[Gerelateerde informatie](#)

[Inleiding](#)

N.B.: De informatie in dit document is gebaseerd op Cisco IOS® softwarereleases 11.2 en hoger.

Dit document onderzoekt gemeenschappelijke problemen bij het fouterstel voor TACACS+ wanneer een protocol voor wachtwoordverificatie (PAP) of het Challenge Handshake Authentication Protocol (CHAP) wordt gebruikt. Gemeenschappelijke PC-instellingen voor Microsoft Windows 95, Windows NT, Windows 98 en Windows 2000 worden geleverd, evenals voorbeelden van configuraties en voorbeelden van goede en slechte versies.

[Voorwaarden](#)

[Vereisten](#)

Er zijn geen specifieke vereisten van toepassing op dit document.

[Gebruikte componenten](#)

Dit document is niet beperkt tot specifieke software- en hardware-versies.

De informatie in dit document is gebaseerd op de apparaten in een specifieke laboratoriumomgeving. Alle apparaten die in dit document worden beschreven, hadden een opgeschoonde (standaard)configuratie. Als uw netwerk live is, moet u de potentiële impact van elke opdracht begrijpen.

Conventies

Raadpleeg [Cisco Technical Tips Conventions \(Conventies voor technische tips van Cisco\)](#) voor meer informatie over documentconventies.

Gemeenschappelijke PC-instellingen

Windows 95

Voer de volgende stappen uit:

1. Kies in het venster Netwerknetwerk de verbindingssnaam en vervolgens **Bestand > Eigenschappen**.
2. Ga op het tabblad Server naar het vakje **Encrypt Password (Versleuteld wachtwoord)** onder Type inbelserver controleren. Als dit vakje is ingeschakeld, accepteert de PC alleen de CHAP-verificatie. Als dit vakje niet is ingeschakeld, accepteert de PC PAP- of CHAP-verificatie.

Windows NT

Voer de volgende stappen uit:

1. Kies in het venster Inbelnetwerken de verbindingssnaam en kies vervolgens **Bestand > Eigenschappen**.
2. Controleer de instellingen op het tabblad Beveiliging: Als de optie **Elke verificatie inclusief een duidelijk tekstvak accepteren** is ingeschakeld, accepteert de PC PAP of CHAP. Als het vakje **Alleen versleutelde verificatie accepteren** wordt ingeschakeld, accepteert de PC alleen CHAP-verificatie.

Windows 98

Voer de volgende stappen uit:

1. Kies in het venster Inbelnetwerken de verbindingssnaam en kies vervolgens **Eigenschappen**.
2. Controleer de instellingen in het gebied Geavanceerde opties op het tabblad Server: Als het vak **Encrypt added files** niet is ingeschakeld, accepteert de PC PAP- of CHAP-verificatie. Als het vak **Encrypt added files** wordt ingeschakeld, accepteert de PC alleen CHAP-verificatie.

Windows 2000

Voer de volgende stappen uit:

- Selecteer in Network and Dial-Up Connections de verbindingen naam en kies vervolgens Properties.
- In het tabblad Beveiliging Geavanceerd > Instellingen > Deze protocollen toestaan: Als het vakje Unencryptie wachtwoord (PAP) is ingeschakeld, accepteert de PC PAP. Als het vakje Challenge Handshake Authentication Protocol (CHAP) is ingeschakeld, accepteert de PC CHAP per RFC 1994. Als het vakje Microsoft CHAP (MS-CHAP) is ingeschakeld, accepteert de PC MS-CHAP versie 1 en aanvaardt CHAP niet per RFC 1994.

Configuraties en voorbeelden debug

Opdrachten voor andere Cisco IOS-releases

Opmerking: Als u deze opdrachten wilt gebruiken, verwijdert u de vet weergegeven opdrachten uit de configuratie en het plakken in deze opdrachten, zoals door uw Cisco IOS-release bepaald.

Cisco IOS 11.3.3.T tot 12.0.5.T

```

aaa authen login default tacacs+ local
aaa authen ppp default if-needed tacacs+ local
aaa authorization exec default tacacs+ if-authenticated
aaa authorization network default tacacs+ if-authenticated

```

Cisco IOS 12.0.5.T en hoger

```

aaa authen login default group tacacs+ local
aaa authen ppp default if-needed group tacacs+ local
aaa authorization exec default group tacacs+ if-authenticated
aaa authorization network default group tacacs+ if-authenticated

```

Monsterverpakkingen - TACACS+ en PAP

N.B.: In de debug uitvoer wijst de vet tekst op problemen in het debug. De vlektekst duidt op een goed debug.

Opdrachten voor andere Cisco IOS-releases

Opmerking: Om deze opdrachten te gebruiken, verwijdert u de vet opdrachten uit de configuratie en voegt u deze opdrachten toe, zoals door uw Cisco IOS-release bepaald.

Cisco IOS 11.3.3.T tot 12.0.5.T

```
aaa authen login default tacacs+ local
aaa authen ppp default if-needed tacacs+ local
aaa authorization exec default tacacs+ if-authenticated
aaa authorization network default tacacs+ if-authenticated
```

Cisco IOS 12.0.5.T en hoger

```
aaa authen login default group tacacs+ local
aaa authen ppp default if-needed group tacacs+ local
aaa authorization exec default group tacacs+ if-authenticated
aaa authorization network default group tacacs+ if-authenticated
```

Monsterverpakkingen - TACACS+ en CHAP

N.B.: In de debug uitvoer wijst de vet tekst op problemen in het debug. De vlektekst duidt op een goed debug.

General OS:

TACACS access control debugging is on

AAA Authentication debugging is on

AAA Authorization debugging is on

PPP:

PPP authentication debugging is on

PPP protocol negotiation debugging is on
