Cisco Small Business 300€, 1, 2, 3

Cisco Small Business 500€, 1, 2, 3

Web of Things (WoT) is a key enabler for the Industrial Internet of Things (IIoT) and Smart Manufacturing (SM) ecosystems. It enables the integration of physical and digital assets, allowing for data-driven decision-making and automation. The WoT architecture is based on the W3C WoT specification, which defines a set of protocols and standards for connecting physical devices to the Internet of Things (IoT) and IIoT ecosystems.

The WoT architecture is based on the W3C WoT specification, which defines a set of protocols and standards for connecting physical devices to the Internet of Things (IoT) and IIoT ecosystems.
