordo. La struttura è un dominio MP-BGP (Multiprotocol Border Gateway Protocol) di transito tra i peer.

## Configurazione

### Esempio di rete

Esempio di rete

## Configurazioni

Un profilo di nodo logico viene utilizzato per identificare lo switch foglia connesso alle reti esterne e in grado di distribuire il protocollo di routing o le route statiche verso di esso.

Profilo nodo logico per LEAF102

Profilo nodo logico per LEAF202

Per identificare l'interfaccia L3Out che si connette al dispositivo esterno, viene utilizzato un profilo di interfaccia logica. Come conseguenza di entrambi i profili, vengono visualizzati diversi elementi funzione definiti per il routing e l'inoltro virtuale (VRF): Address Resolution Protocol (ARP), Border Gateway Protocol (BGP), Neighbor Discovery e Open Shortest Path First (OSPF).

Logical Interface Profile - MR-BGP\_interfaceProfile

Policy | Faults | History

General | Routed Sub-Interfaces | Routed Interfaces | **SVI** | Floating SVI

Path	Side A IP	Side B IP	Secondary IP Address	IP Address	MAC Address	MTU (bytes)	Encap	Encap Scope
Pod-1/Node-102/eth1/1				50.50.50.51/24	00:22:BD:F8:19:FF	inherit	vlan-499	Local

Profilo interfaccia logica per LEAF102, eth1/1

Logical Interface Profile - MR-OSPF\_interfaceProfile

Policy | Faults | History

General | Routed Sub-Interfaces | **Routed Interfaces** | SVI | Floating SVI

Path	IP Address	Secondary IP Address	MAC Address	MTU (bytes)	PTP
Pod-2/Node-202/eth1/2	10.101.101.101/24		00:22:BD:F8:19:FF	9000	Disabled

Profilo interfaccia logica per LEAF202, eth1/2

Un profilo di istanza EPG esterno (External EPG, L3Out EPG) rappresenta un gruppo di subnet esterne con lo stesso comportamento di protezione. Altre subnet possono inoltre essere associate ad altri ambiti, che definiscono il comportamento di routing per la subnet.

The screenshot shows the configuration page for 'External EPG Instance Profile - MR-BGP-EXT-EPG'. The left sidebar shows the navigation tree with 'MR-BGP-EXT-EPG' selected under 'External EPGs'. The main panel has tabs for 'Policy', 'Operational', 'Stats', 'Health', 'Faults', and 'History'. The 'General' tab is active, showing the following properties:

```

RIB per VRF MR-OSPF su N5K2

In BGP L3Out, immettere l'indirizzo IP della subnet esterna ricevuta da OSPF L3Out, 101.101.101.101/32, scegliere Esporta subnet di controllo route nella sezione Controllo route, quindi cancellare le subnet esterne per la classificazione EPG esterno. Fare clic su Invia. L'opzione Esporta subnet di controllo del percorso consente di esportare (annunciare) una rete nel peer esterno.

Crea nuova subnet

Create Subnet dialog box with fields for IP Address (101.101.101.101/32), Name, Route Control options (Export Route Control Subnet checked), Aggregate options, Route Summarization Policy (BGP Route Summarization Policy), Route Control Profile table, External EPG classification options, and Cancel/Submit buttons.

Configurare le opzioni corrette per la nuova subnet

Sul modello N5K1, la rete esterna OSPF 101.101.101.101/32 viene ora ricevuta tramite BGP.

```
N5K1# show ip route vrf MR-BGP
IP Route Table for VRF "MR-BGP"
'*' denotes best ucast next-hop
 '**' denotes best mcast next-hop
 '[x/y]' denotes [preference/metric]
 '%<string>' in via output denotes VRF <string>

49.49.49.32, ubest/mbest: 2/0, attached
  *via 49.49.49.49, Lo50, [0/0], 1d08h, local
  *via 49.49.49.49, Lo50, [0/0], 1d08h, direct
50.50.50.0/24, ubest/mbest: 1/0, attached
  *via 50.50.50.50, Vlan499, [0/0], 1d08h, direct
50.50.50.50/32, ubest/mbest: 1/0, attached
  *via 50.50.50.50, Vlan499, [0/0], 1d08h, local
101.101.101.101/32, ubest/mbest: 1/0
  *via 50.50.50.51, [20/0], 00:00:03, bgp-65001, external, tag 65010,
```

RIB per VRF MR-BGP su N5K1

In Uscita OSPF L3immettere l'indirizzo IP della subnet esterna ricevuta da BGP L3Out, 49.49.49.49/32, scegliere Esporta subnet di controllo route nella sezione Controllo route, quindi deselezionare Subnet esterne per la classificazione EPG esterno. Fare clic su Invia.

The screenshot shows a network configuration interface. On the left is a navigation tree with the following items: ND for VRF- MR-MR-VRF, OSPF for VRF- MR-MR-VRF (expanded), Areas, Interfaces (expanded), Interface eth1/2, Interface lo1, Routes, External EPGs, and MR-OSPF-EXT-EPG. On the right, there is a configuration section for 'Preferred Group Member' with 'Exclude' and 'Include' buttons. Below this is a table titled 'Subnets:' with columns: IP Address, Scope, Name, Aggregate, Route Control Profile, and Route Summarization Policy. A 'Create' button is visible on the right side of the table. The table contains one entry: IP Address: 101.101.101.101/32, Scope: External Subnets for th...

Crea nuova subnet

## Create Subnet

IP Address:   
address/mask

Name:

### Route Control:

- Export Route Control Subnet
- Import Route Control Subnet
- Shared Route Control Subnet

- Aggregate
- Aggregate Export
  - Aggregate Import
  - Aggregate Shared Routes

### Route Summarization Policy

### Route Control Profile:

Name	Direction
------	-----------

Route control is used for filtering external routes advertised out of the fabric, allowed into the fabric, or leaked to other VRFs within the fabric.

### External EPG classification:

- External Subnets for External EPG
- Shared Security Import Subnet

External EPG classification is used to identify the external networks associated with this external EPG for policy enforcement (Contracts).
