

Cisco Application Policy Infrastructure

Controller (APIC) - CVE-2019-1586

Product ID : cisco-sa-

[CVE-2019-](#)

20190501-apic-encrypt

[1586](#)

Published : 2019-05-01 16:00

Version : 1.0 : Final

CVSS Score : [4.6](#)

Workarounds : No workarounds available

Cisco ID : [CSCvn09800](#)

Summary: A vulnerability in the Cisco Application Policy Infrastructure Controller (APIC) allows an attacker to bypass the encryption of sensitive data.

Details

Cisco Application Policy Infrastructure

Controller (APIC) is a software component that manages the configuration and operation of Cisco Application Centric Infrastructure (ACI) devices.

The vulnerability exists in the APIC's handling of sensitive data, which is encrypted by default. An attacker can exploit this vulnerability to bypass the encryption and access the data.

The vulnerability is rated as Medium (CVSS 4.6) because it allows an attacker to access sensitive data, but it does not allow the attacker to execute arbitrary code or cause a denial of service.
