## [Inleiding](#)

Dit document toont hub en sprak encryptie van één router (het "hub") aan drie andere routers (de "spokes"). Er is één crypto kaart op de hub router die de netwerken achter elk van zijn drie peers specificeert. De crypto kaarten op elk van de gesproken routers specificeren het netwerk achter de hub router.

Er wordt versleuteld tussen deze netwerken:

- 160.160.160.x-netwerk tot 170.170.170.x-netwerk
- 160.160.160.x-netwerk tot 180.180.180.x-netwerk
- 160.160.160.x-netwerk tot 190.190.190.x-netwerk

## [Voorwaarden](#)

### [Vereisten](#)

Er zijn geen specifieke vereisten van toepassing op dit document.

### [Gebruikte componenten](#)

De informatie in dit document is gebaseerd op de volgende software- en hardware-versies:

- Cisco IOS® software release 12.0.7.T of hoger

- Cisco 2500 routers

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

## [Conventies](#)

Raadpleeg voor meer informatie over documentconventies de [technische Tips](#) van [Cisco](#).

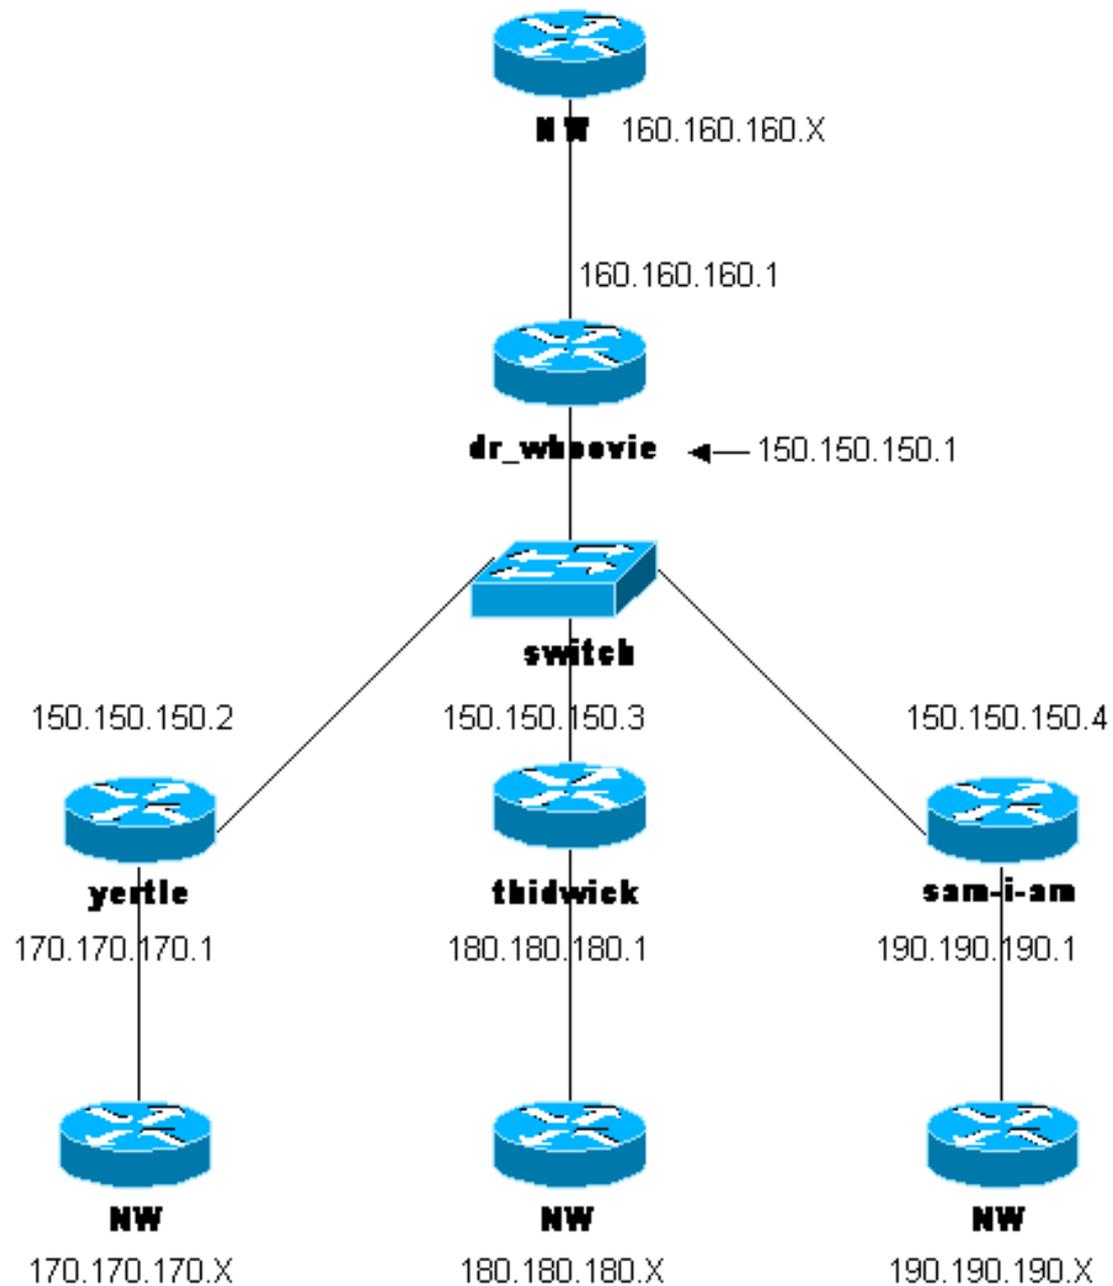

## [Configureren](#)

Deze sectie bevat informatie over het configureren van de functies die in dit document worden beschreven.

**N.B.:** Als u aanvullende informatie wilt vinden over de opdrachten in dit document, gebruikt u het [Opdrachtplanningprogramma](#) (alleen [geregistreerd](#) klanten).

## [Netwerkdigram](#)

Het netwerk in dit document is als volgt opgebouwd:

## Configuraties

Dit document gebruikt deze configuraties:

- [Configuratie dr\\_handig](#)
- [Configuratie-I-AM](#)
- [Didwick-configuratie](#)
- [Configuratie yertle](#)

### Configuratie dr\_handig

```
Current configuration:
!
version 12.0
service timestamps debug uptime
service timestamps log uptime
no service password-encryption
!
```

```
hostname dr_whoovie
!

## Verifiëren

Deze sectie verschaft informatie die u kunt gebruiken om te bevestigen dat uw configuratie correct werkt.

Bepaalde opdrachten met **show** worden ondersteund door de tool [Output Interpreter \(alleen voor geregistreerde klanten\)](#). Hiermee kunt u een analyse van de output van opdrachten met **show** genereren.

- toon **crypto ipsec sa**-shows the fase 2 security associaties.
- toon **crypto isakmp sa** - toont de fase 1 veiligheidsassociaties.

## Problemen oplossen

Deze sectie bevat informatie waarmee u problemen met de configuratie kunt oplossen.

### Opdrachten voor troubleshooting

**Opmerking:** Voordat u **debug**-opdrachten afgeeft, raadpleegt u [Belangrijke informatie over Debug Commands](#).

- **debug crypto ipsec**-displays de IPsec-onderhandelingen van fase 2.
- **debug crypto isakmp** — Hiermee geeft u de ISAKMP-onderhandelingen van fase 1 weer.
- **debug van crypto motor**-displays het verkeer dat versleuteld wordt.
- **duidelijke crypto isakmp** — ontslaat de veiligheidsassociaties met betrekking tot fase 1.
- **duidelijke crypto sa** — ontruimt de veiligheidsassociaties met betrekking tot fase 2.
