Inleiding

In dit document wordt de BGP-advertenties (Border Gateway Protocol) beschreven die voorzien in extra controle op routeadvertenties, hetgeen afhangt van het bestaan van andere prefixes in de BGP-tabel.

Voorwaarden

Vereisten

Cisco raadt aan dat u kennis hebt van dit onderwerp:

- Platform Independent

Gebruikte componenten

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies:

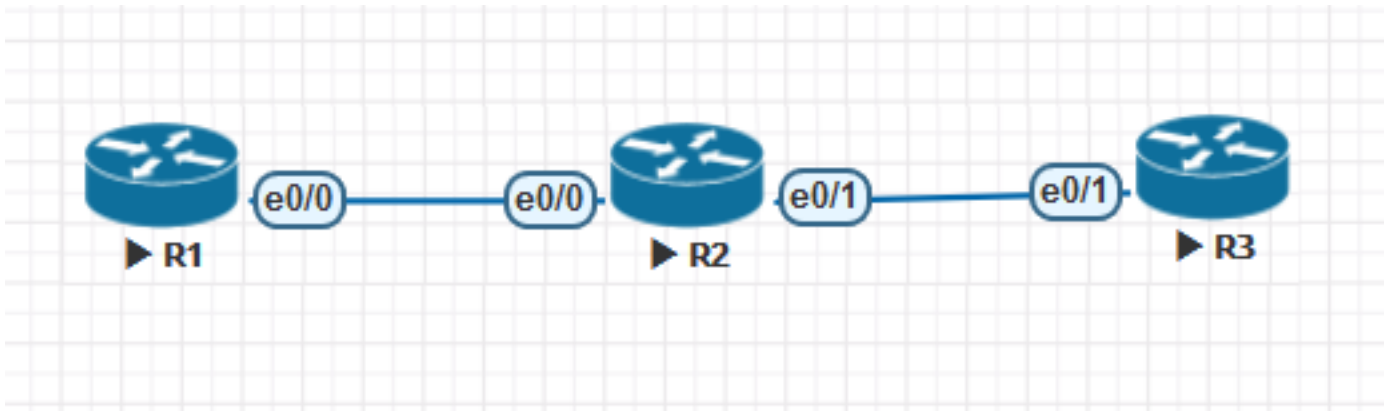

- IOS
- IOS-XE
- ASR 1000 router

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk levend is, zorg er dan voor dat u de mogelijke impact van om het even welke opdracht begrijpt.

Configureren

Configureer R1, R2 en R3. De configuratie wordt hier gegeven.

Netwerkdigram

Configuratie

Configuratie R1:

```

!
hostname R1
!
ip cef
!
interface Loopback0
ip address 1.1.1.1 255.255.255.255
!
interface Loopback1
ip address 1.1.1.2 255.255.255.255
!
interface Loopback2
ip address 1.1.1.3 255.255.255.255
!
interface Loopback3
ip address 1.1.1.4 255.255.255.255
!
interface Loopback4
ip address 1.1.1.5 255.255.255.255
!
interface Loopback100

!
end

```

Verifiëren

Voorwaarde 1:

Indien de standaardroute niet aanwezig is in BGP RIB, mag R2 bepaalde routes niet bekendmaken.

Indien de standaardroute aanwezig is in BGP RIB, moet R2 alle routes adverteren.

Bestaande-map gebruiken

Voorwaarde 2:

Indien de standaardroute niet aanwezig is in BGP RIB, moet R2 alle routes bekendmaken.

Indien de standaardroute aanwezig is in BGP RIB, mag R2 bepaalde routes niet bekendmaken.

Gebruik niet-existentiële kaart

```
R1#show ip bgp
BGP table version is 7, local router ID is 10.139.224.1
Status codes: s suppressed, d damped, h history, * valid, > best, i - internal,

Problemen oplossen

De belangrijke opdracht is **debug ip bgp updates** die u een backend beweging van routekaarten geven verbonden aan de BGP voorwaardelijke kaart. In groot netwerk lopen voorwaardelijke debug met ACL.

Opmerking: Het BGP-scannerproces wordt elke 60 seconden uitgevoerd, dus zodra we de updates voor de existentiële kaart/niet-existentiële kaart hebben, duurt de advertentie-map 60 seconden om geactiveerd te worden.
