

# Cisco Unified Contact Center Enterprise Denial of Service (DoS/DDoS) Vulnerability

**Severity:** [Medium](#) **CVE ID:** [CVE-2020-3163](#)

**Product:** Cisco Unified Contact Center Enterprise

**Published:** 2020-02-19 16:00

**Version:** 1.0 : Final

**CVSS:** [6.8](#)

**Workarounds:** No workarounds available

**Reference:** [CSCvq16162](#)

**Summary:** Cisco Unified Contact Center Enterprise is vulnerable to a Denial of Service (DoS) attack due to a buffer overflow in the SIP message processing component. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

## Details

Cisco Unified Contact Center Enterprise is vulnerable to a Denial of Service (DoS) attack due to a buffer overflow in the SIP message processing component.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

**Impact:** Cisco Unified Contact Center Enterprise is vulnerable to a Denial of Service (DoS) attack due to a buffer overflow in the SIP message processing component.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.

The vulnerability is located in the SIP message processing component of the Cisco Unified Contact Center Enterprise. An attacker can send a specially crafted SIP message to the vulnerable component, causing it to crash and resulting in a denial of service.
