CSS Remote File Transfer Vulnerability in SSL

Medium
CVE ID : Cisco-SA-20100702-CVE-2010-1575
Published : 2010-07-02 14:15
Updated : 2012-07-14 14:00
Version : Final
CVSS Score : 3.5
Workarounds : No Workarounds available
Cisco Bug ID :

[CVE-2010-1575](#)

Remote File Transfer Vulnerability in SSL

Summary

Cisco CSS Content Services Switch(CSS) and SSL Services Module(SSLM) and ACE Application Control Engine(ACE) are vulnerable to a remote file transfer vulnerability.

The vulnerability exists in the SSLM and ACE components of the CSS. The vulnerability is caused by a flaw in the way the SSLM and ACE components handle file transfer requests. An attacker can exploit this vulnerability to transfer files to the device.

```
server < CONTEXT > http-header client-cert SSLM ssl-proxy policy http-header
```

SSLM and ACE components of the CSS are vulnerable to a remote file transfer vulnerability. The vulnerability is caused by a flaw in the way the SSLM and ACE components handle file transfer requests.
