

Cisco Firepower Threat

Defense(FTD) Shell Command Execution Vulnerability

Cisco Security Advisory ID : [cisco-sa-ftd-shell-9rhJF68K](#) [CVE-2020-3253](#)

Published : 2020-05-06 16:00

Version : 1.0 : Final

CVSS Score : [6.7](#)

Workarounds : No workarounds available

Cisco ID : [CSCvp16933](#)

Summary: A shell command execution vulnerability exists in Cisco Firepower Threat Defense (FTD) versions 6.5.0 and earlier. An attacker can execute arbitrary commands on the device via a specially crafted request.

Details

Cisco Firepower Threat

Defense(FTD) versions 6.5.0 and earlier are affected by a shell command execution vulnerability.

The vulnerability exists in the `ftd` process. An attacker can execute arbitrary commands on the device via a specially crafted request.

The vulnerability is caused by a buffer overflow in the `ftd` process. An attacker can execute arbitrary commands on the device via a specially crafted request.

For more information, see the [Cisco Security Advisory](#).
