

Cisco Integrated Management Controller

Denial of Service (DoS) Vulnerability in Cisco IMC

Cisco Security Advisory ID : cisco-sa-

[CVE-2019-](#)

20190619-imc-firmware-dos

[1630](#)

Published : 2019-06-19 16:00

Version : Final

CVSS Score : [5.5](#)

Workarounds : No workarounds available

Cisco Advisory ID : [CSCvo36079](#)

Denial of Service (DoS) vulnerability in Cisco Integrated Management Controller (IMC) versions 1.0 through 1.1.0 allows an attacker to cause a denial of service condition by sending a specially crafted request to the IMC's REST API.

Summary

Cisco Integrated Management Controller (IMC) versions 1.0 through 1.1.0

are affected by a Denial of Service (DoS) vulnerability in the REST API.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

Technical Details

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.

The vulnerability is caused by a buffer overflow in the REST API when processing a specially crafted request.
