### Details

#### Authentication Bypass

The authentication bypass is achieved by sending a specially crafted request to the UCCX API endpoint. The request contains a valid API key but is designed to bypass the authentication process.

The bypass is achieved by sending a specially crafted request to the UCCX API endpoint. The request contains a valid API key but is designed to bypass the authentication process.

#### Impact

The impact of this vulnerability is that an attacker can bypass the authentication process and access the UCCX API without providing a valid API key.
